PREFACE

THE idea of the present work, the publication of which has been inevitably delayed by the war, was first conceived in 1933. It is designed to cover the same ground, though on a different scale, as the well-known dictionaries by Sir William Smith on Greek and Roman antiquities and on Greek and Roman biography, mythology, and geography. The eighth edition (1914) of Lübker's *Reallexikon* was taken as a general model, but with certain modifications in principle and with certain differences in emphasis. The present work is intended to be less purely factual than Lübker. It devotes more space to biography and literature, less to geography and to bibliographical information, aiming in this latter respect at no more than referring the reader to the best work, in English and foreign languages, on the various subjects. A special feature is the inclusion of longer articles designed to give a comprehensive survey of the main subjects and to place minor characters, places, and events, the choice of which has been necessarily selective, against their appropriate literary or historical background. The *terminus ad quem* is, generally speaking, the death of Constantine (337), and proportionately less space has been allotted to persons who lived later than the second century A.D.; but a few prominent figures of later ages, such as Augustine, Eustathius, Photius, Psellus, Thomas Magister, Trielinus, and Tzetzes, who are important for the student of classical antiquity, have been included. Christian writers, as such, have been excluded.

The editors of the dictionary at its inception were Mr. J. D. Denniston, for Greek literature; Professor J. Wight Duff, for Latin literature; Mr. (now Professor) H. M. Last, for Greek and Roman history and geography; Professor A. D. Nock, for Greek and Roman religion; the then Provost of Oriel, Dr. W. D. (now Sir David) Ross, for Greek and Roman philosophy, mathematics, and science. Professor R. G. Collingwood advised on matters concerned with art and archaeology until his death in 1943. In 1937 Professor Last found himself unable to continue his editorship, and his place was taken by Professor M. Cary and Dr. H. H. Scullard, who are alone responsible for the selection and form of articles on history, geography, law, archaeology, and art. In 1944 Professor Wight Duff died, and Professor A. Souter agreed to see the articles on Latin literature through the press; and in 1945 Professor H. J. Rose took over from Professor Nock the final stages of the editorship of articles connected with religion. In the autumn of 1939 Sir Paul Harvey undertook the complicated and laborious task of securing uniformity in such matters as spelling, transliteration, and abbreviations, and of adding the requisite cross-references. He had all but completed this work when in June 1948 illness compelled him to relinquish it. Professor Paul Maas has placed his many-sided learning at the Delegates' disposal in the final stages, and contributed the short bibliographical articles at the end of the book. Valuable help and advice have also been received from Mr. R. Syme and Professor A. Momigliano.

A list of contributors will be found on p. vii. At the end of the book three short bibliographical articles have been included as appendixes, listing the principal works of reference in the field of classical scholarship generally, the history of Greek and Latin literature, and Greek grammar.

Every effort has been made by the editors to incorporate the results of recent scholarship and to bring the work as much up to date as possible, but a task which involved communication with so many widely scattered contributors has been made much harder by the interruptions of war and the difficulties of present production. For any omissions therefore, particularly in the bibliographies, the reader's indulgence is sought.

June 1948

NOTE TO THE READER

ROMANS have normally been listed under their *cognomina* rather than *nomina*. Bearers of the same name have usually been arranged in their chronological order, subject to a priority given to emperors and kings. But it has not been possible to do this in the case of the bearers of the names Dionysius, Julius, and Ptolemaeus; and for these a rough alphabetical order of their places of origin, or of their *cognomina*, has been adopted. Numerous cross-references have been given for the reader's assistance. Quantities of vowels have been indicated where readers might be in doubt, e.g. ANŶTUS, EURĪPIDES. In the bibliographies place of publication is not mentioned, except in the case of books in English published outside the United Kingdom. The abbreviations employed (a list of which is given on pp. ix-xix) are somewhat fuller than those in Liddell and Scott, *Greek-English Lexicon*, and in Lewis and Short, *Latin Dictionary*. In the spelling of Greek and Latin words the rules for transliteration adopted in the *Journal of Hellenic Studies* have been in general followed; but no attempt has been made to achieve a pedantic uniformity. Where there is an accepted English form of an ancient name, such as Hecuba, Clytemnestra, Phidias, Pisistratus, that form has been used. Similarly, such established forms of common nouns as *choregus*, *didascaliae*, *palaestra*, *scolia*, *strategus* have been thus spelt, while the Greek spelling has been retained for less familiar words such as *ephetai*, *hektemoroi*, *nauarchos*. For the names of Greek cities ending in *-eia*, *-eia* has normally been adopted; but *-ea* or *-ia* has been preferred in the case of some cities, e.g. Chaeronea, Mantinea, Alexandria, which are usually so spelt in English. The Greek final *-ων* in proper names has normally been transliterated *-on*, but not in such famous names as Plato and Zeno. The whole subject is one on which scholars differ, and it has been found necessary to impose a measure of uniformity in face of some disagreement. In the cases of I and J, U and V the following rules have been followed in principle; but many exceptions have been made where it seemed convenient. In headings J is normally used as initial letter for proper names, e.g. Janiculum, Jason, Josephus, Julius, Juvenal (but it would be eccentric to spell Iacchus, Iapetus, &c., where metre often demands the I, with a J): I for all other words, e.g. *iaculum*, *iudex*, *ius*, *iuvenes*. In the body of the articles J is used for names isolated in an English context, also for abbreviations: I for names in a Latin title, phrase, or quotation, and for things. Thus: Jugurtha *passim* in article on Marius, Juv. for Juvenal, but *Bellum Iugurthinum*, *ius civile*, *Lex Iulia*, *De vita Iulii Agricolae*. Consonantal U is used in Latin quotations (as opposed to phrases) alone: V everywhere else, including all headings.

THE OXFORD CLASSICAL DICTIONARY

ABACUS, a counting-board, the usual aid to reckoning in antiquity. The Egyptians, Greeks, and Romans alike used a board with vertical columns, on which (working from right to left) units, tens, hundreds, or (where money was in question) e.g. $\frac{1}{2}$ obols, $\frac{1}{4}$ obols, $\frac{1}{8}$ obols, obols, *drachmae*, sums of 10, 100, 1,000 *drachmae*, and talents were inscribed. When an addition sum was done, the totals of the columns were carried to the left, as in our ordinary addition. The numbers might be marked in writing or by pebbles, counters, or pegs. W. D. R.

ABARIS, a legendary servant of Apollo, similar to Aristaeas (q.v.), and believed to be a Hyperborean (q.v.). He lived without food, and travelled everywhere bearing the golden arrow, the symbol of the god (Hdt. 4. 36). Pindar assigned him to the time of Croesus (fr. 283 Bowra). Later authorities tell of his presence in Athens (Suidas, s.v.) and of his helping the Spartans by directing the performance of sacrifices which prevented all plagues thereafter (Apollonius, *Mir.* 4). W. K. C. G.

ABDERA, a Greek city in Thrace, near the mouth of the river Nestus. It owed its prosperity to its good wheat-lands and to a gap in the coastal mountains which facilitated trade with the Thracian interior; but it was exposed to attack through this gap. The original Greek settlement, founded by Clazomenae c. 650 B.C., was soon destroyed by the Thracians. A new colony from Teos established itself c. 500, and in the fifth century became one of the richest Aegean cities, paying 12-15 talents of tribute to the Delian League. In 376 it was rescued by Chabrias from Thracian marauders and joined the Second Athenian Confederacy. From 352 to 198 it was mostly under Macedonian rule; thenceforward it was a 'free city' under Roman rule. Though its inhabitants had a reputation for stupidity, they included the philosophers Protagoras and Democritus. M. C.

ABORIGINES. Livy and Dionysius have preserved a puzzling tradition: that the neighbourhood of Rome was occupied originally by Sieuli (see SICELS), who were expelled by *Aborigines* before the Romans themselves came. That Sieuli were there is probable enough, but these Sieuli themselves were what we should call 'aboriginal', for palaeolithic man hardly counts. The explanation may lie in the fact that Rome was occupied by Villanovans (q.v.) two or three centuries before the traditional date of its founding. Although actually their kindred, the Romans may have regarded these earlier forerunners as aborigines. D. R.-MacI.

ABRAXAS, see AMULETS.

ABYDOS, Milesian colony on the Asiatic side of the Hellespont, at its narrowest point, opposite Sestos (see HERO AND LEANDER). In 411 B.C. the Spartan fleet was defeated by the Athenians near Abydos. In 200 the town, until then a free city, fought heroically against Philip V of Macedon, but was forced to surrender. Three years later Antiochus III made Abydos one of his chief bases of support. Later it probably belonged to Pergamum, but as an autonomous State. V. E.

ACADEMY, (1) a park and gymnasium in the outskirts of Athens sacred to the hero Academus (or Hecademus); (2) the school or college established there by Plato,

probably about 385 B.C. This was organized as a corporate body with a continuous life of its own and survived down to its final dissolution by Justinian in A.D. 529.

There can be little doubt that Plato's chief object in the foundation was to train men for the service of the State, and there is evidence that a number of his pupils played a considerable part in the political life of their cities. But his method of training consisted of a thorough education in science and philosophy, and the school is better known for its contributions to these subjects. Under Plato and his immediate successors a great deal of important work was done in mathematics and astronomy. But later more purely philosophical interests became paramount. In the third and second centuries B.C., under Arcesilaus and Carneades, the Academy became known as the chief sceptical school, though there is some doubt as to the exact length to which their scepticism went. In the following century this tendency was abandoned. After that we know practically nothing of the institution for several centuries, though occasional indications justify us in believing in its continued existence. It does not emerge into the light again until the fifth century A.D., when it appears as a centre of Neoplatonism, particularly under the leadership of Proclus. It was also active in the production of commentaries on Plato and Aristotle, some of which still survive and preserve information of great value.

Histories of Ancient Philosophy: Zeller; Gomperz; Robin. J. Burnet, *From Thales to Plato* (1914), ch. 12; G. C. Field, *Plato and His Contemporaries* (1930), ch. 3; W. Jaeger, *Aristotle*, ch. 1 (Engl. Transl. 1934); R. E. Witt, *Albinus and the History of Middle Platonism* (1937); T. Whittaker, *The Neo-Platonists* (1918), ch. 9. G. C. F.

ACAMAS, in mythology, son of Theseus, brother of Demophon (q.v.); eponym of the tribe Acamantis. When Diomedes went to Troy to ask for the return of Helen, Acamas accompanied him; Laodice, daughter of Priam, fell in love with him and had by him a son, Munitus (Parthenius, *Amat. Narr.* 16). After the Trojan War, according to one account, it was he, not Demophon, who came to Thrace and met and deserted Phyllis. While in Cyprus he opened a mysterious box she had given him, and, frightened by what he saw in it, galloped wildly away, fell, and was killed by his own sword (schol. *Lycophron* 495). H. J. R.

ACARNAN, eponym of Acarnania; in mythology, son, with Amphoterus, of Alemaeon (q.v.) and Callirhoë. When Alemaeon was murdered, Callirhoë prayed Zeus, who was her lover, to make her sons grow up immediately; he granted her prayer, and they avenged his death on Phogeus and his sons (Apollod. 3. 91-3). H. J. R.

ACARNANIA, a district of north-west Greece, bounded by the Ionian Sea, the Gulf of Ambracia, and the river Achelous. It contained a fertile plain along the lower Achelous, but was ringed off on other sides by mountains. Its inhabitants long remained semi-barbarous: in 'Thucydides' day they still went about wearing armour (1. 5). In the seventh century the seaboard was occupied by settlers from Corinth. With Athenian help the Acarnanians beat off later attacks by the Corinthian colonists (c. 437 B.C.) and by the Spartans (429-426 B.C.);

but they were subdued by Agesilaus in 390 and remained under Spartan rule until 375. They again allied with Athens, to resist Philip of Macedon (344), but subsequently became dependants of Macedonia. In 314, at the instance of Cassander, they replaced their early cantonal league by a federation of newly founded cities (their largest town being Stratus). Frequent frontier disputes with the Aetolians led to the partition of Acarnania between Aetolia and Epirus c. 255; but after the fall of the Epirote monarchy in 230 the Acarnanians recovered their independence and acquired from Epirus the island of Leucas. Though they sided with Philip V of Macedon against the Romans (200), they were allowed by the latter to retain their league until 30 B.C.

Hirschfeld, in *PW*, s.v. 'Akarnania'.

M. C.

ACASTUS, in mythology, son of Pelias (see **NELEUS**); he took part in the Argonautic expedition and the Calydonian boar-hunt. When Peleus (q.v.) took refuge with him, Acastus' wife (variously named) loved him, and being repulsed, accused him to her husband of improper advances. Acastus, therefore, contrived to steal Pelcus' wonderful sword and leave him alone on Mt. Pelion, where he was rescued by Chiron (see **CENTAURS**). Afterwards Pelcus took Ioleus, putting to death Acastus' wife and, by some accounts, Acastus himself (Apollod. 3. 164-7, 173; schol. Ap. Rhod. 1. 224; cf. Paus. 3. 18. 16).

H. J. R.

ACCA LARENTIA (less correctly **Larentina**), an obscure Roman goddess, whose festival (**Larentalia** or **Larentinalia**) was on 23 Dec. A story current in Sulla's time (Valerius Antias ap. Gell. 7. 7. 5-7) makes her a prostitute, contemporary with Romulus (or Ancus Martius, Macrob. *Sat.* 1. 10. 12), who became rich by the favour of Hercules and left her property to the Roman people; another, perhaps invented by Licinius Macer, says she was wife of Faustulus (q.v.), mother of the original Arval brothers (see **FRATRES ARVALES**) and adopted mother of Romulus (Macrob. *ibid.* 17). That she had another festival in April (Plut. *Quaest. Rom.* 35) is probably a mis-statement, but see E. Tabeting, *Mater Larum* (1932), 57.

The principal work on the subject is Mommsen, 'Die echte und die falsche Acca Larentia', in *Römische Forschungen*.

H. J. R.

ACCENSI, see **APPARITORES**.

ACCENT, see **GRAMMAR**, **PRONUNCIATION**.

ACCIUS (in older books often **ATTIUS**), **LUCIUS** (170-c. 85 B.C.), Latin tragic poet, born at Pisaurum, of freedman parents, Roman in origin. He came to Rome, becoming famous as a tragic writer by 140. He was a friend of Brutus Gallaeus, and of the tragic poet Pacuvius. In 135 he visited Asia. He seems to have been a man of 'pushing' but not quarrelsome character, and posterity came to regard him as the central figure of Roman tragedy. See **DRAMA**, **ROMAN**, para. 6.

FRAGMENTS: (i) 660 lines from tragedies on Greek models—*Achilles*, *Aegisthus*, *Agamemnonidae*, *Alcestis*, *Alceio*, *Alphesiboea*, *Amphitryon*, *Andromeda*, *Antenoridae*, *Antigona* (not from Sophocles' play), *Armorum Iudicium*, *Astyanax*, *Athamas*, *Atrous*, *Bacchae* (following Euripides' extant play, but with original lyrics and cantica), *Chrysippus*, *Clytaemnestra*, *Deiphobus*, *Diomedes*, *Epigoni*, *Epinausimache*, *Erigona* (from Sophocles?), *Eriphyla*, *Eurysaces*, *Hecuba* (from Euripides' extant play?), *Hellenes*, *Io*, *Medea* (not from Euripides), *Melanippus*, *Meleager* (from Euripides?), *Minos*, *Myrmidones*, *Nicoptolemus*, *Nyctegresia*, *Oenomaus* (from Sophocles), *Pelopidae*, *Philocteta* (not from Sophocles), *Phinidae*, *Phoenissae* (free adaptation from Euripides' extant play), *Prometheus*, *Stasiastac*, *Telephus*, *Tercus*, *Thebais*, *Troades*. (ii) 44 lines from unknown tragedies. (iii) 16 lines from the *praetexta* entitled *Aeneadae* or *Decius*

on the self-sacrifice of Decius Mus in battle at Sentinum, 295 B.C.; and 23 almost continuous and a few other lines from the *praetexta* entitled *Brutus* on the Tarquins' downfall. (iv) 22 unpoetical sotadic lines from *Didascalica* (9 or more books) on Greek sources of plays, stage-technique and equipment, and Roman stage-history. (v) 2 lines from *Pragmatica* (on stage-diction?). (vi) 9 hexameters from *Annales*, on festivals. (vii) 2 doubtful lines from *Parerga*. Accius also wrote *Praxidica* (agricultural?), saturnians for Gallaeus, and amatory poems, and made new rules for spelling (e.g. for long vowels *a, e, u*, put *aa, ee, uu*; for *i, ei*; for sound *ng*, put *gg*, etc.).

Fragments: E. H. Warmington, *Remains of Old Latin* ii (with transl.—Loeb 1936); O. Ribbeck, *TRF*³ (Teubner, 1897). Plays only: L. Mueller, *C. Lucili Saturnarum Reliquiae; accedunt Acci (praeter scenica) carminum reliquiae* (1872).

E. H. W.

ACCLAMATIO was public applause in Rome at marriages, funerals, and especially performances and triumphs. The emperor and his family were greeted in the circus, theatre, and Senate by fixed words in a fixed rhythm. Nero trained his Augustiani (the corps of young noblemen which he established) in Oriental forms of salutations. The *acclamatio* might be accompanied by shaking of handkerchiefs and throwing of flowers. In the Senate it replaced the *sententia* of the *senatus consultum* and was recorded in the *acta* from the time of Trajan. The popular *acclamatio* of magistrates after election by the Senate sanctioned the choice.

Mommsen, *Röm. Staatsr.* iii. 349, 951; Dar.—Sag. i. 18; L. Friedländer, *Röm. Life*, ii. 3-4; M. P. Charlesworth, *JRS* 1943, 4 ff.

A. M.

ACESTES (*Αἰέετος, Αἰέετος*), in mythology, son of a Trojan woman of noble rank, exiled for some reason by Laomedon (various accounts in Dion. Hal. *Ant. Rom.* 1. 52. 1 ff.; Serv. on *Aen.* 1. 550; schol. Lycophron 953 ff.), and a non-Trojan father, usually said to be the Sicilian river-god Cri(m)nisus. He founded Egesta (Segesta) in Sicily, and hospitably received Aeneas (*Aen.* 1. 550).

H. J. R.

ACHAEA (*Ἀχαια*) is a name derived from *Ἀχαιοί*, the common designation for Greeks in Hittite and Egyptian texts of 1400-1200 B.C. and in Homer, where it refers particularly to Achilles' men and Agamemnon's followers. In historical times it was restricted to south-east Thessaly (*Ἀχαια Φθιώτις*), and the north coast of Peloponnesus, between Elis and Sicyon. Here a narrow territory, with good soil in the plains and on the hill-terraces, extends between the almost harbourless Corinthian Gulf and a steep range of mountains. Twelve small towns, forming a federal league, divided this territory; they met at the sanctuary of Poseidon Heliconius until Helice fell into the sea (after an earthquake in 373 B.C.), later generally at Aegium.

The Achaeans sent colonists to Sybaris, Croton, Metapontum, Caulonia in south Italy; otherwise they had an unimportant early history, remaining neutral in the Persian Wars and most of the wars between Greeks. In the third and second centuries the Achaean League (q.v.) became the chief power in Greece, eventually including nearly all the Peloponnesus and part of central Greece. After 27 B.C. this area became the senatorial province of Achaia (for its boundaries see Larsen, *op. cit.* inf., 437 ff.; J. Keil, *CAH* xi. 556 ff.).

E. Curtius, *Peloponnesos* i (1851), 403 ff.; Frank, *Econ. Surv.* iv, 259 ff.; E. Groag, *Die röm. Reichsbeamten von Achaia* (1939).

T. J. D.

ACHAEA PHTHIOTIS, see **PHTHIOTIS**.

ACHAEAN LEAGUE. An early Achaean League, organized at an unknown date, lasted through the fourth century. The later and more famous Achaean League was founded in 280 B.C. by the union of four cities, to which the remaining Achaean cities soon were added. It acquired importance through the incorporation of

non-Achaean, who were admitted on terms of equality, so that Dorians and Arcadians could become Achaean statesmen. When Sicyon was admitted after the expulsion of its tyrant in 251, Aratus (q.v. 2) of Sicyon soon became the leading Achaean statesman and adopted a definitely anti-Macedonian policy. The later admission of Megalopolis and other Arcadian cities led to hostility with Sparta and paved the way for reconciliation with Macedonia. During the Cleomenic War (see CLEOMENES III) Aratus himself asked for Macedonian help and permitted the Achaeans to join the Hellenic League of Antigonus Doson (224). This alignment lasted till Achaea went over to Rome in 198. The new alliance led to the incorporation of almost the entire Peloponnesus, but also led to frequent clashes with the Roman authorities. After the Achaean War of 146 the League was dissolved, but a smaller Achaean League soon was organized and continued under the Empire.

At the head of the League were two generals until a single general was substituted in 255. Immediate reelection was forbidden, and prominent leaders commonly served every second year. Alongside of the general stood a board of ten *demiurgoi*, who shared in the administration and presided over the assemblies. A primary assembly, the *synkletos*, was summoned at irregular intervals to deal with questions of war and peace, and later also written communications from the Roman Senate. Any meeting could consider only the one subject announced beforehand; voting was by cities, and each city probably was given a number of votes in proportion to its size. Other business was brought before the *synodos*, which met several times a year. This is mentioned frequently, but its composition never clearly described. Consequently agreement has not yet been reached on the question whether it was a primary assembly, a representative assembly, or a combination of a *boule* and a primary assembly. See also FEDERAL STATES.

Polybius; Livy, bks. 31-45. G. Niccolini, *La confederazione achea* (1914); F. W. Walbank, *Aratos of Sicyon* (1933); A. Aymard, *Les Assemblées de la confédération achaienne* (1938) and *Les Premiers rapports de Rome et de la confédération achaienne* (1938). See also under FEDERAL STATES.

J. A. O. L.

ACHAEMENIDS, descendants of Achaemenes (Hakhamanish), the eponymous founder of the Persian royal house. According to Herodotus (7. 11) and the Behistun inscription, he was the father of Teispes, ancestor of Cyrus and Darius. At first kings only of Parsumash, a vassal State of the Median Empire, the Achaemenids extended their sovereignty over Anshan and Parsa; Cyrus II (q.v.) challenged and conquered Astyages, and the Median Empire passed to the Persians (550 B.C.). Campaigns in the north and east, the conquest of Lydia and the defeat of Nabonidus of Babylonia, brought the whole of western Asia into one vast empire, to which Cambyses added Egypt. A collateral branch of the family assumed the succession with Darius (q.v.), the greatest of the Achaemenids. His reign marks the climax of Persian rule. Subsequent reverses, e.g. the failure of Xerxes' Greek expedition, and harem intrigues weakened the dynasty, until with the defeat of Darius III Codomannus by Alexander in 330 B.C. the line perished.

Classical sources for Achaemenid Persia: Herodotus; Ctesias, *Perica*; Xenophon, *Cyropaedia*, *Anabasis*, etc.; Strabo, bks. 11-17. Cuneiform: F. H. Weissbach, *Keilinschriften der Achämeniden* (1911). Archaeological: E. Herzfeld, *Archäologische Mitteilungen aus Iran* (1929-). Modern works: G. C. Cameron, *History of Early Iran* (U.S.A. 1936); C. Clemen, *Fontes historiae religionis persicae* (1920); A. Christensen, *Die Iranier*, *Handbuch der Altertumswissenschaft* iii. 1, 3; A. Godard, *L'Art de la Perse Antienne* (1930); E. Meyer, *Geschichte des Altertums* iii (1937); P. M. Sykes, *History of Persia* i (1930); *CAH* iv, chs. 1, 9, 10; vi, ch. 12; *Plu.*, arts. on individual kings. M. S. D.

ACHAEUS (1), eponym of the Achaeans; in mythology, son of Poseidon (Dion. Hal. *Ant. Rom.* 1. 17. 3), Zeus (Serv. on *Aen.* 1. 242), Nuthus (Apollod. 1. 50), or Haemon (schol. *Il.* 2. 681).

ACHAEUS (2) of Eretria (b. 484-481 B.C.), Athenian tragic poet, wrote 44 (or 30 or 24) plays, the first produced about 447 B.C. (Suidas, s.v.). Of nineteen known titles more than half are probably satyric; the philosopher Menedemus thought his satyric plays second only to those of Aeschylus (Diog. Laert. 2. 133). The Alexandrians placed him in the *Canon* (see ARISTOPHANES 2) and Didymus wrote a commentary on him. Euripides is said to have adapted one line from him (Ath. 6. 270 b) and he is twice quoted by Aristophanes (*Vesp.* 1081, *Ran.* 184). Athenaeus (10. 451 c) describes him as lucid in style, but liable to become obscure and enigmatical.

TGF, 746-59.

A. W. P.-C.

ACHAEUS (3) (d. 214 B.C.), grandson of Antiochus I, and general of Antiochus III. In 223 he recovered most of Seleucid Asia Minor from Pergamum; but he was encouraged by Antiochus' difficulties in the East to proclaim himself independent (220). His soldiers refused to follow him against Antiochus, but he maintained himself in Asia Minor until the king was at liberty to deal with him. After a two years' siege in Sardes he was betrayed to Antiochus and barbarously executed.

Polybius, bks. 5-6.

G. T. G.

ACHARNAE, the largest Attic deme (the figure 3,000 hoplites in Thuc. 2. 20. 4 is too high), lay in a corner of the Attic plain, near the pass from the Thriasian plain. It had good corn and olive land and vineyards, but its special resource lay in the charcoal-burning on Mt. Parnes. Near Acharnae (at Menidi) is a beehive-tomb which received offerings continuously from the fourteenth to the fifth century.

Thuc. 2. 19-23; Aristophanes, *Acharnians*; A. Milchhöfer, *Karten von Attika* ii. 42 ff.

T. J. D.

ACHATES, in mythology, faithful companion of Aeneas (*Aen.* 1. 312 and often); he killed Protesilaus (schol. *Il.* 2. 701).

ACHELOÛS, the longest of Greek rivers, rising in central Epirus and debouching after a course of 150 miles (mostly through mountain gorges) at the entrance to the Corinthian Gulf. Its lower reaches constituted the frontier between Acarnania and Aetolia. It had no value as a line of communications.

ACHERON, a river of Thesprotia in southern Epirus. In its upper course it ran through gloomy gorges, and it disappeared underground at several points. It was, therefore, reputed to lead to Hades, and an oracle of the dead was situated upon it (Hdt. 5. 92. 7).

ACHILLES (*Ἀχιλλεύς*), in mythology, son of Peleus and Thetis (qq.v.); usually said to be their only child, but cf. Lycophron 178 and schol. there. The etymology of his name is unknown, though a connexion with the river-name Acheloüs is possible. All the evidence goes to show that he was a man, real or imaginary, and not a 'faded' god, and that his widespread cult (Leuke in the Black Sea, Olbia, and elsewhere in that region; sporadically in Asia Minor; Epirus; doubtfully in Thessaly; Elis; Croton in Italy) is the result chiefly or solely of the *Iliad* (see Farnell, *Hero-Cults*, 285 ff.). His portrait was drawn once for all by Homer, and later writers merely added details from their own imagination, or possibly from obscure local legends of which we know nothing.

2. In the *Iliad* he appears as a magnificent barbarian, somewhat outside the circle of Achaean civilization, though highly respected for his prowess. He, alone among Homeric figures, keeps up the old practice of making elaborate and costly offerings, including human victims, at a funeral (*Il.* 23. 171 ff., condemned as 'evil deeds', 176); contrast the sceptical attitude of Andromache (22. 512-14). His treatment of the body of Hector is of a piece with this (22. 395, again stigmatized as 'unseemly deeds', and 24. 15 ff.). So also is his furious

and ungovernable anger, on which the whole plot of the *Iliad* turns; in 24. 560 ff. he is himself conscious of this weakness and afraid that it may overcome his chivalrous pity for Priam. When not roused by anger or grief, he is often merciful (21. 100 ff.), but in his fury he spares no one and has no respect even for a visible god (22. 15-20). Besides his valour in battle, he is a pathetic figure, being conscious of the fated shortness of his life (9. 410 ff., cf. 19. 408 ff.). He is capable of the most generous sentiments, witness his devoted friendship for Patroclus throughout the poem and his strong detestation of lying (9. 312), an unusual thing in a Homeric Greek.

3. He comes to Troy, apparently, of his own free will, not as in any sense a subject of Agamemnon, at the head of a contingent of fifty ships (*Il.* 2. 685), and there distinguishes himself in a series of engagements during which he takes twelve towns along the coast and eleven inland (9. 328-9), including Lyrnessos, where he captures Briseis (2. 690). Agamemnon, on being compelled to return his own captive, Chryseis, to her father (1. 134 ff.), takes Briseis from Achilles by way of compensating himself (*ibid.* 320 ff.). At this insult, Achilles refuses further service and begs his mother Thetis to move Zeus on his behalf (352 ff.). She succeeds in inducing the god to punish Agamemnon and his army; a false dream encourages the king to go out against the Trojans, who, hearing that Achilles is no longer fighting, profit by their strategic superiority (their reinforcements are close at hand, Agamemnon can get none from nearer than Greece) to offer battle, instead of merely standing on the defensive (9. 352 ff.). The result is a series of engagements in which Agamemnon loses far more men than he can afford (*Il.* 2-8). Now Agamemnon offers a full and handsome honour-price to Achilles, who puts himself in the wrong by refusing it (9 *passim*), but is later induced to let Patroclus go at the head of his followers, the Myrmidones (16. 1 ff.), to keep the Trojans from actually burning the Greek camp. Patroclus, however, is killed fighting (16. 786 ff.), and Achilles, on hearing the news, is frenzied with grief (18. 15 ff.), hastily reconciles himself to Agamemnon, goes out the next day, routs the Trojans, and kills Hector (19-22). He is wearing armour specially made for him by Hephaestus (18. 468 ff.), as his own had been worn by Patroclus and fallen into the hands of Hector. He then gives Patroclus a magnificent funeral (23) and, warned by his mother (24. 137), lets old Priam ransom Hector's body.

4. His death is foretold in the *Iliad* (22. 359-60); he is to be slain by Paris and Apollo. The *Odyssey* (24. 35 ff., a doubtfully authentic passage) describes the fight over his body, his funeral, and the mourning of Thetis and the other sea-nymphs over him. Later authors add the following details, among others.

5. He had his education from Chiron (see e.g. Pind. *Nem.* 3. 43 ff., developing *Il.* 11. 832). When the contingents were gathering for the Trojan War, Peleus, or Thetis, knowing that he would die at Troy, hid him in Scyros, dressed as a girl. Here he met Deidameia, daughter of Lycomedes, king of the island, who bore him Neoptolemus (q.v. 1). Calchas having told the Greeks that Troy could not be taken without him, Odysseus with other envoys found him and discovered his sex; after which he went willingly with them (so unnamed and rather doubtful cyclic poets in schol. *Il.* 19. 326, and many later writers). On the way to Troy, the Greeks landed in Mysia, and there Achilles wounded Telephus (q.v. 1) in battle, afterwards healing him (so the *Cypria*, which also makes Achilles marry Deidameia after the affair in Mysia). Still according to the same poem, the army then reassembled in Aulis, where the affair of Iphigenia (q.v.) occurred, went on to Tenedos, where Achilles and Agamemnon had a quarrel, and finally reached Troy, where a number of exploits of Achilles are recorded (killing of Cycnus and Troilus, checking of

a plan to abandon the enterprise, etc.). After the events in the *Iliad*, Troy was reinforced successively by the Amazon Penthesilea and by Memnon (qq.v.), who were both slain by Achilles. Immediately afterwards he was killed by Apollo (or Paris, or Apollo in the shape of Paris). So far the *Aethiopis*.

6. Further details are mostly erotic. Achilles and Patroclus were lovers (e.g. Aesch. fr. 135 Nauck); other loves were Troilus (Serv. on *Aen.* 1. 474), Polyxena daughter of Priam (Hyg. *Fab.* 110), Helen (Lycophron 171 f., where he merely dreams of her; Paus. 3. 19. 13, where he is united to her in Leuce), and, oddest and earliest, Medea (Ibycus and Simonides ap. schol. Ap. Rhod. 4. 814; Lycoph. 174; in the Elysian Fields). The story that he was made invulnerable by Thetis (save for the heel in which he traditionally got his death-wound, originally no doubt from a poisoned arrow) by being plunged into Styx is not found earlier than Statius (*Achil.* 1. 134, whereon see schol. 269). It is a common folk-tale.

A useful collection of references will be found in the art. 'Achilleus', in Roscher's *Lexikon*.
H. J. R.

ACHILLES TATIUS (1) of Alexandria, author of the *Leucippe and Clitophon* (τὰ κατὰ Λευκίππην καὶ Κλειτοφῶντα) and probably the last of the extant Greek novelists, wrote not later than c. A.D. 300. His identification by Suidas with a writer of more serious works, including a treatise on the sphere (see next article and cf. Firmicus Maternus, c. A.D. 350), is difficult to credit, and the statement that he ultimately became a Christian bishop may be rejected as a reflection of the tradition about Heliodorus (q.v.). A. T. presents his story as a narrative heard from the hero's lips; but the setting, which is not plausible, is soon forgotten, though Clitophon continues to recount his experiences in the first person. The adventures, amorous and other, are according to pattern, but they are less heroically conceived and more sensationally treated. A. T., with Heliodorus in mind, seems to have attempted to substitute realism for idealism, but by stripping off the heroic glamour he only exposes the incredibility of the material. Perhaps he had little interest in his plot, which he is always ready to abandon in favour of some irrelevant or barely relevant digression. Though the rhetoric is at once more ambitious and more ridiculous than in the other novels, A. T. has a certain liveliness of style and power of description. He was popular in later times and much esteemed by Byzantine critics; Photius placed him second to Heliodorus only on moral grounds and wrote an epigram in praise of his novel (*Anth. Pal.* 9. 203).

Dörrie, *de Longi Achillis Tatii Heliod. memoria* (1935). Life and work: S. Gaselee (Loeb); D. B. Durham, *CPhil.* 1938. See also NOVEL, GREEK.

R. M. R.

ACHILLES TATIUS (2) (probably 3rd c. A.D.), author of a Greek commentary on Aratus, the only surviving part of his work *Περὶ σφαίρας*.

Ed. E. Maass, *Commentariorum in Aratum Reliquiae* (1898), 25; *PW* i. 247.

ACHILLEUS, rebel in Egypt, A.D. 296-7, not the Domitius Domitianus of the coins, but his chief assistant. Domitianus revolted in summer 296 and was conquered by Diocletian in person early in 297. His revolt was probably not related to that of Coptos and Busiris, but was due to economic distress connected with Diocletian's reform of the coinage.

Seston, *Mélanges d'arch.* (1938), 184 ff.

H. M.

ACILIUS, GAIUS, Roman senator and historian, who interpreted for Carneades, Diogenes, and Critolaus in the Senate in 155 B.C., wrote a history of Rome, in Greek, from early Italian times to his own age, certainly to 184 B.C. (Dion. Hal. 3. 67. 5); it appeared c. 142 (Livy,

Per. 53: reading *C. Acilius*). His senatorial tradition is seen in the anecdote of Scipio and Hannibal (*Livy* 35. 14. 5). His work was reproduced in Latin by a Claudius, probably Claudius (q.v.) Quadrigarius, who would then have incorporated it in his annalistic form.

ACILIUS, see also ATTIANUS, GLABRIO.

ACOUSTICS, see PHYSICS, para. 7.

ACRAGAS (Lat. *Agrigentum*), a Doric colony founded by Gela (582 B.C.) on fertile Sicilian territory in south-west Sicily, the birthplace of Empedocles and Philinus and powerful rival of Syracuse. Its tyrant Theron, Acragas' earliest personality apart from the half-mythical Phalaris (c. 565), helped Gelon of Syracuse to crush Carthage at Himera (480). After expelling Theron's son Thrasydaeus (471), Acragas became a wealthy, pugna-cious democracy, possessing temples as amazing to Pindar (*Pyth.* 12. 2 f.) as to modern visitors to Agrigento. It was, however, sacked by Carthage (405) and, although somewhat revived by Timoleon (338) and Phintias (286–280), its Punic Wars misfortunes prevented it from regaining real prosperity until it became a *civitas decumana* subject to Rome. By Verres' time it was quite wealthy and c. 43 B.C. obtained Roman citizenship. Although not mentioned in imperial history Acragas has always remained a large city, productive of grain, wine, olives, cheese, salt, sulphur, and textiles.

Strabo 6. 272. Diod. bks. 11–23. Thuc. 6. 4; bk. 7. Polyb. 1. 17 f.; 9. 27 (excellent description). *Livy* 24. 35; 25. 40 f.; 26. 40. *Cic. Verr. passim*. P. Marconi, *Agrigento* (1929). V. Bérard, *Bibliogr. topogr.* (1941), 40. E. T. S.

ACRISIUS, in mythology, son of Abas, king of Argos, and his wife Aglaia, father of Danaë and brother of Proetus (q.v.). After Abas' death the two brothers quarrelled; in their warfare they invented the shield. Proetus, defeated, left the country, returned with troops furnished by his father-in-law Iobates, and agreed to leave Argos to Acrisius, himself taking Tiryns; both were fortified by the Cyclopes. See schol. *Eur. Or.* 965. Cf. *PERSEUS* (1). H. J. R.

ACROAMA, see ANAGNOSTES.

ACRON, HELENIUS (2nd c. A.D.), wrote commentaries (now lost) on Terence (*Adelphi* and *Eumuchus* at least) and Horace; but evidence for a commentary by him on Persius is slender. The extant pseudo-Acron scholia on Horace (ed. O. Keller, 2 vols., 1902–4) appear in three recensions of which the earliest dates from the fifth century. Alongside of excerpts from Porphyryon (q.v.), these scholia may contain genuine Acron material; but their attribution to him (not made in any MS. before the 15th c.) is probably due to a humanist. See *SCHOLARSHIP, LATIN*, and cf. Teuffel, § 365a; Schanz–Hosius, § 601. J. F. M.

ACROPOLIS, a detached hill-site containing a town or temples, but pre-eminently the *Athenian Acropolis*, a rocky eminence to the south of the Greek town, precipitous to north and east, sloping steeply to south but more accessible from west. As fortified in the sixth century B.C. it was roughly an oval about 1,000 × 480 ft., with main axis east and west and with approach steps thrust forward from west salient; it was a sanctuary site from very early times, associated later particularly with Athena. There are evidences of pre-Greek walls, but Cimon (q.v.) built great retaining walls on south and east early in fifth century B.C., when the principal buildings were the old Athena Temple or Hecatompedon (c. 550 B.C., enlarged c. 530), and the old Parthenon (c. 490), of which, as of other sixth-century temples in stone, important sculptural remains exist.

Under Pericles, after the destruction of Persian wars, the Acropolis was made glorious by the rebuilt Propylaea (q.v.), the little temple of Athena Niké beside it, and the rebuilt Parthenon (q.v.), the Erechtheum (q.v.) being added slightly later. The colossal statue of Athena Promachos, the precinct of Artemis Brauronia, and an adjacent hall (*Chalkotheke*, completed before 400 B.C.), were between Propylaea and Parthenon. There are foundations of other fifth-century buildings against the north wall. Though placing of buildings was influenced by structural and religious requirements, recent research (Stevens, op. cit. below) has shown that the approach to the Parthenon from the Propylaea was an ordered though asymmetrical scheme. On south slope outside the wall were, from east, the Theatre of Dionysus (6th c. B.C. and later), the Stoa of Eumenes (c. 260 B.C.), and the Odeon of Herodes Atticus (c. A.D. 167).

M. L. D'Ooge, *The Acropolis of Athens* (1908); G. P. Stevens, *The Periclean Entrance Court of the Acropolis of Athens* (New York, 1936). See also *ATHENS* (topography). T. F.

ACROSTIC. Acrostics were perhaps composed in Latin earlier than in Greek. They were used by Ennius and the composers of Sibylline oracles (*Cic. Div.* 2. 110–12). Phlegon (q.v.) cites two examples from oracles (*Mir.* 10, pp. 76 ff., Keller). Cf. also *Anth. Pal.* 14. 148 (to Julian the Apostate), *GGM* 1. 238–9 (where the acrostic determines the authorship of a work), Dionysius Periegeta (*GGM* 2. 102 ff., 109 ff., 513 ff.), the acrostic prologues (of uncertain date) to Plautus' plays, and the beginning and end of the *Homerus Latinus*, giving (Silius) Italicus as the author. A comedy-prologue of the third century B.C. has a series of lines beginning with α, β, etc. (O. Schroeder, *Nov. Com. Fragm.* (1915), 65).

H. Diels, *Sibyllinische Blätter* (1890).

J. D. D.

ACTA. Under the Roman Republic magistrates took an oath, on entering office, to respect the laws of the State. With the fall of the Republic and the increasing scope and importance of the emperor's enactments (loosely called *Acta*), it was desirable that these should acquire a permanence comparable with that of the laws. Magistrates, therefore, emperors included (Dio Cass. 60. 10), took the oath to observe the *Acta* of previous emperors, except those whose *Acta*, directly after their death, were explicitly rescinded (*rescissio actorum*) or at least excluded from the oath. Thus no oath was taken to observe the *Acta* of Tiberius, Gaius, Galba, Otho, Vitellius, Domitian, or Caracalla; though it is clear, from the evidence of Gaius, *Inst.* 1. 33 (citing an edict of Nero) and *Digest* 48. 3. 2 (citing an edict of Domitian), that the wise enactments of even bad emperors might survive their death. The exact definition of *Acta* was not easy. The term was eventually held to cover the 'Constitutiones Principum' (i.e. *edicta*, *decreta*, and *rescripta*); but the difficulties arising from a loose definition of it were apparent when Julius Caesar's *Acta* were ratified by the Senate after his murder (*Cic. Phil.* 1. 16 ff.). A second difficulty concerned the relation of the *Acta* of the living emperor to those of his predecessors. The first recorded case of an oath to observe such *Acta* was that taken by all the magistrates to observe the *Acta* of Julius Caesar in 45 B.C. (Appian, *BCit.* 2. 106). Similar oaths were taken to observe the *Acta* of Augustus in 29 and in 24 B.C. (Dio Cass. 51. 20; 53. 28). The more moderate emperors, as Tiberius and Claudius, sought to restrict the oath to the *Acta* of Divus Augustus, excluding their own *Acta* (Suet. *Tib.* 67; *Tac. Ann.* 1. 72; Dio Cass. 60. 10), but, with the increase of autocracy, the oath came to include the *Acta* of reigning emperors.

The *Acta Senatus* (or *Commentarii Senatus*) constituted the official record of proceedings in the Senate under the Roman Empire, the senator responsible for the record being, since the reign of Tiberius, selected by the

emperor (Tac. *Ann.* 5. 4). The *Acta Diurna* were a gazette, whose daily publication dates from 59 B.C. (Suet. *Jul.* 20); it recorded important social and political news, and was read not only at Rome but also in the provinces (Tac. *Ann.* 16. 22). The *Acta Senatus* were preserved and could be consulted by senators. Tacitus used, or depended on authorities who used, both these (e.g. *Ann.* 15. 74) and the *Acta Diurna* (*Ann.* 3. 3).

J. P. B.

ACTAEON, in mythology, son of Aristaeus (q.v.) and Autonoe, daughter of Cadmus (q.v.). A keen hunter, he one day came upon Artemis bathing; offended at being thus seen naked by a man, she turned him into a stag and he was chased and killed by his own hounds; so first in Stesichorus ap. Paus. 9. 2. 3 (see Vürtheim, *Stesichoros' Fragmente und Biographie* (1919), 29); most famously in Ovid, *Met.* 3. 138 ff. Other versions of his offence were that he was Zeus' rival with Semele (Acusilaus, fr. 33 Jacoby = Apollod. 3. 30) or that he boasted that he was a better hunter than Artemis (Eur. *Bacch.* 339-40), and that he wished to marry Artemis (Diod. Sic. 4. 81. 4). But to see any deity uninvited brings destruction (Callim. *Lav. Pall.* 101-2). For representations in art of his death, cf. P. Jacobsthal, *Marburger Jahrbuch f. Kunstwissenschaft* v.

H. J. R.

ACTE, CLAUDIA, Nero's favourite freedwoman, came from Asia Minor; hence her alleged descent from the Attalidae. Nero's passion for her was encouraged by Seneca in Agrippina's despite. She became very wealthy. Replaced by Poppaea, she apparently remained at court, since she deposited Nero's remains in the tomb of the Domitii.

A. M.

ACTIO, see LAW AND PROCEDURE, ROMAN, II, para. 6.

ACTIUM, a flat sandy promontory on the Acarnanian coast, south of the entrance to the Ambracian Gulf, forming part of the territory of Anactorium. There was a temple of Apollo there at least as early as the fifth century B.C. Actium was the site of Antony's camp in 31 B.C., and gave its name to the naval battle fought just outside the gulf, in which he was defeated by Octavian.

ACTORIONE, see MOLIONES.

ACUSILAUS, of Argos, lived 'before the Persian Wars' (Joseph. *Ap.* 1-13) and compiled *Γενεαλογίαι*, translating and correcting Hesiod, with ingenious conjectures but no literary merit.

FGH i. 100; FGRIH i. 2.

ADAERATIO, a technical term in use during the Late Roman period for payment in money for official duties, especially taxes which had been originally payable in kind. The new institution developed as a consequence of an improvement in money economy throughout the Roman Empire after the reforms of Diocletian and Constantine. The expression was much later than the habit to which it gave the name. '*Adaeratio*' seems not to have been used before A.D. 409 and '*adaerare*' not before 383, the Greek equivalents ἀπαργυρισμός and ἐξαργυρισμός not before Justinian. Tax-debts in kind, and (somewhat later) part of the dues connected with the *annona* (q.v.), and even military obligations, could be discharged in money. Officials sold legally and illegally their remunerations in kind to tax-collectors against money allowances reckoned in genuine or (more often) fictitious market prices, until government decrees regulated such exchange rates for private and for official use.

Humbert, in *Dar.-Sag.* s.v.; O. Seeck, in *PIV* s.v. F. M. H.

ADAM-KLISSI, a mound in the plain of the Dobrudja (S. Rumania), containing two Roman monuments: (1) an altar inscribed with the names of at least 3,000 Roman soldiers, which commemorates the defeat of Cornelius Fuscus or (more probably) of Oppius Sabinus in the Dacian War of Domitian (A.D. 85); (2) a trophy, dedicated by Trajan to Mars Ultor in 109, to signalize his final victory over the Dacians. Below the mound Trajan founded a small town, Tropaeum Traiani.

B. W. Henderson, *Five Roman Emperors* (1927), 162-3, 302-7. M. C.

ADEIA, permission given by the Athenian Ecclesia to make proposals or give information under special circumstances: e.g. proposals (1) to revoke sentences of *atimia* (q.v.), or to remit State debts; (2) to rescind a special clause forbidding the alteration of certain laws or decrees (Thuc. 2. 24. 1; 8. 15. 1); (3) to impose an *eisphora* (q.v.), or to borrow from the treasury of Athena. For a grant of *adeia*, at least in case (1) above, a quorum of 6,000 votes was necessary. *Adeia* was also necessary, for non-citizens, to make supplication to the assembly or lay information about crimes of which it took cognizance (see ECCLESIA). A similar procedure was observed in many other Greek States.

A. W. G.

ADHERBAL, see NUMIDIA.

ADIABENE (*Hadiab*), district of the two Zab rivers in north Mesopotamia. A Seleucid eparchy, it became a vassal kingdom, later a satrapy, of Parthia, and was constantly involved in her internal disputes and in her wars with Rome. One of the dynasties of Adiabene embraced Judaism (Joseph. *Ap.* 20. 17-37). After Trajan's conquest it became the Roman province Assyria (q.v.); the two names were thenceforward interchangeable.

M. S. D.

ADLECTIO. Under the Roman Republic a man could enter the Senate (see SENATUS) either by holding a magistracy or by having his name placed on the senatorial roll by the censors. Admission by this second means (which Sulla temporarily suppressed) was known technically as *adlectio* under the Principate. *Adlectio* was also employed to accelerate the magisterial careers of senators; an ex-quaestor, for instance, who was *adlectus inter praetorios*, like Germanicus in A.D. 9 (Dio Cass. 56. 17), could proceed directly to the consulship. Princes of the Imperial house might be adlected by the Senate—e.g. Germanicus and Drusus, son of Tiberius, in A.D. 9 (Dio Cass. 56. 17), following the precedent set for Octavian in 43 B.C. (Augustus, *Res Gest.* 1). Though the right of adlection had been largely employed by Julius Caesar, it was exercised cautiously by the first emperors, and only in connexion with the holding of an official *lectio senatus* or the tenure of the censorship: by Augustus probably, and certainly by Claudius (*ILS* 968) and by Vespasian and Titus (*ILS* 1024). After Domitian the right of *adlectio* was exercised as a normal power of the emperor. Men were adlected *inter quaestorios* (i.e. to the rank of ex-quaestors in the *cursus honorum*), *inter aedilicios*, *inter tribunicios*, *inter praetorios*. *Adlectio inter consulares* was an innovation of Maecinus and met with opposition (Dio Cass. 78. 13); under the constitution of Diocletian and Constantine it became common.

J. P. B.

ADMETUS, see ALCESTIS.

ADONIS (Ἄδωνις), in mythology, the son of Cinyras (q.v.), king of Cyprus, by an incestuous union with his daughter Myrrha or Smyrna, according to the usual myth (Ov. *Met.* 10. 298-559, 708-39). The beautiful youth was beloved by Aphrodite. While hunting he was killed by a boar, or, in some accounts, by the jealous Hephaestus, or by Ares disguised as a boar. Panyasis (in Apollod. *Bibl.* 3. 183) calls A. the son of Theias and Smyrna.

Aphrodite concealed the infant in a box and entrusted it to Persephone, who was unwilling to restore him till Zeus decreed that A. should spend part of each year on earth with Aphrodite, part in the underworld with Persephone. A. was a divinity of vegetation and fertility, whose disappearance marks the harvesting of the crops (cf. Euseb. *Præp. Evang.* 3. 11. 12). He is akin to the Babylonian Tammuz; the name Adonis may be simply the Semitic title 'Adon', 'Lord', by which he was known in Phœnicia. Byblus was especially sacred to A., and his death, which annually stained the river Adonis with his blood, was localized at the near-by Aphaca (Lucian *Syr. D.* 6-9). He was worshipped at Amathus in Cyprus, and it was probably from Cyprus that his cult was carried, by the fifth century, to Athens, where he was, at least partially, identified with Eros. His cult existed only in conjunction with that of Aphrodite (q.v., para. 3), to whom swine seem to have been sacrificed only where she was associated with A.

THE ADONIA. At Byblus there was a period of mourning for the dead A., followed by the day of his resurrection. At Alexandria the rites consisted of a magnificent pageant of the wedding of A. and Aphrodite; the next day women carried A.'s image to the sea-shore amid lamentations (Theoc. *Id.* 15). The mourning of the women and the setting out of the ephemeral 'Gardens of A.' on the house-tops marked the festival at Athens. There was perhaps considerable variation in the content as in the date of the festival, and much of the original intent of the rites appears to have been forgotten. In fifth-century Athens they were held in April, in Ptolemaic Egypt perhaps in September, while under the Empire the accepted date was 19 July. The cult was especially popular with women.

Cumont, *Syria* 1927 and 1935; A. S. F. Gow, *JHS* 1938 (detailed commentary on Theoc. 15); F. R. Walton, *Harv. Theol. Rev.* 1938. F. R. W.

ADOPTIO, a legal act by which a Roman citizen—*sui* or *alieni iuris*—enters another family and comes under the *patria potestas* (q.v.) of its chief. When the adopted person is *sui iuris* the act is called *adrogatio*. The original development of *adrogatio* is an independent development; but it has some characteristics in common with *adoptio* in the strict sense (i.e. of a person *alieni iuris*), such as the artificial creation of a *patria potestas*, the *capitis deminutio* (*mutatio familiae*) of the adopted person, and the same effects with regard to the rights of succession and property.

2. *Adrogatio* effects the fusion of two families, for together with the *adrogatus* all the persons under his power (*potestas*, *manus*) and all his property pass into the family of the *adrogator*. In early times a public act was necessary for the validity of *adrogatio*: the vote of the *comitia curiata* preceded by an investigation by the pontiffs; by the time of Cicero the *comitia* were replaced by thirty *lietors*, who gave their assent as the representatives of the *curiae*. These forms of *adrogatio*, which were valid only for Rome, were inaccessible to the provincials, who, therefore, applied directly to the emperor: this was the origin of *adrogatio per rescriptum principis* which became obligatory after Diocletian. After Antoninus Pius *impuberes* could be *adrogated*, in post-classical times women too.

3. The *adoptio* of a *filius familias* had a more private character. It was executed according to a rule of the XII Tables (see *PATRIA POTESTAS*) by a complicated mechanism of three *mancipationes* effected by the natural father with two intervening manumissions made by the future adoptive father and a final collusive *vindictio filii*. This procedure by which the father lost his *potestas* over the son and the adopter acquired it is described in

Gai. 1. 132, 134. These troublesome and antiquated formalities were finally abolished by Justinian; henceforth a *datio in adoptionem* (a declaration of the natural father in presence of the adopter and the child before the magistrate) was sufficient.

4. Adoption, since it was a method of acquiring *patria potestas*, could originally be by men only, and its object was that, in the absence of natural children, the family and its *sacra* should be carried on by the *heres*, who would also succeed to the family property. Adoption by women, allowed in post-classical times as a *solacium liberorum amissorum*, shows a change in conception. Other innovations were brought about by adopting the principle that *adoptio imitatur naturam*, of which one result was the rule introduced by Justinian that the adopter must be at least eighteen years older than the person adopted. Under him complete severance of the adopted person from his original family was no longer necessary.

5. The classical form of adoption gave to the adopted the position of a *filius familias* in the new family with all its duties and rights, especially in regard to inheritance. The new member of the family was bound to it by the agnatic and gentile tie. He received his adoptive father's name and rank; a plebeian adopted by a patrician became patrician and vice versa. For the defence of the adopted against the disadvantages of a premature *emancipatio* his right to the succession in the new family was preserved by a law of Antoninus Pius. By a further development the adopted person kept his right of succession in his former family and did not come under the *patria potestas* of the adoptive father (this is the *adoptio minus plena* in Justinian's law; its roots lie in the popular law, cf. *PLIPS.* 28 and *POxy.* 9. 1206). Only in special cases, as in that of adoption by a natural ascendant, did the full effects of the ancient *adoptio plena* remain unaltered.

ADRASTUS, the name of several mythological persons, the only one of importance being the son of Talaus, king of Argos. His name, if it means 'the unescapable', is very appropriate to a warrior-prince and gives no grounds for supposing he was originally a god. In historical times he had a cult at Sicyon and Megara (see Farnell, *Hero-Cults*, 334 ff.). Probably much of the tradition concerning him is derived from the lost cyclic *Thebais*; whether it has any historical content is doubtful.

When a young man he was driven out of Argos by dynastic rivalries and took refuge in Sicyon with his mother's father Polybus (q.v.). He married Polybus' daughter and succeeded him as king (*Il.* 2. 572 and scholiast there; Pind. *Nem.* 9. 9 ff., with schol.); afterwards he returned to Argos, making terms with Amphiarus (q.v.). While reigning there he received in his house Tydeus and Polynices (qq.v.), both exiles, and recognized in them the lion and boar to whom he had been bidden marry his daughters, Argeia (to Polynices) and Deipyle (to Tydeus) (see, e.g., Apollod. 3. 58-9). He then undertook to restore them, and began by attempting to set Polynices on the throne of Thebes. The army was led by himself, his two sons-in-law, and Parthenopæus (originally Adrastus' brother, in later accounts son of Atalanta, q.v.), Amphiarus, Capaneus, and Hippomedon—the famous Seven against Thebes; in some lists the exiles are omitted and Mæcisteus and Eteocles substituted (see Wilamowitz-Moellendorf, *Aischylos Interpretationen*, 97 ff.). On the way to Thebes the army halted at Nemea, and there were shown the way to water by Hypsipyle (q.v.). While she was thus engaged her charge, the baby Arehemorus, was killed by a serpent; Amphiarus secured her pardon and the Nemean Games were founded in memory of the infant

(see especially Eur. *Hypsipyle*). The attack on Thebes was a complete failure, only Adrastus escaping home, thanks to his marvellous horse, Arion. Our chief authorities here are Aeschylus, *Septem* and some odes of Pindar, notably *Ol.* 6. 12 and *Pyth.* 8. Ten years later Adrastus led the sons of the Seven, the Epigoni, against Thebes with better success; the city fell, but Adrastus' son Aegialeus was killed in the fighting. According to the earlier story (Paus. 1. 43. 1) the aged Adrastus died of grief on the way home; a sensational and late account (Hyg. *Fab.* 242. 5) makes father and son burn themselves alive *ex responso Apollinis*. H. J. R.

ADRIA, a Greek colony at the Po estuary, probably dating back to the sixth century, but of uncertain origin. It prospered by its trade with the Etruscan rulers of north Italy, but fell into decay in the fourth century, after the occupation of north Italy by the Gauls and the recession of the Adriatic Sea. The historian Philistus took refuge at Adria from Dionysius I of Syracuse and wrote his *Σικελικά* there. M. C.

ADRIANUS of Tyre (c. A.D. 113-93), sophist, pupil and successor of Atticus Herodes at Athens. He subsequently taught rhetoric at Rome and his works included *μελέται*, epideictic speeches, and treatises on *idéai* and *στάσεις*.

ADRIATIC SEA (ὁ Ἀδρίας; *mare Adriaticum* or *superum*). This term was used indifferently with that of 'Ionian Sea' to denote the gulf between Italy and the Balkan Peninsula. Its southward limit was extended by some authors to include the sea east of Sicily. In pre-historic times it was a route by which Baltic amber (q.v.) and perhaps also Bohemian tin (q.v.) reached Italy and Greece. Greek exploration of the Adriatic was mainly the work of the Phocaeans, who penetrated to its upper end by 600 B.C. (Hdt. 1. 163); but Greek colonization was relatively late and sporadic. The south-east coast was settled from Corinth and Corcyra in the late seventh and the sixth centuries, their chief foundations being Apollonia and Epidamnus (qq.v.). Emigrants from Cnidus occupied Black Corcyra (*Curzola*), and Syracusans (probably refugees from Dionysius I) took possession of Issa (*Lissa*). But the north Dalmatian coast was not colonized. Temporary settlements were made by Rhodes in south Apulia (Strabo 14. 654; probably in the sixth century). In central Italy Ancona was a solitary Greek foundation. Adria and Spina (qq.v.) at the Po estuary thrived temporarily on trade with the Etruscans, and finds of coins in the Po valley indicate Tarentine trade up the Adriatic in the fourth century.

Adriatic commerce and colonization were impeded by the brigandage of the Illyrians on the south Dalmatian coast, where deep recesses and off-shore islands provided ideal pirate bases. This nuisance was eventually suppressed by the Romans, who swept the Adriatic with a war-fleet after the First Punic War (229 and 219 B.C.), and from the time of Augustus patrolled it with a regular police flotilla. But Greek trade in the Adriatic fell away after 300 B.C., and the Romans made little use of this sea except on the crossings from Brundisium and Ancona (qq.v.).

ADROGATIO, see **ADOPTIO**.

ADULIS or **ADULE**, on west coast of the Red Sea (in Annesley Bay near Massowa), was used by Ptolemies II and III for elephant-hunts, and became an important export-mart for African and re-exported Indian wares, a caravan-route leading thence inland. Greeks and Indians frequented it. When the Axumite kingdom rose (1st c. A.D.; see **AXUMIS**) Adulis became their main port and base (for voyages to E. Africa and India), surpassing all

others in the third century A.D. Two famous inscriptions (combined in *OGI* 54) are among its monuments.

Periplus M. Rubr. 4; *Ptol. Geog.* 4. 7. 8; 8. 16. 11. E. H. W.

ADULTERY. I. In GREEK STATES the punishment of adultery (*μοιχεία*) ordinarily took the form of private self-help. A law of Draco allowed a man to kill anyone caught in the act with his wife, mother, sister, or daughter; according to a law of Solon the offended husband could deal with the adulterer as he liked. The adulterer could, however, buy himself off by paying a money penalty. It was also open, alike to interested persons and to others in the first instance, to enter a legal prosecution against him. Penalties were very severe and differed in the individual States. The husband of a woman convicted of adultery was compelled to repudiate her, otherwise he became liable to *atimia* (q.v.) by a law of Solon. In the Greco-Egyptian papyri some marriage contracts (so the oldest one, *PEleph.* 1) prescribe a pecuniary penalty for adultery.

II. ROMAN LAW. The punishment of adultery (sexual intercourse of a married woman with a man other than her husband) was first regulated by Augustus in the *Lex Iulia de adulteriis coercendis* (ante 18 B.C.). The mention of a legendary law of Romulus (Dion. Hal. 2. 25), punishing the adulteress with death, is doubtless an anticipation of an old rule adopted in judgements of family councils or of the usage of killing the adulterous woman and her partner caught in *flagranti* (cf. *Gell.* 10. 23; *Val. Max.* 6. 1. 23). In the Republican period the repression of adultery became less rigorous; but a reaction against the decay of ancient custom was brought by the above-mentioned *Lex Iulia*, which introduced severe penalties. By this law the father was allowed to kill his adulterous daughter and her paramour, when caught in the act in his or her husband's house; a husband could in certain cases kill the adulterer, but not his wife. The normal penalty for adultery was the banishment (in the form of *relegatio*, q.v.) of both guilty partners—but in *diversas insulas*—confiscation of parts of their property, and for the woman the loss of half of her dowry. The husband was obliged to divorce immediately, otherwise he was punished as a *leno* (procurer). The accusation of adultery had to be made by the husband or the wife's father within sixty days after the divorce; after this time it could be made within four months by anyone, on the ground that the adultery was an offence against morality. A special criminal court (*quaestio*) was instituted for cases of adultery; it was presided over by a praetor, and had much work to do: Dio Cassius (76. 16) relates that in his first consulship there were about 2,000 suits for adultery pending. The procedure shows an interesting peculiarity: slaves could exceptionally be examined (under torture) against their *dominus*. Adultery committed by a *concubina* was treated as that of a married woman.

The penalties of the *Lex Iulia*, to which a special title is dedicated in Justinian's Digest (48. 5), were made more severe by the Christian emperors. Constantine introduced the death-penalty; Justinian confirmed it (*Nov.* 134. 10), and restored the husband's right to slay his adulterous wife, but he restricted the right of making a charge against the guilty persons to the relatives.

ROMAN LAW: Mommsen, *Röm. Strafr.* (1899), 627 f., 688 f.; Ph. Lotmar, *Mélanges Girard* ii (1912), 143 f.; E. Volterra, 'Storia dell'accusatio adulterii', *Studi econ.-giur. dell'Univ. Cagliari* 1928; B. Biondi, 'Poena Adulterii', *Studi Sassaresi* xvi (1938). A. B.

ADVOCATUS. The parties to a trial, under Roman procedure, could be assisted in both its stages, *in iure* and *apud iudicem*, by legal advisers, *patroni*, *oratores*, or *advocati*. (For the difference in this terminology, not very essential, see *pseudo-Ase.* in *Cic. Div.* 4, whose words

imply that the advocate's part was a modest one: 'aut ius suggerit aut praesentiam suam accommodat amico'. Being experienced in law and procedure, they helped the party with technical advice; but they were also expected to be versed in oratory, as their task often included the delivery of a speech on behalf of the client. The activity of advocates was supposed from the earliest times to be gratuitous; but it is certain that they did not refuse gifts or money for their services. The *Lex Cincia* (204 B.C.), and again Augustus, forbade this practice, but legislation remained fruitless, so that later emperors could not do other than recognize that the advocates—now defined as 'qui causis agendis quoquo studio operantur' (Ulp. *Dig.* 50. 13. 1. 11)—might receive a *honorarium* (or *palmarium*, if payment was conditional on the case being won). The intervention of an *advocatus* was considered in classical times so necessary that the praetor promised in his edict to assign one to those who were without legal assistance. Under the later Empire the standing of the advocates improved considerably, as the professional jurists became increasingly rare. They formed a special corporation and were attached to individual courts, where they could defend the interests of their clients, acting generally as their legal representatives (which they were not in earlier times). Diocletian in his *Edictum de pretiis* fixed the maximum fees for the different functions performed by advocates; Justinian limited the *honorarium* to 100 aurei. The majority of his collaborators at the composition of the Digest were advocates.

AEACUS, in mythology, son of Zeus and Aegina (daughter of the river-god Asopus), ancestor of the Aeacidae, the (post-Homeric) genealogy being:

Some accounts give Aeacus a third, illegitimate son, Phoeus, who was killed by his brothers; they consequently left the island of Aegina (so named from their grandmother). Aeacus was celebrated for his piety. In response to his prayers a drought came to an end (Isoc. 9. 14-15 and later authors). Because the population of the island was scanty, or had died of a plague sent by Hera, he besought Zeus to help him, and the god turned a swarm of ants into men, who were, therefore, called Myrmidones (Hes. fr. 76 Rzach; Ov. *Met.* 7. 517 ff.). He judged between the gods (Pind. *Isthm.* 8. 25); built part of the walls of Troy (Pind. *Ol.* 8. 31; no other authority). After his death he became a judge of the dead (Isoc. loc. cit.; Plato, *Ap.* 41 a, *Grg.* 523 c).

H. J. R.

AEDESIUS (d. c. A.D. 355) of Cappadocia, Neoplatonist, pupil of Iamblichus and teacher of Maximus, Chrysanthius, Priscus, and Eusebius Myndius. He set up a school of philosophy in Pergamum. No writings remain; biography by Eunapius.

PIV i. 941.

AEDILES. The aediles originated as two subordinate officials of the *plebs*, created to assist the tribunes, whose sacrosanctity they partly shared, either for the maintenance of the prison, or, as is more likely, to superintend the common temple (*aedes*) and cult of the *plebs*, that of Ceres (q.v.). Soon their functions began to extend to the administration of public buildings in general, particularly to the oversight of the archives, both

plebiscita and *senatus consulta*. With the addition in 367 B.C. of two *aediles curules*, elected from the patricians, the aedileship became a magistracy of the whole people. After the admission of plebeians the curule magistracy was held alternately by either order, but in the Empire was omitted by patricians. The office was elective—either in the *concilium plebis*, or, for the *curules*, in the *comitia tributa*—and annual, being held after 367 for the consular, not the tribunician, year (see CALENDARS, para. 6). *Curules* ranked below praetors, *plebei* at first below tribunes but eventually with the *curules*. The office was non-essential in the *cursus honorum*, but its connexion with the games rendered it useful to men with political ambitions, and it was the first office to confer full senatorial dignity and the *ius imaginis*. The competence of either branch was the same. Their duties were the *cura urbis*, *cura annonae*, and *cura ludorum sollemniūm*. *Cura urbis* meant care for the streets of Rome, traffic regulations, public order in religious matters and cult practices, care for the water-supply and the market, especially the supervision of weights and measures. Consequently they had powers of minor jurisdiction. Fines exacted went to separate chests for *plebei* and *curules*. Out of the *cura urbis* developed the *cura annonae*, the maintenance and distribution of the corn-supply (see ANNONA), a heavy charge until Julius Caesar created special *aediles Ceriales* for this duty, which passed under Augustus to the *praefectus annonae* and other officials. Care for the public games, which grew out of their urban administration, increased in importance with the growth of wealth and political rivalry in the later Republic, till the greater part of the expense was borne by the aediles as a means of gaining popularity and votes. Augustus, however, transferred the games to the praetors. The *Iudi Romani* and the *Megalesia* fell to the *curules*, the *Iudi Ceriales* and *plebei* to the plebeians. Aediles are also found as the normal minor administrative officials of all Roman municipalities (see MUNICIPIUM), and in corporate bodies such as *vici* (see VICUS) or *collegia* (see CLUBS, ROMAN). See also AERARIUM.

Livy; Dion. Hal.; Cicero, *Verrines*, 2 and 5. 14. G. De Sanctis on origins, *Riv. Fil.* 1932; Kubitschek, 'Aedilis' in *PIV*; E. Kornemann, *Klio* 1915; Mommsen, *Röm. Staatsr.* ii². 470 f. A. N. S.-W.

AEDITUUS (older *Aeditumus*), properly the keeper or sacristan of a consecrated building, *aedes sacra*. In practice two kinds of official were so named, (a) a man of rank and standing, who was responsible for the upkeep of the building, (b) a servant, often a slave, who did the actual work of cleaning, etc.

See Marquardt-Wissowa, *Röm. Staatsverw.* iii². 214 ff. H. J. R.

AEDON (Ἀηδών), in mythology, daughter of Pandareos, the son of Hermes and Merope. She married Zethus (q.v.) and had two children, Itylus and Neis. Envyng Niobe (q.v.), Amphion's wife, for her many children, she planned to kill them, or one of them, at night; but Itylus was sleeping in the same room as they and she mistook the bed and so killed him. In her grief, she prayed to be changed from human form, and became a nightingale (Ἀηδών).

See schol. *Od.* 19. 518, and cf. Rose, *Handb. Gk. Myth.* 340.

H. J. R.

AEDUI, a Gallic tribe which occupied most of modern Burgundy. They appealed to Rome against the Arverni and Allobroges (121 B.C.) and received the title of *fratres consanguineique*. During the Gallic War they gave valuable though not whole-hearted support to Caesar, and when they finally joined Vercingetorix in 52 their support was lukewarm. Under the Empire they became a *civitas foederata*, and were the first tribe to furnish Roman senators. *Duxiri* replaced the *Vergobretus* as magistrates, and the hill-fort Bibracte was abandoned for Augustodunum (c. 12 B.C.). They took part unsuccessfully in the rebellions of Sacrovir (A.D. 21) and

Vindex (68). In the third century the region suffered heavily from civil war and barbarian invasion; the panegyrist Eumenius celebrates the relief measures of Constantianus and Constantine.

CIL xiii. 400; O. Hirschfeld, *Kleine Schriften*, 186–200; C. Jullian, *Hist. de la Gaule* iii. 535–40; vi. 423–30. C. E. S.

AEGAE (modern *Vodena*), early capital of Macedon, commanding the route from the Macedonian plain to upper western Macedonia. Formerly called Edessa, it formed a base for the Macedonian conquest of the coastal plain c. 640 B.C., was renamed Aegae, and remained the cult-centre of the royal house even after Archelaus moved the court to Pella (q.v.). Its strong position is illustrated in S. Casson, *Macedonia, Thrace, and Illyria* (1926), fig. 69. N. G. L. H.

AEGEAN SEA, between Greece and Asia Minor. To it the modern name Archipelago was originally applied, but the ancient Greeks derived the name Aegean variously from Theseus' father Aegeus (q.v.), who drowned himself in it; from Aegea, Amazonian queen, who was drowned in it; from Aegae city. They subdivided it into *Thracian*, along Thrace and Macedonia to the north coast of Euboea; *Myrtoan*, south of Euboea, Attica, Argolis, west of the Cyclades; *Icarian*, along (Asiatic) coasts of Caria and Ionia; *Cretic*, north of Crete. Some, like Strabo, treated the last three as separate, ending the Aegean at Sunium in Attica. The whole Aegean contains many islands in three groups: along the Asiatic coast, including Lesbos, Chios, Samos, Rhodes; a small group off Thessaly; Euboea and the Cyclades, a continuation or reappearance of the mountains of the Greek mainland. E. H. W.

AEGEUS (*Αἰγέως*), almost certainly a humanization of Poseidon of Aegae; hence Theseus (q.v.) is sometimes called his son, sometimes Poseidon's. In legend, however, he is a king of Athens, son (usually) of Pandion and Pylia, daughter of Pylas, king of Megara. Born in Megara, he afterwards conquered Attica. Probably Athenian claims to the Megarid in historical times have much to do with this and similar legends. Having no children, he consulted Delphi, and was told in riddling phraseology to be continent till he reached home (Eur. *Med.* 679, and schol.), but did not understand, and begat Theseus on Aethra, daughter of Pittheus, king of Troezen, who understood the oracle and purposely brought it to pass that the divinely ordained child should be his grandson. Later, he gave Medea a refuge on her flight from Corinth (see *MEDEA*), and married her; their son was Medus (Hyg. *Fab.* 26. 1, from some Alexandrian source). On her trying to poison Theseus when he arrived in Athens, Aegeus drove her out (different account in Hyginus, *ibid.* 2). Theseus freed him from the attacks of Pallas and his fifty sons, who were trying to overthrow him, and afterwards left for Crete to meet the Minotaur (see *MINOS*). On returning, however, he forgot to change the black sails of his ship, and Aegeus, seeing them and thinking his son dead, killed himself by leaping off the Acropolis or into the sea, hence, in this account (but see preceding article), called the Aegean (*Αἰγαῖον πέλαγος*) after him. Sec, for connected accounts, Plutarch, *Theseus*, and Apollod. 3. 206 ff. H. J. R.

AEGIMIUS, a legendary king, son (or father, schol. Pind. *Pyth.* 1. 121) of Dorus, eponym of the Dorians. Being attacked by the Centaurs, he asked Heracles to help him, and in gratitude for his aid adopted Hyllus (q.v.) and made him joint heir with his own sons—obvious Dorian propaganda.

AEGINA, an island in the Saronic Gulf, inhabited from late neolithic times and in contact with Minoan Crete and Mycenae. It was conquered c. 1000 B.C. by the Dorians under Deiphontes (q.v.), son-in-law of Temenus

of Argos. Early in the seventh century (probably) it fell to the Argive tyrant Pheidon and struck the first coins of Greece proper, the long-lived silver 'tortoiseshells'. Throughout the archaic period it was a naval power, often in rivalry with Samos (war with King Amphicrates; voyages of Sostratus of Aegina and Colaëus of Samos; establishments at Naucratis (q.v.); attack c. 520 on Samians settled in Crete).

In 506 began the long struggle with Athens. The Athenian fleet that won Salamis was raised ostensibly against the Aeginetans who had 'medized' in 491; but at Artemisium, Salamis, and Plataea they fought on the Greek side, winning the prize for valour and much besides. To this period belongs the temple of Aphaea (q.v.) with its splendid sculptures now in Munich.

When Athens and Sparta became estranged, Aegina, the 'eyesore of the Piraeus', sided with the Peloponnesians. A decisive naval defeat in 459 led to its capture by Athens and incorporation in the Delian League (458), to which it paid 30 talents yearly. The Aeginetans helped to foment the Peloponnesian War, and on its outbreak were expelled from their island, which was occupied by Athenian cleruchs, among them the families of Aristophanes and Plato. Restored by Lysander in 405 they received a Spartan harmost, and till its bequest to Rome by Attalus of Pergamum the island played a minor, mainly passive, rôle. Its supreme glory is to have inspired some of Pindar's greatest poetry, including the eighth Pythian.

Herodotus; Thucydides; Xenophon, *Hellenica*; *Oxyrhynchus Papyri* v. 842, cols. 1, 2, 3; Pindar; *IG* i². 191 f.; A. Furtwängler and others, *Heiligtum der Aphaia* (1906); G. Welter, *Aegina* (1938, with good bibliography). P. N. U.

AEGIS, attribute of Zeus and Athena, usually represented as a goatskin. When Zeus shakes the aegis (*Il.* 17. 593 ff.) a thunder-storm ensues and he puts fear into the hearts of Achaeans. Athena and Apollo use the aegis to disperse enemies and to protect friends (*Il.* 15. 229, 307; 21. 400).

The aegis made by Hephaestus (*Il.* 15. 307 ff.) for Zeus is indestructible, resisting even lightning (*Il.* 21. 400). That of Athena (*Il.* 5. 738) is surrounded by Fear, Fight, Force, and Pursuit, and has a Gorgon-head in the centre. In art the aegis appears as an attribute of Athena from mid-sixth century on (A. Rumpf, *Chalkidische Vasen*, 143). It is shown as a short cloak worn over the shoulders or, like a shield, over the left arm; it is bordered with snakes and has often the head of Gorgo in the centre. It is assumed that originally the aegis was conceived as a storm-cloud (Aesch. *Cho.* 585) and came to be regarded as a goatskin because of the similarity of words *αἶξ* goat and *καταιγὶς* hurricane.

Dar.-Sag. s.v.; N. Prins, *De Oorspronkelijke Beteekenis van de Aegis* (1931). G. M. A. H.

AEGISTHUS, in mythology, surviving son of Thyestes (see *ATREUS*; so Aesch. *Ag.* 1605); but a version apparently Sophoclean (see Dio Chrys. 66. 6; cf. Apollod. *Epit.* 2. 14; Hyg. *Fab.* 87 and 88. 3–4) makes him the incestuous offspring of Thyestes and his daughter Pelopia after the murder of the elder sons. His name suggesting the word *αἶξ*, a story is told, in connexion with that mentioned above, that he was exposed and fed by a she-goat (Hyg. *ibid.* and 252). When adult, he returned to Argos to avenge his father. All this is post-Homeric; the *Odyssey* (3. 517 ff.) evidently thinks of him as a baron having an estate near the domains of Agamemnon, and gives no reason for the quarrel except Aegisthus' intrigue with Clytemnestra (q.v.; cf. 1. 35 ff.). For his murder of Agamemnon and the revenge taken by Orestes, see the appropriate articles. H. J. R.

AEGRITUDO PERDIC(C)AE, an anonymous Latin cpyllion narrating the calamitous love of Perdiccas for

his mother, Castalia. The ascription of the poem to Dracontius (q.v.) is unwarrantable, though it almost certainly belongs to his period.

A. H.-W.

AEgyptus, see DANAUS, EGYPT.

AELIA CAPITOLINA, see JERUSALEM.

AELIANUS (1), CLAUDIUS (c. A.D. 170-235), generally known as 'Aelian', of Praeneste, where he was pontifex. He taught rhetoric in Rome, but later confined himself to writing. Extant works: *Π. ζῴων ἰδιότητος* (*De Natura Animalium*), a collection of excerpts and anecdotes of a moralizing character, concerned chiefly with the animal world; *Ποικίλη ἱστορία* (*Varia Historia*), a similar collection dealing with human life and history; *Ἐπιστολαὶ ἀγροικικαί*, short stylistic exercises in letter form. Fragments exist, chiefly in Suidas, of *Π. προνοίας* and *Π. θεῶν ἐναργειῶν*, collections designed to illustrate the workings of providence and divine justice.

Aelian's philosophical ideas, notably that of universal reason as manifested in the animal creation, derive from Stoicism; he is especially bitter against the Epicureans. His excerpts, largely derived from intermediate sources (Sostratus, Alexander of Myndos, Pamphilus, etc.), often supplement our knowledge of earlier writers. He enjoyed a reputation for Attic purity of diction (Suidas, Philostratus); he affects simplicity (*ἀφέλεια*) and lack of arrangement. His works enjoyed great subsequent popularity. He is probably to be distinguished from the author of a *Tactica* (see article below).

Suidas; Philostr. *VS* 2. 31. Editions: R. Hercher 1858 (preface); id. (Teubner) 1864. Criticism: W. Schmid, *Atticismus* (1889) iii. 1 f. (language); M. Wellmann, *Hermes* xxvi (1891), xxvii (1892), xxxi (1896), li (1916) (sources of *Π. ζ. i.*); F. Rudolph, *Leipzig. Stud.* vii (1884) (sources of *Π. i.*). W. M. E.

AELIANUS (2), author of a *Tactica* (in Greek), probably in Trajan's reign, on the long-dead Macedonian phalanx, mostly taken from Asclepiodotus (q.v.). Its value is slight.

Text: H. Köchly and W. Rustow, *Griechische Kriegsschriftsteller*, 1855.

AELIUS (1) **PAETUS CATUS**, **SEXTUS** (cos. 198 B.C.), a Roman jurist, was the author of the renowned work *Triperitita* which contained the law of the XII Tables, an account of its development by legal interpretation, and the forms of the *legis actiones*. The work was later known under the name *Ius Aelianum*; Pomponius says of it: 'ueluti cunabula iuris continet'. A. B.

AELIUS (2) **TUBERO**, **LUCIUS**, friend of M. Cicero and legatus to Q. Cicero in Asia, engaged in writing history; but of publication we have no proof. It possibly descended as material to his son, Q. Aelius (q.v. 3) Tubero, who shared his father's interest both in history and in the Pompeian cause. J. W. D.

AELIUS (3) **TUBERO**, **QUINTUS**, jurist and annalist, who fought on Pompey's side but became reconciled with Caesar, left politics after an unsuccessful prosecution of the Republican Q. Ligarius in 46 B.C., and wrote on jurisprudence and history (Pompon. *Dig.* 1. 2. 2. 46). He was reputed to be an expert in public and private law; he published several legal works which, however, did not enjoy a great popularity because of his *sermo antiquus*. In at least fourteen books, he treated Roman history from the origins to his own times; these fragments, however, may be from a monograph addressed to Oppius (Gell. 6. 9. 11). Livy cites him with Macer (4. 23. 1; 10. 9. 10), whom he may have taken as model. Pliny cites a Q. Tubero for astronomical data (*HN* 18. 235).

H. Peter, *HRRel.* 3 (1914), pp. cccxvi and 305; W. Soltau, *Latius Geschichtswerk* (1897); cf. K. J. Beloch, *Röm. Gesch.* 105. A. H. McD.

AELIUS (4), **LUCIUS** (L. Ceionius Commodus, son of L. Ceionius Commodus), praetor in 130, cos. I in 136, and adopted (as 'L. Aelius Caesar') later in the same year (*CIL* vi. 10242) as Hadrian's successor; *trib. pot.*, Dec. 136-7; cos. II, 137. Elegant, luxurious, and consumptive, he nevertheless governed the two Pannonias well (136-7). He died on 1 Jan. 138, honoured but not deified. (See also under **VERUS**, L.)

S.H.A., *Had. and Ael.*; Dio Cassius 69; *PIR*², C 605; H. Mattingly, *B.M. Coins, Rom. Emp.* iii (1936). C. H. V. S.

AELIUS (5) **PROMOTUS**, physician from Alexandria, probably belonging to the period between Hadrian and Pertinax (A.D. 138-93). He wrote a book on curative methods called *Δυναμείων*, sections of which remain. *PIV* i. 528.

AELIUS, see also s.v. **ARISTIDES**, **DONATUS**, **GALLUS**, **HADRIAN**, **HERODIAN**, **MARCIANUS**, **SEJANUS**, **STILO**, **THEON** (3).

AELLO, see **HARPYIAE**.

AEMILIANUS, **MARCUS AEMILIUS**, emperor A.D. 253. While governor of Moesia he repelled a Gothic invasion and was saluted emperor by his troops (252). Next spring he invaded Italy and was accepted as successor to Gallus (see **TREBONIANUS**). His reign lasted only three months. When news reached Rome that Valerian had been proclaimed emperor, Aemilianus, who deserved a better fate, was assassinated by his own soldiers.

AENARIA (or *Inarime*—a fanciful derivation from *Il.* 2. 783): the largest island near Naples; nowadays Ischia. The activity of its now extinct volcano Epopeus ('Typhoeus' grave according to some; *Aen.* 9. 716) rendered sojourn difficult for its successive Euboean, Syracusan, Neapolitan, and Roman settlers (Strabo 5. 248 f.; Livy 8. 22). Aenaria was famous for its warm springs and potter's clay (whence its Greek name *Pithecusae*; Pliny, *HN* 3. 82).

V. Bérard, *Bibliogr. topogr.* (1941), 78.

E. T. S.

AENEAS (1) (*Αἰνείας* or *Αἰνέας*), son of Anchises and the goddess Aphrodite, a famous Trojan leader in Homer's *Iliad* and the hero of Virgil's *Aeneid*. In the *Iliad* he is said to have been respected equally with Hector (5. 467), and honoured like a god (11. 58). He fought against Diomedes (bk. 5), Idomeneus (bk. 13), and Achilles himself (bk. 20). His actions are not strikingly heroic, and more than once he is protected or rescued by one of the gods, to whom he exhibits marked piety (20. 298, 347). Aeneas was descended from the younger branch of the Trojan royal house (20. 230 ff.), and had a grudge against Priam, who came of the elder branch, for not giving him his due (13. 460). But he himself hoped to succeed to the kingship (20. 180), and Poseidon prophesies that he and his descendants will rule over the Trojans (20. 307). Aeneas is thus the one Trojan hero who has a definite future before him.

From this hint tradition developed the legend of his flight from Troy with his father Anchises (q.v.), his son Ascanius (q.v.), and his ancestral gods (see **PENATES**) (Xen. *Cyn.* 1. 15), and the legend of his subsequent wanderings. Arctinus represents him as retiring to Mt. Ida, and afterwards he was thought to have visited or founded many places on the mainland of Greece and elsewhere, which either had names resembling his own, like Ainos in Thrace and Ainea in Chalcidice, or possessed temples of Aphrodite, often with the cult-title *Aἰνείας*, such as those in Leucas, at Actium, and at

Elymus in Sicily. This story of his wanderings was developed with the addition of other places, such as Delos and Crete, by later writers, especially by Hellanicus, Timaeus, and Dionysius of Halicarnassus. The association with Sicily acted as a stepping-stone both to Rome and to Carthage. Stesichorus may have asserted that Aeneas reached 'Hesperia', but the story that he came to Latium appears first in Hellanicus. It became popular after the wars with Greece, when patriotism urged the Romans to seek a founder within the cycle of Greek legend, but among the enemies of Greece. Among Roman writers this development is found in Naevius and Ennius, in Q. Fabius Pictor and later historians, including Livy. Considerations of chronology later made Aeneas the founder, not of Rome itself, but of Lavinium, the head of the Latin League. The connexion of Aeneas with Carthage was known to Varro, and there is a possible earlier reference to the meeting of Aeneas and Dido in a fragment of Naevius.

Virgil thus inherited a flat and disconnected story of Aeneas' wanderings, a legend of his association with the foundation of Rome, and a hero with no definite characteristics, except a scrupulous piety. Out of this material he constructed the epic of the *Aeneid*. The legends of the wanderings he wisely telescoped into the third book, while the association with Rome is developed into the great national theme of the poem. Virgil's portrait of Aeneas is based on the piety ascribed to him by Homer, but this is amplified in the full sense of the Roman *pietas* into a devotion to his father, to his mother and the gods in general, and to the great destiny of Rome. If to modern readers he still seems colourless, and his 'piety' monotonous, the key to the understanding of Virgil's Aeneas lies in the gradual strengthening of his character and purpose, which follows on his realization of his destiny as the founder of the Roman State.

The *Aeneid* ends with the slaying of Turnus by Aeneas, but other writers tell of his meeting with Dido's sister, Anna, on the banks of the Numicius (Ov. *Fasti* 3. 601 ff.) and of his purification in the river and his assumption to heaven with the title of Indiges (Ov. *Met.* 14. 581 ff.).

C. B.

AENEAS (2), commonly called *Tacticus*, probably the Aeneas of Stymphalus who was general of the Arcadian League in 367 B.C., wrote several military treatises (epitomized later for Pyrrhus), of which the one on the defence of fortified positions, probably written soon after 357, has survived. As advice to the defenders of a besieged town it is rather elementary, though it contains interesting details; but its real value is the light it throws on social and political conditions in early fourth-century Greece, for it is assumed throughout that the chief danger to the defence is not so much the enemy without the wall as the opposing faction within, who will betray the city if they can. Philologically, the work, as an early non-Attic document, has some interest for the study of the growth of the Hellenistic *Koine*.

E. Schwartz, 'Aineias (3)' in *PIW*; Illinois Greek Club, *Aeneas Tacticus* (Loeb, 1923); L. W. Hunter, *Aineiou Poliorketika* (1927).

W. W. T.

AENESIDEMUS of Cnossos, Sceptic, probably of the Ciceronian period. Philo seems to have borrowed from him an account of the *τρόποι τῆς ἐποχῆς* (grounds of suspense of judgement). Works: *Πυρρώνειοι λόγοι*, 'Υποτύπωσις εἰς τὰ Πυρρώνεια, *Κατὰ σοφίας, Περί ζητήσεως, Πρώτη εἰσαγωγή*. His aim was to restore the sceptical character which the teaching of the Academy had under Antiochus' influence lost. Diogenes Laertius (in the life of Pyrrhon) and Sextus Empiricus give many details of his teaching, which was substantially followed by Sextus himself. The *τρόποι τῆς ἐποχῆς* were directed against the reliability of the senses.

PIW i. 1023.

W. D. R.

AENUS, a Greek colony in Thrace at the mouth of the river Hebrus, founded by Mytilene and Cyme. It stood at the head of a trade route up the Hebrus valley and across the Thracian isthmus to the Black Sea. Its prosperity in the fifth and fourth centuries (temporarily interrupted by the rise of the Thracian kingdom of Sitalces, q.v.) is attested by the high tribute which it paid in the Delian League and by its copious emission of coinage. Between 341 and 185 B.C. it passed through the hands of the Macedonian, Egyptian, and Pergamene kings; in 185 it was declared a free city by the Romans.

S. Casson, *Macedonia, Thrace, and Illyria* (1926), 255-9. M. C.

AEOLIAE INSULAE (nowadays *Lipari Islands*), seven volcanic islands off north-eastern Sicily, named after their fancied connexion with Homer's island of Aeolus (*Od.* 10. 1, etc.). The largest, Lipara, contained a Cnidian-Rhodian colony (c. 579 B.C.) which practised piracy in the fourth century (Livy 5. 28). The islands became a Carthaginian naval station, which Rome captured in 252 B.C. and later assigned to the Sicilian province. Under the Republic Lipara was a *civitas decumana* (i.e. subject to tithe) but possessed Roman citizenship under the Empire. Volcanic eruptions were frequent on the islands, especially on Hiera (*Vulcano*), which was traditionally Vulcan's abode; to-day Strongyle (*Stromboli*) is the most active. Principal products: obsidian, sulphur, alum, pumice, coral.

AEOLIC, see DIALECTS, GREEK.

AEOLIS, the territory of the northernmost group of Greek immigrants to the western coast of Asia Minor, extending from the entrance of the Hellespont to the mouth of the Hermus—a linguistic and ethnological, not a geographical, unit. Near the end of the second millennium B.C. the Aeolians, deriving from Bœotia and Thessaly, planted their first settlements in Lesbos, and thence expanded northwards to Tenedos, and along the mainland coast to the east and south. The Troas was occupied much later (perhaps in the seventh century B.C.) by secondary colonization, principally from Lesbos. There must have been considerable racial fusion with the local barbarian inhabitants. Most of the Aeolian cities derived such prosperity as they enjoyed primarily from agriculture, commerce being of minor importance in Lesbos. The Aeolian settlements in the south were grouped together in a league, whose origin was probably religious. Its members were Aegae, Acgirusa, Cilla, Cyme, Gryneum (where the temple of Apollo was perhaps the central sanctuary of the league), Larissa, Myrina, Neonteichos, Pitane, Smyrna (later resettled by Ionians), and Temnos. The most important cities in the north were: Antandros, Assos, Cebren, Gargara, Ilium, Neandria, and Scapsis.

G. Hirschfeld, *PIW*, s.v. 'Aiolis (3)'.

D. E. W. W.

AEOLUS, (1) the ruler of the winds; in *Od.* 10. 2 ff. a mortal, son of Hippotes; he lives in Aeolia, a floating island, with his six sons and six daughters, who have married one another; he can tie up the winds in a sack to prevent them blowing. In *Aen.* 1. 51 ff. he is a minor god and keeps the winds in a cave on Acolia. Sometimes confused with (2) a son of Hellen (q.v.), eponym of the Aeolians and the Acolidae:

Canace killed herself, or was killed by her father, because of incest with Macareus (Ov. *Her.* 11). Arne, or Melanippe, became by Poseidon mother of (3), another ancestor of the Aeolians; see Hyg. *Fab.* 186 and Rose ad loc.; Euripides, frags. of *Μελανίππη ἡ δεσμώτης* and *Μ. ἡ σοφῆ*.
H. J. R.

AEON, see AION.

AEPYTUS, in mythology, son of Cresphontes, king of Messenia, also called Cresphontes (sec *TGF* 497) and Telephontes (Hyg. *Fab.* 137. 3). Escaping, as a child, when his father was killed by Polyphontes, he returned with false news of his own murder and, after narrowly escaping death from his mother Merope, killed Polyphontes, thus becoming king.
H. J. R.

AEQUI, primitive (Ocean-speaking?) mountaineers, inhabiting the valleys of the upper Anio, Tolenus, and Himella in central Italy (Strabo 5. 228, 231, 237; *Aen.* 7. 746). Expanding thence towards Latium, by 500 B.C. they held the mountains behind Tibur and Praeneste. During seventy years Hernici, Latins, and Romans found them, despite their small numbers (Livy 6. 12), even tougher enemies than their Volseian confederates (H. Last, *CAH* vii. 500). They established themselves on the Alban Hills and were not expelled until 431 (sec *ALGIDUS*). Thereafter, however, Aequi are only casually mentioned until 304, when they apparently occupied their original central Italian area. Rome now almost exterminated them; she established Latin colonies at Carsoli and Alba Fucens, gave the surviving Aequi *civitas sine suffragio* and rapidly romanized them (Livy 9. 45; 10. 1. 9). The Aequian nation thus disappeared, although a *municipium Aequiculorum sive Aequiculanorum* is still recorded after 90 B.C. (Pliny, *HN* 3. 106); its name survives in the district Cicolano north of the Fucine Lake. Their name (*aequi*) gave rise to the tale that the Aequi invented the *ius fetiale* (Livy 1. 32).

R. S. Conway, *Italic Dialects* i (1897), 300 f.

E. T. S.

AEQUITAS, see PERSONIFICATIONS.

AERARIUM, derived from *aes*, denotes 'treasury'. The main *aerarium* of Rome was the *aerarium Saturni*, so called from the temple below the Capitol, in which it was placed. Here was kept the State treasure, originally mainly of bronze, *aes* (hence the name), but including also ingots of gold and silver and other valuables. With it was associated a public record office, the *tabularium* (q.v.).

The *aerarium* was controlled by the quaestors under the general supervision of the Senate, with a subordinate staff of *scribae*, *viatores*, etc. The *tribuni aerarii* (q.v.), men of a property-class a little below the knights, were probably concerned with making payments from the tribes into the treasury. The Roman mint was associated with the temple of Juno Moneta, but it is possible that the coinage of *aes*, as opposed to gold and silver, was, at first at any rate, associated with the *aerarium*. The *aerarium sanctius* was a special reserve, fed by the 5 per cent. tax on emancipations. Treasure was withdrawn from it in 209 B.C. and on other occasions. Caesar in 49 B.C. insisted on seizing the reserve for his own uses.

Caesar placed two aediles in charge of the *aerarium*, Augustus two *praefecti* (28 B.C.) and then two praetors (23). Claudius (A.D. 44) placed it again under the quaestors, Nero, finally, in A.D. 58, under two *praefecti*. The *aerarium* of the Empire at first dealt with important revenues, but stood, effectively, at the disposal of the emperor. It steadily lost ground to the *fiscus* (q.v.) and sank to be a mere city-chest of Rome. See also FINANCE, ROMAN.

The *aerarium militare*, founded by Augustus in A.D. 6 to provide for the pensioning of discharged soldiers, was fed by special grants and by the *vicesima hereditatum*, an estate-duty affecting only Roman citizens. It was

administered by three praetors, at first drawn by lot, later nominated by the emperor.

O. Hirschfeld, *Die Kaiserlichen Verwaltungsbeamten* (1905), 8 ff., 18 ff.; *PW*, s.v.

H. M.

AERARIUS, at Rome, the citizen who, having no land-property, was not registered in any Servian tribe. He was exempted from voting and military service, but had to pay a poll-tax in proportion to his means. The half-citizens (*Caerites*, q.v.) who were not landowners, from 353 B.C. onwards; the Latins, even if they possessed estates; and the citizens of Capua after their rebellion (211), were also counted as *aerarii*. The class was suppressed (c. 312) by Appius Claudius and restored in 304 by Fabius Rullianus, who retained, however, the distribution of the *aerarii* among the four urban tribes. People punished with removal from their tribe for moral or military misbehaviour were also called *aerarii*.

W. Kubitschek, *PW*, s.v.; Mommsen, *Röm. Staatsr.* ii³. 392 ff.; strongly opposed by A. H. J. Greenidge, *Infamia* (1894), 106 ff., who attributes the origins and meaning of the word *aerarius* 'not to the tribes but to the centuries', and by P. Fraccaro, *Athenaeum* 1933. P.T.

AES, bronze, i.e. copper, as generally used with alloy of tin, etc.

Aes, by itself, can denote (1) a document recorded in bronze, e.g. the ground-plan of a colony, (2) 'stipendium', 'military pay', and from that 'military service', (3) the bronze list of recipients of free corn (*aere incisi*). *Aes*, with explanatory adjectives, has a wide range of uses: thus *aes alienum* (or *circumforaneum*) = 'debt', *aes multaticium* = 'money raised by fines', *aes equestre* = the grant to the knight to buy his horses, *aes hordearium* = the allowance for the keep of the horses. *Aes et libra* represented the old method of purchase, by touching the scales with a piece of bronze.

All these uses depend on the fact that bronze was the first metal employed by the Romans to measure values (see COINAGE, ROMAN). Most important is the reckoning with cardinal numbers and the genitive *aeris*, representing originally pounds of bronze, but, subsequently, perhaps, smaller amounts, as the *aes* fell from the full pound to two ounces, one ounce, a half, and even a quarter. The characteristic meaning, however, seems to be the original, 'pounds', so that, even in later days, when the silver *sestertius* was the unit of reckoning, it was equated to the old pound of bronze. When Gaius gives the limit fixed by the *Lex Voconia* as 100,000 *aeris*, he does not mean anything different from the 100,000 *sestertii* recorded by Dio Cassius.

PW, s.v.; H. Mattingly, 'Aes and Pecunia', *Num. Chron.* 1943, 21 ff.

H. M.

AESCHINES (1) (c. 390–after 330 B.C.), the orator, son of Atrometus, an Athenian who, exiled by the Thirty, fled to Corinth. Returning to Athens some years later, he kept a school. Of A.'s early life we know little beyond what is recorded by the malice of Demosthenes, from which the only truth which emerges is that he was brought up in comparatively humble circumstances and had to earn his living at an early age. The fact that A. himself frequently boasts of his good education perhaps indicates an inferiority complex in this matter. He was first a clerk to some minor officials, and later an actor. He served as a hoplite at Mantinea and Tamynae, obtained political employment under Eubulus, c. 357 B.C., and was subsequently clerk to the Ecclesia. In 348 he was a member of the embassy sent to Megalopolis, when, having gone out as an opponent of Philip's designs, he came back with changed views, having recognized, as he says himself, that resistance was impracticable. Two years later he went with Demosthenes and others on the embassies which resulted in the peace of Philocrates. Demosthenes prepared to prosecute A. for taking bribes from Philip, and enlisted Timocrates as his fellow-

prosecutor. A., however, prosecuted the latter as being a person of notorious evil character and therefore debarred from speaking in public. He appears to have proved his case. In 343 B.C. Demosthenes brought the action in which he and A. delivered the speeches entitled *De Falsa Legatione*, and A. was acquitted by a narrow majority. In 339 he delivered before the Amphictionic Council a provocative speech which led to the outbreak of the Sacred War. In 337, when Ctesiphon proposed to confer a crown on Demosthenes, A. impeached Ctesiphon for illegality; the case was not heard till 300, when A., having failed to obtain a fifth of the votes, was fined 1,000 *drachmae*. He retired to Asia Minor, where he lived, according to Plutarch, as a professional sophist.

2. Aeschines had no consistent policy: he was admittedly an opportunist. Demosthenes definitely accused him of changing front in consequence of bribes offered by Philip. A. admits having changed his views, but only when he found that the policy which he first advocated was impossible. He is further accused of having given false reports of Philip's intentions, with a view to misleading the public. It is more probable that he was himself misled: a self-made man, vain of his success, may well have been imposed on by the subtle flattery of the adroit diplomatist who was able to convince even Isocrates of the purity of his intentions. But he cannot be acquitted of bad taste and lack of serious judgement: his speech to the Amphictions, which led to a riot and caused a war, was due, as he admits, to momentary exasperation, and, disregarding the serious consequences, he glories in the effect of his oratory on the audience.

3. SPEECHES. *Against Timarchus*—who is accused of (a) private immorality, (b) prodigality, (c) corruption in public life.

On the Embassy: The charge of treason brought by Demosthenes really referred to the second embassy, though he implied that A. was corrupt both before and after. A. diverts attention by laying stress on the conduct of the first embassy, about which no specific charge had been laid. After an appeal for impartiality there follows an amusing narrative of the embassy. The main line of defence is that A. was himself deceived by Philip. He succeeds in thoroughly obscuring the issues, and the speech is a fine piece of advocacy.

Against Ctesiphon: A. proposes to prove that Ctesiphon's proposal was illegal, his statements about Demosthenes untrue, and the result of his action harmful. (a) As Demosthenes was subject to *εὐθυνα* (see EUTHYNA), it was illegal to propose to confer a crown on him; (b) it was illegal to make the proclamation in the theatre; (c) the assertion that Demosthenes had acted for the best interests of Athens was false. The first two charges are dealt with by legal argument, the third by a lengthy discussion of Demosthenes' public policy.

4. A man of dignified presence and fine voice, A. deprecated the use of extravagant gestures by an orator, preferring a statuesque pose. Proud of his education, he displays it by frequent quotation of poetry. In the use of historical argument he cannot compare with Demosthenes, but in a battle of wits he more than holds his own. His vocabulary is simple but effective, though occasional obscurities may be found in his sentences. Ancient critics ranked him lower than he deserves; the fact is that he was not aiming at literary perfection; his object was to produce a powerful effect on his audiences, and he was justified by the result. With no initial advantage of birth, education, or even principle, he raised himself by the force of his eloquence to a position of authority and importance.

For general bibliography, see ATTIC ORATORS; passages in Demosthenes, *de Corona*. Text: Blass (Teubner, 1903). Text and translation: Adams (Loeb); Martin and Budé (Budé). Commentaries: *In Ctes.*, Gwatkin and Shuckburgh; *Sur l'ambassade*, Julien and Pérera (1912). Index: S. Preuss (1896); J. F. D.

AESCHINES (2) SOCRATICUS (4th c. B.C.), of the Athenian deme Sphettus, one of Socrates' most devoted adherents, was present at his master's condemnation and death. He founded no school of philosophy, but is said to have had Xenocrates as a pupil. He also wrote speeches for the law-courts, and taught oratory. He fell into great poverty, but found a refuge at the court of Syracuse; whether in the time of Dionysius I or in that of Dionysius II (i.e. after 368) is not known; he returned to Athens after the expulsion of Dionysius II in 356. He is best known as the author of Socratic dialogues which were highly esteemed for their style and their faithfulness to Socrates' character and way of speaking. Those which were pretty certainly genuine are *Μιλτιάδης*, *Καλλίας*, *Ἀξίλογος*, *Ἀσπασία*, *Ἀλκιβιάδης*, *Τηλαύγης*, *Πίνων*; seven others passed under his name, but were judged by antiquity not to have the genuine Socratic character.

Ed. H. Dittmar (1912); *PW* i. 1048.

W. D. R.

AESCHYLUS. (See also TRAGEDY.)

I. LIFE (525/4-456 B.C.)

1. Aeschylus, son of Euphorion of Eleusis, a member of a Eupatrid family, was born 525/4 B.C. (*Marm. Par.*) and witnessed the end of tyranny at Athens in his youth, and the growth of democracy throughout his life; he fought at Marathon (*Marm. Par.*), where his brother Cynegeirus met a noble death, and probably at Salamis (schol. Aesch. *Pers.* 429; Pausanias (114. 5) adds Artemisium, and the *Life* Plataea, but these reports are much less certain). On the strength of Ar. *Ran.* 885-7 many have believed that he was initiated into the Mysteries. It is not clear what inference should be drawn from Aristotle's statement (*Eth. Nic.* 3. 1) that when accused of revealing the Mysteries, he replied that he did not know that what he said was something which might not be uttered. (Clement of Alexandria (*Strom.* 2. 461) says that he obtained acquittal by proving that he was not initiated; there is no agreement as to the plays in which the supposed revelation was made.) But his temperament was profoundly religious and intensely patriotic, and the effect upon it of the great events of his youth and manhood was seen in his assertion of the supremacy of Justice and his conception of Divine Government.

2. His first appearance in tragedy must have been very early in the fifth century (Suidas, s.v. 'Pratinas') and his first victory was in 484 (*Marm. Par.*). Of his extant plays, the earliest, the *Suppliants*, cannot be certainly dated, the *Persae* was produced in 472, the *Septem contra Thebas* in 467, and the *Oresteia* (*Agamemnon*, *Choephoroe*, and *Eumenides* with the lost satyric *Proteus*) in 458; the *Prometheus* trilogy was probably one of his latest plays (see G. Thomson's edition). He paid probably two visits to the court of Hieron in Sicily, the first not many years after the foundation by Hieron in 476 of the new city of Aetna, the second after the production of the *Oresteia*. On the first visit he wrote a play (*Aetnae* or *Aetnaeae*) in honour of the new city, and gave a performance of the *Persae* at Hieron's request; the second ended with his death at Gela in 456. No better reason for these visits need be sought than the attraction of such a centre of literary men as Hieron's court; the causes imagined by old writers—his defeat by Sophocles in 468, or by Simonides in the composition of an epitaph on the heroes of Marathon, or the collapse of the wooden theatre during one of his plays, or the unpopularity caused by the terrifying effect of the *Eumenides*—may be dismissed. The epitaph on his monument at Gela, in which his fighting at Marathon is mentioned, but not his poetry, may (as Paus. 1. 14. 5 asserts) or may not have been composed by himself. After his death the Athenians decreed that anyone desiring to produce the works of Aeschylus should be granted a chorus by the archon

(Vit. Aesch.). In view of this, not too much must be made of Aristophanes' allusion (*Ran.* 807) to disagreements between Aeschylus and the Athenians; but, unless Aristophanes' picture of him is wholly wrong, we can believe that he was by temperament somewhat aloof and warm-tempered as well as high-souled. The figures in the *Life* and in Suidas giving the number of his plays and victories are uncertain or corrupt. The catalogue of his plays in the Medicean MS. includes 72 titles, but omits 10 plays ascribed to him elsewhere, most of them probably correctly. The statement in the *Life* that his plays gained many victories after his death may well be true.

II. WORKS

3. The trilogies or tetralogies of plays connected in subject which are certainly recorded are (1) the *Lainis*, *Oedipus*, *Septem contra Thebas*, and the satyric *Sphinx*. (2) the *Prometheus Desmōtēs*, *Pr. Anómēnos*, and *Pr. Pyrphōros*; (3) the *Oresteia* (see above); (4) the *Λυκούργεια*, including the *Edoni*, *Bassarides* or *Bassarai*, *Neavískoi*, and satyric *Lycurgus*. No connexion of subject can be traced between the plays produced in 472—the *Phineus*, *Persae*, *Glaucus Potnieus*, and satyric *Prometheus*; but it is practically certain that there was a Danaid trilogy including the extant *Suppliees*, the *Aegyptii*, *Danaides*, and probably the satyric *Amymone*, and a number of titles have been grouped together with considerable likelihood:

Myrmidones, *Nereides*, *Phryges* or *Ἐκτορος Αὔτρα*, with choruses attendant upon Achilles, Thetis, and Priam (see Wilamowitz, *Interpret.* p. 245). A papyrus fragment of the first play has been recovered (*Supp. Aesch.* p. 31).

Ὀπλων Κρίσις, *Threissae*, *Salamini*, the first turning upon the contest for the arms of Achilles, the second on the death of Ajax, the third perhaps on the misfortunes of Teucer.

Argivi, *Eleusini*, *Epigoni* (or *Nemea*, *Argivi*, *Eleusini*: see Wilamowitz, loc. cit. p. 68), dealing with the hostilities of Argos and Thebes; the *Eleusini* corresponded in subject to Euripides' *Suppliees*.

Lemnii, *Hypsipyle*, *Argo*, *Cabiri*, on the Argonautic story. (The *Nemea* may also have belonged to this group, and if so, one of the other plays must go. The statement in Ath. 10. 428 f. that Aeschylus brought drunkards on the stage for the first time in the *Cabiri* suggests a satyric play.)

Baechae, *Xantriae*, *Pentheus* (order uncertain).

Δικτυουλκοί, *Polydeutes*, and *Phorides* (satyric, *IG* iii. 973), on the story of Perseus and connected legends. A papyrus fragment of the first-named has been published (*Supp. Aesch.* p. 71; D. L. Page, *Greek Literary Papyri*, 8 ff. (Loeb, 1940)).

Besides these, the *Telephus* and *Mysi* probably belong to one group, the *Memnon* and *Ψυχοστασία* to another, and the *Ixion* and *Perrhaebides* to a third.

The titles not enumerated above include the *Athamas*, *Actnae* or *Actnaeae*, *Alcmene*, *Atalanta*, *Heliades*, *Heraclidae*, *Thalamopoioi* (possibly an alternative title for one of the plays of the Danaid trilogy), *Ἰερείαι*, *Callisto*, *Cares* or *Europa* (of which a papyrus fragment exists), *Cressae*, *Niobe* (for a considerable fragment, see *Greek Poetry and Life*, 106 ff.; D. L. Page, op. cit. 2 ff.), *Palamedes*, *Penelope*, *Propompoi*, *Semele* or *Hydrophoroe*, *Toxotides* (on the death of Actaeon), *Philoctetes* (see Dio Chrys. 52), *Orithyia*; and the satyric plays, *Διονύσου Τροφοί*, *Θεωροί* ἢ *Ἰσθμιασταί*, *Ceryon*, *Kípukes*, *Circe*, *Ixon*, *Ὀστολόγοι*, *Sisyphus* (possibly two plays, *Σ. δραπετής* and *Σ. περποκυλιστής*), *Ψυχαγωγοί*.

III. CHARACTER OF HIS WORK:

4. It was Aeschylus who in all probability organized the external presentation of the drama on the lines

which were to become traditional—the rich costumes, the decorative (though probably not in his time thick-soled) cothurni, the solemn dances. He seems to have had a special liking for gorgeous or impressive spectacular effects, such as were presented in the *Suppliees* and *Eumenides* and, indeed, in nearly all his plays, though in a certain fondness for the barbaric (cf. Ar. *Ran.* 928 ff., 962 f.) and in some experiments in mechanical devices which may have bordered on the grotesque his successors did not follow him. The Egyptian and Oriental dresses in the *Suppliees* and *Persae* are of a piece with his enjoyment of the geography of strange lands. The Persian Wars affected him as they affected Herodotus. His love of long and magnificent descriptions—the battle of Salamis in the *Persae*, the armour of the heroes in the *Septem*, the fall of Troy in the *Agamemnon*—is characteristic, and in a trilogy there was room for it. In other respects, too, he was a master of impressiveness—the long silences of some of his characters, the recurrent refrains (*ἐφύμνια*) of many choral odes, the solemn grandeur of Darius in the *Persae*, the litany of invocation in the *Choephoroe*, are sufficient illustrations. It must also have been he who created the tragic dialogue in the forms which became regular, though in him they sometimes show (especially in stichomythia, as compared e.g. with Sophocles) a certain stiffness, and there is not much adaptation of style to speaker. His characters are 'typical', in the sense that in most there is not much minute drawing of the details of character—Danaus is the cautious father, Pelasgus the constitutionally-minded king, Atossa the royal mother, Eteocles the champion and defender of his city, Prometheus the victim and the unyielding opponent of tyranny, and so on—and that most are the embodiment each of some great passion or principle which determines all their words and acts.

5. The characters share the greatness of the issues which are worked out in their destiny. A man's destiny depends on the interaction of two factors, his own will and the higher powers that rule the world; each of the great personages of Aeschylus possesses a will that can rise to the conflict; but the Clytemnestra of the *Agamemnon* stands above them all as one in whom the imagination of a poet is added to a commanding and relentless personality. Not that Aeschylus is incapable of pathos; but even in Cassandra there is no lack of strength.

6. His choruses are all very distinctly characterized, though still 'typical'; the foreboding solemnity of the old men of the *Agamemnon*, tremulous, not what they were, but not prepared to endure an Aegisthus, contrasts sharply with the fussy, noisy terror of the women in the *Septem*; and the tender sympathy of the Oceanids with the savage joy of the Erinyes in their horrible office. The chorus in most plays serves as a foil to set off in relief the character of the leading personage. Now and then, as in the Watchman in the *Agamemnon* and the Nurse in the *Choephoroe*, there is a thoroughly homely character with little human touches.

7. In the *Frogs* of Aristophanes Aeschylus is made to defend the 'high-flown' language with which he is taunted on the ground that great thoughts and minds need great words for their expression, in other words, that the grandeur of his style is of a piece with that of his characters and conceptions. The defence was a just one in a poet who had fought at Marathon; the critics belonged to an age when grandeur did not come naturally and was not taken seriously. He is not afraid of compound words of which each embodies a whole picture; of epithets strung together in a mass, passing rapidly from one metaphor to another, rather than giving for comparison (as Sophocles does) a single picture clearly and beautifully drawn; of phrases suggesting the outline of some great imaginative idea, not so minutely analyzed as to be expressible in simple language. He lives in a world of metaphor, and his metaphors are

drawn from a wide range of sources in human life and the natural world, and if sometimes strange, often give pictures of incomparable beauty. He is fond of lines consisting of but three resounding words, and does not mind an occasional repetition or a neglect of the caesura.

8. The plot of an Aeschylean play is usually of the kind which Aristotle calls simple or straightforward (*ἀπλή*), i.e. uncomplicated by *περιπέτεια* or by recognition scenes of the kind which often compose the crisis in his successors' plays; events move relentlessly forward, as the divine plan works itself out. The connected trilogy was a form specially fitted for the presentation of the divine operation in its slow but certain working, and the forms of surprise, which were very telling and almost necessary when the action was confined to a single play and a single day, were less natural to Aeschylus. For what Aeschylus taught was the lesson of the ultimate justice of Providence, in whose designs the rival claims, whether of men or of supernatural powers, were at last reconciled and contending wills brought to work together within the universal scheme of ordered government and goodwill towards men, which is what the name of Zeus signifies to him, and in which there is room for both Apollo and the Eumenides. That at least was the moral of the *Oresteia* and the Prometheus trilogy, and probably of the Danaid trilogy also, as is strongly suggested in the choruses of the extant play. Everything that is of the nature of *ὑβρις*, unless it has become incurable, must be pruned of its selfishness and its excess—the Danaids' rejection of Aphrodite, the irreconcilability of Prometheus, the savagery of the age of the Titans and the Furies. Zeus himself (this is perhaps the boldest of Aeschylus' imaginations) has had to grow in wisdom and learn the spirit of good government. The current ideas of inherited evil, of the curse upon a house and the fatality of great prosperity, Aeschylus takes over but purifies. The curse will not fall on a man unless he calls it out by his own wrongdoing and so gives the demon in the house his chance, nor will wealth, perilous though it be, harm its possessor if he keeps himself free from *ὑβρις*; the stroke of Justice, however long delayed, will never fail to fall where it is deserved, but there may be at last, by the grace of God, an escape from the fatal chain of evil, and the cruellest suffering, like that of Io, may be seen in the end to have been only a step in a great and beneficent design of the Divine Will.

9. In the history of his own time, no less than in legend as he interpreted or refashioned it, Aeschylus read the same lessons. We cannot fully explain the echoes of the history of contemporary Argos in the *Suppliants*, but the antithesis of tyranny and freedom was in the air the poet breathed, and it is not far below the surface in any play. The failure of Persia was unmistakably the downfall of *ὑβρις*, and as for Athens, the salvation of the State lay in freedom and righteousness and in the reconciliation, through moderation on either side, of rival claims—that is the moral of Athena's speeches in the *Eumenides*, a play which ends in a great festival of reconciliation, recalling at every point the Panathenaea, the festival of united Athens (see W. Headlam, *JHS* 1906).

AESCULAPIUS, latinized form of *Asclepius* (q.v.). A. was brought to Rome from Epidaurus at the instance of the Sibylline Books, perhaps seconded by Delphi, after a plague in 293 B.C. Legend told how the sacred snake, incarnating the god, itself chose the Insula Tiberina for its abode, and there on 1 January 291 a temple was dedicated to A. (Livy 10. 47; *epit.* 11; *Ov. Met.* 15. 622-745; *Fasti* 1. 289-94). The cult was patterned directly on that of Epidaurus, but of the minor deities there only Hygieia was received, to whom, from about 180 B.C. (Livy 40. 37) the name of the Italic goddess Salus was sometimes applied. They received a joint cult from the military in various parts of the Empire, but the relative strength of A. in Dacia and Spain may be due to Greek or Oriental elements there. The A. worshipped with Caelestis in and about Carthage is a Semitic god of the Eshmun type.

AESEPUS, god of the Mysian river of that name, Hesiod, *Theog.* 342.

AESERNINUS, grandson of Asinius Pollio (q.v.), an orator under Tiberius.

AESON, see JASON (1).

AESOP, see FABLE.

AESOPUS (1st c. B.C.), tragic actor, 'gravis' (Hor. *Epist.* 2. 1. 82), contemporary of Roscius (Quint. *Inst.* 11. 3. 111 'Roscius citator, Aesopus gravior'), gave the young Cicero lessons in elocution. *Auct. ad Her.* (3. 21. 34) suggests that he was greatly his senior: as an optimiste, he supported Cicero's recall from exile (*Sest.* 120-3), and returned to the stage for Pompey's ludi, 55 B.C., without much success (*Fam.* 7. 1. 2). See *Div.* 1. 80; *Tusc.* 4. 55; *QFr.* 1. 2. 14. His son, M. Clodius Aesopus, was rich enough to be a wastrel (Hor. *Sat.* 2. 3. 239; Pliny, *HN* 9. 122). G. C. R.

AETERNITAS, see PERSONIFICATIONS.

AETHER, see AETHER.

AETHERIAE PEREGRINATIO, see PEREGRINATIO AD LOCA SANCTA.

AETHIOPIS, see EPIC CYCLE.

AETHRA, in mythology, daughter of Pitheus, king of Troezen, and mother of Theseus by Aegeus (qq.v.). Since Theseus was often called son of Poseidon, various explanations grew up. Aethra was sent by Athena (hence called Apaturia, the Deceitful) to the island of Hieria or Sphairia, where Poseidon met her (Paus. 2. 33. 1); Poseidon visited her the same night as Aegeus (Apollod. 3. 208, *Hyg. Fab.* 37. 1); it was a tale invented by Pitheus to save her credit (Plut. *Thes.* 6). Her appearance as waiting-maid to Helen (*Il.* 3. 144) also needed explanation; a story, apparently as old as the Cycle (*Iliu Persis*, fr. 3 Allen, cf. Apollod. 3. 128), says the Dioscuri carried her off while Theseus was in Hades, as reprisal for his kidnapping of Helen, and her grandsons, Demophon and Acamas (qq.v.), fetched her home when Troy fell. H. J. R.

AËTION, painter (and sculptor?), dated by Pliny 352 B.C. In his most famous picture, the 'Marriage of Alexander and Roxane' (not before 327), Roxane was seated in the marriage chamber, Alexander standing

before her, Hephaestion leaning on Hymen; Eroses fluttered round the chief actors and played with Alexander's arms in the background. A. was probably not the sculptor mentioned by Theocritus (*Epigr.* 8) and Callimachus (*Epigr.* 24).

T. B. L. W.

AETIUS, Eclectic of the first or second century A.D., summarized in his *Συναγωγή περί ἀρεσκόντων* the opinions of the Greek philosophers on natural philosophy. These *Placita* are reproduced in the ps.-Plutarchean *Epitome* and in Stobaeus' *Eclogae*, and have been edited by H. Diels in *Doxographi Graeci* (1879), 273-444. They form one of our most important sources for the opinions of the philosophers whose works have for the most part perished.

PW i. 703.

W. D. R.

AETNA, (1) Europe's highest active volcano (10,758 feet), lying between Tauromenium and Catana in Sicily. Its fertile lower slopes produce excellent grapes; forests cover the middle slopes; the upper slopes are bare. Its eruptions, which reputedly drove the Sicani into western Sicily, greatly impressed the ancients, who commonly attributed them to a giant, either Typhon or Enceladus, buried beneath. Roman ruins near the summit prove that Aetna was frequently climbed (by Hadrian amongst others). Empedocles is said to have committed suicide there.

[Lucilius], *Aetna*; Strabo 6. 273 f.; Pind. *Pyth.* i. 20 f.; Aesch. *PV* 351 f.; Luer. 6. 640 f.; Verg. *Aen.* 3. 570 f.; Gell. 17. 10. C. S. du Riche Preller, *Italian Mountain Geology* (1923).

(2) A town lay at the southern foot of the volcano near *Paterno*. Originally a Sicel settlement named Inessa, it was renamed Aetna in 461 B.C., when Hieron's Doric colonists, fleeing from Catana (q.v.), came there. Aetna was a Syracusan stronghold which Dionysius garrisoned with Campanians whom Timoleon ultimately ejected. Under the Romans it was a *civitas decumana* which Verres plundered unconscionably. Its subsequent history is unknown.

Strabo 6. 268; Thuc. 3. 103; Diod. bks. 11-16; Cic. *Verr.* 3. 23. 44; 4. 51.

E. F. S.

AETNA, Latin didactic poem in 646 hexameters, was placed among Virgil's minor works in early manuscripts. This ascription was doubted in Donatus' day, and very few accept it now. Style, metre, and language point on the whole to the early Silver Age; since the poem mentions the volcanic activity of Campania as extinct, it cannot be placed later than the earthquake of A.D. 63. Seneca, *Ep.* 79. 5, prompted the ascription to Cornelius Severus, Ovid's friend (an ascription supported by some later manuscripts), or to Lucilius Junior, Seneca's correspondent; but Seneca's words suggest a description of Aetna inside a larger work, not a separate poem on Aetna.

Rejecting mythological explanations, the unknown author argues that the controlling force behind eruptions is wind operating at high pressure in narrow subterranean channels, and that the volcanic fire, produced by friction, gets a nutritive material especially in the lava-stone (*lapis molaris*). The poem is embellished by digressions. One passage (224-73) extols physical science; another (604-46) narrates the devotion of two brothers who rescued their parents during an eruption. *Aetna* makes difficult reading, partly because of its corrupt text, partly because of the author's style. He strains after brevity, overloads words and phrases, indulges freely in metaphor and personification; in his terse mythological allusions, details are taken for granted as well known. Nevertheless, the work does not lack polish or animation; and one respects the author's earnest enthusiasm for the study of nature (see *METEOROLOGY*). Posidonius is probably the chief scientific source of *Aetna* (Sudhaus ed. 59-81); similarities of expression in Seneca's *Naturales*

Quaestiones seem to indicate, not a debt to Seneca, but a common source behind both works. Among poets, Lucretius and Virgil are the principal models.

A. M. D.

AETOLIA, a country bordered on the west by the lower arid middle valley of the river Achelous, and on the east by Mt. Oxya, the watershed between Aetolia and Malis. It contains the southern continuation of the Pindus mountain range. While the mountains of north Aetolia run north and south, the main range of southern Aetolia runs east and west, cutting off the rich plains of central Aetolia by Lake Conope and Lake Trichonis from the coast of the Corinthian Gulf. The coast between the mouths of the Achelous and the Euenus contains shallow lagoons but no good harbour. While five coastal towns, especially Pleuron and Calydon, were known to Homer, the religious centre of classical Aetolia lay inland at Thermum near Lake Trichonis, and its history was entirely that of a land power. Seclusion from the sea left Aetolia undeveloped in the fifth century B.C. (Thuc. 1. 5), little urbanized, and organized in tribes who formed a common front against Demosthenes' invasion (426 B.C.). The natural avenues of expansion lay into Acarnania and northwards to Amphiloehia and Malis; but Aetolia did not develop successfully along those lines until the third century B.C.

W. J. Woodhouse, *Aetolia* (1897).

N. G. L. H.

AETOLIAN CULTS AND MYTHS. The chief divinities of Aetolia were Artemis, Apollo, and Athena (dedication of statues of all three by Aetolians at Delphi, Paus. 10. 15. 2; of Artemis and Apollo only, id. 10. 16. 6). The cult centre of Artemis Laphria was Calydon (later Patrae, id. 7. 18. 8-13); Apollo was worshipped at Calydon, but principally at Thermum; Athena is associated with Pleuron (Stat. *Theb.* 2. 726-31; Dion. Calliphon. 57-9 = *GGM* i. 240). At Phistyon the Syrian Aphrodite (see *ATARGATIS*), to whom the epithet Phistytis was here applied, shared a temple, from at least 213/12 B.C., with the Mother of the Gods and the Virgin (Parthenos), possibly local deities in origin; the cult is known only from inscriptions. The cults of Dionysus (cf. Paus. 7. 21. 1-5), Heracles, Zeus Soter, and some others are also known.

Prominent in myth are Aetolus, the reputed founder, and the family of Oeneus, Althaea, Melaege, and Deianira (qq.v.). For the Calydonian boar-hunt see *MELEAGER*.

J. de Keitz, *De Aetolorum et Acarnanum sacris* (Diss. Halle, 1911); W. J. Woodhouse, *Aetolia* (1897); for the inscriptions see *IG* i. 1 and G. Klaffenbach, *Sitz. Berl.* 1936; for the myths, C. Robert in L. Preller, *Griechische Mythologie* ii. 1 (1920), 85-100. F. R. W.

AETOLIAN LEAGUE. The looser tribal organization of the Aetolians gave way during the fourth century B.C. to a federal State (*sympolitica*, q.v.), which acquired considerable power already in the latter part of that century and retained it even during the first period of the Roman intervention. In the third century the Aetolians exercised a protectorate over Delphi and through their expansion secured a controlling interest in the Amphiclonic League (see *AMPHICLONIES*). Since they normally were hostile to Macedonia, they naturally became Rome's first active allies within Greece proper. Their later hostility to Rome and co-operation with Antiochus III proved their downfall. Their conquests and outside influence were lost, and in 189 B.C. the Aetolians were forced to accept a treaty as subject allies of Rome. The League was not dissolved, but all its importance and influence were gone.

At the head of the League was a general elected annually. The primary assembly had two regular meetings a year

and could be summoned for special sessions. The *boule* or *syndesion*, in which the cities were represented in proportion to population, contained some thousand members. Hence, particularly in time of war, much of the leadership fell to a smaller body, the *apokletoi*, itself containing over thirty members, probably a committee of the *boule*. At no time did the leadership of the League pass out of the hands of the Aetolians proper. This was in part because more distant States were not made regular members but merely bound to the League by *isopoliteia* (q.v.), which involved civil rights, protection, and potential citizenship but no participation in federal affairs unless residence was established in a community possessing active citizenship. Grants of *asylia* (q.v.) by the Aetolians were not infrequent and were highly prized on account of their extensive use of piracy and the right of reprisal. See also FEDERAL STATES.

G. Klaffenbach, introduction to IG² ix. 1; R. Flacelière, *Les Aétoliens à Delphes* (1937). J. A. O. L.

AETOLUS (*Ἀἰτωλός*), eponym of the Aetolians. His legend seems to be founded on traditions of the relation between certain Greek peoples. Endymion, king of Elis, had three sons, Paeon, Epeios, and Aetolus; he set them to race at Olympia, promising the kingship to the winner. Epeios won, hence the ancient name *Epeioi* for the people of the district; Paeon left the country and gave his name to the district of Paeonia; Aetolus had later to leave because of a blood-feud, and went to Aetolia, which is called after him (Paus. 5. 1. 3-8). H. J. R.

AFER, GNAEUS DOMITIUS (d. A.D. 59), considered by Quintilian the best orator of his age. After his first spectacular success (the condemnation of Claudia Pulchra, cousin of the elder Agrippina, in A.D. 26), he enjoyed a distinguished, but sinister, reputation. Prosecuted by the Emperor Gaius in 39, he saved himself by flattery and was made consul (Sept. 39). J. P. B.

AFRANIUS (1), LUCIUS (b. c. 150 B.C.), Latin poet, was the most prolific composer of *comoediae togatae*, whose representation of domestic life in Italian towns he made more artistic and involved, with wider and coarser appeal. His plays were performed even in Imperial times, the most renowned being *Divortium*, *Epistula*, *Fratriae*, *Privignus*, *Vopiscus*. He admired Terence, from whom he confessedly borrowed, and was compared by Horace (*Epist.* 2. 1. 57) with Menander. He portrayed chiefly family life and the 'middle classes'. See DRAMA, ROMAN, para. 5.

Fragments: O. Ribbeck, *GRF*² 164 (3rd ed. Teubner, 1897). E. H. W.

AFRANIUS (2), LUCIUS (*cos.* 60 B.C.), of Picene birth (*ILS* 878), served under Pompey in Spain and against Mithridates, and was rewarded with the consulate of 60 B.C., being elected by flagrant bribery and proving most disagreeable to Cicero; 'quam ignavus et sine animo miles'. He became proconsul of one of the Gauls, probably Cisalpine, and perhaps gained a triumph. From c. 53 he governed Hispania Citerior as Pompey's legate with three legions, and in 49 commanded at Ilcrda. Pardoned by Caesar, he returned to Pompey, though charged with treachery by other Pompeians. He escaped from Pharsalus, but was captured and executed after Thapsus. G. E. F. C.

AFRANIUS, see also BURRUS.

AFRICA, see LIBYA.

AFRICA, ROMAN. The Punic Wars (q.v.) made Rome heir to the Carthaginian Empire. In 146 B.C. Rome left most of the continental territory in the hands of Massinissa's descendants and annexed merely some of the fertile lands round Carthage. This new province

(roughly equivalent to modern Tunisia) covered c. 5,000 square miles within a frontier from Thabraca to Hadrumetum; it was governed by a praetor from Utica (q.v.). Except for the new capital and six other favoured cities, most of the land became *ager publicus* (q.v.). Though the attempt of Gaius Gracchus to colonize Carthage failed, Roman and Italian merchants settled in Africa in large numbers. After the battle of Thapsus (46 B.C.) Caesar added to the province the Numidian territories of Juba I, and planned to restore Carthage as a Roman colony.

2. Augustus promoted urbanization by founding six colonies, fifteen *municipia*, and thirty *oppida libera* in Africa. He placed the province under a proconsul at Carthage with command of the Third Augustan legion. After the rising of Tacfarinas (q.v.), Gaius made the proconsul a purely civilian official, and handed the legion and Numidia over to the legate. The westward expansion was carried on by Claudius, who organized the two provinces of Mauretania. The frontier was pushed southward slowly as the result of successful wars (e.g. against Tacfarinas) and the Saharan campaigns under Septimius. Roman Africa reached its greatest extent under Caracalla. The frontier ran from the Cyrenaic border at Ara Philaenorum through Cydamus (mod. *Gadhamès*), Nefta, and Vescera (mod. *Biskra*) and then north-west through Auzia (mod. *Aumâle*) to reach the Atlantic south of Volubilis (q.v.) at Sala (mod. *Salé*).

3. This huge territory, on which the provincial organization of the Empire was imposed, was populated mainly by men of Berber stock, whose language survives to-day. Their chief tribal divisions were Garamantes in the Fezzan, Massyli and Masaesyli in the east and centre of the high plateaux, Moors in the west of the Atlas Mountains (q.v.), and Gaetulians in the Sahara. Phoenician colonies covered the coast from Leptis, through Hadrumetum, Carthage, and Caesarea, to Tingis on the Straits of Gibraltar, down the Atlantic seaboard to Lixus (mod. *Larache*). Inland other Phoenician communities had settled, and intermarriage had produced the so-called Libyphoenician race; they inhabited the numerous towns and practised an agriculture which made their country the granary of Rome. Phoenician divinities were worshipped side by side with primitive Libyan or Berber gods. Both the Punic and Berber languages persisted, though the official speech was Latin. Roman law was enforced in the lands near the network of Roman roads; but in the gaps native customs and even some form of native rule persisted. The proconsular province of Africa was the most completely romanized, and was always richer than Numidia and the Mauretaniae.

4. The most fertile corn districts were the hinterland of Oea and Leptis, the Bagradas valley, and the country round Cirta; productivity depended on the magnificent water-system established by Rome. Other exports were oil, precious woods, marble, minerals, purple dyes, amphitheatre beasts, slaves, minerals, gold dust, and ostrich eggs. African wine was not highly esteemed. The great estates were run on slave labour, and the country was a paradise for sportsmen, as is shown by the mosaics, in which the Africans reached a high degree of skill. Surviving remains testify to great building activity, which lasted from the first century to the middle of the fourth. Till the Moslem invasion Roman Africa seems to have maintained a higher degree of continuous prosperity than any other part of the Empire.

5. A force of about 30,000 men sufficed to protect the four provinces, till Moorish and Gaetulan tribesmen raided successfully in the fourth century. The victory of the Vandals (q.v.) was due largely to religious dissensions. The Africans embraced Christianity with enthusiasm, and the work of Tertullian, Cyprian, and Augustine did much to mould the thought and organization of Western Christendom. But this same enthusiasm pro-

duced the Donatist and Circumcellion heresies. Yet Byzantine Africa was still vigorous enough to send Heraclius eastward to restore the power of Constantinople in the seventh century. His name ends the long list of emperors which Africa gave to the throne, a list beginning with Titus and Domitian, whose mother was born in Sabratha, and continuing through Clodius Albinus, the Severi, and Macrinus. The tie with the Eastern Empire lasted till the end of the seventh century, when the Berbers were defeated at Thysdrus (q.v.) and Carthage surrendered to Hassan.

AFTER-LIFE. In Greek and Roman thought, bound by no generally received dogma or revelation, numerous and often contradictory concepts of the after-life existed side by side. These peoples were concerned primarily with this life, but, certain philosophers apart, a belief in some sort of survival after death was almost universal. That the dead live on in the tomb was perhaps the most primitive, and most enduring, concept of all. There they still feel human wants, which are satisfied both by the household objects buried or burned with the body and by the continued tendance regularly paid to the dead by their families. Already in Mycenaean times this tendance seems to have given rise, in the case of individuals especially powerful both in life and death, to the continuing cult of heroes by persons not related to them and eventually by the whole community. By a different line of development arose festivals such as the Attic Anthesteria in which the dead in general received attention.

2. The belief that the dead dwell together in a common, subterranean abode, the realm of Hades and Persephone, dark and gloomy like the grave, found its classic expression in Homer (especially *Od.* 11), and so became fixed as the popular eschatology of all antiquity. Thither all mortals must repair, there good and evil alike lead a shadowy and cheerless existence. The dead need nothing and are not to be feared, for Homer's aristocratic society, separated from the ancestral tombs, has forgotten or ignores the older ideas (which, however, reappear in the post-Homeric age), and the elaborate funeral rites are in the main but meaningless survivals.

3. A totally different conception, that of Elysium or the Isles of the Blest, situated at the ends of the earth, appears in Homer (*Od.* 4. 561-9) and Hesiod (*Op.* 167-73) as the place to which certain favoured heroes, exempted from death, are translated by the gods. Elysium appears to be a survival from Minoan religion; when a later age concerned itself with the fate of the blessed dead, Elysium was transferred to the nether regions, in conformity with Greek ideas and the Homeric picture.

4. By the sixth century the Eleusinian Mysteries, an old, probably pre-Greek, agrarian cult, through an associa-

tion of its chthonic divinities and the powers of the underworld, had begun to promise to its initiates a happier lot in the after-life (*Hymn. Hom. Cer.* 480-2; *Ar. Ran.* 154-8, 455-9); apparently, there as in this world they will continue to celebrate the Mysteries. A more clearly ethical note was struck in some mystic speculation, notably that reflected in Pind. *Ol.* 2 and frs. 131 and 133 Bergk. The divine origin of the soul was affirmed; popular ideas of punishment after death were combined with a doctrine of metempsychosis, and assurances of blessedness were held out to those who, throughout a series of existences in this and the other world, should lead pure lives. These or similar ideas were entertained by Pythagoreans and by Orphics, and had wide currency, but it is doubtful that there was any consistent doctrine of 'Orphism'.

5. Hitherto the hope of immortality had been at most based on intuition or religious teaching. Plato, whose eschatology was profoundly influenced by 'Orphism', however much he scorned its baser manifestations, first supplied this hope with a philosophic foundation, by arguments based on anamnesis, the Theory of Ideas, and ethical considerations. The precise nature of immortality he never defines, but his intense conviction that to the good man nothing but good can come and that the highest part of man's nature is allied to God has had far-reaching consequences.

6. Aristotle denied the power of survival to all but the intellectual part of man's tripartite soul, and even this is deprived of all sensibility. The Hellenistic age was, in general, little inclined to speculate on the after-life. The Academy adopted a thoroughly sceptical attitude. Epicurus and his followers attacked the fear of death with the claim that the soul, like the body, was composed of material atoms, and was dissipated at death. While some Stoics admitted a limited survival, at least of the souls of the wise, until the next cosmic conflagration, Panaetius denied even this. Posidonius, however, reverted to Platonic language and imagery, and the first century B.C. witnessed a considerable revival of interest in the after-life.

7. The Thraco-Phrygian cults of Dionysus and Sabazius and the hellenized mysteries of Attis and of Isis offered to many adepts the assurance of a blessed after-life—whether the dead was thought of as inhabiting the old underworld, or whether his continued existence was transferred to the celestial spheres. This belief in a celestial immortality, which was in no sense limited to the mystery religions, derived its popularity from the new concept of the universe as a series of concentric spheres around the earth and from philosophic speculations on the soul, whether in the Platonic sense of something from the world of Being which had descended into the world of Becoming, or the Stoic sense of something essentially Fire. Such ideas found easy acceptance in the cult of Mithras (q.v.), who was identified with the Sun, and in that more general solar piety which played so large a part in the later religious life of antiquity.

8. A final word on the specifically Italic concepts of the after-life: the ghosts of the dead join the undifferentiated mass of *Manes* or *Lemures* in the underworld (*Inferi*), and can return only at certain specified times, as at the feast of the Lemuria in May; no idea of divine retribution is discernible. On this primitive core of belief was superimposed the whole range of Hellenic conceptions, at first through Magna Graecia and through Etruria, which had combined Greek ideas with an elaborate demonology, and later by direct contact with Greece and the East. From the later years of the Republic on, the Graeco-Roman world was essentially one in its development of religious and philosophic ideas of the after-life.

F. R. W.

AGAMEMNON, in mythology, son of Atreus and brother of Menelaus (qq.v.); king of Mycenae, or Argos; probably an historical person who, if not overlord of some or all of the princes of the Mycenaean era, was the most important of them.

In Homer, A. is commander-in-chief of the Greek expedition against Troy. In the *Iliad* he is a man of personal valour, but lacking resolution and easily discouraged. His quarrel with Achilles (q.v.) supplies the mainspring of the poem's action. The *Odyssey* (I. 35 ff.; 4. 512 ff.; 11. 405 ff.; 24. 96-7) tells how, on his return, he was carried by the wind outside his own territory to the barony of Aegisthus (q.v.), the lover of his wife Clytemnestra, sister of Helen, who treacherously set upon him and his men at a banquet and killed them all, Clytemnestra also killing Cassandra, daughter of Priam, whom A. had brought back with him. This story later authors retell with elaborations and small changes, e.g. the scene is generally (as in Aesch. *Ag.*) transferred to Argos.

The *Cypris* is the earliest evidence for the sacrifice of A.'s daughter Iphigenia (q.v.). The cause of it was the offence given to Artemis by A., who after a successful hunt boasted that he was a better hunter than she. Calchas, when the fleet was wind-bound at Aulis, explained that the goddess was the cause and the sacrifice must be made to appease her. Iphigenia was therefore sent for to Aulis on the pretext that she was to be married to Achilles. For sundry variants, see Rose, *Handbook of Greek Mythology*², 119 and notes.

In other stories A. appears as a subsidiary figure, or is handled with more or less disregard of tradition, as in the fantastic perversion of the legend in Hyginus, *Fab.* 88.

In historical times A. had cults at several places (see Farnell, *Hero-Cults*, 321-2 and note 55). The remarkable statement (Lycophron 335 and 1369, with schol.) that A. was called Zeus at Sparta has never been satisfactorily explained. In any case, there is no earlier evidence for it, and it seems to be a development of the Hellenistic period.

Agamemnon's children in all accounts include Orestes (q.v.). A quite unsupported story (Hyg. *Fab.* 121), gives him an illegitimate son, Chryses, by his slave-concubine Chryseis (Il. I. 111, etc.). His daughters are Chrysothemis, Laodice, and Iphianassa in Il. 9. 145; Iphigenia, whom Homer does not mention, seems to be a later substitution for Iphianassa.

H. J. R.

AGANIPPE, in mythology, daughter of the river-god Permessus (Paus. 9. 29. 5; spelling 'Ter-'), nymph of the spring of that name on Helicon (Callim. *fr.* 100^c 4 Schneider), sacred to the Muses.

AGAPENOR (Ἀγαπήνωρ), in mythology, leader of the Arcadian contingent against Troy (Il. 2. 609); son of Ancaeus (q.v.). On the way back from Troy he arrived at Cyprus (Lycoph. 479 ff.), where he founded Paphos and a temple of Aphrodite and settled (Paus. 8. 5. 2).

AGASIAS, (1) sculptor, son of Dositheus, of Ephesus. He signed the Borghese warrior in the Louvre (Winter, *KB*, 382. 3), a nude figure striding forward to parry an attack from above, showing remarkable knowledge of anatomy and probably deriving from an earlier group. The signature and another from Thessaly are dated late second to early first century B.C.

(2) sculptor, son of Menophilus, of Ephesus, known from signatures in Delos, of about 100 B.C. One base may belong to the wounded warrior of Delos, part of a group (Winter, *KB*, 350. 1; C. Picard, *BCH* 1932, 491).

T. B. L. W.

AGATHARCHIDES, Greek grammarian and Peripatetic of Cnidos, became guardian to a young Ptolemy (? Soter II) of Egypt, c. 116 B.C.

WORKS: (i) *Tὰ κατὰ τὴν Ἀσίαν*, on the Diadochi; (ii) *Τ.κ.τ. Εὐρώπην*, on history ?323 B.C. to fall of Macedon; (iii) *Περὶ τῆς Ἐρυθρᾶς θαλάσσης*; [(iv) epitome of (iii), not A.'s? (v) on Troglodytes (q.v.)—same as (iii)?]; (vi) epitome of writers on (?) wonders; (vii) historical *Ἐκλογαὶ ἱστοριῶν*; (viii) *Intercourse of Friends*.

Extracts survive from (iii), in Photius and Diodorus bk. 3, dealing with elephant-hunts; name of 'Red' Sea, etc.; Ethiopians; gold-mining on Egypto-Ethiopian frontier; races and animals west of Red Sea; Arabians, especially Sabaeans.

FHG iii (historical fragments); *GGM* i. liv-lxxiii, 111-95 (Red Sea); E. H. Bunbury, *Hist. of Anc. Geog.* (1879) ii. 50 ff. E. H. W.

AGATHARCHUS (5th c. B.C.), painter, of Samos. He made scenery for Aeschylus (between 468 B.C. and 456 B.C., since Aristotle ascribes the introduction of scene-painting to Sophocles), and was compelled by Alcibiades (c. 430 B.C.?) to paint his house (with perspective scenes?). He wrote a book on scene-painting, which inspired Anaxagoras and Democritus to write on perspective. He was the first painter to use perspective on a large scale (isolated instances occur on vases from the late sixth century B.C.).

Overbeck, 1118-25; Pfuhl, 723; P. M. Schuhl, *Platon et l'art de son temps* (1933).

T. B. L. W.

AGATHIAS (A.D. 536-82), surnamed *Scholasticus*, 'the advocate', was born in Aeolis, studied law in Alexandria and Byzantium, and practised it in Byzantium until his death. He is best known for his work as compiler of a *Circle* of epigrams on which the existing Anthology (q.v.) is based—see his preface (*Anth. Pal.* 4. 3). The Anthology contains about a hundred epigrams by him, mostly elegant but lifeless adaptations of Alexandrian themes and language. His history, *The Reign of Justinian*, a sequel to Procopius covering the years A.D. 552-8, is romantic and highly poetical in style.

W. S. Teuffel, *Studien und Charakteristiken* (1889), 296. G. H.

AGATHINUS, CLAUDIUS (c. A.D. 50-100), pupil of the Stoic L. Annaeus Cornutus and of Athenaeus of Attaleia (q.v. 3), the founder of the pneumatic school of medicine. He was the teacher of Archigenes (q.v.). Adopting some of the tenets of the empirical and methodical schools of medicine, he founded an eclectic school. Works: *Περὶ ἐλλεβόρου*; *Περὶ ἡμικριταίων* (on tertian fevers); *Περὶ σφνγγῶν* (on the pulse).

PW i. 746.

W. D. R.

AGATHOCLES (361-289 B.C.), tyrant of Syracuse. He became an officer and democratic leader in the Civil Wars after 325. Making himself tyrant (317), he endeavoured to conciliate the poor, and to reinforce army and fleet. In an attempt to extend his power, he brought on long wars with the Sicilian Greeks and Carthage. After great successes he was beaten by the Carthaginians and blockaded in Syracuse (311). He now resolved to attack Carthage in Africa. Having luckily escaped and effected his landing, he seriously threatened Carthage. Meanwhile, the Carthaginian attacks on Syracuse failed. Agathocles increased his power by incorporating the troops of Ophellas (q.v.). Feeling secure in Africa, he shortly returned to Sicily, where he fought hard against Acragas (308/7). But matters in Africa took a bad turn, and A., unable to improve them, left his army in the lurch (307/6). Carthage, however, was too weak to

resume attack. After some concluding campaigns, A. reigned peacefully over east Sicily, assuming the title of king in 304. He subsequently was engaged in various operations in Italy. The last years of this adventurous and cruel man were spoilt by dreadful discord within his family. Renouncing the dynastic succession, he restored liberty to Syracuse by his last will. But the city could not bear liberty any more. Agathocles, the only Hellenistic king among western Greeks, and their last leader, left a heap of ruins.

Sources (deriving mostly from his enemy, Timaeus): Diodorus, bks. 19-21; Justin, bks. 22-3; Polyaeus, bk. 5. Modern Literature: H. J. W. Tillyard, *Agathocles* (1908); M. Cary, *CAH* viii, ch. 19; Glotz, *Hist. grecque* iv. 375 ff. V. E.

AGATHON, tragic poet, son of Tisamenus of Athens, and remarkable for his personal beauty, won his first victory at the Lenaea in 416 B.C., when he was probably under thirty years of age (Pl. *Symp.* 198 a). The *Symposium* of Plato represents a feast in honour of his victory. In 411 he heard and approved of Antiphon's speech in his own defence (Arist. *Eth. Eud.* 3. 5)—this may mean that his sentiments were not on the democratic side—and in the same year he was caricatured in Aristophanes' *Thesmophoriazusae*, but about 407 he went to the court of Archelaus in Macedonia (Ar. *Ran.* 83-5; Ael. *VH* 13. 4; *Anecd.* Ox. iv. 269), and died there, probably about 401. He came under the influence of the sophists, Gorgias and Prodicus (Pl. *Pri.* 305 d). His speech in Plato's *Symposium* is in the manner of Gorgias, and some quotations from his tragedies are in a pointed, epigrammatic style, probably due to sophistic influence. His originality was shown by the composition of a tragedy (*Antheus*, not *Avθος*) in which characters and plot were his own invention, not taken from legend (Arist. *Poet.* 9), by making choral odes, for the first time, mere interludes (*ἐμβόλαια*) without reference to the plot (ibid. 13), and by the free use in tragedy of the chromatic scale and various florid musical figures (Plut. *Quaest. conv.* 3. 1. 1). Aristophanes (*Thesm.* 101 ff.) parodies his lyrics and hints that they are voluptuous and effeminate. Aristotle also criticizes him (*Poet.* 8) for including too lengthy a story, such as the whole sack of Troy, within a single plot. He was evidently a 'modernizer' in tragedy, who sat loose to tradition but was not without genius, though less than forty lines of his work survive. (*TGF* 763-9.) A. W. P.-C.

AGATHOS DAIMON, see **DAEMON**.

AGDISTIS, a form of the Phrygian mother-goddess; at Pessinus Cybele (q.v.) was called A. (Strabo 469, 567). According to the myth (see **ATTIS**), she was originally androgynous. Her cult spread to various parts of Anatolia, to Egypt (by 250 B.C.), to Attica (with that of *Artis* in Piraeus 4th-3rd, cc., *IG* ii². 4671; at Rhamnus, 83/2 B.C.), Lesbos, and Panticapaeum. At Lydian Philadelphia her private shrine (1st c. B.C.) enforced a strict moral code (*SIG* 985; O. Weinreich, *Sitz. Heid.* 1919). There and elsewhere A. appears with *theoi soterics*. See **ANATOLIAN DEITIES**.

H. Hepding, *Attis* (1903); Hiller v. Gaertringen, *ARB* 1926. Rhamnus inscription: K. A. Rhomaïos, *ΕΛΛΗΝΙΚΑ* 1928; P. Rousset, *Rev. Ét. Anc.* 1930. F. R. W.

AGELADAS, Greek sculptor of the Argive school. The earliest work associated with his name is a statue of an Olympic victor, Anochos, whose victory was in 520 B.C. He was also the reputed teacher of Myron, Polyclethus, and Phidias (qq.v.). This would bring his activities down to about 470 and harmonizes with the general character of his work, so far as it is known. He was, like most of the leading sculptors of the fifth century, mainly a worker in bronze. His most famous work was the statue of Zeus at Ithome, said by Pausanias to have been made for the Messenians settled in Naupactus. It appears on silver coins of Messenia of the fourth century.

Both the style and the attitude of the Zeus, who strides forward hurling a thunderbolt, with an eagle perched on his left hand, indicate a date c. 470-460. He also made a statue at Aegium of 'Zeus as a Boy', representations of which appear on the Roman coins of that town; its attitude is similar to that of the Zeus of Ithome. The bronze statue of a god found recently in the sea off Artemisium is attributed by some to Ageladas. S. C.

AGENOR (*Ἀγήνωρ*), name of several mythological persons, the most important being the king of Tyre (or Sidon), father of Europa (q.v.). On the disappearance of his daughter, he sent out his sons to look for her, bidding them not come back without her; hence Phoenix, Cilix, and Cadmus founded respectively the Phoenician and Cilician peoples and Thebes in Boeotia. His genealogy, which varies somewhat (see Stoll in Roscher's *Lexikon*, s.v. 'Agenor'), links various Eastern peoples together. H. J. R.

AGENTES IN REBUS, under the Roman Empire, a corps of imperial agents, organized in *scholae* on military lines, under the control of the *magister officiorum* (q.v.). First heard of in A.D. 319, they replaced the *frumentarii* (imperial secret service agents) of the earlier Empire. Their employments were various. They might carry dispatches or supervise the imperial post. But what made them feared and hated, despite their humble birth and rank, was the fact that they travelled through the provinces as spies, collecting evidence of evasion of taxes and of treasonable conduct of every description.

O. Seeck, *PIW*, s.v.

AGER CAMPANUS, see **CAPUA**.

AGER FALERNUS, see **FALERNUS**.

AGER PUBLICUS. I. IN ITALY. During her conquest of Italy Rome penalized such communities as offered a stubborn resistance or subsequently rebelled, by confiscating a part (usually a third) of their territories. The use to which the public land should be put was from an early date—according to tradition as far back as 486 B.C.—disputed between the patricians, who preferred to maintain public ownership, under which they could occupy it as *possessores* (see **POSSESSIO**), and the plebs, who wished it to be distributed among themselves. As the *ager publicus* grew by conquest, the patricians became more liberal. Some land was distributed to individuals (*virum assignatus*); part of the territory taken from Veii was so treated in 393. More was allocated to colonies of Roman citizens; this practice, according to tradition, dates back to the early fifth century. Larger areas were devoted to the Latin colonies which Rome planted after the dissolution of the Latin League in 338. By the Licinio-Sextian laws of 367 (see **STOLO**) no citizen might occupy more than 500 *iugera* of this land.

The defections of the allied communities during the Second Punic War were punished by extensive confiscation of land, and the conquest of Cisalpine Gaul added large areas to the *ager publicus*. Most of the Gallic land was devoted to colonies, and the remainder was distributed in small holdings (173 B.C.). Elsewhere few colonies were planted, and vast tracts, especially in the south, remained in the hands of the State. The best of this land was leased by the censors and brought in a good rent to the State, but large tracts were occupied by *possessores*, being mostly used for ranching. The *possessores* were supposed to pay dues, and the size of their tenures was legally limited by the Licinio-Sextian laws. But the laws were regularly evaded or ignored, and the collection of dues was lax.

Under the agrarian law of Ti. Gracchus (133) a commission was set up to resume for the State public lands occupied in excess of the Licinio-Sextian limit (increased in favour of *possessores* who had sons) and to

distribute them in small holdings, which were to remain public and pay a *vectigal*. Much land was distributed under this scheme, which was revived by C. Gracchus in 123–122 B.C., until in 119 the land commission was suppressed. C. Gracchus also planned several colonies, one of which at least was planted. By the agrarian law of 111 the Gracchan small holdings, whose *vectigal* had been abolished in 122, and the holdings of *possessores* within the Gracchan limit were declared private land, the *vectigal* which had been reimposed in 119 on the latter being abolished. After this law the following categories of land remained public: (a) open spaces at Rome; (b) roads; (c) lands leased by the censors, notably the *ager Campanus*; (d) lands assigned to Roman and Latin colonies and *municipia* corporately; (e) holdings allotted on condition of maintaining the roads; (f) lands granted to State creditors (*in trientibus*); (g) pastures on which contiguous owners had exclusive rights (*compascua*); (h) all other public lands, which were henceforth to be common pasture. Sulla confiscated the territories of many cities which opposed him for the benefit of his veterans. Caesar in 59 distributed the *ager Campanus* to Pompey's veterans. Octavian in 30 expropriated cities which had favoured Antony to find land for his veterans, but compensated the owners in money or provincial land.

II. IN THE PROVINCES. According to Gaius the *dominium* in all provincial soil was vested in the Roman people or the emperor; but this theory, which probably did not arise till the first century A.D., had no practical import. The public land acquired under the Republic comprised (a) the estates of prominent opponents, in so far as these were not immediately sold or given away; (b) the territories of cities which were, like Carthage and Corinth, destroyed or were merely, as were a few Sicilian and Pamphylian communities, punished by the loss of their lands; (c) the royal lands of kings who were deposed or bequeathed their kingdoms to Rome. These comprised some Macedonian estates, Attalid lands in the Chersonese, and an extensive tract of desert in Cyrenaica; the Bithynian and Pontic royal lands seem to have been assigned by Pompey to the cities of the new province. Most of the provincial public lands (except in Cyrenaica) seem to have been alienated by the beginning of the Principate, some, such as Carthage and Corinth, being devoted to Roman colonies. Under the early Principate more royal lands were added to the *ager publicus*, notably the *γῆ βασιλική* of Egypt and extensive domains in Cappadocia.

The *ager publicus*, both in Italy and the provinces, was swelled by *bona vacantia*, *caduca*, and *damnatorum*. These sources, negligible under the Republic, became important under the Principate owing to the severe *leges caducariae* passed by Augustus and to the frequent condemnations of wealthy men. All public lands gradually passed under the administration of the emperor, and most seem eventually to have been assimilated to the imperial estates; see DOMAINS (b, Imperial).

AGESILAUS (444–360 B.C.), Spartan king, son of Archidamus and half-brother of Agis II, secured the succession in 399, largely through Lysander's influence, in preference to Leotychidas, whose legitimacy was suspect. Lysander had hoped to use Agesilaus for his own ends, but was quickly brought to heel. As commander in Asia Minor from 396, Agesilaus overran Phrygia and routed Tissaphernes, but failed to check the growing Persian naval menace. Recalled with his army in 394, he took the overland route and reached Coronea almost unopposed. The ensuing battle with the Boeotian and allied forces was a Pyrrhic victory, and Agesilaus had to evacuate the country. He won minor successes, however, in the vicinity of Corinth and in Acarnania

(391–388). He condoned, on grounds of expediency, Spartan intervention against Mantinea, Phlius, and Olynthus (in violation of the principle of autonomy enjoined by the peace of Antalcidas), and the still more flagrant occupation of the Cadmea by Phoebidas (382), and attempt on the Piraeus by Sphodrias (378). The alliance between Thebes and Athens resultant on this policy was unshaken by Agesilaus' invasions of Boeotia in 378 and 377. His refusal in 371 to admit Epaminondas' claim to represent all Boeotia at the peace congress in Sparta precipitated the Battle of Leuctra. In the years of Sparta's humiliation he organized the defence of the city (370 and 362) and sought to augment the State revenues by foreign service (in Asia Minor with Ariobarzanes 364, and in Egypt with Nectanebo 361). He died on the homeward voyage from Egypt (360).

Despite his poor physique and a strain of romanticism, Agesilaus was typically Spartan in his qualities and limitations. He was an efficient soldier, but a better tactician than strategist, and he failed to understand the importance of sea-power. The narrowness of his loyalties dissipated those moral assets by virtue of which alone Sparta could maintain her hegemony.

AGGENIUS URBICUS (perhaps 5th c. A.D.), *gromaticus*, author of a commentary on Frontinus' treatise *De controversiis agrorum*.

AGIADS (*Ἀγιάδαι*) was the name of the senior royal house at Sparta. The Agiad dynasty enjoyed a ceremonial precedence over the other (Eurypontid) house, but possessed no constitutional privileges. The most notable Agiad kings were Cleomenes I and III, Leonidas, and Pausanias (qq.v.).

AGIS II, son of Archidamus, king of Sparta c. 427–c. 399. Though active in the Archidamian War, he first gained distinction in the campaign of 418 against the Argives and other enemies of Sparta. After failing to utilize what appeared to be a strategic advantage, he subsequently outmanœuvred his opponents near Mantinea and won a decisive victory, which re-established Spartan prestige. In 413, adopting the suggestion of Alcibiades, he fortified Decelea as a permanent base for plundering Attica. Remaining here, he attempted to exert an autocratic control over Spartan policy, but his influence waned when the centre of war moved to Asia. He collaborated with Lysander in the blockade of Athens in 405–404, and in his last years reduced Elis by a successful invasion. Agis was a fine soldier whose qualities are underrated by Thucydides, but, like so many Spartan kings, he seems to have lacked constructive statesmanship.

Thucydides, bks. 5 and 8.

H. D. W.

AGIS III, king of Sparta (338–331 B.C.), Eurypontid, organized the resistance of the Greeks against Macedonia during Alexander's Asiatic campaign. Assisted by the Persian admirals' gifts of ships and money, he assembled an army, consisting mostly of 8,000 Greek mercenaries; fugitives after Issus. He was successful in Crete and then in Peloponnesus, where some States revolted from Macedonia (331). Athens, however, stood aloof (in spite of Ps.-Dem. 17), and so did Megalopolis, Messenë, and Argos. While besieging Megalopolis, Agis was forced to meet Antipater and an army almost twice as numerous as his own. After a hard struggle, he was beaten and died heroically. His death put an end to all Greek revolts against Alexander.

Arrian, Diodorus, Curtius. Berve, ii, no. 15; Tarn, *CAH* vi. 433 f.; Glotz, *Hist. grecque* iv. 194 f. V. E.

AGIS IV (c. 262–241 B.C.), son of Eudamidas, ascended the Eurypontid throne at Sparta in 244. Heavy mortgages, large estates in single hands, and a depleted citizen-body were evils he resolved to cure by a return to 'Lycurgus' constitution'. In 243, as ephor, his supporter Lysander introduced relevant bills; in 242 A. deposed new, reactionary ephors, and Leonidas, the Agiad king, whom he had already impeached, fled to Tegea. Supported by his rich uncle Agcsilaus, A. now burnt the mortgages; this done, Agcsilaus turned against him, and while A. was absent assisting his Achaean allies against Actolia, Leonidas returned and seized power. Arriving back, A. took sanctuary: but the ephors decoyed him out and executed him.

High-minded but unrealistic, he fell before cleverer men: his death became the legend around which a new generation rallied.

AGNATIO, see *PATRIA POTESTAS*.

AGON, in Greek Comedy, see *COMEDY (ORIGINS OF)*, para. 2; *COMEDY (OLD)*, para. 8.

AGON HOMERI ET HESIODI, a Greek account of a competition in hexameter poetry between Homer and Hesiod, preceded and followed by other information about the origin, life, and death of each poet. The competition takes place at Chalcis (or Aulis), on the occasion of the games at Amphidamas' funeral, and his brother, Panedes, is one of the judges. Hesiod asks Homer questions, which he answers successfully, and then recites verses, apparently nonsense, to each of which Homer replies with another verse which makes sense of the verse propounded. Then Panedes orders each poet to recite his finest passage, and afterwards, though the audience favours Homer, crowns Hesiod and awards the prize, a tripod, to him, on the ground that he encouraged peaceful activities, whereas Homer described fighting. Hesiod dedicates the tripod, with an inscription, to the Muses of Helicon. The story in its present form is not earlier than Hadrian, who is mentioned in it, but much of the material is older. All the writers cited are early. The central part of the competition itself is almost certainly derived from the *Μουσείον* of Alcidas, fifth century B.C., which is cited for an incident connected with the death of Hesiod, and to which Stobaeus (120. 3) attributes two verses of the *Agon* (78–9). Aristophanes quotes from it (*Pax* 1282–3 = *Agon* 119–20), and Plutarch (*Conv. sept. sap.* 10. 153c–154a) attributes to Lesches (q.v.) the initial verses of the central part of the *Agon* (96–101), but in a rather different version. The verses in the central part do not occur in our texts of Homer and Hesiod, but all appear old, fifth century or earlier. The origin of the story is probably Hesiod's claim (*Op.* 650–8) to have won a tripod in a competition at the funeral games of Amphidamas and to have dedicated it to the Muses. The competition in the *Agon* may well have formed part of a life of Homer, earlier than Archilochus, and possibly by Lesches himself.

Text: O.C.T., *Homeri Opera* v. 218–38. Criticism: A. Bussc, *Rh. Mus.* lxi (1909), 108–19; T. W. Allen, *Homer: the Origins and Transmissions* (1924), 20–7. W. F. J. K.

AGONES, public festivals at which competitors contended for a prize, were a distinctive feature of Greek life. Religious in origin, most of the games were under the patronage of a god or hero, the smaller gatherings depending on local support, the larger drawing spectators from all parts of the Greek world. The best-known were the Olympian, Pythian, Nemean, and Isthmian games, together with the Dionysia and Panathenaea at Athens (qq.v.). In most cases chariot-races, foot-races, and field events were the chief attractions, but at Athens the first place was given to the dramatic competitions in

honour of Dionysus. See also *ATHLETICS*. Introduced at Rome in 186 B.C., contests in the Greek manner became fairly common towards the close of the Republic. A regular quinquennial festival (Neronia) was established by Nero, a quadrennial *Agon Capitolinus* by Domitian in A.D. 86, and an *Agon Solis* by Aurelian in 274.

Friedländer, ii. 117–30.

F. A. W.

AGONIUM, name given to 9 Jan., 17 March, 21 May, and 11 Dec. in the Roman calendar. It does not denote a festival of any particular god, and the ancients were in doubt of its meaning, witness the etymologies (Festus, p. 9 Lindsay, and note in his larger ed. *Gloss. Lat.* iv. 104). Possibly it is a latinization of *ἀγών*, in its old sense of 'assembly'. The January entry may have displaced the name of the festival of Janus, presumably **Ianuuar*.

H. J. R.

AGONOTHETES, see *CHOREGIA*.

AGORACRITUS, Greek sculptor, a native of Paros and pupil of Phidias. Pliny (36. 17) records that he was defeated in a competition for a statue of Aphrodite and sold his statue to the people of Rhamnus in Attica, where it served as a figure of Nemesis. Pausanias, however, attributes the statue of Nemesis at Rhamnus to Phidias, who made it from a block of marble brought by the Persians to make a trophy at Marathon. Pausanias gives a most detailed description of the statue and its base, which was adorned with high reliefs. Excavations at Rhamnus have revealed part of a colossal female head, now in the British Museum, which corresponds closely to the description of Pausanias. Antigonos of Carystus (quoted by Pliny) mentions that the statue at Rhamnus bore a tablet with the name of Agoracritus. Clearly antiquity was in doubt as to its authorship, but the attribution to Agoracritus is generally accepted to-day. Fragments of the reliefs on the bases have also been found. A Roman relief at Stockholm preserves versions of four of the figures on the base, clearly copied directly from the base itself.

S. C.

AGORANOMOI (ἀγορανόμοι), overseers of the market, an office known in more than 120 Greek States. In classical times they were usually elected by lot. In Athens there were ten, five for the city and five for the Piraeus. They kept order in the market, saw to the quality and correct weight of goods, and collected market dues. They had power to punish small infractions of their rules with fines, from the proceeds of which they maintained and extended the market buildings; for graver offences they initiated prosecutions before the dicasteries and presided at the trials. See also *METRONOMOI*, *SITOPHYLAKES*, *ASTYNOMOI*.

A. W. G.

AGRICOLA (1), GNAEUS JULIUS (A.D. 40–93), of Forum Julii (*Fréjus*), was son of Julius Graecinus, senator, and Julia Procilla; he married Domitia Decidiana, and had one son (died an infant) and one daughter. He was educated at the University of Massilia. He was *tribunus militum* to Suetonius Paulinus in Britain (A.D. 61); quaestor of Asia (64); *tribunus plebis* (66); praetor (68); commissioner for the recovery of temple property (68); recruiting officer for Mucianus (69); legate of the Twentieth Legion, in Britain (71–3); legate of Aquitania (74–7); consul (77); legate of Britain (from 77 or 78).

His career, in particular the British governorship, is described in his *Life* by Tacitus, his son-in-law. Previous experience in Britain, shrewd intelligence, provincial sympathies, and an exceptional eye for country, enabled Agricola both to pacify civilians and to advance far into Scotland, where his permanent outposts at Inchtuthil (*JRS* 1919, 111 ff.), Fendoch (*PSAS* lxxiii. 110–54) and Dealgin Ross (*JRS*, loc. cit.), with others yet undiscovered, blockaded the Highlands. The advance was by stages. North Wales was conquered (*Tac. Agr.* 18); the

west coast ('silvas ac aestuaria', *Agr.* 20) was annexed. Then came a preliminary advance to the Tay (*Agr.* 22), gripping the Tweed crossing at Newstead and followed by a temporary consolidation between Forth and Clyde (*Agr.* 23) with forts at Mumrills and Cadder and signal-posts at Bar Hill and Croy Hill (Macdonald, *Roman Wall in Scotland*²). The fifth campaign was probably in the south-west (*Agr.* 24), where Agricola's penetration of Ayrshire is now proved (*Antiquity* xiii. 288). The sixth marked annexation beyond the Forth (*Agr.* 25) and campaigning up to the Highlands. In the seventh the Highlands were spurred to defeat at 'mons Graupius' (*Agr.* 29-38) on the fringe of Caledonia (q.v.). Agricola was then recalled after a rather specialized experience which did not fit him for service elsewhere. Roman historians were most struck by his circumnavigation of Britain (*Agr.* 38; Dio Cass. 39. 50. 4; 66. 20. 1-2); kindred explorations were also made (Plut. *De def. or.* 18; cf. Dessau, *Hermes* xlii. 156).

I. A. Richmond, *JRS* 1944, 34-45.

I. A. R.

AGRICOLA (2), SEXTUS CALPURNIUS, waged war as governor of Britain for Marcus and Verus (A.D. 163); was legate in the German phase of the Marcomannic War and governor of *Tres Daciae* in 167-8. British inscriptions attest his military building at Corbridge and Chesterholm in Tynedale and at Ribchester on the Ribble; also a change of garrison at Carvoran on Hadrian's Wall.

I. A. R.

AGRICULTURE (Greek and Roman). The general technique of Greek and Roman agriculture, its utilization of most of the plants, animals, and tools employed until modern times, may have originated in the mesolithic and neolithic periods; but the beginning of the Iron Age, i.e. the dawn of history in Greece and Italy, witnessed a revolutionary change. The iron plough and other tools, now made of the new metal, increased agricultural production as never before. Most of the villagers of the Minoan and Mycenaean regions seem to have been serfs of their kings, but the periods of Homer, Hesiod, and Solon preferred small and economically independent agricultural units, and revolted successfully against the rule of big landlords. Small estates of knights and peasants were now the rule. A few slaves, together with their owner's family, did all normal work. Free labourers were employed during harvest and for tasks for which the farmers and their servants lacked sufficient time. Small irrigation works and canals were necessary almost everywhere. After a year of cultivation the land was left fallow for one, and in some regions, for two years and was ploughed in autumn, in spring, and in summer (in some regions only twice in the year). The production of corn, flax, and vegetables was supplemented by arboriculture, olive-culture, viticulture, and especially pasturage, which were the most lucrative forms of land work.

2. The period of classical Greece witnessed a rational differentiation of the various agricultural plants and their habits, of the different kinds of soil, and of the appropriate manures, and production was stimulated by the growing demand for corn and vegetables in the towns. The time had come for threefold rotation of crops (*IG* ii². 2493 and Xen. *Oec.* 16. 12-15). The agricultural production of Greece must have increased very greatly when the soil could be continuously cultivated without being exhausted. No wonder that the first capitalistic slave estates were established at this time, and that capitalists investing in land began to lease to tenants tracts which were too large for their own or their stewards' management. Small estates remained nevertheless the rule in the Greek motherland, and were common also in Sicily and on the Black Sea coast.

3. From Alexander to Augustus Mediterranean agriculture was improved by many inventions (especially machines for hoisting water). Suitable varieties of plants

and animals were transferred from one part of the civilized world to another, and new crops developed in many countries. Attica seems to have produced 1,100,000-1,250,000 bushels of corn in Alexander's time, of which amount only c. 15-20 per cent. appears to have been wheat. The production of the Hellenistic East increased considerably. The two-crop system originating in the ancient East was improved under Greek management, and independent Greek cultivators were settled throughout the Seleucid Empire.

4. Ptolemaic Egypt introduced a remarkable controlled economy into its agriculture. Oil-seeds, corn, and textile plants had to be cultivated in each region of the Nile country according to an official schedule, which was revised each year. The seed, iron tools, and cattle for agriculture were commonly lent to the cultivators by the government. Almost the whole of the crop had to be paid (for taxes in kind, rent) or sold to the government, which built up a granary system for wheat export throughout the Nile country. Only a few large estates of distinguished owners were partly exempted. Handbooks on agriculture (the sources of Cato, Columella, the *Geoponica*, Mago, Varro) were used in this new cultivation system as well as by the more educated owners of large slave estates, which now superseded many of the peasant homesteads in all Mediterranean countries. Another characteristic of the same period was the surprising extent of division of labour and specialization in Greek and Roman agriculture, and very often the almost capitalistic calculation of expenses, revenues, and profits.

5. The highest standard of ancient cultivation was reached in the Italian agriculture of the later Republic and early Principate. Big slave estates prevailed here, so long as prisoners of war were cheap. The varieties of plants, the rotation of crops, and the other methods of cultivation, amelioration, irrigation, and manuring, book-keeping, the organization and division of labour, the buildings, tools, and machines were carefully selected from the technical as well as from the economic point of view, and similar methods spread to the provinces.

6. The Roman *villa* (q.v.) of this period underwent decisive changes, as soon as slave economy ceased to pay. Estate management of the highest type had to be confined to comparatively small tracts, so far as cheap labour for it was available. Most of the land had to be given to small tenants who were gradually bound to the soil (see COLONUS). This development did not mean the collapse of Graeco-Roman agriculture, but its final preservation. The agricultural methods of small peasants had not been much improved during the prevalence of slave estates; but the landlords of necessity now saw to it that their tenants should learn as much of the results of scientific agriculture as was suitable for their small economic units.

7. The unification of Mediterranean agriculture as seen to-day was completed from the second century A.D. onwards by the popularizing of plants, animals, tools, machines, and methods of estate agriculture under the peasantry of the Empire. Germanic and Oriental prisoners of war, who were settled throughout the Empire, were similarly taught, and transferred such knowledge to their home countries. Agriculture did not break down in Europe after the conquest of the Western Roman Empire. On the contrary, the agriculture of middle and northern Europe was modelled on Late Roman lines; it was a fundamental heritage of the Ancient World. See also ARBORICULTURE, BEE-KEEPING, LATIFUNDIA, OLIVE CULTURE, PASTURAGE, VITICULTURE.

AGRI DECUMATES, a territory including the Black Forest, the basin of the Neckar, and the Swabian Alb, annexed by the Flavian emperors between A.D. 74 and 98 to shorten communications between the Rhine and Danube armies, and lost to Rome c. A.D. 263. It had been occupied by the Helvetii and later by Suebi, but after the migration led by Maroboduus (c. 6 B.C.) there was no compact tribal community left, and a number of homeless Gauls settled there. The meaning of *Decumates* has been much disputed, but it is now widely held that the term was derived from the Celtic word for ten, the *Agri Decumates* thus consisting of ten units, possibly cantons (cf. the *Decempagi* of the *Mediomatrici*).

AGRIGENTUM, see ACRAGAS.

AGRIMENSORES, see GROMATICI.

AGRIPPA (1) I (b. 10 B.C., 'Herod Agrippa'), son of Aristobulus (see HEROD THE GREAT), spent his youth at the Imperial court, whence, having dissipated his patrimony, he fled to Syria. He returned to Rome on borrowed funds in 36, but was imprisoned by Tiberius for treason. He had, however, ingratiated himself with Gaius, who in 37 appointed him king of Philip's tetrarchy and later of Antipas' also. He courageously withstood Gaius' attempt to desecrate the temple, and was appointed by Claudius, whose accession he assisted, king of Judaea (41), with the object of soothing the outraged feelings of the Jews. This he did, being a very popular ruler; but his gross extravagance and his ambitious foreign policy disquieted Claudius, who on his death in 44 annexed his kingdom. Though he is called 'Herod Agrippa' in the Acts of the Apostles (xii), he never bore the name of Herod.

A. H. M. J.

AGRIPPA (2) II (b. A.D. 17), son of Agrippa I, was appointed in 50 king of Chalcis, which in 53 he exchanged for Philip's tetrarchy and Abilene and Arcene; Nero added four toparchies of Galilee and Peraea. From 48 he appointed the high priests and managed the temple funds. He supported the prosecution of Cumanus by the Jews but upheld the Roman government, and in 66 endeavoured by suasion and later by military action to nip the rebellion in the bud. He supported Cestius Gallus, Vespasian, and Titus with troops and with advice, and was rewarded with an accession of territory. He is stated to have died in 100, but had ceased to reign before 93. He is referred to in the Acts of the Apostles (xxv and xxvi).

A. H. M. J.

AGRIPPA (3), M. VIPSANIUS (b. c. 63 B.C.), accompanied Octavian to Rome from Apollonia after the murder of Caesar, played a prominent part in the Perusine War, and was praetor in 40. Subsequently as governor of Gaul he suppressed a rebellion of the Aquitani and led a punitive expedition across the Rhine. During his consulship in 37 he superintended the training of Octavian's fleet, constructing a new harbour for the purpose near Baiae (Portus Julius). His naval victory at Mylae was of decisive importance in the war against

Sextus Pompeius, and at Naulochus his improved grapnel is said to have been highly effective. He took part in the Illyrian War of 35-33, and his vigorous naval operations in the campaign of Actium were the primary cause of Octavian's victory over Antony. Agrippa held a second consulship in 28 and a third in 27, assisting Augustus in carrying out a census and *lectio senatus*. When, on the occasion of a serious illness (23), Augustus handed him his signet-ring, he probably meant to indicate him as his most suitable successor. Agrippa's subsequent departure for the East, where he made Mytilene his head-quarters, is almost certainly to be explained as an administrative (possibly also a diplomatic) mission, though friction with C. Marcellus (q.v. 7) may have made his temporary absence advisable. He was recalled in 21 to represent Augustus in Rome and proceeded to Gaul and Spain, where he put an end to trouble with the Cantabri (19). In 18 he was associated with Augustus by the conferment of the *proconsulare imperium* and the *tribunicia potestas* for five years, these powers being renewed for the same term in 13. (In 13, if not in 18, he received an *imperium maius* like that of Augustus.) As one of the *XVviri sacris faciundis* he assisted in the celebration of the *ludi saeculares* in 17. His second mission to the East (16-13) is notable for the establishment of Polemo of Pontus in the Bosporan kingdom, the settlement of veteran colonies at Berytus and Helio- polis, and Agrippa's friendship with Herod and benevolent treatment of the Jews. He was sent to Pannonia, where there was danger of revolt, in 13, and died shortly after his return to Italy in the following year. He left his property to Augustus, and was buried in the imperial mausoleum.

Agrippa ably seconded Augustus in his restoration and improvement of the city of Rome. Among the public works erected at his expense were two new aqueducts (Julia and Virgo), public baths (Thermae Agrippae), and the Pantheon, and as aedile in 33 he reconditioned the sewers of Rome. He wrote an autobiography (now lost) and a geographical commentary (also lost, but used by Strabo and Pliny) from which a map of the Empire was constructed.

Agrippa was married three times: (1) to Pomponia (daughter of Atticus), who bore him a daughter, Vipsania; (2) to Marcella, niece of Augustus, whom he divorced in 21 to marry (3) the emperor's daughter Julia. By Julia he had three sons (Gaius Caesar, Lucius Caesar, and Agrippa Postumus) and two daughters (Agrippina and Julia).

Velleius, bk. 2; Josephus, *AJ* 12. 3 and 16. 2; Suetonius, *Augustus*; Appian, *BCiv.* bk. 5; Dio Cassius bks. 48-54. T. Rice Holmes, *Architect of the Roman Empire* (1928 and 1931); W. W. AGRIPPA (4), POSTUMUS (12 B.C.-A.D. 14), third son of Agrippa and Julia, was born after his father's death in 12 B.C. and adopted by Augustus in A.D. 4. He was a youth of fine physique, but his depraved and contumacious character ultimately exasperated Augustus into disinheriting him. He was first sent to Surrentum, then condemned by the Senate to perpetual exile on Planasia (A.D. 7), where he was put to death immediately after the death of Augustus.

Velleius 2. 112; Tac. *Ann.* i. 3-6. On the alleged visit of Augustus to Planasia, M. P. Charlesworth, *AJPhil.* xlv (1923), 145 ff. G. W. R.

AGRIPPA (5), Sceptic, later than Aenesidemus (q.v.; date otherwise unknown). Diog. Laert. 9. 88 ff. ascribes to him five *τρόποι τῆς ἐποχῆς* (grounds of doubt), which are distinguished by Sext. Emp. *Pyr.* i. 164 from those previously recognized by the Sceptics.

Phil. i. 827.

W. D. R.

AGRIPPINA. (1) **VIPSANIA AGRIPPINA** (d. A.D. 20) was daughter of M. Agrippa and granddaughter of Pomponius Atticus. Married to Tiberius, she bore him a son, Drusus, but he was forced by Augustus, against his will, to divorce her and marry Julia in 12 B.C. She then married Asinius Gallus (q.v. 5) and bore him at least five sons.

(2) **AGRIPPINA MAJOR** (c. 14 B.C.—A.D. 33), Vipsania Agrippina, the daughter of M. Agrippa and of Julia (daughter of Augustus). She married Germanicus (probably in A.D. 5), to whom she bore nine children. She was with Germanicus on the Rhine from 14 to 16 and in the East from 18 until his death in the following year. From 19 to 29 she lived in Rome, the rallying point of a party of senators who opposed the growing power of Sejanus. With Tiberius, whom she suspected (without evidence) of causing her husband's death, her relations were consistently bad, and he refused her request in 26 for leave to marry again. She was arrested in 29 on the instruction of Tiberius and banished by the Senate to Pandateria, where she starved to death in 33. She was survived by one son, Gaius (q.v. 1), and three daughters, Agrippina II, Drusilla, and Livilla.

(3) **AGRIPPINA MINOR** (A.D. 15–59), Julia Agrippina, the eldest daughter of Germanicus and Agrippina, was born on 6 Nov. A.D. 15 at Ara Ubiorum. In 28 she was betrothed to Cn. Domitius Ahenobarbus, to whom she bore one son, the later Emperor Nero, in 37. During the principate of her brother Gaius (37–41) her name, like those of her sisters, was coupled with the emperor's in vows and oaths; but when she was discovered at Moguntiacum late in 39 to be involved in the conspiracy of Gaetulicus, she was sent into banishment. She was recalled by her uncle Claudius, who married her in 49. Aided by Pallas, Seneca, and Burrus, she quickly achieved her ambitious purpose. Receiving for herself the title Augusta, she persuaded Claudius to adopt Nero as guardian of his own son Britannicus. She was generally believed to have poisoned Claudius, to make room for Nero (54). In the first years of Nero's rule she was almost co-regent with him but, after Pallas had fallen in 55 and Burrus and Seneca turned against her, she lost her power. In March 59 she was murdered at Baiae by a freedman, Anicetus, acting on Nero's instructions. She wrote an autobiography. J. P. B.

AGROECIUS, fifth-century bishop of Sens, wrote a treatise *De Orthographia* (ed. Keil, *Gramm. Lat.* vii. 113–25) as a supplement to Flavius Caper (q.v.).

Cf. Teuffel, § 457, 11; Schanz-Hosius, § 1100.

AGYIEUS, god of roads, title of Apollo (q.v.).

AGYRRHIUS (c. 400 B.C.), Athenian democratic politician, restored the 'Theorika' (q.v.), and introduced payment for attendance at the Assembly, first one, later three obols.

Prosop. Att. 179.

AHALA, see **SERVILIUS**.

AHENOBARBUS, see **DOMITIUS**.

AIAS (*Aías*, Lat. *Ajax*). (1) Son of Telamon, king of Salamis, hence A. Telamoniuss (see **AEACUS**, **TELAMON**), but nowhere called an Aeacid till after Homer. In the *Iliad* he leads the Salaminian contingent (2. 557); he is of enormous (*πελώριος*) size, head and shoulders above the rest (3. 226–9). He is a blunt, stolid man, slow of speech, of unshakable courage, who repeatedly leads the Greek attack or covers the retreat. His stock epithet is 'bulwark' (*ἔρκος*) of the Achaeans' and his characteristic weapon a huge shield, evidently of Mycenaean pattern. Fighting Hector in a duel, he has rather the better of it (7. 206 ff.); he draws a wrestling-match with Odysseus, strength against cunning (23. 708 ff.). He is one of the

three ambassadors who treat with Achilles (q.v.; 9. 169 ff.). In the *Odyssey* (11. 543 ff.) mention is made of his death in consequence of the arms of Achilles having been adjudged to Odysseus and not to him after the death of their owner. The story is probably that found in later authors, e.g. Sophocles (*Ajax*), that he went mad with anger and disappointment and finally killed himself; it was told in the *Little Iliad*.

In the *Great Ehoiai* (Hesiod, fr. 140 Rzach) and thence in Pindar (*Isthm.* 6. 34 ff.), Heracles visits Telamon and, standing on his lion-skin, prays that his new-born child shall be as stout (*ἄρρηκτος*) as the skin; Zeus, in answer, sends an eagle, *αἰετός*, and hence the baby is named Aias. From this develops (Lycophron 455 ff.) the tale that Aias was invulnerable save at one point, where the skin had not touched him when (in this version) he was wrapped in it. In the *Aethiopis* Aias carries off the body of Achilles, while Odysseus keeps off the Trojans (cf. *Od.* 5. 309). Of his death various stories were told; he died of an arrow-wound received from Paris, or, being invulnerable, was buried alive by the Trojans throwing clay on him (argument to Soph. *Aj.* ad fin.). When he killed himself his blood flowed on the ground and there sprang up the iris (*ἰάκυνθος*), which also commemorates the death of Hyacinthus (q.v.); hence the markings on its petals recall the hero's name (*Aias*—*αἶα*, see *Ov. Met.* 13. 394 ff.).

Aias had a cult in Salamis, Attica, Megara (?), the Troad, and Byzantium (Farnell, *Hero-Cults*, 307 ff. and note 58). That he was not originally a man at all, but a gigantic and supernatural being, is an ingenious theory (see, for instance, P. von der Mühl, *Der grosse Aias*, 1930) but based on slight evidence. Certainly from Homer on he was conceived as a very tall and powerful man, nothing more.

(2) Son of Oileus or Ileus, the Locrian chieftain. Of his historical existence there is some proof in the Locrian custom of sending every year two virgins of their noblest families to serve in the temple of Athena of Ilium, if they were not killed on the way by the townspeople. From early in the third century B.C. the Aiantioi, the hero's own clan, undertook to furnish these girls (inscription published by A. Wilhelm, *JÖAI.* xiv (1911), 168 f.; for the custom in general, see Lycophron 1141 ff. and schol. there; Polybius 12, fr. 5, 6 Büttner-Wobst); it ended not very long before A.D. 100 or so (Plutarch, *De sera* 557 d), having lasted 1,000 years). It seems inconceivable that this should be the result of an imaginary person's fabulous crime, and therefore the classical explanation, that it is a penance for Aias carrying off the Palladium or raping Cassandra at the altar of Athena, during the sack of Troy, is by far the most plausible. See further Farnell, op. cit. 294 ff., and *ibid.* 293–4, for Aias' cult; A. Momigliano in *CQ* 39, 49.

In Homer Aias is leader of the Locrian contingent (*Il.* 2. 527 ff.); he is 'much lesser' than the son of Telamon (hence often called Aias the Lesser), quick-footed, and often paired with his greater namesake as a brave fighter. He is, however, of hateful character and on occasion grossly rude (as 23. 473 ff.). Athena hates him (*ibid.* 774; *Od.* 4. 502); in the latter passage he is drowned by Poseidon for blasphemy against the gods while scrambling ashore after shipwreck. In the *Iliu Persis* Aias drags Cassandra away from the altar of Athena, pulling the Palladium with her (cf. above). That he committed any further assault on her is not said by any author earlier than Callimachus (fr. 13 d Schneider); whether he invented this detail or had it from an older writer is not known.

That two heroes so unlike should have the same name is curious, and at the same time an argument against supposing that they were originally one. H. J. R.

AIDOS (*αἰδώς*), see **PERSONIFICATIONS**.

AINOI (*αἰνοί*), see **ARCHILOCHUS**.

AION (*Αἰών*), a personification of (1) period of time, (2) passage of time, indefinitely long time (hardly eternity, except in thought deriving from Plato, *Tim.* 37 d). See **PERSONIFICATIONS**. In cult, (1) is represented by the festival at Alexandria (late and Greek but not unconnected with Egyptian ideas, see E. Norden, *Geburt des Kindes*, 28, and refs. there), at which an image was brought out of the inner sanctuary of the *Kopeïon*, with the announcement that 'the Maiden (*Κόρη*) has brought forth Aion'. This is apparently the year; cf., for an allegedly Phoenician mythological figure of the same kind, Philon of Byblus ap. Euseb. *Praep. Evang.* 1. 10. 7. (2) perhaps in Eur., *Heracl.* 900, but cf. Wilamowitz-Moellendorf on *HF* 669; cf. Heraclitus, fr. 79 Bywater. In cult he is late, probably Orphic (Kern, *Relig. der Griechen* iii. 243), possibly Mithraic also (Cumont, *Textes et Monuments* i. 76; *Rel. or.* (4. 140 and note 46), cf. the Iranian Zervan Akarana. Mythologically, Aion is an important character in Nonnus, *Dionysiaca*. His connexion with a number of figures showing a lion-headed deity is problematical, cf. Cumont, *Textes*, loc. cit., Wernicke in *PW* ii. 1043, 33. An inscription to him, of 74-73 B.C., from Eleusis, *SIG*, 1125. Cf. Nock, *Harv. Theol. Rev.* xxvii (1934), 53 ff. on the complexity of ideas attaching to this term (and on the publicist or patriotic sense of *Aeternitas* at Rome); C. Bonner, *Hesperia* xii (1944), 30 ff. H. J. R.

AIORA, see **ICARIUS**.

AISA, see **FATE**.

AI SYMNETES, according to Aristotle (*Pol.* 1285^a), a supreme ruler appointed by some early city-states in times of internal crisis, for life, for a prescribed period, or till the completion of his task, e.g. Pittacus (q.v.). Aristotle defines the office as an elective tyranny, Dionysius (5. 73) compares the Roman dictator. These *aisymnetai* have affinities with the early lawgivers (Solon, Zaleucus, Demonax, etc.), the difference being one of local nomenclature. Inscriptions (*SIG* 38, 57, 272, 642, 955) show regular magistrates so called in Teos, Miletus, Naxos, Megara, Selinus, and Chalcedon. The word first occurs in *Od.* 8. 258, meaning a referee. P. N. U.

AITHER (*Αἰθήρ*), personification (q.v.) of the purer upper stratum of air (approximately the stratosphere), next to or identical with the sky; son of Erebus and Night (Hesiod, *Theog.* 124-5); of Chaos and Darkness (Hyginus, *Fab. praef.* 1); husband of Day and of Earth (*ibid.* 2-3). H. J. R.

AIUS LOCUTIUS, the unknown divine 'sayer and speaker' who, a little before the battle of the Allia in 390 B.C., bade one M. Caedicius tell the magistrates that the Gauls were coming. After their departure a precinct (*templum*) and shrine (*sacellum*) were dedicated near Vesta's shrine, on the Nova Via, where the voice was heard.

See Livy 5. 32. 6; 50. 5; Platner-Ashby, 4.

H. J. R.

AJAX, see **AIAS**.

AKONTION (*ἀκόντιον*) see **ARMS AND ARMOUR, GREEK**.

ALABANDA, a city in northern Caria, on the Marsyas, a tributary of the Maeander, at the point where the road from Tralles branches to Halicarnassus and to the coast opposite Rhodes. Its site (now *Arablhisar*) between two hills is likened by Strabo to a pack-saddle. In the province Asia it was a *civitas libera* and the centre of a *conventus*. It was proverbial for opulence and comfort. W. M. C.

ALAE, a term originally denoting the two contingents of *socii* normally posted on the legion's flanks; after

90 B.C., it bore the more restricted sense of cavalry. When Augustus organized the *auxilia* the cavalry contingents commanded by equestrian *praefecti* were called *alae* and numbered either 1,000 or 500, subdivided into 24 and 16 *turmae* respectively. They commonly bore titles indicating the country from which they had been recruited (e.g. *Hispanorum*) or the emperor or general who had raised them (*Aelia, Siliana*) or as a mark of honour *Augusta, pia, fidelis*. See **AUXILIA**.

G. L. Cheesman, *The Auxilia of the Roman Army* (1914).

H. M. D. P.

ALAMANNI (ALEMANNI), a Suebic people, descended from the Semnones, who late in the second century A.D. migrated from their home in Brandenburg. Early in the third century they broke through the *limes*, and Caracalla campaigned against them (213). Their attacks became serious in the thirties, and they made incursions into Upper Germany, Gaul, Raetia, and Italy. Gallienus defeated a horde near Milan, but had to abandon the *limes* territory of Upper Germany and Raetia, which the Alamanni then occupied. They did not cease to devastate Roman territory, and frequent Alamannic wars are recorded, notably those of Aurelian, Probus, and Julian. In the fifth century some of the Alamanni occupied Alsace, the Palatinate, and part of Switzerland; others had meanwhile spread over Raetia, and the modern Swabians are largely their descendants.

L. Schmidt, *Geschichte der deutschen Stämme* ii³ (1915), 236-324.

O. B.

ALANS, a nomadic tribe which entered Europe in the wake of the Sarmatians (q.v.) and was established in south-east Russia in the first three centuries A.D. The Alans repeatedly attempted to cross the Caucasus, and in 75 they raided Armenia and Parthia. But the Roman emperors from Nero and Vespasian onward fortified the western exits of the mountains against them, and Arrian, when governor of Cappadocia, beat off an attack by them. In the fourth century the Alans were swept across eastern and central Europe by the Huns. They found new homes in Spain (c. 410), but were soon absorbed here by their fellow-invaders, the Visigoths. Greek writers sometimes confused the Alans with the Albanians of the southern Caucasus.

M. Rostovtzeff, *CAH* xi. 94-7.

M. C.

ALASTOR, in mythology, son of Neleus and brother of Nestor, q.v. Like all his brothers save Nestor himself, he was killed by Heracles (*Il.* 11. 693; Apollod. 1. 93). He married Harpalyce, daughter of Clymenus of Argos, but on the way home he was overtaken by Clymenus and robbed of his bride, for whom her father had an incestuous passion. To revenge herself, she killed her younger brother, cooked his flesh, and served it to her father at a feast. She then prayed to be taken from the world of men, and became a *χαλκίς*, here a night-bird of some kind (Parthenius 13, from Euphorion).

ἀλάστωρ, subst. or adj., in the latter case often with *δαίμων* added: an avenging power, as Aesch. *Ag.* 1501, where it is the supernatural agent who, according to Clytemnestra, exacts vengeance on Atreus' descendants for his crime (see **ATREUS**, **AGAMEMNON**). Hence the criminal himself, presumably as giving occasion for such punishment, e.g. Aesch. *Eum.* 236, where Orestes uses it of himself; hence occasionally a mere vague term of abuse, 'wretch', 'scoundrel', as Dem. 19. 305. H. J. R.

ALAUDAE ('the Larks'), a legion raised by Caesar in Gallia Narbonensis from non-citizens, and the earliest of its kind. In 47 B.C., when its soldiers were enfranchised, it received a number—V. It was probably destroyed in the disaster of Cornelius Fuscus in Dacia in A.D. 87.

Ritterling, *PN*, s.v. 'Legio'.

H. M. D. P.

ALBA FUCENS, an ancient town just north of the Fucine Lake in central Italy, first mentioned as a Latin colony planted in *Aequis*, but near the Marsi, 303 B.C. (Livy 10. 1); perhaps the Via Tiburtina was now extended thus far east (see VIA VALERIA). Alba usually supported the Roman government, e.g. against Hannibal, the *socii* (90 B.C.), Caesar, and Antony; its recusant attitude in 209 was exceptional (App. *Hann.* 39; Livy 27. 9; 29. 15; *Epit.* 72; Caes. *BCiv.* 1. 15; Cic. *Phil.* 3. 6). Roman State prisoners were often kept here (Livy 30. 17; 45. 42; *Epit.* 61). Although not mentioned in Imperial times, imposing ruins at *Albe* and inscriptions attest its importance. E. T. S.

ALBA LONGA, nowadays *Castel Gandolfo* in the Alban Hills twelve miles SE. of Rome (T. Ashby, *Journ. Phil.* xxvii (1901), 37): a very ancient city traditionally founded by Ascanius c. 1152 B.C. (*Aen.* 3. 390 f.). Its necropolis contains tombs of c. 1100. Alba founded some, certainly not all, Latin cities (reject Livy 1. 52, *Aen.* 6. 773; and see I. G. Scott, *Am. Ac. Rome* 1929, 25). Apparently it once headed a league (of Prisci Latini? see Festus, p. 253 L.), the nature and members of which cannot be exactly determined: lists in Diodorus (7. 5), Dionysius (4. 92; 5. 61), and Pliny (*HN* 3. 69), like surviving lists of Alban kings, are untrustworthy. The Romans destroyed Alba (c. 600 B.C.) and transported some of its inhabitants to Rome, where they became prominent (Julii, Tullii, etc.: Livy 1. 29 f.; Tac. *Ann.* 11. 24). Alba was never rebuilt, the untransported Albans remaining in neighbouring Bovillae, where their descendants, *Albani Longani Bovillenses*, preserved Alban cults and memorials until late times (*ILS* 6188 f.). The name Alba is preserved to-day by Albano. Latin *Albanum* means 'a villa on Alban territory': i.e. Domitian's, which Septimius Severus transformed into a legionary camp and which became the nucleus for the modern town. Alban wine and building stone (peperino) were famous.

G. Lugli, *Bull. Com. Arch.* 1917-20; *Ausonia* 1919-21; *Nuova Antologia* 1929; A. Dobosi, *Ephemeris Dacoromana* vi (1935), 240. E. T. S.

ALBANIA (Caucasian), the land (mod. *Shirvan*) adjacent to the eastern Caucasus and the western Caspian, separated from Armenia by the river Cyrus (*Kur*). Its Caspian flat-lands were fertile, but the Albanian people remained a rude and warlike folk of herdsmen, hunters, and fishers, who traded by barter. Under a common king they had twelve local chiefs and spoke twenty-six different dialects; their chief worship was an orgiastic cult of the moon-goddess. Albania was explored by Pompey in 65 B.C. and was occasionally attached to the Roman Empire as a client State.

Strabo 11. 491 ff.; Pliny, *HN* 6. 15, 29, 39; Ptol. *Geog.* 5. 12. E. H. W.

ALBANUS LACUS (mod. *Lago Albano*), a crater lake in the Alban Hills near Rome. Its wooded banks in Imperial times were studded with villas, e.g. Domitian's. Lacking natural outlets, its waters reach the Rivus Albanus, and thence the Tiber, via a tunnel through the crater rim built c. 397 B.C. The Romans reputedly excavated this *emissarium* to ensure the fall of Veii which, an oracle prophesied, awaited the overflowing of the lake (Livy 5. 15-19). Actually their motive was to carry off the waters rapidly for irrigation purposes (Cic. *Div.* 2. 69); otherwise seepage through the porous subsoil would waterlog the districts below. E. T. S.

ALBANUS MONS, the Alban Hills and more specifically their dominating peak (*Monte Cavo*, 3,115 feet), thirteen miles south-east of Rome. Until c. 1150 B.C. the Albanus Mons was an active volcano, preventing human habitation in Latium; the volcano, however, has been inactive in historical times. On the summit stood the

Latin federal sanctuary of Jupiter Latiaris where Roman consuls celebrated the *Feriae Latinae* (Dion. Hal. 4. 49; the antiquity of the festival probably is underestimated). Remains exist, not indeed of the temple, but of the Via Triumphalis leading to it; here at least five Roman generals celebrated ovations after being refused regular triumphs in Rome (e.g. Marcellus in 211 B.C.: Livy 26. 21).

E. T. S.

ALBINOVANUS, CELSUS, see CELSUS (1).

ALBINOVANUS PËDO, a poet-friend addressed by Ovid in *Pont.* 4. 10, author of a *Thesaid*, is mentioned by Martial (1 *praef.*; cf. 5. 5. 6) as one of his models in epigram. The *Consolatio ad Liviam* (q.v.) and *Elegiae in Maecenatem* (q.v.), which Joseph Scaliger ascribed to him, are no longer considered his work. Under Tiberius he wrote a poem on Germanicus' North Sea expedition from which Seneca (*Suas.* 1. 15; cf. Bachr. *FPR*, p. 351) quotes over twenty hexameters as a typical Latin description of the ocean. Its rather turgid rhetoric does not exhibit the qualities in him which appealed to Martial; but the younger Seneca (*Ep.* 122. 15-16) calls him a 'fabulator elegantissimus' and gives his vividly amusing story about a noisy neighbour who turned night into day.

J. W. D.

ALBINUS (1), pupil of Gaius and teacher of Galen (in A.D. 151-2), wrote a Prologue to Plato, in which the nature, classification, and order of the dialogues are discussed, and a text-book of Plato's philosophy (the latter ascribed wrongly in the MSS. to an otherwise unknown philosopher Alcinoüs). Both works contain an amalgam of Platonism with Peripatetic and Stoic elements; specifically Neoplatonic doctrines are merely hinted at.

Ed. C. F. Hermann in his *Plato*, 6. 147, 152 (1892); P. Louis (Paris) 1945. *PW* i. 1314. W. D. R.

ALBINUS (2) (4th c. A.D.), writer on metre and music. His works are lost.

Cf. Teuffel, § 405, 2 and § 407, 5; Schanz-Hosius, § 825.

ALBINUS, see also CLODIUS (4), POSTUMIUS (3, 4, and 5).

ALBION, ancient (Celtic or pre-Celtic) name of Great Britain (but not Ireland), first recorded c. 525 B.C. by a Massiliote seaman (quoted by Avienus, q.v.) who spoke of Ireland, two days' sail from Brittany, 'alongside the island of the Albiones'. The name 'Albion' was used by the author of *De Mundo* (who said that it and Ireland were bigger than the Mediterranean islands, but smaller than Ceylon), but it was soon ousted by the Celtic 'Britannia'. The Romans, connecting 'Albion' with *albus*, white, referred the name to the cliffs of Dover.

E. H. W.

ALBOGALERUS, see APEX.

ALBUCIUS (1), TITUS (2nd c. B.C.), orator and Epicurean, of whose Hellenomania Lucilius makes fun (Marx, 88: cf. 84, where it is probably his style that is likened to a wriggly mosaic pavement).

ALBUCIUS (2) SILUS, GAIUS, Augustan orator and teacher of rhetoric, from Novaria. Though over-conscientious and not sure enough of himself, he could command a grand simplicity, and Seneca places him in the first rank (*Controv.* 7 *praef.* 1-9; Suet. *Rhet.* 6).

C. J. F.

ALBUM, a whitened *tabula*, was used for publishing, in black writing, priestly notices, *fasti*, notices of *comitia* and Senate, *proscriptiones* and edicts (e.g. *album praetoris* with *formulae actionum*), also member rolls (e.g. *album senatorum*, *decurionum*, *iudicum*, *collegii*), and lists of recipients of corn.

A. H. McD

ALBUNEA, nymph of the *albulae aquae*, a sulphurous spring and brook rising at Tibur, where it forms the well-known waterfall, and flowing into the Anio. Near the fall was a dream-oracle (*Aen.* 7. 81 ff., needlessly doubted by Heinze and Wissowa, *RK* 211 note 4). Albunea herself was called a Sibyl (Varro ap. Lactant. *Div. Inst.* 1. 6. 12); Servius on *Aen.* 7. 84 equates her with Leucothea (q.v.) and says the god [*sic*] Mefitis is her subordinate.

H. J. R.

ALCAEUS (1) (b. c. 620 B.C.), lyric poet, of Mytilene in Lesbos (Strabo 617), was still a boy when his brothers, Antimenidas and Cteis, overthrew the tyrant Melanchros (fr. 53, 7-8 Lobel = fr. 48 Diehl, *Diog. Laert.* 1. 74). Melanchros was succeeded by Myrsilus, who was helped by Deinomenes and Pittacus. Alcaeus' early years seem to have been spent in combating all three. At first he lost and went into exile at Pyrrha (schol. ad fr. 57 = 37), where he wrote fr. 55 = 35, and possibly frs. 87 = 30 and 6 = 119, in which political conditions are described in seafaring language. A fight followed, and to A.'s delight Myrsilus was killed (fr. 93 = 124). He was succeeded by Pittacus, with whom A. seems at first to have been friendly, since both fought against Athens at Sigeum (*Diog. Laert.* 1. 74) c. 600 B.C. Here A. lost his shield and celebrated the fact (fr. 193 = 49). On the conclusion of peace Pittacus became all-powerful, and was attacked by A., who regarded his election to power as an act of madness (fr. 109 = 87), and reviled him for his physical defects (*Diog. Laert.* 1. 81), his ambitious marriage (fr. 48 = 43), his riotous behaviour (fr. 50 = 45), and his craftiness (fr. 47 = 42). The result of the struggle was that soon after 600 B.C. A. went to Egypt (Strabo 37) and his brother Antimenidas became a mercenary of the king of Babylon (fr. 112 = 50). Alcaeus seems also to have been in Thrace (fr. 29 = 77) and to have had negotiations with the Lydians (fr. 47 = 42). Before Pittacus resigned his powers in 580 B.C. he forgave A. (*Diog. Laert.* 1. 75), who must have returned home. The rest of his life and the date of his death are unknown.

His works survive only in fragments. Edited by Aristophanes and Aristarchus in at least ten books (*Heph.* p. 74, 12 ff.), they seem to have been arranged according to subject, since *ῶμοι* (schol. *Heph.* p. 169, 28 ff.) and *Στασιωτικά* (Strabo 617) are mentioned, but the papyrus fragments give no indication of systematic arrangement. The remains indicate that A. wrote lyrical songs, usually monodies; many dealt with contemporary politics, while others are drinking-songs (frs. 96 = 91, 99 = 90, 108 = 94, 107 = 96, 128 = 66), sometimes with a meditative tinge (fr. 22 = 73), love-songs (fr. 49 = 44; cf. Theoc. 29-30, *Hor. Carm.* 1. 32. 11), hymns to Apollo (fr. 72 = 1), Hermes (fr. 73 = 2), and the Dioscuri (fr. 17 = 78). Sometimes he seems to write variations on themes of folk-song (fr. 10 = 123) or describes a festive scene (fr. 58 = 106). He writes in vernacular Aeolic, with occasional Homerisms. He uses two- or four-lined stanzas with a wide variety of metres, including the Greater and Lesser Aselepiads, the Sapphic and Alcaic stanzas, and other stanzas of his own invention. He occasionally employs an elaborate allegory (frs. 63 = 117 and 87 = 22), but normally he writes directly and easily, and is at his best in describing simple sights or emotions.

Texts: E. Lobel (1927); E. Diehl, *Anth. Lyr. Graec.* i. 4, pp. 86-159. Criticism: C. M. Bowra, *Greek Lyric Poetry* (1936), 141-85.

ALCAEUS (2) (4th c. B.C.), called by Suidas *κωμικός τῆς ἀρχαίας κωμῳδίας*, but from the titles of his plays clearly a Middle Comedy writer. His *Πασσιγῆν* took the fifth (last) prize in 388 B.C. (hyp. 4 *Ar. Plut.*). Fragments of eight plays survive, mostly mythological burlesques.

FCG i. 244-9; C.A.F. i. 736 ff.; Demianczuk, *Supp. Com.* 7. M. P.

ALCAEUS (3) of Messene (fl. 200 B.C.) has about twenty epigrams in the Greek Anthology, including several very interesting political lampoons on Philip V of Macedonia (see F. W. Walbank, *CQ* 1942-3). Plutarch (*Flam.* 9) says that one of them was sung throughout Greece; the king's fierce retort is also in the Anthology (*Anth. Plan.* 26 b). These are the earliest invective epigrams in the style taken up by Catullus and cultivated by so many lampoonists after him. A.'s iambs, which must have been pasquinades too, are lost.

G. H.

ALCAMENES (c. 460-400 B.C.), Greek sculptor. He was probably an Athenian and may have been a pupil of Phidias, though he is sometimes described as his rival. His latest known work being a relief carved for Thrasybulus at Athens in 404-403, Pausanias attributed to him the carving of the west pediment of the temple of Zeus at Olympia. This attribution, however, cannot be accepted, though Alcamenes may have had some part in the completion or repair of the pediment. The only surviving work which can be attributed to him is a statue, now in the Acropolis Museum (no. 1358), of a woman and a small boy. This appears to be identical with a statue of Proene and Itys which, according to Pausanias, was dedicated by an Alcamenes on the Acropolis. Some scholars think that the dedicator and the sculptor are not identical, but the attribution is almost certainly correct. Perhaps Alcamenes contributed to the sculpture of the Erechtheum, and the similarity between the Proene and Itys and the Caryatids in style is noteworthy.

S. C.

ALCATHOUS (*Ἀλκάθοος* or *Ἀλκάθους*), in mythology, son of Pelops and Hippodameia, to whom games (Alkathioia) were celebrated at Megara (*Pind. Isthm.* 8. 74 and schol. on *Nem.* 5. 46). A folk-tale (theme H 105, Stith Thompson) told by Dieuchidas (ap. schol. *Ap. Rhod.* 1. 517) says that, exiled for his share in the murder of his brother Chrysippus, he killed a lion (it haunted Cithaeron and had killed Euhippus, son of Megareus, king of Megara, who promised his daughter's hand and the succession to his throne to whoever slew it, *Paus.* 1. 41. 3), cut out its tongue, and when false claimants arose, used it to refute them. He then built temples to Apollo Agraios and Artemis Agrotera (*Paus. ibid.*) and walls for Megara; Apollo helped him, and rested his lyre on a stone still shown in Pausanias' time (*ibid.* 42. 2). His eldest son, Isehepolis, was killed on the Calydonian boar-hunt; one Callipolis brought the news and scattered the wood of a fire on which Alcathous was offering, whereat Alcathous killed him with one of the billets (*ibid.* 42. 6).

H. J. R.

ALCESTIS (*Ἀλκηστis*), in mythology, a daughter of Pelias (see *NELEUS*) and wife of Admetus, king of Pherae in Thessaly. For some unknown reason she is the central figure of two interesting legends, one of them also moving and famous in literature, but both characteristic folk-tales.

(1) When she was of age to marry, many suitors appeared, but her father would not give her to any who could not fulfil the prescribed condition of driving wild beasts yoked to a chariot. This is of course one of the innumerable stories told of extraordinary tasks set wooers (see Stith Thompson, *H* 335). In this instance it does not appear that Pelias apprehended any danger from Alcestis' marriage, or had any special reason for wanting her at home. Admetus succeeded, thanks to a divine helper. Apollo had shortly before killed the Cyclopes who made Zeus' thunderbolts (cf. *Eur. Alc.* 1 ff.), because he did not dare to avenge the death of his son Aselepius (q.v.) on Zeus himself. In consequence, he was banished from heaven for a time (the common punishment of a human manslayer is here transferred to a god), and made to serve a mortal. Admetus was renowned for his piety and treated his divine serf with every consideration, employing him (appropriately, as

he is a god of flocks and herds, *see* APOLLO) to tend his horses or cattle. The god, in return for this, in a later form of the legend, because Admetus was very handsome and he loved him (first in Callimachus, *Ap.* 49, who does not mention the affair of the banishment) brought him a lion and a boar yoked, and he drove away with Alcestis behind this team (*Hyg. Fab.* 50. 51; source unknown; 50. 1 suggests another form of the story in which the successful candidate was allowed to choose whichever of Pelias' daughters he preferred).

(2) At the bridal feast, Admetus forgot to sacrifice to Artemis (Apollod. 1. 105, who also had the story of the lion and boar), and on opening the bridal chamber found it full of serpents. The snake being a chthonian creature for the most part, this was an omen of imminent death, and Apollo again intervened. By the primitive method of making the Fates drunk (*Aesch. Eum.* 728) he persuaded them to promise that if anyone else would die on Admetus' behalf, he might continue to live. But no one would consent to die, except Alcestis (*Eur.*, *ibid.* 15 ff. He makes no mention of the portent, which indeed, if he had heard of it, would not fit his version of the story; his Alcestis has been married long enough to have two children past infancy). That there was any baseness in accepting her offer did not occur to tellers of the legend before Euripides; elsewhere Admetus is a wholly admirable character. So far, the tale embodies popular moralizing (a man's truest friend is a good wife). On the appointed day Alcestis accordingly died, i.e. the rest of her life was transferred to her husband, a piece of magic which Jason suggests to Medea (*Ov. Met.* 7. 168), but she declares it quite impossible, 'nec sinat hoc Hecate' (174). When gods were the agents, such difficulties did not exist. Now comes a form of the widespread tale (Tammuz and Ishtar is the oldest known form) of the recovery from the lower world of one of a pair of lovers. It is sometimes said (Apollod., *ibid.* 106) that Persephone sent Alcestis back of her own accord; but the usual version is that Heracles (q.v.) intervened. Admetus, with his usual piety, had received him hospitably in the midst of his own grief; by way of return for this, he set out to harrow Hcll, and fought successfully either with Hades himself (Apollod., *ibid.*) or with the death-spirit, Thanatos, compelling him to give Alcestis back.

Some extraordinarily foolish theories have been evolved concerning this legend, mostly starting from the name of Admetus ('Unconquerable, Unsubduable'). He has been declared to be a sun-god, or, more absurd still, a death-god. The standard treatise is now that of A. Lesky, 'Alkestis, der Mythos und das Drama', in *Sitz. Wien*, 1925, which gives some account of these aberrations and puts forward a substantially correct explanation. It should have been obvious that to give the story point the characters must be human, or near enough to human to be capable of dying; even if originally husband and wife had been gods, the legend would not have been told of them till that fact was forgotten.

Apart from these tales, neither of the pair has much mythology. Admetus took part in the Argonautic adventure, (*Hyg. Fab.* 14. 2 and elsewhere); the Calydonian boar-hunt (Apollod. 1. 67); the funeral games over Pelias (chest of Cypselus in Paus. 5. 17. 9, where he drives a chariot); perhaps in imitation of this, Statius (*Theb.* 6. 310 ff.) makes him compete at the first Nemean games with a team of mares.

One account (Phanodemus ap. schol. *Ar. Vesp.* 1239) says that in his old age Admetus was driven into exile with Alcestis and their youngest child, Hippasus (the elder son, Eumelus, took part in the Trojan War, *Il.* 2. 713-14; he was a skilled charioteer, 23. 288-9, but had ill success in the chariot-race at Patroclus' funeral, *ibid.* 391 ff.; the daughter, Pericle, married Argos, son of

Phrixus, *Ant. Liberalis* 23). The cause of the exile is not known, and the story is plainly connected with the famous skolion (quoted by *Ar. Vesp.* 1238), Ἀδμήτου λόγον ὠπταῖρε μαθὼν τοὺς ἀγαθοὺς φίλει, said by Phanodemus to refer to Admetus' kind reception by Theseus.

There appears to have been no hero-cult of either Alcestis or her husband.

H. J. R.

ALCHEMY is a body of doctrine characterized by

- (a) Interest in the change of base matter into silver and gold.
- (b) A belief that all matter is made up of the four elements, and of a fifth entity, the directed action of which can change the character of the whole.
- (c) A belief that material events have a spiritual basis or even that matter and spirit are one. In the background lies a confused hylozoism. These are the main sources of a notorious obscurity.
- (d) A delight in syncretism.

2. The word 'alchemy' is medieval and is an Arabic combination of the article with Greek *chemia* = Egypt (Plutarch), hence 'the Egyptian art'. This derives perhaps from an Egyptian word meaning black, and especially the black soil, which is Egypt as distinguished from the sandy desert. The Greek alchemical texts never used the word *chemia*, though one is ascribed to 'Chymes'. This name betrays a constantly recurring confusion between *chemia* and *chymeia* (= melting, fusion). The texts refer to their subject as 'The Work', 'The divine and sacred Art', etc. It is not yet possible to indicate the sources of Greek alchemy. The texts bear names of Greek, Egyptian, Hebrew, and Persian authors. The intense religious element in them recalls that of the Hermetic writings and suggests an Alexandrian atmosphere.

3. There is no early Latin alchemy. The technical sections of Pliny's *Historia naturalis* have no trace of the alchemical spirit.

4. Early Greek alchemical texts are almost all pseudonymous and commonly quoted under the names of their spurious authors. They fall into various schools which gradually pass out of the Classical period.

(a) *The School of Democritus* worked only by superficial colouring and by preparing alloys by fusion. The considerable *Physica et mystica* of 'Democritus' has no Christian or Jewish allusion and may be as early as the first century B.C. The mythology of the text of 'Isis' is early Gnostic. It may be about A.D. 100. Later is the text of 'Moses' which opens with Exodus xxxi. 2-5. A second- or third-century text was of 'Ostanes', the traditional name of the Persian teacher of the real Democritus.

(b) *The School of Mary the Jewess* employs complex apparatus for distillation and sublimation. Works in her name were not later than the first century A.D. They survive in numerous quotations. She is commemorated in the modern chemist's 'bain marie'. The text of 'Cleopatra' contains the earliest drawings of alchemical apparatus. Other texts are of 'Agathodaemon', 'Hermes', and 'Comarius'.

(c) *The School of Zosimus* of the third and fourth centuries, at least partly of Christian origin, has a commentary character but also records experiments. Zosimus adhered specially to the ideas of Mary and Cleopatra. This early feminist collaborated with his 'sister' Theosebeia in an alchemical work of which there are substantial remains. Of one member of the school, Olympiodorus of Thebes in Egypt, we gain a clear picture since he wrote in A.D. 425 a history of his times of which an abridgement survives. With the numerous later schools we are not here concerned.

5. The Greek alchemists had at their disposal numerous substances, of which about forty can be identified as moderately pure. Nevertheless they had no criterion

of chemical purity, and it met their needs if substances looked like and, to a certain extent, behaved like those they sought, which were, above all, gold and silver. This could become fraudulent but was, in itself, an approach which necessarily followed from their doctrines.

6. The extreme difficulties of interpreting the descriptions and drawings of apparatus have, in some cases, been surmounted, notably for the complex *kerotakis* used for sublimation. The 'bain marie' itself has been in use for nearly 2,000 years.

ALCIBIADES (c. 450-404 B.C.), son of Cleinias, Athenian general and statesman. Brought up in the household of his guardian Pericles, he became the pupil and intimate friend of Socrates. His brilliance enabled him in 420 to assume the leadership of the extreme democrats, and his ambitious imperialism drew Athens into a coalition with Argos and other enemies of Sparta. This policy, half-heartedly supported by the Athenians, had to be abandoned after the Spartan victory at Mantinea (418). Though Alcibiades temporarily allied with Nicias to avoid ostracism, the two were normally at variance, and when the former sponsored the plan for a Sicilian expedition, Nicias vainly opposed it. Both were appointed, together with Lamachus, to command this armament, and received extraordinary powers (415). Alcibiades was suspected of complicity in the mutilation of the Hermæ (q.v.) and other profanations at Athens, and soon after the fleet reached Sicily he was recalled for trial. He escaped, however, to Sparta, where he gave the valuable advice that a Spartan general should be sent to Syracuse and that a permanent Spartan post at Decelea in Attica should be occupied.

In 412 his mission to Ionia caused many allies of Athens to revolt, but he soon lost the confidence of the Spartans and fled to Tissaphernes. He tried to secure reinstatement at Athens by winning the support of Persia and fomenting an oligarchic revolution, but he could not induce Tissaphernes to desert the Spartan cause. The Athenian fleet at Samos appointed him general, and for several years he skilfully directed operations in Ionia and the Hellespont, winning a brilliant victory at Cyzicus in 410. He returned to Athens in 407 and was entrusted with an extraordinary command. Against the powerful combination of Lysander and Cyrus he could effect little, and when in his absence a subordinate suffered defeat at Notium (406), his enemies roused popular suspicion against him. He then withdrew, and in 404 through the influence of the Thirty Tyrants (q.v.) and Lysander he was murdered in Phrygia, where he sought refuge with Pharnabazus.

Alcibiades was an egoist whose career proved disastrous to Athens, but Thucydides justifiably censures the conduct of his countrymen, who twice discarded him when his genius might have been a decisive factor.

ALCIDAMAS (4th c. B.C.), rhetorician and sophist, was born at Elaea in Aeolis. He studied under Gorgias, and led the orthodox branch of Gorgias' followers, while Isocrates led the innovators; the difference consisted largely in the fact that Alcidamas emphasized the importance of a power of improvisation resting on wide knowledge, while Isocrates excelled in dialectical skill and delicacy of language. The works extant under Alcidamas' name are (1) *Περὶ τῶν τοῦς γραπτῶν λόγων*

γραφόντων ἢ περὶ σοφιστῶν, (2) (spurious) *᾽Οδυσσεὺς κατὰ Πάλαμῆδους προδοσίας*. The most important of the lost works seems to have been that called *Μονοεῖον*.

Ed. F. Blass, in his *Antipho* (1892), 183. *PIV* i. 1533. W. D. R.

ALCIDES = HERACLES (q.v.).

ALCINOUS (*Ἀλκίνοος*), in mythology, son of Nausithous (*Od.* 7. 63), husband of Arête, his first cousin (*ibid.* 66), king of the Phacacians in Scheria (*ibid.* 6. 12, etc.), father of Nausicaa (q.v.). He received Odysseus hospitably (*see* ODYSSEUS) and sent him to Ithaca on one of the magic ships of his people (13. 70 ff.), though he had had warning of the danger of such services to all and sundry (13. 172 ff.). In the Argonautic legend (*see* especially Ap. Rhod. 4. 993 ff.) the Argonauts visit Scheria (here called Drepane) on their return from Colchis; the Colchians pursue them there and demand Medea. Alcinous decides that if she is virgin she must return, but if not, her husband Jason shall keep her. Warned by Arête, she and Jason consummate their marriage. H. J. R.

ALCIPHRON (2nd c. A.D.), Athenian sophist, whose letters, in imitation of Lucian, supposedly written by Athenians of the fourth century B.C., embody reminiscences of Menander, are written in familiar style, and vividly reflect the ordinary life of that time.

Text, M. A. Schepers (Teubner, 1905). Translation, F. A. Wright (1923). J. W. H. A.

ALCITHOE, *see* MINYAS.

ALCM(A)EON (1) (*Ἀλκμαίων*, *Ἀλκμαίων*), in mythology, son of Amphiaras (q.v.). After the expedition of the Seven against Thebes, he avenged his father's death on his mother Eriphyle, and afterwards became, by command of Apollo, leader of the expedition of the Epigoni, which took Thebes (or the expedition came first, the matricide afterwards, contrast Aselepiades in schol. *Od.* 11. 326, with Apollod. 3. 86). Being maddened by the Erinyes, he left Argos and went to Psophis, where King Phlegus purified him and gave him his daughter Arsinoë or Alpheiboca, but as a famine visited the land he left, settled in the new land formed by the Aechelous at its mouth, and therefore not seen by the sun when Eriphyle was killed, and married Aechelous' daughter Callirhoë (*see* ACARNAN). But the brothers of Arsinoë waylaid and killed him, afterwards shutting their sister up in a chest and selling her as a slave. In Euripides' *Alcmeon at Corinth* he met Manto on his wanderings and had two children by her. H. J. R.

ALCMAEON (2) of Croton (c. 500 B.C.), pupil of Pythagoras, physician and scientist, wrote a book *Περὶ φύσεως*. Fundamentally a Pythagorean, he was also influenced by Heraclitus. He is best known for his list of contrary principles (Arist. *Metaph.* 986^a27), and for his study of the human sense-organs. He is said to have been the first Greek to operate on the eye; his view that the eye is connected with the brain by pores was adopted by Empedocles and the Atomists (*see* ANATOMY, para. 1). Testimonia and fragments in Diels, *Vorlesr.* i. 210-16. *PIV* i. 1556. W. D. R.

ALCMAEONIDAE, a noble Athenian family which played a leading part in Attic politics in the seventh, sixth, and fifth centuries B.C. Its most prominent member was Cleisthenes (q.v., 2). Pericles was the son of an Alcmaeonid mother. *See also* CYLON. M. C.

ALCMAN (fl. 654-611 B.C., Jerome-Eusebius; 631-628 B.C., Suidas), lyric poet, who lived in Sparta in the second half of the seventh century B.C. While some (ap. Suid. s.v. *Ἀλκμάν*) said that he was a Laconian from Messoa, others (Crates ap. Suid.) said that he came from Sardes in Lydia, and support for this has been found in fr. 13, where the poet may be addressing himself. In the latter

case he would be an Asiatic Greek. He is also said to have been a slave who was granted his liberty because of his skill (Heraclid. Pont. fr. 2). His fragments show no direct reference to contemporary history, though fr. 100 may refer to the end of a war, and fr. 44 may be a tribute to Spartan methods of government. His work seems to belong to the period of peace which followed the Second Messenian War, and is mainly concerned with Spartan feasts and festivals. He wrote lyrical poems which were later collected in six books (Suid. loc. cit.). These seem to have been mainly choral and to have often been sung by choirs of maidens. From one more than half survives (fr. 1). Beginning with a myth which illustrates the punishment of pride, it goes on to give personal remarks about the girls who sing and is very hard to interpret. It has been variously ascribed to festivals of Artemis, the Dioscuri, Dionysus, and Helen, seems to have been sung at night in some kind of competition against another choir, and has been thought to have its parts divided between different members of the choir, an unusual, though not impossible, occurrence in Greek poetry. Other fragments come from hymns to the Dioscuri (frs. 2-6), Hera (fr. 24), Athena (frs. 25-8), Apollo (frs. 29-34), and Aphrodite (fr. 35), while one seems to describe a nocturnal festival of Dionysus (fr. 37). He also wrote in hexameters what may have been Preludes to recitations of Homer. In these he sometimes varies a Homeric theme (fr. 73) or speaks about himself (fr. 94). He uses a literary language which includes Dorian and Aeolic elements and shows echoes from Homer. References to the Issedones, the Rhipaei mountains, and King Kolaxais of Scythia may perhaps be taken from the work of Aristeas of Proconnesus. He writes with unaffected charm about simple matters such as birds (frs. 92-4), horses (fr. 1, ll. 45-9, 58-9), food (frs. 49, 55, 56), and with magic about night and sleep (fr. 58). Suidas says that he was the inventor of love-poems, but his fragments give no evidence on this beyond the tender emotions which he describes between the different members of a choir. His metres are varied and usually simple, though in fr. 58 he shows an advanced technique. It is not clear that he used a triadic structure in his verse.

ALCMENE, in mythology, daughter of Electryon. When her husband Amphitryon (q.v.) killed her father by mischance, she left Argos for Thebes with him, but refused to allow him conjugal rights till he had avenged the death of her brothers on the Taphians and Teleboans. He gathered an army and set out; but during his absence his wife was visited by Zeus (see HERACLES). She thus bore Heracles to Zeus and Iphicles to Amphitryon (Hesiod, *Shield* 1 ff.). The birth was delayed by Hera (*Il.* 19. 114 ff., much elaborated in *Ov. Met.* 9. 290 ff., *Ant. Lib.* 29, from Nicander). After the death of Heracles, she and her children were persecuted by Eurystheus; according to Euripides (*Herac.*) they took refuge in Attica. Eurystheus attacked but was defeated and captured, the victory being bought by the sacrifice of Heracles' daughter Macaria to Persephone, in accordance with an oracle; Alcmena insisted on the death of Eurystheus. At her own death Alcmena was taken to the Islands of the Blessed and a stone substituted in her coffin (Pherecydes ap. *Ant. Lib.* 33. 3). She had a cult at Thebes and elsewhere (Farnell, *Hero-Cults*, 409).

ALCYONEUS, see GIANTS.

ALEMANNI, see ALAMANNI.

ALESIA, a town of the Mandubii, a client-state of the Aedui, modern *Alise-Sainte Reine*, a hill-fort built by La Tène Celts. Excavation has revealed a Gallic town with

murus Gallicus. In 52 B.C. Caesar besieged Vercingetorix here, and after beating off a large relieving army received his surrender. Siege-works corresponding to Caesar's minute description were discovered in 1860-5. A Gallo-Roman town on the hill, with important buildings, is in course of excavation. It suffered damage in A.D. 69 and c. 166, and in the third century, eventually falling into decay.

ALETES (Ἀλήτης), in mythology, (1) son of Hippotas. Asking at Dodona how he might become king of Corinth, he was told he should do so 'when one gave him a clod of earth on a day of many garlands'. He went there on a festival as a beggar, and was given earth by one of whom he asked bread; subsequently he became king through an intrigue (schol. *Pind. Nem.* 7. 155). (2) Son of Aegisthus, see ERIGONE (2).

H. J. R.

ALEUADAE, the leading aristocratic family of Thessaly, who dominated the neighbourhood of Larissa. The military and political organization of the Thessalian national State was ascribed to Aleuas the Red. The earliest *tagus* (q.v.) who was certainly an Aleuad was Thorax; his intrigues with Persia caused a temporary eclipse of Aleuad influence after the invasion of Xerxes. The Aleuadai vigorously opposed the tyrants of Pherrae and several times invited Macedonian intervention. Simus, at first a creature of Philip, later defied him, and the suppression of this movement against Macedonian domination finally broke the power of the Aleuadai.

ALEUROMANCY, see DIVINATION, para. 6.

ALEXANDER (Ἀλέξανδρος) (mythological), see PARIS.

ALEXANDER THE GREAT, see ALEXANDER (3).

ALEXANDER (1) I, king of Macedon c. 495-450 B.C. He submitted to Persia (492) and served with the Persian forces under Xerxes. Nevertheless he succeeded in helping the Greeks without arousing Persian suspicion; he advised the Greeks to abandon Tempe and is said to have given information to the Athenians before Plataea. For his services he was admitted as a Hellene to the games at Olympia, where he won a victory, and became proxenus at Athens. He endeavoured to hellenize his court, to which he invited Pindar. After the Persian retreat he annexed territory as far as the Strymon valley, capturing silver-mines in the Krusha Balkan, whence he issued the first Macedonian coinage on the standard used by Abdera. His further expansion was checked by the Delian Confederacy and Athens' reduction of Thasos. He was the first king of Macedon to enter Greek politics, to establish claim to Greek descent, and to introduce Greek ways into Macedonia.

F. Geyer, *Historische Zeitschrift*, Beiheft 19 (1930).

N. G. L. H.

ALEXANDER (2) II, eldest son of Amyntas and king of Macedon 369-368 B.C. Invoked by the Alcuadae (q.v.) against Alexander of Pherrae, he garrisoned Larissa and Crannon before a rebellion in Macedonia compelled him to return. Pelopidas ejected the Macedonian garrisons, arbitrated in Macedonia, and made alliance with Alexander. Shortly afterwards Alexander was murdered. He probably instituted the *pezetaeri* (see HETAIROI and ARMIES, GREEK AND HELLENISTIC, para. 4).

N. G. L. H.

ALEXANDER (3) III of Macedonia ('the Great'), 356-323 B.C., son of Philip II and Olympias of Epirus. Aristotle became his tutor, and he early showed his powers of intellect and command. Despite serious quarrels with Philip, occasioned by palace intrigues and

uncertainty as to the succession, Alexander did succeed without difficulty (336), and immediately devoted himself to the plan of invading Asia which was part of his inheritance. To invade the Persian Empire with limited objectives was not difficult, experience having shown that a Greek army could penetrate to Mesopotamia and, with good cavalry, might defeat any Persian army. Distances were great and communications sometimes difficult; but an army could usually live on the land, and had nothing to fear, west of Iran, from a national resistance of hostile populations.

2. Having secured Macedonia, Greece, and his northern frontiers, Alexander crossed the Hellespont (334) with an army of about 40,000 men, of whom fewer than half were Macedonians, and fewer than a quarter were Greek contingents from city-members of the Corinthian League. His immediate object was certainly to liberate the Greek cities in Asia. This was quickly achieved, after the battle of the Granicus (near the Hellespont) had reduced the Persian advance forces to defending a few strong places. He now disbanded his fleet and proceeded to 'defeat the Persian fleet on land', by conquering its remaining bases in Phoenicia and Egypt. Having completed the conquest of western and southern Asia Minor, he was brought to action by the Persian 'Grand Army'. The battle of Issus (near Alexandretta) was fought on ground unfavourable to the Persian cavalry; it was won by the steadiness of the Macedonian infantry and Alexander's brilliant cavalry leadership. Shortly after, he refused peace on favourable terms—the first certain sign that, exceeding the more restricted aims of the Greeks and probably of Philip, he intended to conquer the whole Persian Empire. But though the way to Babylon and the East lay open, he adhered to his original plan and spent the next year in occupying Phoenicia, Palestine, and Egypt. The capture of Tyre represents his greatest military achievement, and with it Persia ceased to be a Mediterranean Power.

3. In 331 Alexander left Egypt for Babylonia, where Darius had collected another 'Grand Army'. At the battle of Gaugamela (in the plain of Mesopotamia), he outmanoeuvred and defeated the Persians on their own terrain; Darius escaped, but now became a mere fugitive. Alexander proceeded to occupy the Persian capitals (Babylon, Susa, Persepolis, Ecbatana), where the vast treasures of the Empire were stored. The sack of Persepolis, if not promoted by impulse, was probably intended to mark the end of the Persian monarchy; and the death of Darius after a stern pursuit left Alexander free to assume the title of *Basileus* (Great King) and to treat further resistance as rebellion (330). In a great sweep from the Caspian to the south-east slopes of Hindu Kush he found little opposition (330–329), but the conquest of Bactria and Sogdiana (Russian Turkestan) cost him nearly three years of hard fighting. Here was a national resistance broken only by time, a strategy adapted to new conditions, and a final gesture of reconciliation, Alexander's marriage with the Sogdian Roxane.

4. The Indian Expedition (327–325) extended the eastern frontiers of the Empire to the Hyphasis (Beas) and lower Indus. The nations of north-western India, unable to combine, presented to Alexander an opportunity like that which the disunion of Greece had given to Philip. The only formidable opponent was Porus (king of the Paurava), and the only great battle (the 'Hydaspes battle') was another triumph for Alexander's versatility. Having overrun the Punjab, he turned back because the army refused to follow him farther. The return journey to Persia became a voyage of discovery. With half of the army, part marching and part in ships newly built, he reached the Indus delta, whence the fleet was to make the unknown voyage to the Persian Gulf, while he took an equally dangerous land route to prepare its bases. This return march through Gedrosia has been called

Alexander's 1812; exaggerated though its horrors may have been, it was certainly the nearest that he ever came to a great disaster. The fleet suffered too, but arrived safe (325–324).

5. The last year of Alexander's life reveals how great would have been his difficulties had he survived. Misgovernment and disloyalty among his subordinates, a mutiny of his Macedonians, a rising of Greek soldier settlers in Bactria, imminent war in Greece—these were the fruits of his policy, which may conveniently be summarized under two heads, (a) Alexander's conception of conquest; (b) his conception of himself.

(a) In the government of the Empire he made only one important innovation, the separation of fiscal from military authority in the Western provinces, with a centralized financial administration. To peoples used to being ruled, the change of rulers meant little; with the former rulers themselves, the Iranian nobility, the case was different. With striking originality, Alexander adopted the style and ceremonial of a Persian king; he drafted Iranian cavalry into his army, and had 30,000 boys trained to fight in the phalanx. He married into the Iranian nobility and eventually made his highest officers do likewise, and encouraged mixed marriages by the soldiers. This bold policy was not wholly successful *vis-à-vis* the Iranians themselves: most of his Asiatic governors turned out badly. To many of his Macedonian officers it was odious from the first, and finally his plans for a new 'mixed' army occasioned the great mutiny of 324, when even the Macedonian soldiers, devoted hitherto, stated their grievances. To the Macedonians the situation was simple: they were the conquerors, the barbarians were the conquered. To Alexander it appeared that some at least of the barbarians should be partners in the Empire. It is even possible that Alexander was the first to conceive the idea of the essential unity of all mankind.

(b) It is practically certain that in 324 Alexander officially requested the Greek cities to treat him as a god (Aelian, *VH* 2. 19; Hyperides 5, col. 31; Arrian, *Anab.* 7. 23. 2): this act perhaps contains the clue to his inner personality and aims. It is usually interpreted as a political manoeuvre, a means of evading his obligations to the Greek city-members of the Corinthian League (to all except Greeks the act was without meaning); but, if so, it was a very clumsy manoeuvre, and failed of its purpose. Greek religion certainly allowed for the possibility of a man, a great benefactor, becoming a god; but there was no religious consciousness in Greece which could override the highly developed political consciousness, and there was no question of Alexander's deification appearing to any Greek as a 'revelation', or compensating for the loss of his political birthright, complete autonomy. Alexander himself, however, may have believed strongly in his own divinity: if Greeks in general could hail a benefactor as a god, who more likely to believe in his divinity than the benefactor himself? In 332–331 Alexander had gratuitously undertaken a long and dangerous march to the desert oracle of Ammon (oasis of Siwah), and his own propaganda later announced that he had been recognized as son of Ammon (Zeus) (Callisthenes ap. Strabo 17. 1. 43, and see AMMON). This may well have been a customary local formula addressed to a new pharaoh; but, equally, its effect can have been incalculable on one whose whole career reveals his extraordinary preoccupation with the gods of all nations and, perhaps, his emulation of the Greek gods Heracles and Dionysus in particular.

6. It remains a debated question whether Alexander aimed at a universal monarchy. The chief evidence supporting this view is probably not authentic (Diodorus 18. 4. 3 ff.); in fact, there is no sign that he intended in the immediate future anything more than exploration, and perhaps conquest, on his southern and northern

frontiers (Arabia and the Caspian). His desire in India to conquer still farther was natural if, as is certain, he thought the eastern Ocean comparatively near. If he believed in his own divinity, that does not make him intent on conquering the West as well as the East, since no Greek god (except perhaps Zeus) was ever supposed to hold a universal rule. What is certain is that he would never have remained idle.

7. Alexander was undoubtedly the greatest general of his race and probably of antiquity. He profited by the splendid army of Philip, and by technical improvements in siegecraft; but this does not explain his achievement, which was due to a profound, if unconsidered, insight into the essentials of strategy, and a wonderful versatility. By temperament an inspired leader of cavalry and a 'monster of celerity', he could nevertheless be patient (siege of Tyre), and could fight a defensive battle until the moment came to strike (Gaugamela). No doubt he exposed himself too readily, and in leading a charge he lost control of the battle; yet to this personal courage and his powers of endurance he partly owed his continued ascendancy over officers and men, despite their accumulating grievances. As a ruler, he must be judged by his plans for the Empire (above), which were grand and original, but perhaps impossible of execution, even by himself. His foundations of new cities show a superb appreciation of strategic needs and economic possibilities. He was always eager to find some new thing, whether a new land or a new piece of knowledge. His favourite book was the *Iliad*, his favourite sport hunting, and his only relaxation the symposium. His character was 'heroic' rather than amiable: extravagantly brave and generous by nature, he was extravagantly passionate and revengeful when thwarted, and his few vices led him to great crimes. In him, the soul wore out the breast, and he died, in his thirty-third year, of a fever which might well have spared him had he ever known how to spare himself.

G. T. G.

BIBLIOGRAPHY

ANCIENT SOURCES. *Alexander-historians* (see under the separate names). There are supposed to be three main lines of tradition. (1) The 'good' tradition includes Alexander's official *Journal* (see EPHEMERIDES) written by Eumenes of Cardia, and such letters of his as are genuine; the geographical work of his biographers Baeton and Diogenes; the histories of Ptolemy I and Aristobulus, Nearchus' book, and some valuable information in Eratosthenes. (2) The anti-Alexander tradition of the Greek opposition, crystallized by the Peripatetic and Stoic schools: Alexander was a tyrant, and (to the Peripatetics) owed his success to Fortune. (3) The so-called vulgar tradition is no real tradition, but only a name used to embrace Cleitarchus and some lesser writers, as Onesicritus and Chares; roughly, it signifies popular beliefs as distinct from genuine history. Callisthenes, and the informative 'mercenaries' source' used by Diodorus and Curtius, come under no label. Many writers are known, from the fourth century B.C. to the fourth A.D., of whom nothing survives but the name or a few fragments; among them may be mentioned Anaximenes the rhetorician, Ephippus the gossip-monger, Androsthenes and Polycleitus the geographers, Nymphis and Marsyas of Pella, historians, Anticleides the antiquarian, Hegesias, rhetorician and untrustworthy historiographer. (For lists see Müller and Jacoby, below.)

Of extant writers, the most important, Arrian, is noticed under his name. Plutarch's *Life of Alexander* is compiled from every kind of source, good and bad; the first part of his *De Alexandri fortuna* is a young man's passionate protest against the slanders of Stoics and Peripatetics. Diodorus 17 is largely based on Aristobulus, overlaid with Cleitarchus and other matter. Curtius gives the full-length Peripatetic portrait, and some invaluable information mixed with much rubbish. Justin is almost worthless. Several extant works—the Metz *Epitome*, *Itinerarium Alexandri*, P. Oxyrhynchus 1798, *Codex Sabbaticus* 29—illustrate the transition to the Romance. The problem of the modern historian is how far to use Diodorus and Curtius. C. Müller, *Scriptores rerum Alexandri Magni*, 1846; F. Jacoby, *FGH* ii nos. 117–53, and the notes; H. Berve, *Das Alexanderreich* ii under the separate names (contemporaries only). For Ptolemy: H. Strasburger, *Ptolemaios und Alexander*, 1934; E. Kornemann, *Die Alexandergeschichte des Königs Ptolemaios I.*, 1935. For others: articles 'Nearchos' (W. Capelle), 'Aristoboulos', 'Curtius' 31, 'Diodoros' 38 (E. Schwartz), 'Cleitarchos' (F. Jacoby), in *PIV*. Full bibliographies in *CAH* vi. 592 ff. and in Glotz, *Hist. grecque* iv. i (1938), pp. 33 ff.; see also W. W. Tarn, *Alexander the Great* ii (1948).

ALEXANDER (4) IV of Macedonia (323–310 B.C.), posthumous son of Alexander the Great and Roxane, succeeded to the Empire jointly with Philip Arrhidaeus, but never lived to rule, though the possession of his person was important to the 'legitimist' generals in the wars of the *Diadochi* (q.v.), and later (316) to Cassander (q.v.), the greatest enemy of Alexander's house. Prisoner though he then became, his name and cause were still useful to Antigonus in his efforts to re-unite the Empire under his own rule; and, correspondingly, his continued existence embarrassed Cassander, who finally put him to death.

G. T. G.

ALEXANDER (5) OF PHERAE, tyrant 369–358 B.C., nephew of Jason (q.v., 2). Throughout his tyranny he was opposed by Larissa and other cities, which refused to recognize him as *tagus* (q.v.). His enemies received occasional support from Thebes and became increasingly formidable, especially after Pelopidas had organized a Thessalian League modelled upon that of Boeotia. Pelopidas, who three times visited Thessaly, defeated him at Cynoscephalae in 364, and Pherae was subsequently compelled to join the Boeotian League. Alexander was at first an ally but later an enemy of Athens. In 358 he was murdered by the sons of Jason.

The cruelties attributed to Alexander by a tradition which glorified Pelopidas may well be exaggerated. He possessed great energy but little judgement, and, unlike Jason, attempted to crush the Thessalian cities rather than win them by diplomacy.

Diodorus, bk. 15; Plutarch, *Pelopidas*, 26–35. H. D. Westlake, *Thessaly in the Fourth Century B.C.* (1935), ch. 7. H. D. W.

ALEXANDER (6) I, king of Molossia in Epirus, 342–330 B.C. Philip II of Macedon, his brother-in-law, placed him on the throne, expelling Arybbas and subjugating Cassopia; as king of the Molossi he united Epirus in the form of a symmarchy with himself as *hegemon*. Invoked by Tarentum c. 333, he conquered most of south Italy, allied with Rome, and was defeated and killed at Pandosia; he had made Epirus an important power, coining gold and silver, and united to Macedon by his marriage with Cleopatra, sister of Alexander the Great.

G. N. Cross, *Epirus* (1932).

N. G. L. H.

ALEXANDER (7) II, king of Epirus 272–c. 240 B.C. During the Chremonidean War (see CHREMONIDES) he invaded Macedonia, was routed and deposed by the generals of Antigonus, who set up a republic (c. 263 B.C.). Restored with Aetolian help, he conquered Acarnania and divided it with Actolia. He died shortly afterwards.

G. N. Cross, *Epirus* (1932).

N. G. L. H.

ALEXANDER (8) (b. c. 315 B.C.), of Pleuron in Aetolia (hence called *Aetolus*), made his name as a tragic poet and was included in the *Pleiad* at Alexandria. Circa 285–283 he was entrusted by Ptolemy Philadelphus with the *diorthosis* (preliminary sorting-out) of the tragedies collected for the Library. Later, c. 276, he appears at the court of Antigonus Gonatas in Macedonia.

WORKS. The only trace of A.'s tragedies is one title, *Ἀσπαραγιστοί* (*Dice-players*), *TGF* 817. Two elegies are known, the *Apollo* and the *Muses*. The first was a collection of love-stories with unhappy endings, framed as a series of prophecies uttered by Apollo himself. Thirty-four lines (fr. 3) survive from the story of Antheus and Cleoboea; the language is learned and the style extremely dry. The *Muses* contained literary history. A striking appreciation of Euripides in anapaestic tetrameters (fr. 7) must come from a similar work. From two epyllia, *Halius* (*Fisherman*) and *Circa* or *Crica*, only a fragment apiece survives. Other works mentioned are *Phaenomena* (A. met Aratus in Macedonia), *Epigrams*, and *Ionic Poems* (without music) in imitation of Sotades.

Texts: J. U. Powell, *Collectanea Alexandrina* (1925), 121-30. Modern literature: G. Knaack, 'Alexandros (84)' in *PW* i. 1447-8; W. von Christ, *Gesch. griech. Lit.* ii. 1^a (1920), 173-4. E. A. B.

ALEXANDER (9) (c. 290-c. 245 B.C.), son of Craterus (q.v. 2), and his successor as viceroy of Corinth and Euboea, declared himself independent in 250-249 (not 252, as commonly held) at Ptolemy's instigation, and allied himself with the Achaeans League. A short war with Athens and Argos ended in 249, Gonatas acquiescing in his usurpation. The Aetolian victory of Chaeronea (245) split his realm in two, and about this time he died (poisoned, an unlikely rumour claimed, by Gonatas), leaving his throne to Nicaea, his widow.

W. H. Porter, ed. Plutarch's *Aratus*, Introd. (1937). F. W. W.

ALEXANDER (10) BALAS (d. 145 B.C.), pretended son of Antiochus IV, became king of Syria after the defeat and death of Demetrius I (q.v.). He was a pawn of Pergamum and Egypt and had support from the Roman Senate, which feared (unnecessarily) a revival of Seleucid power; as a king, he was incompetent. His reign (150-145) was ended by his expulsion and death; it is important mainly as marking the beginning of a period of civil wars which hastened the disintegration of the Seleucid Empire.

G. T. G.

ALEXANDER (11) 'Polyhistor', born c. 105 B.C. at Miletus or in Caria, came as prisoner of war to Rome; freed by Sulla (c. 80 B.C.), he took the name L. Cornelius Alexander; he was pedagogue to Cornelius Lentulus, and later taught C. Julius Hyginus. He was accidentally burnt to death at Laurentum. His vast literary output (*FHG* iii. 206-44) included works on various lands, Delphi, Rome, the Jews, wonder-stories, and literary criticism. A. followed Crates' school; industrious and honest, he lacked taste and originality.

F. W. W.

ALEXANDER (12) (2nd c. A.D.), son of Numenius, wrote a *τέχνη* in which the rival theories of Apollodorus and Theodorus were discussed; also *Π. σχημάτων* (based on Caccilius), which influenced later writers. See also ANONYMUS SEGUERIANUS.

Spengel, *Rhet.* i. 427-60, iii. 1-6, 9-40.

J. W. H. A.

ALEXANDER (13) OF ABONUTEICHOS (*Ἀβώνου τεύχος*) in Paphlagonia, a contemporary of Lucian (q.v.), whose bitterly hostile account of him, *Ἀλέξανδρος ἢ ψευδομαντὴς* (see M. Caster, *Études sur Alexandre ou le faux prophète*, 1938) is our chief source of information. He claimed to have a new manifestation of Asclepius (q.v.) in the form of a serpent called Glycon. With this divine aid, he gave oracles and conducted mysteries, from which he carefully excluded all unbelievers, especially Epicureans, and all Christians. He got a considerable following, a prominent member being a Roman of some standing, named Rutilianus. He was personally handsome and apparently popular with women especially; to what extent, if any, he believed his own doctrine can hardly be determined in the absence of any description of him other than Lucian's, which represents him as a

thorough impostor, applying to him all the stock abuse of rhetorical controversial writings. The cult survived its author.

Cf. A. D. Nock in *CQ* xxii (1928), 160 ff.

H. J. R.

ALEXANDER (14) OF APHRODISIAS (fl. early 3rd c. A.D.), Peripatetic philosopher. He began lecturing at Athens in A.D. 198 or soon after, and dedicated his book *Περὶ εἰμαρμένης* to Septimius Severus and Caracalla. His teachers had been Aristoteles of Messana, Herminus, and Sosigenes. He was the ablest of the Greek commentators on Aristotle, and is treated with great respect by his successors among these, who preserve many fragments of his lost works. He is singularly free from the mystical tendencies of his time. He assumes the indissoluble unity of the mental faculties and denies the immortality of the soul and the reality of time, but apart from a few such individual doctrines confines himself to the attempt to explain Aristotle's views without innovation or criticism. The extant commentaries are on *An. Pr.* i (ed. M. Wallies, 1883), *Top.* (ed. M. Wallies, 1891), *Met.* (ed. M. Hayduck, 1899), *Sens.* (ed. P. Wendland, 1901), *Metaph.* (ed. M. Hayduck, 1891; only bks. 1-5 are by Alexander). There are also extant under his name a work of his own *Περὶ ψυχῆς* (ed. I. Bruns, 1887), *Ἀπορίαι καὶ λύσεις*, *Ἠθικά προβλήματα*, *Περὶ εἰμαρμένης*, *Περὶ κράσεως καὶ ἀξήσεως* (all ed. by I. Bruns, 1892). Of these *Περὶ ψυχῆς* i, *Περὶ εἰμαρμένης* (tr. A. Fitzgerald, 1931), and *Περὶ κράσεως καὶ ἀξήσεως* are probably genuine. *Ἰατρικὰ ἀπορήματα καὶ φυσικὰ προβλήματα* and *Περὶ πυρετῶν* (ed. J. L. Ideler, *Physici et Medici Graeci Minores* (1841), 3, 81), and *Προβλήματα ἀνέκδοτα* (ed. U. C. Bussemaker, *Aristotelis Opera* (1857) iv. 291), are spurious.

PW i. 1453.

ALEXANDER, see also SEVERUS (2), TIBERIUS (3).

ALEXANDRIA, see CASSANDRA.

ALEXANDRIA was founded by Alexander the Great immediately after his conquest of Egypt; communication with Europe by sea was important, and none of the existing harbours on the Delta coast could accommodate a large fleet. Whether he designed to make it the capital of the country is unknown; it was not till after Ptolemy had established himself in possession of Egypt that the seat of government was transferred from Memphis to Alexandria. But it grew rapidly, and was made a centre of learning as well as of commerce and industry by the second and third Ptolemies. Under the Romans it was the one city that counted in the province; and, despite disasters in the third century, it did not begin to decline till the Arab conquest shifted the connexions of Egypt from Europe to Asia.

The plan of ancient Alexandria is difficult to reconstruct, as nearly all buildings have been destroyed and debris has covered the old levels. It lay on a neck between the sea and Lake Mareotis, and the island of Pharos was linked with the mainland by a mole, seven stades (c. 3 mile) long, so as to provide a double harbour. The chief edifices were by the eastern harbour—the Emporium fronting the sea, the Palace on the east, the Caesareum and Theatre, probably also the Museum and Library, behind; a wide street intersected the city from east to west, by which was the Gymnasium. The only one of these of which the site is certain is the Caesareum. The Temple of Sarapis stood in the western quarter. Under the Ptolemies the city may have had a Senate, but there is no record of any action by it. Augustus definitely refused to grant any self-government, though the Alexandrian citizenship was allowed to continue and carried with it certain privileges—e.g. it was the avenue to Roman citizenship for an Egyptian. In 200 Alexandria was given a Senate by Severus, simultaneously with

other Egyptian towns: it is not known to have done anything. Probably the control of the city was kept strictly in the hands of the Prefect: the only special local official mentioned is the head of the police. The Jews, who were numerous and inhabited a special quarter, had their own ethnarch and council under the Ptolemies, and Augustus confirmed these privileges.

E. Breccia, *Alexandria ad Aegyptum* (1922); H. I. Bell, *JEG. Arch.* 1927, 171. J. G. M.

ALEXANDRIA 'ad Issum', near Iskenderun (*Alexandretta*) on the Gulf of Issus, was probably Myriandrus re-founded by Alexander (333 B.C.). It lay six miles south-west of the Cilician Gates (hence the alternative name 'Alexandria of Cilicia'), and was also the key of the Syrian Gates (*Beilan Pass*).

ALEXANDRIA 'Arachosion' (of the Arachosii) or Alexandropolis, at or near Kandahar in Afghanistan, was founded or re-founded by Alexander, 329 B.C. It lay on an important trade-route between Merv (or else Meshed) and India through the Bolan and Mula Passes, Kabul, and Las Bela. It soon ceased to be a Greek town.

ALEXANDRIA 'Arcion' (of the Arii), Herat in Khorasan, founded or re-founded by Alexander, was the chief town in Ariana. It lay on an important trade-route from Merv or else Meshed) through Kandahar to India.

ALEXANDRIA 'Eschate', or 'the Farthest' (*Khondjend?*), hurriedly founded by Alexander on the Jaxartes as a fortress held by Macedonians, Greek mercenaries, and local Asiatics, against savage peoples beyond. It was re-founded by Antiochus I as an 'Antiocheia'.

Arrian, *Anab.* 4, 1, 3; Curtius 7, 6.

ALEXANDRIA 'among the Paropamisadae' was a short-lived colony of Alexander, north of Kabul, at the junction of routes from Aria, Bactria, and India.

Arrian, *Anab.* 3, 28, 4 ff.; 4, 22, 5; Strabo 12, 514. E. H. W.

ALEXANDRIAN POETRY. This term commonly denotes the Greek poetry, other than the New Comedy of Athens, composed between c. 300 and c. 30 B.C., and is justified by the fact that till 145 (expulsion of the scholars by Ptolemy Philseon) Alexandria, thanks to its library and museum, was the literary capital of the Greek world. The distribution of this poetry over the period indicated is very uneven. Two decades of fairly intense activity form a prelude to Alexandria's Golden Age, which itself only lasts from c. 280 to c. 240. The writers who follow are all Epigoni, and the second century B.C. is the least productive in the history of Greek poetry. But the beginning of the first century witnesses a St. Martin's Summer of Alexandrian poetry thanks to Meleager and his contemporaries. Meleager's *Garland* becomes known at Rome, and soon Parthenius and others introduce their pupils to Alexandrian poetry as a whole, which is thus enabled to play an important part in shaping the course of Roman poetry.

2. The struggles of the *Diadochi* discouraged the production of any poetry except Comedy and the Epigram, but c. 300 a revival becomes visible in the south-eastern corner of the Aegean, both on the mainland (Zenodotus and Menecrates of Ephesus, Hermesianax and Phoenix of Colophon) and in the neighbouring islands, where the chief representatives were Philotas of Cos, Simias of Rhodes, and Asclepiades of Samos. The last-named, together with his associates Posidippus and Hedyllus, was mainly important as an epigrammatist, but the other two exerted a wider influence. Both were scholars as well as poets and reviving the tradition of another scholar-poet, Antimachus of Colophon, set an example of a learned poetry, appreciable only by the cultivated few, which their successors followed almost as a matter of course. Though very little of their work survives, it seems that Philotas, Simias, and their con-

temporaries experimented in most of the poetical forms which the next generation commonly favoured, i.e. Narrative Elegy, Epyllion or Short Epic, Catalogue-poem, Hymn, Iambus, Didactic Poem, Epigram, and Paenion. After 280 the leading figures are Aratus of Soli, chiefly but by no means solely a didactic poet; Theocritus of Syracuse, best known for his pastorals but active in many other fields; Callimachus of Cyrene, the most representative Alexandrian poet, thanks to the clarity with which he formulated his poetic creed and the consistency with which he practised it; and finally Callimachus' opponent, Apollonius of Rhodes, who dared to question his former master's ruling and to compose an Epic in the grand manner. Contemporary with these poets was, it seems, Herodas of Cos, whose *Mimiambi* reflect the spirit of the age no less by the archaism of their form than by the modernity of their content. Of Alexandrian tragedy (though its seven most famous writers were known as the Tragic Pleiad) and Satyr-play little can now be established. The *Alexandra*, attributed to Lycophron, one of the Pleiad, probably belongs to the early second century.

3. In the quarrel between Callimachus and Apollonius the victory went to the former, but the question remained unsettled. Thus after the Golden Age, while Euphorion and Eratosthenes cultivate the Epyllion, Rhianus and others revert to the longer Epic. Moschus and Bion continue the Pastoral down to c. 100, and the didactic poems of Nicander of Colophon are best dated about the middle of the second century. But at Alexandria the savant had displaced the scholar-poet. For the poets referred to above see under their names.

4. The chief characteristics of Alexandrian poetry may be summarized thus:

Matter. Preferably this should be new, i.e. not invented by the poet, but not hitherto treated in verse. Hence the attractiveness for the Alexandrians of the so-called Local Legends, which they unearthed from prose-chroniclers. Hence also one justification for Didactic. But the less familiar types of earlier poetry, e.g. the Epic Cycle apart from Homer, the Hesiodic poetry, the Homeric Hymns, Stesichorus, and Pindar were other possible sources for material. Again the poet's own emotions find increased expression, not merely in intimate verse like the Epigram, but in the Iambus, Hymn, and Narrative Elegy. But Love, though a favourite theme of Alexandrian narrative poetry, finds little subjective expression outside the Epigram and some forms of Lyric.

Form. Few forms of earlier Greek poetry escaped imitation by the Alexandrians, but this imitation by no means precluded originality, which lay, as these poets thought, in a nice adjustment of their exemplars to the conditions of their own day and in subtle touches calculated to introduce novelty and variety. Thus the traditional forms are used for new purposes or the traditional dialect of a form is changed or the traditional vocabulary is given a fresh meaning. Some metres were refined, others were simplified. By conscious art the Alexandrians did all they could to rise above the limitations of their age.

ALEXANDRIANISM, LATIN. The work of the 'Alexandrian' poets of the first century B.C. is distinguished from the earlier hellenizing movement,

represented in epic and drama, by a difference of models and a corresponding difference of purpose. Their main interest was turned from the classical Greek writers to the poets of the third and second centuries, and their chief aim was not to graft on to Latin the best of Greek literature but to promote the ideals of technical perfection cultivated by the Alexandrians. Alexandrianism was primarily a movement of scholarship, and it found a natural home in Italy when the period of creative activity which had come with the Punic Wars and the first contacts of Rome with Hellenism had been succeeded by an age of criticism of which the beginnings are seen in Lucilius and Accius; and the social and political unrest in Italy which set in with the Gracchi may well have encouraged an ideal which turned men of letters away from the world upon themselves and on art for art's sake.

Four of the outstanding characteristics of the Greek Alexandrians reappear in their Latin followers: (1) the development of new *genres*, especially epyllion, elegy, and epigram, all miniature forms displacing the large-scale epic and drama; (2) a regard for form, for concinnity and symmetry in language and metre, which left a lasting impression on Latin literature; (3) the cult of erudition, seen in the vogue of didactic verse, mythological allusion, and novelty in story-telling; (4) the emergence of a subjective and personal way of writing—in elegiac and lyric a new individualism, in narrative a sentimental handling and a psychological interest. Two differences probably tempered the excesses of Alexandrian mannerism in transplanting: while in Greece Alexandrian literature was a literature of exhaustion, in Italy it was one of experiment and revolt, and most of the Italian Alexandrians, for all their *ars* and *doctrina*, were not confined, as were their masters, to the sheltered life of the study.

The movement begins with the work of poets writing near the beginning of the first century B.C. and bridging the gap between the old style and the new—the epigrams of Porcius Licinus, Pompidius, and Lutatius Catulus, the bizarre erotic poems of Laevius, and the didactic verse of Varro Atacinus. These pioneers were succeeded by a school of poets especially associated with Cisalpine Gaul, of which Catullus is the only surviving representative, but which also included Valerius Cato, Furius Bibaculus, Cinna, Calvus, Cornelius Nepos, and Tigidas. Thus established, Alexandrianism exercised its influence throughout the century. The mock-heroic *Culex* and the romantic *Ciris* of the *Appendix Vergiliana* are Alexandrian in technique, as were the lost elegies of Gallus; Virgil's *Eclogues*, and in a less degree the *Georgics*, show the influence of Alexandrian models, though in his maturer work Virgil learned to turn their lessons to his own purposes and to reconcile Alexandrian ideals with the tradition of Latin epic. The combination of learning with intense individualism in Propertius reflects his avowed allegiance to the masters of Alexandrian elegy, and Ovid's elegies owe much to the same sources, while the *Metamorphoses* and the *Fasti* are akin to the narrative verse of Callimachus, though in Ovid the influence of Alexandrianism is fused with that of the rhetoric of the schools. Cf. NEOTERICI.

C. J. F.

ALEXIS (c. 372–270 B.C.), Middle Comedy poet, born at Thurii but naturalized at Athens, where he lived the greater part of his long life. His work (245 plays, Suidas) belongs partly to the New Comedy; of the 130 titles, many reveal (1) the love-motive (*Παροδείγματα, Ἐπιδείγματα, Αἰσχρολογία, Ὀρχήστρις*), (2) study of character-types (*Κυβερνήτης*)—two features of the New Comedy. A. wrote only about twelve mythological burlesques, and seldom imitated tragedy. His fragments show sometimes real reflection and beauty of language: fr. 70, carnal love a blasphemy against true Love; fr. 219, life as a carnival;

fr. 228, old age as life's evening. An unusual type of play is *Γραφή* (fr. 40): a man fell in love with a 'picture', which possibly 'came to life', like Hermione's statue in the *Winter's Tale*. In *Ἦννος* (fr. 240) Sleep is described in a riddle more elegant than the usual Middle Comedy riddles. In *Αἶνος* (fr. 135) Linus, teacher of Heracles, has a library at his disposal. Fr. 36, Aristippus; fr. 94, legislation against philosophers, 307 B.C.; fr. 98, beauty-culture; fr. 108, part of a postponed prologue (of the New Comedy type); fr. 149, eulogy of cookery; fr. 257, a gate-crasher.

A lively scene (26 vv.), preserved on a Berlin papyrus of third century B.C. (*PBerol.* 11771; see M. Platnauer in Powell, *New Chapters in Greek Literature*, 3rd Ser., 166 f., and G. Norwood, *Greek Comedy*, 56 ff.) shows someone taking refuge at an altar before the temple of Demeter; here the Chorus, in addition to singing a lyric interlude denoted in a second fragment by ΧΟΡΟΙ, as in Ar. *Eccles.* (see ARISTOPHANES), participates in the action of the play.

It was doubtless popular success that stimulated Alexis to write so many plays; and in Roman times also his fame was great (echoes in Plautus; as also in Caccilius and Turpilius; Gell. 2. 23. 1).

FCG iii. 382 ff.; CAF ii. 297 ff. D. L. Page, *Greek Literary Papyri*, i. 232–7 (Loeb). W. G. W.

ALFENUS VARUS, P.? (*consul suffectus* 39 B.C.; *praenomen* inferred from designation of P. Alfenus Varus, *cos. A.D.* 2, presumably his son, as P. f.) was according to the scholiast on Hor. *Sat.* 1. 3. 130 a shoemaker of Cremona who studied under Servius Sulpicius Rufus at Rome, attained some fame as a juriconsult, became consul, and was accorded a public funeral (cf. Pomponius, *Dig.* 1. 2. 2. 44; Gell. 7 (6). 5. 1; Amm. Marc. 30. 4. 12). He and his son apparently were the only Cisalpines to reach the consulate under Augustus. Perhaps an early supporter of Octavian, Alfenus proved a severe land-commissioner in Cisalpine Gaul, though possibly he helped to restore Virgil's farm (Servius, on *Ecl.* 9. 10, erroneously names Alfenus as Pollio's successor as governor of Cisalpine Gaul, which in fact had become autonomous). Probably he was the Varus named in *Ecl.* 9; it is less certain whether *Ecl.* 6 was dedicated to him or to Quinctilius Varus. He provided Horace (l.c.) with the point of a joke and has been identified with the versifier whom Catullus called Suffenus (T. Frank, *CQ* xiv (1920), 160 ff.).

H. H. S.

ALFIUS (ALPHIUS) AVITUS, a 'neoteric' (q.v.) of Hadrian's time, used iambic dimeters in poems on historical events.

Baehr. *FPR*; Morel, *FPL*.

ALGIDUS, the eastern section of the outer crater rim of the Alban Hills, famous for its temples of Diana and Fortune and its fashionable villas (Hor. *Carm. Saec.* 69; Livy 21. 62; Sil. 12. 536). The rim of the Alban Hills is here pierced by a narrow pass which the Aequi seized in the fifth century B.C. (Diod. 11. 40; implies the date 484). This pass, which the Via Latina (q.v.) later used, dominated the route to the Hernici; consequently Cincinnatus and other Roman generals strenuously tried to dislodge the Aequi, Postumius Tubertus finally succeeding in 431.

E. T. S.

ALIENUS, see *CARCINA* (2).

ALIMENTA. The purpose of the *alimenta* in the Roman Empire was to give an allowance for sustenance to poor children, and this was achieved by the investment of capital in mortgage on land, the mortgage interest being paid to, and administered by, municipalities or State officials. The system originated in private philanthropy, the earliest known benefactor in this field being T. Helvius Basila in the late Julio-Claudian period (*ILS* 977).

A later philanthropist, the younger Pliny, who made a similar gift to Comum, has recorded his reasons for his endowment (*Ep.* 7. 18). Nerva (Aurelius Victor, *Epit.* 12) and Trajan were the earliest emperors to give money for this purpose. According to two Trajanic inscriptions (*ILS* 6675; 6509) from Veleia, near Parma, and from the Ligures Baebiani, near Beneventum, landowners who received sums of money from the emperor's gift gave security in land, to the value of as much as twenty times the sum received; on this sum they paid annual interest at the rate of 5 per cent. The total received annually in interest at Veleia was 52,200 sesterces, which was distributed among 245 boys, 34 girls, and 2 illegitimate children. The boys received 16 sesterces a month, the girls 12, and the illegitimate children 12 and 10 respectively. The system was widely advertised by Trajan, on one of the bas-reliefs of the arch at Beneventum and on coins with the legend ALIMENTA ITALIAE. Its primary object was to increase the birth-rate among the poorer classes, partly, as Pliny suggests (*Panegyricus* 26), with a view to the recruiting of the Roman legions. Perhaps the system had a secondary object of assisting farmers—in as far as the emperors promoted the scheme by investing capital in land, instead of making an annual allowance for the purpose. As the system spread during the second century (in the provinces, as well as in Italy), a civil service was created for its administration, with a senatorial *praefectus alimentorum* at its head and subordinate equestrian *procuratores ad alimenta*. The *curatores* of the great roads of Italy also took part in this work.

PW, s.v.; *CAH* xi. 210 ff. (bibliography on p. 887); and (for the best account in English) B. W. Henderson, *Five Roman Emperors* (1927), 214–24. Coins, H. Mattingly and E. A. Sydenham, *The Roman Imperial Coinage* (1926) ii. 240. Illustrations of the bas-reliefs, Rostovtzeff, *Roman Empire*, 308, 314. J. P. B.

ALISO, a fort on or near the Lippe established during the wars of Drusus, possibly the one mentioned by Dio (54. 33. 4) as set up in 11 B.C. 'at the point where the Lipia and the Elison unite'. The garrison resisted the advancing Germans after the defeat of Varus in A.D. 9 and regained the Rhine (*Vell. Pat.* 2. 120). Germanicus, in 15, re fortified all the posts between Aliso and the Rhine and restored the road (*Tac. Ann.* 2. 7). Its site is uncertain; its identification with an important Roman fort excavated at Haltern, on the Lippe, thirty miles from the Rhine, is not widely accepted. O. B.

ALLECTUS, probably *rationalis* (finance minister) of Carausius (whom he assassinated (A.D. 293)). After three years' rule he was overthrown by Constantius I, whose praetorian prefect, Asclepiodotus, defeated and slew him, probably somewhere in Hampshire.

ALLEGORY, GREEK. As philosophy developed, many who valued its various doctrines were led by their admiration for the wisdom and inspiration of Homer and Hesiod to find similar views symbolically expressed in the early poetry. (The tendency survives, as in a modern scholar who depicts Homer as a pacifist because Zeus dislikes Ares in the *Iliad*.) Even the early philosophical critics of Homer's world-view accepted this standpoint, and competed with the poet by expressing their theories in 'poetic' style, whether by remoulding the myths to suit newer cosmogonies, or at least by using puns, personifications, and 'enigmas', either in verse (Parmenides, Empedocles) or in prose (Anaximander, Heraclitus). Hence the belief that Homer too 'philosophized in verse', and that allegorical treatment could make his teaching fully explicit. This belief was not altogether baseless, for Homer and Hesiod contain some

traces of speculative thought and some genuinely allegorical passages. Allegorical interpretation could not develop fully until philosophy had more or less attained an independent life and an abstract (non-mythical) language of its own. Its most flourishing period was the late fifth century B.C., when Metrodorus of Lampsacus, the most thoroughgoing of all allegorists, studied Homer's 'physical' doctrines, and other adherents of Anaxagoras as well as Heracliteans and Sophists specialized (as Plato shows) in the 'hidden meanings' (*ὁπνοίαι*: *ἀλληγορία* is a later word) of the poets. Once this method had been initiated by the philosophers for its *positive* results, it began to be exploited by 'grammarians' (first, apparently by Theagenes of Rhegium (q.v.), who explained some allegories in Homer's *Theomachy*) for the *negative* purpose of defending morally offensive passages of Homer. But the leading allegorists were philosophers, who applied their treatment to offensive and inoffensive passages alike. The handmaid of this pseudo-science (never, be it noted, popular among the Greeks) was 'etymology' (q.v.), which dealt in the 'true' meanings, as revealed by assonances, of mythical words and names.

2. Plato attacked *positive* (philosophical) allegorism, chiefly on the ground that the authority of the poets (even if their teaching were ascertainable) cannot do duty for reasoned argument. *Negative* or defensive ('grammatical') allegorism he regarded as unimportant.

3. After Plato, among philosophers allegorism (mainly etymological) was practised by the Stoics (especially Chrysippus) for the illustration and corroboration of their own doctrines. This school, however, from Zeno (following Antisthenes, who was not an allegorist) onwards, admitted the presence of irrational 'opinion' (*δόξα*) in the poets, from which deeper meanings cannot be extracted. The Middle-Stoics laid still more stress on this element; hence Cicero's Balbus (unlike the grammarians) refuses to interpret the *Theomachy*; and the Platonizing Stoic, Arion of Chios, rejected allegorism entirely. In the first century A.D. the Stoic Seneca regarded it as an aberration of the grammarians; but his contemporary, the Stoic Cornutus (in his *De Natura Deorum* = *Theologiae Graecae Compendium*, Teubner), tried to recall Stoicism to something like the position of Chrysippus. Plutarch was Platonic enough to reject allegorism, but the Neoplatonists (except Plotinus) revived it in a distorted and exaggerated form (see e.g. Porphyry, *De Antr. Nymph.*).

4. As for the grammarians, Alexandrian scholarship (Aristarchus, etc.) rejected the allegorical interpretations of Homer. But Crates and his school, under Stoic influence, adopted the practice for the defence of Homer's good fame. It is ultimately from these grammarians that the bulk of the allegories found in the Homeric scholiasts and in the collection (first century A.D.) known as Heraclitus' *Quaestiones Homericae* (a veritable curiosity of literature) is derived. Their view is that Homer either erred or allegorized (cf. [Longinus] *II. ὅπως* 9. 7), but (unlike Longinus) they are sure that he did not err: if Zeus binds Hera (for example), this means that aether is the boundary of air, and the two 'anvils' are the other two elements. Such is the standpoint also of Strabo (a Stoic of sorts, who regarded myth as the tragic disguising the pill of historical and philosophical truth), [Plutarch] (*Vit. Hom.*), Maximus of Tyre (for whom poetry is elementary philosophy), Dio Chrysostom, and others. Some, but not all, of these used allegorical interpretation to vindicate Homer's omniscience against Plato.

5. Deliberately written allegories are rare in Greek and never extensive. Examples are Prodicus' *Choice of Heracles* (*Xen. Mem.* 2. 21) and Plato's parable of the Cave (*Resp.* 514 a).

J. Tate in *CR* xli. 214; *CO* xxiii. 41, 142, xxiv. 1, xxviii. 105 and literature there cited; L. Rademacher, *Mythos und Sage bei den Griechen* (1938), especially p. 293, n. 10. J. T.

ALLEGORY, LATIN. The main line of succession in allegorism leads from Stoicism not to Rome but to Alexandria; Origen, for example, had read Cornutus. Some Romans (Ennius, Varro), however, adopted Greek methods with the Roman gods, and the Stoic in Cicero's *De Natura Deorum* (2. 62-9) supplies examples of 'etymological' allegorism on these lines, deriving e.g. 'Neptunus' from 'nare'. But Horace, who knew Stoicism well, is more typically Roman in ignoring 'physical' and 'etymological' speculations, and merely contending for the moral meanings of the *Odyssey* (*Epist.* 1. 2) and of the tales of Orpheus and Amphion (*Ars P.* 391 ff.). And though the word *ἀλληγορία* first appears in a Roman author (Cicero), it has only a very restricted use, as a term of rhetoric.

Unlike medieval allegorism, which led both before and after the Renaissance to the creation of allegories on a large scale (Dante, Spenser), these theories did not result in any such sustained parallelism as marks *The Pilgrim's Progress* or *The Tale of a Tub*. They merely encouraged certain poetic conceits (like calling the sea 'Neptune'), and numerous personifications, which range from Lucretius' Venus to the Philologia of Martianus Capella. These personifications are sometimes developed in poetry in a way which, as Propertius (2. 12) on the figure of Amor suggests, may indicate the influence of symbolic painting; this manner is most clearly seen in Ovid's picturesque Palace of the Sun, Home of Sleep, etc. (*Met.* 2. 1 ff.; 11. 592 ff.).

A few allegories come directly from Greek: Horace takes over Alcaeus' ship of State; Silius adapts the Choice of Heracles. Some rare examples are original and unsophisticated like Tarquin's message to his son or Menenius Agrippa on the belly and the other members (Livy 1. 54; 2. 32). The most novel tendency was the allegorical representation of contemporary persons and events: the shepherds of Virgil (and of his imitators) correspond (to a degree still disputed) with real persons. To some modern scholars Aeneas had seemed a similar disguise for Augustus. Actual allusions in the *Aeneid* to contemporary events may excuse such a view; just as Virgil's profundity and deliberate ambiguities may excuse the older interpretation of the *Aeneid* which, from the time of Donatus onwards, found there an allegory of ideas rather than of facts (see D. Comparetti, *Virgil in the Middle Ages* (tr. of 1st ed., 1895), i, ch. 8; D. L. Drew, *The Allegory of the Aeneid*, 1927.) J. T.

ALLIA, nowadays probably the *Fosso Bettina* (T. Ashby, *Roman Campagna*, 71), a stream flowing into the Tiber eleven miles north of Rome, where the Gauls overwhelmed the Romans (390 B.C.). Despite Diodorus (5. 114) the battle probably occurred on the left bank of the Tiber (Livy 5. 37; Plut. *Cam.* 18). See also **AIUS LOCUTUS**.

E. T. S.

ALLITERATION, see **ASSONANCE**.

ALLOBROGES, a tribe of Gallia Narbonensis, occupying modern Dauphiné and Savoy. The name seems to mean 'foreigners'. They were annexed to Rome in 121 B.C. by Cn. Domitius Ahenobarbus and Q. Fabius (q.v.) Maximus *Allobrogicus*. An attempted revolt was crushed by C. Pomptinus (61). On the other hand, they resisted the invitations of Catiline (63) and Vercingetorix (52). Under the Empire the name gives place to Viennenses (from the capital Vienna), surviving only as the protecting god, Allobrox.

C. Jullian, *Hist. de la Gaule* (1903), ii. 515; vi. 330-5. C. E. S.

ALLOBROGICUS, see **FABIUS** (8).

ALODAE, in mythology, Otus and Ephialtes, sons of Iphimedeia, wife of Algeus, and Poseidon. They grew till they were nine fathoms tall and nine cubits broad when nine years old (*Od.* 11. 310-11). They imprisoned

Ares in a bronze vessel for thirteen months (*Il.* 5. 385 ff.); they meant to climb to heaven by piling mountains on each other, but were killed by Apollo before they grew up (*Od.* 11. 315 ff.). A later variant (Hyg. *Fab.* 28) says they tried to violate Artemis; Apollo sent a hind between them, and in shooting at it they killed each other. They were punished in Tartarus (Hyg. *ibid.* and Rose ad loc.). In their cult (see Schultz in Roscher's *Lexikon* i. 254) they have no such unholy characteristics. H. J. R.

ALPHABET, GREEK. The various forms of local alphabet current in early Greece were all eventually derived from a Phoenician (Semitic) script which must have reached the Aegean in the course of trade certainly by the eighth century B.C. and probably much earlier. The most striking feature in the Greek adaptation of the Phoenician model is that by altering the original significance of *A E I O Y* Greek, unlike Phoenician, has achieved an early representation of vowel-sounds.

An early form of Greek alphabet is represented by the oldest inscriptions of Thera, Melos, and Crete. In it, as in many other 'epichoric' or local alphabets, we find *F* (= *u*), *Q* (= *k* before *o* and *u*), *M* (San, occurring frequently instead of *S*), and *H* = *h*. It lacks, however, *Φ* and *Χ*, using *Π* (or *ΠΗ*) and *Κ* (or *ΚΗ*) instead. *Ψ* and *Ω* are also absent. At a more developed stage the alphabets fall into two groups. Both groups have *Φ* and also *Χ*, but they differ in their use of the latter symbol. (1) The eastern alphabets used *Χ* = *kh* and some of them, notably those of the Greek cities of Asia Minor and of Argos, Corinth, and Megara, had *Ψ* = *ps* and *Ξ* = *ks*. Other places, e.g. Athens, used *ΦΞ* and *ΧΞ* for *Ψ* and *Ξ*. (2) The western alphabets current in Euboea and on the mainland outside the districts which followed the eastern system had *Χ* = *ks* and *Ψ* = (*ψ*) = *hh*. They had no *Ξ* and expressed *ps* by *ΦΞ*.

One variety of the eastern alphabets, namely the East Ionic, eventually became predominant. In the Ionic dialect (as in many others) short *e* had a close quality (*ē*), but there were two forms of long *e*, one open and the other close (*ē*, *ē̄*). Through the loss of the *h*-sound in Ionic, the symbol *H* became superfluous. The East Ionic alphabet then employed it to represent *ē̄*, and invented a new form of *O*, namely *Ω*, to represent *ō̄*. *ē̄* and *ō̄* continued for a time to be denoted by *E* and *O* like the short vowels, but before 400 B.C. the development of the original diphthongs *ei* and *ou* into simple long vowels of close quality made it possible to use *EI* and *OY* not only for the original diphthongs but also for the *ē̄* and *ō̄* that had never been diphthongal (e.g. *εἰπὶ κοῦρος*, older *ΕΜΙ ΚΟΡΟΣ*).

The Ionic alphabet was officially accepted at Athens in the archonship of Eucleides (403-402 B.C.) and thereafter gradually extended. Non-Ionic elements like *F* lingered locally for some time, and local differences, especially in vowel-pronunciation, produced variations in spelling. As *H* could no longer express the rough breathing, a modification of it (*h̄*) was used for this purpose in some areas and has given rise to the sign *̣*; another modification (*h̄*) has produced the sign for the smooth breathing.

ALPHABET, LATIN. It has generally been held that the original Latin alphabet of twenty-one letters (A B C D E F Z H I K L M N O P Q R S T V X) was borrowed directly from the Greek alphabet of Cumae in Campania. This city, a colony of Chalcis in Euboea, was regarded as the most likely source, because the ancient forms of certain Latin letters strongly resemble the Cumaeian equivalents. Modern opinion, however, favours the view that Latin, like Oscan and Umbrian, owes its alphabet only indirectly to the Greeks, but

directly to the Etruscans. For Latin the immediate source is said to be an early form of Etruscan script, derived itself not from Campania but from a type of Greek alphabet current on the mainland of Greece north of the Corinthian Gulf. Be this as it may, the ultimate source is a western alphabet which contained the signs $X = ks$ and $H = h$.

In the Latin adaptation of this alphabet the following points are noteworthy:

(1) C (K), i.e. Γ (Gamma), was at first used for k as well as for g . This peculiarity is usually ascribed to the influence of Etruscan, which made no distinction between voiceless and voiced stops (see PRONUNCIATION, GREEK, B. 1). Of the three signs thus available for the voiceless guttural, K was used originally before a , C before e and i , Ψ (Greek Koppa) before o and u (as in Greek) and also before μ . Eventually C was generalized for all positions except before μ , where Ψ continued. Relics of the old spelling are *Kalendae* and *Kaeso*. In the third century B.C. the introduction of G, a modification of C, gave the voiced guttural a separate symbol. C., Cn. = Gaius, Gnaeus are survivals.

(2) Z originally represented the voiced s (z), but was dropped when this sound became r in the fourth century B.C. Afterwards it was reintroduced to express ζ in words borrowed from Greek, and found its place then at the end of the alphabet, its original position having been occupied by G.

(3) For Latin f the nearest equivalent in Greek was the voiceless Digamma (FH) which occurred in some dialects, and which must have approximated in pronunciation to Scottish *wh*, i.e. *hw*. F is a simplified form of FH. This use of F (in Greek = ψ) made it necessary to express μ as well as u by V. Y (another form of V) was added late in the Republican period to denote v (by then = ψ) in words borrowed from Greek. I had to do duty for both i and \dot{i} . The use of u and \dot{i} for the vowels and v and j for the semivowels is a device of medieval times and not of the Latin period.

(4) An attempt to distinguish long vowels from short by writing the former double is attributed to the poet Accius (q.v.). Later the 'Apex' (a mark like an acute accent) was sometimes employed for the same purpose. *ei* for \ddot{e} is common from about 150 B.C. after the diphthong *ei* had become \ddot{e} in pronunciation. The occasional use of 'I longa' (e.g. FELIC) starts in Sulla's time.

(5) For double consonants a single letter originally sufficed. The reform in this respect belongs to the second century B.C. and is ascribed to Ennius.

W. M. Lindsay, *The Latin Language* (1894), 1-12; F. Sommer, *Handbuch der lateinischen Laut- und Formenlehre* (1914), 23-31; Stolz-Schmalz, *Lateinische Grammatik*⁴ (1926, revised, M. Leumann and J. B. Hofmann), 44-50. J. W. F.

ALPHESIBOEA, in mythology, daughter of Phegeus of Psophis and wife of Alcmaeon (q.v.). According to Propertius 1. 15. 15, she and not Callirhoë's children avenged him; perhaps a mere blunder, perhaps an unknown variant.

ALPHEUS (*Ἀλφειός*), the largest river of Peloponnesus, rises in south Arcadia near Asea and flows past Olympia to the Ionian Sea. Its waters were fabled to pass unmixed through the sea and to rise in the fountain of Arethusa at Syracuse (Pind. *Nem.* 1. 1; Ibycus, fr. 23 Bergk). T. J. D.

ALPS. Although the passes of the Alps were used for trans-European commerce since prehistoric times, the early Greeks had no knowledge of these mountains, though a vague notion of them may lurk in their speculations about the Hercynia Silva and the Rhipaeon Mts. (qq.v.); in Herodotus (4. 49) 'Alpis' is a tributary of the Danube. By the fourth century Greek travellers in north Italy and Provence brought information about a 'pillar'

or 'buttress' of the north (Ephorus ap. Seymn. 188); but Apollonius Rhodius (4. 627 f.) could still believe that the Rhône and Po were interconnected. The Roman conquest of Cisalpine Gaul and Hannibal's invasion of Italy (Polyb. 3. 50-6; Livy 21. 32-7; the pass remains unidentified) brought more detailed knowledge, and Polybius gave a good description of the western Alps, though he thought that they extended uniformly in a west-east direction. The campaigns of Caesar in Gaul, and of Tiberius in Switzerland and Austria, opened up the Alps thoroughly, and in the first two centuries A.D. at least five paved roads (Little and Great St. Bernard, Splügen, Maloja, and Brenner passes) were built across them. Strabo defined the curve of the Alps with substantial correctness, and graphically described their vegetation and the predatory habits of the valley populations.

The Romans distinguished the following chains: Alpes Maritimae, Cottiae (from Mte. Viso), Graiae (the St. Bernard section), Poeninae (Mt. Blanc-Mte. Rosa), Raetiae (Grisons), Noricae (Tyrol), Carnicae, and Venetae. They also gave the name of 'Alps' to the Austrian and Dalmatian mountains.

Cary-Warmington, *Explorers*, 120 ff.

E. H. W.

ALTAR. The ancients distinguished between *βωμός*, *altare*, the altar of a supreme god, *ἑσχαρά*, *ara*, that of a hero or demi-god, and *ἑστία*, *focus*, a domestic altar, though these distinctions were not always observed. An altar for the indispensable sacrifice was a necessary adjunct of a cult (save in the case of infernal deities, to whom offerings were made in pits, *βόθροι*, *scrobes*); and the primitive heaps of stones or turf had been replaced as early as Minoan times by more regular forms. The open-air altars for burnt offerings at Greek temples often attained enormous size; the great altar of Pergamum was 40 feet high, while others at Syracuse and Parium are credited with a length of one stadium. Within the temples smaller altars served for incense or bloodless offerings. In Hellenistic times circular altars are common, while the Romans preferred the quadrangular form, and their cinerary urns were frequently in the form of altars. Altars were places of refuge, the suppliants being under the protection of the deity to whom the altar belonged.

ALTHAEA, see MELEAGER, OENEUS.

ALTHAEMENES, in mythology, son of Catreus, king of Crete. Warned by an oracle that he would kill his father, he left Crete for Rhodes. Long after, his father came to seek him; Althaemenes took him for a pirate and killed him (Diod. Sic. 5. 59; Apollod. 3. 12-16).

ALYATTES, fourth Lydian king (c. 610-560 B.C.), of the house of Gyges, finally drove out the Cimmerians, extended his dominion to the Halys, and made a war on Cyaxares the Mede (585), during which occurred an eclipse (perhaps the one foretold by Thales). After the conclusion of peace through Labynetos (Nebuchadrezzar) of Babylon he continued the Lydian campaigns against Ionia, conquered Smyrna, but was foiled by Clazomenae and Miletus. He built temples to Athens near Miletus and made offerings to Delphi. The vast round-barrow tomb of Alyattes described by Herodotus and Strabo is still visible.

Herodotus bk. 1; Strabo 13. 627. G. Radet, *La Lydie* (1893), 193-206. P. N. U.

ALYPIUS (3rd or 4th c. A.D.), the author of an extant *Ἑσταγωγὴ μουσικῇ*, the fullest source of our knowledge of Greek musical scales.

Ed. C. Jan, *Musici Scriptores Graeci* (1895), 357-406. PW i. 1710.

AMAFINIUS, GAIUS, older contemporary of Cicero, popularized the philosophy of Epicurus in Latin. Cicero refers to him disparagingly (*Acad. Post.* 1. 5; *Tusc.* 1. 6; 2. 7; 4. 6, 7).

PW i. 1714.

AMALTHEA (*Ἀμάλθεια*), in mythology, a nurse of Zeus, variously described as a nymph or a she-goat (details in Stoll, in Roscher's *Lexikon* 1. 262). Possibly she was originally a theriomorphic goddess (cf. Nilsson, *Minoan-Mycenaean Religion*, 466). Two principal legends, neither early, concern her. She was transformed into the star Capella (Aratus, *Phaen.* 162-4 and many later authors). Her horns were wonderful, flowing with nectar and ambrosia (schol. Callim. *Jov.* 1. 49). One of them broke off, and was filled with fruits and given to Zeus (*Ov. Fasti* 5. 121 ff.). This was the origin (the story is variously told) of the proverbial *Ἀμάλθειας κέρας*, *cornu Copiae*, first mentioned by Antiphanes ap. Ath. 503 b. It is very likely to be older than its connexion with Amalthea, for it is a widespread folk-motif, the magical object whose possessor can get anything he likes (or all he wants of some specific thing) out of it (see Stith Thompson, *D* 1470. 2. 3). Ovid has another version: when Achelous' horn was broken off in wrestling with Heracles (q.v.), the Naiads picked it up, filled it with flowers and fruit, and gave it to Bona Copia (*Met.* 9. 88-9); this is Latin, for there is no Greek goddess corresponding to Copia. H. J. R.

AMANUS, the name applied to the mountain horseshoe of Elma Dag above Alexandretta, together with Giaour Dag which trends north-eastwards. It is separated from Taurus by the deep gorge of the Jihun. It is crossed by great passes, the Amanid Gates (*Baghche Pass* from the Cilician plain to Zeugma), and the Syrian Gates (*Beilan Pass*) carrying a Roman road from Tarsus into Syria. The part of Mt. Amanus which Cicero reduced to order (*Att.* 5. 20. 3) must be the heights that end in Ras-el-Khianzir. E. H. W.

AMARANTUS of Alexandria (1st-2nd c. A.D.), an older contemporary of Galen (Gal. 14. 208, Ath. 8. 343 f), was the author of a commentary on Theocritus (*Etym. Magn.* 156. 30, 273. 41), perhaps based on Theon's notes, and of a work *Περὶ σκητῆς*, which probably gave historical and biographical accounts of stage performances and performers (Ath. l.c. and 10. 414 c). J. F. L.

AMASEIA, the capital of the early kings of Pontus, with a magnificent fortress commanding the middle valley of the Iris and the chief Pontic roads. Pompey gave it municipal status and made it the administrative centre of a large territory. Under the Empire it became the metropolis of Galatic Pontus, and increased in importance with the development of the roads leading to the eastern frontier.

Strabo 12. 561; F. Cumont, *Studia Pontica* ii (1926), 138-82, iii (1910), 109-87; Jones, *Eastern Cities* (Index). T. R. S. B.

AMASIS (1) became pharaoh c. 569 B.C. as champion of the native Egyptians against Apries (q.v.), but later 'becoming philhellene' granted the Greeks Naukratis (q.v.), maintained a Greek bodyguard, allied himself with Lydia, Samos, Cyrene, and perhaps Sparta, and made gifts to Greek shrines. These foreign alliances were dictated by the Persian peril, which overthrew Egypt in 525, shortly after Amasis' death. His long reign was remembered as a time of peace and prosperity attested by numerous great buildings, and Amasis himself as a great but unconventional and sometimes deliberately undignified figure.

Herodotus 1. 77 and bks. 2 and 3; G. Maspero, *Popular Stories of Egypt*, 251 ff. P. N. U.

4515

AMASIS (2) (6th c. B.C.), potter, in Athens; probably father of the potter Cleophrades; known from eight signatures. The Amasis painter, who worked for him 555-525 B.C., painted black-figure *amphorae*, *oinochoae*, *lecythi*, cups. A formal but individual artist; note particularly his Apollo and Heracles (Boston), and Dionysus and Maenads (Paris).

J. D. Beazley, *JHS* 1931, 256; W. Kraiker, *Ath. Mitt.* 1934, 19. T. B. L. W.

AMAZONS (*Ἀμαζόνες*), in mythology, a people of female warriors, always situated on the borders of the known world (Themiseyra on the Thermodon, Aesch. *PV* 723-5, but they have been driven from there, Strabo, 11. 5. 4; on the Tanais, Pliny, *HN* 6. 19; the Caspian Gates, Strabo, *ibid.*, citing Cleitarchus), and in all probability nothing more than the common travellers' tale of the distant foreigners who do everything the wrong way about, cf. Hdt. 2. 35. 2 (Egyptians). Attempts to find a sociological significance in the legend (Baehofen, *Mutterrecht*?, 1897, 88 and elsewhere) or other explanation postulating a foundation of fact are mistaken. Why this particular tale caught Greek fancy and was elaborated we do not know.

2. *Amazon customs*. Generally it is stated that they provide for offspring by meeting at certain seasons with men of another race, afterwards keeping their female children but getting rid of or disabling the boys (Justin 2. 4. 9-10, Diod. Sic. 2. 45. 3); they destroy the girls' right breasts to prevent them getting in the way in battle, *ibid.*; hence their name, fancifully derived from *ἀμαζόνες*. Their deities are Ares (e.g. Ap. Rhod. 2. 385 ff.) and Artemis (see below). Their occupations are hunting and fighting, their weapons being especially the bow and the 'Amazonian' crescent-shaped shield, but also axe and spear, all used on horseback.

3. *Amazon legends*. In the *Iliad* they are warred upon by Bellerophon (q.v.; *Il.* 6. 186) and by Priam (3. 189). After Homer Arctinus (*Amazonis*) and others represent them as coming to the help of Priam after Hector's death under their queen Penthesilea (q.v.), daughter of Ares. Achilles kills her, but is accused of being in love with her by Thersites, whom he kills in anger (cf. Quint. Smyrn. 1. 538-810). With these stories are connected the numerous legends that this or that place in Ionia was founded by Amazons (especially Ephesus, Strabo 12. 3. 21 and 1. 4; Pind. fr. 157 Bowra; Tac. *Ann.* 3. 61. 2; cf. schol. *Il.* 6. 186). They are often connected also with the following legends.

4. Heracles (q.v.) and his campaign against the Amazons to get their queen's girdle produced an echo in the legend of Theseus (q.v.), modelled as usual on that of the greater hero. Either because he had been with Heracles or on account of an expedition he undertook on his own behalf (Plut. *Thes.* 26 gives several versions), the Amazons attacked him in force, reached Attica, and besieged him in Athens itself. A great battle took place on the date of the later festival Boedromia (Boedromion, unknown day), and a chthonian ceremony in Pyanopsion (?) was interpreted as a sacrifice to the dead Amazons. In general, there was a strong tendency, perhaps especially among antiquarians, to explain nameless monuments and festivals whose original meaning had been forgotten by relating them to this event (examples in Plut. *ibid.* 27). The result was that the Amazons were defeated, or at all events so stoutly resisted that they agreed to retire from Attica. For the further history of the Amazon Hippolyta (or Antiope), who had become Theseus' prisoner, see HIPPOLYTUS.

5. Of Hellenistic date, on the other hand, is the legend, or rather cycle, which represents Dionysus (q.v.) as meeting the Amazons and conquering them. It is part of his conquest of the East; references to it are found, e.g., in Tacitus, *loc. cit.* and Plut. *Quaest. Graec.* 56.

A Euhemerizing story in Diod. Sic. 3. 71. 4 represents them as his allies, and presumably goes back to some legend to that effect.

6. Representations of the Amazons in art are exceedingly common, the piquant contrast between their feminine beauty and their manly employments attracting artists of all periods of antiquity later than the archaic. Attica was especially rich in these monuments.

Besides the articles 'Amazonen' in Roscher's *Lexikon* and *PW* see especially W. R. Halliday in *The Greek Questions of Plutarch* (1928), 209-11. H. J. R.

AMBARVALIA (*Ambarvale sacrum*, *Lustratio agri*), (1) a private rite, described by Cato, *Agr.* 141; Verg. *G.* 1. 338 ff., cf. *Ecl.* 3. 77; 5. 75 and Servius ad loc.; Tib. 2. 1; see **LUSTRATION**. (2) A State rite, in which, since even the earliest *ager Romanus* had too large a circumference to be easily got about in one day, sacrifice was offered at particular points (Strabo 5. 3. 2). That this was identical with the sacrifice to the Dea Dia performed by the Arval Brothers has been repeatedly suggested (Wissowa, *RK* 562), but is rightly denied by A. Kilgour, *Mnemos.* 1938, 225 ff. H. J. R.

AMBER, a fossilized resin, occurring in Tertiary strata and particularly common along the Baltic. From the earliest periods it was highly valued, the bright colour suggesting sunlight. A treasure of 4,000 pieces found in Denmark is actually neolithic, but in the next periods export reduced the quantity available at home. In return for amber Denmark received bronzes from the Mediterranean; this lively commerce explains her early culture. Amber appears freely at Mycenae and sparsely in the *Terremare* (q.v.); in classical Greece it had little vogue. The trade with Germany, central Europe, and Italy lasted with some fluctuations for two thousand years. Till the late Iron Age the only source was the Baltic ('succinite'). J. M. de Navarro, partly inspired by O. Montelius, has deduced three main routes by plotting all finds on the map of Europe. The central route (early Bronze Age) ran from Jutland up the Elbe to the Saale, where it divided. One half went up the Moldau to the Danube at Passau, the other up the Saale and thence to Passau. From Passau this road crossed the Brenner. The western (middle Bronze Age) diverged from the central route in Thüringen and went to the Main, the Rhine, and the Neckar. The eastern (Iron Age) route, which began at Danzig, by destroying the monopoly of Jutland almost ruined Denmark. It led to the head of the Adriatic, and supplied the east coast of Italy with a particular abundance. Amber is seldom mentioned in classical writers, though its power of attraction interested observers as early as Thales. Pliny (*HN* 37. 45) emphasizes its extraordinary popularity in the Roman Empire. As late as the sixth century A.D. an embassy from the Baltic brought a large gift of amber to Theodoric.

Ebert's *Reallexikon der Vorgeschichte*, s.v. 'Bernstein'; J. M. de Navarro, *Geographical Journal*, Dec. 1925. D. R.-MacI.

AMBITUS, a 'going round' (cf. *ambire*), or canvassing for public office. Personal contact with the electors in Rome was naturally allowed, but propaganda throughout Italy or among provincial citizens, although legal, was generally open to criticism. The State soon intervened against bribery and intrigue. The alleged law *de ambitu* of 432 B.C. is probably either a forgery or an anticipation of the *Lex Poetelia* (358), which forbade propaganda outside Rome but was soon disregarded, or of a law passed in 314 against the *coitiones*, i.e. societies of illegal canvassers. The scandalous increase of electoral corruption in the early second century required an elaborated legislation. From the *Lex Cornelia Baebia* (181) down to the laws enacted by Cicero (*L. Tullia*, 63), Pompey (*L. Pompeia*, 52), and Caesar (*L. Iulia*, 49), attempts were made to stop bribery by threatening heavy penalties (death, exile for ten years or life, etc.). Municipal

authorities accordingly took steps to keep order in local elections. But the works of Cicero and the *Commentarium petitionis consulatus* (64 B.C.) of his brother Quintus expose the uselessness of such precautions. In the Imperial age *ambitus* came to indicate an appointment illegally secured, and was punished with confiscation and deportation.

L. M. Hartmann, *PW*, s.v.; Mommsen, *Röm. Strafr.* (1899), 865 ff.; W. Kroll, *Die Kultur d. ciceronischen Zeit* (1933), i. 50 ff. P. T.

AMBIVIVUS TURPIO, LUCIUS, actor and theatre-director in Terence's day. His experience as a player contributed much to the success of Caecilius Statius and Terence (q.v.). All Terence's plays were, the *didascalicae* record, produced by him.

AMBRACIA, a Greek city, situated north of the Bay of Actium, in the fertile valley of the lower Arachthus. It was founded as a Corinthian colony by Gorgos, son of the tyrant Cypselus. Its attempts to control the whole coastland of the Bay of Actium brought it into conflict with the Acarnanians and Amphilochians, who with Athenian aid inflicted a severe defeat upon the Ambracians in 426 B.C. Ambracia allied with Athens against Philip of Macedon, who subdued and garrisoned it. In 294 it was ceded by Cassander's son to Pyrrhus of Epirus, who made it his capital and spent lavishly on its adornment. In 229 it passed into the Aetolian League, from which it was wrested by the Romans after a siege (189). It then became a free city. M. C.

AMBROSIA and **NECTAR**, the food and drink respectively (but the reverse occasionally, see *Ath.* 39a) of the gods. Their effect is to make those who take them immortal (Pind. *Ol.* 1. 60 ff., cf. *Il.* 5. 341-2). They will keep a corpse from decay (e.g. *Il.* 19. 38-9). The smell of ambrosia is extraordinarily sweet and will overpower bad odours (*Od.* 4. 445-6). Various things connected with the gods are 'ambrosial' (the fodder of Ares' horses, *Il.* 5. 369; the 'beauty', *καλλος*, apparently a sort of magical wash, with which Athena treats Penelope, *Od.* 18. 192-3); mortals of high rank wear 'nectarean' garments (*Il.* 3. 385; 18. 25), perhaps 'sweet-smelling'. That nectar is originally some kind of honey-drink (mead?), ambrosia idealized honey, is probable (see Roscher in his *Lexikon* i. 282). H. J. R.

AMBRŌSIUS (St. Ambrose) (c. A.D. 337-4 Apr. 397), son of a *praefectus praetorio* in Gaul, and born there. After his father's death he received in Rome the best education, and entered on an official career. While still young he was appointed *consularis* of Aemilia and Liguria, with headquarters in Milan. He was so esteemed that on Auxentius' death (374) the people chose him against his will as bishop of Milan, though a layman who had held none of the lower offices. He devoted himself ardently to the varied duties of his office. Already a great orator, he became a great preacher. He fought heresy. After Gratian's death (383) he became again important politically. He successfully opposed the Empress Justina (385, 386), who was an Arian. With equal force and tact he resisted the civil power in the interests of the Church. The Emperor Theodosius was forced by him to repent publicly for murders for which he was responsible.

His writings are not so voluminous as those of Jerome (see **HIERONYMUS**) or Augustine (q.v.), but are nevertheless considerable in bulk and quality. They are exegetical, ethical, dogmatic, oratorical, and epistolary. (Two contemporary works are falsely attributed to him: a commentary on St. Paul's Epistles, often now called 'Ambrosiaster', and the *Lex Dei sive Mosaicarum et Romanarum legum collatio*). The following illustrate his range: (1) *Hexameron* (6 books) on the Creation narratives in Genesis, *De Helia et Iuliano* (important for history of

morals), *De Nabuthe* (Naboth), *De Tobia*, *Enarrationes in XII psalmos Davidicos*, *Expositio in psalmum 118* (our 119), *Expositio Evangelii sec. Lucam* (10 books). These were all based on sermons. (2) *De Officiis Ministrorum*, based largely on Cicero *De Officiis*. (3) *De Fide*, *De Mysteriis*, *De Sacramentis*. (4) *De excessu fratris Satyri* (2 books), and 91 letters, where his greatness as bishop especially appears.

Works: Migne, *PL* xiii-xvii, *CSEL* (incomplete, 6 vols.); F. Homes Dudden, *The Life and Times of St. Ambrose* (1935).

A. S.

AMBURBIUM, a rite of lustration (q.v.) for the city, corresponding to the *Ambarvalia* (q.v.), for the fields. It is probable that it was annual, though if so it must have been one of the *feriae conceptivae*, or movable festivals, for it appears in no calendar. Beyond this we have no certain knowledge, for the conjecture of H. Usener (*Weihnachtsfest*², 310 ff.), that it was on 2 Feb. and ultimately christianized into Candlemas is too hazardous to accept even in the modified form proposed by Wissowa (*RE*, p. 142, n. 12), that it was held about then (see L. Delatte in *Ant. Class.* vi (1937), 114 ff.). Lucan (1. 592 ff.) describes an *amburbium* of some kind, but it was clearly an extraordinary ceremony.

H. J. R.

AMBUSTUS, see **FABIUS** (1) and (2).

AMEIPSIAS, Athenian comic writer, contemporary with Aristophanes. The *Kónvos* (423 B.C.), attributed to him, was placed second to Cratinus' *Πύριν* and above Aristophanes' *Clouds* (hyp. 5 Ar. *Nub.*). *Kónvos* was Socrates' music-master, and the play probably ran on much the same lines as the *Clouds*. Socrates himself was a character (fr. 9) and the chorus consisted of *Φροντισταί* (Diog. Laert. 2. 27)—i.e. Sophists (cf. the *Φροντιστήριον* in the *Clouds*). Protagoras was not included (Ath. 5. 218 c). The *Κωμασταί* ('The Revellers'), likewise attributed to A., defeated Aristophanes' *Birds* and Phrynichus' *Μονότροπος* in 414 (hyp. 1 Ar. *Av.*; *IG* ii², 2325). But the *Kónvos* and *Κωμασταί* were perhaps by Phrynichus (q.v. 2). According to Aristophanes, a defeated rival, Ameipsias was a vulgar writer (*φορτικός*, *Nub.* 524) and his jokes banal (*Ran.* 15). Suidas, doubtless echoing Aristophanes, calls him *ὑπόψυχρος*.

FCG i. 199 ff.; *CAF* i. 670 ff.

M. P.

AMELESAGORAS, author of a series of Greek miracle stories: cf. Ov. *Fasti* 6. 749 (see Frazer ad loc.), perhaps derived from A. Probably a priest of Eleusis. A fourth-century B.C. *Atthis* is doubtfully ascribed to him.

FHG ii. 21.

AMELIUS or **AMERIUS GENTILIANUS** (3rd c. A.D.), born in Etruria, was Plotinus' pupil A.D. 246-70. His literary work was devoted mainly to the exposition and defence of Plotinus' philosophy, of which, however, he had little true understanding.

PW i. 1822.

AMICUS AUGUSTI, a term used unofficially to indicate senators and equites who were admitted to the Roman Imperial court. The *amici* were graded (by a practice which, in private families, dated from C. Gracchus and Livius Drusus: Sen. *Ben.* 6. 34) as *primae*, *secundae*, or *tertia admissiois*. The term was also used in a narrower sense to indicate those who were chosen from this larger body as the emperor's advisers (*consiliiarii*) and travelling-companions (*comites*): cf. Suet. *Tit.* 7. 2; Pliny, *Pan.* 88.

J. P. B.

AMISUS, a sixth-century colony of Phocaea or Miletus, situated at the head of the one easy road from the Euxine coast into the interior of Pontus. Pericles settled cleruchs in Amisus and renamed it Piraeus. It belonged to the Pontic kings by 250 B.C. Lucullus gave it freedom

and additional territory, gifts that Pompey confirmed when he shaped its municipal constitution. It became a free and allied city under Augustus, and remained attached to the province of Bithynia and Pontus until Dioeletian. Its territory included the fertile coastal plain of Themiseyra and was eventually extended westwards to the mouth of the Halys river. Its commercial prosperity is attested by its abundant coinage and the wide dispersal of its citizens.

Strabo 12. 547; F. Cumont, *Studia Pontica* ii (1906), 111 ff., iii (1910), 1 ff.; Jones, *Eastern Cities* (Index).

T. R. S. B.

AMMIANUS MARCELLINUS (b. c. A.D. 330), last of the great Roman historians, was born into a good family at Antioch. After a creditable military career he wrote in Latin a work dealing with the years 96 to 378, which was thus a continuation of Tacitus. The first thirteen books have perished. Books 14 to 31 contain a very valuable narrative of the events of 353 to 378. Ammianus served under Ursicinus in the East, accompanied him to Italy and Gaul, and took part in operations against the Persians. He visited Egypt and Sparta, and in later life lived in Rome and wrote his history there, finishing it probably a few years after 390. He had a keen eye for human character, and, as Gibbon observed, was 'without the prejudices and passions which usually affect the mind of a contemporary'. He was a polytheist with a ready religious toleration. Latin was an acquired language for him, but he was very well read in several Latin authors. He often makes use of phrases from them, and he is fond of showing his learning in digressions. His style is far from homogeneous and is often overloaded with metaphor and ornament; his syntax also is peculiar, but he can write vivid narrative and strike out a splendid phrase.

Best edition, C. U. Clark's (Berlin, 1910-15). The following are valuable in themselves and for bibliographical references: W. Eusslin, 'Zur Geschichtsschreibung und Weltanschauung des Ammianus Marcellinus', *Klio*, Beiheft xvi (1923); H. Hagendahl, 'Studia Ammianea', *Uppsala Universitets Årsskrift* 1921; G. B. Pighi, *Studia Ammianea* (1935); id. *Nuovi Studi Ammianei* (1936); id. *I Discorsi nelle Storie d' Ammiano Marcellino* (1936); P. de Jonge, *Sprachlicher und historischer Kommentar zu Ammianus Marcellinus XIV* (1935-9); E. A. Thompson, *The Historical Work of A.M.* (1947).

G. B. A. F.

AMMON (or **AMO[U]N**), originally the god of the city of Thebes in Egypt. During the age of the Egyptian Empire Ammon became an imperial deity whose worship struck roots in Nubia, Syria, and Libya. Ammon appears in Greek literature chiefly by reason of his cult at the oasis of Siwa, which became known to Greeks after the colonization of Cyrene in the seventh century. In the temple at Siwa there was an oracle of A. whose fame in the Greek world came to rival that of Delphi and Dodona. In Greece A. was usually portrayed on coins and elsewhere with a head of Zeus to which the curling ram's horns of A. were added. Pindar and Herodotus testify to the authority of the oracle of A., and we are told that it was consulted by Cimon, Lysander, and others. In the fourth century Athens had a theoric vessel named the Ammonis, and public sacrifices to A. were conducted by the magistrates. The oracle was probably at the height of its influence when it was visited by Alexander the Great. Alexander's question and the answer he received from the god are unknown to us, but some modern writers have asserted that Alexander went to the oracle to be deified. Actually the priests there did but employ a conventional form in greeting Alexander as the son of Zeus. The cult of A. seems to have been popular with some members of the Ptolemaic dynasty, but it certainly was not widespread in the Mediterranean world during the Hellenistic and Roman periods. We know of *thiasotai* of A. in Attica, and A. was connected in some way with the cult of Amphiarus at Oropus (*IG* ii². 1252). Occasionally A. is included among the Egyptian deities, though there are only two such

instances at Delos. Ammon is represented in sculpture chiefly by busts, masks, and relief medallions, most of which portray him in the conventional manner.

A. B. Cook, *Zeus* i (1914), 346 ff.; A. Erman, *Die Religion der Ägypter* (1934); E. Meyer, art. 'Ammon' in Roscher's *Lexikon*; A. Wiedemann, *Herodots Zweites Buch* (1890); U. Wilcken, *Alexander the Great* (1932). T. A. B.

AMMONIUS (1) (2nd c. B.C.), pupil and successor of Aristarchus (schol. *Il.* 10. 397; Suid. s.v.), wrote, besides a commentary on Homer (*POxy.* ii. 121), other works on the Homeric poems, e.g. a treatise on Plato's borrowings from Homer ([Longinus], *Subl.* 13. 3), and essays in defence of Aristarchus' recension of the Homeric text (schol. *Il.* 10. 397); these formed a valuable source for Didymus. For his commentary on Pindar (schol. *Ol.* 1. 122 c) he used Aristarchus' work, but made independent additions (schol. *Nem.* 3. 16 b). The work on Aristophanes (schol. *Vesp.* 947), sometimes entitled *Κωμωδοῦμενοι* (ibid. 1239), probably discussed the individuals attacked in Old Attic Comedy. J. F. L.

AMMONIUS (2) **SACCAS** (3rd c. A.D.), of Alexandria, was born a Christian but reverted to the ancient religion of Greece. Among his pupils were Origen the Neoplatonist, Origen the Christian Father, Longinus, Herennius, and Plotinus (the latter from 232 to 242). He wrote nothing, and preferred that his philosophy should be kept secret, but Origen the Neoplatonist, Herennius, and Plotinus published portions of it. It was mystical in character, whence his nickname *Θεοδιδάκτος*. In view of his influence on Plotinus he ranks among the founders of Neoplatonism, but his teaching was soon completely overshadowed by that of his pupil. PW i. 1863. W. D. R.

AMNESTY. There are few certain records of public amnesties in Greek States, the earliest one being the law of Solon (Plut. *Sol.* 19), who restored citizen rights to every man who had lost them, unless he was disfranchised for murder or tyranny. Another act of general reconciliation was the decree of the Athenian Assembly after the restitution of democracy (403 B.C.), which excluded only the Thirty Tyrants (q.v.) and some of their most important assistants. Aristotle (*Ath. Pol.* 39. 6) quotes its chief regulation: *μηδὲν πρὸς μηδὲνα μνηστεικᾶν*. The word *amnestia* is not used for this act before Plutarch; its first known use is in a Milesian inscription of the second century B.C. (*SIG* 633, l. 36). V. E.

AMOEBEAN VERSE, a device found mainly in bucolic poetry, consists of couplets or 'stanzas' assigned alternately to two characters (e.g. Theoc. 5 and 8; Verg. *Ecl.* 3 and 7; cf. Hor. *Carm.* 3. 9). Such passages are generally singing matches (sometimes preceded by mutual abuse) in which each theme introduced by one character is closely 'capped' by the other. J. F. M.

AMPELIUS, LUCIUS (2nd or possibly 3rd c. A.D.), published a *liber memorialis*, a handbook of knowledge, dedicated to a Macrinus, not necessarily the emperor of A.D. 217-18. It gives a summary of cosmography, geography with *miracula mundi*, mythology (Euhemeristic in tendency), and history (Oriental, Greek, and of the Roman Republic, with constitutional interests); incidental references to Trajan occur. Compensious in style, it was based, probably indirectly, on Nigidius Figulus and Varro, Alexandrian works, Euhemeristic genealogies of the gods, and, in the historical part, Cornelius Nepos, Trogus, the epitomized Livian tradition, and the tradition of the *De Viris Illustribus*.

Editions: E. Wölfflin (1854); E. Assmann (1935). Cf. E. Wölfflin, *De L. Ampelii libro memoriali* (1854). A. H. McD.

AMPHIARAI EXELASIS, see EPIC CYCLE, para. 5.

AMPHIARAUS (*Ἀμφιάραος, Ἀμφιάρεως*), in mythology, son of Oecles (or Apollo, Hyg. *Fab.* 70, a not unexampled genealogy for diviners). On the return of Adrastus (q.v.) from Sicyon, Amphiaraus made peace with him and married his sister Eriphyle (Apollod. 1. 103). Foreknowing the result of the expedition of the Seven against Thebes, he would not take part in it till Eriphyle, bribed by Polynices with the necklace of Harmonia, compelled him (for the necklace, see Rose, *Handb. of Gr. Myth.*, 185, 190, 194), it having been agreed between Amphiaraus and Adrastus that in case of differences between them she should decide. Before setting out, he commanded his children to avenge his death on Eriphyle and to make an expedition against Thebes (cf. ALCEMAEON 1). He attacked Thebes at the Homoloian Gate (Aesch. *Sept.* 570), was driven off, and, as he fled, was swallowed up in a cleft in the ground made by Zeus' thunderbolt (rhetorical description, Stat. *Theb.* 7. 771 ff.; for continuous account, see Apollod. 3. 60-77). Thus originated the very famous oracular shrine of Amphiaraus (Farnell, *Hero-Cults*, 58-62; see also under OROPUS and AMMON).

Whether he was originally a man or a god is disputed; his name ('very sacred') points to the former, as *ἱερός* is not used of a god in classical Greek (though Hesiod, *Theog.* 21, uses it of the 'race of immortals'). H. J. R.

AMPHICTIONIES (from *ἀμφικτίους*, 'dwellers round about') is the name for leagues connected with temples and the maintenance of their cults. Most important was the Amphictionic League organized around the temple of Demeter at Anthela near Thermopylae and later associated also with that of Apollo at Delphi (see DELPHIC ORACLE, para. 6). In the earliest form known the League consisted of the following twelve tribes: Thessalians, Boeotians, Dorians, Ionians, Perrhaebians, Dolopians, Magnetes, Loerians, Acnians, Phthiotic Achaeans, Malians, and Phocians. Thus it was possible to control the League by reducing the small tribes of central and northern Greece, as was done by Thessaly in the sixth and Aetolia in the third century B.C. The League, in co-operation with Delphi, administered the temple of Apollo and its property and conducted the Pythian Games. In the *synedrion*, which met twice a year, each tribe had two votes cast by two *hieromnemes* (q.v.), alongside of whom stood a number of *pylagoi*, later replaced by *agoratroi*. The ecclesia was less important and is seldom mentioned. During the fourth century B.C. a board of *naupoioi* and later of *tamiai* supervised the rebuilding of the temple and the administration of its funds. The latter even issued Amphictionic coins.

The League was not without political importance. An old Amphictionic oath forbade destroying cities within the League or cutting off their water-supply. Later efforts at Panhellenic legislation included decrees concerning Dionysiac guilds and currency. Violators of Amphictionic laws were tried by the *hieromnemes*, who could even proclaim sacred war against offenders. Strong States, however, disregarded Amphictionic judgments, and the League was important politically chiefly as a tool of powerful States. Votes frequently were transferred from one State to another: Delphi acquired two, those of Phocis were transferred to Philip II, and the Aetolians assigned votes to their friends. They themselves probably were not admitted to the League, but by their conquests acquired direct control of the votes of others, the maximum recorded being fifteen. Under Augustus six votes were added for Nicopolis and the total for the first time increased (from 24 to 30). Under Hadrian there was a readjustment to secure a more just representation, but the details are unknown.

Ancient Sources: a selection of documents in *SIG*. Modern Literature: G. Busolt, *Griechische Staatskunde* ii (1926), 1280 ff.; U. Kahrstedt, *Griechisches Staatsrecht* (1922), 383 ff.; R. Flacelière, *Les Attolens à Delphes* (1937); G. Daux, *Delphes au II^e et au III^e siècle* (1936). J. A. O. L.

AMPHILOCHUS, in mythology, brother of Alcmaeon (q.v. 1), and, in some accounts (as Apollod. 3. 82 and 86), his comrade in the expedition of the Epigoni and helper in slaying Eriphyle. After Homer he takes part in the Trojan War (e.g. Quint. Smyrn. 14. 366), and is celebrated as a diviner. He and Calchas left Troy together by land and came to Claros (Strabo 14. 1. 27). A number of local tales (or constructions of Greek historians) connect Amphilocheus with the origins of places and peoples in Asia Minor, as Poseidon on the borders of Syria and Cilicia (Hdt. 3. 91. 1), the Pamphylian nation (ibid. 7. 91. 3), but above all the famous mantic shrine in Mallus (Strabo 14. 5. 16). Apollo killed him in Soli (Hesiod quoted ibid. 17).

H. J. R.

AMPHION (*Ἀμφίων*) and **ZETHUS** (*Ζήθος*), in mythology, the sons of Antiope (q.v.) and Zeus. Left behind by their mother at birth, they were found and reared by a shepherd. Amphion was given a lyre by Hermes and became a wonderful musician; Zethus was a herdsman. When, after long captivity, their mother escaped, they were full grown, and recognizing her, they took her under their protection, killing or at least dethroning Lycus and putting to death his wife Dirce by tying her to the horns of a bull, as she had intended to do to Antiope. Dirce was turned into, or her bones were burned and thrown into, the spring which bore her name. Amphion and Zethus now proceeded to wall the city later known as Thebes (from Zethus' wife Thebe, Apollod. 3. 45; Thebe is a local nymph or minor goddess), Amphion drawing the stones after him by the magical music of his lyre. Amphion married Niobe (q.v.). See Euripides, fr. 179-227 Nauck, and later finds, Pickard-Cambridge in Powell, *New Chapters* iii. 105 ff.; Apollod. 3. 43 ff.; Hyg. *Fab.* 7-9.

It is doubtful whether the brothers (called also *ἄλκυονες*, the White Horses, or Horsemen) were originally gods or heroes; see for this and their cult in historical times Farnell, *Hero-Cults*, 212 ff.

H. J. R.

AMPHIPOLIS, the chief Greek city on the north Aegean coast. Situated on the river Strymon, at the point of its emergence from Lake Cercinitis, it was a centre of communications (as was implied by its original name, *Ἐννέα Ὀδοί*), and it controlled the western approach to the mines and timber standings of Mt. Pangaeus (q.v.). After an ineffectual attempt by Aristagoras of Miletus (497 B.C.), and by an Athenian force in 465, to wrest it from the Thracians, it was colonized by Athens in 437. In 424 the Spartan general Brasidas carried it by surprise, and two years later he decisively defeated the Athenian Cleon under its gates. Though nominally ceded back to Athens by the Peace of Nicias, it maintained its independence, beating off attempts at recovery by the Athenians in 416 and in 368-365. In 357 it was captured by Philip of Macedonia, who had promised to restore it to Athens but kept it for himself. It remained under the Macedonian kings until 168, when it became for twenty years the capital of Macedonia Prima. With the decline of the Pangaeus mines Amphipolis lost its former importance.

S. Casson, *Macedonia, Thrace, and Illyria* (1926), *passim*. M. C.

AMPHIS, Middle Comedy poet, not anterior to Plato (fr. 6). His twenty-eight titles come chiefly from mythology and daily life, but *Γυναικοκρατία*, *Government by Women*, sounds like an Aristophanic theme, and *Διδύραμβος* (perhaps also *Ἰάλεμος* and *Σαπφώ*) dealt with musical innovations of the time. Fr. 30, on slovenly pronunciation (*κτὼ βολῶν for δκτὼ δβολῶν*).

FCG iii. 301 ff.; GAF ii. 236 ff.

W. G. W.

AMPHISSA, in western (Ozolian) Locris, commands the route leading west of Mt. Parnassus from Doris to the Gulf of Crisa. Its traditional policy being enmity

with Phocis and alliance with Thebes, Amphissa played a leading part in the Third Sacred War (q.v.), and was reduced to dependence by Onomarchus in 353 B.C. Independent again after the collapse of Phocis, it proposed, probably in the interest of Thebes, that Athens be fined by the Delphic Amphictiony, but Aeschines countered by accusing Amphissa of sacrilege in cultivating the Sacred Plain of Crisa (340); from this sprang the Amphissaeon War, in which Philip II of Macedonia captured Amphissa and destroyed its walls (338).

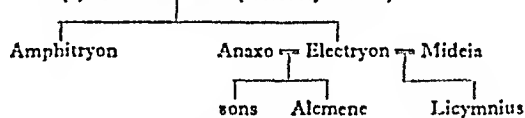

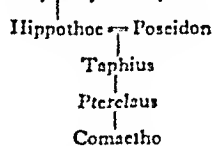

N. G. L. H.

AMPHISSUS, see DRYOPE.**AMPHITHALES**, see CHILDREN.

AMPHITHEATRES. The earliest known Roman amphitheatre is that of the Sullan colony (c. 80 B.C.) at Pompeii, called by its builders *spectacula* (CIL x. 852). Pliny (HN 36. 117-20) ascribes the introduction of amphitheatres at Rome to Curio (q.v. 2), the first permanent building being erected by Statilius Taurus in 29 B.C., at a time when such buildings were being constructed far and wide throughout the Empire. Architecturally, such examples as those of Emerita (8 B.C.; *Arch. Journ.* lxxxvii. 113, pl. viii) with segmental arches, and of Nemausus (*Nîmes*), with heavy lintel construction, exhibit affinity to wooden prototypes, which continued to exist (Tac. *Ann.* 4. 62). The Pompeian amphitheatre, dug deep into the earth and retained by a low façade with external staircases, demonstrates also the connexion with the natural arena or earth mound, of which provincial examples abound. Imperial architects, however, rapidly evolved very large self-contained buildings, in which problems of access and circulation were solved by remarkably ingenious use of balanced vaulting systems. The most famous is the Colosseum (q.v.). The arena was honeycombed with underground passages for stage effects, comparable with those of Julius Caesar's *Forum Romanum* (JRS 1922, 8-9). The amphitheatre should be distinguished from the *ludus*, or gladiators' training-school, which has much less seating and a proportionately larger arena (Lundström, *Undersökningar i Roms topografi*, 22-5).

Ashby-Anderson-Spiers, *Architecture of Ancient Rome*. See also bibliography s.v. **COLOSSEUM**. Methods of laying out the non-elliptical arena are discussed by J. A. Wright, *Archaeologia* lxxviii. 215.

I. A. R.

AMPHITRYON, in mythology, son of Alcaeus.(1) Alcaeus \rightarrow wife (variously named)(2) Mestor (brother of Alcaeus) \rightarrow Lysidice (dr. of Pelops)

Taphius and the sons of Pterelaus quarrelled with Electryon and reaved his cattle. In recovering them, Amphitryon accidentally killed Electryon, and so had to leave his native Mycenae (or Argos), taking Alcmena and Licymnius with him. At her urging (see **ALCME**) he got together an army, partly by help of Creon I, king of Thebes, who made it a condition that Amphitryon should rid him of the uncatchable Cadmeian vixen, which was ravaging the country. Amphitryon obtained the help of Cephalus (q.v.) and his hound Laelaps, which never lost its quarry, and the impasse between the beast which could not be caught and the beast which must catch was settled by Zeus turning both to stone. Amphi-

tryon proceeded against Pterelaus and his people the Teleboans, but could not take their city while Pterelaus lived, nor could the latter die till a golden hair which Poseidon had planted in his head was removed. Comaetho, being in love with Amphitryon, finally betrayed Pterelaus, and their city, Taphos, was taken. *See further* ALCMENE, HERACLES.

Apollodorus 2. 50 ff.; a somewhat different account in Arguments 4 and 5 to [Hesiod], *Shield*. H. J. R.

AMPLIATIO, a peculiarity of Roman criminal procedure in the time of the Republic, exceptionally admitted by some laws on criminal matters. We meet this institution particularly in trials for *repetundae*. When the jury was unable to come by majority to a decision, the evidence of guilt of the accused having been not quite sufficient either for condemnation or for discharge, they settled by the vote *non liquet* that the case was not quite cleared up and demanded by pronouncing the word *amplius* the reiteration of the evidence. The effect was not a simple adjournment, but a repetition of all proofs with the object of elucidating the case thoroughly. Normally *ampliatio* took place only once; but it lent itself to abuse before an unscrupulous jury: it is told, for instance, that in the trial of L. Aurelius Cotta on a charge of *repetundae* proceedings were repeated seven times. Such incidents perhaps caused the institution to fall into disuse in the early Principate. *See* LAW AND PROCEDURE, ROMAN, III.

J. P. Balsdon, *BSR* 1938, 109 ff.

A. B.

AMULETS (Lat. *amuletum*), charms, objects worn for magical use, to protect the wearer against witchcraft, the evil eye, sickness, accidents, etc. (cf. modern mascots). Houses, walls, towns, etc., were protected in the same way. Any kind of material might be used, stones and metals as well as animals and plants, because every sort of material was supposed eventually to possess supernatural or magical virtue. Even parts of the body (hand, *fascinum*, *vulva*) had peculiar efficacy; thus the snout of a wolf, fixed upon the door, guarded against evil influences (Plin. *HN* 28. 157), etc. The efficacy of the amulet might be enhanced by engraved figures, e.g. deities or symbols, especially on stones and metals (cf. the so-called 'Abraxas gems' and the Solomon gems in Byzantine times). Inscriptions (magical formulas, unknown magic words, the 'great name', alphabets, anagrams) are here often added, but such inscriptions were also thought effective by themselves. A number of apotropaic charms written on papyrus have been found in Egypt, the classical home of every sort of magic (cf. also the illustrations in *POsl.* 1). The magical potency was secured and strengthened by a consecration of the amulet (cf. the procedure described in Orph. *Lith.* 366 ff.). The forms of amulets are innumerable (270 kinds are examined by Flinders Petrie, *Amulets*); notable are rings, nails, keys, knots, etc. Special importance derives from the place at which or the circumstances (fitting times, stellar influences) in which the amulet was found or made. A crossway and a burial-place are considered to endue anything there found (plants, bones, skulls) with magic powers. Remains of men whose death had been a violent one (shipwrecked men, etc.) were eagerly sought. 'Individual amulets' depend only on chance observation and vague ideas of connexion.

Belief in amulets remained active in Greece, as in Italy, in all classes of the populations through the whole of antiquity and still survives to-day.

Words for amulets: *φυλακτήριον*, *περίσπασμα*, *περίσπαστον*; *amuletum* (for etymology see Walde-Hofmann, *Lat. etym. Wörterbuch* i. 42), *bullā*, *crepundia*, *fascinum*, *alligatura* (later), etc.

Otto Jahn, 'Über den Aberglauben des bösen Blicks' (*Ber. Sachs. Ges. Wiss.* 1855, 28 ff.); Kropatschek, *De amuletorum apud antiquos usu* (1907); Freire-Marreco, op. cit., art. 'Charms' in Hastings, *ERE*; E. Labatut, 'Amuletum' in *Dar.-Sag.*; E. Riess, 'Amulett', in *PIW*; cf. Flinders Petrie, *Amulets* (1914). S. E.

AMULIUS, *see* ROMULUS AND REMUS.

AMYCLAE, an early town on the right bank of the Eurotas c. 3 miles south of Sparta, mentioned in the Homeric *Catalogue* as in the domain of Menelaus. According to tradition it was an Achaean stronghold which long resisted the Dorian invaders; after its conquest, which opened the way for their southward advance, it was incorporated in Spartan territory. But it retained its own magistrates, including three *ἐφόροι* (*IG* v. 1. 26, 2nd or 1st c. B.C.). Remains of the famous sanctuary and throne of Apollo Amyclaeus have been excavated on the hill of H. Kyriake (probably north of the ancient town).

Paus. 3. 18. 7-19. 6. For the sanctuary and throne: Frazer, *Paus.*, ad loc. A. Furtwängler, *Meisterwerke*, 693 ff.; *JDAI* xxxiii. (1918); *Ath. Mitt.* lii (1927). A. M. W.

AMYCUS, in mythology, king of the Bebryces, a savage people of Bithynia. He was of gigantic strength and compelled all comers to the land to box with him, the loser to be at the absolute disposal of the winner. When the Argonauts arrived in his country, Polydeuces accepted his challenge, and being a skilled boxer, overcame Amycus' brute force. In the fight Amycus was killed (Apollonius), or knocked out (Theocritus), and made to swear to wrong no more strangers, or, having lost the fight, was bound by Polydeuces (Epipharmus and Pisandrus ap. schol. Ap. *Rhod.* 2. 98). *See* Ap. *Rhod.* 2. 1 ff.; Theoc. 22. 27 ff. H. J. R.

AMYMONE (*Ἀμυμώνη*), in mythology, daughter of Danaus. While at Argos (*see* DANAUS) she went for water, was rescued from a satyr and seduced by Poseidon, who created the spring Amymonie in commemoration (Apollod. 2. 14; *Hyg. Fab.* 169, 169a).

AMYNTAS, king of Galatia 39-25 B.C. Originally a secretary of Deiotarus (q.v.), he commanded the Galatian auxiliaries of Brutus and Cassius at Philippi. He deserted after the first battle of Philippi, and after Deiotarus' death received from Antony a kingdom which eventually comprised Galatia and parts of Lycia, Pamphylia, and Pisidia. He accompanied Antony to Actium, but by a second timely desertion (before the battle of Actium) he won Octavian's favour and retained all his possessions. He died on a campaign against the unruly mountain tribes on the southern borders of his realm. M. C.

AMYNTOR (*Ἀμύντωρ*), in mythology, father of Phoenix (q.v.), son of Ormenus, king of Hellas (in the epic sense), (*Il.* 9. 447; *see* the whole passage), or of Eleon (*ibid.* 10. 266). Being jealous of Phoenix' attentions to his concubine, he cursed him (blinded him, according to Euripides, *Ar. Ach.* 421, cf. *Ov. Ibis*, 259), driving him from home. H. J. R.

ANABOLE, strictly used of the striking-up of a musical instrument, especially of a lyre, by a bard when he began to sing (*Od.* 1. 155, 8. 266: *ἀνεβάλλετο*, *Pind. Pyth.* 1. 14), but used in a special sense of a lyric solo introduced into a dithyramb (*Ar. Av.* 1385; *Arist. Rh.* 3. 9. 1) by Melanippides, Cinesias, and Timotheus. C. M. B.

ANACHARSIS (c. 600 B.C.), a hellenized Scythian sage. He travelled through Asia Minor and Greece imbibing Greek customs and showing great wisdom. When he tried to introduce the orgiastic worship of the 'Mother of the Gods' from Cyzicus to his country he was killed by the king (Hdt. 4. 76 f.). In the fourth century B.C. and later A. is described as one of the so-called Seven Sages, uttering the voice of unspoiled nature and criticizing the over-civilization of Greece (cf. Ephorus, *FGH* 70: frs. 42; 158; 182 Jacoby; in this they were perhaps influenced by a work of the Cynic school). Maxims ascribed to him occur from Aristotle onwards. Writings falsely ascribed to him, as the so-called letters of A. (R. Hereher,

Epistologr. Graeci, 102 f.), and works like the biography by Diogenes Laertius (1. 101 f.) or Lucian's *A.*, display him with clearly Cynic characteristics. But certain important features of this later A. may well be old.

F. E. Bohren, *De septem sapientibus* (1867); R. Heinze, *Philol.* 1891; Von der Mühl, *Festschrift für H. Blümner* (1914); *PIV* i. 2017. K. O. B.

ANACREON (b. c. 570 B.C.), lyric poet, son of Scythianus, born at Teos (Suid. s.v. *Ἀνακρέων*), but left home c. 545 B.C. when it was threatened by the Persians (Strabo 644); to this he may refer in frs. 67 and 90. With other Teans he founded the colony of Abdera in Thrace (Suid., Strabo, l.c.). References to fighting here against Thracians may be seen in fr. 100, a commemorative epigram for a dead fighter, and in fr. 101. Here too he may have written fr. 88 to a Thracian girl. He was summoned to Samos by Polycrates, who wished him to instruct his son in music (Himer. *Ex. Nap.* in *Hermes* xlv. 422), and he was with the tyrant when the fatal messenger came summoning the latter to his death (Hdt. 3. 121). He is said to have made many references to Polycrates in his poems (Strabo 14. 638), but none survive. To his Samian period must belong fr. 25 with its reference to civil strife, fr. 1 for the Magnesians on the Maeander, and many of his love-poems, which seem to have been to the taste of Polycrates. After the fall of Polycrates Hipparchus fetched him to Athens ([Pl.] *Hipparch.* 228 b); thence c. 514 B.C. he went to Thessaly, where two epigrams, fr. 107, a dedication by King Echekratidas, and fr. 108, a dedication by Queen Dyeris, show him consorting with royalty. He returned to Athens, where his memory was honoured later by Critias (fr. 8) and by a statue on the Acropolis (Paus. 1. 25. 1). Some of his poems seem to show traces of Attic language, and may belong to this period (frs. 44, 52, 96, 110). His death, at an advanced age, was said to be due to a grape-pip sticking in his throat (Val. Max. 9. 8). His works were edited by Aristarchus in six books of μέλη, ἱαμβοί, and ἐλεγεία (Heph. p. 68. 22; 74. 11 ff.). The first class contains his lyric poems, mostly monodic, such as hymns to Artemis (fr. 1), Eros (fr. 2), and Dionysus (fr. 3), love-songs to Cleobulus (frs. 3-4), and other convivial or sympotic poems (frs. 5, 11, 32, 37, 43). Of his iambic poems the most complete example is his cruel poem on Artemon (fr. 54). His elegiacs contain commemorative poems, dedications, and epitaphs. He writes in an Ionic vernacular with very few traces of Homeric or Aeolic language. His metres are usually simple. He favoured a stanza made of Glyconics with Pherecrates for *clausilae*, and often used a minor Ionic verse with anacalasis, called Anacreontic after him. He is remarkable for his combination of fancy and wit, which prevents him from taking himself or others too seriously. His poetry is concerned mostly with pleasure, but this may well be due to the circumstances of its performance, and it is unwise to deduce too much about his character from it. See also IAMBIC POETRY, GREEK, and LYRIC POETRY, GREEK.

ANACREONTIC, see METRE, GREEK, III (13).

ANAGNIA, chief town of the Hernici (q.v.), in a fertile area of Italy (*Aen.* 7. 684); nowadays *Anagni* with well-preserved walls. In 306 B.C. Anagnia became a *civitas sine suffragio* (see MUNICIPIUM) which Pyrrhus and Hannibal later ravaged (Livy 9. 42 f.; 26. 9; App. *Sam.* 10). In the second century it acquired full citizenship (Festus 155 L.) and remained a *municipium* under the Empire (reject *Lib. Colon.* p. 230). Vitellius' general Valens and Commodus' concubine Marcia were born here (Tac.

Hist. 3. 62; *ILS* 406). The numerous temples near Anagnia were still celebrated in Marcus Aurelius' time (Fronto, *Ep.* 4. 4).

S. Sibilia, *La Città dei Papi* (1939).

E. T. S.

ANAGNORISMOS, see TRAGEDY, para. 16.

ANAGNOSTES, a reader, often an educated slave, whose duty in Roman houses was to entertain his master and guests at table by an *acroama* in Greek and Latin. Cicero (*Att.* 1. 12) mentions his distress at the death of his young reader Sosthenes. He had one, however, who ran away (Vatin. ap. Cic. *Fam.* 5. 9. 2). Atticus kept very good readers whom he thought indispensable at dinner parties (Nep. *Att.* 13 and 14). Gellius (3. 19) records similar entertainment at dinner with the philosopher Favorinus. The word is used of a scholar giving a *recitatio* in a theatre (Gell. 18. 5). The *anagnostes* also took part in grammatical instruction. J. W. D.

ANAGNOSTICI, see TRAGEDY, para. 21.

ANAHITA (*Anaitis*, *Ἀναΐτις*), Persian goddess of the fertilizing waters (*Zend-Avesta*, Yašt 5). Artaxerxes Ochus (358-338 B.C.) introduced the use of cult-images (Berossus ap. Clem. Alex. *Protr.* 5. 65. 3), and the cult spread to Armenia, Cappadocia, Pontus, and especially to Lydia. In Armenia sacred prostitution (q.v.) was practised (Strabo 532-3), and in Pontus A. possessed many *hierodouloi* (q.v.). In Lydia she was assimilated to Cybele and to Artemis Ephesia, and hence called Meter A. or Artemis A., but Iranian cult traditions also persisted (Paus. 5. 27. 5-6). She was often called the Persian Artemis. Bulls were sacred to her, and the *taurobolium* (see CYBELE, para. 3) perhaps originated in her cult. See ANATOLIAN DEITIES.

F. Cumont, *PIV*, s.v. 'Anaitis'; *ERE*, s.v. 'Anahita'; *Rev. Arch.* 1905, i. 24-31; *CRAcad. Inscr.* 1915, 270-6 for exorcism by her priestess. In Roscher, *Lex.*, E. Meyer, s.v. 'Anaitis', Höfer, s.v. 'Persike'. F. R. W.

ANAKES (*Ἀνάκες*), old by-form of *ἀνακτες*, hence 'kings', 'lords'. A title especially of the Dioscuri (q.v., and see L & S⁹ s.v.), but also of the Tritopatores (? q.v.), (Cic. *Nat. D.* 3. 53), and perhaps certain deities at Amplussa (Paus. 10. 38. 7, where MSS. have *Ἀνάκτες*).

ANALOGIA, DE, Caesar's lost treatise inspired by the teaching of Antonius Gniphio (q.v.), written on a journey across the Alps (55 or 54 B.C.) and dedicated to Cicero. It defended the principle of Analogy (q.v.) and a reformed *elegantia* founded on the *sermo cotidianus*. Gellius (1. 10. 4) quotes from its first book the famous advice 'ut tamquam scopulum sic fugias inauditum atque insolens uerbum' (see Dahlmann, *Rh. Mus.* lxxxiv. 3). J. W. D.

ANALOGY and **ANOMALY** were the watchwords of two opposing schools of thought about linguistic phenomena. In particular, the analogists held that nouns and verbs were capable of classification into orderly declensions and conjugations on the basis of similarity of form (*ἀναλογία*), whereas the anomalists were impressed by the many manifestations of irregularity (*ἀνωμαλία*) which actual usage sanctioned. Neither party viewed language in a true perspective or effected any appreciable change in living speech; but the discussion was not entirely barren in so far as it stimulated grammatical studies. The analogist at least had a standard he could apply in cases of genuine doubt; the strength of the anomalist's position lay in his readiness to accept language as he found it. Underlying the controversy was the question (already discussed in Plato's *Cratylus*; cf. Lucr. 5. 1028-90) whether language was a natural growth or an arbitrary convention; and though matters of style did not at first enter into the argument, the analogists tended to be allied with purists in their condemnation of barbarisms and solecisms, and anomalists with those who

claimed a place for new coinages and modes of expression. Amongst the Greeks, the quarrel was most keenly pursued on the side of analogy by the grammarians of Alexandria (e.g. Aristophanes of Byzantium, Aristarchus, Dionysius Thrax), and on the side of anomaly by the Stoics (e.g. Chrysippus, who wrote four books *Περὶ ἀνωμαλίας*) and the scholars of Pergamum (e.g. Crates of Mallos). At Rome the Scipionic circle in their pursuit of *Latinitas* and *purus sermo* inclined to favour the analogical view (cf. Lucil. 964). Varro (*Ling. bks. 8-10*) gives both sides of the controversy but leans towards the analogists, as did Caesar (in his *De Analogia*, where he condemns the 'inauditum atque insolens uerbum'; cf. Gell. i. 10. 4) and 'Atticists' like Calvus. Cicero (e.g. *Orat.* 155-62), Horace (*Ars P.* 70-2), and Quintilian (i. 6) give greater weight to the claims of *consuetudo*.

ANATOLIAN DEITIES. The outstanding characteristic of Anatolian religion is the worship of a mother goddess and her youthful male consort, embodiments of the fertility principle, who reappear constantly under a diversity of local, differentiating names, epithets, and forms. There is some evidence (J. Keil, *JÖAI.* xviii. 1915) for a divine triad of mother, father, son, but this is a less constant feature. The apparent diversity which masks the basic similarity of the great pair is due in part to the strength of localism and to local differentiation and development, in part to the complex racial background of Asia Minor, and in part to identification with various Hellenic divinities, each of whom might fitly be thought to represent one facet of the native god's complex personality. Thus the male god, as supreme, might be called Zeus; as giver of oracles, Apollo; and as healer, Asclepius. Generally the goddess predominated in Asiatic cities, while in Hellenic foundations the god was accorded higher rank. The native names, such as Cybele (q.v.), Attis (q.v.), Ma, Wanax, seldom or never appear in Asia Minor on Greek inscriptions (though local epithets do), and are known chiefly from Neo-Phrygian documents or from outside Anatolia. According to Calder (*CR* xli (1927), 161-3) this shows that while speakers of the native languages used the old names, speakers of Greek did not, except in the Mysteries (cf. the mystic formula in Dem. *De Cor.* 260). Of the Mysteries themselves we know little, and that chiefly from non-Asiatic sources. See AGDISTIS; ANAHITA; ATTIS; CYBELE; EUNUCHS, RELIGIOUS; HIERODULOI; METRAGYRTES; PROSTITUTION, SACRED; SABAZIUS.

The inscriptions are our chief source of material: see especially the series *Monumenta Asiae Minoris Antiqua* (1928-), and numerous articles in *Anatolian Studies presented to Sir Wm. Ramsay* (1923), *Anatolian Studies presented to W. H. Buckler* (1939), and L. Robert, *Études anatoliennes* (1937). A valuable synthesis in F. Cumont, *Les Religions orientales dans le paganisme romain* (1929), ch. 3.

F. R. W.

ANATOMY AND PHYSIOLOGY. The earliest records of true anatomical observations are in fragments of Alcmaeon (q.v. 2; c. 500 B.C.) of Croton. There can be no doubt that he actually dissected animals, discerning the optic nerves and the tubes between the nose and ear cavities now known as 'Eustachian'. He even extended his researches to embryology, describing the head of the foetus as the first part to develop—a justifiable interpretation of the appearances. His followers investigated especially the blood-vessels.

2. The theory of Empedocles (q.v.; c. 480 B.C.) of Aeragas of four elements in opposites was to control medical thought for two millennia, but more immediately influential was his view taken from folk-belief that the blood is the seat of the innate heat (*θερμὸν ἐμφύον*)—‘the blood is the life’. This led to the consideration of the heart as centre of the vascular system and chief

organ of the *pneuma* which was distributed by the blood-vessels. *Pneuma* was identified, in accord with certain philosophical tendencies, with both air and breath. These views of Empedocles were rejected by the important Coan Medical School, then becoming prominent, but were widely accepted elsewhere. Notably Diogenes of Apollonia, a contemporary of Hippocrates of Cos, was led to investigate the blood-vessels, and his account of the vascular system is the earliest that is intelligible.

3. Early members of the so-called ‘Hippocratic Collection’ (q.v.) are the treatises *On the sacred disease* of about 400 B.C. and *On the nature of man* which is but little later. The author of the former opened the skulls of goats and found the brain to resemble that of man in being cleft into symmetrical halves by a vertical membrane. The large veins of the neck are intelligibly described. The arteries are said to contain air, an idea gained from their emptiness in dead animals. *On the nature of man*, ascribed by Aristotle to Polybus, son-in-law of Hippocrates, contains the doctrine of the four humours. These—Blood, Phlegm (*pituita*), Black Bile (*melancholia*), and Yellow Bile (*cholē*)—make up the living body as the four elements make up non-living matter. This doctrine persisted till quite modern times and has left definite traces in the anatomical and pathological nomenclature of our own day.

4. An interesting Athenian practitioner of the middle and late fourth century B.C. was Diocles (q.v.) of Carystus. He drew his opinions from many sources, adopting the humours of Polybus and the innate heat of Empedocles, regarding with Aristotle the heart as seat of the intelligence but accepting also Sicilian pneumatism. His observations on the early human foetus are the first recorded. His work *On anatomy*, based to some extent on human material, has disappeared and we have no general early treatise on the subject. Our best representative of the anatomy of the fourth century is the tract in the Hippocratic Collection *On the heart*, of about 340 B.C. We cannot be sure that it is based on human dissection, but it discusses the anatomical similarities of man to animals. It places the innate heat in the heart. Air enters direct into the left ventricle, where takes place some subtle change of blood into spirit, and where too the intellect resides. The heart valves are described and experiments are suggested for testing their competence. There is the startlingly false statement—with a claim that it is verified by experiment—that, in drinking, some of the fluid passes to the lungs. This might be ascribed to textual confusion were not the same view expressed in Plato's *Timaeus* and other early writings. The *Timaeus* itself had little effect on medical teaching.

5. The direct contributions of Aristotle to human anatomy and physiology are unimportant and he did not dissect the human body. The text of his account of the heart is corrupt and incomprehensible, but it was in any event very inadequate, nor did he make any proper distinction between arteries and veins, though he gave fair descriptions of several of these vessels. On the other hand, he gave excellent accounts of certain organs from the standpoint of comparative anatomy. Some were illustrated by drawings, the first anatomical figures recorded. We can confidently restore certain of them, for example, that of the organs of generation. His nomenclature of the uterine organs is still partially retained.

6. Among the noteworthy errors of Aristotle is his refusal to attach importance to the brain. Intelligence he placed in the heart. This was contrary to the views of Diocles and other of his medical contemporaries, contrary to the popular view, and contrary to the doctrine of the *Timaeus*. Aristotle must have known all these, and it is conjectured that, having found the brain to be devoid of sensation, he concluded that it could not be associated with it. The function of the

brain was to prevent the heart from over-heating the blood. This was effected by the cold Phlegm (*pitiuita*) secreted in the nose, supposedly by the brain, an idea preserved in our anatomical term 'pituitary body'.

7. After Aristotle's time Alexandria became the chief medical centre. Herophilus (q.v.; c. 300 B.C.) of Chalcidion was of the earliest Alexandrian scientific generation, was the first to dissect the body publicly, wrote a work *On anatomy*, and made numerous discoveries. He recognized the brain as the central organ of the nervous system and the seat of intelligence; distinguished the cerebrum from the cerebellum; described the fourth ventricle of the brain and even its 'calamus scriptorius', which he named (*ἀνάγλυφος κάλαμος*); and described the meninges and the 'wine-press' (torcular, *ληνός*), a confluence of veins which modern anatomists, following Galen, still name after him. He was the first to grasp the nature of nerves other than those of the special senses, and he distinguished motor from sensory nerves. The modern anatomical terms 'prostate' (*ἀδενοειδὲς προστάται*) and 'duodenum' (*δωδεκάδακτυλον*) are derived, through Galen, from him. We owe to him also the first description of the lacteals and the first clear differentiation of arteries from veins. Pulsation was for him an active arterial process. He wrote an anatomy for midwives and is the first medical teacher recorded—perhaps apocryphally—to have had a woman pupil.

8. Erasistratus (q.v.) of Chios, a younger Alexandrian contemporary of Herophilus, was the first to set forth a complete physiological scheme. Accepting the atomism of Democritus and its consequent 'materialism' he described the body as a mechanism, combining this with a pneumatic theory. Observing that every organ is equipped with a threefold system of branching vessels—veins, arteries, and nerves—he concluded that the minute divisions of these, plaited together, compose the tissues. Blood and two kinds of pneuma are the sources of nourishment and movement. Blood is carried by the veins, which take it to the heart. Air is taken in by the lungs and passing thence to the heart becomes changed into the first pneuma, the *vital spirit* (*πνεῦμα ζωτικόν*) which is sent to the parts of the body by the arteries. Carried by these to the brain it is there changed to the second pneuma, the *animal spirit* (*πνεῦμα ψυχικόν*), and distributed to the parts through the nerves, which are hollow.

9. The view of Erasistratus that the heart is the centre and source not only of the arterial system but also of the venous system was ahead of all opinion until Harvey (1628). Perceiving that arteries though empty in dead bodies, yet when incised in the living contain blood, he sought to explain the presence of the blood in them as due to the escape of pneuma through the wound leading to a vacuum by which blood was sucked into the arteries from the veins through fine intercommunications between artery and vein. The view that arteries contain air was experimentally disproved by Galen 450 years later, but Erasistratus, having realized that the two systems communicate at their periphery, was not very far from the conception of a circulation.

10. Erasistratus advanced on Herophilus' knowledge of the nervous system, giving detailed descriptions of the cerebral ventricles, which he regarded as filled with animal spirit. He observed the cerebral convolutions, noting their greater elaboration in man than in animals, associated, as he thought, with man's higher intelligence. He made experiments on the brain and meninges, traced the cranial nerves into the brain itself, and distinguished cranial sensory from cranial motor nerves. He also attained a clear view of the action of muscles in producing movement, regarding their shortening as due to distension by animal spirit.

11. After Erasistratus anatomy and physiology declined at Alexandria. The schools that arose at Perga-

mum, Smyrna, Corinth, and elsewhere were poor substitutes. The human body ceased to be dissected and when Galen began his studies about A.D. 145 it was difficult to find even a skeleton in these schools. Nevertheless, two Ephesians of the first Christian century produced noteworthy anatomical works. Of these Rufus gave to many parts of the eye the names by which they are still known, and in his book on the pulse claimed that the heart strikes the chest-wall during contraction. Had this critical observation been known to Galen it should have led him to modify his physiological scheme, perhaps in the direction of a circulation. Soranus of Ephesus wrote a book on pregnancy with figures of the uterus. Indirect medieval copies of these are the first surviving anatomical drawings exhibiting details ascertainable only by human dissection.

12. Anatomical and physiological science in antiquity reached both its climax and its end with Galen (q.v.; A.D. 129–99), who spent his early years gleaning in many schools the traditions of his predecessors. His active professional life was passed at Rome, where he gave public demonstrations. He never dissected a human body, but made numerous accurate anatomical and physiological studies on a variety of animals, among them the Barbary ape, the structure of which is not very different from that of man. He also experimented on dogs, bears, cattle, and pigs, being struck with the resemblance of the latter to human beings.

13. Galen elaborated a complete physiological scheme which was generally accepted until modern times. It involves three kinds of pneuma or spirit in addition to air. The basic principle of life was drawn from the world-pneuma of air by breathing. Entering the body through the windpipe it passes to the lung and thence to the left ventricle, where it encounters the blood. His view as to the changes that then take place in the blood was most ingenious, and the errors that it involved remained current till the seventeenth century.

14. Galen believed that chyle, brought from the digestive system by the portal vessel, reaches the liver, and that that organ has the power of enduing it with a pneuma, innate in all living substance, which came to be called the *natural spirit* (*πνεῦμα φυσικόν*). It then became venous blood. This is distributed by the liver through the venous system, ebbing and flowing in the veins.

15. One great branch of the venous system, a mere extension of a great trunk direct from the liver, was the cavity that we now call the right ventricle. The venous blood that entered this had two possible fates. Most of it, remaining awhile in the ventricle, left it to ebb back into the liver, having parted with its fumes or impurities, which were carried off to the lung and thence exhaled—hence the poisonous character of re-breathed air. A small fraction of the blood in the right ventricle, however, trickling through minute channels in the heart-substance, dripped slowly into the left ventricle. There, encountering the air brought through the lung, these drops of dark blood, charged with natural spirit, are elaborated into the higher *vital spirit*, which is the active principle of the bright arterial blood.

16. The arterial blood charged with vital spirits is distributed through the arteries to all parts of the body. Some passes to the so-called 'rete mirabile' (*πλέγμα μέγιστον θαύμα*) at the base of the brain, and becomes charged with yet a third pneuma, the *animal spirit* derived from the brain. This is distributed by the nerves. The 'rete mirabile', absent in man, is well developed in cattle. It was from experiments and observations on them that this remarkable system was derived.

17. Of Galen's positive anatomical knowledge the best presentation is his great work *On anatomical procedure* in sixteen books, of which nine survive in Greek while the remainder have been recovered in modern times in Arabic translation. His treatise *On the uses of the parts*

of the body of man was the most popular of his general anatomical works. On anatomical operations is a superb experimental study. On the anatomy of muscles is an accurate and remarkable pioneer survey. On bones, for beginners is his only work based on human material and has influenced modern nomenclature. Among his terms current in modern anatomy are apophysis, epiphysis, trochanter, diarthrosis, and synarthrosis.

18. In pure anatomy Galen's best work was on the muscles, and his writings contain frequent references to the form and function of muscles of various animals. Thus the dissection of the muscles of the orbit and larynx was performed on the ox, while those of the tongue are described from the ape. Occasionally he indicates that he is aware of the difference between the muscles he is describing and those of man. His famous and intensely teleological description of the structure and functions of the hand was derived from that of the Barbary ape. There is perhaps in all literature no passage that is more confident as to the exact details of the divine intentions.

19. Galen's anatomical and physiological writings are both voluminous and detailed. They are, however, ill arranged, and, since he has no adequate technical nomenclature and is very argumentative, his meaning is often obscure. Though his account of the brain and of its related nerves is difficult, yet his classification and description of the cranial nerves remained in vogue until quite modern times, and part of his nomenclature of them survives even in current anatomy.

20. Perhaps Galen's most remarkable achievement was his experimental investigation of the spinal cord, the continuity of which at different levels was, he showed, necessary for the maintenance of certain functions. Injury between the first and second vertebrae caused instantaneous death. Section between the third and fourth produced arrest of respiration. Below the sixth it gave rise to paralysis of thoracic muscles, respiration being carried on only by the diaphragm. If the lesion was yet lower the paralysis was confined to the lower limbs, bladder, and intestines. Galen's knowledge of the functions of the spinal cord was not developed and indeed was not adequately appreciated until well into the nineteenth century.

21. Galen's scientific works are among the most influential of all time. Nevertheless he established no school and he had neither disciples nor followers. On his death in 199 the prosecution of anatomical and physiological inquiry ceased abruptly. Silence descends like a curtain; the classical period of the subject is over and the Dark Ages have begun.

Brock, *Galen on the Natural Faculties* (Loeb, 1916) and a very good anonymous rendering of the famous passage *On the hand* by T. Bellotti (1840). G. Senn, *Die Entwicklung der biologischen Forschungsmethode in der Antike* (1933). Survey by Charles Singer and C. Rabin, *A Prelude to Science* (1946). C. S.

ANAXAGORAS (c. 500-c. 428 B.C.; Apollodorus ap. Diog. Laert. 2. 7), son of Hegesibulus, a native of Clazomenae, the first philosopher to reside in Athens. He came in 480, probably with Xerxes' army, and 'began to philosophize at Athens in the archonship of Callias (Calliades) at the age of 20, where he is said to have remained 30 years' (Demetrius of Phalerum ap. D.L.

ibid.). The teacher and friend of Pericles, he was indicted by the latter's enemies on charges of impiety and medism; but with Pericles' aid he escaped to Lampsacus, where he founded a school and died in general honour and esteem. Accounts of the trial vary: the probable date is 450, not 432 (as Ephorus ap. Diod. 12. 38 f. and Plut. *Vit. Per.* 32 state). A.'s astronomical views, the main ground of the charge, were influenced by the fall of the meteorite at Aegospotami in 468-467. Only one work is ascribed to him: from bk. 1 a score of fragments is preserved by Simplicius.

2. Conflicting testimonies make modern reconstructions of A.'s system problematic. He accepts, like Empedocles, the Eleatic denial of 'becoming' and void, but advocates a radical pluralism and an indefinitely complex matter. His Sphere is a 'mixture' containing 'seeds' (*σπέρματα*) of every qualitatively distinct natural substance, organic and inorganic: these (flesh, blood, bone, gold, etc.) are infinitely divisible into parts like each other and the whole—hence Aristotle's name for them, 'homoeomeries' (*ὁμοιομερή*)—and are A.'s 'elements'; Empedocles' are mixtures of seeds of all sorts (*πανσπερμιαί*). A. thus rejects contemporary atomism and, implicitly, Empedocles' less drastic pluralism. Seeds take their quality from their prevailing component (fr. 12); but actually, at every stage of division, imperceptible portions of every other 'qualified' thing remain, for (fr. 11) 'in everything there is a portion of everything except mind (*νοῦς*)'. This last A. introduces as initiator of cosmic motion and animating principle of plants and animals. Mind, because itself separate and unmixed, can move other things.

3. Anaxagoras thus explains growth and nutrition without assuming qualitative change (cf. fr. 10): the characters which 'emerge' must have been present, imperceptibly, in the germ or food, and rendered apparent by regrouping. But much is obscure: modern controversy centres round the place of the contrary 'opposites' (the hot, the cold, etc.) in A.'s scheme. Tannery's view that these are the ingredients of the seeds has been modified by Burnet and Cornford. Cornford, identifying them with the 'things' of which there is something in everything, uses this dictum to explain the qualitative differences in the seeds only, not also, as do Aristotle and Burnet, biological changes. Bailey adopts the usual and literal (but uneconomical) interpretation, which was that of Aristotle and subsequent ancient authorities, that every seed contains a portion of every other; and apparently avoids a vicious infinite regress by assuming two forms of mixture: (1) complete fusion (*σύνμυξις*) in the All, from which seeds of different sorts are broken off; (2) compounding of these by juxtaposition (*σύνκρισις*)—a distinction scarcely justified by the texts.

4. Anaxagoras' cosmology is a closely knit part of the theory. *Nous* starts a rotatory motion (*περιχώρησις*) which gradually spreads. Thus seeds are separated out, the dense, moist, cold, and dark (*ἀήρ*) going to the centre, their opposites (*αἰθήρ*) to the circumference. The heavenly bodies are stones, torn from the earth, which motion renders red-hot (cf. ASTRONOMY). A. follows the Ionian tradition of a flat earth, but knows the cause of eclipses. He assumes only one world. (Cornford's arguments against Burnet in CQ xxviii (1934) are convincing.) Sense-perception depends on the contrast of unlikes.

5. Anaxagoras' great reputation in antiquity is endorsed on the whole by Aristotle. He solves the problem raised by Parmenides more subtly, if less simply, than the Atomists. His failure to use mind as a teleological principle, which Plato and Aristotle deplore, was fortunate for science.

ANAXANDRIDES (4th c. B.C.), Middle Comedy poet who came to Athens from Rhodes or Colophon. His plays are dated by inscriptions from 382 to 349 B.C. (first victory, 376 B.C.); with 65 comedies he won 10 victories. Forty-two titles have survived, 15 denoting mythological burlesques. Aristotle, who often mentions him, says (*Rhet.* 3. 12) that Philemon (q.v. 5; not the famous comic poet) acted in Anaxandrides' plays.

Fr. 6, parody of style of Timotheus; fr. 39, an Athenian contrasts Egyptian and Athenian ideas and customs; fr. 41, wedding-feast of Cotys' daughter with Iphicrates; fr. 49, the quack doctor; fr. 52, cynical view of marriage. *FCG* iii. 161 ff.; *CAF* ii. 135 ff. W. G. W.

ANAXARCHUS (4th c. B.C.) of Abdera, a follower of Democritus, with Sceptical tendencies, was the teacher of Pyrrhon the Sceptic. His nickname *Εὐδαιμονικός* implies that he treated happiness as the *summum bonum*. He accompanied Alexander the Great on his Asiatic campaigns and was much esteemed by him. He is usually represented in antiquity as a flatterer of Alexander, but this may be due to Peripatetic prejudice. He was cruelly put to death by the Cypriot prince Nicocreon.

Testimonia and fragments in Diels, *Vorsokr.*⁴ ii. 235-40. *PIV* i. 2080. W. D. R.

ANAXICRATES, admiral of Alexander the Great, see ARADIA.

ANAXILAS (1), tyrant of Rhegium, 494-476 B.C. He tried to take Zanele from Hippocrates (q.v. 1) by offering it to Samian refugees, but the Samians came to an agreement with Hippocrates. Later he succeeded in expelling them and settling other Greeks, especially Messenians (c. 490), from whom the town was renamed Messina. In 480, through antagonism to Gelon, he was on the Carthaginian side; afterwards he became dependent on Syracuse. In 477 he threatened Locri, but Hieron (q.v. 1) intervened; next year he died. The story in Paus. 4. 23 which connects him with Aristomenes (q.v.) is a mere invention.

Hackforth, *CAH* iv, ch. 11; Kroymann, *Sparta und Messenien* (1937), ch. 2. V. E.

ANAXILAS (2) (4th c. B.C.), Middle Comedy poet, whose name bespeaks a Dorian origin, and whose date is indicated by his burlesques (frs. 14 and 26) of Plato (who died in 347 B.C.) and his composition of a comedy *Νεοττίς* (cf. EUBULUS (2) and ANTIPHANES), named after the courtesan (31 vv. attempt to describe the type, fr. 22). His plays are mythological burlesques (*Κίρκη*, *ᾠραι*), or deal with daily life (*Ἄγροικος*, *Ἀλληγής*). *Ἰάκινθος πορροβοσκός* appears to combine both types; *Βοτρυλίων* is perhaps a vine-growing peasant; *Μοιότροπος*, a study of a Timon-like character, is influenced by Phrynichus. Fr. 27 is on the 'new music' of the time: ἡ μουσικὴ δ' ὥσπερ λιβύη πρὸς τῶν θεῶν | ἀέι τι καὶ ὄν κατ' ἐν αὐτὸν θηρίον | τίκτει.

FCG iii. 341 ff.; *CAF* ii. 264 ff.

W. G. W.

ANAXIMANDER (*Ἀναξίμαδρος*) (born 610 B.C.) of Miletus wrote the first Greek treatise in prose c. 546 B.C. He held that the origin (*ἀρχή*) of all things was the Infinite (*τὸ ἄπειρον*), which he regarded as the Divine, describing it as 'immortal and deathless' and as 'surrounding and governing' the innumerable worlds. Each world he envisaged as a community of conflicting opposites 'separated' out of the Infinite by the world-rotation and liable to inevitable 'punishment' for their mutual 'in-

justice'. He thereby first conceived the entire universe as subject to a single law. A. revolutionized astronomy by regarding our world no longer as hemispherical but as spherical; in the centre is the unsupported Earth, shaped like a truncated column, around which circle at even distances and in an inclined plane stars, moon, and sun. Hence he is credited, perhaps rightly, with discovering the obliquity of the ecliptic. He introduced into Greece the gnomon, which he used to determine the equinoxes, and drew the first map of the earth. See also ASTRONOMY.

Diels, *Vorsokr.*⁴ i. 81-90; Burnet, *Early Greek Philosophy*⁴, 50-71; W. Jaeger, *Paideia* (Engl. Transl. 1945), 154-61; *PIV* i. 2085. A. H. C.

ANAXIMENES (1) of Miletus (fl. c. 546 B.C.), junior and perhaps pupil to Anaximander (q.v.), maintained in simple Ionic prose that all things arise from air (*ἀήρ*), which when rarefied becomes fire, when condensed, progressively wind, cloud, water, earth, stone; all other things are formed from these. The Earth is thin and flat, floating on air; sun, moon, and stars are leaves of fire exhaled from the Earth and carried by air around it, setting behind high ground in the distant north. A.'s astronomy is retrograde from Anaximander's; but in his theory of condensation and rarefaction he is the first to conceive the cosmos as governed according not to a moral but to a physical law.

Diels, *Vorsokr.*⁴ i. 90-6; Burnet, *Early Greek Philosophy*⁴, 72-9; *PIV* i. 2086. Zeller-Mondolfo, *La filosofia dei Greci* i² (1938), 206-38. A. H. C.

ANAXIMENES (2) of Lampsacus (c. 380-320 B.C.), historian and rhetorician, a pupil of Zoilus and instructor of Alexander. Fragments of his historical works—*Ἑλληνικά*, *Φιλιππικά*, and a *History of Alexander*—reveal rhetorical influences seen yet more clearly in his speeches, writings on Homer, and *παλύνια*. More significant is his *Rhetorica ad Alexandrum*, formerly attributed to Aristotle, the fourth-century origin of which is confirmed by the Hibeh Papyrus (1906), no. 26. As the sole surviving manual of early Sophistic rhetoric, it throws light on the teaching from Corax to Isocrates.

Spengel, *Rhet.* i. 169-242.

J. W. H. A.

ANAXIPPUS, New Comedy poet, 'in the time of Antigonos and Demetrius Poliorectes' (Suidas). Four comedies are plainly attributed to A.; and one fragment (49 vv.) of another is assigned to 'Anthippus'—probably a mistake for Anaxippus—the verbose but humorous speech of a cook who elevates the gastronomic art.

FCG iv. 459 ff.; *CAF* iii. 296 ff.

W. G. W.

ANCAEUS (*Ἄγκαϊος*), in mythology, (1) son or grandson of Lycurgus of Arcadia (*Hyg. Fab.* 14. 14), an Argonaut (Ap. Rhod. 1. 164), the strongest next to Hēracles, with whom he is paired (ibid. 426, 531, etc.), killed in the Calydonian boar-hunt (Ov. *Met.* 8. 315, 391 ff.). (2) son of Poseidon (Ap. Rhod. 1. 187) and king of the Leleges of Samos; often confused with (1) (as Apollod. 1. 112 and 126). A skilled navigator, he steered the *Argo* after Tiphys died (Ap. Rhod. 2. 894). He planted a vineyard and was told by his servant that he should not live to drink its wine. On the grapes ripening, he pressed some of the juice into a cup, but the man remarked *πολλὰ μετὰ πέλαι κύλικος καὶ χεῖλεος ἀκροῦ*, and Ancaeus was killed by a boar before he could drink (schol. Ap. Rhod. 1. 185).

H. J. R.

ANCHISES, in mythology, son of Capys and grandson of Assaræus, belonged to the younger branch of the Trojan royal house. Spoken of with respect in the *Iliad*, he is chiefly famed for his marriage with Aphrodite while pasturing herds on the slopes of Ida, from which union Aeneas was born. Forbidden to reveal the name of his son's mother, he is said to have boasted of it among his friends, and for this was blinded or lamed by lightning.

At the fall of Troy he was rescued by Aeneas, who carried him on his shoulders from the city, and subsequently shared his son's wanderings. Tradition gives many accounts of his death; Virgil places it at Drepanum in Sicily, and later describes him in the Elysian fields.

R. A. B. M.

ANCHISTEIS (ἀγχιστεῖς), the kinship-group, extending to second cousins, which was the basis of family law at Athens; also called *συγγενεῖς*. In cases of homicide, the nearest male relative within this limit had to prosecute; in cases of intestacy, the nearest male relative within this limit could claim the property. Relatives on the father's side had precedence, but the mother's relatives were included.

A. W. G.

ANCONA (Ἀγκών, so called from the shape of its harbour, which resembles an elbow-socket), a town of Italy in the territory of the Piceni, with the only good natural harbour on the central east coast, but with a poorly developed hinterland. It is first mentioned as a colony of refugees from Dionysius I of Syracuse. It was used by Cornelius Cinna as the mustering point of his expeditionary force against Sulla (84 B.C.), and it subsequently served as a port of embarkation to Dalmatia. Trajan rebuilt the harbour and erected a commemorative arch on a mound above it.

M. C.

ANCYRA (Ἄγκυρα, modern *Angora*), a city in that part of Phrygia settled by the Galatians, one of whose three tribes, the Tectosages, made it their capital. It lies in a strong position, around the steep fortified crag which formed its acropolis, at an important road junction, and rose to prominence as the capital of the province Galatia, as again to-day as the capital of Turkey. On the walls of the temple of Rome and Augustus, the ruins of which still stand, was inscribed the bilingual record of the reign of Augustus known as the *Monumentum Ancyranum*.

W. M. C.

ANDOCIDES (1) (c. 440–c. 390 B.C.), a member of an aristocratic family which, as he claimed, had been distinguished for three generations. In 415, shortly before the starting of the Athenian expedition to Sicily, Athenian feeling was shocked by two acts of sacrilege, the mutilation of the Hermæ and the parody of the Mysteries of Eleusis by Alcibiades. A. was accused of participation in both these acts. He cleared himself in the case of the Mysteries, but admitted some knowledge of the Hermæ incident. He was imprisoned, and in order, as he says, to save his father and others, decided to tell all that he knew. A sentence of *atimia* was passed on him, and he went abroad. In his speech *De Reditu*, some years later, he affirms that he knew of the plot and opposed it, that at the time when the sacrilege was committed he was incapacitated by an accident, and that he was induced by threats to say nothing about it. For some years he was engaged in commerce in various parts of the world. In 411 he provided oars for the Athenian fleet at Samos, and returned to Athens to plead for a remission of his sentence. The Four Hundred, who had now come into power, rejected his plea. In 410 he made another unsuccessful attempt, delivering the speech *De Reditu*; he was finally reinstated under the terms of the amnesty of Thrasylbulus (403).

He took an active part in public life, speaking in the Assembly as a warm supporter of democratic ideals. In 399 he was accused of impiety on two counts, the more serious being that he had taken part in the Mysteries when he was legally disqualified from doing so. He defended himself successfully in the *De Mysteriis*. In 391 he was one of the envoys appointed to negotiate peace with Sparta. The attempt was unsuccessful. The Ps.-Plutarch states that he went into exile a second time, and we know nothing of his subsequent adventures.

SPEECHES

1. *De Reditu*, 410 B.C. In 415 A. made certain disclosures under a guarantee of immunity from punishment, but the decree of Isotimides excluded from the Agora and the temples all who had committed impiety and confessed it. The enemies of A. maintained that this decree applied to him. A. pleads his subsequent services to the State, particularly to the army at Samos, as a reason for his reinstatement.

2. *De Mysteriis*, 399 B.C. A. had returned to Athens under the general amnesty of 403, and four years later was charged with having transgressed the decree of Isotimides by taking part in the Mysteries and entering the temple of Eleusis. His adversaries (see [Lysias], *Against Andocides*) maintained that the amnesty was only political and did not extend to religious matters. A. here maintains that he was guiltless with regard both to the Mysteries and to the Hermæ incident, and therefore the decree does not touch him. The speech is of great importance in relation to the history of the year 415.

3. *De Pace*, 390 B.C. A. argues unsuccessfully in favour of peace with Sparta on terms practically the same as those obtained three years later by the peace of Antalcidas.

4. *Against Alcibiades* is a rhetorical forgery of late date (Jebb, *Attic Orators* i. 134–6).

Four lost speeches were entitled *Πρὸς ἐταίρους*, *Συμβουλευτικός*, *Περὶ τῆς ἐνδείξεως*, and *Ἀπολογία πρὸς Φαίακα*.

Greek and Roman critics discovered in A. faults which, according to their canons, were serious; and admittedly the faults are there. He sometimes carries the use of parenthesis to absurd extremes; he cannot keep to one point at a time; his style is so loose that the argument is hard to follow. On the other hand, this inconsequential method of expression is at times effective, giving the impression of an eagerness which outruns premeditated art. He possessed a natural gift of expression, a fine flow of words, and a good narrative style. He was not a professional rhetorician, and if he neglected scholastic rules, it can at least be claimed for him that he was successful on his own unconventional lines.

For general bibliography see *ATTIC ORATORS*. Text: Blass-Fuhr (Teubner, 1913). Commentary: *De Mysteriis* and *De Reditu*, E. C. Marchant (1889). Index (to A., Lycurgus, and Dinarchus), L. L. Forman (U.S.A. 1897).

J. F. D.

ANDOCIDES (2) (fl. last quarter of 6th c. B.C.), a potter in Athens, known from six signatures. Two important artists worked for him: 1. Andocides painter. Painted amphorae and cups in black- and red-figure (the black-figure parts perhaps by another), red-figure, and white-figure technique. Successor of Execias (q.v.). 2. Menon painter (probably called Psiax; worked also for the potter Menon). Painted amphorae, hydriac, and small vases in black-figure, black- and red-figure, and red-figure technique.

J. D. Beazley, *Attic Black-figure* (1928), 25; *Attische Vasenmaler* (1923), 7, 9; G. M. A. Richter, *Attic Arch.* 1934, 547; H. R. W. Smith, *New Aspects of the Menon Painter* (1929).

T. B. L. W.

ANDREAS (d. 217 B.C.), physician of Ptolemy IV (Philopator). Works: *Νάρθηξ* (a pharmacopoeia, with descriptions of plants and roots); *Περὶ δακτύλων* (on snake-bites); *Περὶ τῶν ψευδῶς πεπιστευμένων* (against superstitious beliefs); *Περὶ στεφάνων* (all lost except for fragments).

PW i. 2136.

ANDRISCUS, an Adramyttian adventurer, claiming to be Philip, the son of Perseus and Laodice, appeared as pretender to the Macedonian throne. On approaching Demetrius I of Syria, Laodice's brother, he was handed over to Rome, but escaped and with Thracian help invaded Macedonia, where by two victories and repressive measures he established control in 149 B.C.

Rejecting negotiations with Scipio Nasica, he defeated Juventinus Thalna, but was crushed in 148 by Q. Caecilius Metellus.

Livy, *Per.* 48-50; Polyb. 36. 9-10 and 17; Zonar. 9. 28. G. Colin, *Rome et la Grèce* (1905), 608. A. H. McD.

ANDROGEUS (*Ἀνδρόγεωσ*), in mythology, (1) son of Minos (q.v.) and Pasiphaë, was treacherously killed by his defeated rivals after a victory in the Panathenaic games, or (in another version) was sent by Aegeus king of Athens against the Marathonian bull and destroyed by it. To avenge him Minos besieged Athens, and was only appeased by an annual tribute of seven youths and seven maidens to be thrown to the Minotaur. Later he was honoured in Phalerum as *κατὰ πρῦμναν ἦρως*. (2) Greek leader killed at Troy (Verg. *Aen.* 2. 370-3).

R. A. B. M.

ANDROMACHE, in mythology, daughter of Eëtion king of Thebe and wife of Hector (q.v.; *Il.* 6. 395 ff.). Her father and brothers were killed by Achilles, her mother taken prisoner but ransomed (*ibid.* 414 ff.). After the fall of Troy her son Astyanax was put to death by the Greeks (*Little Iliad*, fr. 19 Allen; *Iliu Persis*) and she herself became Neoptolemus' slave (*ibid.*). She bore him a son, Molossus, eponym of the Molossians. According to Euripides (*Andromache*) she narrowly escaped death at the hands of Neoptolemus' wife Hermione (q.v.) during the visit to Delphi in which he was killed (see **NEOPTOLEMUS**). After his death (Euripides) or before his marriage (*Aen.* 3. 327-9) she was handed over to Helenus, with whom she lived the rest of her life in Epirus.

H. J. R.

ANDROMEDA, in mythology, daughter of Cepheus king of the Ethiopians and his wife Cassiopeia or Cassiope (*Κασσιόπεια*, *Κασσιόπη*). A principal source of our information about her is apparently the *Andromeda* of Euripides (Nauck², pp. 392 ff.). Cassiopeia boasted that she was more beautiful than the Nereids; they complained to Poseidon, who flooded the land and sent a sea-monster to ravage it. On consulting Ammon, Cepheus learned that the only cure was to expose Andromeda to the monster, and she was accordingly fastened to a rock on the sea-shore. At this point Perseus (q.v.) came by on his way from taking the head of Medusa. He fell in love with Andromeda at sight, and got her and her father's consent to marry her if he could kill the sea-beast. This he did; but Andromeda's uncle Phineus, who had been betrothed to her, attacked him by open force (*Ov. Met.* 5. 1 ff.) or otherwise (*ἐπιβουλευόντος*, Apollod. 2. 44). Perseus showed him and his followers the head of Medusa, turning them all into stone. He and Andromeda stayed for a time with Cepheus, and left their eldest son, Perses, with him; from Perses the Persian kings were descended. They then went on to Seriphus and thence to Argos and Tiryns, see **PERSEUS**. Their other children were Alcaeus, Sthenelus, Heleius, Mestor, Electryon, and a daughter Gorgophone (Apollod. 2. 43-9; other authorities in Nauck, loc. cit.). The story is of a type widely distributed (Stith Thompson R111. 1. 3) and may well have had a share in forming the legend of St. George and the dragon (Politis in *Λαογραφία* 4, 1913, p. 220 f.).

That Andromeda, Perseus, Cepheus, Cassiopeia, and the monster were all turned into the constellations bearing their names (the monster is Cetus) was asserted by Euripides, according to [Eratosthenes], *Catast.* 17, by the natural interpretation of his words; he may, however, merely mean that Euripides tells the story of her rescue. If the first interpretation is right, it is one of the very few Greek star-myths which can be traced back to an earlier date than the Alexandrian period.

See Manilius 5. 22 ff., 540 ff.; [Eratosthenes] 15-17; Hyginus, *Poet. Astr.* 2. 9-12; schol. German. *Astr.* pp. 77 ff., 137 ff., Breysig. H. J. R.

ANDRON of Halicarnassus, author concerned with the genealogies of Greek cities and families (*Συγγενικά* or *Συγγενείαι*), a popular subject in the fourth century B.C. The ascription of an *Atthis* to him is improbable.

FGH i. 10; *FGH* ii. 349.

ANDRONICUS, LIVIUS, see **LIVIVS ANDRONICUS**.

ANDRONICUS RHODIUS (1st c. B.C.), Peripatetic philosopher, who recalled the attention of the school to the works of Aristotle and Theophrastus, which had sunk into neglect. He arranged the works of both in the order in which those of Aristotle and in part those of Theophrastus have survived; on his arrangement of Aristotle's works is based the list preserved by Ptolemy. He wrote a treatise in at least five books on the order of Aristotle's works, with discussion of their contents and authenticity, an account of his life, and a transcript of his will. In his work he had the assistance of the grammarian Tyrannio. Andronicus' editorial work is probably to be dated about 40 B.C., and his assumption of the headship of the Peripatetic school at Athens shortly thereafter. The work *De Passiomibus* which passes under his name (bk. 1, ed. X. Kreuttner, 1885; bk. 2, ed. K. Schuehhardt, 1883) is spurious.

PW i. 2164.

W. D. R.

ANDROS, the most northerly of the Cyclades (q.v.). In the eighth century B.C. the island was dependent on Eretria. It submitted to Persia in 490, thus angering Athens, and later Pericles planted Athenian colonists there. About 410 it revolted from Athens; as a free State it entered the second Athenian confederacy (378-377). After the battle of Chaeirona the island came under Macedonian control, which remained more or less continuous until the occupation by Pergamene and Roman forces in 200. After 133 Andros was associated with the Roman province of Asia.

IG xii. 5; Bursian ii. 441 ff.; T. Sauciuc, *Andros* (1914).

W. A. L.

ANDROSTHENES, of Thasos, sailed with Nearehus (q.v. 3) and wrote an account of the voyage and of his subsequent exploration of the inner Persian Gulf and Bahrein. See **ALEXANDER** (3), Bibliography, Ancient Sources.

ANDROTION (4th c. B.C.), entered Athenian public life c. 386 and was engaged in military or diplomatic matters for the next forty years. Pupil of Isocrates. Accused by Demosthenes (*Or.* 22) in 354-353 of making an illegal proposal (*παράνομα*). His *Atthis* (q.v.), probably in ten books, was next in importance to that of Philochorus, being one of Aristotle's sources for the *Athenian Constitution*. It reached 346.

FGH i. 371.

G. L. B.

ANGELS (*ἄγγελοι*), 'messengers'. Hermes was considered the messenger of the Olympians, and named Angelos (once Euangelos). The same function was attributed to Iris (in the *Iliad* and *Homeric Hymns*), and in Plato (*Cra.* 407 e, 408 b) the two are the divine *angeloi*. Hecate-Artemis is also designated as *angelos* (Sophron in schol. Theoc. 2. 12), which signifies her intercourse with the nether world and the dead. Hermes is once named the 'messenger of Persephone'. Thera has yielded interesting sepulchral inscriptions (Christian), in which the 'angelos' of the defunct is mentioned, *IG* xii. 3. 933 ff. (Index, p. 257; in no. 1238 the protective genius of the grave, cf. Hermes in Thessaly). The role of the angels became important in Gnostic and Neoplatonic systems (in the following order: gods, archangels, angels, demons, heroes); they were connected with the planets (under Jewish-Chaldaean influence), dominated metals and plants, and their names had magic virtues (see *PGM*, Index). Their cult flourished in Egypt and Asia Minor

especially in the second and third centuries A.D. and gained new life with the Christians (Michael replacing Hermes, but also Apollo, etc.).

Th. Hopfner, *Griechisch-ägyptischer Offenbarungszauber* (vol. xxi and xxiii of Wessely's *Studien zur Paläographie und Papyrskunde* 1922, 1924) i, §§ 135 ff.; H. Leclercq, art. 'Anges' in Cabrol-Leclercq, *Dictionnaire d'archéologie chrétienne* i. 2, col. 208c-161. S. E.

ANGERONA, **DIVA**, a Roman goddess, worshipped on 21 Dec. (Divalia or Angeronalia), in the Curia Acculeia (Varro, *Ling.* 6. 23), or the *sacellum Volupiae*, where there stood on the altar a statue of Angerona with her mouth bound up and sealed (Macrobian. *Sat.* 1. 10. 8; *CIL* i², p. 337). The ancients connected her name with *angina* (Festus, p. 16, 12 Lindsay) or *angor* (Masurius ap. Macrobian. *ibid.*); Mommsen with *angerere*, 'to raise up', sc. the sun after the solstice.

See Wissowa, *RK* 241.

H. J. R.

ANGITIA, or the **ANGITIAE**, Marsian goddess(es), principally worshipped on the Lacus Fucinus at Lucus Angitia (now *Luco*), also at Sulmo, where the plural of the name is found (see, for the former, *Aen.* 7. 759). Her native name was Anagtia and she seems to have been a goddess of healing and very popular; see Conway, *Ital. Dialects*, 182, 289 f.; Wissowa, *RK* 49; Schirmer in Roscher's *Lexikon*, s.v.

H. J. R.

ANICETUS, prefect of the fleet at Misenum, was freedman and tutor of Nero, who used him to murder Agrippina. Subsequently induced to confess himself Octavia's paramour, he was exiled to Sardinia (A.D. 62).

*PIR*³, A 589

ANIMALS, DOMESTIC, see **PETS**.

ANIMALS, SACRED. Neither Greece nor Italy regarded any beast as an incarnate god in classical times (unlike Egypt, with the practices of which land they became familiar), but various animals were sacred in one sense or another. (1) A number of beasts and birds are connected with individual gods; thus, the eagle is associated with Zeus, the cow and the peacock with Hera, the owl with Athena, the bull with Dionysus, and so forth; in Italy, the wolf and the woodpecker are creatures of Mars (e.g. *Plut. Rom.* 4). For the Greek associations of animals and plants with deities, see Eustathius in *Il.*, p. 86, 36 ff., discussed by C. Reinhardt, *De Graecorum theologia* (1910), p. 90 ff. It is a tenable theory that some at least of these deities were originally theriomorphic. (2) Besides the consecrating of victims to gods and the dedication of a live creature to some deity (as the horses dedicated by Julius Caesar, Suet. *Divus Iulius* 81; such animals were unworked and called *ἄφετοι* in Greek, e.g. *Pl. Critias* 119 d) we occasionally hear of an animal living in a shrine, as serpents (q.v.) very commonly in chthonian cults (Erechtheus, on the Acropolis, *Hdt.* 8. 41. 2; Asclepius, *Ar. Plut.* 733); geese sacred to Juno (Moneta) (*Livy* 5. 47. 4). (3) Sporadically, we hear of some creature locally sacred and inviolable; e.g. tortoises on Mt. Parthenion (*Paus.* 8. 54. 7); these were regarded as sacred to Pan. Such phenomena have often been explained as survivals of totemism, but there is no evidence that this ever existed in Greece, see Rose, *Primitive Culture in Greece*, 47-51. Perhaps no one explanation can fit them all. See also **BIRDS (SACRED)**.

H. J. R.

ANIO (modern *Aniene*), a river of Italy rising in the Sabine country and separating it from Latium (*Pliny, HN* 3. 54). After flowing seventy-five miles west-south-west it joins the Tiber at the site of Antemnae just north of Rome. Landslides in A.D. 105 and later have changed but not destroyed its spectacular cascades at Tibur (*Hor. Carm.* 1. 7. 13; *Pliny, Ep.* 8. 17). It supplied two aqueducts, Anio Vetus (272 B.C.) and Anio Novus (A.D. 52),

and below Tibur was navigable (*Strabo* 5. 238). Recently found Neanderthal skulls indicate very ancient habitation of its valley.

G. Colasanti, *L'Aniene* (1906); T. Ashby, *Aqueducts of Ancient Rome* (1935), 54, 252. E. T. S.

ANIUS, in mythology, king of Delos and priest of Apollo. His mother Rhoëo being with child by Apollo, her father Staphylus son of Dionysus set her afloat in a chest, which stranded on Delos. A., when he grew up, married Dorippa and had three daughters, the Oenotropoe, Oeno, Spermo, and Elais, who could produce respectively wine, seeds, and oil, by grace of Dionysus. They thus supplied Agamemnon's army before Troy. A. received Aeneas (*Aen.* 3. 80). See Lycophron 170, and scholiast there.

H. J. R.

ANNA, see **DIDO**.

ANNA PERENNA, a Roman goddess, whose festival was on 15 March, i.e. the first full moon of the year by the old reckoning (1 March being New Year's Day). It was popular and merry (see *Ov. Fasti* 3. 523 ff., with Frazer's commentary). She is usually explained as being a year-goddess, and her name thought of as created from the prayer 'ut annare perennareque commode liceat', 'for leave to live in and through the year to our liking' (Macrobian. *Sat.* 1. 12. 6). See, however, Altheim, *Terra Mater* (1931), pp. 91 ff., who makes her 'Mother Perna', a form of Ceres with Etruscan connexions. She has no mythology, but Ovid (*ibid.*) tells two stories (? of his own invention), one identifying her with Anna the sister of Dido (545-656), the other with an old woman of Bovillae named Anna ('Granny'), who fed the plebeians during the secession to the Mons Sacer (663-74). On what follows, 675 ff., cf. Rose, *Handbook of Greek Mythology*, 324).

H. J. R.

ANNAEUS, see **CORNUTUS**, **FLORUS**, **LUCAN**, **SENECA**.

ANNALS, ANNALISTS. From the beginning of Roman history to 400 B.C. only scanty records were preserved, but the main lines of tradition are authentic in the fourth century, and from c. 300 B.C. the *tabulae pontificum* (q.v.) gave regular records of magistrates and events of cult importance. These tables were the first annals, from which Ennius took the title of his historical epic; but their character was still purely sacral in Cato's day (*Origines*, bk. 4, fr. 77 Peter), and the variance in the foundation-dates of Rome indicates that the pontifical records were not in full chronicle form in the middle of the second century.

The senatorial historians, Fabius Pictor, Cincius Alimentus, Postumius Albinus, and C. Acilius (qq.v.), now appear, on M. Gelzer's reinterpretation of Cicero (*De Or.* 2. 51-2; *Leg.* 1. 5) and his study of the Fabian tradition, to have been not annalistic writers, but discursive historians, following the Hellenistic *κρίσεις* and episodic histories; Cato's *Origines* merely continued their work in Latin. If this view is accepted, the evidence of both pontifical records and historiography sets the first annalistic history in the latter part of the second century B.C.

Under Cato's influence the 'old' annalists, Cassius (q.v.) Hemina and Calpurnius Piso (q.v. 1), began the systematic reconstruction of Roman history. Then the publication of the *Annales maximi* in eighty books, *ab initio rerum Romanarum usque ad P. Mucium pontificem maximum*, presumably by P. Mucius Scaevola himself (Pontifex Maximus from 131-130 to between 123 and 114 B.C.), set out in formal arrangement year by year the official events of the State, viz. elections and commands, civic, provincial, and cult business. The composition involved for the regal period legendary and antiquarian speculation, for the early Republic systematic reconstruc-

tion from the nucleus of records, and added to the framework of the *tabulae pontificum* from the fuller records in the archives.

The publication was definitive, and the new material and its formal arrangement determined the character of 'late' annalistic history from Cn. Gellius to the Sullan annalists and Livy. The influence of Isocratean historiographical theory allowed, probably Gellius, certainly Valerius Antias and Claudius Quadrigarius (qq.v.) to elaborate the ceremonial form and expand the records in the light of senatorial constitutionalism, legalistic antiquarianism, and family interests, with conventional rhetorical composition; this led, particularly with Antias, to inaccuracy, invention, and tendentious falsification.

The annalistic form was thus established as an historiographical *gévos*. Licinius Macer (q.v. 1) and Aelius Tubero (q.v. 2) in following it appear to have checked their material, but Livy accepted both material and arrangement in its Sullan form, and his work enshrines the annalistic tradition. The form was adapted to the narration of contemporary history, and was used by the Imperial annalists, imposing its conventions even on Tacitus.

A. H. McD.

ANNIANUS, a 'neoteric' (q.v.) of Hadrian's time, composed *carmina Falisca* on country themes.

Bachr. *FPR*; Morel, *FPL*.

ANNICERIS, of Cyrene, philosopher of the Cyrenaic school, probably lived under Ptolemy I, who died 283 B.C. He, Hegesias, and Theodorus 'the godless' became leaders of three divergent branches of the school, his own originality consisting, so far as we know, in stressing the importance of sympathetic pleasure.

PW i. 2259.

W. D. R.

ANNIUS (and **ANNIA**), see **FAUSTINA**, **FLORIANUS**, **GALLUS**, **LUCILLA**, **MILO**, **VINICIANUS**.

ANNOA. This word, literally 'harvest', is almost always used in the sense of corn-supply. From the earliest times the Romans regarded it as a duty of the State to secure that the population of the city was adequately supplied with corn at a reasonable price; speculation in grain was punishable by law. Under the Republic the *cura annonae* devolved upon the aediles (q.v.), whose duties were considerably increased by the introduction of *frumentationes* (doles of cheap or free corn) by C. Gracchus. In 57 B.C. a special *cura annonae* was conferred upon Pompey. Two new aediles (*aediles Cerialis*) were created by Caesar. The corn-supply was made into an imperial department by Augustus, who delegated it to a *praefectus annonae*, an equestrian official of high rank. The *praefectus* held office for an indefinite period, and had subordinates in the Italian ports and in the provinces, where barns were erected for storage at the cost of the government. Officials connected with the *annona* (*aediles*, *praefecti*, *curatores*) are also found in the municipal towns, which followed the example of Rome in making public provision for essential foodstuffs. In the later Empire the word *annona* was used of a tax in kind, which was imposed by a special imperial order (*indictio*, q.v.; see also **DIOCLETIAN**, para. 7).

G. H. S.

ANONYMUS Ἀντατικιστής, a contemporary opponent of Phrynichus the Atticist (q.v.), who cites from good, but not always Attic, writers many words condemned by Phrynichus. See **LEXICA SEGUERIANA**.

ANONYMUS *περί ὕψους*. See **LONGINUS**.

ANONYMUS SEGUERIANUS (3rd c. A.D.) wrote a *τέχνη τοῦ πολιτικοῦ λόγου*, including references to the work of Alexander (q.v. 12), son of Numenius, which throw light on first-century rhetorical teaching.

Spengel, *Rhet.* i. 427-60.

ANSER (1st c. B.C.), a salacious erotic poet. Nothing remains of his poems. The only unequivocal reference to him is in Ovid (*Tr.* 2. 435).

Cf. R. Unger, *De Anseri Poeta* (1858).

ANTAEUS (*Ἀνταῖος*), in mythology, a giant, son of Poseidon and Earth, living in Libya; he compelled all comers to wrestle with him and killed them when overcome (Pind. *Isthm.* 4. 56 ff. and schol. Plato, *Thet.* 169 b). He was defeated and killed by Heracles (q.v.). That he was made stronger when thrown, by contact with his mother the Earth (Apollod. 2. 115), seems a later addition to the story.

H. J. R.

ANTAGORAS OF RHODES (3rd c. B.C.), author of a *Thebais*, epigrams, and a *Hymn to Love*.

ANTALCIDAS (more correctly *Antialcidas*) (fl. 4th c. B.C.), Spartan agent and general, converted first Tiribazus (392 B.C.) and later Artaxerxes II (388) to the view that Persia had greater identity of interest with Sparta than with Athens. Having negotiated a Sparto-Persian alliance, he blockaded the Hellespont and forced Athens, and her allies, to agree to the peace which bears his name (386). Its terms abandoned the Greek cities of Asia Minor to Persia (Xen. *Hell.* 5. 1. 32-6). He undertook further diplomatic missions to Persia in 372 and 367, the second of which was a disastrous failure and may have occasioned his death by suicide.

D. E. W. W.

ANTEIA, see **BELLEROPHON**.

ANTENOR (1), in mythology, an elderly and upright counsellor in Troy during the siege, who advised the return of Helen to the Greeks, and in return for this (or, according to much later accounts, for betraying the city) was spared by the victors. Pindar says his descendants held Cyrene; but in the story current in Roman times he took with him the Eneti from Paphlagonia (who had lost their king at Troy) and, settling in Venetia at the head of the Adriatic, founded Padua.

R. A. B. M.

ANTENOR (2) (c. 540-500 B.C.), Athenian sculptor, famous as the sculptor of the first group of the Tyrannicides, Harmodius and Aristogiton (see **CRITIUS**). This group stood in the Agora at Athens, but was taken to Persia by Xerxes in 480. It was later restored to its place by Seleucus or Alexander. Two signed bases of this artist were found on the Acropolis at Athens. One of them belongs to a fine marble *kore* now in the Acropolis Museum (No. 681). The doubts which have been expressed as to the association of the base with the statue (see H. Payne, *Archaic Marble Sculpture from the Acropolis*, 31) may be dismissed. It is held by many that he was the sculptor of the archaic pedimental figures of the temple of Apollo at Delphi.

S. C.

ANTHETERIA, the festival of the flowers, celebrated in the spring, in Athens on the 12th Anthesterion and (as the frequent occurrence of the month name Anthesterion shows) in many other Ionian towns. The day before had its name, Pithoegia, from the opening of the wine-jars. The festival had two aspects, on the one hand that of merriment and rejoicing and, on the other, that of gloom. On the chief day, the 12th, the new wine was ceremonially blessed before Dionysus; everyone carried in wine and drank of his own jug; hence this day was called *Xôos*, the *Jugs*. Small children were admitted to the festival and given little jugs; it was a school

holiday. On the same day Dionysus was brought in on a ship set on wheels and married the wife of the (Archon-) Basileus, and in the evening, which according to religious reckoning belonged to the 13th, called the *Χῦτροι*, pots with cooked fruits were brought to the dead. The derivation of the word from *ἀναθέσσανθαι*, 'to raise by prayer', i.e. the dead (J. E. Harrison, *Prolegomena to the Study of Greek Religion*, 48), must be rejected. The *carrus navalis* and the blessing of the wine are represented on vase-pictures, which by some scholars are referred to the Great Dionysia and the Lenaea respectively (see *LENAEA*).

M. P. Nilsson, *Studia de Dionysiis atticis* (1900), 115; *Gesch. d. griech. Religion* (1940) i. 550. L. Deubner, *Attische Feste*, 93 ff. M. P. N.

ANTHOLOGIA LATINA as a title properly belongs to a collection of poems made by a certain Octavianus in 532-4 A.D. at Carthage. This work delighted the Middle Ages. Of its extant MSS. by far the best is the seventh-century Parisinus 10318, called also Salmasianus (from its owner Claude de Saumaise, 1588-1653). The first five books are missing. But from the *Praefatio* to Octavianus' own poems we may gather that they contained selections from poets that preceded the sixth century A.D. Other MSS., such as Thuanus (Parisinus 8071) and Vossianus L.Q. 86, both of the ninth century, help to remedy their loss. The surviving books include Virgilian Centos, Serpentine Verses, Poems on Roses, Dido's Letter, Poems of the Vandals, The Vigil of Venus, and a host of other pieces dealing with a large variety of subjects.

From the sixteenth century onwards many collections of Latin poems have been arranged and published, notably those of Joseph Scaliger (1573), P. Burmann Secundus (1759-73), J. C. Wernsdorf (1780-99), E. Baehrens (1879-83), A. Riese and F. Buecheler (1894), and J. W. and A. M. Duff (Selections: *Min. Lat. Poets*, Loeb 1934, with excellent English translation). Such collections show the vast output of the minor Latin poets that usually are not easily accessible.

See C. Schubart, *Quaestionum de Anthol. Cod. Salmasiani Pars I* (1875); and the Prefaces of those scholars mentioned above. R. M.

ANTHOLOGY, *ἀνθολογία*, 'bouquet', was first used of a collection of poems in the Byzantine period. The greatest classical anthology is the Palatine Anthology (quoted as *Anth. Pal.*) of Greek poetical epigrams—so called because the only manuscript was found in the Count Palatine's library at Heidelberg.

2. From the fourth century B.C. onwards many collections of epigrams by individual poets or on single subjects were made. The first really large critical anthology was the *Garland* of MELEAGER (q.v. 2), c. 90 B.C.), which contained epigrams attributed to about fifty poets from Archilochus down to Meleager himself. Most of them were elegiac; a few were in other metres; all were short, averaging eight lines. They were probably arranged in groups, the original epigram on any one theme being followed by imitations and variations; but there are traces of an alphabetical arrangement, by the first letter of each poem.

3. About A.D. 40 PHILIPPUS (q.v. 3) of Thessalonica collected a less abundant *Garland* of Greek epigrammatists since Meleager. He was more conservative—all his poets wrote in elegiacs, and conformed to certain easily defined patterns, erotic, epideictic, etc.

4. Large sections from both *Garlands* were included in the *Circle* of epigrams compiled about A.D. 570 by the Byzantine AGATHIAS (q.v.), who added many contemporary epigrams, and arranged them all by subject: his metrical contents-page (*Anth. Pal.* 4. 3) survives to give the scheme he followed.

5. Under the learned Emperor Constantine VII (912-59), CEPHALAS (q.v.) made the existing Anthology by

rearranging those of Meleager, Philippus, and Agathias, and adding others such as Straton's homosexual poems. His arrangement is: (i) Christian epigrams, mainly on Byzantine churches; (ii) a description of statues in a Byzantine gymnasium (c. A.D. 500); (iii) inscriptions on statues in Attalus' temple to filial love (c. 183 B.C.); (iv) the prefaces of Meleager, Philippus, and Agathias; (v) love-poems; (vi) dedications; (vii) epitaphs; (viii) religious epigrams by St. Gregory (c. A.D. 350); (ix) epideictic epigrams—displays of wit and imagination on odd facts, famous people, great works of art; (x) comments on life and morality; (xi) convivial and satirical epigrams; (xii) poems on homosexual love; (xiii) epigrams in peculiar metres; (xiv) riddles; (xv) miscellaneous epigrams, including poems shaped like an egg and an axe.

6. The Anthology of Cephalas was re-edited in 1301 by the monk PLANUDES, who expelled many fine poems. His revision was the only known collection of Greek epigrams until the solitary manuscript of Cephalas was found (1606) and—after many vicissitudes—printed. The current text ends with the Planudean Appendix, a collection of nearly 400 epigrams, chiefly on works of art: they come from Planudes' edition, and ultimately from a lost book of Cephalas, but are not in the Palatine MS.

7. The Anthology is a mine of jewels choked with masses of lumber. Books i, ii, iii, viii, xiv are worthless; iv, xii, xiii, xv are curious, often (e.g. Meleager's preface) fascinating; the remaining books contain some tedious imitations, some trivialities, and some of the finest poetry in the world. See EPIGRAM.

ANTIAS, see FURIUS (1), VALERIUS (10).

ANTICATO or **ANTICATONES** (Schanz-Hosius' viii. 1, § 118), two (?) lost books by Caesar (A. Dyroff, *Rh. Mus.* (N.F.) 1. 481 ff., thinks one by Hirtius) answering eulogies on Cato, whose death at Utica occasioned laudatory discourses on republican heroes by Cicero, Brutus, and Fadus Gallus. J. W. D.

ANTICLEA (*Ἀντίκλεια*), in mythology, daughter of Autolycus (q.v.), wife of Laertes, and mother of Odysseus (*Od.* 11. 84-5). Later (as Sophocles, *Phil.* 417 and schol.) Odysseus' real father is Sisyphus (q.v.).

ANTICYRA, Phocian town at the head of the gulf east of Cirrha. An excellent port and outlet for Phocian export, it shared the history of Phocis, being destroyed in 346 B.C. and captured by Roman generals. It gained a reputation from the medicinal plant hellebore (supposed to cure madness), which grew in its neighbourhood. N. G. L. H.

ANTIDORUS (c. 300 B.C.) of Cyme was the first to abandon the name *κριτικός* and to call himself *γραμματικός* (Clem. Al. *Strom.* 1. 16. 79). He wrote a work on Homer and Hesiod, of which the form and content are unknown, and a treatise on *λέξεις*, which was either a lexical study, perhaps of Homeric expressions, or a work on style (schol. Dion. Thrax, pp. 3, 7, 448 H.; schol. *Il.* 23. 638-9). J. F. L.

ANTIDOSIS. An Athenian who had been put to a liturgy (q.v.) had a right to refuse it, by asking, at an officially fixed date, another wealthy citizen either to perform it in his stead or to agree to an exchange of properties. If the other citizen rejected this offer, a court decided which of them should perform the liturgy. Both parties had to divulge their whole estate on oath, three days after they had formally laid claim to their opponents' possessions before the magistrates. Only shares in the mines of Laurium had not to be declared, because they were free from liturgy obligations.

A. M. Andreades, *History of Greek Public Finance* (U.S.A. 1933), 283 f.; H. Francotte, *L'Antidosis en droit athénien* (1895).

F. M. H.

ANTIGENES (5th c. B.C.), Attic dithyrambic poet, who wrote a dedicatory poem for tripods won at the Dionysian competition by the Acamantis tribe. The poem, preserved at *Anth. Pal.* 13. 28, is written in couplets, the first line of which is a daetylic tetrameter followed by a trochaic dipody, the second an iambic tripody followed by an alcaic decasyllable. Nothing else is known of him or his work.

Text: E. Diehl, *Anth. Lyr. Graec.* ii. 119. Criticism: U. von Wilamowitz-Moellendorf, *Sappho und Simonides* (1913), 218-23.

C. M. B.

ANTIGONE (1). In the versions of the legend of Oedipus (q.v.) best known to us, he and Iocasta have four children, Eteocles, Polynices, Antigone, and Ismene, though Homer (*Od.* 11. 271 ff.) and the Cyclic epic *Oedipodia* (see Paus. 9. 5. 11) know nothing of offspring of the incest and the latter makes Euryganeia daughter of Hyperphas the mother of his children. Of these four, the two sons are part of the story from the cyclic *Thebais* onwards; the daughters seem to be a later addition, or at least are unimportant until the fifth century B.C. The earliest certain mention of either appears to be Mimnermus fr. 21 Bergk, from which, combined with Phocylides ap. schol. Eur. *Phoen.* 53 it appears that Ismene was 'in converse with Theoclymenus' (unknown in such a context, perhaps a mistake for Periclymenus, one of the Theban heroes) and was killed by Tydeus (q.v.) at the instance of Athena by the spring which bears her name, i.e. the source of the river Ismenus. Ion of Chios (fr. 12 Bergk; both this and the passage of Mimnermus are from Salustius' argument to the *Antigone*) said that both sisters were burned in the temple of Hera by Laodamas son of Eteocles, an otherwise unknown tale. Also, in the older stories neither the affair of the burial of Polynices nor the banishment of Oedipus is told. We have then a legend apparently of fifth-century Attic growth, whether pure invention or founded on some local tradition.

2. Omitting the spurious termination of the *Septem* of Aeschylus (latest discussion by P. Groeneboom, *Aeschylus' Zeven tegen Thebe* (1938), p. 245 ff.), our materials are the *OT*, *OC*, and *Antigone* of Sophocles and the fragments of Euripides, *Antigone*, with their derivatives. Taking the Sophoclean plays in the order of events in the story, not of their composition, in *OT* 1480 ff. Oedipus takes farewell of his children and commends them to the fatherly care of Creon; they are mute figures. In *OC* he is a wandering beggar, faithfully tended by Antigone. Ismene, here as elsewhere the less resolute character, remains at Thebes, but comes to Colonus (324 ff.) to bring them news of happenings there. Creon, whose character has deteriorated in this play, kidnaps both sisters in an attempt to force Oedipus to return, but is himself taken by Theseus and the girls rescued (818-1096). Antigone advises Oedipus to grant Polynices an interview (1181 ff.), and vainly begs her brother to abandon the attempt on Thebes (1414 ff.); they address each other in terms of deep affection. In the *Antigone* Creon has forbidden Polynices to be buried

after his and Eteocles' death at each other's hands (23 ff.); Antigone resolves to bury him despite this. Ismene is horrified, and will not do more than keep her secret (85). Antigone contemptuously casts her off and later (536 ff.) will have none of her attempts to confess herself a confederate. The attempt to give Polynices at least the formal minimum of burial succeeds (245 ff.), but later (407 ff.) Antigone is arrested while coming to pour libation and replace the dust which had been swept from the body. Creon now sentences her to be placed alive in a vault, despite the protestations of his son Haemon who is betrothed to her (635 ff.). In this he is doubly wrong, for it is impious to put a living person into the underground realm of Hades, and it is Antigone's betrothed husband who should deal with her (P. Roussel in *Rev. ét. grecques* (1922), 63 ff.; Rose in *CQ* 1925, 147 ff.). Tiresias warns him (988 ff.) that he is offending the gods by leaving dead bodies unburied; he sets out (1095 ff.) to bury Polynices and rescue Antigone, but finds her already dead by her own hand; Haemon kills himself over her body and Creon's queen Eurydice stabs herself from grief (1183 ff.).

3. Euripides, possibly using some tradition of the existence of descendants of Antigone, modified Sophocles' story; his play being lost, we have to reconstruct the plot chiefly from Hyginus (*Fab.* 72, which is not an accurate synopsis, see C. Robert, *Oedipus*, 381 ff.; Rose, *Modern Methods in Class. Myth.*, 40 ff.; J. Mesk in *Wien. Stud.* xlix. 1 ff.). Creon, acting more correctly than in Sophocles, handed over Antigone, when taken, to Haemon to be put to death. He, instead of doing so, hid her among shepherds, and had a son by her. The child lived, grew, and came to Thebes on the occasion of certain games. Since he naturally competed naked, Greek fashion, Creon recognized him as one of his own race, the Sparti, because he had on his body the peculiar birthmark like a spear-head which all that family bore (Hyg. *Fab.* 72. 3; Arist. *Poet.* 1454^b22, very likely from this play). He denounced the young man as a bastard (fr. 168 Nauck) and ordered the deaths, apparently, of Haemon and Antigone. Hereupon, according to Hyginus (72. 3) Heraeles vainly interceded; fr. 177 is an apostrophe to Dionysus, and Aristophanes' argument to Sophocles' *Antigone* says that Antigone was 'given in marriage' to Haemon, from which, together with general probability, it seems likely that Dionysus was the intercessor (if indeed the quotation is not from the *Antiope*) and the play ended with a reconciliation and formal union of the lovers.

4. The story in Hyginus is itself evidence that some development took place in the legend after Euripides, possibly at the hands of the fourth-century tragedians (so Mesk). One additional detail, of unknown date of origin, is the appearance of Argia, wife of Polynices, to help Antigone bury him (Hyginus 72. 1; Statius, *Theb.* 12. 177 ff.); she meets Antigone by moonlight; they put Polynices' body on Eteocles' still burning pyre, the flames of which divide (cf. ETEOCLES); they are taken and sentenced to death by Creon, but rescued by the arrival of the Attic army under Theseus.

Although the above stories are not of Theban origin, they had been adopted in Thebes by Imperial times. Pausanias was shown (9. 25. 2) a place outside the walls called *σῆμα Ἀντιγόνης*, 'Antigone's drag', said to be the spot where she dragged the body of Polynices, as it was too heavy for her to lift, to lay it on the pyre of Eteocles (see above; this suggests that the legend was popularized there in a rather late form). It was one of several alleged monuments of the mythical past of the city, doubtless rather a by-product of the tourist trade than the result of a real tradition.

See material collected briefly in Jebb's introduction to his edition of Sophocles, *Antigone*; more in Stoll's art. 'Antigone' and 'Ismene' in Roscher's *Lexikon*.

H. J. R.

ANTIGONE (2), in mythology, daughter of Eurytion son of Actor, king of Phthia. Peleus (q.v.) was purified by her father after the murder of Phocus (see **AEACUS**) and married her, with a third of the country for her dowry. Later he accidentally killed Eurytion at the Calydonian boar-hunt and fled to Iolcus (Apollod. 3. 163). H. J. R.

ANTIGONE (3), in mythology, daughter of Laomedon, king of Troy. Because she vied in beauty with Hera, the latter turned her hair into snakes; afterwards she, or the other gods, turned her into a stork, which therefore preys on snakes (Ovid, *Met.* 6. 93-5; Servius on *Aen.* 1. 27; *Myth. Vat.* 1. 179.) H. J. R.

ANTIGONUS (1) I (probably 382-301 B.C.), son of Philip, a Macedonian noble, first appears holding a command in Alexander's army (334). He was left as satrap of Phrygia (333). In Alexander's lifetime he did useful work in Asia Minor, but he gave no indication of his future greatness. His opportunity came when his friend Antipater (q.v. 1) gave him command over the royal army in Asia (321). His successful campaigns against the 'rebels' Alcetas (320) and Eumenes (320 and 318-316), and the death of Antipater (319), gave A., alone of the generals, a prospect of reuniting all Alexander's empire under himself, and this became his unceasing aim. The result was a coalition of the 'separatist' generals against him (Cassander in Macedonia, Ptolemy in Egypt, and Lysimachus in Thrace), but the war (315-311) left him as strong as before, though the occupation of Babylon and the Eastern satrapies by Seleucus (312) greatly reduced the area he controlled. The peace of 311 lasted only a year, and his separate attempts to crush Seleucus (310-309), Ptolemy (306-305), and Cassander (304-302) finally convinced them all (with Lysimachus) that A. must be crushed. In the decisive battle of Ipsus (in Phrygia) he was defeated and killed. Of his kingdom little is known. He is said to have governed well, and he certainly showed statesmanship in his policy towards the Greeks. His reputation rests on his greatness as a general, but in an age of peace he would probably have been a great ruler, and certainly could never have been a bad one.

Diodorus bks. 18-20; Plutarch, *Eumenes* and *Demetrius*. W. W. Tarn. *CAH* vi, ch. 15. G. T. G.

ANTIGONUS (2) II (c. 320-239 B.C.), surnamed *Gonatas* (Euseb. 1. 238; meaning unknown), son of Demetrius I and Phila, was in charge of Demetrius' Greek possessions after 287. In 285, having lost much of Thessaly to Pyrrhus, he made peace; on Demetrius' death (284-283) he took the title of king. In 280 he marched on Macedon, but was repelled; Sparta meanwhile stirred up revolts in Greece. After a naval campaign he made a lasting peace with Syria (278); and having defeated 20,000 Gauls near Lysimacheia, he seized Macedonia. For ten months Cassandreia resisted, but by 276, when he married Antiochus' sister, Phila, he was acknowledged king of Macedon. When in 274 Pyrrhus, back from Italy, attacked Macedon, many Macedonians deserted; Antigonus suffered defeats (274-273) and lost Thessaly and upper Macedonia. In 272, however, Pyrrhus invaded Peloponnesus, and A. joined with Sparta to destroy him. He now re-established his power as far as Corinth. Shortly afterwards, subsidized by Egypt, Athens and Sparta began the Chremonidean War against him (267-263/2), which ended with the fall of Athens. After a short-lived truce (261), he defeated Ptolemy at sea off Cos (258), thus securing the Aegean, and peace followed in 255. In 250-249, instigated by Egypt, Alexander, his governor of Corinth, revolted, and held Corinth with Chaleis until his death. But after defeating Ptolemy at sea off Andros (246), Antigonus tricked Alexander's widow, Nicaea, out of Acrocorinth (245). This fortress, however, Aratus seized in 243, and Antigonus' subsequent

Aetolian alliance proved fruitless; to this period belongs his patronage of Peloponnesian tyrants. In 241-240 he made peace with Achaea, and died in spring 239.

Blunt, honest, and tenacious, A. won not only Macedon, but also its people. Himself a philosopher, he gathered about him poets, philosophers, and historians; and his long reign, despite vicissitudes, re-established Macedon as a nation.

Ancient sources: Plut. *Demetr.*, *Pyrrh.*, *Arat.*; Justin. bks. 16 ff. For the early years the tradition echoes Hieronymus of Cardia, for the later the pro-Spartan Phylarchus. Inscriptions important. Modern literature: W. W. Tarn, *Antigonos Gonatas* (1913); *CAH* vii; W. Fellmann, *Antigonos Gonatas . . . und die griechischen Staaten* (1930). F. W. W.

ANTIGONUS (3) III (c. 263-221 B.C.), surnamed *Doson*, son of Demetrius the Fair (who was half-brother of Antigonus II), became guardian to Philip V on Demetrius II's death (229) and married Philip's mother Phthia (Chryseis). After expelling a Dardanian inroad he recovered most of Thessaly from invading Aetolians, but made an agreement leaving them Phthiotic Achaea, and renounced the re-establishment of Macedonian influence beyond Thermopylae. Early in 227, as sequel to a threatened mutiny by the army assembly, he took the title of king. An expedition to Caria in 227 was probably directed against Ptolemy: it brought acquisitions in the Aegean, alliances in Crete, and temporary gains in Caria; but the islands generally remained independent, and Macedonian sea-power now rapidly decayed. Meanwhile the Achaean League was crumbling before Cleomenes; in 227-226 A. received Achaean envoys favourably, and in 224, on Aratus' promise of Acrocorinth, he led his troops to the Isthmus. In two campaigns he recovered Arcadia, and in winter 224 set up a Confederacy of Leagues, with himself as president. In 222 he crushed Cleomenes at Sellasia and occupied Sparta. But immediately he was summoned to expel the Illyrians from Macedon; having burst a blood-vessel in battle, he died in summer 221, after providing for Philip's succession.

The Achaean alliance and the Confederacy stamp A. as a statesman of generous vision. His policy mainly followed traditional lines; but his rehabilitation of Macedon gave it new life and a strong material background for Philip's wilder policies.

Ancient sources: Polyb. 2; Plut. *Cleom.*, *Arat.*; Justin. bk. 28. Modern literature: W. W. Tarn, *CAH* vii; 'Phthia-Chryseis', *Athenian Studies presented to W. S. Ferguson* (U.S.A. 1940), 483 ff.; P. Treves, *Athenaeum*, 1934-5; S. Dow and C. F. Edson, *Harv. Stud.* 1937; J. V. A. Fine, *AJPPhil.* 1940. F. W. W.

ANTIGONUS (4) of Carystus (fl. 240 B.C.), bronze-worker and writer, lived at Athens in touch with the Academy; worked under Attalus I at Pergamum.

WORKS. An inferior anecdotal collection survives, the (1) *Ἱστοριῶν παραδόξων συναγωγή* (O. Keller, *Rer. Nat. scr. Graec. Min.* i. 8 f.); Diog. Laert. and Athenaeus contain fragments from (2) *Lives of Philosophers*, personal character-sketches of contemporaries; (3) various works of art-history; (4) *Περὶ λέξεως* (Ath. 3. 88 a; 7. 297 a; probably this A.).

A reliable biographer with a flowing, periodic style, A. achieved considerable popularity. He helped to make the statues which celebrated Attalus' Gallic victory.

U. von Wilamowitz-Moellendorf, *A. v. Karystos* (1881). F. W. W.

ANTILOCHUS, in mythology, son of Nestor (q.v. 1), mentioned several times in the *Iliad* as a brave warrior and a fine runner (c.g. 15. 569-70). He brings Achilles the news of Patroclus' death (18. 2 ff.), drives cleverly in the chariot-race (23. 402 ff.), and courteously cedes the second prize to Menelaus (596). His death is mentioned (*Od.* 3. 111); it took place (*Aethiopsis*, whence Pindar, *Pyth.* 6. 28 ff.) while he was defending his father against Memnon, when Paris had killed one of Nestor's horses and he called Antilochus to his help. H. J. R.

ANTIMACHUS (1) (probably b. c. 444), of Colophon, poet and scholar. It is possible that he competed in a poetic contest at the Lysandreia in Samos before Lysander (died 395), cf. Plut. *Lys.* 18. 8. Further, the evidence of Hermesianax, fr. 7, 41-6 and [Plutarch], *Cons. ad Apoll.* 9. 106 b may be accepted that he loved one Lyde (probably his mistress, not his wife), and wrote his narrative elegy with that title, a collection of 'heroic misfortunes', to console himself for her loss. Finally Heraclides Ponticus (fr. 91 Voss) records that Plato sent Heraclides to Colophon to collect A.'s poems. It is, therefore, probable that A. died fairly early in the fourth century B.C.

WORKS. Our sources mention five poems: *Thebais*, *Lyde*, *Deltai*, *Artemis*, *Iachine* (?). The *Thebais* was an epic narrating the first expedition against Thebes. For his material A. probably drew not only on the Epic Cycle but also on lyric and tragic versions of the story of Thebes. The *Lyde* comprised at least two books, probably considerably more in view of A.'s reputation for prolixity, which the fragments detailing the voyage of the *Argo* seem to justify. Other legends mentioned included those of Demeter's wanderings, Bellerophon, and Oedipus. It is clear that except for the metre there was very little that was elegiac about the *Lyde*. Though it is possible that the poem contained a preface in which A. explained the circumstances that had produced it, there is no evidence that once embarked he turned aside from his narration of 'heroic misfortunes' to bewail his own. The laments which according to Heremesianax filled the poem must have been those of the heroes and heroines. Though others, e.g. Mimnermus, had inserted references to myth into their elegies, A. was the real founder of Narrative Elegy and found many imitators. The *Deltai* (? *Tablets*) was perhaps a collection of short poems (? in elegiacs). The *Artemis*, if the first part of *PMilan*. 17 contains excerpts from this poem, was written in hexameters and its careful recording of the goddess's titles and cults recalls the *Hymn to Artemis* of Callimachus.

Later writers praised A. for his sobriety and virility, qualities which perhaps explain Plato's liking for his verse. But Callimachus (fr. 74 b) found him stodgy and involved. What little survives seems to justify the more unfavourable verdict. But A.'s real importance is that as a scholar (he edited Homer) no less than poet he anticipated by some 100 years the scholar-poets of Alexandria. Unlike his post-Cyclic predecessors, Pisander and Panyassis, he not only borrowed without change from early Epic, but also practised all the arts of 'interpretation', variation, and contamination which were to become so popular with the Hellenistic poets, and not least with Callimachus. In language, too, A. anticipates the Alexandrians. The scanty fragments contain many 'glosses', neologisms, and obscure periphrases.

ANTIMACHUS (2) of Teos, see EPIC CYCLE. EGF, p. 247.

ANTINOÛPOLIS (*Sheikh Abâdeh*), in Middle Egypt, founded in A.D. 130 by Hadrian in memory of Antinous, stood east of the Nile at the head of a new road to the Red Sea. Its constitution was Greek, modelled on that of Naukratis, with special privileges; hellenized inhabitants were brought, e.g., from Ptolemais; it was also the metropolis of an Egyptian nome. After Diocletian it was the administrative centre of the Thebaid. Considerable remains of public buildings existed in 1800, but have been destroyed. The cemeteries were excavated by Gayet, the mounds explored for papyri by Johnson.

E. Jomard, *Description de l'Égypte, Antiquités*, ch. 15, pl. 53-61; E. Kuhn, *Antinoëpolis* (1913); J. Johnson, 'Antinoë and its papyri', *UFs Arch.* 1914; H. I. Bell, *JRS* 1940, 133-47. J. G. M.

ANTINOUS (1), in mythology, chief of Penelope's suitors, son of Eupheithes (*Od.* 1. 383); killed by Odysseus (22. 8 ff.).

ANTINOUS (2) (b. c. A.D. 110-12), Greek-born at Bithynium (= Claudiopolis) Bithyniae. His beauty and grace made him Hadrian's favourite; accompanying Hadrian up the Nile in 130, he was drowned, to Hadrian's bitter grief. His royal friendship and tragic death (some said he gave his life for Hadrian) aroused almost legendary fame. Deified, he was commemorated by the Egyptian city Antinoöpolis (q.v.), and by cults, festivals, and statues in many lands.

B. W. Henderson, *Life and Principate of the Emperor Hadrian* (1923), 130 ff.; see also *PIR*², A. 737. C. H. V. S.

ANTIOCH (*Ἀντιόχεια*) (1), capital of Seleucid Syria, on the left bank of the Orontes, some 15 miles from the sea, was founded in 300 B.C. by Seleucus I, who transferred thither the 5,300 Athenian and Macedonian settlers whom Antigonus had planted at Antigoneia nearby in 307. These settlers occupied the first quarter of the city; the second was filled with the native inhabitants; a third and fourth were added by Seleucus II and Antiochus IV, no doubt for fresh settlers; Antiochus III after 189 B.C. enrolled exiled Aetolians and Euboeans in the city. Antioch also contained a large Jewish community, whose privileges were said to go back to Seleucus I. From the reign of Antiochus IV, who built a new council chamber, the city issued a municipal coinage, and from 149 to 147 autonomous coins as one of the Brother Peoples. Since it was the royal capital, its people played a large part in the dynastic revolutions of the later Seleucid era. After an interlude of Armenian rule (83-66) it was annexed by Pompey (64) and became the capital of the province of Syria; it was freed by Caesar (47). Having sided with Pescennius Niger it was in A.D. 194 degraded by Septimius Severus to a village of Laodicea, but was in 201 restored to its former rank, to which Caracalla added the title of colony. Antioch had a council numbering 1,200 and its people were divided into eighteen tribes: it ruled a very extensive territory. It was one of the greatest cities of the East, disputing the primacy with Alexandria. Its wealth must have been derived from its administrative position and from commerce: no industries are recorded save the Imperial mint. The scanty ruins are being excavated (*Antioch on the Orontes* i (1934), ed. G. W. Elderkin; ii (1938), ed. R. Stillwell).

K. O. Müller, *Antiquitates Antiochenae* (1839); E. S. Bouchier, *A Short History of Antioch* (1921). A. H. M. J.

ANTIOCH (2) (Pisidian: *Ἀντιόχεια Πισιδίας* or more correctly *πρὸς Πισιδίαν* 'towards Pisidia'), a city in Phrygia (so Strabo, confirmed by inscriptions), lying near the Pisidian border, called 'the Pisidian' to distinguish it from the other Phrygian Antioch on the Maeander, and hence wrongly assigned to Pisidia by Pliny and others. It was a Seleucid foundation, settled by colonists from Magnesia-on-the-Maeander, occupying a plateau above the river Anthios (mentioned on its coins) close to the modern Yalovac. It was declared free by the Romans after the defeat of Antiochus the Great, but passed under Roman control as part of the kingdom of Amyntas (see GALATIA) in 25 B.C., and about the same time was made a Roman colony with the name Caesarea Antiochia. The colony was linked by military roads with the other colonies subsequently founded by Augustus to control Pisidia. Near it was a wealthy *hieron* of Men Askaenos with wide estates and numerous temple-servants (*hierodouloi*, q.v.), the site of which has recently been excavated. In the provincial reorganization of Diocletian Antioch was assigned to Pisidia.

Jones, *Eastern Cities* (see Index).

W. M. C.

ANTIOCH (3) (*Margiana*, modern *Merv*) was founded apparently by Alexander, destroyed by Asiatics, and refounded by Antiochus I. Here in a mountain-girt fertile plain a land-route from Scleuceia branched, forming silk-routes, (i) through Samarkand, (ii) through Balkh, to central Asia; a third went south through Herat and the Bolan Pass to India.

E. H. W.

ANTIOCH-IN-PERSIS (4), the *Ionaca polis* ('Greek-town') of Ptolemy 6. 4. 2, probably stood on the Gulf of Bushire, whence a road must have run up to Persepolis, as now to Shiraz. It was founded by Seleucus I and re-colonized and enlarged by Magnesia-on-the-Maeander for Antiochus I (*OGI* 233). It was a Greek city, with Council, Assembly, and Prytanies, i.e. division into tribes; it worshipped the gods of Magnesia, and was the local centre for the official cult of the Seleucid dynasty.

W. W. T.

ANTIOCHUS (1) I (SOTER) (324–262 or 261 B.C.), son of Seleucus I (q.v.) and the Bactrian Apama. He ruled the eastern Seleucid territories from 293/2, and took over Seleucus' young wife Stratonice (whether for romantic or political reasons). On his accession (280) he renounced his father's ambitions in the West, and his treaty (279) with Antigonus (q.v. 2) Gonatas formed the basis of peace and friendship with Macedonia throughout the century. Northern Asia Minor, and later much of its southern and western coast, slipped from his grasp, the latter being lost mainly to Egypt ('First Syrian War', 276–272, and war of 266–261). His chief exploit was his defeat of the Gallic invaders of Asia Minor (276—'the Elephant Victory'), which earned him his cult-name 'Soter'. Of his personal character and internal policy little is known, except that he was the greatest founder of cities after Alexander (see COLONIZATION, HELLENISTIC). His elder son Seleucus became co-regent in the East (280), but proved a failure, and may even have been executed for treason.

G. T. G.

ANTIOCHUS (2) II (THEOS) (c. 287–247 B.C.), second son of Antiochus I and Stratonice. His reign (commencing 262 or 261) comprises the most obscure period of Seleucid history. Most of the known facts bear on his relations with Egypt, and show that, by the 'Second Syrian War' (260–255), in alliance with Macedonia, he recovered most of what Antiochus I had lost, namely the coast of Asia Minor (except Pergamum, Caria, and Lycia) and places in Coele Syria. His Egyptian marriage, however (to Berenice, daughter of Ptolemy II, 252), and repudiation of Laodice with her children, created a 'succession question' which became acute on his death.

G. T. G.

ANTIOCHUS (3) III ('the Great') (241–187 B.C.), second son of Seleucus II (q.v.), succeeded (223) to a kingdom already reduced by separatist movements (Bactria and Parthia), which threatened to spread to Media, Persis, and Babylonia and to Asia Minor (see ACHAEUS 3). His aim from the first was to restore and expand. His first attempt to conquer Ptolemaic Syria and Palestine was foiled by a Ptolemaic victory at Raphia ('Fourth Syrian War' 219–216). But by his 'Anabasis' in the East (212–206) he acquired Armenia, and regained Parthia and Bactria, as vassal kingdoms; and his demonstrations in 'India' (Cabul valley) and 'Arabia' (across the Persian Gulf) earned him, like Alexander, the title of 'Great'.

But Antiochus' expansion policy was ruined by his failure to recognize the advent of a new Power in the eastern Mediterranean, Rome. His notorious secret treaty with Philip V of Macedonia to partition the overseas possessions of Egypt (202) was not directed against Rome; but the Senate, already suspicious of Philip, took alarm when Antiochus, after conquering Ptolemaic Syria and Palestine (202–198), invaded Europe to recover

Thrace (196). In the protracted diplomatic exchange of 196–193 he and the Senate were at cross purposes, and finally he lost patience and invaded Greece. He was defeated by the Romans in two land battles, at Thermopylae and Magnesia (ad Sipylum), and also lost a naval campaign to them. By the peace of Apamea (188) the Seleucid Empire ceased to be a Mediterranean Power, though it remained a great continental Power in Asia. Despite these errors of judgement in dealing with Rome, the triumphs of his youth, his unflinching energy, and his high conception of the Seleucid task in Asia suggest that Antiochus really was a great man.

Ancient sources: the most important is Polybius, directly in bks. 2–21 (ed. Büttner-Wobst), and indirectly in Livy bks. 30–8. Modern literature: M. Holleaux, *Rome, la Grèce, et les monarchies hellénistiques* (1921), and in *CAH* viii, chs. 6, 7; W. W. Tarn, *ibid.* vii. 723 ff.

G. T. G.

ANTIOCHUS (4) IV (EPIPHANES) (c. 215–163 B.C.), third son of Antiochus III, became king in 175. The tradition about him is unfavourable, mainly because of his policy towards the Jews. He controlled Judaea firmly (if tactlessly), because it was strategically important as a frontier province; and he wished to hellenize the Jews, because he believed in hellenization in general. But the result, apparent only after his death, was to stimulate and revive Jewish nationalism. Despite his reputation for eccentricity, Antiochus was probably a sound statesman: his policy of urbanization, especially in the East, represents a notable achievement at this date. His Egyptian war (169–168), 'preventive' in motive, could certainly have achieved the annexation of Egypt, had Rome not intervened. Finally, the Eastern expedition, on which he met his death, shows that he was alive to the nascent danger from Parthia.

G. T. G.

ANTIOCHUS (5) V (EUPATOR) (c. 173–162 B.C.), son of Antiochus IV, reigned less than two years through the regent Lysias, and was put to death in Antioch when Demetrius I (q.v. 8) arrived from Rome to claim his throne.

G. T. G.

ANTIOCHUS (6) VI (EPIPHANES DIONYSUS) (c. 148–138 B.C.), son of Alexander (q.v. 10) Balas and Cleopatra Thea (daughter of Ptolemy VI). In the revolt at Antioch against Demetrius II (q.v. 4) he was put forward by the general Diodotus (later called Tryphon) as heir to the throne formerly usurped by his father. Tryphon soon deposed (142) and later killed him (138).

G. T. G.

ANTIOCHUS (7) VII (SIDETES) (c. 159–129 B.C.), second son of Demetrius I (q.v. 3) of Syria, succeeded his brother Demetrius II, who had become a prisoner in Parthia (139). Able and energetic, he quickly defeated and killed the pretender Tryphon in Antioch (138), reconquered Palestine (135–134), and temporarily recovered Babylonia from Parthia (130). But his eventual defeat and death in battle against the Parthians brought about the final loss of the Seleucid provinces in the East.

G. T. G.

ANTIOCHUS (8) (HIERAX) (c. 263–226 B.C.), second son of Antiochus II and Laodice, became independent ruler of Seleucid Asia Minor when his brother Seleucus II was occupied with the 'Third Syrian War' (246–241). He defeated Seleucus' attempt to recover Asia Minor ('War of the Brothers', c. 239–236), allying himself with traditional enemies of the Seleucid House, Pontus, Bithynia, and Galatians. This last alliance, however, embroiled him with the rising power of Attalus I of Pergamum, who drove him from Asia Minor (236–228). After an unsuccessful attempt to raise Syria and the East against Seleucus, he became an exile (227), and died by violence in Thrace.

G. T. G.

ANTIOCHUS (9) of Syracuse, Greek logographer of the fifth century B.C., author of a history of Sicily in Ionic, reaching from Cocalus to 424 B.C., and of Italy. His style, according to Strabo (p. 254), was simple and old-fashioned. See HISTORIOGRAPHY, GREEK, para. 2.

FIG I. 181-4.

J. D. D.

ANTIOCHUS (10) of Ascalon (b. c. 130-120 B.C.), founder of the 'fifth Academy', became the pupil, at Athens, of Philo (q.v.) of Larissa and of the Stoic Mnesarchus. In 88 he accompanied Philo to Rome, and made the acquaintance of L. Lucullus. He had probably already reacted against the teaching of Philo, and he soon abandoned the Scepticism of the Middle and New Academy and reverted to the teaching of the Old Academy. He was head of the Academy at Athens in 79-78, when Cicero attended his lectures. He joined Lucullus again at the time of the Second Mithridatic War (73), and died about 68. His doctrine was an eclectic one in which he maintained the essential agreement of the Academic, Peripatetic, and Stoic philosophies; in spite of lack of originality he had much influence. Cicero quotes him frequently.

PW i. 2493. H. M. Strache, *D. Eklektizismus v. Antiochos v. Askalon* (1921).

W. D. R.

ANTIOCHUS (11) of Athens (not later than A.D. 300), author of a popular compilation of astrological lore.

Ed. A. Olivieri, *Cat. Cod. Astr.* i. 108, and F. Boll, *ib.* vii. 128. PW i. 2494 and Suppl. 4. 32.

ANTIOPE (*Ἀντιόπη*), in mythology, daughter of the river Asopus (Od. 11. 260) or Nycteus, king of Boeotia (tragedians, especially Euripides, see schol. ad loc.). Her story has come down chiefly through Euripides' tragedy *Antiope*, now lost (see AMPHION). Zeus loved her and approached her in the form of a satyr (Ov. *Met.* 6. 110; Nonnus, *Dion.* 16. 243). She then fled from her father to Sicyon, where she married Epopeus; Nycteus, dying by his own hand, bade his brother Lycus punish her. He attacked Sicyon, killed Epopeus, and carried Antiope off. Either then (Apollod. 3. 43), at Eleutherae, or before meeting Epopeus (Hyg. *Fab.* 8. 2) she bore her twin sons. Lycus and his wife Dirce put her in a dungeon and tormented her till at length she escaped; see further AMPHION.

H. J. R.

ANTIPATER (1) (*Ἀντίπατρος*) (397-319 B.C.), Macedonian general. He was one of Philip II's right-hand men in war and in diplomacy; in 347-346 he helped to negotiate the peace between Philip and Athens. After Philip's death he aided Alexander in the struggle for the succession, and during Alexander's absence in the East he was governor of Macedonia and 'general of Europe' (334-323). He made himself disliked in Greece by giving support to oligarchs and to tyrants, but he obtained the assistance of the Greek League founded by Philip, when Agis III (q.v.) of Sparta organized rebellion against Macedon, and defeated him decisively at Megalopolis (330).

After the death of Alexander, Antipater was caught by surprise when the Athenians, Aetolians, and Thessalians rose in revolt, and had to sustain a siege in Lamia; but after the arrival of Macedonian reinforcements and a victory at Crannon he broke up the rebel league (323-322). He now imposed a more oligarchic form of government upon Athens and drove Demosthenes, whose surrender he demanded, to commit suicide. In 321 he joined a coalition of Macedonian generals against the regent Perdiccas, and after Perdiccas' death he obtained the regency from a conference of generals at Triparadisus in Syria. He remained a loyal servant of the Macedonian dynasty, and his death in 319 precipitated the break-up of Alexander's empire.

Diodorus, *hks.* 17-18, *par.* J. Kaerst, in *PH*, s.v. 'Antipatros'; Berve, *Alexanderreich* ii. no. 94.

M. C.

ANTIPATER (2) of Tarsus (2nd c. B.C.), Stoic, successor of Diogenes (q.v. 3) of Babylon as head of the school at Athens and teacher of Panaetius. He defended himself in many writings against the criticisms of Carneades, and committed suicide at a great age. His views differed little from those of Chrysippus. Named works: *Περὶ θεῶν*, *Περὶ μαντικῆς*. His definition of the end of life (Stob. *Ecl.* 2, p. 76, 11, ed. Wachsmuth) has some importance in the history of ethics.

Testimonia and fragments: in H. von Arnim, *SVF* iii. 244-58. PW i. 2515.

W. D. R.

ANTIPATER (3) of Sidon (fl. 130 B.C.), Greek epigrammatist, knew and influenced Q. Lutatius Catulus and other Republican poets (Cic. *De Or.* 3. 194). The Greek Anthology contains about seventy-five of his epigrams—mostly artificial epitaphs and epideictic pieces. With his passion for rhetorical effect, he occasionally strikes out a fine phrase, but he is usually trivial or strained. For his life and character, see Meleager (*Anth. Pal.* 7. 428).

P. Waltz, *de A. Sidonio* (1906).

G. H.

ANTIPATER (4) of Tyre (1st c. B.C.), who introduced Cato of Utica to the Stoic philosophy, died shortly before 44 B.C. Works: *Περὶ καθήκοντος*, *Περὶ κόσμου*, *Περὶ οὐσίας*, *Περὶ ψυχῆς*, *Περὶ γάμου*, *Περὶ γυναικὸς συμβιώσεως*.

PW i. 2516.

ANTIPATER (5) of Thessalonica (1st c. B.C.-1st c. A.D.), Greek epigrammatist, became in about 11 B.C. a client of L. Calpurnius Piso Frugi, the cultured statesman for whose sons Horace wrote the *Ars Poetica*. His latest datable poem belongs to the years A.D. 12-15. In the Greek Anthology there are about eighty of his epigrams—graceful, witty, and unimportant; his attitude to life and art closely resembles Ovid's.

C. Cichorius, *Römische Studien* (1922), viii. 6.

G. H.

ANTIPHANES (c. 388-c. 311 B.C. (Capps, *AJPhil.* xxi (1900), 54 ff.)), Middle Comedy poet (two poets, some think), of foreign birth, was granted Athenian citizenship by Demosthenes (Anon. *De Com.*); wrote many plays (?260, ?365), some to be read, others to be produced elsewhere than at Athens: about 120 titles are known, including *Ἀνθρωπογορία* (*POxy.* iii. 427). Many titles denote mythological burlesques (*Ἀδωνίς*, *Ἀφροδίτης γοῦνα*), some are from occupations (*Ἰατρός*, *Κιθαρωδός*, even *Τριταγωνιστής*) or characters (*Ἀγροίκος*, *Φιλοπάτωρ*), others are proper names (*Νεοττίς*, *Χρυσίς*), and a few are of unusual type—*Ποίησις* (fr. 191, comparison of Tragedy and Comedy), *Παροιμιαί* (introducing a character like Sam Weller, whose speech is lavish in proverbs), *Πρόβλημα* and *Σαπφώ* (both dealing in riddles, spoken in hexameters). Over 300 fragments survive, of varied content (fr. 1, parody of Sophocles; fr. 18, parody of Euripidean prologue; frs. 52, 182, ridicule of dithyrambic bombast; fr. 55, lesson in cottabos-playing; fr. 85, contempt for old-fashioned poetry; fr. 122, on the Lyceum; frs. 124, 169, references to Philip of Macedon and Demosthenes; fr. 221, cynical humour at the expense of matrimony; fr. 304, speech frozen in winter, thawed out in summer).

FCG iii. 3 ff.; CAF ii. 12 ff.

W. G. W.

ANTIPHATES, in mythology, king of the gigantic Laestrygonians in the *Odyssey* (10. 106). On Odysseus sending three of his crew to inquire who the people are, he kills one for his dinner, the others escaping. His people then destroy all Odysseus' fleet save his own ship.

H. J. R.

ANTIPHILUS of Byzantium (1st c. B.C.-1st c. A.D.), Greek epigrammatist, can be dated by his poem on Tiberius' retirement to Rhodes (5 B.C.-A.D. 2) in *Anth. Pal.* 9. 178. He has about fifty poems in the Greek

Anthology, more than half of which are rhetorical paradoxes, or descriptions of queer accidents in which the hunter is caught or the biter bit. But three or four (c.g. 9. 71, 546) are vivid and forcible. In his love of point and surprise, he was a direct predecessor of Martial.

K. Prinz, *Martial u. das griech. Epig.* (1911); K. Müller, *Die Epig. des Antiphilos v. Byzanz* (1935). G. H.

ANTIPHON (1) (c. 480–411 B.C.), the Attic orator. A man of strong aristocratic prejudices, he never, or very seldom, appeared in court or spoke in public, but gained a great reputation by speeches composed for others. He suddenly came to the front in 411 B.C. as the brain of the oligarchic conspiracy, and was the leader of the extremists against the moderate counsels of Theramenes. He went with Phrynichus and eight others to negotiate peace with Sparta in the hope of obtaining support for the oligarchs. The mission failed, and the murder of Phrynichus was followed shortly by the fall of the Four Hundred and the flight of the leaders to Decelaea. Antiphon and Archepolemus remained, and were tried, condemned, and executed. A. delivered, in his own defence, the finest speech of the kind which had ever been heard (Thuc. 8. 68). When congratulated by Agathon on its brilliance, he replied that he would rather have satisfied one man of good taste than any number of common people (Arist. *Eth. Eud.* 1232^b7).

2. **WORKS.** The *tetralogies* are oratorical exercises designed to show in outline how speeches should be composed both for attack and defence. Each set contains (a) the prosecutor's opening speech, (b) the first speech for the defence, (c) the prosecutor's reply, and (d) the defendant's conclusion. *First Tetralogy*: a murder case tried before the Areopagus. *Second Tetralogy*: a boy has been accidentally killed by a javelin in the gymnasium, and the boy who killed him is charged with murder. *Third Tetralogy*: an old man, assaulted by a young man, has died of his wounds. *The Murder of Herodes* deals with a real case. Herodes and the accused were on a voyage together; one night H. went ashore and disappeared; later, his companion was accused of murder. It is possible that the charge was trumped up to injure the defendant's father, who was unpopular in Mytilene on political grounds (§§74–80). *On the Choreutes* (c. 412 B.C.), defence of a *choregus* who has accidentally caused the death of a boy singer by giving him a drug to improve his voice. *Against a Stepmother*: a young man accuses his stepmother of having employed a slave-woman to poison his father. This may be a rhetorical exercise. A few fragments of other speeches survive; some of these may be the work of Antiphon (2), the sophist.

3. When Antiphon began to write there was no tradition of prose style in the Attic dialect. His contemporary Gorgias wrote in Attic, but his influence cannot have been much felt before 427 B.C., when he first visited Athens. A., then, was free to make experiments. The result was a style which, though crude at times, is always vigorous and precise. He was the first of extant writers to pay careful attention to 'periodic' expression, as opposed to the 'running' style, which is more suitable to narrative than to argument. He indulges freely in antithesis both of word and of thought, and is able to join together clauses so neatly balanced that they correspond even in the number of syllables. In vocabulary, he avoids colloquialisms, and has some partiality for poetical words. Some of the peculiarities of Thucydides may be traced to his influence.

4. He established a standard form of structure—an introduction, describing the circumstances of the case; a narration of the facts; arguments and proofs, sometimes interspersed with evidence; lastly, a peroration.

5. His manner is as dignified as his style; he frequently appeals to divine law, which punishes the guilty even though he may escape human justice; he avoids persona-

lities, though in the *Herodes* the speaker exhibits a righteous indignation against his persecutors. He relies on *a priori* probabilities (arguments from character, etc.) at least as much as on the evidence of witnesses.

For general bibliography see ATTIC ORATORS. Text: Blass-Thalheim (Teubner, 1914). Text and Translation: Gernet (Budé). Index: F. L. van Cleef (U.S.A. 1895). J. F. D.

ANTIPHON (2) of Athens (5th c. B.C.), contemporary with Antiphon the orator and often confused with him, sophist and interpreter of dreams, mentioned by Xenophon and Aristotle as an opponent of Socrates. Works: *Ἀλήθεια, Περί ὁμολογίας, Πολιτικός, Περί κρίσεως δυνάμεων*.

Testimonia and frs. in Diels, *Vorsokr.* ii. 334–70. *PW* i. 2529. W. D. R.

ANTIPHON (3), tragic poet at the court of the Elder Dionysius of Syracuse, by whom he was put to death (Plut. *Quomodo adul.* 27; Philostr. *VS* i. 15. 3).

TGF 792.

ANTISTHENES (1) (c. 455–c. 360 B.C. (Diod. 15. 76)), son of Antisthenes of Athens and of a Thracian woman (Diog. Laert. 6. 1; Seneca, *Constant.* 18. 5), one of the most devoted followers of Socrates (Xen. *Symp.* 8. 4; *Mem.* 3. 11. 17). He was considered founder of the Cynic sect (Diog. Laert. 1. 15; 6. 13) and probably influenced the philosophy of Diogenes of Sinope, from whose nickname *ὁ κύων* the name of that sect is derived. He also influenced the doctrine of the Stoics.

The main principles of his philosophy were the following. Happiness (*εὐδαιμονία*) is based on virtue (*ἀρετή*). Virtue is based on knowledge and therefore can be taught. This is done through investigation into the meaning of words (*ὀνομάτων ἐπισκευή*). For he who knows the meaning of a word knows also the thing which it denotes. Whoever knows what virtue is cannot but act virtuously. Whoever has attained this knowledge can never lose it. Most pleasures (*ἡδοναί*) are treacherous and do not contribute to happiness. Only the pleasure which is the result of exertion (*πόνος*) is lasting and unobjectionable. The best government is that of the wise man.

He revered Heracles because he led a life of virtue and exertion, and considered Cyrus the model of a wise monarch. He preferred Odysseus to Ajax because he considered wisdom superior to brutal strength. He wrote dialogues (*Heracles, Aspasia, Cyrus, Protrepticus*, and others), interpretations of Homer, and fictitious orations (*Ajax, Odysseus*).

Antisthenis fragmenta coll. A. W. Winckelmann (1842); Diogenes Laertius 6. 1–19; F. Dümmler, *Antisthenica* (1882); K. v. Fritz, *Hermes* lxii. 453–84; *Rh. Mus.* N.F. lxxiv (1935), 19–45; R. Dudley, *A History of Cynicism* (1937), 1–16; F. Sayre, *Diogenes of Sinope* (1938), 48–70; *PW* i. 2538. K. von F.

ANTISTHENES (2) of Rhodes (fl. early 2nd c. B.C.), wrote *Διαδοχαὶ φιλοσόφων*; also a history, perhaps of Rhodes, down to his own time (used by Polybius via Zeno).

FHG ii. 174–83.

ANTISTIUS (1) **VETUS**, GAIUS (1st c. B.C.), under whose father Cacsar had served in Spain, became Caesar's quaestor (date uncertain). In 45 B.C. in Syria he opposed Caecilius Bassus, but in 44 he joined the Liberators. He was legate of Octavian against the Salassi (c. 34), *cos. suff.* (30), and legate in Spain, perhaps as governor of Hispania Citerior (26–24).

*PIR*², A 770; R. Syme, *The Roman Revolution* (1939), see index. A. M.

ANTISTIUS (2) **LABEO**, MARCUS (d. before A.D. 22), one of the most prominent Roman jurists, lived in the time of Augustus. Of plebeian extraction, he was by political conviction a republican; his official career

ended with the praetorship, for he refused the consulate offered to him by Augustus. In his legal work he showed great independence of mind and was a bold innovator ('*plurima innouare instituit*'). His learning was enormous: besides mastering his special branch of knowledge, to which he was introduced by his father (who was also a jurist), and by other teachers, including Trebatius Testa and some of the disciples of Servius Sulpicius (qq.v.), he was expert in dialectics, in the history of Latin language and grammar, and in philosophy. Gellius (13. 10. 1) emphasizes his knowledge of ancient Roman literature. Labeo was a voluminous writer: it was his practice to spend six months in every year with his pupils in Rome, and to devote the remainder of the year to writing in the country. He is said to have written about 400 volumes (Pompon. *Dig.* 1. 2. 2. 47). We know from the citations by other jurists the titles of the following works of L.: *Pithana* (collection of decisions on individual cases, very instructive); *Responsa*; *Epistulae*; a large treatise *De Iure Pontificio* (15 books); a commentary to the Praetor's Edict. After his death his posthumous works, *Posteriora* (at least 40 vols.) were published. These are known only by quotations in other jurists, and by a large Epitome made by Javolenus (q.v.) and freely excerpted by the compilers of the *Digest*.

He was a contemporary of Ateius Capito (q.v.), and if Pomponius' account is true, it was the political and personal antagonism between them which originated the schools of jurists named later *Sabiniani* and *Proculiani*. Labeo enjoyed a high reputation not only with his contemporaries but also with the best jurists of the classical epoch. It is notable that a leader of the Sabinians published an edition of his posthumous works, though he was a precursor of the opposite school.

A. Pernice, *M. Antistius Labeo* i (1873). O. Karlowa, *Röm. Rechtsgeschichte* i. 677 ff. (1882). P. Krüger, *Gesch. der Quellen des röm. Rechts* (1912), 154 ff. A. B. & J. W. D.

ANTISTHIUS (3) VETUS, Lucius (d. A.D. 65), consul with Nero in A.D. 55, was legate of Germania Superior (55-6) and planned to connect the Rhine with the Rhône. In 62 he vainly urged his son-in-law Rubellius Plautus to take up arms against Nero. Proconsul of Asia (c. 64), he anticipated condemnation by suicide (65). He is perhaps the writer who was source for Pliny, *HN* 3-6.

ANTIUM (modern Anzio), roadstead of Latium. Legends envelop its origin, but apparently it was Latin in the sixth century B.C. (Dion. Hal. 1. 72; Polyb. 3. 22). Shortly thereafter Volsci captured it, and for 200 years Antium was apparently the principal Volseian city. Most fifth-century records concerning it, including the record of the Latin colony in 467, are untrustworthy: the notorious annalist Valerius Antias hailed from here. But in the fourth century it was the centre of Volseian resistance to Rome, that ended only when Maenius (q.v.) captured the Antiate fleet and made possible the establishment of a citizen colony, 338 (Livy bks. 2-8; Dion. Hal. bks. 4-10). Antiate pirates, however, continued active even after 338 (Strabo 5. 232). After being sacked by Marius, Antium became a fashionable resort with celebrated temples (App. *BCiv.* 1. 69; 5. 26; Hor. *Carm.* 1. 35). Caligula and Nero were born here and, like later emperors, patronized the town (Suet. *Calig.* 8; *Ner.* 6). Antium nevertheless gradually declined. A pre-Julian calendar, ruined villas, and famous *objets d'art* like the Apollo Belvedere have been found here.

K. Lehmann-Hartleben, *Antiken Hofenanlagen des Mittelmeeres* (1923), 190. E. T. S.

ANTONIA (1) (b. between 54 and 49 B.C.), daughter of the triumvir M. Antonius and Antonia. She was promised to the son of the triumvir Lepidus, but in 34

married the rich Pythodorus of Tralles. Her daughter Pythodoris married Polemo I, king of Pontus.

Mommsen, *Eph. Epigr.* i. 270; ii. 263. Drumann-Groebe, *Gesch. Roms* i². 380. A. M.

ANTONIA (2) MAJOR (b. 39 B.C.), eldest daughter of M. Antonius and Octavia, was the wife of L. Domitius Ahenobarbus. Her son, Cn. Domitius, was Nero's father. Tacitus (*Ann.* 4. 44; 12. 64) calls her Antonia Minor.

PIR¹, A 884.

A. M.

ANTONIA (3) MINOR (36 B.C.-A.D. 37), younger daughter of M. Antonius and Octavia, married the elder Drusus (c. 16 B.C.), and refused to marry again after his early death. She gave information to Tiberius leading to the discovery of the conspiracy of Sejanus. Gaius (Caligula) at first conferred numerous honours upon her, but later appears to have resented her interference (though the charge that he drove her to suicide is at least doubtful). Her children were Germanicus, Livilla, and Claudius (later emperor).

Josephus, *AJ* 18. 6; Plutarch, *Antony* 87; Dio Cassius 51, 58-60, and 66. G. W. R.

ANTONIA (4), daughter of Claudius and Aelia Paetina, married in A.D. 41 Cn. Pompeius Magnus and afterwards Faustus Cornelius Sulla. Her first husband was put to death by Claudius, the second by Nero. She was killed some months after the Pisonian conspiracy, in which her complicity is doubtful. That her refusal to marry Nero after Poppaea's death caused her condemnation is improbable.

PIR¹, A 886.

A. M.

ANTONINIANUS (coin), *see* AURELIUS (2), COINAGE, ROMAN, para. 15.

ANTONINUS LIBERALIS, mythographer, probably of Antonine times, published a *Μεταμορφώσεων συναγωγή*, based on Hellenistic sources, e.g. Nicander.

Text. E. Martini, *Mythographi graeci* ii. 1, p. 61; E. Oder, *De Antonino Liberali* (1886).

ANTONINUS PIUS (*Titus Aurelius Fulvus Boionius Antoninus*) (A.D. 86-161), born at Lanuvium, was son of Aurelius Fulvius (of consular stock settled originally at Nemausus) and Arria Fadilla (also of provincial but consular descent). He adopted a senatorial career, serving as quaestor and praetor and (in 120) as consul; already he had married Faustina (q.v. 1). Appointed *IVvir consularis*, he administered this legal office in Etruria and Umbria, where he owned much property. Proconsul of Asia between 133 and 136, he gained fame for his integrity, and afterwards joined Hadrian's *consilium*. Scrupulous, loyal, and gentle, he thus earned the respect of Hadrian, who, on the death of L. Aelius (q.v.), proposed him as successor. Antoninus was adopted by Hadrian (138), himself adopting both M. Annius Verus (= M. Aurelius, q.v.), Faustina's nephew, and L. Ceionius Commodus (= L. Verus, q.v.), son of Aelius. During Hadrian's last months, Antoninus, now holder of proconsular and tribunician power, was virtual ruler: his authority and modest arguments equally secured Hadrian's consecration. The succession (10 July 138) was smooth: the Senate conferred on him the title 'Pius' (devout), and that of 'Augusta' on Faustina. The title 'Pater Patriae', refused at first, he accepted in 139, with the consulship (afterwards held in 140 and 145).

2. His policy was unsensational, but beneficent and mildly progressive. Accession-gifts were remitted entirely for Italy, and as to one-half for the provinces. Italy (with its opportunities for a country gentleman's life) claimed, with Rome, his chief attention, and returned to senatorial control with the removal of the *IVviri consulares* (S.H.A. *M. Ant.* 11. 6). Completely deferential

to the Senate (of which no member was put to death), he nevertheless conceded it no new powers, and used his advisory *consilium* on all matters. General administration was increasingly centralized: rotation of office became slower, good officials (at home and abroad) remaining unchanged for years; and permanent home-officials were *consiliarii*. Imperial control of jurisdiction continued, with experts to assist.

3. Antoninus dispensed nine 'liberalities' (to a total of 800 *denarii* a head); founded the 'Puellae Faustinae' to commemorate Faustina (died 140-1); lightened the provincial burden of Imperial Posts; helped many communities financially; and carried out much public building. But he cut down unnecessary public expenditure, and at his death left 675 million *denarii* in the Treasury (Dio Cass. 74. 8. 3). Modest and plain-living himself, he disciplined both freedmen and imperial procurators. Confiscation was rare, judicial clemency frequent.

4. Foreign affairs, though Antoninus' influence encouraged peaceful settlement, were uneasy. About 140-1 the British frontier was advanced (see WALL OF ANTONINUS); but the Brigantes were later to revolt. A restive Germany was further insulated by settling Britons in the Neckar lands. Revolt in Numidia and Mauretania (c. 145-50) was followed by Jewish and Egyptian risings. Dacian trouble (c. 158) caused the tripartition of the province under procurators (159). Kings were assigned to the Colchian Lazi; to the Quadi; and to the Armenians, whom Parthia was warned to leave untouched, though hostilities occurred later (ILS 1076); and Abgar of Edessa was admonished for aggressive conduct.

5. With the succession assured, and himself—another Numa—high in respect, Antoninus quietly developed the centralization of government, relying chiefly on a friendly Senate. Rome and Italy (which he perhaps never quitted as emperor) were the focus of his *pietas*; and his medallions (struck 140-4) advertising the coming 900th anniversary of Rome (147) show his conception of Rome's spiritual ascendancy. He died at Lorum on 7 March 161, entrusting the State to M. Aurelius. Deified by universal accord, he received all the usual honours.

BIBLIOGRAPHY

I. ANCIENT SOURCES. (a) *Literary authorities*: The account of Antoninus in *Historia Augusta* is uncritical. Minor references in Aurelius Victor and Eutropius; and fragments of Dio Cassius bk. 70. The *Meditations* of M. Aurelius and Fronto's *Letters* contain frequent allusions to Antoninus.

C. H. V. S.

ANTONIUS (1), **MARCUS** (143-87 B.C.), was praetor in 102, consul in 99, and censor in 97. In 102 he made a preliminary drive against the pirates off the south coast of Asia Minor and established the province of Cilicia (q.v.). At Rome he gave support to the *Optimates* and opposed the party of Saturninus; he perished in the Marian massacres. Antonius was also a distinguished orator. Eschewing Greek refinements and appeals to emotion, he carried his point by sharp reasoning and skilful marshalling of his argument. None of his speeches has been preserved.

Cicero, *Brutus*, 139-42.

M. C.

ANTONIUS (2) '**CRETICUS**', **MARCUS** (d. c. 72 B.C.), son of (1) and father of the triumvir. He shared his son's amiable disposition and spendthrift habits. As

praetor in 74 B.C. he was invested with a general commissio (*imperium infinitum*) on sea against the Mediterranean pirates, but showed none of the organizing ability which his task required. After some heavy requisitioning in Sicily he operated off the coasts of Liguria and Spain, where he perhaps assisted Pompey by cutting Sertorius' sea communications (74-73). Leaving the west Mediterranean still exposed to pirate raids, he made further severe requisitions in the Aegean area, only to sustain an ignominious defeat in a pitched battle against the pirates of Crete (72). He died of illness shortly afterwards.

P. Foucart, *Journal des Savants* 1906, 569 ff.

M. C.

ANTONIUS (3) **HYBRIDA**, **GAIVS**, son of M. Antonius (1), a notorious spendthrift. Expelled from the Senate in 70 B.C., he stood for the consulship of 63 in association with Catiline. He was elected with Cicero, who won over his colleague from Catiline by surrendering to him the province of Macedonia. After Catiline's flight to north Italy, A. took over the troops in Etruria, but was not present at the final battle near Pistoria.

Antonius' inglorious record in Macedonia led to his trial for misgovernment (59). Despite Cicero's defence he was condemned. Recalled from exile by Caesar, he was censor in 42.

J. M. C.

ANTONIUS (4), **MARCUS** (c. 82-30 B.C.), 'Mark Antony' the triumvir, eldest son of Antonius (2) Creticus, was born probably in 82 B.C. After a dissipated youth he distinguished himself as a cavalry commander under Gabinus in Palestine and Egypt (57-55), and subsequently joined Caesar's staff in Gaul, where he served his quaestorship in 51. As tribune in 49 he defended Caesar's interests in the Senate, joining him at Ravenna before the outbreak of the Civil War and taking part in the campaigns in Italy and Greece. He had been left in charge of Italy in 49, and was sent back as Caesar's representative after Pharsalus, being appointed *magister equitum*. Probably because of a temporary estrangement, he took no part in the Dictator's last campaigns, but in 44 he was his colleague in the consulship. After the Ides of March he at first adopted a conciliatory attitude towards the Liberators, but he made an unscrupulous use of Caesar's papers, and his recruiting of armed supporters, followed by the irregular enactment of a law which gave him Cisalpine Gaul and Gallia Comata for five years (June), caused general apprehension. Decimus Brutus was supported in his refusal to surrender Cisalpine Gaul by the Senate and Octavian (with whom Antony had quarrelled), and Antony was compelled by reverses at Forum Gallorum and Mutina (April 43) to retreat to Gallia Narbonensis. He was joined there, however, by the governors of the Western provinces (Lepidus, Pollio, and Plancus), and subsequently reconciled with Octavian.

2. By the *Lex Titia* (November 43) Antony, Lepidus, and Octavian were appointed *Triumviri Rei Publicae Constituendae* for five years. The proscription of their political and personal enemies in Rome was followed by the defeat of Brutus and Cassius at Philippi (42), where Antony established his reputation as a general. He then proceeded to Asia Minor (41), met Cleopatra at Tarsus, and spent the following winter in Egypt. His brother's defeat in the Perusine War compelled him to return to Italy in 40, but a new agreement was reached at Brundisium, by which he received the Eastern provinces (east of Illyricum) and married Octavian's sister Octavia. He left for the East after the treaty of Misenum (39), but met Octavian again at Tarentum in 37, when they agreed to renew the Triumvirate for another five years. In 36 Antony's expedition against the Parthians ended in a disastrous retreat. At the end of 37 he had again met Cleopatra, and in 35 he offended Octavian by forbidding

Octavia to visit him. In 34 he annexed Armenia on the pretext of the king's desertion in 36, and celebrated a triumph at Alexandria. His conduct there and his donations of territory to Cleopatra and her children had alienated many of his supporters, and in 32 Octavian induced the Senate to deprive him of his authority and declare war on Cleopatra. Decisively defeated at Actium (31), Antony attempted to defend Egypt, but the general defection of his governors in the Eastern provinces made his cause hopeless. He committed suicide before Octavian's entry into Alexandria (30).

3. Of fine physique, and with a constitution which excesses and hardships alike failed to ruin, Antony was a natural soldier, and his courage, affability, and generosity made him a great soldiers' leader. As a politician, though by no means unskilful, he was sometimes led into serious errors by his irascible temper and self-will.

4. Antony was married four times: (1) to Fadia, (2) to Antonia, (3) to Fulvia (c. 46), and (4) to Octavia (40). He left three daughters and two sons (Antyllus and Iullus Antonius). If he contracted a formal marriage with Cleopatra it was not valid in Roman law. She bore him three children: Alexander, Ptolemy, and Cleopatra.

Cicero, *Letters and Philippics*; Caesar, *BCiv.* bks. 7 and 8, *BCiv.* bks. 1 and 3; Velleius, bk. 2; Josephus, *AJ* bks. 14 and 15; Plutarch, *Antony*; Appian, *BCiv.* bks. 2-5; Dio Cassius, bks. 41-53. Modern literature: V. Gardthausen, *Augustus und seine Zeit* (1891); Drumann-Groebe, *Gesch. Roms* i; T. Rice Holmes, *Architect of the Roman Empire* i (1928); F. E. Adcock, M. P. Charlesworth, and W. W. Tarn, *CAH* ix and x; J. Kromayer, *Hermes* xxix, xxxi, xxxiii, xxxiv (1894 ff.). G. W. R.

ANTONIUS (5), GAIUS, second son of Antonius (2) Creticus and brother of the triumvir. As Caesar's *legatus* in 49 B.C. he was blockaded by a Pompeian fleet on the island of Curieta and taken prisoner. After his praetorship in 44 he set out for Macedonia, but was besieged and captured in Apollonia by M. Brutus (March 43). He tried to incite the troops of Brutus to mutiny and was executed by his order early in 42.

Cicero, *Letters and Philippics*; Caesar, *BCiv.* 3. 10 and 67; Plutarch, *Brutus*, 26 and 28; Appian, *BCiv.* bks. 2 and 3; Dio Cassius, bks. 41-7. Modern literature: Drumann-Groebe, *Gesch. Roms* i; Ganter, *Jahrb. f. Philologie* (1894). G. W. R.

ANTONIUS (6), LUCIUS, third son of Antonius (2) Creticus. He served his quaestorship in Asia in 50 B.C., and as tribune in 44 carried a law giving Caesar special powers in the appointment of magistrates, and an agrarian law under which he himself served as one of the commissioners. In the war of Mutina he was *legatus* to his brother Marcus. As consul in 41 he asserted the rights of his office against Octavian, and championed the Italians dispossessed by the latter's settlements of veterans. The ensuing civil war ended in the surrender of Lucius at Perusia (40). He was then sent as Octavian's *legatus* to Spain, where he appears to have died soon afterwards.

Cicero, *Letters and Philippics*; Josephus, *AJ* 14. 10; Appian, *BCiv.* bk. 5; Dio Cassius, bks. 45-8. Modern literature: V. Gardthausen, *Augustus und seine Zeit* i (1891); Drumann-Groebe, *Gesch. Roms* i; T. Rice Holmes, *Architect of the Roman Empire* i (1928). G. W. R.

ANTONIUS (7), MARCUS, 'Antyllus', the name given by the Greeks to Marcus Antonius, elder son of the triumvir and Fulvia. In 37 B.C. (at Tarentum) he was betrothed to Octavian's daughter Julia. He assumed the *toga virilis* after Actium and was put to death by Octavian after the capture of Alexandria. G. W. R.

ANTONIUS (8), IULLUS, second son of the triumvir and Fulvia, was praetor in 13 B.C., consul in 10, and probably proconsul of Asia. In 2 B.C. he was convicted of adultery with Julia, daughter of Augustus, and committed suicide. He married Marcella, niece of Augustus (21 B.C.), and had a son Lucius. G. W. R.

ANTONIUS (9) CASTOR, perhaps a freedman of M. Antonius, was one of the Elder Pliny's sources for botany (*HN* 25. 9).

M. Wellmann, *Hermes* lix (1924); *PIW* i. 2615.

ANTONIUS (10) MUSA, physician of Augustus, whom in 23 B.C. he cured of a serious illness. Apparently he was the first to introduce hydropathy at Rome. He wrote a work in several books on the properties of drugs. The extant works that pass under his name—*De herba botanica* and *De tuenda valetudine ad Maecenatem*—are spurious and later.

Ed. E. Howald and H. E. Sigerist, *CML* iv (1927); *PIW* i. 2633. W. D. R.

ANTONIUS (11) DIOGENES (c. A.D. 100), author of a fantasy in twenty-four books called *The wonderful things beyond Thule* (*Tὰ ὑπὲρ Θούλην ἀπίστα*), of which Photius' abstract is extant. The story, which in spite of a love interest is less a romance than an aretology, had little or no influence on the development of the Greek Novel.

Text: R. Hercher, *Erotici Scriptores Graeci* i (Teubner). See also NOVEL, GREEK. R. M. R.

ANTONIUS, see also FELIX, GNIPHO, GORDIAN, PALLAS, PRIMUS, SATURNINUS.

ANTYLLUS (2nd c. A.D.), physician, belonged to the pneumatic school; his chief contributions to medicine were in the sphere of dietetics, general therapeutics, and especially surgery. Works: *Περὶ βοθημάτων* (on medicine); *Χειρουργούμενα* (on surgery); *Περὶ ὑδροκεφάλων*: all lost except for frs. See SURGERY, para. 6.

PIW i. 2644.

W. D. R.

ANTYLLUS, see also ANTONIUS (7).

ANUBIS, originally one of several local gods of the dead in Egypt, is represented on the monuments as a jackal. In Hellenistic times his cult is both celestial and infernal and he is sometimes identified with Hermes under the name Hermanubis. He is an important member of the cult of the Egyptian deities only at Delos, though we know of a *thiasos* which worshipped him at Smyrna. In the Roman period he is represented at times as a soldier in armour. T. A. B.

ANYTE (fl. 290 B.C.), Arcadian poetess, is known from twenty charming Doric epigrams in the Anthology. Twelve are dainty mock-epitaphs on pet animals (a fancy which she invented); most of the others are little nature-lyrics filled with the quiet, pure emotion which characterizes the Peloponnesian school of epigrammatists. See EPIGRAM.

R. Reitzenstein, *Epigramm und Skolion* 123 (1893). G. H.

ANŶTUS (5th-4th c. B.C.), a wealthy Athenian and a democratic leader. General in 409 B.C., he failed to prevent the loss of Pylus, and is said to have escaped condemnation only by bribery. After the war, he was one of the restorers of democracy with Thrasybulus, proving himself an honest and moderate politician. Plato (*Meno* 90 f.) introduces him as a well-bred man, but a passionate enemy of the sophists. He probably did not belong to the circle of Socrates, as some sources hint. He became Socrates' chief accuser, less for private reasons than from an honest belief that he was doing the best for Athens. Accounts about his banishment and murder may be later inventions.

Protop. Att. 1324.

V. E.

AORNOS, the mountain stronghold between the Swat and Indus rivers captured by Alexander (327-326 B.C.), has been identified by Sir Aurel Stein with Pir-sar, north of Buner. Two great ridges, Pir-sar and Una-sar, converge at right angles; the 'rock' is Bar-sir on Pir-sar, cut off from the Una ridge (along which Alexander

attacked) by the Būrimār ravine (across which he constructed his ramp). The operations can only be understood from a map, which shows what a great feat of arms it was. 'Aornos' may represent Una (Unra).

Sir A. Stein, *On Alexander's Track to the Indus* (1929), chs. 17-22, with maps. W. W. T.

APAMEA, a city on the Orontes which replaced the Macedonian military colony of Pella. It was founded by Seleucus I, or perhaps Antiochus I. It was the capital of a satrapy and the military head-quarters of the Seleucid kingdom. A natural fortress, it was seized by Caecilius Bassus in 46 B.C. and endured a long siege. During the Principate it made only one issue of coins (under Claudius), but ruled a large territory; its citizen population numbered 117,000 under Augustus. Its ruins are being excavated (reports in *L'Antiquité classique* 1932, 1935-6). Apamea was the place where the Romans concluded a peace with Antiochus III (q.v.) in 188 B.C.

A. H. M. J.

APARCHE, votive gift to a god. The custom which is expressed by the Latin word *votum* (q.v.), that a gift is promised and given if a certain condition is fulfilled by the god, was common in Greece too (cf. *Il.* 6. 305 ff.); it is expressed by the word *εὐχή*. The words *ἀπαρχή*, *ἀκροθίνια* express the idea that a part of something gained is given to the god. Generally these gifts were understood as a *χαριστήριον*, thank-offering. Cf. *IG* i². 625 *εὐχολήν τελέσας σοι χάριν ἀντιδιδούς*.

H. Beer, *Ἀπαρχή und verwandte Ausdrücke in griechischen Weihinschriften* (Diss. München, 1914). M. P. N.

APATURIA, a festival characteristic of the Ionians (among the Dorians the Apellai (q.v.) corresponds to it). It is chiefly known from Athens, where it was celebrated by the phratries in the month of Pyanopsion (Oct.-Nov.). Its three days were called (1) *δορπία* (from a late meal), (2) *ἀνάρρυσις* (from the sacrifice of an animal), (3) *κουρεῶντις*. On this last day the children and young adult men and newly married wives were enrolled in the phratry. Three sacrifices are mentioned in connexion with this enrolling: the *μεῖον* (the lesser one) was probably brought on behalf of a child introduced into the phratry; the *κούρειον* (cf. *κουρεῶντις*) has its name from the shearing of the hair of the ephebes; the *γαμήλια* from the introduction of the newly married young women. See also under **AETHRA**.

L. Deubner, *Attische Feste*, 232 ff. Note above all the inscription of the phratry of the Demotionidae, *IG* ii². 1237 = *SIG*³ 921. M. P. N.

APELLA (*ἀπέλλα*; probably related to *Ἀπόλλων*), the Spartan Assembly, which retained many features of the Homeric *Ἀγορά*. Instituted, or at least defined, by the *Rhetra* of Lycurgus, it met once every month, and all Spartiatai (perhaps only on attaining the age of thirty) could attend. Summoned originally by the kings, it was later (? 6th c.) convoked and presided over by the ephors. It could merely consider proposals put before it by the ephors or the Gerousia. It expressed its opinion by acclamation, and if this seemed indecisive, by formal division.

Its functions were to decide disputed royal successions; to appoint military commanders; to elect ephors and other magistrates and members of the Gerousia; to decide on peace or war and the conclusion of treaties; and to approve the emancipation of helots. Any proposed change in the laws required its approval. Its authority was diminished—perhaps only temporarily—by the addition to the *Rhetra* ascribed to the time of Polydorus and Theopompus, empowering the kings and the Gerousia to set aside misguided decisions.

We hear also of a *μικρά ἐκκλησία* (Xen. *Hell.* 3. 3. 8) apparently convoked on urgent occasions, but its composition is uncertain.

Arist. *Pol.* 2. 11. 6 (comparison with Carthage); Plut. *Lyc.* 6. 7. 25. G. Busolt, *Griechische Staatskunde* (1926), 691 ff.; U. Kahstedt, *Griechischer Staatsrecht* i. 255 ff. A. M. W.

APELLAI. *Ἀπέλλα* is a Dorian word signifying assembly-place, assembly (see preceding article). In the plural it signifies a festival corresponding to the Athenian *Apaturia* (q.v.) at which the new members of the *gens* were introduced. The name of the month *Apellaios* proves that it was widely spread among the Dorians; otherwise it is only known through the inscription of the Labyadai at Delphi (*SIG*³ 438).

M. P. Nilsson, *Gesch. d. griech. Religion* i. 524.

M. P. N.

APELLES (4th c. B.C.), painter, of Colophon, later of Ephesus (sometimes called Coan because of the Coan Aphrodite). Pliny dates him 332 B.C. (by Alexander). He was taught first by Ephorus of Ephesus, then by Pamphilus (q.v.) of Sicyon. When in the Sicyonian school, he helped Melanthius to paint the victorious chariot of the tyrant Aristratus. He painted portraits of Philip, Alexander, and their circle, and a self-portrait. Anecdotes connect him with Alexander, Ptolemy, and Protogenes. He died in Cos while copying his Aphrodite, probably early in the third century.

SELECTED WORKS: 1. Aphrodite Anadyomene, in Cos, later in Rome. Aphrodite rising from the sea, wringing out her hair. 2. Alexander with the thunderbolt, in Ephesus. Alexander darker than nature so that the thunderbolt stood out. 3. Calumny, preceded by Envy, Intrigue, and Deception, and followed by Repentance and Truth, dragging her victim before a man with large ears, attended by Ignorance and Superstition. 4. Sacrifice, in Cos. Described by Herodas (4. 59). The tone of his pictures was due to a secret varnish. He wrote a book on painting; he claimed to know when to take his hand from a picture (contrast Protogenes), and that his works had charm, *χάρις* (contrast Melanthius).

Overbeck, 591, 1067, 1073, 1090, 1446-8, 1481, 1687, 1726, 1745, 1748-9, 1751, 1759, 1766, 1772, 1774, 1827-1906, 1921; Puhl, 801. T. B. L. W.

APENNINES, Italy's mountain backbone, branch off from the Alps near Genoa. At first they are of moderate height (3,000-4,000 ft.) and run eastwards forming the southern boundary of Cisalpine Gaul (Northern Apennines); then, near Ariminum, they turn south-east, follow the line of the Adriatic coast and attain great altitudes—9,560 feet at the Gran Sasso (Central Apennines); approaching Lucania they become lower again, swing south and occupy virtually all south-west Italy (Southern Apennines: the granite Sila mountains of the Bruttian Peninsula, although geologically distinct, are generally reckoned a prolongation of the limestone Apennines. Italy's volcanic mountains, however—Albanus, Vesuvius, Vultur—are independent of the Apennine system). The 800-mile Apennine chain is not continuous and unbroken, but consists of tangled mountain masses of varying width, interspersed with numerous upland passes and fertile valleys suitable for agriculture or summer pasturage. Offshoots are numerous, e.g. Apuan Alps (Liguria), Volscian Mountains (Latium); some are completely separated from the main range, e.g. Mons Garganus (Apulia). The Apennines feed most Italian rivers except the Po and some of its tributaries, but, not being perennially snow-capped, supply inadequate amounts of water in summer, when consequently the rivers become mere rills or torrent-beds. The Apennines contain numerous mineral springs but little mineral wealth. In antiquity their cheeses, wolves, bears, goats, extensive forests, and brigands were famous.

Polybius 2. 16; 3. 110 includes Maritime Alps in the Apennines; Strabo 2. 128; 5. 211; Lucan 2. 396-438; Varro, *Rust.* 2. 1. 5, 16; Pliny, *HN* 11. 240; 16. 197. C. S. du Rieu Preller, *Italian Mountain Geology* (1923). E. T. S.

APER, MARCUS, an advocate of Gallic origin who attained the praetorship. He apparently visited Britain, perhaps as *tribunus laticlavus*. Tacitus studied his rhetorical

methods, and in the *Dialogus* introduces him as a utilitarian defending lucrative court-oratory in the modern style as against poetry and the older fashions (Tac. *Dial.* 2; 5-10; 16. 5-23). G. C. W.

APEX, a sort of mitre worn by Roman *flamines* and some other priests, or more properly the top of it (Suetonius ap. Servius on *Aen.* 2. 683, 'apex proprie dicitur in summo flaminis pilleo uirga lanata, hoc est in cuius extremitate modica lana est'. The *virga* was a twig or spike of olive-wood (Festus p. 9. 30 Lindsay); the *lana* was a woollen thread, *apiculum*, with which apparently the spike was tied on (ibid. 21. 10). The lower part of the head-dress was the *galerus*; that of the *flamen Dialis* was called *albogalerus*, being made of the skins of white victims sacrificed to Jupiter (ibid. 9. 29; Varro ap. Gel. 10. 15. 32). This was a close-fitting conical cap (Varro, *Ling.* 7. 44). See K. A. Esdaile, *JRS* i. 213 ff.; Wissowa, *RK* 499. H. J. R.

APHAEA (*Ἀφαία*), a goddess worshipped in Aegina, where the ruins of her temple (famous for its pedimental sculptures, now in Munich) are still extant. She was identified with Britomartis (q.v.); Paus. 2. 30. 3; i.e. she was of similar character to Artemis (q.v.). H. J. R.

APHRODISIUS, SCRIBONIUS, a slave instructed by Horace's teacher, Orbilius, took up the subject of Latin orthography and passed strong criticisms on the work of Verrius Flaccus (q.v.). Scribonia, Augustus' first wife, freed him (Suet. *Gram.* 19).

APHRODITE, Greek goddess of love, beauty, and fertility. The meaning of the name is uncertain, though the Greeks, from Hesiod on (*Theog.* 188-206), derived it from *ἀφρός*, 'foam', and told of the birth of A. from the sea. She was worshipped throughout almost all of the Greek world; the sanctuaries at Paphos and Amathus in Cyprus, at Cythera, and at Corinth were especially renowned. To Homer she is 'the Cyprian', and it was probably from the meeting of Greek and Semite in Cyprus that A., who is certainly akin to Astarte and Ishtar, entered Greece, though the Hellenic goddess doubtless owes something to earlier Aegean divinities, such as Ariadne, whose cults she absorbed. Greek tradition consistently pointed to an Eastern origin for A. (cf. Hdt. 1. 105; Paus. 1. 14. 7), and it was from Cyprus that Adonis, the consort of Astarte-Aphrodite, was later to come to Athens. But the process of hellenization has already gone far in Homer, who makes A. the daughter of Zeus and Dione, and the wife of Hephaestus; Ares, in later myth her husband, appears in the lay of Demodocus (*Od.* 8. 266-366) as her paramour. Aeneas is her son by the Trojan Anchises (*Il.* passim; *Hymn. Hom. Ven.* 5), and she is ever the partisan of the Trojans (another hint of her non-Hellenic origin) but no warrior, and when she is wounded by Diomedes, Zeus reminds her that her sphere is not war but love (*Il.* 5. 428-9).

2. Primarily, she is a goddess of generation and fertility, and in poetry often seems little more than a personification of the sexual instinct and the power of love. Occasionally she presides over marriage, and the bearded A. of Cyprus seems to be an androgynous type arising from the marriage ritual (see HERMAPHRODITUS), but marriage was a domain largely pre-empted by Hera. Prostitutes, however, considered A. their patron (cf. Aphrodite *Πόρνη*, *Ἑταίρα*, Ath. 13. 572 e-573 a), and there was sacred prostitution (q.v.) in her cult at Corinth, but in general the public cult, at least, was staid and even austere.

3. The goddess of vegetation appears most clearly in Cyprus and wherever else Adonis (q.v.) was worshipped with A. Here too belong the cult names A. *ἡ Κίπριος*, A. *ἡ Θεία*, and her associations with the Charites, the Horae, and Eros (qq.v.) (cf. the sanctuary of Eros and A. *ἡ Κίπριος* on the north slope of the Acropolis, O. Broneer, *Hesp.* 1932, 1935). The powers of fertility are

generally chthonian (A. *Μελανίς*, Paus. 2. 2. 4; 8. 6. 5; 9. 27. 5; A. *Ἐπιτυμβία* at Delphi, Plut. *Quaest. Rom.* 269 b), and to this trait may be due her frequent association in cult with Hermes (q.v.).

4. Aphrodite was widely worshipped as a goddess of the sea and seafaring (A. *Ποντία*, *Εὐπλοία*). The armed A. (*ὤπλισμένη*) or goddess of war (A. *Ἀρεία*, *Στρατεία*) was worshipped in Sparta, Cyprus, Cythera, and elsewhere; this warlike character is probably a direct survival from her Oriental prototypes, and may also explain her associations, chiefly in myth, with Ares (q.v.).

5. Two very common titles are *Ὀὐρανία* and *Πάνδημος*, but the philosophical interpretation of these as representing intellectual and common love (Pl. *Symp.* 180 d-181; Xen. *Symp.* 8. 9-10) is unjustified. The title *Urania*, in fact, seems frequently a mark of the Oriental goddess, and was a cult name at Cyprus, Cythera, and Corinth. It was also applied to various foreign goddesses (e.g. the Scythian Argimpasa, Hdt. 4. 59; the Arabian Allat, Hdt. 3. 8; Venus Caelestis = Astarte at Carthage). Pandemus, on the other hand, the 'goddess of the whole people', represents the highest political idea to which A. attained, notably at Athens, but also at Erythrae, Thebes, Cos, and Megalopolis.

6. Apart from Hermes, A. has no strong associations in cult with the major Hellenic gods. Nor are her festivals, except in Cyprus, of great importance, though that at Delos, where A. has replaced Ariadne, was very ancient (Plut. *Thes.* 21; Callim. *Del.* 306-13), and several States had a month named for A. The myrtle and the dove are sacred to A. (cf. dove used for lustration of temple of Pandemus, *IG* ii². 659); the sacrifice of swine seems to mark the fertility cult and the presence of Adonis.

7. In the Hellenistic period the name 'Syrian A.' (on Delos A. *Ἀγνή*) designates Atargatis (q.v.).

8. The poets, as in the fragment of Aeschylus' *Danaides* and the magnificent exordium of Lucrctius, exalt A. as the cosmic generative force pervading all nature.

L. R. Farnell, *Cults of the Greek States* ii (1896), chs. 21-3; M. P. Nilsson, *Griechische Feste* (1906), 362-87; L. Preller-C. Robert, *Griechische Mythologie* (1894) i, 345-85. See VENUS. F. R. W.

APHRODITE IN ART. Greek art took several hundred years to achieve a truly individual vision of Aphrodite. Archaic art represents A. either in the Oriental type of a nude goddess or as a standing or seated figure distinguished only by attributes from other goddesses.

Classical art of the fifth century endows A. with majestic beauty and grave charm. The famous images by Phidias, Alcamenes, and Agoracritus (A. W. Lawrence, *Class. Sculpt.* 1929) are lost, but we can admire in originals the poetic charm of Aphrodite rising from the sea (Ludovisi Throne), the quiet dignity of Aphrodite on the swan (painted eup, London), the harmony of Aphrodite and Eros in the Parthenon frieze. An A. on a tortoise and an A. leaning on a pillar reflect monumental images of Periclean times (Schrader, *Phidias*, 1924).

"The finest statue not only of Praxiteles but of the whole world is the Aphrodite for the sight of which many had sailed to Cnidos", says Pliny. Carved about the middle of the fourth century and known through Roman copies, this statue showed the goddess laying her garment on a hydria before taking a bath. The first convincing representation of the beautiful female nude, distinguished by an evasive charm, the Cnidian A. became a model for the numerous A.s of Hellenistic and Roman times. Of these the best known are A. of Cyrene, the popular Venus de Milo, the crouching A. by the Bithynian Doidalsas, the armed A. of Acrocorinthus, and the various types described as 'Venus Genetrix'.

Blinkenberg, *Knidia* (1933); A. W. Lawrence, *Later Greek Sculpture* (1927); O. Broneer, *The Armed Aphrodite* (1930); M. Bieber, *Kunst. Mitt.* 1933. G. M. A. H.

APHTHONIUS, AELIUS FESTUS (3rd c. A.D.), wrote four books *De Metris*, which now form the bulk of the *Ars Grammatica* of Marius Victorinus (ed. Keil, *Gramm. Lat.* 6. 31-173). This incorporation (not due to Victorinus himself) was effected before A.D. 400.

Cf. Teuffel, § 395; Schanz-Hosius, § 829.

J. F. M.

APICIUS, a proverbial gourmet under Augustus and Tiberius (Plin. *HN* 10. 13; Tac. *Ann.* 4. 1), committed his experience in *cuisine* to writing (Sen. *Helv.* 10. 8; schol. Juv. 4. 23). The *De Re Coquinaria* under his name was compiled some centuries later (C. T. Shuch, 1867; Giarratano and Vollmer, 1922).

J. W. D.

APICULUM, see APEX.

APION, son of Posidonius, a Greek (or Graeco-Egyptian) of Alexandria, pupil of Didymus, and successor to Theon as head of the Alexandrian school. He was later at Rome, under Tiberius and Claudius. He was nicknamed *Πλειστονίκης* (by himself), *cymbalum mundi* and *propriae famae tympanum* (by Tiberius and Pliny, Plin. *HN* Pref.), and, for his industry, *Μόχθος*. He wrote on Egypt (cf. Josephus, *Ap.*; and Gell. 5. 14. 10-30); he called up (so he said) Homer's spirit to ascertain the poet's parentage and birthplace, but published no account of the proceedings, and compiled, *inter alia*, an alphabetically arranged Homeric glossary, based, as was usual, on Aristarchus, and preserved only in fragments and in the derivative work of Apollonius Sophistes.

Fragment: *FHG* iii. 506-16. A. Ludwich, *Philol.* lxxiv (1917), 205; lxxv (1919), 90.

P. B. R. F.

APIS, the sacred bull worshipped in Memphis. His cult attained national prominence and under Ptolemaic and Roman rulers official recognition was given to it and to the feast-days connected with it. When the sacred animal died, a successor was chosen and the dead beast was mummified and entombed during a period of sorrow and fasting which lasted for seventy days. Apis is mentioned a few times in Greek inscriptions as one of the gods included among the Egyptian deities, but his chief importance for Graeco-Roman religion lies in the fact that the cult of Sarapis (q.v.) originated in the worship of the Osirified (see OSIRIS) Apis bulls entombed in the temple at Memphis.

T. A. B.

APODEKTAI, a board of ten officials at Athens, who received all the moneys from the revenue-collecting departments and paid them over to the spending departments, under the supervision of the Boule. They were instituted by Cleisthenes; from the time of Pericles they were appointed by lot.

APOLLINARIS, see SIDONIUS, SULPICIUS (4).

APOLLO (Ἀπόλλων, Epic also Ἀππόλλων or Ἀπόλλων, as *Il.* 1. 14), the most Greek of all gods, in art the ideal type of young, but not immature manly beauty. His functions are especially music, archery, prophecy, medicine, and the care of flocks and herds; with agriculture he has much less to do. He is often associated with the higher developments of civilization, approving codes of law (as *Hdt.* 1. 65. 6), inculcating high moral and religious principles (as *id.* 6. 86. 15; Aelian, *VH* 3. 44), and favouring philosophy (e.g. he was said to be the real father of Plato). In matters of ritual, especially of purification, his oracles are commonly regarded as the supreme authority. Politically, he is especially prominent in suggesting or approving schemes of colonization (Apollo Archegetes, q.v.). His cult was panhellenic and he is regularly spoken of with profound respect, some of the war-time plays of Euripides being an exception.

2. His name is of uncertain etymology, perhaps not Greek. Of his origin there are two principal theories.

(1) He comes from somewhere north of Greece. In support of this it is urged that his seats of worship are numerous and ancient in the north; the legendary Apolline people, the Hyperboreans (q.v.), are always thought of as northerners and are real enough to send yearly offerings to Delos which follow a route from the north (*Hdt.* 4. 33; cf. Farnell op. cit. infra, 99-100); and the ritual of the Stepteria points north also. (2) He is Asianic, for his title Ἀλκείος and the name of his mother Leto suggest Lycia and the Lyeian *Lada*; he has numerous connexions with that country and with the Oriental sacred number seven (e.g. his birthday is the seventh of the month, *Hesiod*, *Op.* 771); he is especially worshipped at Troy and warmly supports the Trojans in Homer. For a short selection of the literature on this question, which is yet undecided, see Rose, *Handb. of Gk. Myth.*, 158 n. 2; add Bethe, 'Apollon der Hellene', in *Arvidsson* (Göttingen, 1924).

3. It was conjectured as early as the fifth century B.C. (Euripides, fr. 781, 11-13 Nauck; Aesch. ap. [Erastosth], *Catast.* 24 is uncertain) that Apollo was the Sun, and this theory prevailed in Hellenistic and Imperial times and was for a while revived by modern scholars. It lacks, however, any real evidence (see Farnell, 136 ff.). It is more likely that the god's origins are to be sought in his titles of Nomios and Lykeios. If he was a god of herdsmen in wild country, it is highly probable that his interests would include archery, music, and medicine, and that he should be somehow connected with their worst enemy, the wolf, is equally reasonable; he can both send and stay that and other plagues. How and where he became a prophetic god is not known, but he is so from our earliest records.

4. Of his oracular shrines, Delphi was the chief, though others were important, notably Branchidae and Claros in Ionia, whereof the latter was particularly prominent in Hellenistic times. The method of divination was by possession, the medium (commonly female, as at Delphi) being filled with the god, or his inspiration (see further Farnell, 179 ff. and DELPHIC ORACLE). Of his ritual perhaps the most remarkable was the Delphic Stepteria, held every eight years. In this, a boy, apparently personating the god, was led to a hut near the temple, called the palace of Python (see below); this was set on fire; the boy went away into supposed banishment; and finally all concerned were purified at Tempe and came back by the traditional sacred route known as the Pythian Way (see Farnell, 293). The ancients regarded the ritual as a sort of play commemorating the killing of Python (see below). Delphi, through the enterprise of its clergy, became the nearest approach to a Vatican which Greece possessed, though it had no formal authority to enforce its advice. Delphic propaganda may be traced in the tendency to introduce Apollo as adviser, inspirer, etc., into any and every myth which contains a prophet or a prediction. Delphi claimed to be the centre of the world, the famous stone called the *omphalos* (navel) marking the very spot. In art, Apollo is often represented as sitting on this, but the actual seat of his medium, the Pythia, was a tripod, hence continually associated with Apollo and his oracles.

5. Apollo's earliest adventure (for his birth at Delos, see LETO) was the killing of Python, a formidable dragon which guarded Delphi (in the earliest version, the Homeric Hymn to the Pythian Apollo, 300 [122], it is a female and unnamed). He also killed Tityos, a giant who offered violence to Leto, *Od.* 11. 580. For other divine vengeance, see ALQADAE, NIOBE.

6. Of his many loves, the most famous was that for Coronis, mother of Asclepius (q.v.). For the adventures to which Asclepius' death led, see ALCESTIS. Very interesting is the tale of his unsuccessful rivalry with Idas (q.v.) for Marpessa. Another object of his affections was Cassandra (Alexandra), daughter of Priam. To win

her he gave her the gift of prophecy, but having received it she would not grant him her love. He could not recall his gift, but made it futile by causing her always to be disbelieved (Aesch. *Ag.* 1202 ff.). Somewhat similar, probably modelled upon this, is the story of the Cumaean Sibyl, as told by Ovid (*Met.* 14. 132 ff.). He bade her choose whatever she wished, and she asked to live as many years as she held grains of sand. But she forgot to ask for permanent youth, and, having denied him, received no more favours from him; hence she grew so old that she finally hung in a vessel, saying, when asked what she wanted, that she wished to die (Petronius, *Sat.* 48. 8; see Campbell Bonner in *Quantulacunque, Studies presented to Kirsopp Lake* . . . (U.S.A., 1937), 1 ff.). By Cyrene, granddaughter of the river Peneus, he became father of Aristaeus (q.v.); he was first attracted to her by observing her courage and prowess in hunting on Mt. Pelion, where she was fighting a lion bare-handed, and carried her off to that part of Africa which was afterwards named after her (Pind. *Pyth.* 9. 17 ff.; it was a foundation-legend of the colony of Cyrene, see L. Vitali, *Religione Cyrenaica* (1932), 107 ff.).

7. Apollo was usually impartial in politics, though he shows Troy great favour in the *Iliad*. His principal departures from this attitude were during the Persian Wars, when he was partial to the Persians, and the Peloponnesian War, when he was whole-heartedly of the Spartan faction, hence Euripides' attitude, see above.

8. In Italy, Apollo was introduced early, partly through Etruria (cf. the famous statue of him from Veii), partly direct from Greek settlements. Although now and then equated with native gods (as the deity of Soracte, *Aen.* 11. 785), he never had a generally accepted identification. At Rome his Republican cult seems to have been primarily that of a god of healing (the Vestals addressed him as *Apollo medice*, *Apollo Paean*, Macrobi. *Sat.* 1. 17. 15) and of prophecy (cf. SIBYLLA, QUINDECIMVIRI). He had a shrine, *Apollinar*, outside the Porta Carmentalis, and a temple was erected in consequence of the plague of 433 B.C. Augustus, who had a special devotion to him, partly owing to the nearness of the battle of Actium to one of his temples, erected a magnificent temple on the Palatine (thus receiving him *intra pomerium*), to which the celebrated library was attached. Thenceforward, under the Empire, Apollo Palatinus was in some sort the equal of Jupiter Optimus Maximus. See Wissowa, *RK* 293 ff. See also DELPHIC ORACLE, OMPHALOS; STONES, SACRED.

9. Besides the appropriate sections and articles of the handbooks and dictionaries of mythology, see, for the cult, etc., of Apollo, L. R. Farnell, *Cults of the Greek States* iv (1907), 98 ff., cited above as 'Farnell'; see also ARISTEAS (1).

H. J. R.

APOLLODOREANS (*Apollodorei*), followers of Apollodorus (q.v. 5) from Pergamum. He belonged to the older and stricter Attic school, and taught Octavian rhetoric (Suet. *Aug.* 89; Tac. *Dial.* 19). His followers are mentioned by Quintilian, *Inst.* 2. 11. 2; 3. 1. 18. They insisted on rigidly observing rhetorical rules and on retaining in order four indispensable parts of a legal speech, *prooemium*, *narratio*, *argumentatio*, *peroratio*, whereas their opponents, the Theodorean (q.v.), keen on political oratory, claimed that rules depended on circumstances and that *argumentatio* was essential. The Apollodorean method emphasized explanatory *narratio* (q.v.) in speeches (Sen. *Controv.* 2. 1. 36) and contrasted with that of the Theodorean, who did not think clearness and brevity always advisable (Quint. *Inst.* 4. 2. 32).

See M. Schanz, 'Die Apollodoreer und die Theodoreer', *Hermes* xzv (1892).

J. W. D.

APOLLODORUS (1) (5th c. B.C.), painter, of Athens. Pliny dates him 408 B.C., but he must have been painting by 430, if Zeuxis (q.v.) 'entered the door opened by

Apollodorus'. He was the first to represent appearance (*species*) and was known as *σκιαγράφος*. *Σκιαγραφία*, common in Plato for illusionistic painting, means primarily plastic shading by gradation of colour; on vases shading is not used for human figures until 425-400. Although only two of his pictures are mentioned, his importance was fully recognized in antiquity.

Overbeck, 1641-7; Pfuhl, 734; R. G. Steven, *CQ* 1933, 150; A. Rumpf, *JDAI* 1934, 10. T. B. L. W.

APOLLODORUS (2) of Gela. New Comedy poet, contemporary of Menander according to Suidas. He has been identified with Apollodorus (q.v. 3) of Carystus, but Pollux 10. 138 and inscriptional evidence (see E. Capps, *AJPhil.* xxi. 45) prove his separate existence.

FCG iv. 438 ff.; CAF iii. 278 ff.

W. G. W.

APOLLODORUS (3) of Carystus, New Comedy poet, more famous than Apollodorus (q.v. 2) of Gela, and sometimes referred to simply as Apollodorus. Apollodorus 'the Athenian comic poet' composed forty-seven dramas and won five victories (Suidas); probably Apollodorus of Carystus obtained Athenian citizenship. A contemporary of Posidippus, he produced his first play c. 285 B.C. *Ἐκρύα* was the original of Terence's *Hecyra*: *Ἐπιδικαζόμενος*, of Terence's *Phormio*. Terence frequently translated the Greek *verbatim* (Donatus)—evidence of his high opinion of the Greek poet. Fr. 5, the folly of war; fr. 7, whimsical humour.

FCG iv. 440 ff.; CAF iii. 280 ff. See E. F. Krause, *De Apollodoris Comicis* (1923); M. Schuster, *De Apollodoris Poetis Comicis* (1927).

W. G. W.

APOLLODORUS (4) of Alexandria, physician and scientist of the beginning of the third century B.C. His chief work, *Περὶ θηρίων ἢ λόγος θηριακός* (on poisonous creatures), was the primary source for all the later pharmacologists of antiquity (e.g. Numenius, Nicander, Hieracides of Tarentum, Sostratus, Aelian, Sextius Niger, Pliny, Dioscorides, Archigenes, Aemilius Macer). He seems also to have written a work *Περὶ θανάσιμων (ἢ δηλητηρίων) φαρμάκων*.

Frs. in O. Schneider, *Nicandrea*, 181 ff. PW i. 2895.

W. D. R.

APOLLODORUS (5) of Pergamum (c. 104-22 B.C.), rhetor who taught Octavianus and others at Rome. His *Τέχνη*, dedicated to C. Matius, was translated into Latin by C. Valgius Rufus; but his real influence was due to his oral teaching, which was challenged by Theodorus (q.v. 3) of Gadara. Both followed Hermagoras; but whereas to Apollodorus rhetoric was a science (*ἐπιστήμη*) with fixed rules, to Theodorus it was an art (*τέχνη*) with freer methods. This clash of theories, influenced by the opposition of Analogy and Anomaly in grammar, was keenly debated during the first century A.D. (see RHETORIC, LATIN, para. 3).

J. W. H. A.

APOLLODORUS (6) of Athens (b. c. 180 B.C.), pupil of Aristarchus, left Alexandria (c. 146 B.C.), perhaps for Pergamum, and later moved to Athens, where he remained until his death. He was a scholar of great learning and varied interests.

WORKS. 1. Chronological: *Χρονικά ἢ Χρονική σύταξις*, dedicated to Attalus II of Pergamum, was written in comic trimeters and dealt in considerable detail with successive periods of history, important incidents, philosophical schools, the life and work of individuals from the fall of Troy (1184 B.C.) to 144 B.C.; later it was continued, not certainly by A. himself, down to 119 B.C. 2. Mythological: *Bibliotheca* (*Βιβλιοθήκη*), a study of Greek heroic mythology. The extant work of this name, which presents an uncritical summary of the traditional Greek mythology, belongs to the first or second century A.D. 3. Theological: *Περὶ θεῶν*, a rationalistic account of Greek religion, much used by later writers. 4. Geographical: a commentary on the Homeric Catalogue of

Ships, an important work of scholarship based on Eratosthenes and Demetrius of Seepsis, and containing many quotations from poets and historians and many criticisms of earlier writers; Strabo found it a valuable source for books 8 to 10 of his *Geography*. The *Πῆς περίοδος* or *Περὶ γῆς*, a geographical guide-book in comic trimeters, was probably a later forgery. 5. Critical and exegetical: commentaries on Epicharmus and Sophron; these probably included a critical recension of the text. 6. Etymological: 'Ετυμολογίαι or 'Ετυμολογούμενα or Γλῶσσαι.

F. Jacoby, *FGH* ii. B. 244 and *Apollodori Chronik* (1902); [Bibliotheca], R. Wagner in *Mythographi Graeci*, i (1894), J. G. Frazer, with translation (Loeb, 1921); C. Robert, *De Apollodori bibliotheca* (1873); R. Münzel, *De Apollodori περὶ θεῶν libris* (1883). J. F. L.

APOLLODORUS (7) of Damascus, a Greek town-planner and architect who worked at Rome in the first century A.D. He planned the Forum of Trajan and designed, or supervised, the Basilica and Column of Trajan, and other adjacent architecture. When the temple of Venus and Rome was built by Hadrian, he advised that it should be raised on an artificial platform. He was banished by Hadrian in A.D. 129, and later put to death. For his surviving work on *Engines of War* see C. Wescher, *La Poliorcétique des Grecs* (1867), 137 ff.

H. W. R.

APOLLODORUS (8) of Seleucia on the Tigris, Stoic philosopher, the author of an *Ethics* and a *Physics* cited by Diog. Laert. 7. 102, 129; 125, 135. He also wrote logical works. Testimonia in H. von Arnim, *SVF* iii. 259-61.

PW i. 2894.

APOLLONIA was the name of several Greek towns. The chief of these was in Illyria, near the mouths of the rivers Aoüs and Apsus, with relatively easy communications across Mt. Pindus to Thessaly and Macedonia respectively. It was founded as a Corinthian colony by Periander (possibly with an admixture of Coreyraean settlers—Wade-Gery, *CAH* iii. 553 n.). It is rarely mentioned before the Hellenistic period, when it was acquired in turn by Cassander and by Pyrrhus as an outlet on the Adriatic. Its main importance was as a base for Roman expeditionary forces in the Balkans. First occupied by the Romans during the Illyrian War of 229 B.C., it was the starting-point of their Greek and Macedonian campaigns in the second century. After 146 it was one of the terminal points of the Via Egnatia (q.v.), and it was Caesar's head-quarters in the campaign of Dyrrhaeum (48). In 45-44 Caesar gathered an army at Apollonia for his Eastern campaigns, and at his death his grand-nephew Octavius was stationed there as a cadet.

M. C.

APOLLONIUS (1) **RHODIUS** (3rd c. B.C.) of Alexandria or less probably Naucratis, but generally called the Rhodian owing to his retirement to Rhodes. Born c. 295 B.C., A. was a pupil of Callimachus (*Vitae*, Suidas). According to *Vita* i (Mooney, p. 1) he turned late to writing poetry. This conflicts with the following statement of the same authority that A. gave a recitation of the *Argonautica* while still a stripling (*ἐτι ἐφηβον ὄντα*), was badly received, and retired to Rhodes, where he revised the poem, which then became famous. Unless *ἐφηβον* is here an error for *νεανίσκον*, a term used by Tzetzes (Kaibel, *CGF* 31. 13) to describe Callimachus' official position at the court, it is best to regard the story as a tendentious invention. At any rate, *POxy.* 1241, a list of Alexandrian librarians, establishes that A. held that post after Zenodotus and before Eratosthenes. *Vita* ii represents A. as being appointed librarian after his return from Rhodes, but this dating and Suidas' statement that A. succeeded Eratosthenes as librarian probably originate in a confusion with Apollonius the Eidograph, who is now known (from *POxy.* 1241) to

have followed Eratosthenes in this office. On the whole it is likely that A. succeeded Zenodotus as librarian c. 260, held the post till the accession of Euergetes in 247, and then retired to Rhodes, where he remained till his death. A.'s famous quarrel with Callimachus may have been caused not only by their differing about the type of Epic suitable to the age, but also by friction at the library, where Callimachus, who was never librarian, was presumably A.'s subordinate.

WORKS. *Verses.* In the fashion of the day A. wrote poems, from which a few hexameters survive, on the Foundation (*κτίσις*) of Alexandria, Naucratis, Caunus, Cnidos, Rhodes, possibly Lesbos. A poem called *Canobus* was in choliambics. Of his *Epigrams* only *Anth. Pal.* 11. 275, an attack on Callimachus, is extant. A.'s *magnum opus* was the *Argonautica*, narrating the *Argo's* voyage to Colchis by the Propontis and Black Sea (bks. 1-2), the winning with Medea's aid of the Golden Fleece (bk. 3), and the return by the Danube, Po, Rhône, Mediterranean, and northern Africa (bk. 4). At six places in bk. 1 the scholia cite the version of the *proekdosis* (= the first edition), but the differences from the present text are not important.

Apollonius' vocabulary is mainly taken from Homer, but in the Alexandrian manner he is continually varying and 'interpreting' the Homeric words and phrases. Indeed his greatest achievement as a stylist lies in this subtle adaptation of Homer's language to describe a new world of romantic sentiment. For the subject-matter it is evident that A. consulted a great number of authorities, and the excellent scholia record many of his sources. They include prose-chroniclers as well as poets. It is in fact this passion for completeness which ruins the artistic effect of all but the third book. There, however, in recounting the birth and progress of Medea's love for Jason, A. shakes off the trammels of his erudition and in his subtle and moving analysis of a young girl's first love, attended by many doubts and difficulties, rises to heights which none of his contemporaries, even Theocritus, ever equalled. For the rest A.'s *forte* lies in his similes, his descriptive powers, and on occasion his gift for suggesting atmosphere. His characterization is weak, Jason in particular being a colourless figure, and the poem lacks all unity except that inherent in the theme itself. Metrically A.'s hexameter follows Homer rather than Callimachus.

Prose. A. had some repute as a scholar. A tract of his *Against Zenodotus* is mentioned, also works on Archilochus, Antimachus, and Hesiod.

E. A. B.

APOLLONIUS (2) of Perga (c. 262-190 B.C.), called the 'great geometer' (Geminus ap. Eutocius), was born at Perga in Pamphylia. He spent a long time in Alexandria studying with the successors of Euclid during the reign of Ptolemy Euergetes (247-222). He visited Ephesus and Pergamum, where he stayed with Eudemus of Pergamum, to whom he dedicated the first three books of his *Comics* in a second and improved edition; the first edition in eight books he had presented, as he says, prematurely, to Naucrates, a geometer at whose instance he had taken up the subject. The fourth and remaining books were dedicated, after Eudemus' death, to King Attalus I (241-197 B.C.).

Of the *Comics* four books survive in Greek, and three more in Arabic; the eighth is lost. Serenus and (according to Suidas) Hypatia wrote commentaries on it; Pappus added a number of lemmas. Eutocius' commentary on the first four books is included in the definitive

edition of the Greek text by J. L. Heiberg (Teubner, 1891-3). The first important edition was the Latin translation of the first four books by Commandinus (Bologna, 1566) which included the lemmas of Pappus and Eutocius' commentary. The *editio princeps* of the Greek text is that of Edmund Halley (1710), which includes also a Latin translation of books 5-7 from the Arabic version by Thābit b. Qurra (826-901). [A fragment of book 5 (up to Prop. 7) was edited by L. Nix (Leipzig, 1889).]

Previous writers on conic sections had generated them from separate right circular cones, 'right-angled', 'acute-', and 'obtuse-angled' respectively. Apollonius was the first to produce all three from the most general cone, right or oblique; he expressed their fundamental properties in terms of the traditional 'application of areas'; hence the names *parabola* (παραβολή), ellipse (ἔλλειψις), and *hyperbola* (ὑπερβολή) first given to the curves by Apollonius. Books 1-4 he describes as an elementary introduction; books 5-7 are specialized investigations; book 5 (on normals) is the most difficult and advanced, including propositions which lead immediately to the determination of the *evolute* of any conic.

Pappus (bk. 7) describes shortly the contents of six other treatises by Apollonius, each in two books. (1) Λόγου ἀποτομή, *Cutting-off of a ratio*: this alone survives, in Arabic (Latin translation by Halley, 1706); (2) Χωρίου ἀποτομή, *Cutting-off of an area*; (3) Διωρισμένη τομή, *Determinate section*; (4) Ἐπαφαί, *Tangencies*, (5) Τοποὶ ἐπιπέδου, *Plane Loci*, (6) Νεύσεις, *Inclinationes or Vergings*. There have been many attempted restorations, e.g. of (5) by Fermat, van Schooten, and Robert Simson, of (6) by Marino Ghetaldi, Alex. Anderson, and Samuel Horsley (1770). The great problem of (4)—the drawing of a circle to touch three given circles—has attracted the most distinguished mathematicians; Vieta (1540-1603), van Roomen (1561-1615), and Newton (in *Arithmetica universalis*) gave solutions of it. Apollonius also wrote a *Comparison of the dodecahedron with the icosahedron* (v. Hypsicles, pref. to 'Eucl. bk. 14'), a *General Treatise, Καθόλου πραγματεία* (v. Marinus on Euclid's *Data*), and works on the *Cylindrical Helix* (Κοχλίας), on the *Burning-Mirror* (Περί τοῦ πυλίου), and on *Unordered Irrationals* (v. schol. on Eucl. 10. 1). An arithmetical work, Ὁκυτόκιον ('quick delivery'), calculated limits closer than those of Archimedes to the value of π . Apollonius invented a system (of 'tetrads') for expressing large numbers as the sum of units and successive powers of the myriad (10,000), *see* PAPPUS; he showed how to work with a system in which (practically) 10,000 is substituted for 10 as the base of the scale of notation.

In astronomy Apollonius was an exponent, if not the inventor, of the hypotheses of eccentric circles and epicycles respectively.

Editions of the *Conics*, other than those above mentioned, include: a German translation by A. Czwalina (1926), T. L. Heath, *Apollonius of Perga, Treatise on Conic Sections*, in modern notation (1896), H. G. Zeuthen, *Die Lehre von den Kegelschnitten im Altertum* (1886), Paul ver Eecke, *Les Coniques d'Apollonius de Perge, œuvres traduites pour la première fois du grec en français avec une introduction et des notes*. T. H.

APOLLONIUS (3) (3rd c. B.C.), the finance minister of Egypt for about twenty years from 262 B.C., held an estate of some three square miles at Philadelphia in the Fayûm; it was reclaimed land, tenable at the king's will. His development of the estate can be traced from the correspondence of Zenon, his right-hand man; he was specially interested in the improvement of live-stock, horticulture, and viticulture. He had extensive business operations in Egypt and the Levant and owned a merchant fleet, as is shown by the same correspondence; there is also mention in it of properties in Alexandria and at Memphis which he seems to have possessed. Zenon, a Carian from Caunus, entered his service soon after his

appointment to office, and settled at Philadelphia probably in 256; thereafter he managed Apollonius' estates, and acquired businesses of his own, which he carried on for some years after Apollonius disappears as a landholder at Philadelphia (c. 242). Of his associates the most important was Cleon, an engineer employed in the reclamation of the Fayûm, whose works are recorded in other papyri besides those of Zenon.

M. Rostovtzeff, *A Large Estate in Egypt* (1922); *Social and Economic History of the Hellenistic World* (1941); C. C. Edgar, *Zenon Papyri in the University of Michigan Collection* (1931). J. G. M.

APOLLONIUS (4) (2nd c. B.C.) of Alabanda, ὁ μαλακός, a pupil of Menecles of Alabanda. He founded a school of rhetoric at Rhodes, visited by Scaevola (121 B.C.) and M. Antonius (98 B.C.).

APOLLONIUS (5) perhaps of the 2nd c. B.C., author of *Ἱστορίαι θαυμάσιαι*, a compilation from Aristotle, Theophrastus, Aristoxenus, etc.

Ed. O. Keller, *Rerum Naturalium Scriptores* i. 43-56. PIV Suppl. iv. 45.

APOLLONIUS (6) (1st c. B.C.), sculptor, son of Archias, of Athens. Known from signature in Athens and on bronze herm of Polyelitus' Doryphorus (Winter, *KB* 393. 3); three other herms from the same villa in Herculaneum are probably also his.

APOLLONIUS (7), sculptor, son of Artemidorus, brother of Tauriscus (q.v. 2).

APOLLONIUS (8), sculptor, son of Nestor, of Athens. Works: 1. Belvedere torso in the Vatican (Winter, *KB* 394. 2), perhaps the Amycus on Roman coins of Sparta. 2. Bronze boxer in the Terme (Winter, *KB* 339. 1). Both are new creations, combining Hellenistic realism with classical reminiscence. The signatures are dated about 50 B.C. Apollonius may also have made the cult statue of Jupiter Capitolinus, dedicated 69 B.C., which is reflected in small bronzes. T. B. L. W.

APOLLONIUS (9), sculptor, son of Tauriscus (q.v.); late first century B.C.

APOLLONIUS (10) of Citium, an Alexandrian physician of about 50 B.C. Works: (extant) commentary on Hippocrates *Περὶ ἀρθρῶν*; (lost) *Πρὸς τὰ τοῦ Ταραντίου* (against Heraclides); *Πρὸς Βακχείον*; *Curationes*.

Ed. H. Schönc, 1896. PIV ii. 149.

APOLLONIUS (11) **MOLO**N (1st c. B.C.), rhetor, a native of Alabanda and pupil of Menecles. He lectured at Rhodes, visited Rome (87 and 81 B.C.), taught Cicero and other Romans, and won success as a pleader. He wrote on rhetoric and attacked both philosophers (*Κ. φιλοσόφων*) and Jews (*Κ. Ἰουδαίων*). J. W. H. A.

APOLLONIUS (12) **MYS**, member of the Herophillean school of medicine, worked for many years in Alexandria, towards the end of the first century B.C. He wrote *Περὶ τῆς Ἡροφίλου αἰρέσεως*, *Περὶ εὐνορίστων φαρμάκων*, and *Περὶ μύρων*. PIV ii. 149.

APOLLONIUS (13) **SOPHISTA** (c. A.D. 100) compiled a *Lexicon Homericum* which is extant in an abridged form (ed. I. Bekker, 1833). A fragment of the unabridged work survives in a Bodleian papyrus. He used especially the commentaries of Aristarchus, on whose critical method he throws valuable light, and the glossary of Apion. J. F. L.

APOLLONIUS (14) of Tyana (Ἀπολλώνιος ὁ Τυανεύς), a Neopythagorean sage. According to our only full account, Philostratus' *Tὰ ἐς τὸν Τυανία Ἀπολλώνιον* (time of Septimius Severus, *see* ROSE, *Handb. of Gk. Lit.*

403, W. Nestle, *Griechische Religiosität*, iii. 123 ff.), he was born at Tyana in Cappadocia, apparently about the beginning of the Christian era, and survived into the Principate of Nerva (for other datings, and the few known facts about him, see J. Miller in *PW* ii. 146 ff.). He led the life of an ascetic wandering teacher, possessed miraculous powers, visited distant lands, including India, was in danger of his life under Nero and again under Domitian, and saw by clairvoyance the latter's death (Philostr. 8. 25-6, cf. Cassius Dio 67. 18). Philostratus is highly untrustworthy (cf. W. R. Halliday, *Folklore Studies* (1924), last essay), and references elsewhere scanty; but Apollonius' existence and Pythagoreanism need not be doubted. An anti-Christian writer, Hierocles of Nicomedia, paralleled Apollonius with Christ, which provoked a reply (extant) from Eusebius. Of his writings (see Suidas, s.v., p. 623 Bernhardt) there survive some doubtfully authentic letters and a fragment of his treatise *On Sacrifices* (*Τελεταὶ ἢ περὶ θυσιῶν*). H. J. R.

APOLLONIUS (15), son of Mnesitheus, named *Dyscolus*, of Alexandria (2nd c. A.D.). Of his life little is known, except from his works: these are distinguished, even among grammarians, for obscurity of style and asperity of manner; but his method is genuinely critical, and his zeal for correcting errors extends to his own (cf. *Syntax*, p. 231. 15 Bekk.). For the history of grammar from Dionysius Thrax to his own day he is our chief source of information.

Of his twenty-nine works, mostly on syntax, named in Suidas, four survive—on the *Pronoun*, *Conjunction*, *Adverb*, and *Syntax*. A conspectus of his doctrines is given in the *Syntax*, which deals mainly with Article, Pronoun, Verb, Preposition, and Adverb, successively. He approaches syntax from the parts of speech, not the sentence, beginning with the establishment of the 'correct' order of these, assuming that there must be a proper order for them as there is, in his view, for the alphabet; and he has much argument disproving such current opinions as that the function of the article is to distinguish genders, and that *ὦ* is its vocative. As a result, although he correctly settles many details, acutely arguing from function, not form, he nevertheless achieves no comprehensive, organic, system of syntax. His work is marked by a constant quest for principle. 'We must investigate what *produces* solecisms, and not merely adduce examples.' 'Why do some verbs take the genitive, not the accusative?' In discussing forms and constructions he makes much use of alleged *ἀναλογία* (see CRATES OF MALLOS), e.g. insisting on *ἐμὶ*, not *ἐμοί*, by 'analogy' from the plural and dual; also *τεθεϊκόωμαι* (pf. pass. subj.). He also makes use of what he recognizes to be false analogy (*συνεκδρομή*), as when he explains that the usage *γράφει τὰ παῖδια* (nominative) is permitted because it sounds the same as when *παῖδια* is accusative, in which case the syntax is normal.

His own syntax shows both extreme carelessness, e.g. in bad order, pleonasm, ellipsis, and anacoluthon, and also the idioms of his day, e.g. *ἐάν* c. indic., *εἰ* c. subjunct., increased confusion of negatives (*ἐπεὶ μὴ* constantly), and odd uses of conjunctions and prepositions. He had a wide knowledge of literature and was familiar with Latin. Inevitably, perhaps, he falls short of the comparative and historical methods available, if not always adopted, to-day. But it would be hard to overestimate his influence on later Greek and Latin grammarians, notably Priscian, or to quarrel with Priscian's tribute, 'maximus auctor artis grammaticae'.

Edition, by Uhlig and Schneider in Teubner's *Grammatici Graeci*. E. Egger, *Apollonius Dyscole: Essai sur l'hist. d. théories gramm. dans l'antiquité* (1854). P. B. R. F.

APOLLONIUS (16) of Tyre, the hero of an anonymous romance widely known in the Middle Ages. The oldest extant version (5th-6th c. A.D.) is in Latin, *Historia*

Apollonii regis Tyri; but matter and style suggest that there was a Greek original of the second to third century A.D.

Text and Prolegomena: ed. Riese (Teubner). See also NOVEL, LATIN. R. M. R.

APOLLOPHANES, according to Suidas an Athenian comic writer. Once victorious, c. 400 B.C. (*IG* ii². 2325). In the *Κρήτες* a character is introduced apparently speaking Doric.

FCG i. 266-7; *CAF* i. 797 ff.; Demianczuk, *Supp. Com.* 9.

APOPHRADES, unlucky, forbidden days, characterized by gloomy rites (Plato, *Leg.* 800 d), e.g. the Plynteria (Plut. *Alc.* 34), on which no assembly or court was held. Such were also the last two days of the Anthesteria, on which the dead visited their old houses and people chewed buckthorn and smeared the doors with pitch to protect themselves. They were properly called *μαραὶ ἡμέραι* as opposed to *καθαραὶ*.

E. Rohde, *Psyche* i. 237, n. 3.

M. P. N.

APOTHEOSIS, see RULER-CULT.

APPARITORES, public servants who attended Roman magistrates (cf. *apparere*). The most important classes were *scribae*, *lictors*, *viatores* (qq.v.), *accensi*, and *praecones*. They were generally freedmen or sons of freedmen. They received an annual salary from the State. Although their appointment was technically annual, they were soon permitted to retain their posts indefinitely. They formed corporations which were legally recognized by the State. It is uncertain whether the *apparitores* wore any characteristic uniform.

Mommsen, *Röm. Staatsr.* i². 332 ff.; P. Habel, *PW*, s.v. P. T.

APPELLATIO. As an institution of the Roman civil procedure *appellatio* was introduced (according to the prevalent opinion) only in the latest form of classical proceedings, the *cognitio extra ordinem*. The judgement of the private *iudex* in Republican times was not subject to appeal. The oldest not unquestionable records of civil appeal date from the times of the first emperors. *Appellatio* is the act by which a litigant disputes a judgement, and its effect is that the controversy is brought before a higher magistrate, normally before the one who appointed the magistrate of the lower instance. *Appellatio* in its developed phase had to be effected either orally (the pronouncing of the word *appello* sufficed) or in writing (*libelli appellatorii*) at the court of the magistrate whose decision was impugned; he was then obliged to transmit all the documents in the case to the competent higher magistrate with a written report (*litterae dimissoriae*, *apostoli*). Judgement was given after a new trial in which fresh evidence was admitted. The appellate judge could confirm or reverse the judgement of the lower court, or alter it as he thought fit, even in favour of the respondent. A frivolous appellant had to pay to his adversary four times the costs of the appeal proceedings. Constantine punished him by relegation *in insulam* and confiscation of half of his property. Justinian reverted to mere pecuniary sanctions. His legislation reformed the institution thoroughly (many of its norms have passed into modern legislation); and his *Nov.* 82 settled the rule that all judgements except those of the praetorian prefect are appealable.

In the widest sense *appellatio* is any recourse to a higher magistrate for the alteration or abolition of a decree of a lower one. In this sense the term is used with respect to ordinary administrative decisions of magistrates and judgements delivered in criminal cases. In the language of the later classical jurisprudence (since Scaevola) the term *appellatio* is used indiscriminately with *provocatio* (cf. *Dig.* 49. 1 and *Cod. Iust.* 7. 52),

the proper field of which in former times was criminal jurisdiction. Thus imperial constitutions speak of *appellatio* or *provocatio* against a nomination as *decurio* or *scriba* (*Cod. Just.* 7. 62. 4. 7).

Introduction to the Study of Roman Law* (1932), 406, 459. For criminal procedure: Mommsen, *Röm. Strafr.* (1899), 275 ff., 468 ff.; J. L. Strachan-Davidson, *Problems of the Roman Criminal Law* (1912), ii. 176 ff. A. B.

APPENDIX VERGILIANA According to Suetonius (ed. Reifferscheid, p. 58) Virgil wrote in his youth *Catalepton*, *Priapea*, *Epigrammata*, *Dirae*, *Ciris*, *Culex*, and *Aetna*. Servius (A.D. 400) adds the *Copa*. A nineteenth-century library catalogue mentions a Virgilian MS. containing also the *Moretum* and the post-Virgilian *Elegiae in Maecenatem*. Evidently the *Epigrammata* belong to the *Catalepton*.

1. The *Catalepton* (κατὰ λεπτόν, (?) 'trifles') contains fourteen short, for the greater part charming little poems, differing in metre and contents; an epilogue, possibly by the publisher, is sometimes added as a fifteenth. There are those who take all the poems to be Virgil's; others again consider them spurious. It is generally admitted that numbers 9, 13, 14 (in Vollmer's edition) were not composed by Virgil. There is reasonable certainty that numbers 1, 3, 5, 7, 8 are Virgilian and the rest are perhaps his.

2. *Priapea* (3), to which Pliny (*Ep.* 5. 3. 2) may allude, when he ascribes 'uersiculos seuceros parum' also to Virgil.

3. *Dirae* ('maledictions'), called down by an unknown poet upon an estate from which he was expelled by a veteran when the arable land was distributed.

4. *Lydia*, an elegy (in the MSS. united with the preceding poem) in which the poet (most probably the same as the author of the *Dirae*) mourns the absence of his beloved.

5. *Ciris*, a Hellenistic epyllion, relating how Scylla, daughter of King Nisus of Megara, became the cause of her father's death, because she had conceived love for Minos, her country's enemy. The gods changed her into a sea-bird called Ciris. The *Ciris* is probably neither the work of Cornelius Gallus nor a youthful poem of Virgil's (see Bibliography, below). It contains elements drawn from Lucretius and Catullus and lavishly uses Virgilian verses and phrases. Though on the whole rather clumsy, it contains some fine psychological pictures.

6. *Culex*. A shepherd kills a gnat that has stung him to warn him against a snake. Later on, the insect's ghost blames him for his ingratitude and explains the torments and the blessings of the nether world. Lucan (*Suet. Vita Luc.* p. 50 Reiff.), Statius (*Silv.* 1. *praef.*) and Martial (8. 56. 20) mention a Virgilian *Culex*. Following Donatus, who tells us that Virgil wrote the *Culex* when sixteen, some assume that our poem is an immature work of the poet's youth which he published later with a dedication to Octavius before June 44 B.C.; for after that date Octavius was named Octavianus. The verse-structure, however, which points to a later period of Augustan poetry, the stilted, obscure language, some vulgar forms, and the indubitable imitation of Virgilian phrases (cf. *Cul.* 275 and *Aen.* 6. 431; *Cul.* 292 and *Ecl.* 8. 48) prove the *Culex* to be a spurious poem that shortly after Ovid's time was attributed to Virgil.

7. *Copa*, 'the Hostess'. An elegy bubbling over with the joy of life, too cheerful, however, to allow ascription to Virgil.

8. *Moretum*, 'Salad', relates the way in which a farmer prepares his breakfast on a dark winter morning. The poem charms by its unadorned realism. Poet unknown.

9. *Aetna*: see article AETNA.

APPIAN (*Appianos*) of Alexandria, born at latest under Trajan, experienced the Jewish rising of A.D. 116, held office in Alexandria, and after gaining Roman citizenship moved to Rome, becoming a knight, probably *advocatus fisci*, and, through the influence of Fronto, *procurator Augusti*; an old man under Antoninus Pius, he then wrote his *Ρωμαϊκά*. Ethnographic in arrangement, this work treated in turn the Roman conquests: Bk. i *Βασιλική*, ii *Ἰταλική*, iii *Σαυιτική*, iv *Κελτική*, v *Σικελική* καὶ *Νησιωτική*, vi *Ἰβηρική*, vii *Ἀννιβαϊκή*, viii *Λιβυκή* (*Καρχηδονιακή*, *Νομαδική*), ix *Μακεδονική* καὶ *Πλυρική*, x *Ἑλληνική* καὶ *Ἰωνική*, xi *Συριακή*, xii *Μιθριδάτειος*; xiii-xvii *Ἐμφυλίων* (the Civil Wars, bks. 1-5); xviii-xxi *Αἰγυπτιακῶν* (the conquest of Egypt); xxii *Ἐκατονταετία*, xxiii *Δακική*, xxiv *Ἀράβιος* (the Empire to Trajan and the Dacian and Arabian campaigns). The final *Παρθική* *γραφή* was not written. Bks. vi-ix, xi-xvii are complete, except for *Νομαδική* (viii) and *Μακεδονική* (ix), which with i-v are fragmentary; x, xviii-xxiv are lost.

The extant tradition goes back ultimately, in its successive parts, to an early annalist (perhaps Cassius Hemina), Polybius, Posidonius, Fannius (possibly), Sallust, Asinius Pollio, Livy, the memoirs of Augustus and Messalla, possibly Nicolaus of Damascus; but it came immediately from the tendentious, constitutionalistic, literary composition of an imperial annalist, writing under Augustus or Tiberius, whom Appian adapted to his ethnographic form. Loyal and honest, an admirer of Roman imperialism, he wrote in the plain *κοινή*, and though interested solely in wars and ignorant of Republican institutions and conditions, preserves much valuable material, most notably in bk. 1 of the *Civil Wars*.

APPIUS, see CLAUDIUS.

APPULEIUS, see SATURNINUS.

APRIES (*Hophra*), fourth pharaoh (589-570 B.C.) of the Saite XXVIth dynasty, relied like his predecessors on Ionian and Carian mercenaries. He made unsuccessful attempts to conquer Phoenicia and Cyrene, and was overthrown by a rising against his mercenaries which set Amasis on the throne.

Herodotus 2. 161 f., 4. 159.

P. N. U.

APSINES of Gadara (c. A.D. 190-250), Athenian rhetor and rival of a certain Fronto of Emesa, author of *Π. σχημάτων*, *Ζητήματα*, and *Μελέται*. His *Τέχνη* (Spengel, *Rhet.* i. 331-414), which has come down with many interpolations, owed much to Hermogenes and is the latest complete *τέχνη* to survive.

J. W. H. A.

APULEIUS, born (c. A.D. 123) of wealthy parents at Madauros in Africa (August. *De Civ.* D. 8. 14), was educated first at Carthage (*Flor.* 18), later at Athens (*Apol.* 72). After much travel (*Apol.* 23) he apparently visited Rome (*Met.* 11), whence he returned to Africa. Later setting forth on a journey to Egypt he fell sick at Oea (*Tripoli*) c. A.D. 155, where he was visited

by an old friend, Sicinius Pontianus; the latter was anxious about his widowed mother Pudentilla, now betrothed to her brother-in-law, Sicinius Clarus. Pontianus, being on bad terms with his uncle, proposed to A. that he should marry Pudentilla; after some hesitation, A., finding the widow wealthy and attractive, took her to wife. Sicinius Aemilianus (brother of Sicinius Clarus) accused A. of having won her love by magic. The case was tried at Sabrata before the proconsul, Claudius Maximus. A. defended himself with vigour (*Apologia*) and was acquitted, but left Oea for more congenial surroundings. He is next heard of at Carthage, enjoying renown as poet, philosopher, and rhetorician (c. A.D. 161). He was appointed chief priest of the province (*Flor.* 16), and delivered many florid declamations after the manner of the rhetoricians of the 'second Sophistic'. Statues were erected in his honour at Carthage and at Madauros (the base of the latter has been discovered). He may have had a son named Faustinus. The date of his death is uncertain.

WORKS. (1) *Apologia* (or *Pro se de Magia*) is one of the most interesting and certainly the oddest of all Latin speeches. At times an almost childish display of wild rhetoric and shallow sciolism, at times a vigorous and skilful defence, it gives a unique description of provincial life and throws a curious light on superstitions of the age. For its theme see above.

(2) The *Metamorphoses* (better known as 'The Golden Ass') is the sole Latin novel that survives entire. A delightful work, imaginative, humorous, and exciting, it tells the adventures of one Lucius who, being too curious concerning the black art, is accidentally turned into an ass, and thus disguised, endures, sees, and hears many strange things. He is at last restored to human shape by the goddess Isis. At the outset a Greek (1. 1), at the close he is identified with A. himself (11. 27), and the story of his initiations into the mysteries of Isis and Osiris is probably autobiographical. Many stories are embedded in the novel, the most famous being the exquisite tale of Cupid and Psyche (4. 28-6. 24). A briefer version of the novel, falsely attributed to Lucian, also exists (*Δούκιος ἡ ὄνος*). Both works probably derive from the same original, the lost *Metamorphoses* of Lucius of Patras (Photius 96 b, 12 Bekker). The story of Cupid and Psyche may be an adaptation of the Greek of 'Aristofontes Atheneus' (Fulg. *Myth.* 3. 6). The date is uncertain (an early work according to Purser, late (c. A.D. 180) according to Helm).

(3) The *Florida* are excerpts from declamations on varied themes, mainly trivial and showing an extravagance typical of the author. They contain much that is curious and amusing, while the description of the death of the comic poet Philemon has real beauty. They were largely composed between A.D. 160 and 170.

(4) The *De Dogmate Platonis*, an exposition of the philosophy of Plato, showing neither knowledge nor understanding. Bk. 1 deals with P.'s life and physical doctrine; bk. 2 (dedicated to 'my son Faustinus') sets forth his ethics. Bk. 3, in which he promised to deal with his dialectic, is missing; some have held that the *Περὶ ἐμπνεύσεως*, a treatise on formal logic, is the third book, but it is regarded by others as spurious.

(5) The *De Deo Socratis* is a flamboyant declamation on the δαιμόνιον of Socrates, probably based on a Greek original.

(6) The *De Mundo* is a translation of the *Περὶ κόσμου* falsely attributed to Aristotle; it too is dedicated to Faustinus.

(7) A Latin translation of a passage from Menander's *Ἀνέχουερος*: Baehrens, *PLM* iv. 104.

(8) *Lost Works*: Poems (*Apol.* 6, 9; *Flor.* 9, 17, 18, 20); Speeches (*Apol.* 24, 55; *Flor.* 16; August. *Ep.* 138. 19); *Quaestiones Naturales*, *De Piscibus* (*Apol.* 36, 38, 40), *De Re Rustica*, *De Arboribus*, *Astronomica*, *Arithmetica*;

De Republica, *De Proverbiis*; *Epitome Historiarum*; *Eroticus*; *Quaestiones Conviviales*; a translation of Plato's *Phaedo*; a novel entitled *Hermagoras* (Priscian, *Gramm. Lat.* 2. p. 85).

(9) *Spuria*: *Asclepius*, *Herbarius*, *De Remediis Salutaribus*, *Physiognomonica*.

The style of A. is a development of Asianism (see RHETORIC), which finds its nearest parallel in Pliny (*HN* 9. 102; 10. 3; 10. 81). There is no justification for calling it African Latin. It is florid and extravagant, richly coloured with poetry, full of strange words, Graecisms, archaisms (see ARCHAISM), and idioms drawn from colloquial Latin; its fault and most perfect development is seen in the *Metamorphoses*, where it finds appropriate scope and at times rises to great heights of beauty (e.g. *Met.* 11. 1). The works of A. are tinged throughout by his personality—a rhetorician posing as philosopher, peacock-proud and full of an immense store of undigested and superficial learning. But his novel won him deserved renown. Indeed St. Augustine was not certain that he had not actually been turned into an ass, and warns the faithful against those who extol him as a thaumaturge whose powers surpassed those of Christ himself (*Ep.* 136. 1; 138).

APULIA, a rather unhealthy region of south-eastern Italy (cf. Varro, *Rust.* 1. 6), extending from Mons Garganus to Calabria; nowadays *Puglia*. Its arid soil is fertile, especially in the coastal and northern plains; southern Apulia contains numerous hills, including Mons Vultur. Apulian wool was famous, summer migration of flocks having been practised there continuously since early times (Varro, *Rust.* 2. 1; Pliny, *HN* 8. 190). Its inhabitants were indiscriminately called Apuli; they included Messapic-speaking Peucetii and Daunii as well as Apuli proper who dwelt about Mons Garganus and spoke Oscan (Strabo 6. 283 f.). Although lacking Greek colonies, Apulia was much hellenized by 300 B.C. Between 326 and 317 it became subject to Rome, largely voluntarily, and remained loyal against Pyrrhus (Livy 8. 25, 37; 9. 12. 9 f., 20; Zonar. 8. 5). In the Hannibalic and Social Wars, however, many Apulians revolted (Livy 22. 61; Appian, *BCiv.* 1. 39); the consequent devastation ruined Apulia. Chief towns: Teanum, Sipontum, Luceria, Arpi, Herdonia, Venusia, Canusium, Barium.

AQUAE ET IGNIS INTERDICTIO, see EXSILIUM.

AQUAE SULIS (modern *Bath*) attained importance since the first century A.D. from its hot springs. The water was led to a partly underground oblong building containing a great bath (73 ft. by 29 ft.) and three other swimming-baths. Hot air baths, stoked by coal-fires, were later added at either end. To the north were at least two porticoed courtyards, one containing the temple of Sul Mincerva; Corinthian pilasters and fragments of the pediment (25 ft. wide) are extant, the latter containing the famous Gorgon sculpture. Though a small place (25 acres), Bath was visited even by continentals. It was completely destroyed by the Saxons, and the bath establishment was choked up and forgotten.

F. J. Haverfield in *VCH (Somerset)* i. 219-88; W. H. Knowles, *Archaeologia* lxxv. 1-18.

AQUEDUCTS are justly regarded as one of Rome's most distinctive contributions to architecture and hygiene. Rome's first aqueducts, *Aquae Appia* (312 B.C.) and *Anio Vetus* (272 B.C.), were tunnelled, no doubt owing much to inherited experience drawn from making the far older drainage-channels (*cuniculi*) and emissaries cut in the soft tuffaceous Latian valley-floor. Possibly this experience weighed with the builders even more than military considerations, which favoured the hidden underground channel. Such tunnels, like early railway tunnels, were cut in short lengths reached by vertical shafts, which later served for inspection and cleaning. To cross ravines and narrow valleys or to reach elevated points a conduit carried on arches was required, short bridges occurring sparingly on the *Anio Vetus*, as at Ponte Tauella, long arched sectors for the first time upon *Aqua Marcia* (144 B.C.). An alternative method of conveyance, employed for the *Anio Vetus* at Ponte Lupo, was the inverted siphon (Vitr. 8. 7; *ILS* 5348). All these principles were strikingly developed in the wide Imperial world, the Pont du Gard near Nemausus (*Nîmes*) and the aqueduct of Segovia furnishing the most famous examples of storied bridges, the *Aquae Marcia* (144 B.C.), *Claudia*, and *Anio Novus* (A.D. 38-52) of Rome itself offering the most remarkable series of arched substructions, the four aqueducts of Lyons the finest series of inverted siphons, made of lead pipes in series bedded upon concrete. The cost and upkeep of these works was high. *Aqua Marcia* cost 180,000,000 sesterces, and Pliny (*Ep.* 10. 37) quotes 3,329,000 sesterces for the aqueduct of Nicomedia in Bithynia. The quality of work varied very much also (cf. Frontin. *Aq.* 120-2; *ILS* 5795). Smaller towns thus contented themselves with simpler underground systems, which were also much in vogue in military forts and fortresses, where wooden pipe-lines were often used. The channels and their course remained public property, often demarcated by *cippi*, and the water, on arrival, was distributed from *castella*, as at *Nîmes* and *Thuburbo Maius*, to public fountains, baths, and private consumers, the latter relying much upon overflow (*aqua caduca*). Supplies were regulated by gauge-pipes of standard bore (*calices*) or by time-limits (*CIL* vi. 1261, viii. 448). Development of water-power, as on the *Aqua Traiana* (A.D. 109; s.v. *JANICULUM*), was rare. Rents were not designed to cover running costs or capital charges, and the works were usually a liability to the community rather than a source of income.

Frontinus, *De Aquis Urbis Romae*, T. Ashby, *Aqueducts of Ancient Rome* (1935); E. B. Van Deman, *The Building of the Roman Aqueducts* (U.S.A. 1934); G. de Montauzan, *Les Aqueducs antiques de Lyon* (1909); E. Samesreuther, *Bericht der Röm.-Germ. Kommission* xvi (1936), 24-157. I. A. R.

AQUILA ROMANUS (3rd c. A.D.), rhetorician, whose treatise *De figuris sententiarum et elocutionis* (ed. Halm, *Rhet. Lat. Min.* 22-37) was partly based on the Greek of Alexander Numenius, but contains illustrations from Cicero's works (often misquoted from memory).

Cf. Teuffel, § 388, 1; Schanz-Hosius, § 837.

J. F. M.

AQUILA, see also **PONTIUS** (3) and **SIGNA MILITARIA**.

AQUILEIA, a city seven miles from the head of the Adriatic. In 186 B.C. Transalpine Gauls occupied this fertile site, which controls roads across the Julian Alps. Rome ejected them and founded a Latin colony (181 B.C.) to forestall similar intrusions and to exploit neighbouring gold-mines (Liv. 39. 22, 54; 40. 34; H. Mattingly-E. S. G. Robinson, *Date of Roman Denarius* (1933), 22). Aquileia became a great military, commercial, and industrial stronghold; its amber trade was especially important (Strabo 4. 207 f.; 5. 214). In Imperial times it was a *colonia*, sometimes dubbed *Roma secunda*, the capital of *Venetia et Istria*, one of the world's largest cities, until razed by Attila in 452 (Auson. *Ordo Nob. Urb.* 65 f.; Amm. Marc. 21. 11 f.; Procop. *Vand.* 1. 330).

Its inhabitants fled to the neighbouring lagoons of Venice. Aquileia became a malaria-stricken village, but was still an important patriarchate in the fifteenth century. Ancient remains are numerous.

A. Calderini, *Aquileia Romana* (1930); A. Deggrasi, *Riv. Fil.* 1938, 132 ff. E. T. S.

AQUILIUS (1) (fl. c. 174-154 B.C.), supposed Latin author of *Boeotia* (*Boeotis?*), a *comœdia palliata* which Varro attributed to Plautus. See **DRAMA**, para. 4.

O. Ribbeck, *CRF* 33 (3rd ed. Teubner, 1897). E. H. W.

AQUILIUS (2), **MANIUS**, consul in 129 B.C., completed the war against Aristonicus, succeeding Perperna, and settled the province of Asia. He was accused *de repetundis*, but acquitted. The Senate, however, took away Phrygia from the king of Pontus, to whom it had been assigned by Aquilius.

C. Gracchus, apud Gellium 11. 10.

M. H.

AQUILIUS (3), **MANIUS**, a legate of Marius in the Cimbrian campaigns, was consul with Marius in 101 B.C., and proceeded to crush the slave revolt in Sicily, the rebel leader Athenion being killed. Through the influence of Marius and the oratory of M. Antonius, Aquilius was acquitted on a charge of maladministration in Sicily. Sent to Asia, he successfully ejected Mithridates' forces from Cappadocia and Bithynia, and blackmailed Nicomedes whom he restored to Bithynia; but in 88 he was driven from Bithynia by Mithridates and captured. Mithridates poured molten gold down his throat to rebuke Roman avarice.

M. H.

AQUILIUS (4) **GALLUS**, **GAIVS**, a Roman jurist in the last century of the Republic, disciple of the celebrated Q. Mucius Scaevola (q.v.), and a teacher of law in his turn. He was praetor in 66, contemporarily with Cicero; and he died between 55 and 44 B.C. 'Vir magnae auctoritatis et scientiae iuris excellens' (Val. Max.). He is the creator of the *stipulatio Aquiliana*, which served for transferring all kinds of debts into one general *stipulatio*, so that they could be discharged by the convenient means of *acceptilatio* (*Dig.* 46. 4. 18. 1), and of the *iudicium de dolo* (*Cic. Nat. D.* 3. 30. 74; *Off.* 3. 14. 60).

A. B.

AQUILIUS, see also **REGULUS** (2).

AQUINCUM, on the Danube at Buda-Pest, originally an Illyrian-Celtic settlement, was later the capital of Pannonia Inferior and an important Roman base against the Quadi and Sarmatae-Iazyges. *Auxilia* were quartered there probably from the time of Tiberius. Later, apparently from A.D. 114, Legio II Adiutrix was garrisoned at Aquincum, but it may have been there under Domitian and then only detached for the Dacian wars. Perhaps Legio X Gemina was at Aquincum between 103 and 107, and a short stay of Legio IV Flavia is probable between 161 and 211. The *canabae* (q.v.) near the camp had their own administration (cf. 'dec(urio) canab(arum)' in an unpublished inscription quoted by Kuszinsky, op. cit. infra, p. 186, no. 499). Aquincum became a *municipium* (*Aelium*) under Hadrian, and a *colonia* (*Septimia*) under Septimius Severus. When the Romans gradually relinquished Pannonia (c. 400), Aquincum (last mentioned in Sid. Apoll. 5. 107) was also given up.

W. Tomaschek, *PF*, s.v.; K. Kuszinsky, *Aquincum* (1934); J. Szilgyi in *Laureae Aquincensis* (1938), 287-311. F. A. W. S.

AQUITANIA, a name originally applied to the area of modern Gascony, occupied apparently by mixed Ligurian and Iberian population with a slight Celtic tinge. It consisted of a number of small and obscure tribes, which were conquered by Caesar's lieutenant, P. Licinius Crassus, and finally subdued by Augustus after campaigns

in 38 and 27 B.C. In Augustus' provincial organization Aquitania was extended to include the tribes of the Loire, a measure which, as Strabo (4. 1. 1) complains, made ethnographical nonsense of the name; but by the third century the original Aquitanian tribes, which had coalesced to nine (*novem populi*), secured their administrative independence. Of these, Ausci and Convenae enjoyed Latin rights, while Lugdunum Convenarum and Elusa are called *coloniae* at various dates. Nevertheless, the level of romanization was nowhere high.

O. Hirschfeld, *Kleine Schriften* (1913), 209; C. Jullian, *Hist. de la Gaule* (1908), ii. 449. C. E. S.

ARA PACIS, a monument dedicated by the Senate, as Augustus records in his Testament, to commemorate his safe return from Gaul and Spain. It stood on the Campus Martius under the modern Palazzo Fiano. The altar, which was adorned with reliefs representing the *suovetaurilia* or sacrifice at the ceremony of dedication (30 Jan. 9 B.C.), stood in a walled precinct (11.6 × 10.6 metres) with doors on the east and west. The wall was sculptured with reliefs in two tiers: internally, festoons and ox-heads above, panelling below; externally, the lower frieze was filled with foliage, the upper contained on east and west mythological panels, on north and south a representation of the consecration procession (4 July 13 B.C.) with portraits of the imperial family and court. These reliefs rank among the most important products of Augustan art.

Several sculptured slabs were brought to light about 1568; others were found in 1859 and 1903. They were identified as parts of the Ara Pacis by F. von Duhn in 1879. In 1937-8 the site was thoroughly explored and the monument re-erected as far as possible on the bank of the Tiber.

G. Moretti, *L'Ara Pacis Augustae* (1938).

F. N. P.

ARABIA. Greeks of the Classical period knew little about Arabia. The Babylonian king Nabonidus had resided at Teima; Darius I, astride the 'incense route' in the north-west, had drawn a tribute of spices from the south, like Sargon and Sennacherib before him. But knowledge really began with Alexander. In preparation for his intended circumnavigation his admiral Hieron sailed down the Persian Gulf to Ras Mussendam, and Anaxicrates down the Red Sea through Bab-el-Mandeb to the south coast; the south-east (Oman) long remained unknown. The Seleucids planted some settlements along the coast between the Euphrates and Gerrha, and had a trade arrangement with Gerrha, which supplied Seleucia with spices. Ariston explored down to Bab-el-Mandeb for Ptolemy II, and that king, to chastise the hostile Nabataeans of Petra, tapped the 'incense route' south of them by a trade arrangement with the Lihyanites of Dedan (Al-'Ula); Miletus settled for him a colony, Ampelone, as a sea-port for Dedan. The fourth-third-century kingdoms in the south were Minaea on the Red Sea, Katabania at the Straits, and Sabaea, the Hadramaut, and Mahra along the south coast; by the second century Minaea had vanished, and a Sabaeen-Homerite confederacy (Himyarites) dominated Yemen. In the first century Petra grew great, and the Nabataeans finally extended from Damascus to Dedan. The interior was always unknown. Arabia exported frankincense and myrrh, gold and gems, and re-exported Indian spices and other products. The principal routes were the 'incense route' from Sabaea through Medina, Dedan, and Petra to Syria, and routes from Dhofar to Gerrha, from Gerrha across to Petra, and from Egypt to Babylonia via Jaufr. Till Augustus' time the southern Arabs were jealous intermediaries of the sea-trade between India and Egypt; Roman Egypt, with direct voyages to south Arabia and India, broke their monopoly, and also diminished the importance of the 'incense route'. Augustus sent an expedition to conquer Sabaea, which

failed; the story that he ruled Aden cannot be true. Subsequently the south was let alone, Rome being content with her sea trade; but Trajan made Nabataea a Roman province, with its capital at Bostra, and constructed a great road through it from the Red Sea to Damascus.

M. Cary and E. H. Warmington, *Ancient Explorers*, ch. 4; J. G. C. Anderson, *CAH* x. 247 ff.; W. W. Tarn, *JEGArch.* 1929, p. 9. W. W. T.

ARACHNE (i.e. 'Spider'), in Ovid, *Met.* 6. 5 ff., a Lydian woman, daughter of Idmon of Colophon, so skilled in weaving as to rival Athena, whom she challenged to a competition when the goddess visited her to warn her. On Athena destroying her web, she hanged herself and Athena changed her to a spider. This seems to be originally a folk-tale (Stith Thompson A 2091. 1, 2231. 5).

H. J. R.

ARADUS, an ancient Phoenician town on an island off the Syrian coast, whose kings ruled a large area on the mainland. Confirmed by Alexander, the dynasty was suppressed in 259 B.C. and its dominions dismembered. The Aradian republic extorted from Seleucus II during his war with Antiochus Hierax the rights of coinage and of harbouring exiles (c. 239) and gradually became independent. In the early first century B.C. it reconquered most of its old mainland territory, but having resisted Antony in 38 B.C. was deprived of it.

A. H. M. J.

ARAE FLAVIAE, modern *Rottweil* on the Neckar. In A.D. 74 the Roman Rhine-Danube frontier was shortened by carrying a road south-eastwards from Strasbourg to the Danube. A fort was built at the point where another road coming up from Windisch (Vindonissa) joined the first, and the town Arae Flaviae was founded there. Some fine houses of this period, probably belonging to officials, have been excavated. Domitian advanced the frontier farther and removed the garrison, and after A.D. 100 Rottweil lost its importance, being afterwards no more than a station on the road from Switzerland.

O. B.

ARAROS (*Ἀραρός*), son of Aristophanes, who according to Ar. *Plut.* hyp. 4 wrote Araros' first two productions, *Κώκαλος* (? victorious 387 B.C.) and *Ἀιολοσίκων*, 'συστήσαι Ἀραρότα τοῖς θεαταῖς βουλόμενος'. The series of A.'s own plays began, according to Suidas, about 375 B.C.

FGG i. 343-6; CAF ii. 215-19.

M. P.

ARATEA, Latin poems translated from the *Φαινόμενα* and *Προγνώσεις* of Aratus (q.v.) (1) by Cicero, partly extant, a portion being in about 480 hexameters besides detached fragments of *Phaenomena* and *Prognostica* (Baehr. *PLM* i. 1-28; Cicero, ed. C. F. W. Müller, p. 4 v. 3, 360-94; W. W. Ewbank, *The Poems of Cicero*, 1933), sometimes inaccurate and monotonous; (2) by Germanicus, *Phaen.*, 725 hexameters, and fragments amounting to over 200 verses of *Progn.* (Baehr. *PLM* i. 142ff.; A. Breysig, Teubner² 1899), a more poetic and more independent adaptation than Cicero's, in which the imperial author corrects some astronomical errors in the original; (3) by Avienus (q.v.) in the fourth century, *Phaen.* in 1325, *Progn.* in 553 hexameters (Breysig, 1889), considerably expanded from the Greek. Cf. G. Sieg, *De Cic., German., Avieno Arati interpretibus* (1886).

J. W. D.

ARATUS (1), of Soli in Cilicia (c. 315-240/239 B.C.), was first taught by Menecrates of Ephesus, perhaps in that town. Later he went to Athens, where he imbibed Stoicism from Zeno and was introduced to Antigonos (q.v. 2) Gonatas. Antigonos c. 276 invited A. to the Macedonian court, where he celebrated the king's marriage to Phila, half-sister of Antiochus I, in a *Hymn to Pan*. Later A. went to Syria and joined Antiochus'

court. There he completed his edition of the *Odyssey*, but eventually returned to Macedonia, where his death preceded that of Antigonos in 240/239.

WORKS. Aratus' best-known work, still extant, is an astronomical poem, entitled *Phaenomena*. This, undertaken at the request of Antigonos, versifies a prose treatise or treatises of Eudoxos of Knidos (c. 390–337). After a proem to Zeus (1–18), and a brief reference to the poles, A. describes the northern and southern fixed stars (26–453), the circles of the celestial sphere (462–558), and the risings and settings of stars (559–732). The remainder of the poem (733–1154) deals with weather signs, in spite of a separate title (*Προγνώσεις διὰ σημεῖων*) an integral part of the poem. The *Phaenomena* achieved immediate fame (cf. *Anth. Pal.* 9. 25 (Leonidas of Tarentum); Callimachus, *Epigr.* 27) and found many commentators (the names of 27 are known); but the astronomical mistakes, which some commentators tried to remove by altering the text, were widely criticized, especially by Hipparchus (c. 190–120 B.C.), whose commentary survives. Nevertheless the poem enjoyed a great reputation among both Greeks and Romans (cf. Cic. *De Or.* 1. 69) till the end of antiquity. Latin translations of it were made by Varro of Atax, Cicero, Germanicus, Avienus (see ARATEA). A.'s style is sober, being modelled on Hesiod, and the language, drawn mostly from Homer, is relatively simple (there are few 'glosses'), but the poem is not easy reading owing to the nature of the subject-matter. There are some bad errors in the formation of Epic words, and some neologisms. The metre is fairly correct, but the refinements introduced by Callimachus are lacking. The Stoic creed pervades the whole poem, while poetic colour is provided by digressions, the longest being the descriptions of the Golden Age (98–136) and of storms at sea (408–35).

Aratus wrote many other poems, now lost, e.g. *Epikedeia*, *Epigrams* (cf. *Anth. Pal.* 12. 129), *Elegies* (Macrob. 5. 20. 8), *Hymns*, *Paegnia*, and a collection of short poems with the title *Τὰ κατὰ ἄεττον* (the meaning is uncertain), from which the *Catalepton* attributed to Virgil takes its name. Other lost works have astronomical or medical titles.

ARATUS (2) (271–213 B.C.), a Sicyonian statesman, educated at Argos, his refuge after his father's murder (264). He recovered Sicyon in 251, united it to the Achaean League for defence against Macedon, and solved its economic difficulties by subsidies from Ptolemy Philadelphus, whom he visited personally. As General of the League, normally each alternate year from 245, he seized Acrocorinth in 243 and defeated Gonatas' Aetolian allies at Pellene (241). In alliance with Aetolia (239–229) he frequently attacked Athens and Argos; additions to the League included Megalopolis (235) and Argos (229), and on Demetrius II's death (229) Aratus helped to liberate Athens. However, Spartan aggression cancelled these advances. Defeated at Mt. Lycæus and Ladoceia (227) by Cleomenes III, he realistically opened negotiations with Macedon, and Doson's arrival in 224 preserved the League from disruption. In the crisis he held special powers, judicial and administrative. On Philip V's accession he called in Doson's Confederacy against Aetolian aggression (220); in the subsequent war he successfully exposed the treachery of the court cabal under Apelles, and after the peace of Naupactus (217) vigorously resisted Philip's anti-Roman policy and proposed seizure of Ithome. His death (213), probably from consumption, was attributed popularly to Philip.

His *Memoirs* (*ὑπομνηματισμοί*: Polyb. 2. 40) were pro-Achaean and apologetic in tone, and less reliable than Polybius claims (2. 40. 4).

Though not without personal rancour (e.g. against Lydiades or Aristomachus of Argos), Aratus' actions usually revealed a sound statesmanlike basis. His failure to organize a strong army was serious; but his major decisions were almost invariably correct, and both as a diplomatist and guerrilla leader he carried adaptability to the height of greatness.

ARAUSSIO, a town in Gallia Narbonensis, modern Orange; the scene of a great Roman defeat in 105 B.C. A probably posthumous Caesarian colony was founded here under the title *Colonia firma Iulia Secundanorum Arausio*. The theatre, the gymnasium (?), a temple, probably of the Imperial house, and a triumphal arch, all of Caesarian or Augustan date, still survive. The last, re-dedicated to Tiberius in A.D. 28, may have fronted the north gate of the town wall, much of which is elsewhere preserved. The *territorium* was laid out in centuriated plots; fragments of the allotment plan are extant.

ARAXES, properly the Armenian river now called Aras, Ras, or Yerash, rising in Bin Geul Dagħ, then flowing eastwards across Erzerum and the Mogan Steppe. Until A.D. 1897 it joined the Kur (ancient Cyrus), but now flows separately into the Caspian. Swift and turbulent now, in Graeco-Roman times it marked a trade-route from the Caspian and the Cyrus to Artaxata and Asia Minor. Herodotus confuses the Aras with the Iaxartes or the Oxus. Xenophon calls it Phasis, his Araxes being probably the Khabur. The 'Araxes in Persis' is probably the Bendamir or Kum Firuz. E. H. W.

ARBITER, see INDEX.

ARBITRATION, GREEK. The submission of a dispute to a neutral person or body, whose verdict the disputants engage themselves in advance to accept, was recognized among the Greeks from a very early period, and legend and history alike attest its frequent application. There is evidence for the existence of public arbitrators in numerous States, e.g. Sparta, Gortyn, Ephesus, and Lampsacus, but we have detailed knowledge only about Athens. There private *δαιτῆραι*, not necessarily citizens, were frequently employed to settle claims on an equitable rather than on a legal basis (Arist. *Rhet.* 1. 13), while public arbitrators, appointed from citizens in their sixtieth year, were used, especially in the fourth century, for the settlement, under the auspices of the 'Forty', of private claims exceeding 10 drachmas in value, so as to lighten the work of the public courts (Arist. *Ath. Pol.* 53). Once accepted by both parties, the arbitral award became legally binding, but inasmuch as either party had the right of appeal to the law-court, these public *δαιτῆραι* must be regarded as mediators rather than as arbitrators in the strict sense. Another important application of the same principle was the practice, especially frequent in the Hellenistic age, whereby a State invited a friendly neighbour-State to send a tribunal (*δικασταὶ μετ' ἀλλήλων*, *ἐξ ἑκὸν δικαστήριον*) to deal with civil, and sometimes also with criminal, cases affecting its citizens; the visiting judges sought first to settle disputes 'out of court', but where the method of conciliation (*σούλειαις*) failed, they had the right to pronounce legal judgements.

2. But it was in the field of inter-State relations that arbitration attained its greatest influence. Whether the Greeks originated this device for substituting equity for force is uncertain, but it was assuredly they who made

it a recognized and frequent means of averting wars. The earliest recorded cases, such as the Spartan arbitration between Athens and Megara regarding the possession of Salamis, are known only from semi-legendary traditions; but the original text survives of an award of about 450 B.C. (SIG 56), by which Argos sought to compose existing differences between her two Cretan colonies Cnossos and Tylissus and to prevent their future recurrence. From 450 peace-treaties normally contained a clause binding the contracting parties to submit to arbitration all eventual disputes (e.g. Thuc. i. 78. 4, 140. 2, 144. 2, 145; 4. 118. 8; 5. 18. 4, 79. 4); and we may assume that this course was frequently followed, though circumstances sometimes arose in which the exacerbation of public feeling and the difficulty of finding a suitable arbitrator led to the neglect of this provision. Athens seems to have claimed the right to act as arbitrator in disputes among the members of her Empire (Plut. *Per.* 25), and later the Greek Leagues sought by similar means to secure internal harmony.

3. It is upon inscriptions that we depend for our detailed knowledge of the operation of the arbitral machinery, the size, composition, and appointment of the tribunals, their procedure, the nature of the evidence laid before them, the formulation and publication of their awards, the penalties attaching to their infraction, and the character of the boundary-delimitations carried out by frontier commissions. Among the fullest and most interesting accounts of this kind are those relating to the arbitrations of King Lysimachus and, later, the Rhodians between Samos and Priene (OGI 13, SIG 599, 688), of the Megarians between Corinth and Epidaurus (SIG 471), of the Calydonians between Perea and Melite in Thessaly (ib. 546 B), of the Senate between Melite and Nartachium (ib. 674), of the Mylasians between Magnesia and Priene (ib. 679), of the Milesians between Sparta and Messene (ib. 683), of the Magnesians between Itanus and Hierapytna (ib. 635), and of the Cnossians between Lato and Olus (ib. 712; *Inscriptions de Délos*, 1513).

ARBITRATION, ROMAN. The history of Roman arbitration begins with the interference of Rome as a great power in the politics of the Hellenistic world. Rome took the place of the kings who had often acted as international arbitrators between the free cities and leagues of the Greeks. Such disputes were referred to the Senate, which decided the general issue, but sometimes left particular points to a third party with local knowledge for settlement. Rome did not, in the earliest period, enforce the acceptance of her arbitral awards. While not abusing her influence, Rome tended to accept the state of affairs at the time when the appellants first came under her influence as the standard of reference. This practice tended, as her authority increased, to merge into the defence of the privileges of her allies. With the formation of provinces and the consolidation of the Empire, arbitration lost its international character, since, except by special permission, which was sometimes allowed, notably in Sicily, the subject peoples could not turn elsewhere. But senatorial adjudication of disputes between provincial States of all categories continued to

be frequent till the third century of the Empire. Such arbitration tended to merge with the general provincial administration, and was gradually replaced by the activity of special commissioners such as the *curatores* and *correctores civitatum*. Its existence illustrates the lively political self-consciousness of the cities of the Roman Empire.

ARBORICULTURE. Neolithic Europe knew apple, and perhaps pear-, cherry-, and plum-trees; the ancient Oriental regions also knew fig-trees and date-palms, pistachio-, carob-, walnut-, peach-, lemon-, pomegranate-, and almond-trees. Greece after the Persian Wars and especially in the Hellenistic age, as well as Italy after 200 B.C., imported and cultivated all these fruit-trees, so far as climate permitted. Under the Roman emperors many of them reached the Rhine, the Danube, and the Atlantic coast, and spread into Germanic and Slavic Europe, and from Iran even to China. Fig- and date-trees had great economic importance for the Asiatic and African parts of the Mediterranean world and for southern Greece from Minoan times. The scientific experience of Greece and Rome was used for arboriculture with remarkable results. Orchards flourished everywhere, the methods of their cultivation being well known to us from papyri and contemporaneous authors. Cultivation of trees useful for their wood is found in the Ptolemaic Empire. State plantations of them were established, private plantations encouraged and even commandeered to lessen the scarcity of wood in Egypt. See **AGRICULTURE**.

F. M. H.

ARCADIA, a mountainous area in central Peloponnesus, approaching the sea only in the south-west, near Phigalia. Its small valleys have a hard climate but are not infertile. Most of it is drained by the Alpheus and its tributaries, but large parts have no overground outlet for their waters, which disappear through swallow-holes; hence the north and east valleys either held lakes (Pheneus, Stymphalus) or became flooded. The most prosperous parts were the eastern plains, with Orchomenus, Mantinea, Tegea, lying at about 2,000 feet, and the Alpheus valley, where lay Heraea, the first Arcadian place to coin and one of the religious centres of Arcadia (C. Seltman, *Greek Coins*, 97). The rest of Arcadia, particularly the mountain valleys, was a land of villages. Arcadia therefore carried little weight in the politics of Greece; its chief strength was man-power, and from the early fifth century we hear of Arcadian mercenaries. From the mid-sixth century it came under Spartan hegemony, but was often ready to revolt. Under Epaminondas' direction an Arcadian League was formed as a counterweight to Sparta, but was weakened by particularism. For Arcadian participation in the Achaean League see **MEGALOPOLIS**.

The dialect, related to Cypriot, was a survival of the pre-Dorian speech of Peloponnesus. The pastoral character of Arcadian life was shown in their myths and cults, many of them rude and savage, and the charming small bronze figurines of shepherds, etc.

Paus. bk. 8 and Frazer's Commentary; W. Lamb, *BSA* 27. 133 ff.; C. Callmer, *Studien zur Geschichte Arkadiens* (1943). T. J. D.

ARCADIAN CULTS AND MYTHS. All the usual gods were worshipped in Arcadia; the most remarkable features of the cult were (1) Zeus on Mt. Lycæon had a holy place, to enter which was death (by stoning, if it was deliberate; mysteriously within a year, if otherwise). It was reported as early as the time of Plato that human sacrifice was practised there, and that he who tasted the flesh of the human victim became a wolf. (2) Poseidon's shrine at Mantinea stood open but might not be entered;

one Aepytyus who disregarded this was blinded by a mysterious wave. (3) Hermes by most reports was born on Mt. Cyllene; there is little doubt that his cult originated in that region. (4) Demeter at Lycosura was associated with a goddess Despoina, said to be her daughter by Poseidon; at Phigalia she was shown horse-headed and bore the surname of Black; at Thelpusa, that of Erinys. In other words, she was a local goddess identified with the normal Demeter, but of more formidable character. (5) Pan is universally said to be an Arcadian god, as was natural enough, considering that the country was largely pastoral. (6) Before a festival at Aliphera sacrifice was made to a godling called Myiagros, 'fly-catcher', and it was believed that after this flies would not trouble the worshippers. Of myths, the most important was the claim of the Arcadians that Zeus was born in their country, and the source of the river Neda had sprung up for Rhea to wash herself and her infant. It was a kind of proverb or standing joke that the Arcadians had lived there since before the moon was created. See also ARES.

W. Immerwahr, *Die Kulte und Mythen Arkadiens* (1891).

H. J. R.

ARCADIUS of Antiocheia, a grammarian, of the later Empire, who wrote a (lost) *Ὀνομαστικόν* (table of noun inflexions). To him is falsely ascribed an extant epitome from Herodian, probably made by Theodosius (end of 4th c. A.D.), and interpolated in the sixteenth century.

Edition (Hdn. Epitome): E. H. Barker (1820). P. B. R. F.

ARCADO-CYPRIAN, see DIALECTS, GREEK.

ARCAS, eponym of Arcadia, son of Zeus and Callisto (q.v.). Being left without a mother, he was reared by Maia. His grandfather Lycaon, to test the omniscience of Zeus, killed him and served up his flesh. The god overthrew the table, destroyed the house with a thunderbolt, turned Lycaon into a wolf, and restored Arcas to life. Later, meeting Callisto in bear-shape, Arcas pursued her into the precinct of Zeus on Mt. Lycaon. Both thus incurred the death-penalty (cf. **ARCADIAN CULTS**; Ovid, *Met.* 2. 496, says nothing of the shrine but only that he did not know her and was about to kill her), when Zeus turned them respectively into the Great Bear and Arctophylax.

Hyginus, *Poet. Astr.* 2. 1 and 4.

H. J. R.

ARCESILAS I, II, III, IV, second, fourth, sixth, and eighth kings of the house of Battus, which ruled Cyrene (q.v.) from its foundation (630 B.C.) till after 460 B.C. Arcesilas I (c. 590-574) inherited the original settlement of colonists from Thera. Arcesilas II (the Cruel) succeeded c. 560 to a city which Battus II had reinforced with settlers from Peloponnesus, Crete, and other islands; he quarrelled with his brothers, who seceded and founded Barca with Libyan support, and was defeated and murdered by them. He is probably the Arcesilas figured in the famous cup in Paris (*CAH*, Plates i. 378) seated on board ship watching the stowage of bales of merchandise (silphium?, wool?). Arcesilas III succeeded Battus III on a throne diminished by the democratic reforms of Demonax, a lawgiver called in from Mantinea; helped by Polyerates of Samos and Cambyzes of Persia, whose vassal he became, he regained personal power, but leaving Cyrene to be governed by his mother Phere-time retired to Barca, where he was murdered c. 510. The last Arcesilas is immortalized in Pindar's fourth Pythian (462), which pleads the cause of a political exile from Cyrene. A few years later Arcesilas himself was exiled and the dynasty ended.

Herodotus 4. 154-67, 200-5.

P. N. U.

ARCESILAUS (1) (*Arcesilas* in Cicero, *Arkesilaos*; c. 315-241/40 B.C., *Diog. Laert.* 4. 44, 61), founder of the sceptical or middle (and new) Academy (D.L. 4. 28;

etc.). He was the son of Seuthes, or Skythes, of Pitane in Acolia (Hermipp. ap. D.L. 4. 28). On the death of his father his elder brother intended to make him a rhetor. Instead he went to Athens and became a pupil of Theophrastus; finally he was won over by Crantor to the Academy (D.L. 4. 29, 43; Numen. ap. Euseb. 14. 6. 2). An intimate friendship connected him with his new teacher as well as with Polemon and Crates, successively presidents of the Academy (D.L. 4. 22; etc.). Upon the death of Crates (probably 268-265), general recognition of his superiority caused a rival to resign, and he became president of the School (D.L. 4. 32). His teaching opened a new and flourishing period of Academic philosophy. He left no writings (D.L. 4. 32; Plut. *De Alex. Fort.* 4, p. 328).

His chief polemic was directed against the dogmatic theory of knowledge brought forward by the Stoics (Cic. *Acad.* 1. 44) for merely ethical purposes. The Stoics maintained that there was a criterion of truth which they found in a specific kind of sense-perception, called the 'irresistible' or 'convincing perceptions' (*καταληπτικαὶ φαντασίαι*). A. replied that wrong perceptions under certain circumstances were as convincing as right ones (Cic. *Luc.* 27; Sext. Emp. *Math.* 1. 154; cf. the other arguments, 150 f.).

After disproving the Stoic theory of apprehension A. goes on to deny the possibility of any knowledge: 'if apprehension does not exist, all things will be non-apprehensible' (Sext. ib. 155). This denial became a watchword of Academic scepticism (Sext. *Pyr.* 1. 3). Consequently he not only adopted the attitude Socrates assumes in Plato's early dialogues but even the agnosticism of the Sceptic Pyrrhon (Sext. *Math.* 1. 155, cf. *Pyr.* 1. 233, etc.). But Pyrrhon's crude criticism started from an ethical basis and aimed at an ethical goal, imperturbability of mind. A. on the other hand founded a sceptical theory of knowledge based on certain parts of Socratic and Platonic teaching and on his own refutation of the then established dogmatic philosophy, the Stoic.

Study of A.'s ethics makes this difference still clearer. To him moral philosophy was of secondary importance. He withdrew it from the main line of his criticism by holding that in practical life it was enough to find the most sensible reasons for an action. As the criterion for a practical question he only offers the 'reasonable' (*εὐλογον*) which is, without philosophic doctrine, sufficient to secure achievement in life (Sext. *Math.* 1. 158).

It is not easy to see how the Platonist A. was able to deal with the dogmatic elements of Plato's own philosophy. But at least it can be said that, in a time given to dogmatic overstatement, he upheld, if somewhat rigidly, the Socratic power of clear thinking. A. originated the school of logical scepticism which played an important role in the development of the philosophical mind.

H. von Arnim in *PIV* ii. 1164; see also the bibliography under **SCPTICS**. K. O. B.

ARCESILAUS (2) (1st c. B.C.), sculptor, friend of L. Lucullus, working in Rome. Works: 1. Statue of Venus Genetrix for temple dedicated by Julius Caesar in 46 B.C. For reduced reproduction see M. Bieber, *Röm. Mitt.* 1933, 261. 2. Statue of Felicitas for Lucullus. 3. Centaurs carrying nymphs, for Asinius Pollio. 4. Lioness with Cupids for Varro. 5. Plaster model for crater with reliefs. His models, *proplasmata*, were sold at a high price. Probably a versatile adapter rather than an original artist. T. B. L. W.

ARCHAEOLOGY, CLASSICAL. Classical Archaeology may be defined as the study which is concerned with the reconstruction of the ancient life of Greece and Rome by means of the discovery, classification, and interpretation of its material remains. In so far as such a study produces papyri or inscriptions, it is allied to the literary studies of the ancient world. In so far as it recovers

works of art it is allied to the more general study of the History of Art. Its contributions to the study of ancient history are direct and obvious.

2. The founder of Classical Archaeology was Cyriac de' Pizzicolli (usually known as Cyriac of Ancona), who travelled in Greece between 1412 and 1447, and searched for works of art and inscriptions. His note-books, which have never been adequately published, contain a mass of important epigraphical material.

3. After his day little further was done except by agents who set out to purchase antiquities for the great collectors of the seventeenth and early eighteenth centuries. This was helpful to the study of ancient art, but not based on sound knowledge. The first serious contribution to an organized study of antiquity in Greece was the work of the Society of Dilettanti (founded in England in 1732), who sent out in the late eighteenth century well-organized expeditions to study the antiquities of Athens and Asia Minor. The work of Stuart and Revett, two of their best representatives, is of prime importance.

4. In 1835, shortly after the Declaration of Independence in Greece, much good work was done in the clearing of the Acropolis at Athens. One of the earliest journals of Classical Archaeology was the *Ἀρχαιολογικὴ Ἐφημερίς*, which began to be published at this time.

5. Excavation in Italy commenced with the uncovering of Herculaneum and Pompeii at the end of the eighteenth century. The opening of Etruscan tombs in the early nineteenth century, while largely a matter of looting and organized commercial excavation, did nevertheless add enormously to our knowledge of Greek vase-painting, as well as of Etruscan archaeology. Unfortunately the Greek vases in Etruscan tombs were for a long time classified as Etruscan.

6. The foundation of the German Institute of Archaeology in 1829 followed upon the activities of Lessing and others, and in Germany the organized study of Classical Archaeology grew up more rapidly than elsewhere. But it was not until c. 1870 that any large-scale organized excavations were undertaken, when H. Schliemann began work on the Homeric sites of Mycenae and Troy. Twenty years later Schliemann's operations at Troy were resumed in a more scientific fashion by W. Dörpfeld, and in 1901 Sir Arthur Evans brought to light the palace of Minos at Knossos. The Acropolis at Athens, Delphi, and Olympia were subjected to close excavation by Greek, French, and German scholars respectively (c. 1880); minor sites elsewhere were also extensively studied, and material was thus accumulated for the intensive study of Greek art and epigraphy. Schools and institutes were founded by many countries in Athens and in Rome, and on their work and activities most of the modern organization of the study of Classical Archaeology is based. The exploration and identification of classical sites has also been carried on in more systematic fashion since the nineteenth century. The work of Col. Leake in Greece, of Sir W. M. Ramsay and others in Asia Minor, and of T. Ashby in the environs of Rome, has been of special value in finding suitable spots for excavation.

7. Classical Archaeology is concerned with all aspects of the history, social and artistic, of Greece and Rome from the time when those two lands achieved a distinct character and coherent existence. Any period prior to the Bronze Age does not strictly come under consideration. Classical Archaeology can justly interest itself in the Early Iron Age in Greece and Italy, or in Asia Minor and Cyprus, but earlier periods are concerned only in so far as anything in Classical Greece or Italy is derivative from the Bronze Age.

8. Classical Archaeology falls into the following sections:

(i) The study of art as such, including the study of

sculpture (from small bronzes and terra-cottas to colossal figures in marble and bronze), of vase-painting, painting in general, and decorative or ornamental art. The study of vase-painting (as apart from the study of pottery) has, owing to the enormous mass of material available, become a subsidiary study in itself with its own methods and organization.

(ii) The study of architecture. This covers all forms of building from the largest temples to the smallest houses and shrines.

(iii) The study of epigraphy, a highly expert branch of work. All inscriptions, whether incised on stone and metal, or painted on vases or on any other medium, constitute the material of this study. The archaeologist is the producer of the material, the epigraphist its interpreter.

(iv) Numismatics. This, though a vast and important branch, is still an essential part of Classical Archaeology as a whole.

(v) The study and classification of ancient pottery. Since pottery is one of the principal clues to the chronology of ancient sites, its organization as a special study is essential. The pottery at any given site is the first and main study of the excavators; its importance cannot be over-estimated. Vase-painting, considered as art, is a subject that properly belongs to (i) above.

9. Contacts of Greek and Roman civilization with outside lands and other modes of culture make it essential that the Classical Archaeologist should make himself acquainted with the art and archaeology of other lands. Of these, Persia, Egypt, and Assyria, with perhaps the later Hittite world, are most important. S. C.

ARCHAISM in Latin. The efforts of Ennius to hellenize Latin literature diverted the literary language of Rome away from the popular dialect, and literary Latin became in a sense a dead language. Writers wishing to invigorate their style would introduce from everyday speech words which came in time to appear archaic. We still find in Ennius the original quantity of terminations (e.g. *ponebāt*), nominatives in *-ōr* and *-ā* and elision of *-s* before consonants. The first declension genitive is always in *-āi* or *-ās*, the old genitive plural, e.g. *deum*, is common, and obsolete pronouns e.g. *mis*, *olli*, *sas*, and verbs like *morimur*, *fūimus*. Many of these forms were metrically convenient for later writers, but, apart from such considerations, the success and prestige of the *Annales* stamped such archaisms firmly upon the literary language. Forms thus reintroduced are frequently of popular origin, and it is difficult to disentangle the archaic and the popular elements. Modernizing scribes have removed much of the archaic from Cato, but he still shows archaisms such as *praefamino* (imperative) and *prohibessis*. In Caesar and Cicero Latin prose reached its zenith of classical purity, but in Sallust we come to one who deliberately imitates the ancients. He is full of old words, e.g. *prosapia*, *obsequela*, *dextumus*, and recalls early comedy in his fondness for frequentatives. In inflexion he uses e.g. *fide* (dat.), *vis* (acc. pl.), *nave* (adv.), *senati*, *nequitur*. Lucretius too is given to archaism, chiefly to show his admiration for Ennius. He uses forms like *im*, *endo*, *alid*, *rabies* (genit.), *vapōs* (nomin.), *scatit*, *confluxet*, *recesce*, infinitives in *-ier*, *escit*, *siet*, *fuat* and elision of pre-consonantal *-s*. Archaisms are naturally not frequent in the impassioned poetry of Catullus, but some of the above are convenient and he shows *alis*, *alid*, *deposivit*, *componier*, *tetulit*, *recepso*. Horace's *Epistles* and *Satires* have many colloquialisms and a few archaisms, e.g. *erepsemus*, *surrexe*. Virgil, though a keen antiquarian, keeps archaism within bounds, retaining just enough to give to his work a grateful flavour of antiquity, e.g. *aulāi*, *olli*, *iusso*, *admittit*. The Latinity of Propertius is quite peculiar. He shows many archaisms both in vocabulary and inflexion, e.g. *tergit*, *lenibunt*.

nullo, toto, uno (= *nulli*, etc.). The not infrequent archaisms in Livy occur mostly in legal formulae and hardly affect the general tone of his work, for by his time the struggle between the graceizing and archaizing schools had ended in victory for the former. Persius (1. 76-8) mocks Neronian archaizers, and this recurrent phenomenon reappears in Hadrian's time, when it became fashionable to prefer Ennius to Virgil. In Fronto and Apuleius we see a deliberate return to the obsolete diction of Ennius and Cato; and even Gellius, whose language is much purer, is full of archaisms like *edulare*, *recentari*, *aeruscator*. In Christian writers, who wrote for the people at large, archaic words which had never died out of the spoken language again came into their own.

A. Ernout, *Recueil de textes latins archaïques* (1938), and texts of authors mentioned in the article. P. S. N.

ARCHEBULEAN, see **METRE**, GREEK, III (15).

ARCHEDEMUS of Tarsus, Stoic philosopher, probably a pupil of Diogenes (q.v. 3) of Babylon.

Testimonia in von Arnim, *SVF* iii. 262-4. *PW* ii. 439.

ARCHEDICUS, New Comedy poet, who foully slandered Demochares, nephew of Demosthenes (Polyb. 12. 13), in order to gain favour with Antipater.

FCG iv. 435 ff.; *CAF* iii. 276 ff.

ARCHEGETES (*Ἀρχηγέτης*), i.e. 'leader', 'guide', a title of Apollo (q.v.) in several places, e.g. Naxos in Sicily (Thuc. 6. 3. 1), where he had an altar; of Heracles at Sparta (Xen. *Hell.* 6. 3. 6); of Aesclepius near Tithorea (Paus. 10. 32. 12). It signified that the god either personally shared in, or had shown approval of, the foundation of the colony or other institution in question and would protect it. *Archegetis* (*ἀρχηγέτις*) is used in like manner of goddesses.

H. J. R.

ARCHELAUS (1), philosopher (fl. 5th c. B.C.), probably of Athenian birth, was a pupil of Anaxagoras (q.v.) and followed him in the main, but in some details adhered to the view of the older Ionian school. He held that the warm and the cold were produced out of the original Mixture by rarefaction and condensation, and agreed with Diogenes of Apollonia in assigning great importance to the part played by air. He is said to have taught Soerates, but it is improbable that he anticipated Soerates by engaging in ethical speculation.

Testimonia and frs. in Diels, *Vorlesr.* ii. 44-9. *PW* ii. 454.

W. D. R.

ARCHELAUS (2), king of Macedon c. 413-399 B.C. He organized the military strength of Macedonia by training infantry and building forts and roads (Thuc. 2. 100), and sought to foster hellenization by bringing Greek artists, especially Euripides, to his court, and by celebrating games at Dium. Moving his court from Aegae to Pella near the coast and adopting the Persian coin standard, he developed Macedonian trade. He maintained friendly relations with Athens, averted the revolt of Elimiotis by a marriage alliance, and captured Pydna (410); c. 400 he put the philo-Macedonian party into power at Larissa, probably annexing Perrhaebia.

F. Geyer, *Historische Zeitschrift*, Beiheft 19 (1930). N. G. L. H.

ARCHELAUS (3) (fl. 1st c. B.C.), Greek general of Mithridates VI, perhaps from Sinope or Amisus. After overrunning Bithynia and most of central Greece ('First Mithridatic War', 88-85 B.C.), he was twice defeated by Sulla, and commissioned by Mithridates to negotiate a peace. Falling under suspicion of treasonable dealings with Sulla, on the renewal of war (83) he deserted to Rome, and he assisted Lucullus early in the third war (74). His only defeats were by Rome's best general with an army better, and not much smaller, than his own.

Appian, *Mithridatica* 18 ff.; Plutarch, *Sulla* 11 ff. For army figures, see esp. *Memnon* (frs. 31-2, in *SHG* iii. 535 ff.). G. T. G.

ARCHELAUS, see also **LAELIUS** (3), **CAPPADOCIA**.

ARCHEMORUS see **HYPSIPYLE**, **ADRASTUS**.

ARCHERS (Greek and Hellenistic). In Homer the chieftains, except Teucer, Pandarus, and Paris, did not use the bow in war, but the rank and file did. In classical times the Persians were dreaded for their attacks with arrows, but Greek citizens were not organized into regular bodies of archers. Archery, which had gone out of normal use, was kept up only in Crete and the backward parts of Greece, such as Acarnania. Cretan archers, who were specially renowned, were frequently employed at all periods to supplement the ordinary citizen-soldier. Athens also in the fifth century imported Scythian mercenaries who acted both as police and as soldiers, and were reinforced by additional recruits from the poorer citizens up to a total of 1,600 (Thuc. 2. 13. 8). Mounted archers were few in the classical period. In the Hellenistic armies under Oriental influence the use of archers, whether mounted or on foot, was somewhat more frequent, but only the Parthians made them the main arm of their offensive.

H. Hommel, *PW* s.v. *τοξόται*; R. Cagnat, *Dar.-Sag.* s.v. 'Sagittarii'; W. W. Tarn, *Hellenistic Military and Naval Development* (1930), 87 ff.

ARCHERS (Roman), see **MERCENARIES**, **ROMAN**.

ARCHESTRATUS of Gela, a contemporary of Aristotle, styled *ὁ τῶν ἀποφάγων* 'Hoiōdos ἡ ὀέογυς' (Ath. 6. 310 a). Wrote a *Ἡδυπάθεια*, a sort of gastronomical Baedeker, the source of Ennius' *Hedyphagetica*.

P. Brandt, *Corpusc. poet. ep. graec. ludibundae* (1888), i. 114-93. J. D. D.

ARCHIAS, AULUS LICINIUS (2nd-1st c. B.C.), a Greek poet of Antioch, arrived in Rome before the end of the second century B.C. He celebrated Marius' Cimbric victory, and the Mithridatic victories of L. Licinius Lucullus, who obtained for him the citizenship of Heraclea in Lucania (93 B.C.). Under the Lex Plautia Papiria he acquired Roman citizenship. This was contested by Grattius (62), and defended successfully by Cicero (*Pro Archia*). Cicero hoped for a laudatory poem from him, but (*Att.* 1. 16. 15) in vain, as he was engaged by the Metelli. He improvised in verse (Quint. *Inst.* 10. 7. 19). His epigram on the infant Roscius discovered asleep with a serpent coiled round him is mentioned by Cicero (*Div.* 1. 79): it may be inferred he was alive in 45. Haupt and Th. Reinach have attributed to him some of the forty-one epigrams in the Greek Anthology headed 'Archias'. Mackail doubts Reitzenstein's opinion that he is the elder Archias, implied by the title *Ἀρχίας νεώτερος* (*Anth. Pal.* 9. 91).

F. Susemihl, *Griech. gr. Lit. Alex.* i. 900.

G. C. R.

ARCHIDAMUS, the name of several Spartan kings. The most notable were:

ARCHIDAMUS II, who reigned from 469 (?) B.C. (476, Diodorus) to 427-426; grandson of Leotychidas (q.v.). He distinguished himself on the occasion of the Spartan earthquake in 464, and in operations against the rebel Messenians, after which we hear nothing of him for thirty years. Having failed to dissuade Sparta from going to war with Athens, he led the Peloponnesian forces to invade Attica in 431, 430, and 428; and to attack Plataea in 429. He left two sons, Agis II and Agesilaus II (qq.v.).

Thuc. bks. 2 and 2, passim; Diod. 11. 63-4.

ARCHIDAMUS III, who reigned from 360-359 to 338, son of Agesilaus II. He brought back the Spartan army after Leuctra (371), in which Diodorus wrongly states that he took part, and fought against the Arcadians (367, 364). He distinguished himself in the defence of Sparta against Epaminondas (362), and supported the Phocians in the Sacred War, but returned in disgust at the duplicity

of their commander Phalaecus (347-346). Invited to help Tarentum against the Lucanians, he landed with a force in Italy but soon fell in battle at Manduria (338). Isocrates' *Archidamus* purports to be the appeal of the king to a congress at Sparta (366-365) to refuse the Theban demand for the recognition of the independence of Messene. Pausanias mentions a statue of him at Olympia.

Xen. *Hell.* bks. 5-7; Diod. bks. 15 and 16; Plut. *Ages.* 19, 33-4, 40; Paus. 3. 10. 3-5; 6. 4. 9. Niese, *PW*, a.v. 'Archidamos'; E. Meyer, *Forschungen* ii. 505-6. A. M. W.

ARCHIGENES of Apamea in Syria, pupil of Agathinus (q.v.); well-known physician at Rome in the time of Trajan (A.D. 98-117). He belonged to the eclectic school, but was chiefly influenced by the doctrines of the pneumatic school. The leading principle of his therapeutics was to combat the eight *δυσκρασίαι* (bad temperaments). Galen's theory of the pulse was borrowed from that of Archigenes, while at other points Galen reacts against his teaching. Works: *Περὶ τῶν κατὰ γένος φαρμάκων*; *Περὶ τόπων πεπονθότων*; *Περὶ καστορίου χρήσεως*; eleven bks. of letters of medical advice; and many others: all lost except for frs.

PW ii. 484.

W. D. R.

ARCHILOCHEAN, see *METRE*, GREEK (14).

ARCHILOCHUS, iambic and elegiac poet, of Paros, son of Telesicles (Ael. fr. 80) and a slave-woman. His date is disputed. The ancient authorities vary from the time of Romulus, 753-716 B.C. (Cic. *Tusc.* 1. 1. 3), to that of Gyges, who died c. 652 B.C. (Hdt. 1. 12). The eclipse of the sun mentioned in fr. 74 is usually taken to be that of 6 April, 648 B.C., but may be that of 14 March, 711 B.C. Since Archilochus took part in the colonization of Thasos (Euseb. *Praep. Evang.* 6. 8), and this is dated c. 708 B.C. (Clem. Al. *Strom.* 1. 333 b), the earlier date is more probable. If so, Archilochus mentions contemporary events in the Lelantine War (fr. 3) and the destruction of Magnesia (fr. 19). Little is known of his life except of warfare in Thasos, and his quarrels with Lycambes in his attempts to marry Neobule (Hor. *Epist.* 1. 19. 23 ff.). Fr. 18 does not prove that he went to Magna Graecia. He was killed in battle (Plut. *De sera* 7). Considerable remains of his work survive: (1) elegiac epigrams, probably songs sung to the flute over the wine, often about himself, sometimes influenced by epic language, but remarkable for their strongly personal note, whether about war (frs. 3, 6, 7) or wine (fr. 4); (2) iambic trimeters, also about himself, though in fr. 22 another character is represented as speaking. In them he seems to have assailed Lycambes (fr. 24), and fr. 25 has been referred to Neobule; (3) trochaic tetrameters catalectic, including lines on the colonization of Thasos (frs. 52-4), the approach of war (fr. 56), his own misfortunes (frs. 58, 67), the eclipse of the sun (fr. 74), and his own skill in poetry (frs. 76-7); (4) epodes, or stanzas of mixed metres, of which there are different types: (a) frs. 81-7 iambic trimeter followed by hemiepes, (b) frs. 88-97 iambic trimeters followed by iambic dimeters, and (c) fr. 104 dactylic hexameters followed by iambic dimeters. In this class he composed *αἰοι*, fables of traditional character about the fox and the monkey, the fox and the eagle, the fox and the hedgehog, probably with personal references to himself and his circumstances; (5) tetrameters of mixed rhythms, (a) frs. 107-11, paroemiacs and ithyphallics, (b) frs. 112-17, dactylic tetrameters and ithyphallics; (6) Pindar (*Ol.* 9. 1) attributes to him the song of victory used by victors at Olympia. He was regarded as a great innovator (Plut. *De mus.* 28) in metre, language, and subjects, and the fragments support this reputation. They are less violent and abusive than we might expect (cf. Pind. *Pyth.* 2. 99). His language is mostly colloquial Ionic, though

in his elegiacs he admits epic forms. See also *IAMBIC POETRY*, GREEK.

TEXT: E. Diehl, *Anth. Lyr. Graec.* i. 3, pp. 3-49. CRITICISM: A. Hauvette, *Archiloque, sa Vie et ses Œuvres* (1905); A. A. Blakeway, 'The Date of Archilochus' in *Greek Poetry and Life* (1936), 34-55; F. Jacoby, 'The Date of Archilochus', *CQ* xxv (1941), 97-109. C. M. B.

ARCHIMEDES (c. 287-212 B.C.), the greatest mathematician of antiquity, born at Syracuse, killed at the sack of the city by Marcellus, was the son of Phidias, an astronomer, and was on intimate terms with King Hieron II. He studied for some time in Alexandria, where he met Conon of Samos and Eratosthenes, and then returned to Syracuse. History knows him (1) as the inventor of a water-screw (*κοχλίας*) and of clever machines used against the Roman besiegers, (2) for his boast of being able to move a great weight by a very small force ('give me a place to stand on and I will move the earth', *πᾶ βῶ καὶ κινῶ τὰν γῆν*, Simplicius in *Phys.* 1110. 5 d), (3) for his determination of the proportions of gold and silver in a crown made for Hieron (*εὐρηκα, εὐρηκα*), (4) for his planetarium ('sphere') which was taken to Rome, where it was seen by Cicero (*Rep.* 1. 21. 22, etc.) and probably by Ovid (*Fasti* 6. 277). His tomb, by his wish, showed a cylinder circumscribing a sphere with the ratio $3/2$ which he discovered between them (Cic. *Tusc.* 5. 64 f.).

Archimedes' works extant in Greek are: *On the Sphere and Cylinder* bks. 1 and 2, *Measurement of a Circle*, *On Conoids and Spheroids*, *On Spirals*, *Plane Equilibriums* (*Ἐπίπεδοι ἰσοπονηταί*) bks. 1 and 2, *Sand-reckoner* (*Ψαμμίτης, Arenarius*), *Quadrature of a Parabola*, *On Floating Bodies* (*Περὶ ὀχονυμένων*) bks. 1 and 2, and the *Method* (*Ἐφῶδιον*)—the Greek text of the last two only discovered in 1906, by Heiberg. Lost works named by various writers include: *Περὶ ζυγῶν*, on balances or levers (Pappus 8), *Κερτοβαρικὰ* (Simplicius on *De Caelo* 543. 24 Heib.), *Κατοπτρικὰ*, Theory of mirrors (Theon on Ptol. *Alm.* 1, p. 29 ff.), and on thirteen semi-regular solids (Pappus 5. 352-8). A book of lemmas coming from the Arabic includes interesting propositions on the *salinon* (? 'salt-cellar') and *ἑρπηλός* ('shoemaker's knife'), and a method of trisecting any angle; Arabic tradition refers to yet other works and has preserved some, notably the inscribing of a regular heptagon in a sphere (see T. L. Heath, *Manual of Greek Mathematics*, 340-2).

In geometry, building upon the 'method of exhaustion' invented by Eudoxus, and extending it, Archimedes performs operations equivalent to the use, with us, of the integral calculus; thus he finds the area of a parabola and of a spiral, the surface and volume of a sphere and any segment thereof, the volumes of any segments of the conicoids of revolution. The newly discovered *Method* is of special interest, since it explains a 'mechanical' method (weighing pairs of infinitesimal parts of two different figures separately against one another) by which he discovered many of his results. In the *Measurement of a circle* Archimedes uses regular polygons of 96 sides inscribed and circumscribed respectively to a circle, and finds by pure arithmetic upper and lower limits ($3\frac{1}{8}$ and $3\frac{1}{4}$) to the value of π ; he starts from approximate values of $\sqrt{3}$, and gives approximations to the square roots of many large numbers. An arithmetical *tour de force* is the *Sand-reckoner*, in which he describes an original system for expressing in language very large numbers; it amounts to a scale of notation in which 100,000,000 is substituted for 10 as the base; by this means Archimedes works out at 10^{63} the number of grains of sand which, on certain assumptions, the universe would contain. A *cattle-problem* contained in an epigram addressed to Eratosthenes (edited by Lessing in 1773) is a problem in indeterminate analysis (seven equations between eight unknowns, with other conditions) leading to prodigious figures.

In *mechanics* Archimedes establishes the theory of the lever and finds the centre of gravity of triangles and quadrilaterals, any segment of a parabola, a semicircle, a hemisphere, a segment of a sphere, etc. Lastly, in *Περὶ ὀχυρμένων* he invented the whole science of hydrostatics, dealing with the behaviour of different bodies when floating in a fluid, according to their shape and to what we call their specific gravity. See also *PHYSICS*, paras. 3, 4, and 6.

The *editio princeps* is that of Gechauff, Basel 1544. A Latin translation of five treatises by Commandinus followed in 1588 (Venice). J. Torelli's edition in Greek and Latin (Oxford 1792) was the standard edition until the appearance of Heiberg's definitive Greek text with Latin translation (2nd edition 1910-15, Teubner). See also: German translation by E. Nizze (1824); French translations by F. Peyrard (2nd ed. 1808) and (recent) by Paul ver Eecke; T. L. Heath, *The Works of Archimedes* (in modern notation) (1897); *PW* ii. 507.

ARCHIPPUS, Athenian comic dramatist, victorious 415-412 B.C. (Suidas: several fragments point to a similar flourish). In his best-known play, *Ἰχθύες* (probably shortly after 403 B.C.), the fishes declare war on man, and a treaty is made for an exchange of prisoners, the gourmets most obnoxious to the fishes being handed over to them. The *Πύων* no doubt satirized the statesman of that name and so is after 403 B.C. (Isoc. 18. 6). A. seems to have been an imitative writer. His *Ἰχθύες* probably owes something to Ar. *Av.*, his *Ἡρακλῆς γαυῶν* to Epicharmus' *Ἡβης γάμος*, and possibly his *Πλοῦτος* (probably after Ar.'s first *Plutus*, 408 B.C.) to Aristophanes'. His contemporaries derided his frigid puns (schol. Ar. *Vesp.* 481), some of which survive in the fragments.

FCG i. 205 ff.; *CAF* i. 679 ff.

M. P.

ARCHITECTURE. I. GREEK. Greek architecture began about the middle of the seventh century B.C.; approximately at that time the first temples which can be called Greek were built, the earliest known example being the Dorian Temple of Hera (Heraeum) at Olympia. There were two main streams of development, Dorian and Ionian, the former being firmly planted in the West till the second century B.C., with centres in Greece proper, south Italy (Magna Graecia), and Sicily; a parallel Ionian development prevailed from c. 600 B.C. in west and south-west coast lands (Ionia, Lycia, and Caria) and adjoining islands of Asia Minor. Both streams preserved separate architectural character throughout; in Greece (at Athens and Delphi) during the sixth and fifth centuries B.C., and at Loeri in Magna Graecia (an Ionian colony) we find Ionian buildings in Dorian lands.

2. Though the temple (q.v.) is the supreme architectural type, there are others, mostly civic, well worth study. The Hall of Mysteries (Telesterion) at Eleusis (6th and 5th c.), the Thersilion at Megalopolis (a unique pillared hall—c. 370 B.C.), and the Arsenal at the Piraeus (c. 347 B.C.) may be mentioned. From c. 350 till c. 100 B.C.—or, broadly speaking, in the period called 'Hellenistic', there are remains of buildings showing interesting plan and structure (e.g. the 'Hypostyle Hall' at Delos and the Heroön at Calydon), large monumental quality (e.g. the Mausoleum (q.v.) at Halicarnassus), and small monumental quality (e.g. the Choragic Monument of Lysicrates and the 'Tower of the Winds' at Athens); in addition there is a wealth of evidence about domestic buildings in the fifth to second centuries, notably from Olynthus, Priene, and Delos (see *TOWNS*). Theatres (q.v.) and halls of assembly (Miletus and Priene) also gave opportunity for architectural treatment.

3. All Greek architecture was strictly governed by the expressions of post and beam (trabeated) construction known as the Doric, Ionic, and (to a slight extent) Corinthian Orders; the arch, though known by 200 B.C., was practically never used. It is essential to realize,

firstly, that the beam, or entablature, and the base, or stylobate, combine with the column (q.v.) to form an Order, the two former being even more important, as they were used in wall treatments as well as in columnar treatments, securing the emphasis of the horizontal element which is the hall-mark of all classical architecture; secondly, that Greek architectural forms outlasted Greece, politically, completely saturating Roman decorative expression, which, in the Near East even as late as the second century A.D., maintained essentially Greek qualities. The term 'Graeco-Roman', vaguely understood in an architectural sense, can be used with certainty for Order treatments in most of the structures that are Roman in date up to the end of the first century B.C., and often much later.

4. The Orders had their origin in wooden originals: in Doric this can be seen particularly in entablatures, while the Doric column capital shows the influences of Minoan and Mycenaean prototypes; in Ionic the capital developed from Near Asian (Aeolic) and from further eastern forms. Before the end of the sixth century B.C. both Doric and Ionic temples had become perfect stone and marble expressions, construction being flawless and without the use of mortar; utmost refinement was the ideal, stone, where used, being finished with thin stucco, and both stone and marble coloured with admirable taste. The Corinthian Order, also fully coloured, was first used in the latter part of the fifth century; some rudimentary examples (one, at Epidaurus, remarkably fine) are known from Greek and Hellenistic times, but this Order was really a Graeco-Roman achievement.

II. ROMAN. The Romans were skilful users of the artistic genius of the Greeks in regard to pure architecture, and even Roman works of civic development were an extension of ideas already evolved in Greek lands. The Roman Forum took the place of the Greek Market (*Agora*), and there was nothing new in the underlying principles of Roman temples, theatres (q.v.), palaces (q.v.), domestic buildings, or even basilicas (q.v.), though baths (q.v.) and amphitheatres (q.v.) were new types; but the Romans became constructors of first-rate ability by a mastery in the use of the semicircular arch, borrowed from the Etruscans and from native Syrian masons. The trabeated principle was never abandoned, but was associated with arched forms externally (e.g. in the Colosseum (q.v.) at Rome, and with vaulted and domical forms internally (e.g. in baths). By a gradual process of transition the expressions of the Greek Orders were changed into forms which have become the accepted modern ones through their exploitation in the Italian Renaissance. For columnar treatments of exceptional strength (e.g. in Triumphal Arches) a fourth Order, the 'Composite', was used; the capital being a fusion of Ionic and Corinthian which had its origin in the fourth century B.C. The profusely carved and dentilled cornice of the Corinthian and Composite Orders, enriched with modillions, was the most important architectural feature bequeathed by the Romans to posterity.

2. Roman arched forms supported and sometimes reinforced the concrete used for their vaults and domes (see *BUILDING MATERIALS*). Though the fully developed pendentive dome on a square plan was used by the Romans at Gerasa (Syria) at the end of the second century, it was not adopted in the West, but the large rotunda known as the Pantheon (q.v.), the so-called 'Temple of Minerva Medica' (3rd or 4th c.), and other circular or polygonal structures from the time of Hadrian to that of Constantine, had an important influence on Early Christian and Byzantine churches of centralized type. See also *AQUEDUCTS*, *BRIDGES*.

3. The outstanding contribution of Greek architecture to posterity was its perfecting of the Orders, and of Roman architecture the constructive ability and sheer magnitude of its greatest buildings; but the Orders are

of paramount importance—their survival value has been unique in the history of architectural development. Apart from their Orders, the Parthenon (q.v.) and the tiny Monument of Lysicrates at Athens would lose all their expression; and structures such as these are immortal.

D. S. Robertson, *Greek and Roman Architecture*² (1943); W. J. Anderson, R. P. Spiers, and W. B. Dinsmoor, *The Architecture of Ancient Greece*² (1927); W. J. Anderson, R. P. Spiers, and J. Ashby, *The Architecture of Ancient Rome*² (1927). T. F.

ARCHITHEORIA, see LITURGY.

ARCHIVES. I. GREEK (*ἀρχεῖα*: this name originally applied to all offices of magistrates; it did not acquire its special sense until the Hellenistic period). The predecessors of Greek archives were the officials called *mnemones*, 'remembrancers'. They were gradually displaced through the necessity of having public records in writing and under the custody of the State. Even Sparta possessed an archive (which included the Delphic oracles). But generally the institution of public archives started in the fifth or fourth century B.C.; in Athens a centralized record-office was perhaps not instituted before 403. The name of the record-offices varied, temples often being used, as the Metroön in Athens. All records kept in archives were written on white wooden tablets or papyrus. They constituted the originals (*αὐτόγραφα*), while all inscriptions in public places were copies (*ἀντίγραφα*). There were, of course, all kinds of records in the archives; most of them contained a register of landed property. Registration of public records became increasingly general; in most Hellenistic States it seems to have been made optional for everybody to deliver private records to the archive, and it became compulsory to lodge certain legal documents there. The registration of landed property and generally the preservation of records was nowhere more elaborate than in Ptolemaic and Roman Egypt.

E. Weiss, *Griech. Privatrecht* i (1923), 356 ff., 391 ff. Busolt-Swoboda, *Griech. Staatskunde* i. 484 ff., ii. 1036 ff. Kahrstedt, *Klio* 1928, 25 ff.

II. ROMAN (*tabularia*, from *tabulae*, the usual word for records). The chief archive was the *aerarium populi Romani*. This was at first housed in the temple of Saturn in the Forum, after 78 B.C. in the so-called *tabularium* on the south-east side of the Capitol. Originally the treasury, it contained from early times all documents relating to financial administration, and later on almost all official records were deposited there, including laws, *plebiscita*, *senatus consulta*, Imperial constitutions and decrees. Various officials, chiefly the *quaestores urbani*, were concerned with the administration of the *aerarium*. Among the other archives the most important were the temple of Ceres (where copies of plebiscites and, in early times, of *senatus consulta* were lodged), and the *tabularium Caesaris*, where all documents relating to landed property were kept in Imperial times. Documents concerning foreign affairs, e.g. treaties, were stored in bronze copies on the Capitol. All provinces and *municipia* had their own archives. Private records were generally not admitted, until Marcus Aurelius ordered that the birth of every Roman child was to be registered at the *aerarium* of the provincial *tabularium*.

Mommsen, *Röm. Staatsr.* passim, esp. ii. 1. 545 ff.; Sachers, *PW*, s.v. 'Archive'. V. E. and A. H. McD.

ARCHONTES, the general term for all holders of office in a State. But the word was frequently used of a particular office, originally at least the highest office of the State. *Archontes* are found in most States of central Greece, including Athens, and in States dependent on or influenced by Athens.

2. In Athens there were at first three archons, the *basileus*, the polemarch, and the archon (*eponymos*), this

being probably the order in which they were first instituted. The royal house of Medontidae (see COBRUS) continued to hold a hereditary life-office (probably as *basileis*, not as *archontes eponymi*, as Aristotle says) after the institution of polemarch and archon, the two latter being presumably elective. Later (c. 750 B.C.?) the three archons were made ten-yearly, and in 683 yearly magistrates; all rights of the Medontidae had disappeared. Shortly after this the number of archons was increased to nine by the addition of six *thesmothetai* (q.v.). They were elected by the people and were the chief magistrates of the State. The *archon eponymos* was the most important because he had the widest range of duties. Political struggles in the seventh and sixth centuries centred round the elections to this office till the tyranny of the Pisistratids, who arranged that one of themselves or their adherents should hold it. In 487 the lot (first from an elected body of 500, later without pre-election) was introduced as the mode of their appointment, and therewith their political importance ended. No influential politician held the office afterwards; before 487 Solon, Hippas, Themistocles, and Aristides had been archons.

3. The nine archons and the secretary to the *thesmothetai* were each chosen from one of the ten *phylae*. Solon's arrangement was preserved, by which the archonship was open only to men of the highest or two highest census-classes (see SOLOON); it was opened to the *zeugitai* in 457, never formally to the *thetes*, though questions were not asked if one of the latter was chosen.

4. All ex-archons after their *euthyna* (q.v.) entered the Areopagus, and remained life-members of that council. This added considerable importance to their office in early times; after the introduction of the lot as the method of election, the Areopagus too lost its political importance.

5. Like most public offices in Greece, the archonship involved wide judicial as well as executive duties. In early times the nine archons tried cases entirely themselves (except those involving life or citizen rights, where there was trial by the Areopagus or appeal to the citizen-body). The relationship between the archons and the *Heliatai* (q.v.) in the sixth century is obscure. In the developed democracy the archons (and other magistrates) were only required to examine a case to decide if it could be brought at all, and if so in what court, to collect the evidence, and to preside at the trial (see DICASTERIES).

6. The *archon eponymos* was so called because he gave his name to the year: the list of eponymous archons was kept continuously from 683 B.C., but the term *eponymos* was not officially used before Roman Imperial times. He was chief magistrate until 487 and always remained the nominal head of the State. His archonship was a civil office, and was concerned especially with the protection of property; on entry into office he took an oath that at the end of his year everyone should hold what he held at the beginning: that is, he guaranteed the citizens against disorder and arbitrary executive action. Since property involved inheritance, the archon had to protect the family (and in particular orphans and heiresses), and in his judicial capacity had charge of all cases involving family and inheritance rights. He regulated certain religious festivals, particularly the City Dionysia, and had the charge of lawsuits arising from them.

7. The *Basileus* had certain religious duties and presided over the Areopagus. He had charge of the *Lenaea* and the *Mysteries* (q.v.), and in general of all the religious duties of the former kings. He introduced lawsuits arising from these, and also those between claimants for a priesthood. His jurisdiction included all charges of impurity, and all homicide cases (because a man guilty of shedding blood must be kept away from sacred places till purified). See also POLEMARCHUS; THESMOTHEAI.

Aristotle, *Ath. Pol.* chs. 3, 8, 13, 55-9.

A. W. G.

ARCHYTAS of Tarentum flourished in the first half of the fourth century B.C. He was visited by Plato, and had a great reputation in antiquity. He is said to have been the founder of mechanics; he distinguished harmonic progressions from arithmetical and geometrical; he solved the problem of doubling the cube, by means of two half-cylinders. He worked out the ratios which underlie the relations of successive notes in the enharmonic, the chromatic, and the diatonic scales. In philosophy he belonged to the Pythagorean school. Frs. of his mathematical works remain, but the other frs. cited as from him are late fabrications.

Testimonia and frs. in Diels, *Vorsokr.* i. 421-39. PIV ii. 600.
W. D. R.

ARCISIUS (*Ἀρκίσιος*), in mythology, father of Laertes and grandfather of Odysseus (q.v.); his own parentage is variously given. In one story, his mother was a she-bear (*Ἀρκίσκος*—*ἄρκτος*), Aristotle in *Etym. Magn.* 144. 25.

ARCTINUS of Miletus (? 8th c. B.C.), epic poet; author of the *Aethiopsis* and *Iliu Persis*. and probably of the *Titanomachia*. See EPIC CYCLE.

EGF, pp. 3, 6-8, 33-6, 49-52.

ARDEA, a city of the Rutuli, a Latin people. Although three miles distant from the sea it served as a port for Latium. Archaeological remains (ditch and wall defences, acropolis, and temples that long served as federal sanctuaries for the Latin League) confirm the tradition that Ardea was once an important city, worthy of signing a separate treaty with Rome (444 B.C.). In 442 a Latin colony strengthened Ardea against the Volsci and in 390 Camillus, it was said, set out from here to repel the Gauls. Apparently, too, Ardea remained loyal in the Latin War (Livy 8. 12). Ardea began its decline c. 300 and malaria accelerated the process. However, the erection of numerous villas and possibly the dispatch of a Hadrianic colony prevented the village from entirely disappearing. In Republican times Ardea served as a State prison; later its fields supported the Imperial elephants.

Verg. *Aen.* bks. 7-12; Dion. Hal. 1. 72; Livy 4. 7; 5. 43 f.; 39. 19; Cato fr. 58 P.; Strabo 5. 232; Diod. 12. 34; *Lib. Colon.* p. 231. B. Tilly, *Vergil's Latium* (1947), 31 ff. E. T. S.

AREITHOUS (*Ἀρήθους*), a mythological character, surnamed *Κορυνητής*, i.e. Club-man, because he fought with a club of iron; his armour had been given him by Ares. Lyeurgus the Arendian caught him in a narrow road where he had no room to swing his club, ran him through with a spear, and took his armour (*Il.* 7. 138 ff.).

H. J. R.

ARELATE, a town in Gallia Narbonensis, modern *Arles-sur-Rhône*. The *periphr.* of Avienus (679) mentions a Greek town Theline which preceded 'Arelatus', and the 'Rhodanusia' of Ps.-Scymnus (206) was presumably in the vicinity; but archaeological vestiges are slight (cf. Jacobsthal-Neuffer, *Préhistoire* ii. 51). Arelate came into importance with the construction of the 'Fossae Mariana', and was used as a naval base by Caesar against Massilia (49 B.C.). A colony of veterans of the sixth legion was founded here in 46 ('colonia Iulia Paterna Arelate sextanorum'), but the town was much enlarged, as appears, by Augustus, to whom the earliest surviving town-wall, and probably the still visible east gate, are due. The *territorium* was created mainly at the expense of Massilia. Early buildings still partially surviving are the forum, amphitheatre (136 m. × 107 m. externally), and the theatre. The principal importance of Arelate was due to its position as a port of trans-shipment for sea-going vessels which were under the control of the five corporations of *nauticularii Arelatenses*. In the Later Empire it acquired importance as the occasional residence of emperors, in the fourth century a mint was set up, and in the

fifth it became the seat of the praetorian prefecture. Extensive baths (*La Trouille*) date from this period, and though the area within the walls was reduced, Ausonius (19. 73-80) and the Emperor Honorius (Hacnel, *Corpus legum*, 238) attest its prosperity. After various vicissitudes it was annexed by the Visigoths in A.D. 476.

L. A. Constans, *Arles antique* (1921); Grenier, *Manuel* i. 289-95; ii. 493-9. C. E. S.

ARELLIUS FUSCUS, Augustan rhetor, perhaps a Greek. His style was brilliant but affected and undisciplined (Sen. *Controv.* 2 *praef.* 1). Ovid was one of his many pupils (*ib.* 2. 2. 8-9).

AREOPAGUS (officially ἡ Βουλὴ ἡ ἐξ Ἀρείου πάγου), the oldest Council at Athens, originating in the king's advisory body of chief men. It had also from earliest times a special jurisdiction in cases of homicide (including wounding with intent and arson); in this capacity it met on the hill known as the Areopagus (see ATHENS (TOPOGRAPHY)), as a Council in the Stoa Basileios. The Basileus (see ARCHONTES, para. 7) presided at its meetings; from the time of the three archons, or more probably from that of the nine, it received into its ranks all ex-archons who had passed a *dokimasia* (q.v.) before it.

Since the archons (until 456 B.C.) were chosen exclusively from the nobles or the rich, the Areopagus would naturally become a powerful oligarchic body, like the Senate at Rome, and as its members were appointed for life would be far stronger than the yearly archons. According to Aristotle it not only controlled the magistrates before Solon but had the administration of affairs practically in its hands; and Solon made it particularly the guardian of the new constitution. It had specific powers to punish offenders (presumably offending magistrates, for the archons had jurisdiction in ordinary civil and criminal cases). Yet in fact there was no tradition of its ever playing an important part in the history of Athens during the seventh and sixth centuries: the archonship is the chief office and the centre of party struggles. After 487, when the lot was introduced for the archonship, the political power of the archons, and therefore ultimately of the Areopagus, declined. We are told indeed that after 480, owing to its unshaken courage before and after Salamis, it recovered much of its influence; there is probably some truth in this—Themistocles and Aristides were both members, and they may have been greatly helped by the Council's action; but there is no reason to believe that it almost ruled Athens for a number of years, putting a brake on the democratic advance. On the contrary Salamis gave a great impulse to the growth of the democratic sailor-class. In 462-461 the democrats, led by Ephialtes, carried a series of laws taking from the Areopagus its power of 'overseeing' the constitution and its control over the magistrates; this marks the end of its influence, but that had been effectively undermined by the reform of 487.

For the rest of the fifth and in succeeding centuries it remained a highly venerated court for the trial of homicide (and a few minor cases arising from certain religious cults): much talked about by sentimentalists who wanted 'the old constitution' back, ignored by all in practical politics. There was some revival of its activities after 338; it seems to have taken some part in hunting down traitors and cowards, and it was given the commission of examining the affair of Harpalus (q.v.) in 325-324 and reporting to the dicasteries. But even then, and in later oligarchic attempts to restore it, it never gained any real political power.

Aristotle, *Ath. Pol.*, *passim*.

A. W. G.

ARES (*Ἄρης*, Aeolic *Ἄρερς*; etymology unknown, but good Greek formation), the Greek war-god, not in the sense of a warlike deity who leads his people into battle,

but rather a deification of warlike spirit. F. Schwenn, *ARW* xxii (1923-4), 224 ff., finds difficulty in supposing this possible for early times and suggests that Ares was originally a deity of vegetation, who became a war-god secondarily by some unknown process. There is, however, no reason to assume that Ares was worshipped by the earliest Greeks. He is unpopular, is an important god only in Thebes and perhaps Athens (contrast Mars, q.v.), belongs especially to the northern and western communities (Aetolia, Thessaly, etc.), and has been considered by some to be of Thracian origin (Farnell, op. cit. infra, 399 ff.). It is conceivable that he was 'projected' from some widespread rite of war-magic, earlier than civilization in any Greek people. He never develops into a god with any moral functions, like Zeus or Apollo, and in mythology he appears either as instigator to violence or as a tempestuous lover, a divine *miles gloriosus*. He frequently has Aphroditic (q.v. para. 4) as his partner (e.g. at Thebes they are the parents of Harmonia, see CADMUS); he is associated with her, Athena, and Enyo in his temple at Athens (Paus. i. 8. 4). It must be noted that Aphrodite (q.v.), like many mother-goddesses, has warlike qualities. Hence, as she is also thought of as wife of Hephaestus, the story that Ares is her paramour (*Od.* 8. 266 ff. and often later). In his ritual perhaps the most remarkable feature is that at Tegea he was worshipped by women under the title of *Γυναικοβοίνας* (Paus. 8. 48. 4); it should be remembered that women are often active in war-magic. Dogs were sacrificed to him (under his common title of Enyalios) at Sparta (Plut. *Quaest. Rom.* 290 d; Paus. 3. 14. 9), a procedure associated with purifications and deities of an uncanny sort, such as Hecate.

In mythology, although son of Zeus and Hera, he is commonly the helper of foreign peoples, such as the Trojans, or unusually warlike ones, as the Amazons (q.v.). He is the father, by various mothers, of numerous children, mostly sons and commonly of warlike, often violent and outrageous character, as Ascalaphus (*Il.* 13. 518; 15. 113 for Ares' fury at his death); Diomedes the Thracian (see HERACLES); Cycnus the brigand (see *ibid.*); Meleager in some versions of the story (*Hyg. Fab.* 14. 16); Phlegyas, eponym of a whole people of impious raiders and ferocious fighters (Paus. 9. 36. 2). Such genealogies seem to waver between the complimentary (a brave warrior is a 'shoot from Ares' stock', ὄζος Ἄρης, in Homer) and the uncomplimentary, the god's own character being ferocious and unlovely. That he is the father of Eros (Simonides, fr. 24 Diehl) is a by-product of the original lack of any association between Eros and Aphrodite. Of his daughters, Harmonia has already been mentioned; by Agraulus daughter of Cecrops (see ATTIC CULTS AND MYTHS) he became the father of Alcippe, who was violated by Halirrhothius son of Poseidon. Killing him, he was tried by the Areopagus and acquitted (Apollod. 3. 180) or sent into a year's serfdom (Panyassis ap. Clem. Alex. *Protr.* p. 26, 22 Stählin). As early as Hesiod (*Th.* 934) Aphrodite bears him his Homeric attendants Deimos and Phobos (Fear and Rout). Cicero (*Nat. D.* 3. 60) adds Anteros to the family from some late author.

In Rome he was identified with Mars (q.v.).

Much material collected in Roscher's *Lexikon*, s.v. 'Ares' (Stoll-Furtwängler). Brief account in Rose, *Handbook of Gk. Myth.*, 157-8. For his cult, see especially Farnell, *Cults of the Greek States* v. 396-414. H. J. R.

ARETAEUS of Cappadocia, medical author, a contemporary of Galen (c. 150-200), wrote in Ionic in imitation of Hippocrates. Works (extant but incomplete): *Περὶ αἰτιῶν καὶ σημείων ὀξέων καὶ χρόνιων παθῶν*; *Περὶ θεραπείας ὀξέων καὶ χρόνιων παθῶν*; (lost) *Περὶ πυρετῶν*; *Περὶ γυναικείων*; *Περὶ φυλακτικῶν*; *Χειρουργία*. His main merit is that he builds on the solid foundations of Archigenes (q.v.).

Ed. K. Hude, *CMG* ii (1923). *PIW* ii. 669.

W. D. R.

AREUS (c. 312-265 B.C.), son of Acrotatus, succeeded his grandfather, Cleomenes II, on the Spartan throne (309-308). In 280 he invaded Aetolia, after organizing a Peloponnesian coalition against Macedonia; on his repulse this collapsed. In 272 he returned hurriedly from helping Gortyn in Crete, to drive Pyrrhus back from Sparta, and assisted in his destruction at Argos. During the Chremonidean War he failed to force Craterus' Isthmus lines to relieve Athens; in 256 he fell outside Corinth. He was the first Spartan king to hold an elaborate court and to issue silver coins.

K. J. Beloch, *Griech. Gesch.* iv (1928).

F. W. W.

ARGAS, citharode and poet of the first half of the fourth century B.C., renowned for his badness (Plut. *Dem.* 4, schol. Aeschin. 2. 99). Hence his name was used as a term of abuse of Demosthenes by Aeschines (2. 99).

ARGEADAE, see MACEDONIA, para. 2.

ARGEI. On 16 and 17 March a procession went *ad Argeos* (Ov. *Fasti* 3. 791-2), i.e. to the twenty-seven *Argeorum sacra* (Varro, *Ling.* 5. 45) scattered about Rome. On 14 May (15, Dion. Hal. *Ant. Rom.* i. 38. 3), the Vestals, pontiffs, and others threw from the Pons Sublicius into the Tiber twenty-seven effigies of men in old-fashioned clothing (Ov. op. cit. 5. 621 ff.; Dion. Hal. loc. cit.; Varro, op. cit. 7. 44 and Ennius quoted there; see further Frazer on Ovid, loc. cit.). The ancients commonly explained this as a surrogate for human sacrifice (Ov. *ibid.*, and other passages). Of moderns, Wissowa holds a similar view (art. 'Argei' in *PIW*, = *Gesammelte Abhandlungen*, 211 ff.), and dates it from the third century B.C., the age of the document quoted in Varro, *Ling.* 5. 47 ff. This is generally rejected. That it is a vegetation-rite, with the well-known drowning or bathing of a sort of Jack-in-the-Green, is unlikely, if only from the number of the figures (why more than one?) (L. Deubner in *ARW* xxiii (1925), 299 f.); it remains most likely that, as Frazer suggests (*Fasti of Ovid*, iv. 91 and references there), the puppets are 'offerings to the river-god to pacify him' and induce him to spare the real persons using the bridge or otherwise approaching the stream.

H. J. R.

ARGEIA, see ADRASTUS.

ARGENTARIUS (1), MARCUS (fl. 1 B.C.), is the liveliest of the Graeco-Roman epigrammatists whose works crowd the Greek Anthology. A heavy drinker (see his address to a bottle, *Anth. Pal.* 6. 248), he was poor and unsuccessful; but his vein of coarse humour never deserted him, though his sense of propriety often did. He is probably the Latin-speaking Greek rhetor cited by the elder Seneca (*Suas.* 5. 6, *Controv.* 2. 6. 11).

G. H.

ARGENTARIUS (2), Augustan rhetor, a Greek; a slavish follower of Cestius (Sen. *Controv.* 9. 3. 12-13). He may be identical with the epigrammatist of the Greek Anthology.

ARGENTORATE, modern *Strasbourg*. The Celtic name (silver fort) hints at a pre-Roman settlement, of which traces have been found. Perhaps first occupied as one of Drusus' *castella* by 'Ala Petriana Treverorum'. It was garrisoned c. A.D. 12-43 by Legio II Augusta, then by legionary detachments including one of XXI Rapax, who constructed the first basalt wall. *Circa* A.D. 80 Legio VIII was transferred here. Its fortress (606 × 300 m.) was defended by an earth bank with 90 cm. thick revetment wall of small blocks and brick borders. From the third century Argentorate was exposed to barbarian attacks (an incident of which was Julian's victory, A.D. 357), and for increased protection the wall was fronted by another, 2 m. 50 cm. thick, of re-used masonry with

bastions c. 25 m. apart. In this period the *canabae* (q.v.), previously important, were given up and the civil population crowded into the fortress.

R. Forrer, *Strasbourg-Argentorate* (1927).

C. E. S.

ARGONAUTS (*Ἀργοναῦται*), one of the oldest Greek sagas, based originally on a perhaps real exploit of the semi-historical Minyae, known as early as Homer (*Od.* 12. 70), probably elaborated into something like its present form at Miletus (Colchis as goal of the voyage; Miletus had an extensive Black Sea trade). The chief surviving accounts are Pindar, *Pyth.* 4; Apollonius Rhodius, *Argonautica* (both of these, especially the latter, have very helpful scholia); Valerius Flaccus, *Argonautica* and the 'Orphic' *Argonautica*; Apollodorus, 1. 107 ff.; Hyginus, *Fab.* 12 ff. The later authors all draw more or less on Apollonius, but not exclusively. Many of the episodes were represented in art.

2. Aeson son of Cretheus (see AEOLUS) was deprived of the kingship of Iolcus in Thessaly by his half-brother Pelias. His young son Jason (q.v.), on reaching manhood, came to reclaim the throne. Pelias was afraid to refuse openly, so induced him (how, accounts vary) first to go and fetch the Golden Fleece (see ATHAMAS) from Colchis. With the help of Hera, who favoured him and had been insulted by Pelias, he got together a band of the noblest heroes in Greece (lists differ widely, owing no doubt to ambitious families, many not Minyan, claiming an ancestor in the *Argo*; but all include Argos (q.v. 3b), Tiphys the helmsman, Lynceus, whose sight was preternaturally keen, and a few more, among them Heracles and Orpheus, both manifest intruders; cf. also Rose, *Handb. of Gk. Myth.*², 295). Argos built him a ship, the *Argo*, by help of Athena; she was the first longship ever made. They set sail for Colchis and had several adventures by the way. At Lemnos (see HYPSPYLE) they stayed a year with the women of the island; at Cyzicus they were hospitably received by the eponym of the island and Heracles rid him of the Gegeneis who infested the hills. Driven back by a storm, they killed Cyzicus in a scuffle at night, and mourned for him. At Cios, Heracles' page Hylas was carried off by water-nymphs and he, staying to look for him, was left behind. After visiting the Bebryces (see AMYCUS) they touched at Salmydessus and learned from Phineus (q.v.) that to get to the Euxine they must pass the Clashing Rocks (Symplegades), which he advised them to test by seeing if a dove could fly between them before they met. The dove did so, and the *Argo* likewise passed; in some accounts the rocks became stationary (at the present Dardanelles). Arrived finally at Colchis, they were confronted with a task set by King Aetes; they must yoke a pair of fire-breathing bulls, plough a field, sow it with teeth from Cadmus' dragon (see CADMUS), and overcome the warriors who should spring up. This Jason succeeded in doing with the help of Medea (q.v.), and, still by her advice, he took the Fleece that same night and fled, accompanied by her.

3. The story now divides into several main variants, conditioned partly by the geographical ideas of different periods, partly by the desire to bring the Argonauts into connexion with places traditionally Minyan. (1) They returned the way they came. (2) Because they did not want to face the Symplegades again or for some other reason, they ascended the river Phasis, got to the stream of Ocean, and so sailed around till they reached the Mediterranean again. (3) They went up the Ister (Danube), thence got into the Eridanus (fabulous, but in part the Po), down it to some part of the Mediterranean, and so home. (4) From the Ister they got (via the Rhine?) into the North Sea, and so down to the Straits of Gibraltar and through them. The subsidiary adventures vary accordingly; some of the commonest are, that they reached Africa and there met a Triton who showed them the way through the shallows near Cyrene and foretold the

founding of the colony by one of their descendants (Pind. *ibid.* 19 ff.); they passed the Sirens (see ODYSSEUS) and were protected against their song by Orpheus' still more lovely playing (Ap. Rhod. 4. 891 ff.); they came to Crete, and there encountered Talos, q.v., who guarded the island. Medea charmed him into a magic sleep, and he was killed by destroying the fastening that closed his one vein, thus letting out his blood, or whatever corresponded to it in him (Ap. Rhod. 4. 1638 ff., Apollod. 140-1; details vary, however). For their meeting with Alcinous, see s.v.

4. Not only is the story diversified with details which are pure *Märchen* (a feature of many sagas, since one good story attracts another; cf. Rose in *Folklore* (1935), 16 f.) but the motive of the voyage is of the same sort, together with two principal episodes at least. To send a hero on a dangerous journey to get rid of him, to confront a dangerous visitor with tasks, to be helped in those tasks by the daughter of a tyrant, wizard, or other formidable person, are all well-known themes (Stith Thompson, nos. H 1211, H 900, G 530. 2), and the Golden Fleece itself seems a sort of magical treasure, the kind of thing which fairy heroes go to look for. If a real voyage underlies the tale, it is deeply buried.

Good collection of material in Roscher's *Lexikon*, arts. 'Argo', 'Argonautai' (Seeliger). Interesting discussion in J. R. Bacon, *Voyage of the Argonauts* (1925). H. J. R.

ARGOS (1), a city in the southern part of the Argive plain, three miles from the sea, at the foot of the Mycenae and classical acropolis called Larissa. A lower hill, the Aspis, was enclosed in the walls. Both were occupied from the Early Bronze Age; most of the classical city lay in the plain.

In the *Iliad* Argos was the kingdom of Diomed, who owned Agamemnon's leadership; also, in a wider sense, Agamemnon's empire. In the Dorian invasion Argos fell to Temenus, the eldest of the Heraclids. It probably was the base from which the Dorians occupied north-east Peloponnesus, and retained the overlordship until the eighth or seventh century, when its ascendancy was challenged by Sparta. Early in the seventh century a strong king, Pheidon (q.v.), defeated the Spartans, coined the first Greek money in Aegina, presided in person over the Olympic Games, and made Argos the first power in Greece. But his power died with him, checked perhaps by the rise of Corinth. Henceforth Argos maintained a suspicious neutrality, fighting once a generation with Sparta. Her heaviest defeat was c. 494 B.C., when Cleomenes was barely repelled from the walls by the women of Argos, rallied by the poetess Telesilla. In 480-479 the Argives observed a benevolent neutrality towards Persia. Shortly afterwards they set up a democracy. They were repeatedly allied with Athens against Sparta (461, 420, 395), but remained an ineffective power. Argos sided with Philip II of Macedon and was one of the last cities to join the Achaean League, after a period of rule by tyrants. The territory of Argos in classical times included Mycenae, Tiryns, Nauplia, Asine; and other strongholds in the Argive plain, but not the cities of the Aetean east of Argos, nor Phlius and Cleonae in the northern hills. The great Argive goddess was Hera, worshipped at the Heraeum six miles north of Argos. The minor arts were important in the earliest period, but from the seventh century they shared in the general decline. Argive sculptors of the early classical period were pre-eminent; the greatest was Polyctetus (q.v.).

H. T. Wade-Gery, *CAH* iii. 527 ff.; A. Boethius, 'Zur Topographie des dorischen Argos', in *Strena Philologica Upsalensis* (1922), 248 ff. Excavations: C. W. Vellgraf, *BCH* 1904, 1906, 1907, 1920; *Mémoires de l'Académie des Inscriptions et des Beaux-Arts*, *Alph. Latture*, *Deel* 66, 57 ff.; 71 ff. (summaries in French); C. Waldstein and others, *The Argive Heraeum* (1902-5); C. W. Blegen, *Prize* (1937); *Arch. Ep.* 1937, 377 ff.; *AJA* 1939, 410 ff. T. J. D.

ARGOS (2), the chief place of the Amphilocheians at the head of the Bay of Aetium. Captured by the Ambracians c. 437 B.C., it was set free by the Athenians and assisted Athenian operations in north-west Greece in the early stages of the Peloponnesian War.

ARGOS (3), in mythology, (a) a monster, of variously stated parentage, who had a third eye in the back of his neck, or four eyes, two before and two behind (Pherecydes and the anonymous epic *Aegimius* ap. schol. Eur. *Phoen.* 1116), or many eyes (Aesch. *PV* 678 and most authors). He was of huge strength and size, and killed a bull and a satyr which were troubling Arcadia; he also took vengeance on the killers of Apis the son of Phoroneus (Apollod. 2. 4). When Io (q.v.) was turned into a heifer, Hera set Argos to watch her (Aesch. loc. cit.), but by command of Zeus, Hermes killed him (Apollod. *ibid.* 7 and many authors). He turned into a peacock (Moschus, 2. 58 ff., schol. Ar. *Av.* 102), or Hera took his eyes to deck its tail (Ov. *Met.* 1. 722-3). (b) An Argonaut, builder of the *Argo*, see ARGONAUTS. His parentage and nationality are variously given. (c) Eponym of the city Argos, Apollod. 2. 2-3.

H. J. R.

ARGOS, CULTS AND MYTHS OF. The most famous cult of the Argolid was that of Hera, whose great temple, however, was not in Argos itself but some distance away (see HERA). In the city itself, on the lower acropolis (the Aspis), stood a very ancient temple of Athena (see Vollgraff in *Mnemos.* lvi, 319). Of great importance in historical times was Apollo Lykeios, whose temple stood in the Agora (Soph. *El.* 6 f.; Paus. 2. 19. 3); its foundation was ascribed to Danaus (q.v.). Myths connected with the city and district are innumerable, nearly every important legend touching them at some point; more local are the lists of Argive kings, of which the oldest is in a *βοστrophῆδόν* inscription from the Aspis (Vollgraff, *Mnemos.* lix, 369 ff.): Potamos (? Inachus), Sthenelas son of Echedamidas, Hippomedon, Charon (otherwise unknown as a hero), Adrastus (q.v.), Orthogoras, Cteatus, Aristomachus, and Ichonidas. See, for later lists, Apollod. 2. 1 ff., Hyg. *Fab.* 124.

H. J. R.

ARGUMENTUM, an explanation of the circumstances in which the action of a play is supposed to open, addressed direct to the audience by the speaker of the prologue (which may be deferred, cf. Plaut. *Cist.* 155). The *argumentum* forms part of all the prologues of Plautus except in the *Asinaria* and *Trinummus* (where we are informed that it is unnecessary); no doubt it was often translated from the Greek original (cf. the exposition uttered by Agnoia in Menander's *Perikeiromene*); it may vary from a brief statement (as in the *Truculentus*) to a detailed account (c.g. *Amph.* 97-150). Frequently it anticipates the plot to some extent. Terence abandoned the *argumentum* altogether. Cf. HYPOTHESIS.

G. Michaut, *Plaute* (1920), i, 101-8.

W. B.

ARIADNE, in mythology, daughter of Minos (q.v.) and Pasiphaë. When Theseus (q.v.) came to Crete, she fell in love with him and gave him a clue of thread by which he found his way out of the Labyrinth after killing the Minotaur. He then fled, taking her with him, but (magically?) forgot and left her on Naxos (Dia). It is generally said that Dionysus found her there and married her; but Plutarch (*Thes.* 20, from Paeon of Amathus) preserves a curious local legend and custom. Theseus left her there pregnant, and she died in childbirth. In commemoration of this, every year at Amathus a young man imitated a woman in childbirth in honour of Ariadne Aphrodite (see APHRODITE, para. 1). It is probable that Ariadne was originally a goddess.

Rose, *Handb. of Gk. Myth.* 184, 265, and notes.

H. J. R.

ARICIA, nowadays *Ariccia*, a city at the foot of the Albanus Mons, sixteen miles south-east of Rome, on the edge of a remarkably fertile volcanic depression (*vallis Aricina*; the impressive, beggar-infested viaduct, which carried the Via Appia across this (Juv. 4. 117), survives). Founded in mythical times, Aricia was a powerful city in early Latium: under Turnus Herdonius it organized resistance to Tarquinius Superbus, helped Aristodemus of Cumae to crush the Etruscans (c. 505 B.C.), supplied the Latin League with a meeting-place (*caput aquae Ferentinae*), and was prominent in the Regillus battle and the following treaty, *foedus Cassianum* (499-493). In 446 Aricia quarrelled with Ardea over boundaries. After participating in the Latin War it received Roman citizenship (Festus, p. 155 L. represents this, probably inaccurately, as partial citizenship), and became a prosperous *municipium* (Cic. *Phil.* 3. 15). Such it remained, despite its sack by Marius (Livy, *Epit.* 80; *Lib. Colon.*, p. 230), until barbarian invasions ruined it. Aricia was the birthplace of Augustus' mother Atia, and is celebrated for its wealthy Temple of Diana Nemorensis, whose ruins still exist nearby in the woods surrounding Lake Nemi; its presiding priest was a runaway slave who had murdered his predecessor.

Strabo 5. 239; Verg. *Aen.* 7. 761 f.; Livy 1. 50 f.; etc. G. Florescu, *Ephemeris Dacoromana* iii (1925) (documented). A. E. Gordon, *Cults of Aricia* (U.S.A., 1934).

E. T. S.

ARIES, see SIEGECRAFT, ROMAN.

ARIMASPEANS. A legendary people of the far North, between the Issedones and the Hyperboreans. They were one-eyed, and fought with griffins who guarded a hoard of gold. Aristeas was said to have written an epic about them (Hdt. 3. 116, 4. 13 and 27; Aesch. *PV* 803 ff.).

W. K. C. G.

ARIMINUM, nowadays *Rimini* with imposing Augustan monuments, an Umbrian and later Gallic town on the Adriatic which became a Latin colony, 268 B.C. (Vell. Pat. 1. 14; K. J. Beloch, *Röm. Gesch.*, 490, for magistrates; A. Sambon, *Monnaies ant. de l'Italie* (1903), 88, for coins; E. T. Salmon, *JRS* 1936, 58, for the *Ius Ariminum*). An important harbour and road-centre, Ariminum was the key to Cisalpine Gaul, controlling the bottle-neck between Apennines and Adriatic (Polyb. 3. 61, etc.; Livy 24. 44, etc.; Strabo 5. 217). It remained loyal to Rome against Hannibal (Livy 27. 10) and obtained Roman citizenship c. 89 B.C. (Pliny, *HN* 3. 115). Surviving sack by Sulla, occupation by Caesar, confiscation and colonization by the Triumvirs, attacks by Flavians (A.D. 69) and Goths (538), it became a member of the *pentapolis maritima* subject to the Ravenna exarchs (App. *BCiv.* 1. 67; 4. 3; Plut. *Caes.* 32; Tac. *Hist.* 3. 41; Procop. 2. 10).

G. A. Mansuelli, *Ariminum* (1941).

E. T. S.

ARION (*Ἀρίων*) (fl. 628-625 B.C.), son of Cycleus, of Methymna in Lesbos (Suidas, s.v.), spent most of his life at the court of Periander, paid a profitable visit to Italy and Sicily, returned to Corinth after being thrown overboard and carried to land, it was said, by a dolphin (Hdt. 1. 23). He was an important figure in the history of the dithyramb, which he composed himself and taught Corinthian choirs to perform. He seems to have made it formal and stationary and to have given his poems names, i.e. definite subjects. Suidas connects him with the birth of tragedy, but this probably means no more than that his type of dithyramb helped eventually to produce tragedy. Nothing survives of his work, and a piece attributed to him by Aelian (*NA* 12. 45) is certainly spurious, being probably work of the fifth century B.C.

Text. Diehl, *Anth. Lyr. Graec.* ii, 5-6. A. W. Pickard-Cambridge, *Dithyramb, Tragedy and Comedy* (1927), 20-22.

C. M. B.

ARION (*Ἀρίων*), in mythology, the wonderful horse of Adrastus (q.v.); at Thelpusa in Arcadia (Paus. 8. 25. 5) he was said to be the offspring of Poseidon and Demeter in horse-shape. He could speak (Propertius 2. 34. 37). He belonged successively to Poseidon himself, Copreus, Heracles (see *CYCNU*), and Adrastus (schol. *Il.* 23. 346).

H. J. R.

ARIOVISTUS, king of the Suebi, invaded Gaul c. 71 B.C. at the invitation of the Sequani, and defeated the Aedui, then the pre-eminent Gallic tribe. He invited more Germans and defeated at Magetobriga (site unknown) a combined Gallic attempt to eject him. The Senate ratified his conquests by the title of 'friend'. In 58, however, Caesar, influenced by the petitions of Gallic chiefs, picked a quarrel with him, and after a difficult campaign routed him in the plain of Alsace. His death is mentioned incidentally in *B Gall.* 5. 29.

Caesar, *B Gall.* 1. 31-53; Cicero, *Att.* 1. 19. 2; Rice Holmes, *Ancient Gaul*, 37-67, 553-5, 636-57. C. E. S.

ARISBE, name of two cities: (1) in the Troad, from Arisbe daughter of Merops, wife of Priam, or Paris, afterwards of Hyrtacus, or daughter of Teucer of Crete and wife of Dardanus; (2) in Lesbos, from Arisbe daughter of Macar. Stephanus Byzantinus, s.v.

ARISTAEUS (1), son of Apollo and Cyrene (daughter of Hypseus, king of the Lapithae), a god or hero, protector of cattle and fruit-trees, whose cult originated in Thessaly, but is found also in Cyrene, Ceos, Boeotia, and elsewhere. Pindar in *Pyth.* 9 tells how Apollo, enamoured of Cyrene in Thessaly, carried her off to Libya, where Aristaeus was born. Virgil in *G.* 4. 315-558 narrates an otherwise unknown story of Aristaeus, which he is said by Servius on doubtful authority to have substituted for a eulogy of Gallus after his disgrace. Aristaeus had offended the nymphs by pursuing Eurydice, wife of Orpheus, who in her flight was bitten by a serpent and died. The nymphs in revenge destroyed his bees. On his mother's advice he takes counsel of Proteus, who explains the cause of his misfortune. Cyrene urges him to sacrifice cattle to the nymphs. Returning after nine days Aristaeus finds bees swarming in the carcasses.

C. B.

ARISTAEUS (2), of Croton, son-in-law and first successor of Pythagoras, is said to have written works on mathematics. In an extant fr. of a work *Περὶ ἀφρονίας* ascribed to him, the eternity of the world is inferred from that of God.

Ph ii. 859.

ARISTAEUS, see also *ICARIUS* (1).

ARISTAGORAS (1) (fl. c. 500 B.C.), son-in-law of Histiaeus (q.v.), in whose absence he ruled Miletus. In 499 B.C. he persuaded the Persians to undertake an expedition against Naxos. On the failure of this enterprise he profited by the widespread discontent of the Ionians to raise them in revolt. He restored freedom to Miletus, and combated the other tyrants, who all had Persian support. In winter 490-498 he went to Greece to obtain help. Refused by Cleomenes of Sparta, he was successful in Athens and Eretria, but their small and temporary help was ineffective. Before the final failure of the revolt Aristagoras, who was a mere adventurer, emigrated to Myrcinus in Thraee, there to perish with his companions in a fight against the Thracians.

Hdt. bk. 5. M. Cary, *CAH* iv. 216 ff.; De Sanctis, *Riv. Fil.* lix (1911). V. E.

ARISTAGORAS (2), comic writer of uncertain date. His *Μαυροκόμπος* ('The Simpleton') was possibly a re-chauflé of Metagenes' *Ἀλφαι* (*Ath.* 13. 571 b).

FCG i. 218; *CAF* i. 710.

ARISTARCHUS (1) of Samos (c. 310-230 B.C.), mathematician and astronomer, was a pupil of the Peripatetic Straton of Lampsacaeus. He is famous as the author of the heliocentric hypothesis in astronomy, that 'the fixed stars and the sun remain unmoved, and that the earth revolves about the sun in the circumference of a circle, the sun lying in the middle of the orbit' (Archimedes, *Sand-reckoner*); he combined with this the rotation of the earth about its own axis (Plutarch, *De fac. in orbe lunae*, ch. 6). His only extant treatise, *On the sizes and distances of the sun and moon*, is, however, on the geocentric basis. Starting with six 'hypotheses', the treatise has eighteen propositions combining clever geometry with facility in arithmetical calculation. The ratios of sizes and distances which have to be calculated are really equivalent to trigonometrical ratios, and Aristarchus finds upper and lower limits to their values on the basis of assumptions equivalent to well-known theorems in trigonometry. Aristarchus is said to have invented an improved sun-dial, the *σκάφη* (Vitruv. 9. 8), and to have added $\frac{1}{2}$ day to Callippus' estimate of 365½ days as the length of the year.

The Greek text of *Περὶ μεγεθῶν καὶ ἀποστημάτων ἡλίου καὶ σελήνης* was edited by John Wallis (1688, see *Opera Mathematica* 1693-8), Fortia d'Urban (1810), E. Nizze (1856), T. L. Heath, *Aristarchus of Samos* (1913); see also Pappus 6. 554 f. (Hultsch); Latin translation by Commandinus (1572); German translation by A. Nöck (1854). T. II.

ARISTARCHUS (2) of Samothraee (c. 217-215 to 145-143 B.C.) belonged to the school of Aristophanes of Byzantium at Alexandria and was tutor of Eupator, son of Ptolemy Philometor. He succeeded Apollonius ὁ εἰδογράφος as head of the Alexandrian Library (c. 153 B.C.). On the accession of Ptolemy Euergetes II (145 B.C.) he left Alexandria for Cyprus, where he died. With him scientific scholarship really began, and his work covered the wide range of grammatical, etymological, orthographical, literary, and textual criticism. He was styled ὁ γραμματικώτατος (*Ath.* 15. 671 f.), and for his gift of critical divination was nicknamed *μάντις* by Panaetius (*Ath.* 14. 634 c). His name has often been used to typify the complete critic (e.g. *Cic. Att.* 1. 14. 3, *Hor. Ars P.* 450). The school which he founded at Alexandria and which lasted into the Roman Imperial period had many distinguished pupils, e.g. Apollodorus and Dionysius Thrax. His writings fall into three main groups:

1. Critical recensions (*διορθώσεις*) of the text of Homer, Hesiod, Archilochus, Alcaeus, Anaereon, Pindar. For these, particularly for his double recension of the *Iliad* and *Odyssey*, he used symbols to indicate his suspicions of the genuineness of verses, wrongful repetition, confused orders of verses, etc. (see *SCHOLARSHIP, GREEK*). In his treatment of textual problems in Homer he was more cautious than his Alexandrine predecessors and sought to remove corruption, conjecture, and interpolation by scrupulous regard for the best manuscript tradition, by careful study of the Homeric language and metre, by his fine literary sense, by emphasis on the requirements of consistency and appropriateness of ethos, and by his practice of interpreting a poet by the poet's own usage. But his work seems to have had comparatively little influence on the traditional text of Homer.

2. Commentaries (*ὑπομνήματα*) on Homer, Hesiod, Archilochus, Pindar, Aeschylus, Sophocles, Ion, Aristophanes, Herodotus.

3. Critical treatises (*συγγράμματα*) on particular matters relating to the *Iliad* and *Odyssey*, e.g. the naval camp of the Greeks; and polemics against other writers and scholars, e.g. against Philetas and the *Chorizontes* (see *HOMER*, para. 6), especially Xenon.

K. Lehrs, *de Aristarchi studiis Homericis* (1882); A. Ludwig, *Aristarchi homericæ Textkritik* (1882-53); D. B. Monro, *Homeri Odyssei*, Appendix (1901); H. P. Granelin and A. S. Hunt, *Archilochi Papyri* (1901), ii. 121; P. Causer, *Grundfragen der Homerkritik* (1923); A. Römer, *Die Homerische Aristarchi* (ed. E. Belzner 1914). J. F. I.

ARISTARCHUS (3) of Tegea, a contemporary of Euripides, dated by Eusebius (*Chron.* 2. 105) 455–454 B.C.; said by Suidas (s.v.) to have written seventy tragedies and won two victories. His plays included *Tantalus*, *Achilles* (adapted by Ennius), *Asclepius* (a thank-offering for recovery from illness, Suid., s.v.). No precise meaning can be attached to Suidas' statement that Aristarchus *πρῶτος εἰς τὸ νῦν μῆκος τὰ δράματα κατέστησεν*.

A. W. P.-C.

ARISTEAS. (1) of Proconnesus, a legendary servant of Apollo (cf. ABARIS), and reputed author of a poem on the Arimaspeans (q.v.). His story has three features of special interest for Apolline religion (Hdt. 4. 13): (a) Ecstasis, literal separation of soul from body. A. produces the semblance of death and appears at the same time elsewhere. (b) The taking of non-human shape. A. accompanies Apollo in the form of a raven. (c) Missionary spirit. The object of A.'s miraculous disappearance from Cyzicus and reappearance at Metapontum is to spread the cult of the god.

(2) For the 'letter of Aristeas', see SEPTUAGINT.

W. K. C. G.

ARISTIAS (5th c. B.C.), son of Pratinas (q.v.) of Phlius, contended against Aeschylus in 467, when Aeschylus produced his Theban tetralogy and Aristias the *Perseus*, *Tantalus*, *Antaeus* (?), and his father's *Πολυαιστὰι Σδρυροί* (Arg. Aesch. *Sept.*). He achieved some fame as a composer of satyric plays (Paus. 2. 13. 5). His name is doubtfully restored, two places below that of Sophocles, in the list of Dionysiac victors in *IG* ii¹. 977 a.

A. W. P.-C.

ARISTIDES (Ἀριστίδης) (1) (b. 520 B.C. or earlier), Athenian statesman and soldier. He was strategus in the Marathon campaign (490–489), and archon eponymus in 489–488; he belonged therefore to the richest class (see ARCHONTES). He was ostracized in 483–482, and recalled in the general amnesty two years later. He led the Athenian hoplites who landed on the islet of Psytaleia in the battle of Salamis, and in 479 he held supreme command over the Athenian army at Plataea. Immediately after he worked with Themistocles to secure the rebuilding of the walls of Athens against the wishes of Sparta. In 478 he commanded the Athenian contingent of the Greek naval forces, and was chiefly responsible for the secession of the Asiatic and island Greeks from the Spartan Pausanias (q.v.). These now followed the lead of Athens; the Confederacy of Delos was formed (spring 477), and A. fixed the quota of each contributory State. Aristotle (*Ath. Pol.* 24) says that he also initiated the policy of democratic 'state-socialism'; but this is doubtful. Otherwise nothing is recorded of him after 477.

He died (perhaps 468 B.C.) a poor man, if the story is true that the State had to support his children. His reputation for honesty went back to his contemporaries, and later became proverbial. The later conventional biography made him in all ways the opposite and opponent of Themistocles, honest, conservative, and hoplite against the deceitful, radical, sailor. He may have opposed Themistocles' naval policy in 483–482, but they worked together, not only in 480 and 479, but in the formation of the maritime league.

Plutarch, *Aristides*.

A. W. G.

ARISTIDES (2), painter, of Thebes, pupil of Euxinidas (late 5th c. B.C.), and teacher of Euphranor (q.v.). His use of encaustic was further developed by Praxiteles (q.v.). Probably father and teacher of Nicomachus, whose son and pupil (see below) has been confused with the elder Aristides by Pliny. The statement that he was the first to represent the soul, the affections, and the emotions, though his colour was rather hard, is more credible of early than late fourth-century painting. He

probably painted the Baby creeping to its dying mother's breast (before 335) and the Suppliant whose prayers could almost be heard.

ARISTIDES (3), painter, son of Nicomachus. Of Pliny's list the 'Battle of Greeks and Persians' (for Mnason of Elatea) probably, and the portrait of Leontion, pupil of Epicurus (after 306), certainly, were by the younger Aristides.

Overbeck, 1762, 1772, 1778–85; Pfuhl, 789, 814; H. Fuhrmann, *Philoxenes von Eretria* (1931), 72.

T. B. L. W.

ARISTIDES (4) of Miletus (c. 100 B.C.), author or compiler of the lost *Μιλησιακά*, is credited, probably falsely, with several other works, including *Ἰταλικά*, pseudo-historical anecdotes with a novelistic tendency (*FHG* iv. 320 ff.). Ancient references indicate that the *Μιλησιακά* were erotic, often obscene, stories (Ov. *Tr.* 2. 413–14; Plut. *Crass.* 32; [Lucian], *Amores* 1). The genre, exemplified perhaps by Lucian's *Asinus*, had little influence on the Greek Novel; but the *Μιλησιακά*, translated into Latin by Cornelius Sisenna (Ov. *Tr.* 2. 443–4; fragments in Buecheler–Heraeus, *Petronii Saturae*), were notorious at Rome, where *Milesiae* (*fabulae*) became a generic title for erotic tales. Specimens are extant in Petronius (e.g. *The Widow of Ephesus*, 111–12) and Apuleius, who calls his *Metamorphoses* a Milesian composition. See also NOVEL, GREEK.

R. M. R.

ARISTIDES (5), AELIUS (A.D. 117– or 129–89), famous sophist, educated at Pergamum and Athens, who travelled through Egypt, lectured in Asia Minor and Rome (A.D. 156), and endured a long illness at Smyrna. Unskilled as a teacher, he contributed little to rhetorical study. The [Aristides] *τέχνη* (Spengel, *Rhet.* ii. 459 ff.), falsely ascribed to him in Byzantine times, consist of two treatises (*Π. πολιτικοῦ καὶ ἀφελοῦς λόγου*) by different second-century writers, which possibly influenced Hermogenes in writing his *Π. ἰδεῶν*. His main achievement consisted of ceremonial speeches (55 survive), including *μελέται*, sacred discourses (*ἱεροὶ λόγοι*), eulogies of Athens (*Παναθηναϊκός*), Rome, and Smyrna, an attack on philosophy (*Π. ῥητορικῆς*), and compliments to the emperor. All are written in Attic style; and with their glowing periods, rhetorical devices, and refined feeling, they represent the fine flower of sophistic eloquence. To later ages his work represented a genuine part of the legacy of Greece.

Text, W. Schmid (Teubner, 1926). Commentary, W. Dindorf (1829). Criticism, A. Boulanger, *Aelius Aristide et la sophistique dans la province d'Asie* (1923); C. A. de Leeuw, *Aelius Aristides als Bron voor de Kennis van zijn Tijd* (1939).

J. W. H. A.

ARISTIDES (6) QUINTILIANUS (probably 3rd or 4th c. A.D.), author of an extant work *Περὶ μουσικῆς*, a compilation based partly on Aristoxenus (q.v.), partly on older authorities such as Damon. The metaphysical background savours of the teaching of Porphyry and Iamblichus, and A. may be reckoned as a Neoplatonist.

Ed. A. Jahn (1882). *PIV* ii. 894.

W. D. R.

ARISTIPPUS, (1) a citizen of Cyrene and a companion of Socrates. His date is uncertain, but he was probably somewhat older than Plato. He appears, from the earliest evidence, to have been a professional teacher of rhetoric, a man of luxurious habits and, for a time, a courtier of Dionysius I. But his close friendship with Socrates, which is undoubted, suggests that there must have been something more in him than appears from this. He has sometimes been described as the founder of the so-called Cyrenaic school (see CYRENAICS), but this is almost certainly a mistake for

(2) a grandson of above through his daughter Arcté. He appears to have been the first to teach the characteristic doctrine of this school, that immediate pleasure was the only end of action. This was combined with

a sensationalist theory of knowledge and the belief that the present moment is the only reality. But it is uncertain how much of these developments should be ascribed to Aristippus himself.

Zeller, ii. 1st. 336-40, 361-9; T. Gomperz, *Greek Thinkers* (E.T. 1905) ii. 209-45; Robin (E.T.), 169-73; G. B. L. Colosio, *Aristippos di Cirene* (1925). (1) *PIV* ii. 902; (2) *PIV* ii. 906. G. C. F.

ARISTOBULUS (1) of Cassandrea, Alexander-historian, was one of the Greek technicians with the army. He wrote before Ptolemy I; his history was used by Arrian to supplement Ptolemy, was Strabo's basis for Alexander in India, and was largely the basis of Diodorus Bk. 17, though overlaid with Clitarchus and other material. He was better on geography and natural history than on military matters; but he knew much that was really important about Alexander himself, and must have had his confidence. See ALEXANDER (3), Bibliography, Ancient Sources. W. W. T.

ARISTOBULUS (2), an Alexandrian Jew, probably of the second half of the second century B.C., author of a commentary on the Pentateuch which is known only through quotations by Clement, Anatolius, and Eusebius. This has been thought by some scholars to be a much later work (of the 3rd c. A.D.) falsely ascribed to Aristobulus; but the character of the quotations does not necessitate this conclusion. If the earlier date be accepted, the book is the earliest evidence of contact between Alexandrian Jewry and Greek philosophy. Its object was twofold, to interpret the Pentateuch in an allegorical fashion and to show that Homer and Hesiod, the Orphic writings, Pythagoras, Plato, and Aristotle had borrowed freely from a supposed early translation of the O.T. into Greek. Though A. toned down the anthropomorphism of the O.T., his thought remained Jewish and theistic; it did not accept the pantheism of the Stoics nor anticipate the Logos-doctrine of Philo.

PIV ii. 918; Zeller, *Phil. d. Gr.* iii. 2^a. 277-85. W. D. R.

ARISTOBULUS (3), see JEWS, para. 2.

ARISTOCLES (1) of Pergamum (2nd c. A.D.), Peripatetic, studied under Herodes Atticus at Rome (c. A.D. 130-40) and practised as a sophist and teacher of rhetoric at Pergamum, and as a travelling lecturer in Ionia and Italy, and became consul. Works: *Τέχνη ῥητορική*; letters; *Μελέται*; an address to the Emperor *Ἐπὶ τῇ διατριμῇ τοῦ χρυσοῦ*.

PIV ii. 937. W. D. R.

ARISTOCLES (2) of Messana in Sicily (2nd c. A.D.), Peripatetic, teacher of Alexander (q.v. 14) of Aphrodisias. Works: *Περὶ φιλοσοφίας*; *Πότῃ σπουδαιότερος Ὀμηρος ἢ Πλάτων*; *Τέχνη ῥητορική*; *Περὶ Σαρπίδος*; *Ἠθικά βιβλία*. His history of philosophy was probably superior to that of Diogenes Laertius in insight, his chief interest being in tracing the development of doctrine and in philosophical criticism.

Testimonia and frs. in Mullach, *FPG* iii. 206-21. *PIV* ii. 934. H. Heiland, *Aristoclis Messanii Reliquiae* (1925). W. D. R.

ARISTOCRACY, the 'rule of the best', was originally the rule of the nobility. In Homeric times the king's authority and, in an equal measure, the importance of the assembly of the people, had become limited by the chiefs of the noble families. The nobles, pretending to share descent from the gods with the king, were the ruling class of the city-state (see POLIS). They were the landowners, and owners of live-stock, mostly living in town, prominent by birth, wealth, and personal prowess. They formed a class of knights (*ἱππεῖς*), connected by their unwritten laws of nobility, and by the old social and religious communities of tribe, brotherhood, and family

(see PHYLAE, PHRATRIAI, GENOS). The nobles governed the State by means of the council of the *Gerontes*, whose authority long remained unquestioned. After the eighth century B.C., however, military tactics changed, and rows of heavy-armed foot-soldiers (hoplites) displaced knights fighting in single combat. By subsequent economic evolution, new sources of wealth (mines, trade, industry) arose, and were utilized by nobles as well as by other people. In these circumstances aristocracy changed its character, and non-aristocrats rose to the same level as the nobles. Either the smaller communities, especially the phratries, were opened to the non-nobles, or else new ones with analogous rights were founded. Aristocracy became oligarchy (q.v.). Later on, especially among philosophers, aristocracy was a political and moral ideal, the rule of the best and wisest men. V. E.

ARISTODEMUS (1), see HERACLIDAE.

ARISTODEMUS (2), the traditional hero of the First Messenian War. When the Messenians had withdrawn to their stronghold of Ithome in the fifth year of the war, he offered his daughter for sacrifice to the gods below, in response to a Delphic oracle. Eight years later he was elected king, and after carrying on guerrilla warfare for five years, signally defeated the Spartans. But in the following year he slew himself in despair on his daughter's grave.

Paus. 4. 9-13. For the value of his traditions, see ARISTOMENES (1) and MESSENA. A. M. W.

ARISTODEMUS (3) of Cumae repulsed Etruscans and others who were attacking the city (524 B.C.) and became Cumae's tyrant by exploiting his consequent popularity. By defeating the Etruscans again at Aricia in 505 or earlier A. helped to break their power in Latium. After the Regillus battle he harboured Tarquinius Superbus, and died c. 492. Our principal accounts are vague and exaggerated; nevertheless Aristodemus is an historical figure, the earliest such at Cumae.

Dion. Hal. 7. 2 f.; Plut. *De Mul. Vir.* 26. G. De Sanctis, *Stor. d. Rom.* i. 450 f. E. T. S.

ARISTODEMUS (4), of unknown date (? 4th c. A.D.), compiled a history of Greece which included at least the period 480-431 B.C., perhaps as a handbook for students of rhetoric. The fragments suggest that its historical value was negligible.

FGH ii A 493; ii C 319. G. F. Hill, *Sources for Greek History*, see Index. H. H. S.

ARISTOGITON (*Ἀριστογείτων*) (6th c. B.C.), Athenian tyrannicide. He and Harmodius, both of noble family, planned to kill the tyrant Hippias and his younger brother Hipparchus, in consequence of a private quarrel (514 B.C.). The plot miscarried: only Hipparchus was killed. Harmodius was at once cut down by Hippias' guards, Aristogiton arrested and executed (after torture, it is said). As the tyranny was overthrown three years later, the two were popularly supposed to have made this possible, and were ever after called the Liberators. Simonides wrote a poem in their honour, statues of them were set up in the agora (and new ones erected when these were carried off by Xerxes in 480), and their descendants for all time honoured with the right to meals in the Prytaneum (see also CRITIUS). A. W. G.

ARISTOMENES (1), the traditional hero of the Second Messenian War. Secretly enlisting support from Argos and Arcadia, he led a revolt against Sparta, and soon won a striking victory at Stenyclarus. Defeated in the battle of 'The Great Trench' owing to the treacherous desertion of Aristocrates the Arcadian, he rallied the survivors and held out for eleven years, twice escaping

after capture. After the fall of his stronghold, Eira, he lived in exile at Rhodes.

Paus. 4. 14-24, following Rhianus, a Cretan poet of the fourth century B.C., whose works are lost. The story of Aristomenes and of Aristodemus (q.v.) was much embellished by legend, probably after the founding of Messene in 369.

Modern discussions: E. Schwartz, *Philol.* 1937, 19 ff. J. Kroymann, *Neue Philologische Untersuchungen* xi (1937). A. M. W.

ARISTOMENES (2) (5th-4th c. B.C.), Athenian comic writer, contemporary of Aristophanes (Suid.). He produced *Ῥλοφόροι* (or *Κολεοφόροι*, 'The Sheath-bearers': so *IG* xiv. 1097) in 424 B.C. (Ar. *Eq.* arg. 2) and *Ἀδμητος* in 388 (Ar. *Plut.* arg. 4). A's dramatic activity probably lasted from c. 439 to 388 B.C. (*IG* ii². 2325). In *Διόνυσος ἀσκητής* the effeminate Dionysus turns athlete (Poll. 3. 150).

FCG i. 210 ff.; *CAF* i. 690 ff.

M. P.

ARISTON (1) of Chios, pupil of Zeno of Citium, founded an independent branch of the Stoic school and was, about 250 B.C., the most influential philosopher at Athens, with the exception of Arcesilaus. He apparently left behind him no writings except letters. He represented a return towards the views of the Cynics, taking no interest in logic or physics, and rejecting Zeno's recognition of a distinction between the *προηγμένα* and the *ἀποπροηγμένα* (preferable and non-preferable) among things indifferent, and holding that the end of life is *ἀδιαφορία*, complete indifference to them all.

Testimonia in H. von Arnim, *SVF* i. 75-90. *PW* ii. 957.

W. D. R.

ARISTON (2) of Ceos, Peripatetic, may have succeeded Lycon (who died 226 or 225 B.C.) as head of the Lyceum. He was a writer of some accomplishment, but not a philosopher of importance. Diog. Laert. seems to have derived from him the wills of the first four heads of the school—Aristotle, Theophrastus, Straton, Lycon—with biographies of them and lists of their chief works. Works: *Ἑρωτικά ὁμοία* (a collection of anecdotes); a supplement to Theophrastus' *Περὶ ὕδατων*; a work on education; *Τίθωνος ἢ περὶ γήρως*; *Λύκων*. He continued the Theophrastean tradition of the writing of *Χαρακτήρες*, and was influenced in his writing of them by the lively style of Bion (q.v. 1) of Borystheneis.

PW ii. 953.

W. D. R.

ARISTON (3) of Alexandria, a Peripatetic associated with Antiochus of Ascalon at Alexandria in 87 B.C. He is quoted by Simplicius as an authority on Aristotle's *Categories*.

PW ii. 956.

ARISTON (4) explorer, see ARABIA.

ARISTONICUS (1) (d. 128 B.C.), an illegitimate son of Eumenes II of Pergamum. He led a formidable popular rising after the death of Attalus III and the bequest of his kingdom to Rome (133-130). His motives may have been mainly nationalistic and anti-Roman, but his appeal was to the depressed classes, especially slaves and non-Greeks: the name *Heliopolis* ('City of the Sun') in connexion with his projected State, and the presence of Blossius (formerly tutor of the Gracchi), suggest a 'Utopian' programme of social revolution. After some early successes in the field he was captured by Roman forces and put to death.

G. T. G.

ARISTONICUS (2), son of Ptolemaeus, an Alexandrian grammarian of the Augustan age. He was an opponent of Crates of Mallos. Much of his chief work—on the Aristarchean recensions of Homer—is preserved in our scholia (cf. Nicanor). He also wrote *Περὶ ἀσυντάκτων ὀνομάτων* and commentaries on Hesiod and Pindar.

P. B. R. F.

ARISTONOUS (3rd c. B.C.), son of Nicosthenes, a Corinthian citharode. On a *stèle* found at Delphi (*BCH* xvii (1894), 563 ff.) the Delphians give to him and his descendants certain privileges because of his hymns to the gods. The date has been fixed at 222 B.C. by Pomtow (*Klio* 1914, 305). Then follows a Paean to Apollo of forty-eight lines written in regular eight-lined stanzas of glyconics and pherecrateans.

E. Diehl, *Anth. Lyr. Graec.* ii. 297-300; J. U. Powell, *Collectanea Alexandrina*, 162-4; Powell and Barber, *New Chapters* i. 45.

C. M. B.

ARISTONYMUS, comic writer, contemporary of Aristophanes (schol. Pl. *Ap.* 19 c), whom he attacks in his *Ἥλιος ῥιγών*.

FCG i. 196-7; *CAF* i. 668-9.

ARISTOPHANES (1) (c. 450-c. 385(?) B.C.), the only writer of Old Comedy of whose plays some (eleven) have survived entire, an Athenian of the tribe of Pandion, son of Philippus (schol. Pl. *Ap.* 19 c; Anon. *Περὶ κωμ.* 11). He seems to have lived, or owned property, in Aegina (*Ach.* 654)—a fact which gave rise to accusations from his rivals of foreign birth. The date of his death is uncertain. His last play, *Plutus*, was staged in 388, but he subsequently wrote *Κύκαλος* and *Αἰολοσίκων* for his son Araros to produce (*Plut.* hyp. 4). He died therefore probably c. 385.

2. OLD COMEDIES. Taking the plays in chronological order, as far as possible, we get:

427. *Δαιταλῆς*, which gained second prize (schol. *Nub.* 529). The play represented the officially selected twelve 'banqueters' at the feast of Heracles (Ath. 6. 235 c), who, with their twelve 'sons', formed the chorus (G. Norwood, *Gk. Comedy*, 280), and contained an *ἀγών* between two brothers, *ὁ σώφρων τε καὶ κατὰ φύσιν* (*Nub.* 529).

426. *Βαβυλώνιοι*; a 'political' play which attacked *τὰς τε κληρωτὰς καὶ χειροτονητὰς ἀρχὰς καὶ Κλέωνα* (schol. *Ach.* 377). The chorus consisted of Athenian allies represented as the slaves of the Athenian *Δῆμος* (Suid. s.v. *Σαμίων ὁ δῆμος*). If this view is correct, the 'Babylonians' must have formed a *παρὰ χορήγημα* (see COMEDY, OLD, para. 9). This attack on himself and the public criticism of Athens' treatment of her allies brought upon the poet an impeachment by Cleon (*Ach.* 377-82).

(?) 426. *Δράματα ἢ Κένταυρος*, introducing Heracles. 425. *Ἀχαρνῆς* (*Achamians*): produced (like *Βαβυλώνιοι*) διὰ Καλλιστράτου; won first prize.

424. *Ἰππῆς* (*Knights*): the first of Aristophanes' plays, so far as we know, produced *ἰδίῳ ὀνόματι*; won first prize.

(?) 424. *Γεωργοί*: a 'peace' play, probably on the lines of *Achamians*.

423. *Νεφέλαι* (*Clouds*). Aristophanes was much disappointed at only gaining third prize and is said (hyp. 5 and 6) to have produced a second edition (*διασκευή*). That at least the *parabasis* of the play as we possess it belonged to this *διασκευή* is clear from its reference (553) to Eupolis' *Μαρίας* (421 B.C.). It is probable that this *διασκευή* was never staged and that what we possess is an amalgam of the two editions.

(?) 423. *Ὀλκάδες* ('The Merchantmen'): another 'peace' play.

422. *Σφήκες* (*Wasps*): produced διὰ Φιλωνίδου; gained second prize. It is probable that the play that won first prize on this occasion, the *Προαγών* (or *Προάγων*) 'of Philonides', was really the work of A. We know (schol. *Vesp.* 61) that A. wrote a *Προαγών* in which he brought on the stage and ridiculed Euripides.

421. *Εἰρήνη* (*Peace*): gained second prize.

Three plays may probably be dated shortly after 421: *Δαίδαλος*, a mythological parody introducing Zeus' deception of Leda by means of Daedalus' devices; *Δαναΐδες*, also a mythological parody; *Δράματα ἢ Νίλοβος*, possibly a second edition of *Δράματα ἢ Κένταυρος*.

(?) 420. *Εἰρήνη δευτέρα*, probably a *διασκευή* of the extant play.

(?) 420. *Ἰήρας*: the chorus seems to have consisted of rejuvenated old men (Ath. 3. 109 f). Possibly the play depicted the new age of peace expected after the Peace of Nicias. We may assign the *ᾠραι* to about this time if, as seems probable, it contained some parody of Euripides' *Erechtheus* (produced 422). The play seems to have contained an *ἀγών* between the older and the more recently introduced gods (e.g. Sabazius, fr. 566) leading to the expulsion of the latter from Athens (Cic. *Leg.* 2. 15).

419-412. *Ἀνάγυρος*: seems to have travestied the tragic story of the revenge taken by the eponymous god of the Attic deme *Ἀναγυροῦς* on a farmer who had damaged the trees of his sacred enclosure. *Πολύιδος* satirized soothsayers and the like, and may possibly refer to the revulsion against that class felt and expressed by Athens after the Sicilian expedition (Thuc. 8. 1. 1).

415-404. *Ταγηνισταί* (lit. 'The Broilers'; possibly 'The Roisterers', cf. Eup. fr. 351) seems to have attacked the *jeunesse dorée* and possibly Alcibiades among them.

414. *Ὀρνίθες* (*Birds*): produced διὰ Καλλιστράτου; gained second prize.

414. *Ἀμφιάρεως*: produced διὰ Φιλωνίδου (Av. hyp. 3); a sickly and superstitious old man, accompanied by his wife, goes to the shrine of the hero Amphiarus at Oropus and returns cured. The play probably contained an 'incubation' scene like that in the *Plutus*.

(?) 413. *Ἡρώες*: seems to have dealt with the Athenian neglect of hero-worship; the chorus was composed of 'heroes'.

(?) 412. *Λήμνιαι* (title taken from the Lemnian women who entertained the Argonauts): seems to have satirized the immorality of Athenian women.

411. *Λυσιστράτη* (*Lysistrata*): produced διὰ Καλλιστράτου.

411. *Θεσμοφοριάζουσαι* (*Thesmophoriazusae*): the date is calculable from various scholia.

(?) 410. *Τριφάλης*: almost certainly an attack on Alcibiades under the title *Τριφάλης* (deriv. *φάλλος*; cf. *τριγέρων*, *τρίδουλος*, etc.). The *Φοίνισσαι* (after 409) seems to have been a parody of Euripides' play.

408. *Γηρυτιάδης* (from *γηρύειν*, cf. *Χαιρετιάδης* from *χαίρειν*) probably dealt with the badness of contemporary poets and an attempt to recall some of the older and better ones from Hades (frs. 149, 150). (For another view see Norwood, op. cit. 290-2.)

(?) 408 (schol. *Plut.* 173) *Πλούτος πρότερος*.

(?) 407. *Θεσμοφοριάζουσαι δεύτεραι*.

405. *Βάτραχοι* (*Frogs*): produced διὰ Φιλωνίδου and awarded first prize.

405-400 (certainly before 399) *Τελεμυσσῆς*: the *Telmessians* were a Carian tribe and much given to the practice of divination (Cic. *Div.* 1. 94). This play, like the *Πολύιδος*, was evidently directed against soothsayers.

391. *Ἐκκλησιαζούσαι* (*Ecclesiazusae*). The communism depicted in this play is so like that of the fifth book of Plato's *Republic* that there is probably some connexion between the two, though which came first is not certain. Probably the *Eccl.* followed and to some extent parodied the *Republic*. Still, communism was a regular topic in the philosophical schools, and A. may have been travestying that of Antisthenes.

Though it is a mistake to postulate any sharply defined chronological division between Old and Middle Comedy, it is not unreasonable to assign the death of the Old to the period which separates the *Frogs* from the *Eccl.* The latter, with its restricted and non-lyrical chorus and its lack of all personal-political colouring, may definitely be regarded as a Middle Comedy.

3. MIDDLE COMEDIES. After 399 *Πελαργοί* ('The Storks'): the stork was renowned for its *pietas* (Av.

1354-7; Aesop. 76); it is possible that this play tells the story of an ungrateful son brought in some way to respect and love his parents.

388. *Πλούτος δεύτερος*: whatever may have been the plot and general character of the first *Plutus* (see above), there is no doubt that the *Plutus* we possess (the second) is a Middle Comedy. Its subject-matter is domestic, not political, and the chorus is reduced to a minimum. Indeed, the various indications *ΧΟΡΟΥ* (two such occur even in *Eccl.* 729 and 876) suggest not so much a chorus properly speaking as a series of musical interludes entirely unconnected with the play.

387. *Αἰδοσίκων*, written by A., but given by him for production to his son Araros (q.v.). The title derives from (a) *Aeolus*, the incestuous marriage of whose children Euripides had taken as the plot of his *Aeolus*, and (b) *Σίκων*, a famous *chef* (Sosipater, fr. 1, line 14 (*CAF* iii. 315)). The play—a Middle Comedy with no chorus (*Platon. Diff. Com.* 5)—presumably contained a travesty of the myth, an attack on Eur., and satiric criticism of the luxury and debauchery of the Athenians.

387. *Κώκαλος*: another play written by A. for Araros (*Plut. hyp.* 4). It was obviously a mythological burlesque of the story of Minos' violent death at the hands of Cocalus, king of Camicus in Sicily. Sophocles treated the same theme in his *Καμικοί* (cf. *Soph.* fr. 323-7). According to the first *Vita* (no. 11 of Dübner's *Prolegomena* to the Scholia) the play contained a seduction (*ἡθορά*) and a recognition scene (*ἀναγνώρισις*) καὶ τὰλλα πάντα ἃ ἐξήλωσε Μένανδρος. It was, in fact, New Comedy. Of the four disputed plays (Dühner, l.c.) the attribution of *Ναυαγός* to A. is very uncertain. The *Νῆσοι* is better attested; we may reasonably suppose that it was a 'peace' play with a chorus of islands belonging to the Athenian Empire on the lines of the *Βαβυλώνιοι*.

4. From the first the reputation of A. has stood high. With four first prizes, three second, and one third his success surpassed that of any other writer of comedy, so far as literary or epigraphic sources allow us to judge. It is clear from the speech which Plato puts into his mouth (*Symp.* 189 c ff.) that the Athenian philosopher appreciated him, and we are told in the first *Vita* that he introduced his plays to Dionysius, king of Syracuse. The Alexandrian critics ranked him with Cratinus and Eupolis (e.g. *Platon. Diff. Com.*—probably derived from *Dionysiades' Χαρακτήρες*), though from *Plutarch's Σύγκρισις Ἀρ. καὶ Μενάνδρου* it is clear that the taste of a later generation, to whom the politics of fifth-century Athens meant little or nothing, preferred the New Comedy writer. An epigram (*Anth. Pal.* 9. 186) of Antipater of Thessalonica speaks of his poetry as 'steeped in Dionysus' and praises his outlook on life. Horace (*Sat.* 1.4.1) and Quintilian (10.1.66) mention him, Cratinus, and Eupolis as the main writers of Old Comedy; Cicero (*Orat.* 29) and the younger Pliny (*Ep.* 1.20.19) quote him. It is difficult briefly to estimate the merits of so many-sided a genius as Aristophanes. As a poet his choruses put him at once in the front rank. Though metrically less complicated than those of tragedy, they have a freshness and charm only equalled in some of the simpler lyrics of Sophocles and Euripides. As a dramatist he is all but unrivalled in the invention of comic situations, in parody, in satire, in wit, and in downright farce. Of humour he has little or none, for humour is of the emotions, and A. was rather a man of intellect and imagination. His weaknesses as a playwright are plot-construction (a matter in which he was no doubt hampered by tradition) and character-drawing; for, though he is a brilliant depicter of *types*, he never created a character like, say, *Falstaff*.

Except in a few instances, notably those of Cleon and Euripides, his attacks, violent as they generally are, are good-tempered. His strong political bias towards aristocracy never made him really anti-democratic. He was,

as Kaibel has well said, *μισοδημάγωγος*, not *μισόδημος*. Aristophanes was always 'in opposition'; but his objections to the Government were not so much those of an oligarch as of a pacifist in the best sense of the term, of one, that is, who desired an honourable peace with Sparta. And not only in politics was A. a natural conservative. He had a strong mistrust of, and dislike for, social, religious, literary, and musical innovations, and he had no hesitation in hotly attacking the authors of such. Nor are his the attacks of a foggy or a Philistine. Stripped of their 'comic' exaggeration they are the criticisms of a man who realized that much of what is called progress often ends in a cul-de-sac.

See also COMEDY, OLD; COMEDY, MIDDLE; LITERARY CRITICISM, GREEK, para. 1.

The individual plays have been constantly re-edited, and it is impossible to do more than mention a few outstanding modern editions such as Starkie's *Acharnians* (1909), *Clouds* (1911), and *Wasps* (1897), Neil's *Knights* (1909), Herwerden's *Peace* (1897), Sharpley's *Peace* (1905), Rademacher's *Frogs* (1922), Tucker's *Frogs* (1906). Of complete exegetical editions the best is that of van Leeuwen (in Latin; 1893-1906); also good is Rogers (1902-16) with a brilliant verse translation (text and translation only re-edited in Loeb ed.). Scholia: Dübner (1883), Rutherford (1896-1905).

Concordance: H. Dunbar (1883). Index: O. J. Todd (U.S.A. 1932). General: A. Couat, *Aristophane et l'ancienne comédie antique* (1902); M. Croiset, *Aristophane et les partis à Athènes* (1906; Engl. Transl. Loeb, 1909); J. van Leeuwen, *Prolegomena ad Aristophanem* (1909); T. Zieliński, *Gliederung der altatt. Komödie* (1885); P. Mazon, *Essai sur la composition des comédies d'Aristophane* (1904); G. Murray, *Aristophanes* (1933); Kaibel, 'Aristophanes' in *PIV*; G. Norwood, *Greek Comedy* (1931), 202-312; V. Ehrenberg, *The People of Aristophanes* (1943).

ARISTOPHANES (2) of Byzantium (c. 257-180 B.C.), pupil at Alexandria of Zenodotus, Callimachus, and Eratosthenes, succeeded Eratosthenes as head of the Alexandrian Library (c. 194 B.C.). He was a scholar of wide learning, famous for his linguistic, literary, textual, and scientific researches, and for his systematic study of punctuation and accentuation.

2. His edition of the *Iliad* and *Odyssey* made a distinct advance on the work of Zenodotus and Rhianus. Despite some capriciousness and boldness of treatment, due to a subjective method of criticism, his work showed much critical acumen; e.g. he was the first to put the end of the *Odyssey* at 23. 296. In his textual criticism he used symbols to show his doubts of the genuineness or satisfactoryness of verses (see SCHOLARSHIP, GREEK).

3. Besides editions of Hesiod's *Theogony*, Alcaeus, and Anacreon, he produced the first collected edition of Pindar, whose works he arranged in seventeen books; in his texts of the lyric poets A. used signs to mark the ends of metrical *cola*. He probably compiled a complete and standard edition of Euripides, each volume of which perhaps contained eight plays (*CIA* ii. 992), and also the first critical edition of the comedies of Aristophanes; but to a later date belong the metrical *ὑποθέσεις*, traditionally ascribed to him, on seven of these comedies (see HYPOTHESIS). He was responsible for the somewhat unsatisfactory grouping of fifteen dialogues of Plato in trilogies.

4. His select lists of the best classical poets seem, along with those of Aristarchus, to have provided the basis for the classification of writers in the Alexandrian canon. He corrected and supplemented the biographical and literary information contained in the *Pinakes* of Callimachus. Introductions to some plays of Acsehiylus, Sophocles, and Euripides, based on the *Didascaliae* of Aristotle and on Peripatetic research, are extant in an abbreviated form (see HYPOTHESIS). In the *Π. προσώπων* he treated the character-types in Greek Comedy. His interest in Menander led him to compile the treatise *Παράλληλοι Μενάνδρου τε καὶ ἄφ' ὧν ἔκλεψεν ἐκλογαί*.

5. Of his lexicographical works the most important was the *Λέξεις* (or *Γλῶσσαι*), which perhaps consisted of a series of special studies classified according to dialect or to subject. He produced two books of proverbs in

verse (schol. Soph. *Aj.* 746) and four in prose (schol. Ar. *Av.* 1292). See PAROEMIOTRAPHERS.

6. The grammatical treatise *Περὶ ἀναλογίας*, in which he attempted to define the rules of Greek declension, was probably directed against Chrysippus' *Περὶ ἀνωμαλίας* and began the long controversy between Analogists and Anomalists (see ANALOGY).

7. The work *Περὶ ζῶων* appears to have been based on the studies of Aristotle, Theophrastus, and the Paradoxographers (q.v.).

ARISTOTLE (Ἀριστοτέλης) (384-322 B.C.), son of Nicomachus, of the medical guild of the Aselepiadae, was born at Stagirus (later Stagira) in Chalcidice. Nicomachus was the physician and friend of Amyntas II of Macedonia, and A. may have spent part of his boyhood at the court of Pella; he probably acquired in his father's surgery his interest in physical science. At the age of 17 he entered Plato's school at Athens, and here he remained to the death of Plato in 348-347, first as a pupil, later as a 'research student' working in comparative independence. It seems likely that in the study of zoology, even at this early date, he struck out a fresh line of research. When Plato was succeeded by Speusippus, who represented a tendency of Platonism repugnant to A., its tendency to 'turn philosophy into mathematics', he left the Academy, along with Xenocrates. They accepted an invitation from a former fellow-student in the Academy, Hermeias, the ruler of Atarneus and Assos in Mysia, who had gathered round him a small Platonic circle; at Assos they stayed till the fall and death of Hermeias in 345, and A. married Hermeias' niece Pythias. From Assos he went to Mitylene, in the neighbouring island of Lesbos; his choice of a residence may have been due to Theophrastus, a native of the island. To his stay at Assos, and especially at Mitylene, belong many of his zoological inquiries; the island lagoon of Pyrrha is often mentioned in the *Historia Animalium*. In 343-342 Philip of Macedonia invited him to come to Pella to act as tutor to Alexander. His teaching of Alexander was probably mainly in Homer and the dramatists, but he also composed for him a work on *Colonists* and one on *Monarchy*, and his instruction of Alexander in politics may have sown the seeds of his own interest in the subject. Any close intimacy with Alexander seems to have ended with the latter's appointment as regent for his father in 340; A. probably then settled in Stagira.

2. In 335, soon after the death of Philip, A. returned to Athens. Outside the city to the north-east, probably between Mt. Lycabettus and the Ilissus, lay a grove sacred to Apollo Lyceus and the Muses; here A. rented some buildings and founded a school; the buildings included a covered court (*περίπατος*) from which the school took its name. Here he collected manuscripts—the prototype of all the great libraries of antiquity—maps, and probably a museum of objects to illustrate his lectures, especially those on zoology. Alexander is said to have given him 800 talents to form the collection, and to have ordered the hunters, fowlers, and fishermen of the Empire to report to A. any matters of scientific interest; and the story probably has some foundation in fact. A. laid down rules for his community, and established common meals, and a symposium once a month. Above all he organized research on a grand scale, of which the account of the constitutions of 158 Greek States was a good example. Under his leadership Theophrastus carried on studies in botany, Eudemus in the history of philosophy, and Aristoxenus in music.

3. At some time during his second residence in Athens Pythias died, and A. lived afterwards with Herpyllis, by whom he had a son Nicomachus. On the death of Alexander in 323, Athens became the scene of an outbreak of anti-Macedonian feeling. A charge of impiety was brought against A., and rather than let the Athenians 'sin twice against philosophy' he left the school in Theophrastus' hands and retired to Chalcis, where he died in 322 of a disease of the digestive organs. Diogenes Laertius has preserved his will, in which he makes careful provision for his relations, secures his slaves from being sold, and arranges for the freeing of some of them; his will affords clear evidence of a grateful and affectionate nature.

4. An ancient tradition describes him as bald, thin-legged, with small eyes and a lisp in his speech, and as being noticeably well dressed. We are told further that he had a mocking disposition which showed itself in his expression. A number of extant statues, e.g. one in the Vienna Museum, probably represent him.

5. The works connected with his name may be divided into three classes: (A) early popular works published by himself, mostly in dialogue form, and now lost; (B) memoranda and collections of materials for scientific treatises, also now lost; (C) philosophical and scientific works, still extant. Apart from the *Athenaion Politeia*, the whole extant Aristotelian corpus, so far as it is authentic, belongs to the third class; of the other two our knowledge rests on frs., and on three lists which have come down from antiquity. (A) The dialogue *On Rhetoric*, or *Grylus*, modelled on the *Gorgias*, was probably written not long after the death of Grylus in 362-361. Somewhat later, probably, was the *Eudemus*, or *On the Soul*, named after Eudemus of Cyprus, who died in 354-353. This was modelled on the *Phaedo* and accepted the doctrines of pre-existence, transmigration, and recollection. To the same period belongs the *Protrepticus* (probably not a dialogue), an exhortation to the philosophic life which was very popular in antiquity and furnished Iamblichus with materials for his *Protrepticus*, and Cicero with a model for his *Hortensius*. The dialogue *On Philosophy*, which gave an account of the progress of mankind largely Platonic in character but asserting the eternal pre-existence of the world and opposing the doctrine of Ideas and of Idea-numbers, belongs to about, or just after, the date of the earliest parts of the *Metaphysics*, i.e. to A.'s Assos period. To the period of his tutorship of Alexander belong *Alexander*, or *About Colonists*, and *On Monarchy*. Less is known of the other dialogues—*Politics*, *Sophistes*, *Menexenus*, *Symposium* (all probably modelled on Platonic dialogues of the same names), *On Justice*, *On the Poets*, *Nerinius*, *Eroticus*, *On Wealth*, *On Prayer*, *On Good Birth*, *On Pleasure*, *On Education*.

(B) We know, from ancient accounts, of very large collections of historical and scientific facts which were made by Aristotle, sometimes in co-operation with others. The majority of these have been lost, and exist only in fragments. They must be dated during his leadership of the Lyceum. *Pythionica*, a list of the victors at the Pythian games, was compiled c. 335-334; *Nomima*, a collection of barbaric customs, and *Dicaionata Poleon*, Pleas of the Cities, after 330. Of the *Politeiai*, accounts of the constitutions of Greek States, the *Athenaion Politeia* (written c. 329-328) was recovered from the sands of Egypt in 1890. Other collections of materials now lost were *Didascaliai* (records of the dramatic performances at Athens), *Aporemata Homerica* (Homeric problems), *Olympionica* (records of victories at Olympia). A. also made great collections of materials on physical problems which were added to by successors, and worked up into the extant *Problems*.

(C) The works in the extant corpus may be classified as follows:

(a) Genuine: *Prior Analytics*, *Posterior Analytics*, *Topics*, *Sophistici Elenchi* (= *Top.* 9); *Physics*, *De Caelo*, *De Generatione et Corruptione*, *Meteorologica* (bk. 4 perhaps by Straton); *De Anima* and the following works known collectively as *Parva Naturalia*: *De Sensu et Sensibilibus*, *De Memoria et Reminiscentia*, *De Somno*, *De Somniis*, *De Divinatione per Somnum*, *De Longitudine et Brevitate Vitae*, *De Vita et Morte*, *De Respiratione*; *Historia Animalium* (bk. 10 and perhaps bks. 7, 8, 21-30, 9 are spurious, ? 3rd c. B.C.), *De Partibus Animalium*, *De Incessu Animalium*, *De Generatione Animalium*; *Metaphysics* (the earliest parts, bks. A, Δ, K (first part), A, N belong to the Assos period); *Nicomachean Ethics*; *Politics*; *Rhetoric*; *Poetics* (a fragment).

(b) Probably genuine: *De Interpretatione*, *De Motu Animalium*, *Eudemian Ethics* (probably earlier than *Eth. Nic.*).

(c) Of doubtful genuineness: *Categories*, *Magna Moralia*.

(d) Spurious: *De Mundo* (probably written between 50 B.C. and A.D. 100), *De Spiritu* (? c. 250 B.C.), *De Coloribus* (? by Theophrastus or Straton), *De audibilibus* (? by Straton), *Physiognomonica* (? 3rd c. B.C.), *De Plantis* (the original perhaps by Nicolaus of Damascus), *De Mirabilibus Auscultationibus* (compiled at dates ranging perhaps from the 2nd to the 6th c.), *Mechanica* (? by Straton), *Problems* (compiled perhaps as late as the 5th or 6th c.), *De Lineis Insecabilibus* (? by Theophrastus or Straton), *Ventorum Situs* (perhaps an extract from a work by Theophrastus), *De Xenophane, Zenone, Gorgia* (more properly *De Melisso, Xenophane, Gorgia*) (1st c. A.D.), *De Virtutibus et Vitiis* (c. 100 B.C.-A.D. 100), *Oeconomica* (of different periods, from 300 B.C. to A.D. 400), *Rhetorica ad Alexandrum* (? beginning of 3rd c. B.C.).

6. Strabo tells us (13. 54; cf. Plutarch, *Sull.* 26. 1) that Theophrastus left A.'s MSS. to Neleus of Scepsis in the Troad, whose successors kept them in a cellar to protect them from the book-collecting kings of Pergamum. They were sold (c. 100 B.C.) to Apellicon, who edited them badly. In 84 B.C. Sulla took them to Rome, where they were edited first by Tyrannion and then by Andronicus of Rhodes, towards the end of the first century B.C. Andronicus' edition is the basis of our present corpus. Until these editions were produced, the now extant works of A. were unknown to the world, and he was known only through the works which are now lost. But when once the existing works came to be known, they were commented on by a series of commentators, mostly Neoplatonists, beginning with Aspasius (fl. c. A.D. 110) and ending with Sophonias (c. 1300).

7. The extant works were not prepared for publication, but they are for the most part too full and elaborate to be mere notes for lecture purposes. They rather suggest memoranda meant to be shown to students who had missed the lectures, and to preserve a more accurate record than memory or the notes of students could provide. The indications of date are slight; there are references which indicate that some of the works were begun early, and several which show that they were finished late in A.'s life. Many references imply an Athenian audience. The writings would probably reflect a progressive withdrawal from Plato's influence. Using this and other indications of date, we may say that A. began by writing dialogues on the Platonic model, but that in the latest of these his protest against Plato's 'separation' of the Forms began to be felt. To the period of his stay in the Troad, in Lesbos, and in Macedonia belongs the earliest form of the extant works largely Platonic in character—the *Organon*, *Physics*, *De Caelo*, *De Generatione et Corruptione*, *De Anima* 3, *Eudemian Ethics*, the oldest parts of the *Metaphysics* and the *Politics*, and the earliest parts of the *Historia Animalium*. To the second Athenian period belong the rest of his works of research—*Meteorologica*, the works on

psychology and biology, the *Constitutions*, and the other historical researches, the *Nicomachean Ethics*, the *Poetics*, the *Rhetoric*, and the completion of the works begun in the middle period.

8. It is impossible in a few pages to offer any useful summary of A.'s philosophy; for a philosopher's conclusions are worth little without his reasons for them, and A.'s reasons cannot be stated briefly. It may be more useful to offer a more general characterization. The main lines of his thought were to a large extent determined by his association with Plato and the Academy; and if we may distinguish his philosophical from his scientific works (though the distinction is only one of degree), it may be said that there is hardly a page of them which does not betray Plato's influence. The dialogues written before Plato's death seem to have shown little originality, and even in *Metaph. A*, written in the Assos period, Aristotle thinks of himself as still a member of the Platonic school. But by that time important differences begin to be apparent. A. was an Ionian, with all the Ionian interest in observation and in the world of change. He felt unable to follow Plato in asserting the 'separate' existence of the Ideas, and unable to accept unchanging Ideas (as he mistakenly assumes that Plato did) as sufficient explanation of the facts of change and motion. The later development of Plato's thought, in which numbers took the place of Ideas as the explanation of the universe, he thought at least equally unsatisfactory. He is sometimes described as 'no mathematician', but this is an exaggeration. He was probably abreast of the mathematics of his time; he was interested in the astronomical theories of Eudoxus and Callippus (*Metaph. A*. 8) and his discussion of the problems of infinity and continuity is masterly. But he did not realize to anything like the same extent as Plato the importance of mathematics as the foundation of physical science. It is true that 'God always geometrizes'; in physical science mathematical precision is all-important, and from his failure to realize this he was led, in his physical works, to adopt and reason from assumptions which to common sense, in the absence of exact measurement, were highly plausible, but were mistaken; so that his influence on dynamics and on astronomy was a retarding one. The science in which he was most at home was biology, in which, in its early stages, exact measurement is less important. Here his combination of close observation with acute reasoning made him *facile princeps* among the ancients. 'Linnaeus and Cuvier have been my two gods,' Darwin wrote, 'but they were mere schoolboys to old Aristotle.' It is possible that Plato stimulated him to this study; for at least one other member of the school, Speusippus, tried his hand at biology. But in the main A. was here reverting to the Ionian, pre-Socratic tradition of curiosity about all sorts of natural phenomena.

9. The same passion for research was shown in his vast collections of materials about the constitutions of Greek States, the history of the drama, the history of the Pythian games; apparently nothing was too great or too small to rouse his curiosity. One may even say that his political thought was to some extent modelled on his biological researches. He took over his original classification of constitutions from Plato's *Politicus*, with a difference. But in one passage (*Pol.* 1290^b21-1291^b13) he envisages a classification which takes account of the various forms assumed in various States by the organs of the body politic, as biological classification takes account of the forms assumed by the bodily organs; and we can see in *Pol.* 4 and 6 an attempt to achieve for States such a precise description of their types as he gives for animals in the *Historia Animalium*.

10. His mind has two well-marked characteristics. One is a sort of inspired common sense which makes him avoid extremes in any direction. In theory of knowledge he is neither a rationalist nor an empiricist; he

recognizes the parts played both by the senses and by the intellect. In metaphysics he is neither a spiritualist nor a materialist; he admits the claims both of mind and of body, and regards the two as inseparable elements in the living being. In ethics he is neither a hedonist nor an ascetic; he recognizes in pleasure an element, though a secondary and consequential one, in the good life. In politics he is neither an aristocrat nor a democrat; he advocates the rule of the middle class, which he regards as the steadiest element in the State. He often writes what will not bear very close scrutiny; for many distinctions have become clear through later philosophical discussion that were not clear in his day. But by virtue of his strong common sense he rarely writes what anyone would regard as obviously untrue.

11. The other leading characteristic of his mind is its tidiness and love of order; and by this philosophy has greatly benefited. For one thing, we owe to him, in the main, the classification of the sciences with which we habitually work. He divides them into the theoretical, which aim simply at knowledge, the practical, which aim at improving conduct, and the productive, which aim at the production of things useful or beautiful; and among the theoretical he distinguishes mathematics, which studies things that are eternal and unchangeable but not substantial, physics, which studies things substantial but subject to change, and 'first philosophy' or theology, which studies what is both eternal and substantial (*Metaph. E*. 1). And what is more important, he practises what he preaches. In a dialogue of Plato we are apt to find metaphysics and ethics, psychology and politics, all present together; the variety is part of the charm, but sometimes leaves the reader perplexed as to what Plato is mainly driving at. To logic, to physical science, to zoology, to psychology, to metaphysics, to ethics, to politics, to rhetoric—to each A. devotes one or more works in which, though with many false starts, he sticks to one great subject with a wonderful feeling for relevance; the continuity he achieves is the more remarkable because none of the extant works was revised for publication, and several if not all of them consisted originally of separate essays which he never brought formally into a whole. So it is that, while there have always been philosophers who derived more inspiration from Plato, the working programme of the philosophical sciences has owed more to A.

12. His orderliness of mind shows itself also in the development of a terminology which has been of great service to philosophy. When we talk or write philosophy, we use a vocabulary which derives more from him than from anyone else; and much of it has entered into the speech of all educated men. Universal and particular, premise and conclusion, subject and attribute, form and matter, potentiality and actuality—these are a few of the many antitheses which he first introduced by name. They have their danger, and much harm has been done by the glib repetition of them when the danger has not been recognized; but they have provided philosophy with a framework that has been of great service.

13. His love of classification is another result of his orderliness of mind. The leading categories—substance, quality, and relation—received their names from Plato; but the idea of a complete classification of the *summa genera* of nameable entities seems to be A.'s own; for Plato never attempts a classification of categories in this sense, and the 'greatest kinds' of the *Sophistes* correspond rather to the *transcendentia* which characterize all existing things. Again, A. has a much more elaborate classification of the faculties of the soul than Plato. But it may be noted that he is singularly free from the dangers of faculty psychology. He thinks it important to mark off mental activities into their kinds, but he does not think he has explained activities by referring to the faculties of which they are the manifestation; and his

distinction of the faculties is accompanied by an awareness of the links between them. Sensation, for him, is of particulars, and knowledge of universals; but sensation is of particulars as characterized by universals, and knowledge is of universals as exemplified in particulars. Again, he has a most elaborate classification of animal kinds; but these form a *scala naturae* in which the transition from one kind to another is never very wide, and the lower kinds present analogues of what is found in the higher.

14. A.'s work has till recently been treated as a closed system of doctrine all held by him simultaneously, and much ink has been wasted in the attempt to reconcile the irreconcilable. This tendency requires correction in two ways. First, while some of his works (most notably the account of the syllogism in the *Prior Analytics*) proceed with assured mastery from point to point, others (e.g. *De An.* 3, the *Metaphysics*, and the *Politics*) are little more than a series of *ἀποplai* to which only tentative answers are given. Secondly, Mr. Case and, on a much larger scale, Prof. Jaeger have shown that there is a great deal more development in his doctrine than has hitherto been recognized. As Prof. Jaeger has shown, the general tendency is from Platonic otherworldliness to a growing interest in the phenomena of the world around us. Yet A., while he became more of a scientist, probably did not become less of a philosopher. The last book of the *Physics* and *A* of the *Metaphysics*, which cannot be dated early (since they presuppose the highly original treatment of the infinite and the continuous, to which apparently nothing in the Academy showed the way), show him still seeking for a super-sensuous explanation of change in the sensible world.

For Aristotle's views on ANATOMY AND PHYSIOLOGY, ASTRONOMY, AFTER-LIFE, see under those titles. See also DIALOGUE, GREEK, para. 4; LITERARY CRITICISM (Greek), para. 3; METEOROLOGY; MUSIC, § 2; PAROENIOGRAPHERS; PHYSICS, para. 2.

ARISTOXENUS, born at Tarentum between 375 and 360 B.C., philosopher and musical theorist. He received a musical training from his father Spintharus and from Lamprus of Erythrae (not the Lamprus mentioned by Plato, *Menex.* 236a). For some time he lived at Mantinea; and during a sojourn at Corinth (after 343) he became familiar with the exiled Dionysius the Younger (fr. 9). At Athens he became the pupil of the Pythagorean Xenophilus and finally of Aristotle. His reputation amongst his fellow-pupils at the Lyceum was such that he expected to succeed to the headship of the school; but the master passed him over in favour of Theophrastus. A. is said by Suidas to have assailed Aristotle's memory; but though he retailed scandalous stories about Socrates (fr. 25-30) and alleged that most of Plato's *Republic* was plagiarized from Protagoras (fr. 33), the one extant reference he makes to Aristotle by name (*Harm.*, p. 31) is laudatory. Whether he ever returned to Italy is unknown; nor is there any evidence about the date of his death. Suidas gives the number of his books as 453.

2. WORKS (a) *Principles and Elements of Harmonics*, of which three books are in part preserved. The first deals with the scope of the subject, movements of the voice, pitch, notes, intervals, and scales; ii covers the chief topics of i, but includes keys (*trōvoi*), modulation, and the construction of melody (*μελωδοία*) also, and is more polemical in tone; iii contains twenty-seven theorems on the legitimate combinations of intervals and tetrachords in scales. These three books do not give a complete theory of music; nor are they from a single work. The most probable view is that we have the remains of two treatises, the *Principles* (*Ἀρχαί* = i) and the *Elements* (*Στοιχεῖα* = ii and iii), both of which have suffered partly by curtailment and partly by the insertion of passages from other treatises. Further details of A.'s musical theory are found in later writers such as Plutarch (*De mus.*), Cleonides, Aristides Quintilianus; and a short fragment on Harmonics printed in *POxy.* iv. 667 is probably from some work of A.

(b) *Elements of Rhythm* (*Περὶ ῥυθμικὰ Στοιχεῖα*), of

Die Platonik
NOTAR.

which part of the second book is extant. It deals with the nature of rhythm (defined as a *τάξις ἀφωρισμένη χρόνων*), the primary unit of rhythm (*ὁ πρῶτος χρόνος*), feet, their distribution between arsis and thesis, and their differences. Since A. refers to his earlier writings on musical theory (p. 282), this work is possibly later than the *Harmonics*. Porphyry on Ptol. *Harm.* (p. 78 Düring) quotes from a work entitled *Περὶ τοῦ πρώτου χρόνου*; and passages based on A.'s theory of rhythm are found in later authors, especially the Byzantine Michael Psellus (11th c.). An important fragment (POxy. i. 9), on the rhythmization of cretic sequences, is attributed to a treatise by A. on rhythmical composition (see Powell and Barber, *New Chapters in Gk. Lit.* ii. 178).

(c) Other musical works were: *On Music* (*Περὶ μουσικῆς*, at least four books; cf. Ath. 14. 619 d), *On Melody* (*Π. μελοποιίας*, at least four books; cf. Porph. p. 125), *On Listening to Music* (*Π. μουσικῆς ἀκροάσεως*), *On Keys* (*Π. τόνων*), *On Auloi and Musical Instruments* (*Π. αὐλῶν καὶ ὀργάνων*), *On the Boring of Auloi* (*Π. αὐλῶν τρήσεως*), *On Aulos-Players* (*Π. αὐλητῶν*), *On Tragic Poets* (*Π. τραγῳδοποιῶν*), *On Dancing in Tragedy* (*Π. τραγικῆς ὀρχήσεως*); and the obscurely entitled *Πραξιδαμάντεια* seems to have contained musical material.

(d) Works of a biographical, historical, and miscellaneous character were: the *Lives* (*Βίαι ἀνδρῶν*, including biographies of Pythagoras, Archytas, Socrates, and Plato), *Pythagorean Maxims* (*Πυθαγορικαὶ ἀποφάσεις*), *Comparisons* (*Συγκρίσεις*), *Educational Laws* (*Νόμοι παιδευτικοί*), *Political Laws* (*Νόμοι πολιτικοί*, at least eight books; cf. Ath. 14. 648 d), *Historical Notes* (*Ἱστορικὰ ὑπομνήματα*), *Short Notes* (*Τὰ κατὰ βραχὺ ὑπομν.*), *Miscellaneous Notes* (*Σύμμικτα ὑπομν.*, at least sixteen books; cf. Photius *Bibl.*, p. 176), *Scattered Notes* (*Τὰ σποράδην*), and *Table Talk* (*Σύμμικτα συμποτικά*).

3. Aristoxenus' presentation of the science of Harmonics differed in many important particulars from that of his predecessors and exercised a potent influence for many centuries (see MUSIC). His pride in his own achievements, his combativeness, his tedious proofs of the obvious, and his parade of logic are sometimes irritating; but he shows himself a worthy pupil of Aristotle in his method of expounding by definition and subdivision into categories, and his system of musical theory is distinctly superior to the empirical and half-mystical investigations of the Pythagoreans. He also had a deep interest in the ethical and educational value of music and showed a strong preference for the older styles of composition. The fundamental importance of his work on rhythm has also long been recognized. Like other Peripatetics, A. did not restrict his inquiries to a single subject; but most of what has been preserved from his other works is quoted for its value as gossip. For his philosophical views we have only the evidence of Cicero (*Tusc.* i. 19) that A. regarded the soul as a 'tuning' (*intentio*, *ἀρμονία*) of the body. This opinion, which would be attractive to a musician, may have been taken from the later Pythagoreans; for a somewhat similar view is expounded by Simmias the Theban, disciple of Philolaus, in *Phaedo* 86 b; but it is quite inconsistent with the earlier Pythagorean doctrine of transmigration and could not have been countenanced by Aristotle.

ARIUS DIDYMUS (1st c. B.C.) of Alexandria, philosophical teacher of Augustus. Works: a *Consolatio* addressed to Livia on the death of Drusus; a doxographical work of which Stobaeus preserves two long frs. on the Stoic and Peripatetic ethics. He is described as a Stoic, but seems to have shown an eclecticism similar to that of Antiochus of Ascalon, by whom he was influenced.

Ed. Diels in *Doxographi Graeci*, 447-72. *PW* ii. 626. W. D. R.

ARMENIA, a mountainous country of Asia. Strabo (11. 520 ff.) describes it as bounded on the east by Media Atropatene, on the north by Iberia, Albania, and Colchis, and on the west and south by the Euphrates, Cappadocia, and Commagene. The country was variously divided at different periods; some districts, e.g. Sophene, Gordyene, were often independent principalities. The Romans distinguished between Armenia Major, the whole plateau east of the Euphrates, and Armenia Minor, a small kingdom to the west of it.

Once the seat of the independent kingdom of Urartu, Armenia was incorporated into the Persian Empire, in which it formed a satrapy. Xenophon (*An.* 4. 2 and 3) describes the country as he saw it. Under Seleucid rule the Armenian cantons were administered by local governors, but after Magnesia (189 B.C.) the natives declared their independence, and one king, Artaxias, became sovereign over all Armenia Major, though nominally subject to Rome. The imperialistic ambitions of Tigranes the Great (q.v.) led the Republic to tighten its hold; after the campaigns of Lucullus and Pompey Armenia became a Roman protectorate. Thenceforward it was the subject of a continual tug-of-war between the two world-powers, Rome and Persia, each seeking to maintain control. A dynasty of Arsacid princes founded by Tiridates (q.v.) generally managed to maintain a balance, remaining Parthian in sympathy while professing friendship to Rome. Trajan temporarily reversed Roman policy by annexing the country.

Armenia was the first kingdom officially to adopt Christianity, and the new religion and its persecution by the Sassanids fostered a nationalistic spirit. In A.D. 387 the country was divided between Persia and Byzantium. The Arabs conquered it c. A.D. 653.

M. S. D.

ARMIES, GREEK AND HELLENISTIC. The composition of the Homeric army is never clearly stated in the epic, and was no doubt never exactly defined. Generally there is a distinction drawn between the champions (*πρωταχοι*) and the general mass of soldiers (*πληθὺς*). Probably only the chieftains were fully armed and armoured; the common soldiers equipped themselves as best they could.

2. There is no direct continuity between the Homeric army and the classical. In the latter (for which the Athenian can be taken as typical) the organization was

based on the tribal system and property-qualification. The citizen of any age between eighteen and sixty, if not disabled, might be required at need to serve the State in a military capacity, as horseman, hoplite, or light-armed soldier, according to his assessment. In practice the hoplite was the chief unit. Cavalry were scarce in Greece, apart from Thessaly and Macedon, neither of which was a great military power between 550 and 375 B.C. The usual proportion of hoplites to cavalry in an army was ten to one. Light-armed citizen troops had no fixed equipment: they were only called out *en masse*, when an army marched *πανδημεί* into a neighbouring State or to resist such an invasion. Their numbers might be large, but their military efficiency was slight. The Athenian hoplites were organized into ten tribal regiments; the cavalry were grouped into two divisions of five tribes each and were led by two hipparchs. Total numbers on the Athenian army-list (*κατάλογος*) are never clearly stated; the most important summary is in Thuc. 2. 13. 6 ff., which admits of various interpretations. Ordinarily young men from eighteen to twenty and older men from fifty upwards were retained for garrison duty only. The age-classes required were called up by reference to their year-archons (*ἐπώνυμοι*) or in the fourth century soldiers were alternatively summoned by the detachment (*ἐν τοῖς μέρεσιν*). The only standing army in fifth-century Athens were the *τοξόται*, archers mostly employed for police duties. They numbered 1,600 and were mainly hired from abroad.

3. Every Greek army had its local peculiarities, but the State with the most individual system was Sparta, where all the full citizens were equals, and therefore none was less than hoplite in status. Their cavalry were few and unsatisfactory. In the Persian wars the Spartans sent to Plataea a force of 5,000 citizens as hoplites, supported by 5,000 *perioeci*. At that period they were divided into five territorial regiments, but at the battle of Mantinea (418 B.C.) the regiments were seven in number, subdivided into *πεντηκοστῆς* and *ἐνωμοτίαι*, and in addition there was an eighth, separate, Sciritic λόχος of 600. Thucydides reckoned the main hoplite force at Mantinea as 4,298 men, excluding the Sciritae, and described them as five-sixths of the Spartan army. The number of cavalry at this period had been raised to 700 (Thuc. 4. 55. 2). The early fourth century saw a further reorganization into five *morae*, subdivided into *λόχοι*, *πεντηκοστῆς*, and *ἐνωμοτίαι*. The extent to which the army at Mantinea or later was composed of a blend of Spartans and *perioeci* is uncertain, but the best theory is that Spartans and *perioeci* were incorporated in the same organization, and that the changes of system correspond to increasing proportions of *perioeci* and declining numbers of Spartiates. During the Peloponnesian War the Spartans were also compelled more and more to use Helots for foreign expeditions and garrison duty abroad. They were sent out under the command of one Spartiate with perhaps another Spartan or two as his lieutenants. In the fourth century Sparta like other Greek States was forced to employ mercenaries (q.v.).

4. The Macedonian army is best known as it was organized under Alexander the Great, but no doubt his system was taken over directly from Philip II, and its general lines may be much older. At that time the infantry consisted of the *πεζεταίροι*, about 3,000 strong, who formed the phalanx (q.v.), and the *ὑπασπισταί*, probably about twice as many, who were more lightly armed. The *corps d'élite* of the Macedonian cavalry were the *ταίροι*, grouped in eight *ilai*; but Alexander also had at his command large forces of Thessalian cavalry as well as Thracians, and special light-armed levies, such as the Agrianes. In addition he led into Asia the forces of his Greek allies and a certain number of mercenaries.

5. The armies of the *Diadochi* were in practice little else than mercenary bands, but with the founding of the

Hellenistic kingdoms new national armies were established. (1) The army of the Ptolemies is best known from Polybius' account (5. 65) of the battle of Raphia (217 B.C.), and from many casual references in inscriptions and papyri. The main divisions were (a) native Egyptians, (b) Macedonians, and (c) mercenaries. Of these the Macedonians were the most important, drawn from settlers with an obligation to provide military service, but the standing army mostly consisted of mercenaries who supplied the palace guard. (2) The army of the Seleucids was remarkable for the great variety of nationalities from which it drew its soldiers. Its phalanx was armed in the Macedonian style, but was no doubt of very mixed blood, and was raised from the military settlers (*κατοικοί*). (3) The Macedonian army was still in theory based on its former system of citizen levies, but actually the man-power of Macedon had been seriously exhausted, and in later periods barbarian mercenaries from the north had to be hired in large numbers. (4) In the Hellenistic period the Achaean and Aetolian Leagues were the chief military powers among the Greek States. Their forces were composed in varying proportions of citizens and mercenaries. They copied the royal armies in having more varied types of troops, and tended more and more to depend on professional soldiers.

H. W. P.

ARMIES, ROMAN. Traditional accounts of the early Roman army are tendentious and may often reflect later conditions. It seems, however, probable that from the first military service was regarded as an essential feature of citizenship, but as the poor could not provide suits of armour, in practice service devolved upon the rich. This inequality was lessened by two reforms. (a) Citizens were grouped for service in accordance with their means (traditionally since Servius Tullius). Thus the richest provided the cavalry and the poorest the light-armed troops. (b) As the need for longer campaigns grew, entailing a maximum liability of sixteen years' service, pay was introduced to compensate the cost of armour (traditionally c. 400 B.C.). Thus gradually the State assumed responsibility for the maintenance of its soldiers.

2. By the time of the Punic Wars the Roman army consisted of a citizen militia levied according to seasonal requirements from citizens possessing a certain property qualification (although in a crisis even slaves might be enrolled), and organized in legions under consuls and military tribunes. The *Socii* were obliged by treaty to provide contingents, of equal numbers (theoretically) with those of Rome. These were called *alae*, and gradually superseded the legionary cavalry and light-armed troops. They were commanded by *praefecti*, half of whom were Roman officials under the supreme control of the consuls.

3. This system of military service was radically altered by the Marian army reforms and the enfranchisement of Italy. By the former service in the legions was opened to all Roman citizens, and a professional army voluntarily enlisted replaced the conscript militia. By the latter Italians became eligible for legionary service. Consequently the separate contingents of *Socii* disappeared, and the Roman army now consisted of legions, and of *auxilia* raised outside Italy. During the last century of the Republic long-period commands (sometimes of five or even ten years) became increasingly common. The military executive thus became divorced from the civil government, and the Republican army disintegrated into a series of professional armies owing loyalty each to its own general.

4. Out of the armies of the triumvirs Augustus established a permanent standing army, composed of legions recruited from Roman citizens and *auxilia* from provincials, who were enfranchised after their service. The former were commanded by senatorial *legati*, the latter by equestrian officers, both under the supreme control of the *princeps*. In addition Augustus constituted the Praetorian Guard (see PRAETORIANI).

5. During the next two centuries no substantial alterations were made, apart from the gradual elimination of differences between legions and *auxilia*. With Septimius Severus, who widened the areas of praetorian recruitment, began a policy of democratization, which culminated in Gallienus' removal of senators from military commands. At the same time with the influx of barbarians the army lost its national character, and the Roman stock became increasingly effete.

6. In the reorganization consummated by Constantine the Imperial forces were divided into a mobile field army and stationary frontier garrisons. The former comprised the flower of the troops, the latter soon degenerated into local militias. The praetorians were disbanded, and in place of their prefects *magistri militum* assumed the highest command under the emperors.

ARMILUSTRIUM, see AVENTINE, MARS.

ARMINIUS (c. 18 B.C.-A.D. 17), chief of the Cherusci. He had Roman citizenship, served in the Roman auxiliary forces, and attained the rank of *eques*. In A.D. 9 he secretly organized the struggle against the Romans. By the report of a rising he attracted three Roman legions, commanded by P. Quinctilius Varus, to the Teutoburgian Forest and cut them to pieces. In 15 he fought against Segestes, whose daughter Thusnelda he had married. Segestes was helped by Germanicus (q.v.), and Thusnelda fell into the hands of the Romans. In 16, though beaten by Germanicus and wounded, Arminius again thwarted the Roman conquest of Germany. In 17, with the help of the Semnones and Langobardi, he entered into war with Maroboduus, but was treacherously killed. He was a prudent tactician and a master of surprise attack; his greatness was recognized by Tacitus: 'liberator haud dubie Germaniae.' Only the Roman, not the German tradition, preserved his memory. The identification of Arminius with the Siegfried of German legend is wrong.

ARMS AND ARMOUR, GREEK. Homeric equipment is a special subject. No single description applies to all the passages, but a large number are best interpreted in connexion with Minoan and Mycenaean armaments, which are known from such representations as those on the Shaft-grave daggers. Their characteristic armour is a figure-of-eight-shaped shield made of one ox-hide and swung from the neck by a strap. The only protection used with it was a helmet. The chief weapon was a long rapier-like sword. Towards the end of the Bronze Age this style was displaced by the use of a much smaller round shield carried on the arm. This change involved the addition of a breastplate and greaves, while the sword became shorter and was used for cut as well as thrust. In the Homeric poems the champions begin by throwing spears at each other, and when these are gone they proceed to close combat with swords.

The standing type of the archaic and classical soldier is the hoplite (q.v.). This was ultimately derived from the soldier of the transition to the Iron Age. The trend was towards heavier armour and fighting based on weight of man-power. Shields were made of bronze, and spears and swords of iron. In addition hoplites wore breastplates, greaves, and helmets as defensive armour. The spear as used by hoplites and cavalry had become a pike for thrusting, not throwing, and was usually some nine feet in length. Only light-armed troops and some light cavalry used instead the throwing spear (*ἀκόντιον*). Along with the use of the spear as a pike, the sword (at least of the Athenian hoplite) had developed a short, straight-edged blade; it could only be used for very close fighting.

The fourth century saw the evolution of a more flexible type of equipment than the hoplites. Experiments were first made with the peltast (q.v.), but the final change was the establishment of the Macedonian type as employed in the phalanx (q.v.). The spear (*σάρισα*) was increased still more in length to a maximum of 17 feet, and the shield reduced to a small target carried on the arm. The different ranks of the phalanx used different lengths of spear. The equipment for light-armed infantry and light- and heavy-armed cavalry was also specialized at this period.

Nilsson, 'Die Hoplitentechnik und das Staatswesen', *Klio* xxii (1929), 240 ff. Hellenistic: W. W. Tarn, *Hellenistic Military and Naval Developments* (1930).

H. W. P.

ARMS AND ARMOUR, ROMAN. In the regal and early Republican period the Roman infantry fought as a phalanx and was equipped on the Greek model (possibly under Etruscan influence). The *hasta* or thrusting spear was the chief offensive weapon, and the defensive armour varied with the individual's means. The richest soldiers had corselets and light round shields (*clipei*), and, in common with the less opulent, greaves and helmets.

2. By the time of Polybius, however, the *pilum* or throwing spear had replaced the *hasta* as the Roman national weapon, and was carried by the first two lines (*hastati* and *principes*). For close fighting the two-edged cut-and-thrust Spanish sword had been introduced. The *clipeus* was superseded by an oval *scutum*, while for the Greek corselet was substituted a Celtic coat of mail. By contrast with the heavy-armed legionary the *velites* were equipped with only a small round buckler (*parma*) and a light spear (*iaculum*). The legionary cavalry wore a helmet and cuirass, and carried a *clipeus* and a two-pointed spear (*hasta*, *tragula*), but no sword. The *Socii* were probably armed like their corresponding Roman contingents.

3. During the last century of the Republic the *pilum* became universal in the legion, and its construction was improved so as to increase its penetrative powers. The oval was replaced by a rectangular cylindrical shield, and greaves were abolished. In short, Greek equipment was gradually supplanted by types of armour partly indigenous and partly adopted from Gaul and Spain.

4. Under the Principate the arms of the legionary and the auxiliary were differentiated. Among the former there were few important changes, apart from modifications made in the cuirass. Of special interest is the *lorica segmentata* represented on Trajan's column, which consisted of breast and back plates strengthened by iron hoops round the body and arms. By contrast with the legionary *pilum* and *gladius*, the auxiliary infantry and cavalry carried a *hasta* and *spatha* or long sword; the former had oblong and the latter oval-shaped shields instead of the *scutum*. In addition there was a number of specialist contingents, whose names indicate their equipment (*funditores*, *sagittarii*).

5. The Roman army eventually lost its national character. *Pilum* and *gladius* were replaced by *spiculum* and

spatha, and in the *Notitia Dignitatum* many units bore titles indicating their methods of fighting, e.g. *clibanarii* and *catafractarii*, the iron-clad horsemen of Persian pattern.

H. M. D. P.

ARNÖBIUS wrote about A.D. 305 in Numidia seven books *Adversus Nationes*. They make a detailed attack on ancient paganism in which much curious learning, derived partly from Varro, is preserved. The style is not unpleasing, its most unexpected feature being the constant reminiscences of Lucretius, which make it clear that the author knew the *De Rerum Natura* by heart. His Christianity is especially to be inferred from his hostility to paganism. He is the first dated Latin writer to use the word *deitas*.

C. Marchesi, *Adversus Nationes*, (1934); E. Löfstedt, *Arnobiana* (1917); F. Gabarro, *Le Latin d'Arnobé* (1921); H. Hagendahl, *La Prose métrique d'Arnobé* (1937).
A. S.

ARPINUM, a Volscian hill-town in the Liris valley; nowadays *Arpino*, with interesting polygonal walls. Rome captured Arpinum from its Samnite conquerors and gave it *civitas sine suffragio*, 305–303 B.C. (Diod. 20. 90; Livy 9. 44; 10. 1). After 188 it enjoyed full citizenship, being administered as a *praefectura* and, after 90, as a *municipium* (Livy 38. 36; Festus 262 L.; Cic. *Planc.* 20). Subsequently Arpinum is seldom mentioned. It is famed as the birthplace of Marius and Cicero (Juv. 8. 237 f.); remains, possibly of Cicero's villa, still exist nearby.

L. Ippoliti, *Il luogo di nascita di Marco Tullio Cicerone* (1936) —with bibliography.
E. T. S.

ARRETIVM, modern *Arezzo*. Strabo, who mentions Arretium as important in late days, describes it as the most inland of Etruscan cities. Evidently it was later than most. Its early history is barely revealed by occasional gleams; we do not even know when Arretium became Roman. In 301 B.C. its ruling family were the Cilnii. A hundred years later its wealth is revealed by the supplies furnished to Scipio's fleet (Livy 28. 45). That its commercial magnates were lovers of art is shown by two bronze masterpieces now in the Florence Museum. The Minerva is a copy of some Greek original of the fifth century; but the Chimaera is a work of striking originality. In the first century B.C. Arretium became famous for its red pottery, whose moulded figures are in the finest late Hellenistic style (see *TERRA SIGILLATA*).

D. R.-MACI.

ARRHA SPONSALICIA, see *MARRIAGE, LAW OF*.

ARRIA (1) **MAJOR**, the wife of Caccina Pactus, professed Stoicism. When her husband was condemned by Claudius for his part in the conspiracy of Camillus Scribonianus (A.D. 42), she stabbed herself and gave Pactus the dagger saying, 'Pacte, non dolet' (Plin. *Ep.* 3. 16; Martial 1. 13).
A. M.

ARRIA (2) **MINOR**, daughter of Arria (1), was wife of P. Clodius Thrasea (q.v.) Pactus, mother of Fannia (who became wife of Helvidius Priscus), and relative of Persius. She wished to die beside her condemned husband (A.D. 66), but was forbidden. Banished by Domitian, she returned to Rome under Nerva, and was a friend of Pliny the Younger.
A. M.

ARRIAN (FLAVIUS ARRIANUS, 2nd c. A.D.) of Bithynia governed Cappadocia under Hadrian and defeated the great Alan invasion of 134. He was a pupil of Epictetus, whose teaching reinforced his natural sense and honesty; if he claimed to imitate Xenophon, it was his only affectation. He preserved the valuable *Discourses* of Epictetus; and beside military treatises and his lost

History of Parthia he wrote a history of Alexander's successors, based on Hieronymus of Cardia (large fragments alone survive); the *Indike*, an account of India from Megasthenes and Nearehus, with a reproduction of Nearehus' account of his voyage; and his chief book, the *Anabasis*, his history of Alexander. He calls Ptolemy I and Aristobulus his sources, but his main source was Ptolemy, Aristobulus being used to supplement him; the vulgate and stories he quotes as *λεγόμενα*, 'so they say'. His sober narrative is the basis of Alexander's history, a welcome contrast to the romanticism, the slander, the absurd stories, so often met elsewhere. Purists condemn Arrian's style; it is more important that he wrote plainly and eschewed rhetoric. He is not a compiler, but a real historian who tried to go to the best sources; he illustrates Polybius' dictum that only men of action could write history, and but for this practical soldier we should know little enough about Alexander.

See ALEXANDER (3), Bibliography, Ancient Sources.

W. W. T.

ARRIUS ANTONINUS, grandfather of the Emperor Antoninus Pius, wrote Greek poems which recalled Callimachus and Herodas according to Pliny (*Ep.* 4. 3. 3–4).

ARRIUS, see also *VARUS* (4).

ARRUNTIVS (1), **LUCIVS**, was proscribed in 43 B.C., but escaped to Sextus Pompeius. He returned to Italy after the treaty of Miscenum and commanded a division of Octavian's fleet at Actium. He was consul in 22, and as *XVvir sacris faciundis* took part in the *Ludi Saeculares* in 17. In spite of his wealth Arruntius was noted for the simplicity and severity of his life. He wrote a history of the (First?) Punic War.

Velleius 2. 77, 85 and 86; Seneca, *Ep.* 114. 17–19; Tacitus, *Ann.* 11. 6 and 7.
G. W. R.

ARRUNTIVS (2) **STELLA**, **LUCIVS** (cos. A.D. 101), poet-patron of Martial and Statius, gave games to celebrate Domitian's Sarmatian victory; wrote love-poems on Violentilla, whom he afterwards married (Mart. 1. 7; 4. 6; 5. 11. 2; 7. 14. 5; Stat. *Silv.* 1. 2).

ARRUNTIVS (3) **CELSVS** (2nd c. A.D.), miscellanist, whose (lost) works included a grammar and (possibly) commentaries on Terence and Virgil.

Teuffel, § 365 a, 3; Schanz-Hosius, § 606, 5.

ARRUNTIVS, see also *SCRIBONIANVS* (1).

ARS, a treatise. This meaning of the word, based on the opposition (common in literary criticism) between *ars* (τέχνη) and *natura* (*ingenium*, φύσις), is first found in the *Ad Herennium*. The term is used mainly for technical works (*ars grammatica*, *ars arithmetica*); but *Ars Amatoria* was certainly Ovid's own title (cf. 2. 162). Horace's *Ars Poetica* is first so named by Quintilian (8. 3. 60). J. F. M.

ARSACIDS, the royal dynasty of Parthia (q.v.) c. 250 B.C.–A.D. 230. Arsaces, rebelling against the Bactrian satrap of Antiochus II Theos, became the first king of Parthia, and his descendants (some 38 in number) bore his name as an official title. The Arsacids rapidly made Parthia a world-power second only to Rome; on the west they drove the Seleucids from Mesopotamia and more than once invaded Syria; in the east they reached India and extended their influence over the Indo-Scythian kingdoms. Their relations with Rome were generally hostile, yet they performed a great service to the western world in halting the constant menace of nomadic invasion from the north-west. Politically, the Arsacids were the heirs of the Achaemenids, from whom they claimed descent. They too made Media the centre of their empire and Ecbatana their capital; Ctesiphon (q.v.) was their winter residence. Although not themselves Persians,

they adopted Persian religion and customs, and organization into satrapies.

ARSINOË, in mythology, see **ALCMAEON** (1).

ARSINOË I (b. c. 300 B.C.), daughter of Lysimachus (q.v.) and of his first wife Nicaea. She married Ptolemy II when crown prince (c. 289-288), and had by him at least three children, Ptolemy III, Berenice Syra, and a Lysimachus. She was accused of plotting to kill her husband and was banished to Coptus (279-274). Her motive was perhaps jealousy, as Arsinoë II had returned to Egypt a short time before.

F. M. H.

ARSINOË II (*Philadelphus*) (c. 316-270 B.C.), daughter of Ptolemy I and Berenice I. She married (c. 299-298) Lysimachus (q.v.), who was strongly under her influence and gave her the towns of Heraclea, Tiua, Amastris, and Cassandrea as special domains. After Lysimachus' defeat and death and a short marriage to her step-brother Ptolemy Ceraunus, Arsinoë fled to Egypt. She married her brother Ptolemy II in 276-275 or perhaps a year earlier. Her influence as queen was decisive in the policy of Egypt. The Fayûm, colonized at this time, was called Arsinoites after her.

F. M. H.

ARSINOË III (*Philopator*) (b. c. 235 B.C.), daughter of Ptolemy III and Berenice II. She married her brother Ptolemy IV in 217, but fell into disfavour during his last years and was burnt to death in a deliberately started palace fire in 206-205 or 204-203, shortly before or after her husband's death.

See **PTOLEMY**.

F. M. H.

ARSINOË (*Crocodilopolis*) was developed by Ptolemy Philadelphus as the metropolis of the district which he reclaimed in the Fayûm; its Egyptian predecessor was unimportant. The ruins are extensive, but have not been systematically excavated; they were the first source of papyri exploited in the Fayûm, and have produced large numbers of Roman and Byzantine documents. J. G. M.

ARSINOË (*Gleopatris*), now *Ardscherud* near Suez, at the northern end of the gulf, founded by Ptolemy II, was the capital of the Heroöpolite nome, and the terminal point of a canal from the Pelusiac arm of the Nile. It became one of the chief Egyptian ports, despite shoals and south winds, carrying Red Sea trade, but much less than Myos Hormos and Berenice (qq.v.). Near it Trajan established a garrison at Clysma, at the end of a new canal (from *Baboul*), cleared periodically through several centuries.

Warmington, *Indian Commerce*.

ART, GREEK RELIGIOUS. Greek art, at least until the time of Alexander the Great, was essentially a civic and religious art, devoted primarily to the adornment of the city and the glorification of the gods who protected it.

2. For the four centuries between 1100 and 700 B.C. our information is scanty. A formal, geometric style of decoration took the place of the naturalistic curvilinear schemes of the Bronze Age, as is shown especially by the painted vases and crudely modelled figurines in bronze and terra-cotta. Some of these served religious purposes: large vases painted with scenes of death and burial sometimes marked the graves of the dead, and smaller vessels were placed in the graves and dedicated as offerings at shrines; and the bronze and terra-cotta figurines were also used as offerings. The shrines were for the most part, however, simple structures of wood and crude brick which have left few traces. Greek writers frequently mention wooden statues of divinities which were regarded as very early works and some of these, no doubt, were products of the 'Geometric Period'. The most famous of such images was the ancient Athena in the Erechtheum. Although the forms of the great Olympian divinities were well established at this time, as appears clearly in the Homeric poems, the artist apparently was unable to represent them.

3. It was only in the seventh century, and largely as a result of contact with the Orient, that an advance was made. On vases and bronzes of this time the gods and heroes gradually appeared, often in forms that suggest the influence of the East, like the winged nature goddess with animals, who was most commonly equated with Artemis and sometimes given her characteristic bow and quiver. Even when, towards the end of the seventh century, larger sculpture in stone was attempted, it was only by means of attributes that gods and goddesses were distinguished, the same types being used for divinities and human beings.

4. The Archaic Period (600-480 B.C.) was characterized by rapid progress in all the arts. Temples of stone, generally Ionic in Asia Minor and Doric on the mainland and in the West, replaced the earlier simple shrines. Each of these contained in the principal chamber a statue of the divinity to whom it was dedicated; pediments with scenes from mythology, at first in painted relief, later with painted statues in the round, and the metopes and friezes offered other space for decoration. The pedimental sculptures from the temple of Aphaea at Acgina, now in Munich, with the stiff central figure of Athena and the freely posed but still archaic figures of fighting Greeks and Trojans, show the progress that had been made just before 480 B.C. Throughout the Archaic Period statues in stone and statuettes in bronze and terra-cotta were dedicated as offerings at the sanctuaries of the gods and so have some religious character; excellent examples are found in the great series of female figures from the Acropolis at Athens, each holding an offering in the extended hand. Not infrequently, however, such figures were characterized as divinities by their attributes, and the figurines in clay and bronze placed in the tombs exhibit similar types.

5. The period from the Persian Wars to the end of the fifth century marks the first great flowering of the Greek genius in all fields, when many works were created which later generations looked upon as masterpieces. It was a period of high idealism when the types for many of the gods were fixed for all later time. The great Apollo from the west pediment of the temple of Zeus at Olympia, which was dedicated about 456 B.C., though still slightly archaic, is a marvellous embodiment of the Homeric ideal of 'blessed gods who live forever'. More famous were other statues which we know only in inadequate copies: the gold and ivory Zeus made by Phidias for the temple at Olympia, which according to Quintilian 'seems to have

added something to the established religion'; the gold and ivory Athena in the Parthenon at Athens by the same sculptor; the Hera made by Polykletus for a new temple of the goddess at her shrine near Argos. In the fifth century even purely human figures were idealized; the men and women who appear in the great Panathenaic procession on the frieze of the Parthenon do not differ greatly from the gods who await them. The painted vases of the mid-fifth century exhibit similar qualities and are generally believed to reflect the style of Polygnotus and other painters of the time who decorated the walls of temples and public buildings with elaborate compositions, mostly mythological in subject, such as the Greeks at the sack of Troy and the Slaying of the Suitors.

6. This high level was not long maintained. The fourth century witnessed many changes, especially in the direction of a more human conception of the gods and a greater individuality, both in the artist and in his product. The famous Hermes of Praxiteles found at Olympia, in spite of the skilful execution, lacks the grandeur of the fifth-century Apollo from the same site; and his most famous statue, the nude Aphrodite of Cnidos, was a more human goddess than the creations of the fifth century, such as the Aphrodite on the so-called Ludovisi Throne in Rome and the companion relief in Boston. No doubt we should feel the same about the famous Aphrodite Rising from the Sea by the contemporary painter Apelles, if that work were preserved. It is characteristic of the fourth century, also, that the lesser divinities of the Greek pantheon were more frequently represented than in earlier periods. In the list of Praxiteles' works are found Eros, Peitho, Pan, Satyrs, and Nymphs. Another innovation appeared in statues and groups that represent abstractions, such as Peace Carrying Wealth by Cephisodotus (an altar to Peace is said to have been set up for the first time in Athens in 374 B.C.), Fortune and Wealth by Xenophon.

7. The spread of Greek culture to many lands, which resulted from the conquests of Alexander the Great, brought many changes. In the new cities which were founded by Alexander and his successors temples were erected to Greek divinities as well as to local gods, and the worship of Oriental divinities, such as Sarapis, Isis, and Harpoerates, spread to Greece itself. The sculptors of the Hellenistic Age (dated usually from the death of Alexander in 323 B.C.) based their creations upon the types established in earlier times, but modified them to embody contemporary ideas, which were in the direction of more slender forms, more theatrical poses, and greater realism in detail. The Aphrodite of Melos is less stocky than the fourth- and fifth-century models by which it was inspired; the Apollo Belvedere (a Roman copy of a Hellenistic original) shows well the theatrical quality; the Demeter and the Artemis from the great group by Damophon of Messene suggest individual character much more than the highly idealized forms of earlier days. The Tyche of Antioch, created early in the third century by Eutycheides and worked out as an elaborate allegory of the town itself, was the ancestress of many similar representations of a goddess who became immensely popular, the Fortune of the individual city. The erudite character of much Hellenistic sculpture is well illustrated by the Battle of the Gods and Giants which decorated the great Altar of Zeus and Athena at Pergamum. In the high relief of this elaborate composition are found Aether and other divinities who can have had little real significance even to the Greeks themselves, and in the treatment of the figures with their contorted poses and bulging muscles gods and giants alike are hardly to be distinguished from contemporary athletic types. The gods have descended from Olympus and become much more like ordinary mortals. The diffuse and varied character of Hellenistic art accurately re-

flects the disintegration of Greek civilization in its last phase.

G. H. C.

ARTABAZUS (c. 387-c. 325 B.C.), son of Pharnabazus (q.v.) and Apame. His consistent loyalty to Artaxerxes II (q.v.) was rewarded by his appointment as satrap of Daseyleum, a position which was hereditary in his family. Under Artaxerxes III he revolted, and, aided successively by Chares and Pammenes, held out until 352, when he was forced to seek refuge in Macedonia. His return to Persia was arranged by Mentor, his brother-in-law, in 345. After Gaugamela he fled with Darius III, but deserted from Bessus to Alexander, who made him satrap of Bactria, a command which he resigned in 328.

D. E. W. W.

ARTAVASDES I of Armenia succeeded his father Tigranes before 52 B.C., and was Rome's ally when Crassus invaded Mesopotamia; but Orodes' simultaneous invasion of Armenia brought him over to Parthia's side, and he married his sister to Orodes' son Paerorus. The story of the performance of the *Bacchae* at the wedding feast in the Armenian capital has led to a suggestion that Artavasdes, who is said to have written Greek 'histories', was the unknown historian whom Plutarch followed in the Parthian part of his *Life of Crassus*; but the unknown was certainly an eastern Greek. Artavasdes remained Parthia's ally till Antony's invasion in 36, when Canidius defeated him and he became (in name) an ally of Antony; he deserted in the critical battle, and in 34 Antony punished him by conquering Armenia and leading him in triumph at Alexandria. Contrary to Roman custom, Antony spared his life; later he was put to death by Cleopatra.

W. W. T.

ARTAXATA, the capital city of Armenia, on the river Araxes, in the district of Ararat, c. 20 miles south-west of Erivan. It was founded by Artaxias I, traditionally with the advice and assistance of Hannibal (Strabo 11. 528; Plut. *Luc.* 31). It was several times captured by the Romans during their invasions of Armenia; Corbulo burnt it in A.D. 58 (Tac. *Ann.* 13. 41); it was rebuilt by Tiridates brother of Vologeses (q.v.) and renamed Neronia (Dio Cass. 63. 7), but reverted to its old name. It was finally destroyed by Statius Priscus (A.D. 163). M. S. D.

ARTAXERXES (1) I (*Macrocheir*), king of Persia, son of Xerxes and Amestris, began his forty years' reign on his father's assassination in 464 B.C. He overcame disaffection in the court, in Bactria, and in Egypt, which, through Athenian support, resisted until 454. The peace of Callias (449) regulating relations with Athens was, on balance, a Persian diplomatic success. He was dominated by his mother; but his generous treatment of Themistocles, and of the Jewish and Egyptian minorities, suggests political sense rather than weakness.

D. E. W. W.

ARTAXERXES (2) II (*Mnemon*) (c. 436-358 B.C.), son of Darius II and Parysatis, ascended the Persian throne in 404. After crushing Cyrus' rebellion and repelling Spartan intervention in Asia Minor (peace of Antalcidas 386), he twice failed in the attempt to recover Egypt (385-383 and 374). He succeeded in suppressing the Satraps' Revolt (356-355), largely through mutual distrust among his enemies. His incapacity and subservience to the will of his mother and of his wife, Statira, caused a progressive decline and disintegration of the Empire.

D. E. W. W.

ARTAXERXES (3) III (*Ochus*) succeeded his father, Artaxerxes II, in 358 B.C. He secured his position by the wholesale execution of his brothers, and by crushing Orontes and Artabazus. In 343 (after a previous failure in 351) he reconquered Egypt with the aid of Mentor, who later recovered western Asia Minor. He was poisoned by his minister Bagoas in 338. Though he misjudged the strength of Macedonia, his achievement in restoring the power and prestige of the central government indicates high qualities of statecraft and leadership.

W. Judeich, *PW*, s.v. 'Artaxerxes (3)'.

D. E. W. W.

ARTAXERXES (4) (*Ardashir*), the name of several Sassanid kings, the greatest being Artaxerxes I (A.D. 211–12 to 241), founder of the New Persian empire of the Sassanids. Taking advantage of the confusion in the eastern part of the Seleucid Empire to assume the kingship of Istakhr, and then to conquer the neighbouring principalities one by one, he finally defeated Artabanus V of Parthia in battle and entered Ctesiphon in 224. After further campaigns his empire included Iran, Afghanistan, and Baluchistan to the Oxus, Babylonia, Mesopotamia, and Armenia. He was responsible for the political and religious organization of the Sassanian Empire, and he founded many cities. He maintained friendly relations with Rome and with the neighbouring Arab principalities.

M. S. D.

ARTEMIDORUS (1) of Tarsus (2nd and 1st cc. B.C.), grammarian. For his edition of the Bucolic Poets he wrote *Anth. Pal.* 9. 205. See also GLOSSA (Greek).

ARTEMIDORUS (2) (fl. 104–101 B.C.), a Greek of Ephesus, voyaged along Mediterranean shores, out to Spain (and Gaul?), and in Alexandria wrote eleven geographical books (*Περὶ πλοῦς, τὰ γεωγραφούμενα, Γεωγραφίας βιβλία*), often quoted. His records, especially of distances in western regions, including (misapplied) use of Roman measurements, were fair, with errors and confusions. For eastern waters and Ethiopia A. relied on Agatharchides (q.v.), adding distances and details as far as C. Guardafui; for India, on Alexander's writers and Megasthenes (q.v.). He made two calculations of the inhabited world's length and two of its breadth, without determining positions by latitude and longitude.

Berger, *Gesch. d. wiss. Erdkunde d. Gr.* iv, 38 ff.; E. H. Bunbury, *Hist. of Anc. Geog.* ii (1879), 61 ff.

E. H. W.

ARTEMIDORUS (3) (late 2nd c. A.D.), born at Ephesus, lived at Daldis in Lydia, travelled extensively to collect dreams, and wrote an extant treatise (*Ὀνειροκριτικά*) on their interpretation, a topic which had attracted the attention of serious men, as well as anecdote-mongers, since the Alexandrian age; also *Ὀλιγοσκοπικά* and *Χειροσκοπικά* (palmistry). A. is important for the study of ancient folklore.

J. D. D.

ARTEMIS (*Ἄρτεμις*, occasionally *Ἄρταμις*), a goddess universally worshipped in historical Greece, but in all likelihood pre-Hellenic. The name yields no Greek etymology, *Ἄρταμις* being probably a popular assimilation of it to *ἄρταμος* (slaughterer, butcher; see O. Kern, *Relig. der Griechen* i. 102). For features indicating a specifically Minoan origin, see Nilsson, *Minoan-Mycenaean Religion*, 432 ff. She is often confused with Hecate and Selene (qq.v.), with the former owing to resemblance of character and functions, with the latter through learned speculation. Her proper sphere is the earth, and specifically the uncultivated parts, forests and hills, where wild beasts are plentiful; it is true that she

is often a city-goddess, but this is a secondary development of her importance, especially among women; cf. Wilamowitz-Moellendorf, *Glaube der Hellenen* ii. 148, for a good sketch of her. Her place among the deities was not won immediately, for she plays a feeble and even ridiculous part in the *Iliad* (21. 470 ff.); but she is already a daughter of Zeus, 'lady of wild things' (*πότνια θηρῶν*), sister of Apollo, a huntress and a 'lion unto women' (483), because their sudden and painless deaths are ascribed to her. Her functions as a birth-goddess and a bringer of fertility to man and beast, together with health to their offspring when born (she is often *κουροτρόφος*), are still obscure, at all events in the aristocratic circles for which Homer wrote; we may believe that even then she was made more of among the common people. Of mythology she has not much; for the story of her birth as Apollo's twin, see LETO; it is certain that she had originally nothing to do with him. The principal adventure which she never shares with her brother is the slaying of Orion (q.v.). But it is highly probable that many of the stories of women or nymphs who bear children were originally myths of Artemis (or some similar goddess), for being a giver of fertility she can hardly have been other than a mother-deity herself (see Farnell, *op. cit. infra*, p. 442 ff.); the strongest instance is perhaps Callisto, whose name is suspiciously like Artemis' title *καλλιστή*. However, for historical Greeks she was a virgin goddess, though a friend and helper of women in childbirth.

Concerning her cult, it is characteristic that she seldom has the larger cattle sacrificed to her. Goats are a common offering, and at Patrae Artemis Laphria was annually given a holocaust of wild beasts and birds, presided over by a priestess in a chariot drawn by stags like Artemis' own (Callimachus, *Dian.* 98 ff.; see Paus. 7. 18. 12, J. Herbillon, *Cultes de Patras*, 55 ff.). It is not, however, certain that this was as primitive a rite as it seems. Elsewhere her votaries simulate beast-shape, suggesting a theriomorphic form of Artemis herself. At Brauron in Attica, little girls in saffron dresses (to imitate the tawny hide of the bear?) danced before her; they were said *ἀρκτηρεύειν*, to play the bear, and were themselves called *ἀρκτοί* (Ar. *Lys.* 645 and schol.; Deubner, *Attische Feste*, 207). The existence of the word *νεβεύειν*, to play the fawn, suggests a similar rite in Larissa and Demetrias (Liddell-Scott⁹ s.v., in add. et corr.; P. Clement, *Ant. Class.* iii (1934), 401 ff.). At Halae a pretence of human sacrifice was made, a few drops of blood being drawn from a man's throat with a sword (Eur. *IT* 1450 ff.); actual human sacrifice at Phocaea is alleged (Pythocles ap. Clem. Alex. *Protr.* p. 32, 7 Stählin; doubtfully authentic). These are some of her most characteristic and unusual rites; in many places there probably was little to distinguish her cult from that of any other important deity. That she develops into a city-goddess has already been said; occasionally she shows a connexion with agriculture (Farnell, p. 455 ff.).

Artemis is very often identified with foreign goddesses of a more or less similar kind. Mythologically, the most important of these identifications is with the goddess of a barbarous people in the Tauric Chersonese (*Crimea*), whose cult was said to have been imported by Orcestes to Halae (see above). Historically, that having the widest-reaching results was probably with the great goddess of Ephesus, which was in many ways essentially right, though the two cults had quite independent origins. From Ephesus the worship of this 'Artemis' was carried to Massilia by the Phocaeans, and thence again it made its way to Rome, where the Aventine temple of Diana (q.v.) had a statue modelled on the Ephesian type (Strabo 4. 1. 5).

Identifications with other goddesses in Greece itself, besides Hecate and Selene, were not uncommon. A clear example is the so-called Artemis Orthia of Sparta, where it is archaeologically certain that Orthia came thither with

the Dorians, and therefore cannot have been originally the same as a pre-Hellenic deity; see *Artemis Orthia* (Hellenic Society, supp. paper No. 5, 1929), 399 ff. No doubt many identifications were so complete that they now escape our notice.

Several recent treatises are mentioned above. The best collection of material is still Farnell, *Cults of the Greek States* ii. 425 ff., though some of his conclusions on minor points must now be given up. H. J. R.

ARTEMISIA I, princess of Caria, ruled under Persian suzerainty over Halicarnassus, Cos, Nisyrus, and Calyndus. She accompanied Xerxes' expedition with five ships, perhaps as commander of the Asiatic Dorians. According to Herodotus, whose account (probably based on a Halicarnassian source) is strongly biased in her favour, she vainly urged Xerxes not to attack at Salamis (probably a prophecy *ex eventu*); she fought prominently in the battle and escaped pursuit by sinking an intervening Calyndian vessel. Afterwards she urged Xerxes to immediate retreat and transported part of his family to Ephesus.

P. T.

ARTEMISIA II succeeded her brother and husband Mausolus (q.v.) of Caria in 353-352 B.C. In his memory she completed the Mausoleum (q.v.), and promoted a literary competition attended by the most famous rhetoricians (Isocrates, Theodectes, etc.); Theopompus won the prize. In 350 an attack on Rhodes by democratic exiles, relying on the support of Athens which Demosthenes (*Or.* 15) vainly tried to secure, gave Artemisia a pretext to subdue Rhodes and the adjacent islands. She died soon afterwards.

U. Kahrstedt, *Forschungen* (1910), 22 f., 114 f.; A. Momigliano *Riv. Fil.* 1936, 54 ff.; K. J. Beloch, *Griech. Geschichte*² (1923), pt. 2, 142 ff. P. T.

ARTEMISIUM, a promontory on the north-west coast of Euboea, so called from a temple of Artemis Proseoa on this site. The place is perhaps to be identified with the village of *Potaki* near the Bay of Penki. For the battle of Artemisium, see PERSIAN WARS.

G. B. Grundy, *The Great Persian War* (1901), 321 ff. P. T.

ARTEMON (1) (probably not later than 2nd c. B.C.), sometimes identified with A. (2) of Cassandreia or A. (3) of Pergamum, edited the letters of Aristotle with notes on the art of letter-writing (*Demetr. Eloc.* 223, David on *Arist. Cat.* 24^a 28 Brandis).

ARTEMON (2) of Cassandreia (perhaps 2nd or 1st c. B.C.) wrote two bibliographical treatises, sometimes regarded as parts of a single work: (1) *On the Collection of Books*, (2) *On the Use of Books*, in the second book of which he discussed the three types of scolia.

FHG iv. 342 f.

ARTEMON (3) *Ὁ ἀπὸ Περγάμου*, also styled *ὁ ἱστορικός*, perhaps identical with A. (2) of Cassandreia, Cassandreia being his birthplace, Pergamum the scene of his literary activity (similar discrepancies in appellation often occur). He is several times mentioned in the scholia to Pindar for explanations based on history (*ἀπ' ἱστορίας*), and probably wrote a commentary on some of the *Odes*.

PII ii. 1446-7.

J. D. D.

ARTEMON (4) of Miletus wrote, during Nero's reign, a book on dreams which come true, with special reference to cures by Sarapis, cited by Artemidorus.

FHG iv. 340; PII ii. 1448.

ARTEMON (5) of Magnesia, date uncertain. Author of *Famous Exploits of Women* (*Τῶν κατ' ἀρετὴν γυναικῶν πεπραγμένων διηγήματα*), from which Sopater made excerpts.

PII ii. 1447.

4115

ARTILLERY. Greek artillery represents an early stage in the logical improvement of man's primitive weapons, the bow and the sling, against which men had learned to protect themselves with body-armour, shields, or city-walls. The catapult (*katapultes*) was originally a strengthened bow built on a stand, and fired arrows only. With the materials then available, the increase of power thus obtained was limited, but necessity produced a new invention, the torsion catapult; here the power was produced by many tightly twisted strands of an elastic material (often women's hair), which could be tightened still more with a windlass and then released suddenly. Its first certain use is by Alexander against Tyre (332 B.C.); he may have learned it from the Phoenicians, just as Dionysius I may have borrowed from Carthage when he introduced the earliest form of catapult into Greek warfare (c. 400 B.C.).

The perfected weapon assumed two forms: it shot either arrows (*καταπέλτης* or *ὀξυβελής*), or large stones (*πετροβόλος*—fire-baskets could be substituted), and each was effective up to 200 yards. Though Dionysius had used catapults from land against ships, and Alexander to cover his crossing of a great river, their natural function was as siege-weapons (see SIEGECRAFT), equally necessary to besiegers and defenders alike, as is illustrated by Demetrius' siege of Rhodes (306). In the field, the slingers and archers held their ground, because of their greater mobility and rapidity of 'fire'. Nor could naval warfare profit by artillery, because the ships could not bear the extra weight without a fatal loss of speed.

After 300 there were no important technical improvements, though scientific research produced, besides treatises, an occasional interesting freak. Artillery never became a deciding factor in ancient warfare, except perhaps when it was still, comparatively, a novelty. In sieges it was the superior will, rather than the better material, which most often prevailed, as the Romans showed at Syracuse and Carthage and elsewhere. Rome added to the Greek technique nothing except the Roman will to succeed.

W. W. Tarn, *Hellenistic Military and Naval Developments* (1930), 101 ff.; E. Schramm, in *Heerwesen und Kriegführung der Griechen und Römer* (J. Kromayer and G. Veith, 1928), 209 ff., with bibliography and illustrations. G. T. G.

ARULENUS RUSTICUS, JUNIUS, tribune of the plebs A.D. 66, praetor 69, possibly *cos. suff.* 92. Stoic philosopher and friend of Thrasea (q.v.) Pactus. Thrasea prevented him from vetoing the *senatus consultum* by which he was condemned to death. He fought for Vitellius against Vespasian and was put to death by Domitian because of a panegyric upon Thrasea and Helvidius Priscus (about 93). A. M.

ARUSIANUS MESSIUS (late 4th c. A.D.), grammarian, compiled an alphabetical list (*exempla elocutionum*) of nouns, adjectives, verbs, and prepositions which have more than one construction (ed. Keil, *Gramm. Lat.* 7. 449-514). His citations from Sallust's *Historiae* are particularly valuable.

Teuffel, § 427, 4; Schanz-Hosius, § 839.

J. F. M.

ARVAL BRETHREN, see FRATRES ARVALES.

ARVERNI, a Gallie tribe, occupying modern Auvergne. Craniometry and archaeology agree in assuming a considerable pre-Celtic survival among the population. The Arverni are reported as having long contested the primacy of Gaul with the Aedui (Caesar, *B.Gall.* 1. 31. 3). In 207 B.C. they treated with Hasdrubal (Livy 27. 39. 6), and in the next century, under Luernius and his son Bituitus, their empire, according to Strabo (4. 2. 3), stretched as far as the Pyrenees, the Ocean, and the Rhône. Bituitus was, however, defeated near the Rhône by Cn. Domitius Ahenobarbus and Q. Fabius Maximus

(121), and subsequently arrested at the peace conference, the Arvernian Empire being reduced to suzerainty over some neighbouring tribes. In 52 Vereingetorix (q.v.), son of a former Arvernian king, led the Gallic revolt against Caesar, and defeated an attempt upon the hill-fort capital, Gergovia. Under Augustus the capital was moved to Augustonemetum (*Clermont-Ferrand*), and the tribe lost its powers of suzerainty; but it seemingly obtained the position of *civitas libera*. Its principal temple—of Mercury Dumias—on the Puy-de-Dôme was famous for a statue erected by the Greek Zenodorus at the cost of forty million sesterces (Pliny, *HN* 34. 45). The region was devastated in the third century by the Alamanni, and after a heroic struggle was ceded to the Visigoths in A.D. 475.

C. Julian, *Hist. de la Gaule* ii. 546–52, iii. 1–19; O. Hirschfeld, *Kleine Schriften* (1913), 200–1. C. E. S.

ARX, see **CAPITOL**.

ASCALABUS, in mythology, son of Misme, an Attic woman. His mother gave Demeter (q.v.), who was looking for Persephone, a vessel of water, meal, and pennyroyal; he laughed at her for drinking it greedily, and she threw what was left of it over him, whereat he became a spotted lizard.

Anton. Lib. 24, citing Nicander; Ov. *Met.* 5. 446 ff. H. J. R.

ASCALAPHUS, in mythology, (1) son of Ares (q.v.); (2) son of Orphe (Ov. *Met.* 5. 539), a nymph of the river Acheron, or Gorgyra (Apollod. 1. 33), and Acheron. When Persephone was carried off by Pluto (see **HADES**), Demeter obtained from Zeus a promise that she should return if she had eaten nothing in the lower world. Ascalaphus had seen her eat a few pomegranate-seeds and betrayed her; Persephone turned him into an owl (Ovid) or Demeter put him under a great stone (Apollod.).

H. J. R.

ASCANIUS, the son of Aeneas (q.v.). According to Virgil, his mother was the Trojan Creusa, and he accompanied his father to Italy after the fall of Troy (*Aen.* 2). Livy (1. 3) mentions an alternative version, that he was born from Aeneas' marriage to Lavinia after the foundation of Lavinium; and tells how he became king on Aeneas' death, but later left Lavinium and founded Alba Longa on the Alban Mount. Latin authors also call him Iulus, and the *gens Iulia* claimed descent from him.

W. S. W.

ASCLEPIAD, see **METRE**, **GREEK**, III (11).

ASCLEPIADES (1) of Tragilus (4th c. B.C.), pupil of Isocrates, wrote a work, *Τραγιδούμενα*, on the myths of Greek tragedy and their treatment (*FGH* i. 12), which probably became an important source for Mythography.

ASCLEPIADES (2), whose pen-name was *Sicelidas* (fl. 270 B.C.), the most brilliant of the Alexandrian epigrammatists, has some forty poems in the Anthology, mainly on love. Exquisitely tender and imaginative, but clear and economical in expression, they distil the quintessence of the love-elegy and drinking-song into the inscriptional form of the epigram. A. was probably the first to introduce into love-poetry many of the erotic themes and symbols (e.g. Love the archer) which have become part of world-poetry. He was a close friend of Hedylus and Posidippus (q.v. 2); Callimachus was deeply influenced by him.

R. Reitzenstein, *Epigram und Skolion* (1893), 96 ff. G. H.

ASCLEPIADES (3) of Prusa in Bithynia practised medicine in Rome, where he died at an advanced age (about 40 B.C.). A sensualist and materialist, influenced by Epicurus and Heraclides Ponticus, he accepted the atomic theory, rejecting all teleology and stressing the importance of phenomenal appearances. Opposed to

the theory of humours and of the healing power of nature, he explained health as the unhindered movement of the bodily corpuscles, disease as their inhibited movement. His therapy, consisting in diet rather than in drugs, was based on the principle *tuto, celeriter, iucunde*, and made him equally well liked by high and low. Owing to its consistency and originality, his system influenced contemporary and later physicians and philosophers.

Text: Fragmenta, Ch. G. Gumpert (1749), not complete. List of writings: Sussehl, *Gesch. gr. Lit. Alex.* ii. 439.

LITERATURE: Summary, F. Überweg-K. Praechter, *Die Philosophie d. Altertums* (1926), 138 f., besides W. A. Heidel, *Harv. Stud.* 1911; T. C. Allbutt, *Greek Medicine in Rome* (1921); M. Wellmann, *PW* ii. 1632, still important, though antiquated in general characterization. L. E.

ASCLEPIADES (4) of Myrleia in Bithynia (1st c. B.C.) worked in Spain, and wrote on the history of Bithynia, and of scholarship; on Homer and Theocritus; and, as Atticist analogist, *Περὶ ὀρθογραφίας*. He insisted that grammar was a *τέχνη*: cf. Sext. Emp. *Math.* 1. 60–72.

P. B. R. F.

ASCLEPIODOTUS (1st c. B.C.), probably Posidonius' pupil, wrote on Greek and Macedonian military tactics. His book, the earliest extant specimen of a school treatise on a virtually dead branch of the military art, is a pedantic drill-book, in which the phalanx too often becomes a mathematical scheme. Probably it largely reproduces a lost work of Posidonius; but some things may go back through Posidonius to Polybius, and occasionally it gives an item of real value, as e.g. that the famous Thessalian cavalry fought in a rhomboid formation.

K. K. Müller, 'Asklepiodotos' in *PW*; Illinois Greek Club, *Asclepiodotus* (Loeb, 1923). W. W. T.

ASCLEPIUS (*Ἀσκληπιός*, basic non-Ionic form *Ἀσκληπιός*), hero and god of healing. In the *Iliad* he is a mortal, the 'blameless physician', taught his art by Chiron. To Hesiod and Pindar (*Pyth.* 3) he was the son of Apollo and Coronis, daughter of Phlegyas. Coronis proved faithless and with her lover Ischys was slain by Artemis, but Apollo (or Hermes, Paus. 2. 26. 6) snatched the unborn A. from the pyre, and entrusted him to Chiron. For daring to restore Hippolytus to life, he was slain by a thunderbolt of Zeus. There were conflicting versions (cf. Paus. 2. 26. 3–7): Epidauros (supported by Delphi) claimed to be his birthplace, and told how he was exposed by Coronis-Aigle and nurtured by a goat; in Messenia, Apollo and the Leucippid Arsinoë were considered his parents, in southern Arcadia, Arsippus and Arsinoë. His wife is generally called Epione, and his children include Machaon and Podalirius, the physicians of the *Iliad*, and the personifications Hygieia, Panacea, Iaso, and (an Athenian addition) Aceso.

2. While many writers have classed A. with the chthonian deities, Farnell has adduced strong evidence to show that he was in origin a hero, later elevated to full divinity; as a god, despite a few chthonian traits (e.g. the snake and possibly the rite of incubation), his associations are with the celestial divinities. His primary function, healing, is no criterion of his nature, for that art might be practised by gods, whether celestial or chthonian, or by heroes (cf. *ἥρως ἰατρός* at Athens). Unlike Trophonius, with whom he has been erroneously identified, he was not, except in a limited sphere, a giver of oracles, and even though, as *Σωτήρ*, he was on rare occasions invoked to protect from shipwreck and other ills, healing remained his chief concern.

3. The cult possibly originated at Tricca in Thessaly (Strabo 437; home of Machaon, *Il.* 4. 202), though the birth story is localized in eastern Thessaly. Thence he was carried, perhaps by the 'Phlegyans', into Phocis, where he was called *Ἀ. Ἀρχαγέτας* (Paus. 10. 32. 12), and Boeotia, and now probably originated his fateful alliance with Apollo. In the Peloponnesus, the cult at Titane

contained certain archaic features (Paus. 2. 11. 6-8), and Hygieia may be native here. The cult at Gerenia in Messenia derived from Tricca, and even Epidaurus, despite its pretensions, never entirely forgot the Thessalian origin of A. At Epidaurus the hero, through his association with Apollo Maleatas, first attained real prominence, and Epidaurus became the metropolis from which many of the later shrines were founded: at Athens in 420 B.C. (with some non-Epidaurian influence), Pergamum (apparently 4th c.), Rome in 293-291 B.C. (see AEscULAPIUS), Balagrae of Cyrene (Paus. 2. 26. 9), and, in some degree at least, Lebene in Crete. At Cos local tradition (Herod. 2. 97) insisted on a Triccan origin. In instituting new shrines, a sacred snake, representing the god, was fetched from the mother temple; the famous story (Lucian, *Alex.*) of the charlatan Alexander's quackery at Abonutichos is illuminating. Of the Hellenistic temples the greatest were at Epidaurus and Cos (cf. Herodas 4); under the Empire Pergamum ranked highest, and thence in Pausanias' time the cult was carried to Smyrna (Paus. 2. 26. 9).

4. The cult appealed strongly to the rising individualism of the fourth and ensuing centuries, since it provided a close personal relationship with the divine and could evoke a fervid personal devotion (as with Aelius Aristides) seldom found in the formal State religion. The number and magnificence of the temples and the quantities of ex-votos attest its popularity. The central feature of the cures was the ritual of incubation, amply described by Aristophanes (*Plut.* 653-747). Many of the recorded cures are sheer miracles, and while much was accomplished by auto-suggestion and the workings of faith, use was also made of pragmatic therapeutic methods: dietetic regimens, baths (at Pergamum in radio-active springs), and exercise. In a sense the great sanctuaries were sanatoria, equipped with theatres, gymnasia, and baths, but how far the secular physicians, sometimes designated as Aselepiadae, derived their science from the priestly craft remains an open question, though the foundation of the temple at Cos (mid-4th c.) was perhaps due largely to disciples of Hippocrates. The chronic invalid Aelius Aristides is a valuable witness for the methods employed in his time in the cult. See MEDICINE, II.

5. Usually associated with A. were his children, especially Hygieia, personified Health; Telesphorus is a late Pergamene addition to the cult. The sacred snake regularly assists in the cures, sometimes also dogs, to which, at Piraeus, sacrifices were even ordained (*IG* ii. 4962). The organization of the cult followed normal lines; likewise the festivals for A., the Asclepieia, consisted of the usual hymns, processions, and sacrifices. Of the various paeans to A. one, especially famous, continued in use at Athens for 500 years and more, and copies have been found also at Erythrae, in Macedonia, and in Egypt; late antiquity ascribed it to Sophocles, probably because of his famed 'reception' of A. at Athens and consequent heroization as *Δεξιων*. Of epithets of A. may be mentioned *Σωτήρ*, common on inscriptions, and *Πατήρ*; Zeus A. is late, as is *σωτήρ τῶν ὄλων* and the title *μύσσης*.

6. In art A. generally appears as a mature, bearded man, similar to Zeus, but with a kindlier, milder expression; Calamis and Scopas portrayed him as beardless, and Boetius as a child. His most constant attributes are the staff (cf. rite of *τῆς ῥάβδου ἀνάληψις* at Cos, *Hippocr. Ep.* 11, p. 778 Kühn), and the snake, often coiled about the staff. Generally the god is standing, as in the fifth-century original from Emporion in Spain (R. Carpenter, *The Greeks in Spain* (U.S.A. 1925), 104 ff.); in the famous chryselephantine statue by Thrasymedes at Epidaurus, described by Pausanias (2. 27. 2) and figured on coins, A. is seated, the staff in his left hand, his right extended above the head of a serpent, and beside the

throne lies a dog. The scroll or tablet which he sometimes bears probably represents medical learning.

L. R. Farnell, *Greek Hero Cults* (1921), ch. 10; F. J. and L. Edelstein, *Asclepius* (2 vols., U.S.A. 1945); W. H. D. Rouse, *Greek Votive Offerings* (1902), ch. 5; A. Walton, *The Cult of Asclepius* (U.S.A. 1894); U. v. Wilamowitz-Moellendorf, *Mythos von Epidaurus* (1886). Special topics: R. Herzog, *Wunderheilungen von Epidaurus* (1931); on paeans, J. H. Oliver, *Hesp.* 1936; F. Kutsch, *Attische Heilgötter und Heilheroen* (1913); on A. and Sophocles, F. R. Walton, *Harv. Stud.* 1935; W. S. Ferguson, *Harv. Theol. Rev.* 1944, 86; P. Schazmann and R. Herzog, *Kos*, vol. i, *Asklepieion* (1932); O. Deubner, *Das Asklepieion von Pergamon* (1938). F. R. W.

ASCONIUS PEDIANUS, QUINTUS (9 B.C.-A.D. 76; Hieron. *Chron.* on 76, the year he became blind being 64; see Clark), of Padua ('Livius noster', Ase. 68 [on Cic. *Corn.*]; *Sil. Pim.* 12. 212), a 'historicus clarus'. Quintilian (1.7.24) makes probable an early relationship with Livy. Servius on *Ecl.* 4. 11 implies that he knew Asinius Gallus (d. A.D. 33); Suid. s.v. *Ἀνίκιος* connects him with Iunius Blaesus, cos. A.D. 10, not the consul of 28 (E. Klebs, *PIV*). Lost writings are (1) *Vita Sallustii*, [Aeron] on *Hor. Sat.* 1. 2. 41. (2) *Symposion*, imitating Plato, on physical exercises as promoting health and longevity (Suid., and *Plin. HN.* 7. 159). (3) *Contra obrectatores Vergilii* (Donat. ap. Suet.). We possess only a fragment of his commentary on Cicero's orations (*Pis.*, *Scaur.*, *Mil.*, *Corn.*, *Tog. Cand.*), written between A.D. 54 and 57. It elucidates their history and chronology, on the basis of Cicero's published (and unpublished) works, except the letters to Atticus. Poggio found a ninth-century MS. at St. Gall: his copy is in Madrid (P. Matritensis). It was also copied by Sozomenus of Pistoia (S. Pistoriensis), and by Bartolomeo di Montepulciano (Laur. 54, 15). Included in *Sangallensis* was a fifth-century commentary on *Div. Caec.*, *Verr.* 1 and 2 to § 35. This is of grammatical character, and is quoted as Pseudo-Aseonius.

A. C. Clark, *Q. Asconii Pediani Commentarii* (O.C.T. 1907); *Scholastae Ciceronis Oratorum recensuit Th. Stangl* ii (1912).

G. C. R.

ASCULUM PICENUM, the capital of Picenum, strongly placed amid imposing mountains near the Adriatic on the R. Truentus (Strabo 5. 241); nowadays *Ascoli Piceno*, with numerous ancient remains. Rome captured Asculum in 268 B.C. and continued the Via Salaria to it (Florus 1. 14). The Social War broke out here, but the Romans recovered the town after a two-year siege and grimly punished it (App. *BCiv.* 1. 38, 47, 48). In imperial times it was a *colonia* (Pliny, *HN* 3. 111). Asculum Picenum should be distinguished from Asculum (better Ausculum) in Apulia (nowadays *Ascoli Satriano*), where Pyrrhus defeated the Romans in 279 B.C.

E. T. S.

ASELLIO, SEMPRONIUS, historian, military tribune at Numantia in 134-133 B.C., wrote a history (*res gestae*) of his own times, not in annalistic form (*annales*), but, presumably under the influence of Polybius, with pragmatic treatment. Perhaps beginning at the destruction of Carthage, it included the year 137 B.C. in bk. 4, Ti. Gracchus' death in bk. 5, and Livius Drusus' death (91 B.C.) in bk. 14. In a celebrated fragment on the function of history (Gellius 5. 18. 8), he distinguishes between pragmatic *historia* and formal *annales*.

A. H. McD.

ASIA (continent). The name was probably derived from 'Assiua', the Hittite designation of north-west Asia Minor; in Homer (*Il.* 2. 461) it denoted the hinterland of Ionia. Between 800 and 500 B.C. Greek explorers realized the existence of great land-masses beyond Europe and included all of these under 'Asia'. After 500 they separated Africa from Asia and fixed the boundaries of Asia at Suez and (usually) at the R. Don.

Herodotus knew that a route led up the Don and into the Asian steppe; he had a fairly accurate conception of the Persian Empire as far as Babylonia, and sporadic information about Arabia, Iran, and north-west India; like most Greeks before Alexander, he gave Asia Minor a narrow neck at its eastern base. Greek knowledge of Asia progressed little until Alexander opened up the continent as far as the Syr Daria, the Himalayas, and the Jhelum, and the sea route between India and the Persian Gulf. The Hellenistic Greeks obtained some knowledge of the Ganges valley (see MEGASTHENES), and met Chinese travellers advancing across the Tarim basin (see SERES). But inner Arabia remained a secret to them, and their knowledge of the Caspian basin was inferior to that of Herodotus (see CASPIAN SEA, PATROCLES). The irruptions of the Parthians (250 B.C.) and of the Tochari and Saeae (150) into Iran virtually cut off the Greeks from central Asia.

In the second century A.D. the Roman emperors secured greater freedom of travel through the Parthian dominions, and Greek traders, advancing to Daraut Kurghan, renewed contact with Chinese merchants and gained knowledge of the Pamirs, Tianshan, and Altai. In the first two centuries A.D. Greek traders also opened up the Indian coast as far as C. Comorin, and occasionally visited the Bay of Bengal and the Gulf of Tongking.

Cary-Warmington, *Explorers*, 56 ff., 130 ff. See also ARABIA, BACTRIA, HIPFALUS, INDIA, TAPROBANE. E. H. W.

ASIA (Roman province). Attalus III of Pergamum bequeathed his kingdom to the Romans, and at his death in 133 B.C. it was constituted as *provincia Asia* by M' Aquilius (see AQUILIUS 2). Originally the province consisted of Mysia, Lydia, Ionia, and almost certainly Caria; Phrygia was given to Mithridates Eupator of Pontus, and was not incorporated in the province till 116. Between 80 and 49 the *conventus* of Laodicea, Apamea, and Synnada, which lay along the route by which the governor of Cilicia travelled to his province, were for convenience assigned to Cilicia. From 49 B.C. till A.D. 297 Asia included all the territory from Tyriaion to the sea, with the adjacent islands; it was bounded on the north by Bithynia, on the south by Lycia, and on the east (after 25 B.C.) by Galatia.

The province Asia was rich in natural resources and in the products of agriculture and industry (its dyed wool fabrics were famous), and its harbours were entrepôts for the trade which crossed it by the Hermus and Maeander valley routes from the interior of Asia Minor and countries farther east. On this wealthy land the Roman Republican governors and capitalists descended like vultures, and its hatred of Rome had grown to white heat when it joined Mithridates in 88-84 B.C. and massacred 80,000 Italian residents in one day. In 84 Sulla reorganized Asia and brought order into its system of taxation; this year was used as the beginning of the provincial era in the eastern part of the province till the end of the Imperial period. Asia continued to suffer from arbitrary exactions during the civil wars; order and prosperity returned to it with the foundation of the Principate. At the partition of provinces between Augustus and the Senate Asia became Senatorial, with a governor of consular rank who governed as proconsul. The governor landed and resided at Ephesus, and was assisted by three legates and a quaestor.

Asia was a conglomeration of city territories; several of these cities had been autonomous in the Attalid period, and a few of those retained a titular freedom under the Romans. The cities, under the authority of the governor, continued to be administered by their own councils and magistrates, often with the assistance of a *logistes* appointed by the emperor, who controlled finance and expenditure. For purposes of jurisdiction the province was divided into *conventus*, according to

Pliny nine in number; later others were added. Provincial unity was expressed in the *commune Asiae* (κοινὴν Ἀσίας), a General Assembly of all the cities in the province, which met annually in this or that city, provided for the official worship of Rome and Augustus, organized games and festivals, and made representations to the emperor, sometimes with good effect, on matters concerning the administration of the province. In the first two centuries of the Empire Asia enjoyed great prosperity, of which memorials survive in splendid ruins and handsome monuments all over the country, as well as in the works of Dio Chrysostom and Aelius Aristides. The province shared in the universal sufferings of the third century, and in the fourth century, when the Anatolian roads led no longer westwards to Greece and Rome, but northwards to Constantinople, it lost its age-long position as an entrepôt of inter-continental trade. Meantime Diocletian, about A.D. 297, had divided Asia into seven provinces: see, e.g., LYDIA, PHRYGIA.

V. Chapot, *La Province romaine d'Asie* (1904); T. R. S. Broughton, in Frank, *Econ. Surv.* iv, pt. 4; Jones, *Eastern Cities*, ch. 2. W. M. C.

ASIANISM, see RHETORIC, GREEK, para. 6.

ASIATICUS, see SCIPIO (7), VALERIUS (18).

ASINIUS, see GALLUS (5), POLLIO.

ASIUS of Samos (? 7th or 6th c. B.C.), poet (Ath. 3. 125 b ποιητὴν παλαιόν); author of genealogies, satirical poetry in hexameters (on the luxury of the Samians), and elegiacs.

EGF 202-5.

ASKOLIASMOS (ἀσκολιασμός), a country sport in Attica. The players tried to keep their balance while jumping on an inflated and greasy wineskin (ἀρκός). The occasion seems to have been the Rural Dionysia (see DIONYSIA; Cornutus, *Theol. Graec.* p. 60, 23 Lang; Suidas, s.v.; Verg. G. 2. 384). That it was a religious or magical ceremony and that it belonged to any other festival seem to be mis-statements; see L. Deubner, *Attische Feste* (1932), 117, 135. H. J. R.

ASMONIUS (5th c. A.D.), author of works on grammar and metre (now lost) which Priscian used.

Teuffel, § 445, 8; Schanz-Hosius, § 825.

ASPASIA, a Milesian woman who came to Athens as a courtesan and became attached to Pericles, who divorced his wife (between 450 and 443 B.C.), and lived with her thereafter, as his mistress. Naturally the political enemies of Pericles took the opportunity of attacking her; but these charges are not more trustworthy than other scandals of the law-courts and comedy. Aristophanes parodies them admirably in his story of the origin of the Peloponnesian War (*Ach.* 515-39). Aspasia's intellectual attainments, on the other hand, are attested directly by the Socratics (especially Aeschines); and indirectly by comedy: she was Hera to the Olympian Pericles, Deianira to his Heracles, and so forth. About the beginning of the Peloponnesian War, perhaps when Pericles' own position was weakened in consequence of the pestilence, she was prosecuted for 'impiety', but acquitted, Pericles pleading for her. She had a son by him, Pericles the younger, who was specially legitimated after the death of Pericles' two sons by his first wife. After Pericles' death in 429 she apparently became the mistress of Lysicles, a popular leader, who was killed in 428. She lived on in Athens and was buried there. A. W. G.

ASPASIUS (c. A.D. 100-150), Peripatetic. His commentaries on Aristotle's *Cat.*, *Int.*, *Metaph.*, *Ph.*, and *Cael.*, and his *Libellus de naturalibus passionibus* are lost; his commentary on the *Eth. Nic.* survives in part (ed. G. Heylbut, 1889).

PI² ii. 1722.

ASPENDUS, a Greek colony in Pamphylia, claiming descent from Argos. Though assessed as a member of the Delian League (*IG*¹ i. 64), it preferred Persian rule, even resisting Alexander. Occupied by Ptolemy I, it was later subject to the Seleucids till 189 B.C., when C. Manlius admitted it to the alliance of the Roman people; though no longer free it still vaunted this title on its Imperial coins. It was an important harbour and its wealth is attested by its ruins.

K. Lanckoroński, *Städte Pamphyliens* (1890) i. 85-124.

A. H. M. J.

ASPER, AEMILIUS (late 2nd c. A.D.), wrote commentaries (now lost) on Terence, Sallust (*Historiae* and *Cat.*), and Virgil, which dealt with subject-matter and diction and included parallels from Greek and Latin authors. Aelius Donatus (q.v.) probably borrowed freely from him. The *ars* extant under his name (ed. Keil, *Gramm. Lat.* 5. 547-54) is apocryphal.

Teuffel, § 374, 1; Schanz-Hosius, § 598.

J. F. M.

ASPENAS, the name of two Augustan rhetoricians, Lucius and Publius, whose declamations are mentioned in Seneca's *Controversiae* and *Suasoriae*.

Teuffel, § 267, 2.

ASSONANCE, GREEK. Assonance is the recurrence of a sound in words which strikes the ear. The definition is, of necessity, subjective; and the Greek ear seems not to have noticed recurrences which strike our ear harshly; e.g. Eur. *Alc.* 160 ἐλοῦσατ', ἐκ δ' ἐλοῦσα; *IT* 1339, *Phoen.* 1174, *Or.* 238, *Soph. Phil.* 372. The Greeks tolerated such homocoteleuta as Thuc. 2. 43, ὁ δὲ μετὰ ῥώμης καὶ κοινῆς ἐλπίδος ἅμα γιγνόμενος ἀνάσθητος θάνατος (cf. [Andoe.] 4. 39, *Pl. Leg.* 949 c, *Dem.* 18. 238). Euripides, however, was taunted, perhaps unfairly, with putting in too many sigmas (*Plato Com.* fr. 30, *Eubulus* fr. 26-7).

(1) **ALLITERATION.** There are a few apparently intentional examples in Homer (e.g. *Φ* 181 χύντο χαμαὶ χολάδες, more in Aeschylus, not so many in Sophocles and Euripides. Alliterations in π are the most numerous. (The commonness of π as an initial letter does not wholly account for this.) Next come α and κ. The most famous example is *Soph. OT* 371 τυφλὸς τὰ τ' ὤτα τὸν τε νοῦν τὰ τ' ὄμματ' εἰ. Cf. also Aesch. *Ag.* 819-20, *Cho.* 89, 566, *Soph. El.* 210, *Eur. Hipp.* 1201-2, *Phoen.* 488-9. In the prose of the pre-Socratics alliteration undoubtedly plays a part (cf. Heraclit. fr. 25, *Democ.* frs. 164, 193, 215, 258, *Gorg.* fr. 11. 4, 8), also perhaps in *Thucydides* (1. 69. 1, 81. 5-6; 6. 9. 1; 7. 68. 1), and *Plato* (*Ap.* 39 a, *Resp.* 609 a, *Eur.* 634 c, 666 c, 688 c, 730 c, 923 a), while it is virtually absent from *Herodotus*, *Xenophon*, and the orators. *Plato's* use of assonance is perhaps a legacy from earlier philosophers. At *Pl. Symp.* 197 d (*Agathon*) ἐν πόνῳ, ἐν φόβῳ, ἐν πῶθῳ, ἐν λόγῳ κυβερνήτης the medial assonance is no doubt intentional.

(2) **RHYME.** Theognis (in marked contrast to *Tyrtaeus*) has leonine rhyme in one pentameter out of seven (cf. 173-83, 390-6), which can hardly be accidental. There is little evidence for intentional rhyme in epic, or in tragedy, but we can perhaps, as *Herrmannowski* suggests, detect a tendency to employ it in proverbs (e.g. *Soph. OT* 110-11) and in *loci communes* at the end of a scene (e.g. *Eur. Med.* 408-9). There are more examples in comedy (e.g. *Ar. Ach.* 30-4, 1087-92, *Pax* 341-4; *Alexis* fr. 141. 9-13). Rhyme is clearly present in some of the late *Anacreontea* (e.g. 38). In prose, *Demosthenes* does not seek rhyming clauses, perhaps actually avoids them, while in *Gorgias*, *Isocrates*, and writers of the *Isocratean* school they are an important part of the stock-in-trade, and double rhyme is often employed (e.g. *Isoc.* 4. 18 καὶ ὡς διαλέγειν . . . ἀρχαίως εἰπεῖν).

(3) **PUNNING ASSONANCE**, extending over the greater

part of the two words, including Cicero's 'immutatio litterae quasi quaesitae venustates' (*Orat.* 84). With us the pun is usually humorous, though *Mussolini* was not joking when he said that the Mediterranean is a *vita* for other nations, *vita* for the Italians. With the Greeks it was often serious (*Aesch. PV* 693 ψύχειν ψυχάν), sometimes the means for enforcing a philosophical lesson. Thus *Aesch. Ag.* 177 πάθει μάθος, *Heraclit.* fr. 114, *Democ.* fr. 57, *Pl. Grg.* 493 a (σῶμα-σῆμα, πῖθος-πιθαρός). But in *Plato* the pun, including puns on proper names, is often humorous or semi-humorous (*Leg.* 803 a τροπιδεῖα-τρόποις, 834 d Κρής οὐκ ἄχρηστος, 956 c κληρώσεις-πληρώσεις, *Epin.* 982 c πορείαν-χορείαν), sometimes with a hit at the sophists (*Symp.* 185 e Πανσαιῶν πανσαιμένων, *Grg.* 492 b λόγον καὶ ψόγον, in *Callicles'* mouth, *Prt.* 345 b χρόνον-πόρον, a backhanded compliment to *Protagoras*). *Gorgias'* λαβούσα-λαβούσα (fr. 11. 4) is a typical sophistic instance, and φήμη-μνήμη, ῥώμη-γνώμη are common form in this style. *Xenophon* sometimes indulges in naïve puns (e.g. *An.* 2. 2. 1 Μένων-ἐμνεῖ). For punning on proper names, see **ETIMOLOGY**, para. 1.

J. D. D.

ASSONANCE, LATIN. In Latin, *alliterative* assonance regularly marks both popular and literary usage; its artistic employment helped to bring beauty and sonority to the language. In popular speech it occurs in proverbs ('fortes fortuna iuvat', 'mense Maio malae nubunt'—see *Otto, Sprichwörter*, p. xxxii), in various formulae (e.g. *manu mancipio*), and in prayers ('pastores pecuariae salua seruassis', *Cato, Agr.* 141). In the literary tradition, it forms an important structural principle of *Saturnians* (cf. *Anglo-Saxon* verse); *Ennius* and the dramatists commonly use it, sometimes crudely ('nec eum capta capi nec eum combusta eremari', *Ennius, Ann.* 359 *Vahlen*), sometimes with a proverb-like jingle ('ex malis multis malum quod minum est, id minime est malum', *Plautus, Stich.* 120), often showing fine imagination ('lassitudinemque minum manuum mollitudine', *Pacuvius* 246 *Rib.*²; cf. *Ennius* passim); finally in *Virgil* it becomes a supremely subtle servant of emotion (e.g. *Aen.* 4. 651 ff.). Prose shows analogous development, but in later ages *Apuleius* and *Fronto* recall the more obtrusive methods of the early poets.

Another form of assonance, inherent in Latin grammatical structure and often combined with alliteration, is *homocoteleuton*. Perhaps because final syllables were so slightly stressed, the Romans tolerated such juxtapositions as 'eum studium audientium tum iudicium mire probauit' (*Pliny, Ep.* 3. 18. 8), 'plenior ore laudamus' (*Cicero, Off.* 1. 61); yet extremes were not approved—see *Quintilian* 9. 4. 41, on *Cicero's* phrase 'res mihi inuisae uisae sunt', and *Juvenal* 10. 122, on *Cicero's* notorious verses (cf. *Servius* on *Aen.* 3. 183). But *homocoteleuton* is often used with deliberate effect: e.g. *Virgil, Aen.* 6. 314, 'tendebantque manus ripae ulterioris amore'; *Cicero, Cael.* 77, 'ciuem bonarum artium, bonarum partium, bonorum uiuorum', and 63, 'in balneis delituerunt: testes egregios! dein temere prosiluerunt: homines temperantes!' (cf. *Scaur.* 45).

The parallel structure of Latin rhetorical prose, combined with *homocoteleuton*, often produces a species of *rhyme*. This already appears in *magis* formulae ('terra pestem teneto, salus hic maneto', *Varro, Rust.* 1. 2. 27). It is noticeable in *Cicero* (cf. *Cael.* 63 above), and later becomes exaggerated in *Apuleius* (e.g. *Met.* 11. 25, 'spirant flamina, nutriunt nubila, germinant zernina, crescent germina'), *Tertullian*, and *St. Augustine*. In poetry, *Plautus*, *Terence*, the tragedians, *Ennius*, *Cicero* show similar tendencies; *Virgil* uses rhetorical rhyme

often, with much charm. When the Christian hymn-form began to supersede quantitative verse, conscious poetic rhyme developed. Sedulius and Venantius Fortunatus (5th and 6th centuries) first used it extensively, but its full development came only in the eleventh century, together with that of the 'leonine' hexameter with disyllabic rhyme (found occasionally in Virgil and other classical poets).

E. Raby, *Christian Latin Poetry* (1927), with useful bibliography; F. Britain, *The Medieval Latin and Romance Lyric* (1937). R. G. A.

ASSOS, an impregnable site on the Gulf of Adramyttium, facing south towards Lesbos (it was originally colonized from Methymna) and controlling the coast road. The harbour is artificial. The public buildings rose in terraces on the steep hill-side in a unified architectural scheme; impressive fortifications are still extant. Except in the fourth century B.C. the history of Assos is inseparable from the general history of the Troad. Ariobarzanes was besieged here in 365. Subsequently Hermias made Assos the centre for a school of Platonists, amongst whom Aristotle was numbered. It was the birthplace of the Stoic philosopher Cleanthes.

D. E. W. W.

ASSYRIA (Greek and Roman), the name applied by Herodotus (i. 178, 185, etc.), Xenophon (*Cyr.* 2. 5) and later writers (e.g. Pliny) to the whole country between the Armenian and Iranian mountains and the Syro-Arabian desert. More properly, Assyria denoted the ancient kingdom on the Upper Tigris, bounded on the north and east by the Masius range and the Kurdish hills—the centre of the great Assyrian Empire (c. 1000–612 B.C.). In the Parthian period the kingdom of Adiabene (q.v.) comprised most of the old territory of Assyria; in A.D. 115 Trajan formed the province of Assyria, but this was abandoned by Hadrian. Assyria was a satrapy of the Sassanid Empire. Part of the Parthian city of Asshur, the ancient capital, can be reconstructed from excavations on the site.

W. Andrae, *Das wiedererstandene Assur*, 1938.

M. S. D.

ASTARTE, see **APHRODITE**, paras. 1 and 5.

ASTERIA, in mythology, sister of Leto (q.v.), mother, by Perses, of Hecate (q.v.). Being pursued by Zeus (*Callimachus*, *Del.* 38; *Hyginus*, *Fab.* 53, and several other authors; *Nonnus*, *Dion.* 2. 125, says it was Poseidon), who was in love with her, she turned into a quail, leaped into the sea (or was thrown into it), and then became Ortygia, i.e. Quail Island, afterwards Delos; the time and occasion of her turning into a quail are variously told. As her name means Starry, it appears as if the story were put together from disparate elements, perhaps an idea that the island was originally a falling star, i.e. meteorite, and also a desire to explain its alleged old name. See for more material Schirmer in *Roscher's Lexikon*, s.v.

H. J. R.

ASTEROPE, see **STEROPE**.

ASTRAGALUS. Knucklebones (*ἀσπράγαλοι*) were used especially by Greek women, in various simple games such as children now play with stones, and were also employed as dice. The four long faces of the knucklebones were of different shapes, one flat, one irregular, one concave, and one convex, and in dicing these had the value respectively of 1, 6, 3, 4.

F. A. W.

ASTROLOGY. Ancient astronomy sought to reduce to mathematical order the apparent motions of the heavenly bodies. Astrology was concerned with the supposed effects of these heavenly bodies on human destinies. Its

fundamental faith was that a universal 'sympathy' binds heaven to earth. And, as astronomy by prolonged observation had learned to predict the recurrence of heavenly phenomena, astrology professed to be a science which could forecast the earthly happenings which depend on the heavenly. This view of things, with its blend of religious and scientific elements, was first elaborated in the temples of Mesopotamia, and spread thence to Egypt. It had no great influence on Greek life until after the death of Alexander, when Greeks and Orientals mingled in the kingdoms of the Seleucids and Ptolemics. From this time on it became an increasingly important factor in the civilization of Greece and Rome, reaching its apogee in Imperial times, and affecting every level of society. It is only the underworld of astrology that is represented by the casters of horoscopes, the *Chaldaei* and *mathematici*, assailed by Roman magistrates and satirists. At its highest it commanded the ardent allegiance of the best minds of the ancient world. Hardly a branch of ancient culture remained unaffected by it. The Stoic philosophers, trained in Greek thought, partially secularized this ancient temple wisdom, but gave it fresh currency. The astronomers Hipparchus and Ptolemy believed in it. It affected medicine profoundly. It found poetical expression in the *Astronomica* of Manilius and architectural embodiment in the Pantheon. It supplemented the *Ius Civile* by the concept of Natural Law. See also **FATE**, para. 7.

A brilliant short account will be found in F. Cumont, *Les Religions orientales dans le paganisme romain* (1929), ch. 7, where full bibliographical information is supplied. The same writer's *L'Égypte des astrologues* (1937) gives striking demonstration of the fresh light thrown on the ancient world by the progress of this branch of study.

B. F.

ASTRONOMY. The Ionian Greeks obtained their first astronomical knowledge from Egypt and Babylon. Thales (c. 624–547 B.C.) probably learnt from Egypt the division of the solar year into 365 days and the inequality of the astronomical seasons; he wrote on the solstices and equinoxes. He advised mariners to sail by the Little Bear rather than the Great Bear. He learnt from the Babylonians the period of 223 lunations after which eclipses recur; this enabled him to prophesy the solar eclipse of 28 May 585 B.C. The Doxographers (q.v.) attribute to him many other things which it is not likely that he knew. Anaximander (q.v., c. 611–546 B.C.) put forward a remarkable theory of the evolution from a vortex of our universe and of an infinite number of worlds; for him the heavenly bodies consisted of opaque circular rings with fire shining through at one opening; the earth is poised aloft supported by nothing; it is like a tambourine in shape. Anaximander brought from Babylon the *polos* and the *gnomon* or sun-dial (*Hdt.* 2. 109). He was the first to speculate on the sizes and distances of the sun and moon; he was the first who ventured to draw a map of the inhabited earth. Pythagoras and Parmenides declared that the earth is spherical; Pythagoras held that there were antipodes (*Diog. Laert.* 8. 26); he recognized that the sun, moon, and planets revolve in circles of their own in a sense contrary to that of the daily rotation (*Theon of Smyrna*, p. 150). Later the Pythagoreans made the earth also to be a planet revolving, like the others, about the 'central fire' (*Arist. De Caelo*, *Simplicius*, *Aëtius* 2. 7. 7, etc.); the 'harmony of the spheres' was their doctrine (*Arist. Metaph.* 986^a 1, etc.). Anaxagoras (q.v.) held that the heavenly bodies were thrown off from a central revolving mass by centrifugal force (*Aët.* 2. 13); that the sun is a red-hot stone and the moon earth (*Hippol. Haer.* 1. 8); that the moon receives its light from the sun (*Plato, Cratylus*, 409 a). In 433–432 B.C. Meton put forward the '19-year cycle' consisting of 235 months, making the year 365 $\frac{1}{4}$ days. Callippus (q.v. 2) in 330–329 substituted a 76-year cycle giving 940 months, containing 27,759 days and making the year 365 $\frac{1}{4}$ days.

(Geminus, *Isagoge* 8. 57-60). Plato's astronomy in the main followed that of Pythagoras (*Resp.* 10. 616-17, *Timaeus* 37 d-e, 38 c-d, 40 b-d), but he is said in later years to have repented of placing the earth in the centre (Plut. *Quaest. Plat.* 8. 1, Numa 11). Plato realized the apparent irregularities in the movements of the planets (*Tim.* 40 b-d). Eudoxus explained the movements of the planets by an elegant system of simultaneously revolving concentric spheres (Arist. *Metaph.* 1073^b17-1074^a15, Simpl. on *De Caelo* 496-7 Heib.). Callippus modified the system by adding further spheres. Aristotle himself tried to turn the theoretical into a mechanical system (ibid.). Heraclides of Pontus (q.v. 5, c. 388-315 B.C.) declared that the sun and the fixed stars are stationary, but that the earth revolves about its axis in about 24 hours (Simpl. on *De Caelo* 444. 31-445. 5 Heib.). He also held that Mercury and Venus revolve about the sun like satellites (Chalcidius on *Timaeus*, ch. 110). Aristarchus (q.v. 1) was the first to put forward a heliocentric hypothesis with the earth also revolving round the sun (Archimedes, *Sand-reckoner*); his treatise *On the sizes and distances of the sun and moon* assumes the geocentric standpoint. Seleucus of Seleucia supported Aristarchus' heliocentric hypothesis (Plut. *Quaest. Plat.* 8. 1). Apollonius (q.v. 2) of Perga discussed the hypotheses of eccentric circles and epicycles respectively for explaining the phenomena (Ptol. *Syntaxis* 12. 1). Autolycus (q.v. 2) of Pitane is the author of the earliest extant mathematical text-book in Greek, *On the moving sphere*, which is closely akin to the *Phaenomena* of Euclid, and of another treatise *On risings and settings*. Eudoxus (q.v. 1) wrote two astronomical works, the *Mirror* (*Εὐκρινος*) and *Phaenomena*, to which Aratus was indebted for many of the data in his poem the *Phaenomena* (see Hipparchus *In Arati et Eudoxi phaenomena* 1. 2. 2). Hipparchus (q.v. 3), the greatest of the Greek astronomers, born at Nicaea in Bithynia, belongs to the second century B.C. Apart from his *Commentary on the Phaenomena of Eudoxus and Aratus*, his astronomy is known to us through Ptolemy's *Syntaxis*. He worked upon the hypotheses of eccentric circles and epicycles, on a geocentric system. He was the first to make systematic use of trigonometry; he compiled a Table of Chords in a Circle. He made great improvements in the instruments used for observations; he compiled a catalogue of 850 stars; he discovered the Precession of the Equinoxes. Finally Ptolemy (q.v. 3, c. A.D. 150) wrote his great *Syntaxis* (originally called *Μαθηματικὴ σύνταξις*), giving definitive form to Hipparchus' astronomy, dealing very fully with the eccentric and epicycle hypotheses and including a definite theory of the motions of the five planets.

T. H.

ASTURES, a tribe of north-western Spain, holding the northern coastline between the Callaeci and the Cantabri, and reaching south across the mountains to the Durus (*Douro*). Before their conquest by Augustus they were known as rude and predatory highlanders. The Augustan census estimated 240,000 free men divided between the Transmontani of the north and the Augustani of the south. Pacified by Roman legions (26-19 B.C.), the Astures furnished gold, chrysocolia, minium, horses, and auxiliary troops. Asturia was but slowly and partially romanized. Pliny mentions only one municipality, *Asturica Augusta* (*Astorga*) 'urbs magnifica'. An intricate road system, to aid transport of minerals, was constructed by the emperors from Augustus to Gratian.

A. Schulten, *Los Cantabros y Astures* (1943).

J. J. V. N.

ASTYANAX or *Scamandrius* (Il. 6. 402), in mythology, young son of Hector and Andromache (qq.v.). At the capture of Troy he was flung from the walls by Neoptolemus (q.v.: *Little Iliad*, fr. 19 Allen) or killed by Odysseus (*Iliu Peris*).

ASTYDAMAS, the name of two poets of the fourth century B.C., father and son. The father was the son of Morsimus the son of Philocles (nephew of Aeschylus) (Suidas, s.v.). It is uncertain to which some of the records about 'Astydamos' refer. One of the two was a pupil of Isocrates (436-338 B.C.) in rhetoric before he became a poet. The elder produced his first play in 398 B.C., and one of the two (probably the son) won his first victory in 372 (*Marm. Par.* 71). The elder is said to have lived to the age of sixty (Diog. Laert. 2. 43; Diod. Sic. 14. 43. 5), and if this is true the inscriptional records (*IG*² ii. 2320) which note Dionysiac victories in 341 with the *Achilles*, *Athamas*, and *Antigone*, and in 340 with the *Parthenopaeus* and *Lycaon* must refer to the son, and the ascription by Suidas and Photius of the *Parthenopaeus* to the father must be a mistake. The Athenians were so delighted with this play that they erected a statue to the poet in the theatre, and a fragment of the base of this survives, but he was not allowed to inscribe on it the conceited verses which made his name a byword for vanity (Suidas, s.v. *σαυτήν ἐπαυεῖς*). The son was evidently famous in his day. Aristotle notes (*Poet.* 14) that in his *Alcmaeon* he made the hero kill his mother unwittingly instead of deliberately as in the original legend, and Plutarch (*De Glor. Ath.* 7) speaks with very high praise of the *Hector*. Of the two poets less than twenty lines in all are preserved.

TGF 777-80. See Wilamowitz, *Aischylos Interpretationen* 238-9. A. W. P.-C.

ASTYDAMEIA, see PELEUS.

ASTYNOMOI, an office found mostly in the Ionian States. In Athens there were five for the city and five for the Piraeus, elected by lot for one year. Their principal duties were to keep the streets clean and free of obstruction. They also had duties in relation to festivals; and in particular (at least c. 326) they enforced certain sumptuary laws. They could inflict small fines and introduce to the law courts more important cases within their jurisdiction. They had slaves as assistants. In many States they also had harbour and market duties (see AGORANOMOI).

A. W. G.

ASTYOCHE, in mythology, sister of Priam and daughter of Laomedon (qq.v.; Apollod. 3. 146). She married Telephus (q.v.; Quint. Smyrn. 6. 135) and bore Eury-pylus, who came to the Trojan War and was killed by Neoptolemus with many of his people, *γυρῶλον εὐρυκα δώρων* (*Od.* 11. 521). This the commentators explained either of the gift of a wife (Hermione) by Menelaus to Neoptolemus, or of the gift by Priam to Astyoche of the golden vine which was given Tros by Zeus as compensation for the loss of Ganymedes (*Little Iliad*, fr. 6 Allen), etc. See Eustathius in *Odys.*, p. 1697, 30 ff. H. J. R.

ASYLIA means a guarantee against seizure of property by citizens of another State exercising the right of reprisal. Whenever there were no arrangements for the settlement of disputes between States the party wronged claimed the right to use self-help and to seize the property (e.g. a ship or its cargo), not only of the offending party, but of other citizens and metics of his State. Such seizure was designated by the verb *αὐλᾶν* and related words. Rights of reprisal were often proclaimed by one State against another. When *asylia* was granted to individuals it meant that whatever claims there were against his State his personal property was safe from seizure at the hands of citizens and residents of the State bestowing *asylia*. This form of *asylia* could be given to entire States. Another form, connected with a locality and not applying to the property of its citizens abroad, was the recognition by other States of the

inviolability of a sanctuary or a sanctuary and the city in which it was located. Such sanctuaries were used as places of refuge; hence the later meaning of 'asylum'.

E. Schlesinger, *Die griechische Asylie* (1933), assembles the evidence and cites earlier literature. J. A. O. L.

ATACINUS, see VARRO (3).

ATALANTA (*Ἀταλάντη*), in mythology, daughter of Iasus, son of Lycurgus of Arcadia, and Clymene, daughter of Minyas (Apollod. 3. 105), or of Schoeneus, son of Athamas (Hesiod, fr. 20 Rzach). Boeotian and Arcadian legends often show connexion, but there is no need to suppose two heroines of the same name here, for she is in all probability a by-form of Artemis (q.v.). She was a huntress, averse to marriage, loved by (1) Meleager (q.v.); Parthenopaeus was her son by him (Hyg. *Fab.* 99. 1, a late story, see Rose ad loc.); (2) Melanion (Milanion, i.e. *Μελανίων*, Prop. 1. 1. 9), her first cousin (Apollod., *ibid.*), or Hippomenes. She would marry no one who could not beat her in a foot-race (in Hyg. *Fab.* 185. 2, she follows the suitor and spears him if she can catch him; perhaps a reminiscence of a religious rite, see Rose ad loc.). Melanion, or Hippomenes, got three golden apples from Aphrodite and delayed her by throwing them, thus winning. Their son was Parthenopaeus in most accounts. But (by the anger of Aphrodite, to whom he forgot to pay his vow, Ov. *Met.* 10. 681 ff.) he lay with her in a holy place (Apollod. 108, Hyg., *ibid.* 6, Ov., *ibid.* 686); for this impiety they were turned into lions. In some versions (as Prop. 1. 1. 9) there is no race, but Melanion wins Atalanta's affection when hunting with her. H. J. R.

ATARGATIS (Aramaic 'Atar-'Ata, according to Ronzvalle 'the divine 'Atā': cf. the epithet *ἄτρη* applied to her at Delos) or *Derceto*, the goddess of Hieropolis-Bambyce in Syria. Her temple, rebuilt c. 300 B.C. by Stratonice, wife of Seleucus I, was plundered by Antiochus IV and by Crassus, but was still in Lucian's day one of the greatest and holiest in Syria. Her consort was Hadad; his throne was flanked by bulls, that of A. by lions. At Ascalon, A. was represented as half woman, half fish. Fish and doves were sacred to her; the myth records that, having fallen into a lake, A. was saved by the fish ([Eratosth.] *Cat.* 38), or, in another version, that A. was changed into a fish, and her daughter Semiramis into a dove (Diod. Sic. 2. 4. 2-6; 2. 20. 1-2; Ov. *Met.* 4. 44-8). Late in the third century B.C. her cult appears in Egypt, Macedonia, and, with civic status, at Phistyon in Aetolia and (early 2nd c.) at Thuria in Messenia. Natives of Hieropolis founded a shrine on Delos in 128-127, of which Athens soon took control. A. was worshipped also in a number of other Hellenic cities, whereas in the West (apart from Rome, where Nero favoured her for a while) only a few dedications, from Italy, the Danubian provinces, and England, have been found. Since A. was primarily a fertility goddess, the Greeks often recognized in her a form of Aphrodite, but generally she was simply the 'Syrian Goddess'. Astrologers identified her with the constellation Virgo, and a third-century 'creed' found in England (*CIL* vii. 759) accepts the *dea Syria* as one of several names or manifestations of the universal goddess. At Thuria her cult included mysteries. Lucian, *De Dea Syria*, describes the cult in Syria; Apuleius, *Met.* 8-9, the life of her wandering Galli. See EUNUCHS, RELIGIOUS; FISH, SACRED; METRAGYRTES.

C. Clemen, *Lukians Schrift über die syrische Göttin* (1938); F. Cumont, *PW*, s.v. 'Atargatis', 'Dea Syria', *Dar.-Sag.* s.v. 'Syria Dea'; S. Ronzevalle, *Mélanges de l'Université Saint Joseph* (Beyrouth), 1940; P. Roussel, *Délos Colonie Athénienne* (1916), 252-70; F. R. Walton, *Reallexikon f. Antike u. Christentum*, s.v. 'Atargatis' F. R. W.

ATE, the personification of infatuation or moral blindness, in which right and wrong, advantageous and ruinous conduct cannot be distinguished. She is the subject of an elaborate allegory in *Il.* 19. 90 ff., the earliest in Greek, where she is daughter of Zeus (an early instance of the problem of the moral responsibility of Deity). She is daughter of Strife and sister of Lawlessness (Hes. *Theog.* 230). H. J. R.

ATEIUS PRAETEXTATUS PHILOLOGUS, LUCIUS, one of the chief scholars of the Ciceronian age. Born at Athens, he became a captive of war in 86 B.C., was brought to Rome and manumitted. He claimed to have written 800 books on all kinds of subjects (*miscellanea*, *ὑλη*) and took the name Philologus as an indication of his interests. According to Suetonius (*Gram.* 10) he helped Sallust by compiling a *Breviarium Rerum Romanarum* and Asinius Pollio by advising about the style of his history. Festus mentions his *Liber Glossematorum* and Charisius a work entitled *An amaverit Didun Aeneas*.

G. Funaioli, *Gramm. Rom. Frag.*, 137-41; Teuffel, § 211, 1; Schanz-Hosius, § 195, 6. J. F. M.

ATEIUS, see also CAPITO.

ATELLANA sc. **FABULA**, the Roman 'Punch-and-Judy', an improvised, masked performance; its stock characters were Maecus, 'Clown', Pappus, 'Gaffer', Bueco, 'Fatchecks', Dossennus, 'Hunchback' (?) (? identical with Manducus, 'Champ-jaws'). Perhaps developed from the Doric farce of Magna Graecia (cf. burlesque element) in the Oscan towns of Campania, especially Atella. It achieved early popularity in Rome, where its performance came to be monopolized by amateurs (?). It became literary in the hands of Pomponius and Novius (qq.v.; temp. Sulla); surviving fragments illustrate its coarseness. Later performed by professionals as occasional interlude.

Schanz-Hosius i. 245-53; A. Nicoll, *Masks, Mimes and Miracles* (1931; popular account, illustrated). W. B.

ATESTE, the modern *Este* in Venetia, twenty-five miles from Padua. Until the sixth century A.D. the Adige, which is now nine miles to the south, flowed through Este. This aided a commerce, which was partly sea-borne, with all the head of the Adriatic. From 800 to 200 B.C. the Atestines formed a very important trading community, rivalling the Bolognese, with whom they had culturally and racially very much in common. Ateste and Bononia became equally renowned for their metal-work. They were the Birmingham and Sheffield of Iron-Age Italy. The trade of Ateste was especially transalpine; its products can be traced from Carniola to the Brenner. A noticeable efflorescence of style under Etruscan influence c. 500 B.C. died down when the north Etruscan colonies were destroyed by the Gauls a century later. Ateste, never conquered by Gauls or Romans, retained its independence till 184 B.C., when it was peaceably annexed. D. R.-MacI.

ATHAMAS, in mythology, son of Aeolus (q.v. 2) and a character in a variously told story of a stepmother's cruelty (Stith Thompson, S31). He married first Nephele (a cloud-goddess), then Ino daughter of Cadmus (q.v.); the order is reversed in Philostephanus ap. schol. *Il.* 7. 86; Hyg. *Fab.* 4, professedly from Euripides, introduces a third wife, Themisto, but omits Nephele). Nephele bore him Phrixus and Helle, and Ino in her turn Learchus and Melicertes. Ino was jealous of her stepchildren, and therefore caused the seed-corn to be roasted; when it consequently failed to grow, and Delphi was consulted, she induced the messengers on their return to say that the sacrifice of Phrixus and Helle, or Phrixus alone, was demanded. Nephele saved them, or him, by means of a golden-fleece ram given by Hermes; the ram brought Phrixus to Colchis, where

he married Chalciope, daughter of Aeetes. Helle fell into the strait thenceforth named Hellespont (q.v.) after her. See further ARGONAUTS. In Hyginus, loc. cit., Themisto tries to murder the stepchildren and fails in the same manner as Aëdon (q.v.); cf. Stith Thompson, *K1611*. See Hyg. *Fab.* 1-5; Apollod. 1. 80 ff.; Ov. *Fasti* 3. 851 ff.; [Eratothenes] 19; Hyg. *Poet. Astr.* 2. 20; schol. German. *Arat.*, pp. 79, 142 Breysig. Several of these say that the ram became the constellation Aries. Cf. Pickard-Cambridge in Powell, *New Chapters* iii. 97. The rest of Athamas' story is less folk-tale and more myth. Because Ino had nursed Dionysus, Hera drove Athamas and her mad; Athamas killed Learehus, Ino ran from him carrying Melicertes, leaped into the sea, and she and her son were transformed into deities, Leucothea and Palaemon (Apollodorus and Hyginus, supra; Ov. *Met.* 4. 416 ff.; Rose, *Handbk. Gk. Myth.* 150 and authorities there cited).

At Halos in the Thessalian Achaia, the senior member of the clan claiming descent from Athamas was sacrificed to Zeus Laphystios if he entered the city hall. This was explained as retribution for Athamas' joining Ino in plotting against Phrixus (Hdt. 7. 197. 1). H. J. R.

ATHEISM. 'Denial of the gods' (τὸ μὴ νομίζειν θεοὺς [εἶναι], J. Tate in *CR* l. 3 and li. 3) might mean atheism in the modern sense or a distaste for pagan mythology compatible with deep religious faith. The earliest motive for it was the moral inadequacy of the gods as depicted by Homer and Hesiod. Thus Xenophanes (q.v.) adduced the crimes imputed to them, and added that men everywhere created gods in their own image. Yet he upheld the existence of the divine, and taught a kind of pantheism. However, in the fifth century Ionian speculation and the Sophistic movement did make possible the doubt or denial of any form of deity. ἀθεός later became the term for this philosophical atheism (but see below). Of famous thinkers prosecuted for ἀσέβεια in this century, though political motives usually played a part in such prosecutions, Anaxagoras (q.v.) was a rationalist who sought to explain everything by natural causes and doubtless (though positive evidence is lacking) an atheist in the modern sense. Protagoras' (q.v.) position was strictly agnostic. Socrates (q.v.) is a more complex case. Perhaps the gods of his personal belief were not those of the State, but he conformed to official cults and was a man of deep religious feelings, sure of divine guidance. Often quoted for positive atheism is the fragment of the *Sisyphus* of Critias (q.v., fr. 23 Diels), which describes the gods as human inventions in the interests of law. Among the poets, Pindar defends the tradition by gently purging the myths of their crudities, Euripides exclaims against the folly of believing in such gods. Atheism was attributed to other contemporary philosophers, and Plato's attack in *Laws* 10 suggests that it was widespread in the next century. Aristotle's intellectual conception of divinity left no room for the traditional personal gods (*Metaph. A* 8 fin.), and the theological argument started in the Socratic schools led naturally to scepticism, and in one case at least—Theodorus the Cyrenaic—to actual atheism.

Besides 'unbelieving', ἀθεός meant 'abandoned by the gods', wicked, godless. (See lexica and K. Latte in *ARW* xx. 264.) The question of belief had not in general the importance which it has to-day (cf. A. D. Nock, *Conversion* (1933), p. 10 f.), and the word tended to be a term of abuse rather than a reasoned description, e.g. as applied to the Christians (Nock, *Sallustius* (1926), p. lxxxviii). Yet cf. also Theophrastus in Porphy. *Abst.* 2. 7 and Plutarch *De Superst.*, where ἀθεότης is discussed and defined as a 'lack of sensitiveness to the divine'; also evidence in F. Cumont, *L'Égypte des astrologues* (1937), p. 135.

In general, see A. B. Drachmann, *Atheism in Pagan Antiquity*, London and Copenhagen, 1922. W. K. C. G.

ATHENA (Ἀθάνα, Ἀθήνη, Ἀθηναίη(-α), Ἀθηνᾶ). The patron goddess of Athens in Attica and Athens in Boeotia, also extensively worshipped in many other places in Greece proper and the colonies and islands. There is no reasonable doubt that she is originally pre-Hellenic. Her name shows the non-Greek suffix *-na* found also, e.g., in *Μυκῆναί*; her most famous cult, that at Athens on the Acropolis, is on the site of a Mycenaean palace, the 'house of Erechtheus' of *Odyssey* 7. 81, cf. *Iliad* 2. 549; hence her constant association with other heroes, as Tydeus, Diomedes, and Odysseus. In Minoan fashion, she takes on occasion the form of a bird, as *Od.* 3. 371-2 (the owl, though regularly associated with her in classical times, is not the only bird with which she is connected in cult). Her peculiar cult-statues, female yet fully armed, resemble the Mycenaean shielded goddess (*Ath. Mitt.* xxxvii (1912), p. 129 ff. and plate viii, often reproduced elsewhere). The conclusion is hardly avoidable (Nilsson, *Die Anfänge der Göttin Athene* (1921); *Minoan-Mycenaean Religion*, 417 ff.) that she is the tutelary goddess of Cretan and Mycenaean princes, especially the latter, retained in popular cult when the ancient citadels came to be reserved for the gods and not for rulers. Presumably she had been fervently worshipped by the subjects of those princes; at all events, she continued to hold a very high rank and to develop in several directions.

2. Besides her connexion with citadels, and consequently with cities (e.g. Verg. *Ecl.* 2. 61-2; see ZEUS), she has a rather decided association with water, hence her epithet *Tritogenia*, whereof the first two syllables have something to do with water, though their exact meaning is unknown (cf. Farnell, op. cit. infra, 265 ff.). This, however, did not result in her becoming a deity of the sea, even by way of Athens' naval power; the hold of Poseidon was probably too strong.

3. She is regularly regarded as virgin.* That she is interested in fertility, both animal and vegetable, is not remarkable; she is a goddess of the State and on such increase its continued existence depends.

4. Her most conspicuous functions are perhaps those connected with war. She has a certain tendency to become a war-goddess in general, a kind of female Ares, as in *Iliad* 17. 398, where she is coupled with him as an expert in battles and liable to violent wrath; neither of them could have 'found fault with' the fury of the contest over the body of Patroclus. Normally, however, she is warlike in the sense that she fights for, or leads to battle, her chosen people, or hero (as Diomedes, *Il.* 5. 856, where she guides his spear into Ares' flank; Eur. *Heracl.* 349-50, where, though Hera leads the Argives, Athena leads Athens to fight against them). Or she protects them, as a strong warrior might a weaker one (Solon, fr. 3. 3-4 Diehl), though this does not refer only to war but to shielding Athens against all dangers. Hence also she is the inventor of sundry warlike implements, as the war-chariot (*Hymn. Hom. Ven.* 13) and the trumpet (she was called *Σάλπιγξ* in Argos, Paus. 2. 21. 3).

5. But, being female and goddess of that city which was perhaps nearer than any other in Greece to being industrialized, she is also a patroness of arts and crafts. Among these, spinning and weaving take a prominent place, as might be expected, and in general she is the goddess of women's work (*Hymn. Hom. Ven.* 14-15). But her influence extends much further than this, for all manner of handicraftsmen worship her, or regard her as their teacher, as potters (*Ps.-Hdt. Vit. Hom.* 32; the scene is Samos, indicating that such worship of Athena is in no way purely Attic), goldsmiths (*Ol.* 6.

* Her Hlean title of *Πρηνεα* need mean no more than that mothers worshipped her, cf. the strange titles 'Maid', 'Wife', and 'Widow' applied to Hera (q.v.), and see Farnell, 302 ff., yet cf. E. Fekete, *Kultische Entwicklung* (1910), 183 ff.

233, again wholly unconnected with Athens). In Athens the Chalceia (literally the festival of smiths, *χαλκῆς*) was held in her honour, though Hephaestus seems to have had some share in it (Deubner, p. 35 f.). It is in such connexions as this that her title *Ergane*, 'the work-woman', is especially appropriate, and here also that her functions overlap to some extent those of Hephaestus, thus explaining their mythical connexion; see below. She is on occasion goddess of medicine also, since that is a highly skilled occupation, but this seems to be a development rather of Minerva (q.v.; see *Ov. Fasti* 3.827).

6. Identifications between Athena and foreign goddesses are fairly numerous, e.g. Neith in Egypt (Plato, *Tim.* 21 e), a Libyan goddess whose name is unknown (Hdt. 4. 180. 2), and, most familiar, the Italian Minerva. It is not always possible to tell what caused the identification. Of Greek goddesses subordinate to her, the best known is Nike, whose temple on the Acropolis is one of the best preserved; she also had some connexion with Hygieia, whose name she bore as a title (Paus. 1. 23. 4).

7. That she became ultimately allegorized into a personification of wisdom is a not unnatural development of her patronage of skill; she passes from one sense of *σοφία* to another. The process has already begun in Hesiod (*Theog.* 886 ff.), where Metis, i.e. Good Counsel, is her mother (cf. Rose, *Folklore* (1935), 27 f.).

8. The principal myth concerning her is her birth, without mother (but cf. Hesiod, above), from the head of Zeus. It was fully developed by the time of Pindar (*Ol.* 7. 35; cf. scholiast there); Zeus' head was split with an axe by Hephaestus (or some other deity, the details varying in different accounts), and the goddess sprang out, fully armed and uttering her war-cry. Helios, adds Pindar, let his sons in Rhodes know of this, so that they might be the first to sacrifice to the new power. They did so, but in such haste that they forgot to take fire with them, and so offered the victims unburned, whence, as Athena was pleased with their devotion, the custom continued at her shrine among them. This is the goddess of Lindus, probably not originally Athena at all, who is not worshipped in this fashion, not being a chthonian goddess.

9. The above is no doubt a Rhodian myth; the following is Athenian. Hephaestus desired to marry her, and Zeus consented, but gave her leave to repulse his attentions. They struggled together, and his seed fell on the earth, which thus became fertile and in due season produced a boy. Athena took charge of the infant (possibly she was originally his actual mother, see above), hid him in a chest guarded by serpents and gave it to the daughters of Cecrops to keep, with instructions not to open it. They disobeyed, and at the sight of the serpents (or whatever the chest contained; chests are very common receptacles of sacred objects which must not be looked at at all, or only after some rite of initiation) they were so terrified that they leaped off the Acropolis and so perished. The child was called Erichthonius and remained a favourite of Athena (Rose, *Handb. Gk. Myth.* 110 and references). In Attica also she strove with Poseidon for ownership of the land; she produced the olive-tree, thus outdoing the miracles which he performed, and won the contest; see POSEIDON.

10. That she was originally thought of as theriomorphic is not proved but suggested by her stock epithet *γλαυκῶπις* ('bright-eyed' or 'owl-faced'?).

Useful collections of facts and references, Farnell, *Cults of the Greek States*, i. 258 ff., and the larger classical dictionaries. Attic cults, L. Deubner, *Attische Feste* (1932), 9 ff.; non-Attic, M. P. Nilsson, *Griechische Feste* (1906) 84 ff. H. J. R.

ATHENAEUM, Hadrian's famous institute for lectures and recitations by rhetors and other literary men. Aurelius Victor (*Caes.* 14) calls it 'ludum ingenuarum artium'.

ATHENAEUS (1) (fl. c. A.D. 200), of Naucratis in Egypt. His only extant work, *Δειπνοσοφισταί* ('The Learned Banquet'), was probably completed after the death of Commodus in A.D. 192 (ib. 537 f); other chronological inferences are uncertain. It belongs to the polyhistoric variety of the symposium form (see SYMPOSIUM LITERATURE), practised earlier by Aristoxenus and Didymus. It is now in fifteen books (originally perhaps 30); there is also an Epitome, which covers existing gaps. At the 'banquet', which extends over several days, philosophy, literature, law, medicine, and other interests are represented by a large number of guests, who in some cases bear historical names (e.g. Galen and Ulpian of Tyre); a Cynic philosopher is introduced as a foil. The symposiac framework, if not devoid of occasional humour, is artistically far below the Platonic standard, though recalling certain passages of Plato; it is subordinate in interest to the collections of excerpts which are introduced into it. These relate to all the materials and accompaniments of convivial occasions; they are drawn from a vast number of authors, especially of the Middle and New Comedy, who are otherwise unrepresented; they are valuable both as literature and as illustrating earlier Greek manners. The order of these extracts sometimes suggests the use of lexica (Didymus, Pamphilus) or of *διδασκαλῖαι* (see DIDASCALIA); but A. has collected much independently from the great writers; it is often difficult to judge which method he has pursued.

Ancient source: Suidas. Text: G. Kaibel (Teubner, 1887-90). Text and translation: C. B. Gulick (Loeb, 1927-41), 7 vols. Commentary: J. Schweighäuser (1801-7). Criticism: R. Hirzel, *Dialog* (1895) ii. 352. F. Rudolph, *Philol. Suppl.* vi (1891) (sources); K. Mengis, *Stud. Gesch. Kult. Alt.* x (1920) (composition); C. A. Bapp, *Leipz. Stud.* viii (1885) (music and lyric); K. Zepernick, *Philol.* lxxvii (1921) (trustworthiness). W. M. E.

ATHENAEUS (2), author of an extant work on siege-engines (*Περὶ μηχανημάτων*) may probably be dated in the second century B.C.

Ed. R. Schneider, *Abh. d. Geiellsch. d. Wissensch. zu Göttingen* (Ph.-hist. Kl.) N.F. 12 (1912).

ATHENAEUS (3) of Attaleia practised medicine in Rome under Claudius (A.D. 41-54). Like many other physicians of that time he founded a new school, that of the Pneumatists. Imbued with Stoic ideas, but well trained in philosophy in general, Athenaeus assumed as basic elements the four qualities, together with the *pneuma* as the fifth. Health and disease he explained through their *eukrasia* (good temperament) and *dyskrasia* (bad temperament). His physiology was dependent on Aristotle. Details of his pathology are unknown. His system apparently was important in its speculative formulation rather than in its practical consequences. Athenaeus, who considered medical knowledge as part of general education, devised most elaborate dietetic rules, in which he included pedagogical as well as medical precepts, differentiated according to the different stages of life. The ideas of Athenaeus were highly estimated by Galen.

Text: Fragments from Oribasius, *Veterum et Clarorum Medicorum Graecorum Opuscula*; Ch. F. Matthaei, *Mosque* (1808), not complete. Literature: M. Wellmann, 'Die pneumatistische Schule', *Phil. Unters.* 1895, *PW* ii. 2034; no clear distinction between Athenaeus and the teaching of his followers, whose importance seems exaggerated; cf. also T. C. Allbutt, *Greek Medicine in Rome* (1921); for the early history of Pneumatic theories, E. Neustadt, *Hermes* 1909; W. Jaeger, *Hermes* 1913; Allbutt, loc. cit. 224. L. E.

ATHENS (*Ἀθῆναι*) (HISTORICAL OUTLINE). The Athenian claim to 'autochthony' had at least this much truth, that Attica was comparatively little disturbed at the time of the Dorian and Boeotian migrations. The tradition that it was ruled by kings till c. 1000-900 B.C. is also trustworthy. We may believe as well that Attica was originally divided into several 'kingdoms', with the king in Athens exercising a vague suzerainty; but whether the

union into one State (the *synoecism*) was achieved by 'Theseus' (i.e. in the thirteenth century) is very doubtful. As elsewhere in Greece the monarchy was succeeded by an aristocracy, when the archonship became the principal magistracy (see ARCHONTES). Though the archonship became an annual office in 683-682, and the Thesmothetai (q.v.) were instituted, the aristocracy retained and increased their control of affairs until Solon's legislation (594); for they not only monopolized political office, but had acquired most of the land, the peasants being reduced to serfdom and sometimes slavery. An attempt by Cylon (c. 632) to overthrow them had failed; and Draco's code (c. 624-621) left their powers untouched. In the ninth and eighth centuries Athens produced magnificent 'geometric' pottery, in the seventh the crude but vigorous 'Early Attic'. Sculpture was comparatively little developed. Writing was in use from at least 700.

2. Solon laid the foundations of democracy by establishing economic freedom, by making the Ecclesia independent of the archons, by instituting the Heliæa and making the magistracies responsible to the people. He did not, however, secure internal peace; and after many years of struggle the popular leader Pisistratus made himself tyrant (first in 561-560 and finally c. 545). The tyranny lasted till 511, when his son Hippias was driven out. The sixth century saw a remarkable development of Athens. Her pottery, by its technical and artistic excellence, practically drove its rivals from all foreign fields; sculpture flourished; Solon was himself the earliest Attic poet, and the tyrants attracted poets from elsewhere—Athens was becoming a cultural centre. Material prosperity greatly increased, in agriculture, manufacture, and trade; many foreigners settled in Athens, and by 500 the population was already large.

3. The attempt of the aristocrats to gain control after the expulsion of Hippias failed, and the reforms of Cleisthenes established a true democracy (see ECCLĒSIA, BOULĒ, AREOPAGUS). An active foreign policy was at first checked by an unsuccessful intervention in the Ionian Revolt (499); but the immense military and moral effort of Athens in two Persian wars (490 and 480-479) established her position as the most energetic and enterprising State in Greece; a fact, however, which soon drew her into rivalry with Sparta, the accepted leader. Sparta's refusal to champion the Greek States which had revolted from Persia after 479 gave Athens her chance; in 477 the Confederacy of Delos was founded, comprising most of the Aegean islands and the Greek cities of the Asiatic and Thracian coasts. The war with Persia was successfully continued till Cimon's victory at the Eurymedon (c. 467). Athens had a severe check when she supported an Egyptian revolt (459-454); but by the peace of 449 Persia practically recognized the Athenian Empire, agreeing not to send her fleet west of Phaselis and of the Bosphorus, nor her army nearer than three days' march of the Ionian cities. Before this, war had broken out with the Peloponnesians, in which Athens lost the battle of Tanagra (457), but won the campaign, conquering Boeotia and winning over Phocis, and gaining victories over Corinth and Aegina. Meanwhile she had reduced to submission a few seceding States in the League; she now strengthened her position by improving her fleet, by cleruchies (q.v.) and garrisons, by a better organization of the tribute, and by supporting democracies against oligarchies, by encouraging the States to look upon herself as their capital, and later by introducing her own coinage in the subject cities. The League had become an Athenian Empire. In 447 Boeotia and Phocis recovered their independence; but by the Thirty Years' Peace (445) the Peloponnesians recognized the Empire.

4. By the development of tragedy and later of comedy, history, and oratory, Athens had become indisputably the literary centre of Greece. During the ascendancy of Pericles, painting and sculpture flourished there as never

before; between 447 and 431 the Parthenon, the Propylæa, and many other buildings were completed. Most Greeks eminent in art, letters, and science visited Athens, and many settled there. Socrates, himself an Athenian, laid the foundations of mental and moral science in an enduring manner, and assured to Athens the primacy in philosophical studies. Trade prospered, for Athens preserved the peace of the seas. But peace did not last long. Sparta was jealous, the rest of Greece nervous; in 431 the Peloponnesian League and the Boeotians declared war, 'to free Greece from the tyrant city'. The war lasted, with an interval of uneasy peace, for twenty-seven years. By 404 the whole political structure of Cimon's and Pericles' generations was in ruins: Athens was a dependant of Sparta under the heel of the Thirty Tyrants (q.v.), her Long Walls (q.v.) destroyed, her fleet reduced to a dozen ships, her population barely half its former total.

5. Yet Athens made an astonishingly quick recovery. By 403 she had regained her democracy and her autonomy; ten years later she had a fleet, had rebuilt the Long Walls, and had successfully revolted with other cities against Spartan imperialism. In 377 a new maritime league was formed; in 376 Chabrias won back for Athens supremacy at sea. Athens supported Thebes in her struggle against Sparta till after Leuctra (371), and later assisted Sparta against Thebes, striving for a balance of power. But when Philip of Macedon began his policy of expansion (359), Athens could not decide definitely between war and peace, and became involved in half-hearted wars. The maritime league lost its most powerful members in the Social War (356-355); but Athens was still strong at sea and controlled the Hellespont, indispensable for her food supplies. Inspired by Demosthenes, Athens resisted Philip successfully in the Bosphorus region in 340; but after the defeat at Chaeronea (338) she was glad to secure peace with Philip with the loss of the Hellespont. Overawed by Alexander in 335, Athens reorganized her forces during his absence in the East; but in the war of 323-322 she was defeated on land and sea. She now had to admit a Macedonian garrison in Munychia, and to modify her constitution. It was the end of Athens as a considerable military power.

6. The fourth century was a time of material prosperity, and trade and manufacture had quickly revived; the arts and letters (especially oratory, at its greatest in Demosthenes) were as vigorous as before. Though an Athenian dicastery had condemned Socrates to death in 399 (on grounds that were largely political—see SOCRATES), philosophy and science still flourished and under the leadership of Plato and Aristotle were at their height. But after 322, though comedy, philosophy, and physical and historical science continued active in Athens, the decline in creative thought began; after 300 Zeno and Epicurus were her greatest figures, and, recognized by all as the cultural centre of the Greek world, she began to live on her past. Politically the story of the century after Alexander was one of frequent struggles to rid herself of Macedonian domination, often temporarily successful, but always with the help of one or other of the *Diadochi*, who, if successful, abused his power; they all wanted her as an ally and a military station; she was finally crushed between them in the war against Antigonus Gonatas (q.v., 266-262), and her independence forfeited. She was free again in 228; and as a small State had comparative peace, while Rome was establishing her power in Greece. Her last independent action was when she sided with Mithridates against Rome. Reduced by Sulla after a siege (87-86), she pleaded her glorious past; but he retorted that he was there to punish rebels, not to learn ancient history. Thereafter Athens was a cultured university town to which men came from all parts of the Roman Empire, but with no history, and no creative

thought. See also PERSIAN WARS, PELOPONNESIAN WAR, and the articles on individual Athenians and particular political institutions.

Ancient sources: the Ἀθῆναις (q.v.) or special histories of Athens (written in the fourth and third centuries) have all been lost except Aristotle's *Constitution of Athens*. Modern works: besides the general histories of Greece, see G. de Sanetis, *Storia della repubblica ateniese* (1912); M. L. W. Laistner, *History of the Greek World from 479 to 323 B.C.* (1936); P. Cloché, *La Politique étrangère d'Athènes de 404 à 338 av. J.-C.* (1934); W. S. Ferguson, *Hellenistic Athens* (1911); P. Graindor, *Athènes de Tibère à Trajan* (1931), *Athènes sous Hadrien* (1934); J. Day, *An Economic History of Athens under Roman Domination* (U.S.A. 1942). A. W. G.

ATHENS (TOPOGRAPHY). There are three great building periods in Athens: Pisistratus, Pericles, Hadrian. Few remains of the first are visible, but many fifth-century buildings had sixth-century predecessors.

2. The centre of Athens was the Acropolis, a long rocky hill, one of many in the Attic plain, easy of access only at the west. A Mycenaean fortress and palace (*Ἐπεχθῆος πυκνὸς δόμος*) occupied it. There was much sixth-century building, which was destroyed by the Persians; fragments of buildings and sculpture were used to extend the level surface when the Acropolis was walled by Themistocles and extended by Cimon. (For the extant buildings dating from 450–400 B.C. see ACROPOLIS, ERECHTHEUM, PARTHENON, PROPYLAEA). The only considerable post-classical work on the Acropolis is the tower of Agrippa outside the Propylaea.

3. Below the Acropolis to the south lies the Roman Odeum of Herodes Atticus (the no longer extant Odeum of Pericles lay east of the theatre); the theatre of Dionysus, the oldest Greek theatre, with a temple of Dionysus Eleuthereus; and many monuments for choregic victories, including those of Thrasylus, above the theatre on the Acropolis wall, and Lysicrates, to the east. West of the Acropolis is the prominent monument of Philopappus (1st c. A.D.), the *Pnyx* (q.v.), and many house-walls and foundations cut in native rock. On the eastern and northern slopes, various small sanctuaries in the rock; north-west the Areopagus, with rock-cut seats; under the north side of the Acropolis lay the Agora, recently being excavated (for identification of Bouleuterion, Tholos, Metroön, and other excavated buildings see H. A. Thompson, *Hesperia* vi, 1 ff.). The buildings adjoining the Roman Agora, to the east, are well preserved (the Stoa of Attalus, Library of Hadrian, and Tower of the Winds, where Byron lodged). Above the Agora to the west is the Hephaestum (so-called Theseum), a nearly complete Doric temple of mid-fifth century; farther on, the *Dipylon* (q.v.). The chief cemetery lay here; other graves have been found outside the walls on the north, and in the Agora; until the sixth century family burying-places within the inhabited area were in use. The walls are visible at the *Dipylon* and behind the *Pnyx*; fragments have been found north of Stadion Street.

4. Hadrian added a new quarter towards the Ilissus, marked by an arch standing near the Olympicum (q.v.). There are many Roman remains in the Royal gardens. Beyond the Ilissus the modern stadium is on the site of the Panathenaic stadium.

ATHLETICS. The two main branches of athletics as practised by the Greeks were: (i) Athletics proper, where the essential feature is the competition (*ἀθλος*) with its concomitant the prize (*ἀθλον*), although this latter is often of no intrinsic value, the real prize being the honour of victory. (ii) Gymnastics, the training of the body by a system of exercises in which the naked limbs are allowed full play, part of that physical education which the Greeks closely connected with their art, music, and medicine. The Romans never took either of these seriously: they thought that training for athletics took too much time, and as for gymnastics they considered that nakedness in public was disgraceful, 'flagiti principium'.

2. The gymnastic exercises which the athlete practised fall into three classes, depending respectively on strength of body, of leg, and of arm. To the first class belong boxing and wrestling, to the second running and jumping, to the third throwing the discus and javelin. The last five of these, boxing being excluded, formed the Greek *Pentathlon*, a combined competition in five events, arranged to suit the all-round athlete, and calling not only for strength but also for grace, agility, and skill. The foot-race was taken first and then the jump, the javelin, and the discus; and probably only those who gained a certain number of marks in these first four competitions were allowed to enter for the wrestling.

3. There are many varieties of foot-races; long, short, for men, for boys, for men in armour. In the *Pentathlon* the race may have been the *diaulos*, a quarter-mile, but there is no certainty. Nor can we judge the standard of performances: it is probable that the Greeks were better at long distances than at sprints, but the pictures of runners on the vases show that as far as style goes they were not inferior to the moderns. Jumping was comparatively simple, for the Greeks had neither high jumping, pole-jumping, nor hurdle-races: long jumping was the only form, standing and running, and this was done from a take-off into a pit with the help of jumping-weights. In throwing the javelin and the discus their regular training in body poise and muscular development gave the Greeks a great advantage over our athletes. The javelin was a thin pole about 5 feet long, with a thong fastened near its centre. The movements in throwing, the short steps of the run, and the final turn of the body, are plainly shown in the vase-paintings. For throwing the discus we have Myron's statue, the *Discobolus*. The athlete has swung the discus backwards, turning head and body to the right, and the force of the throw depends largely on the swing of the whole body. See also BOXING, DISCUS, GYMNASIUM, PANKRATION, WRESTLING

ATHOS, a headland on the easternmost of the Chalcidian promontories, with a conspicuous pyramid-shaped peak rising to 6,350 feet. In 492 B.C. a Persian fleet was destroyed near it by a storm. To avoid the passage round Mt. Athos, Xerxes dug a canal through the neck of the promontory (483–481). This had a length of 1½ miles, a breadth of 65–100 feet, and a depth of 6–10 feet. The upcast earth was piled up to a height of 50 feet. Despite the doubts expressed by ancient and modern writers, the canal was undoubtedly completed.

Hdt. 7. 22–4; Strabo 7. 331. A. Struck, *Neue Jahrb.* 1907, 115–30. M. C.

ATIA MAJOR (daughter of M. Atius Balbus and of Julia, Caesar's sister) was the wife of C. Octavius and the mother of C. Octavius (the future Augustus) and of Octavia minor. After her husband's death in 59 B.C. she married L. Marcus Philippus. She tried to dissuade

her son from accepting the inheritance of Caesar. She died in 43. The legend that she had given birth to Augustus by Apollo had some circulation. A. M.

ATIA MINOR, younger daughter of M. Atius Balbus and aunt of Augustus. She married a Marcius Philippus (probably L. Marcius Philippus, son of the step-father of Augustus and consul in 38 B.C.) and had a daughter Marcia.

J. G. Frazer, *Fasts of Ovid* iv. 350-3.

G. W. R.

ATILIUS (1) CALATINUS, AULUS (cos. I, 258 B.C.), fought successfully in Sicily, and as consul II (254) stormed Panormus. He was the first dictator to lead an army outside Italy—to Sicily in 249. He was censor (247). He was buried near the Porta Capena (epitaph, Cic. *Sen.* 61), and was reckoned by Cicero among the most famous men of old. H. H. S.

ATILIUS (2) SERRANUS, AULUS, praetor in 192 B.C., commanded the Roman fleet against Nabis and Antiochus (192-191). Praetor again (173), he renewed the treaty relations with Syria on Antiochus Epiphanes' accession. Envoy to Perseus in 172 with Q. Marcius Philippus, he was consul in 170, in Liguria.

Livy 35-6; 42. 6, and 37 ff. De Sanctis, *Stor. Rom.* iv. 1, pp. 135, 173, 275. A. H. McD.

ATILIUS (3), MARCUS, contemporary with Caccilius, composed *comediae palliatae* of which very few fragments remain (see *DRAMA*, para. 4). He had a reputation for harshness, and could stir the emotions deeply. Licinius, in Cic. *Fin.* 1. 5, applies the term 'ferreus scriptor' to an Atilius who translated Sophocles' *Electra*. Fragments: O. Ribbeck, *CRF*², 32 (3rd ed. Teubner, 1897).

E. H. W.

ATILIUS (4) FORTUNATIANUS (4th c. A.D.), metrician. The first part of his *Ars (metrica)* deals with general principles, the second with Horatian metres (ed. Keil, *Gramm. Lat.* 6. 278-304). The work depends largely on earlier writers, especially Caesius Bassus (q.v.).

Cf. Teuffel, § 405, 3; Schanz-Hosius, § 827.

J. F. M.

ATILIUS, see also **REGULUS**.

ATIMIA, the loss of all or some civic rights in a Greek city. It originally implied outlawry, but later, especially in Athens, involved the loss of active rights only (or of some only of these). Deprivation might be temporary: a state-debtor's *atimia* ended automatically when the debt was paid. Permanent deprivation of all active rights was the punishment for treason, bribery (of a magistrate), cowardice in face of the enemy, perjury in a law-court (after three convictions), and some offences against the citizenship laws. Permanent deprivation of some rights only was applied (1) if a man brought a *graphe* (q.v.) and (a) dropped it, or (b) failed to get one-fifth of the votes at the trial; (2) if a man had been convicted three times in a *γραφὴ παρανόμων*; (3) for certain moral offences. A. W. G.

ATIUS, see **BALBUS** (1).

ATLANTIS, i.e. 'the island of Atlas', 'the island lying in the Atlantic'. A very large island off the Straits of Gibraltar, which, according to myth, once ruled south-west Europe and north-west Africa, till, in an expedition to conquer the rest, its kings were defeated by the prehistoric Athenians (Plato, *Tim.* 24 e ff.). Its constitution is the chief subject of the unfinished *Critias*. Wholly fictitious, though vague accounts of real islands in the Atlantic may have given Plato the hint, it is interesting as the oldest surviving philosophical wonderland in

Greek, a predecessor of Euhemerus' Panchaia (see **EUHEMERUS**), and of Iambulus (Diod. Sic. 2. 55-60).

Cf. W. A. Heidel, *Proc. American Acad. of Arts and Sciences* 1933, 189 ff.; J. Bidez, *Bull. acad. roy. Belgique* 1934, 101 ff. H. J. R.

ATLAS (*Ἄτλας*), probably 'very enduring', a intensive + root of *τλάν*; in mythology a Titan, son of Iapetus and Clymene (Hesiod, *Theog.* 509). He is guardian of the pillars of heaven (*Od.* 1. 53); but later (as Hesiod, *ibid.* 517, Aesch. *PV* 347 ff.), he himself holds the sky up. Both are well-known popular explanations of why the sky does not fall (see Stith Thompson, A665. 2, A842). A. became identified with the Atlas range in north-west Africa, or a peak of it (first in Herodotus 4. 184. 5-6); sky-supporting mountains are also popular (Stith Thompson A665. 3), and found elsewhere in Greek (Ap. Rhod. 3. 161, on which see Gillies ad. loc.); a later tale explaining that Perseus had turned him into stone with the Gorgon's head is in Ovid, *Met.* 4. 655 ff. He was variously rationalized into a king (Plato, *Critias* 113 a), a shepherd (Polydus ap. schol. Lycophron, 879), and an astronomer (Diod. Sic. 3. 60. 2). From his position in the far west, he is naturally brought into conjunction with the Hesperides (q.v.), as in Ovid, *loc. cit.*; he is their father in Diod. Sic. 4. 27. 2. In Homer (*Od.* *loc. cit.*), he is father of Calypso, but usually his daughters are the Pleiades (favourite subjects of popular speculation, Stith Thompson A773), Alcyone, Celaeno, Electra, Maia, Merope, Sterope, and Taygete, whose names and local connexions (Maia with Arcadia, Electra with Troy, etc.) show that the African localization of their father is no part of their story. Besides his connexion with Perseus (see above) he encountered Heracles (q.v.), when the latter was seeking the apples of the Hesperides. Atlas offered to fetch them if Heracles would uphold the sky meanwhile; he then refused to take back the burden, until forced or cheated into doing so by the hero (e.g., Pherecydes ap. schol. Ap. Rhod. 4. 1396). Atlas upholding the sky was represented in art from early times, is a favourite subject in Hellenistic art, and develops into an ornamental support. H. J. R.

ATLAS MOUNTAINS, the great range which formed the backbone of Roman Africa. Its highest peaks are in the Great Atlas to the west, and Greek legend converted them into the bowed shoulders of the god who held up the heavens (see preceding article). The chain slopes eastward through Middle and Little Atlas to the Aurès and Medjerda ranges. On the north the Atlas buttresses the Tell or fertile coastal plain. Southward the mountains slope down to the Saharan desert, which runs eastward to touch Lesser Syrtis (q.v.). Between Tell and Sahara are the High Plateaux with much good grazing land; in the centre and the east lie the shotts or salt lakes. Suetonius Paulinus crossed Mt. Atlas in A.D. 42 (Pliny, *HN* 5. 14-15).

A. N. Sherwin-White, *JRS* 1944, 1 ff.

W. N. W.

ATREUS, in mythology, son of Pelops (see **TANTALUS**) and husband of Aërope. From late epic on (*Alcmaeonis* ap. schol. Eur. *Or.* 995) he and his brother Thyestes are at variance. Hermes was wroth with the whole house for the death of his son Myrtilus (see **PELOPS**) and gave them a golden ram, the possession of which carried the kingship with it; Thyestes got this from Aërope, whose paramour he was; Atreus banished him, but later pretended a reconciliation. At the banquet held to consummate this, Atreus served up to Thyestes the flesh of the latter's own children, at which the sun turned back on its course in horror. See further **ARGISTHUS**. In another version (Apollod. *Epit.* 2. 12) Atreus by advice of Hermes offers to let Thyestes, who has seized the throne, keep it till the sun turns back; Thyestes agrees, and Zeus immediately turns the sun backwards, the rest of the story following much as above. There are numerous

other variants; the story was much elaborated by the tragedians, see for instance Eur. *El.* 699 ff.; *Or.* 995 ff.; Seneca, *Thyestes*, passim. Continuous narratives, Apollod., loc. cit.; Hyg., *Fab.* 86-8; more in Roscher's *Lexikon*, art. 'Atreus' (Furtwängler). H. J. R.

ATRIUM, see HOUSES (ITALIAN).

ATRIUM VESTAE, an ancient precinct, east of the *Forum Romanum*, comprising the *aedes* and *lucus Vestae*, *Regia*, *domus publica*, and *domus Vestalium*. Republican remains of the last two underlie the existing *domus Vestalium*, built after Nero's fire of A.D. 64. The western ritual-kitchen is Flavian, while the eastern *exedra*, once fronting a closed garden behind Nero's small peristyle, is Hadrianic. The Antonines, uniting the rooms grouped about the Neronian courtyard, added second and third stories. The enlarged peristyle now visible is Severan. Later additions are of minor significance.

E. Van Deman, *Atrium Vestae* (U.S.A. 1909).

I. A. R.

ATROPOS, see FATE.

ATTA, TITUS QUINCTIUS (d. 77 B.C.), Latin poet, composed *comediae togatae*, elegiae epigrams, and perhaps *satura*. Fragments, and titles of eleven plays, survive. He excelled in character-drawing, especially feminine. See DRAMA, para. 5.

Fragments: O. Ribbeck, *CRF*², 160 (3rd ed. Teubner, 1897).

ATTALEIA, a city of Pamphylia, founded by Attalus II, perhaps with Athenian settlers; on its Imperial coins the city boasts kinship with Athens. In 79 B.C. it was mulcted of its territory by Servilius Isauricus for its complicity with the pirate king Zenicetes. These lands were probably utilized by Augustus for settling veterans, but Attaleia was not made a colony, a status which it achieved only in the late third century. There are some classical ruins.

K. Lanckoroński, *Städte Pamphylens* (1890), i. 7-32. A. H. M. J.

ATTALUS I (SOTER) of Pergamum, 269-197 B.C., son of Attalus and nephew of Eumenes I, whom he succeeded (241). He was the first to refuse 'tribute' to the Galatians, and his great victory over them (before 230) was commemorated by his cult-name *Soter*, by the triumphal monument at Pergamum famous for its 'dying Gaul', and probably by the title of King (which Eumenes had never taken). His counter-attack on Antiochus Hierax, who had co-operated with the Galatians, gained him all Seleucid Asia Minor except Cilicia (229-228); but Achaëus (223-220), and later Antiochus III (216-214), deprived him of most of his conquests.

Attalus also inaugurated a 'western' policy which was to give a new turn to the history of Pergamum. The dangerous ambitions of Philip V of Macedonia prompted him to support Philip's enemies the Aetolians, first with subsidies (220-217), and later with troops and a fleet (209-207). After the peace of Phoenice (205), Attalus replied to Philip's acts of aggression near the Hellespont by renewing the war in alliance with Rhodes (201), and scouring Roman intervention against Macedon in common with the Rhodians. During the 'Second Macedonian War' he co-operated with the Romans by sea. He died shortly before the final victory.

An excellent general and diplomatist, Attalus raised Pergamum almost to the rank of a Great Power. Between Philip and Antiochus, he chose to live dangerously, and his approach to Rome, though brilliantly successful in its immediate rewards (see also EUMENES II), ultimately made Pergamum a pawn of Roman policy, besides precipitating the collapse of the Hellenistic political system. Apart from politics, Attalus was a notable patron of literature, philosophy, and the arts, and enjoyed a conspicuous domestic happiness with his wife Apollonis of Cyzicus and their four sons.

G. T. G.

ATTALUS II (PHILADELPHUS), 220-138 B.C., second son of Attalus I, and brother of Eumenes II, whom he succeeded (160-159). Before 160 he showed himself a skilful soldier and diplomatist, and was conspicuously loyal to Eumenes, whom he could probably have supplanted, with Roman support, at any time after 168 (see EUMENES II). As king, he fulfilled the (by now) traditional Pergamene part of watch-dog for Rome in the East. He equipped and supported the pretender Alexander Balas to win the Seleucid throne from Demetrius I (153-150); and in return Rome supported him in his two wars with Bithynia. Like all the Attalids, he was genuinely interested in letters and the arts.

G. T. G.

ATTALUS III (PHILOMETOR EUERGETES), c. 170-133 B.C., son of Eumenes II and successor of Attalus II (138). His short reign was famous only for its dénouement, the 'Testament of Attalus' bequeathing the kingdom of Pergamum to Rome (*OGI* 338). Its motive has never been perfectly explained, especially as Attalus was comparatively young and presumably did not expect a premature death. But the revolution after his death (see ARISTONICUS I) suggests that he may have made and published this testament partly as an insurance against social revolution while he survived.

For bibliography, see under PERGAMUM.

G. T. G.

ATTHIS (*Ἀτθίς*), a type of literature dealing specifically with the history of Attica which became popular c. 350-200 B.C. under the influence of the Sophists and Peripatetics and the general conception fostered by Isocrates and the Orators of a return to the past glory of Athens. Hellenicus' history of Attica (Thuc. i. 97), one of a series dealing with various States, was not strictly an *Atthis*. Cleidemus was the first atthidographer, followed by Androtion, Demon, Philochorus, Phanodemus, Melanthius, Amelesagoras, Ister. The last produced a final authoritative version. Characteristics of the *Atthides* are their chronological arrangement and emphasis on mythology and origins of cults. Most atthidographers held priestly or political offices and produced other works on religious antiquities. Scholia to Aristophanes and the *Marmor Parium* show their accepted value for dates. Often used by commentators on the Orators for constitutional and topographical details.

See Wilamowitz, *Aristoteles und Athen* i. 8. See also HISTORIOGRAPHY, GREEK, para. 5.

G. L. B.

ATTIANUS, PUBLIUS ACILIUS (*Röm. Mitt.* xviii (1903), 63 ff.), an equestrian of Italica, guardian and adviser of the young Hadrian (q.v.), was almost certainly *praefectus praetorio* when Trajan died, helping Plotina to secure Hadrian's succession. Replaced by Q. Marcius Turbo (q.v.) in 119 (perhaps after exaggerating the rumoured plotting of the four 'consulars'), he was made a senator, of consular rank, as a mark of honour.

S.H.A. *Had.*; Dio Cassius 69; *PIR*², A 45; R. H. Lacey, *The Equestrian Officials of Trajan and Hadrian*, &c. (Diss. Princeton, 1917), p. 16, no. 37.

C. H. V. S.

ATTIC, see DIALECTS, GREEK.

ATTIC CULTS AND MYTHS. The chief goddess was of course Athena, her festivals being Arrhetophoria (Pyanopsion and Seirophorion; for the month-names, see CALENDARS), Procharisteria (early spring; both the above are agricultural), Callynteria and Plynteria (Thargelion; ceremonial cleansing of temple and statue), Panathenaea (q.v., Hecatombaeon 28, Great Panathenaea every four years), and Chalecia (last day of Pyanopsion). Other gods and goddesses were celebrated at the following festivals: Demeter and Core—Seira (see SCIROPHORION, Seirophorion 12), Thesmophoria (q.v., Pyanopsion 10 at Halimus, 11-13 at Athens), Haloa (Poseideon), Chloia (early spring, to Demeter Chloë and Core, at Eleusis), Lesser Mysteries at Agrae (Anthesterion),

Greater Mysteries beginning at Athens and ending at Eleusis (Boedromion 15-22: see MYSTERIES). Dionysus—Anthesteria (q.v., Anthesterion 11-13; apparently a blend of his worship with an All Souls feast), Lenaea (q.v., Gamelion ?12), Rural Dionysia (see DIONYSIA, Poseideon), Great or City Dionysia (Elaphebolion 9-13 or 14, see J. T. Allen in *Univ. of Calif. Publs.* xii, pp. 35-42; this and the Lenaea were the great dramatic festivals), Oschophoria (Pyanopsion ?8). Kronos—Kronia (Hecatombaeon 12). Zeus—Diasia (Anthesterion 23, to Zeus Meilichios, see ZEUS), Dipolieia (Sciropheorion 14), Diisoteria (Sciropheorion, at Piraeus), and some minor feasts. Apollo—Thargelia (q.v., Thargelion 7), Pyanopsia (Pyanopsion 7). Artemis—Munichia (Munichion 16); Brauronia (at Brauron, unknown date, see ARTEMIS), Tauropolia (Halae, unknown date), Elaphebolia (unknown, gave its name to the month Elaphebolion). There were also festivals, of which not much is known, to Poseidon, Hephaestus, Prometheus, the Eumenides, and some minor deities.

The best-known myths have to do with Athena and Poseidon (qq.v.). Heroic and aetiological tales centre around the vague and contradictory line of kings, dealing mainly with Cecrops (see CULTURE-BRINGERS), Erichthonius, Erechtheus (q.v.), and above all Theseus (q.v.). There is besides the story of Cephalus (q.v.) and Procris, and a few others little known. See also BENDIS, ERIGONE, NEMESIS.

L. Deubner, *Attische Feste* (1932).

H. J. R.

ATTIC ORATORS. Caccilius of Calacte in the Augustan age wrote 'On the style of the ten orators', namely Antiphon, Andocides, Lysias, Isocrates, Isaeus, Lycurgus, Aeschines, Demosthenes, Hyperides, Dinarchus. This 'canon', though ignored by Dionysius, was recognized by the Ps.-Plutarch, Quintilian, and later writers. Its origin is unknown, but the arbitrary inclusion of a definite number of names in such a class is characteristic of Alexandrian scholarship.

Ancient sources: Pseudo-Plutarch, *Lives of the Ten Orators*; Dionysius of Halicarnassus, *De Verborum Compositione and Letters to Ammarchus*; Demetrius, *De Elocutione*; Hermogenes *Περὶ ἰδεῶν*; [Longinus], *On the Sublime*. Modern works: F. Blass, *Die attische Beredsamkeit* (1887-98); R. C. Jebb, *The Attic Orators from Antiphon to Isocrates* (1893); J. F. Dobson, *The Greek Orators* (1919); Grote, *History of Greece*; CAH vii; Croiset, *Histoire de la litt. grecque v.* Texts: *Oratores Attici*, I. Bekker (1828); do. G. S. Dobson (1828); Text and translation of *Minor Attic Orators*, K. J. Maidment (2 vols. Loeb). *Selections from the Attic Orators* (text and commentary), R. C. Jebb (2nd ed. 1888). Indexes: T. Mitchell, *Index in Oratores Atticos*. C. Rehdantz, *Indices zu Demosthenes neun philippischen Reden*, 4th ed. (1886) revised by Blass. See also under the names of the various orators.

J. F. D.

ATTICA, a triangular promontory of about 1,000 sq. m., the easternmost part of central Greece, separated from Boeotia by Mt. Parnes. Most of it consists of small interconnected plains; the Thriasian plain (where Demeter gave corn to man), the Attic plain, larger but stonier, and the Mesogeia, an undulating and fertile land of vine and olive, in a cup of low hills with easy access south and east to the sea. Pentelicon and Hymettus, with their marble quarries, and other smaller hills, stand out of these plains. The south-east, with the silver mines of Laurium and temples of Sunium, is a mass of hills; the north is hill-country, well wooded, with patches of good land, the largest round Aphidna and Marathon. The soil, though light, is as good as in most of Greece; but its natural riches lay in mines, marble, and excellent potter's clay.

In early times Attica contained several independent settlements; the tradition of twelve townships fused by Theseus into a single Athenian State is borne out by rich Mycenaean cemeteries at Eleusis, Marathon, and in the Mesogeia. The synoecism was probably gradual, and went on until the seventh century (see ELEUSIS). Cults

from the country-side were brought to Athens (e.g. Artemis Brauronia, the Eleusinian goddesses); this continued after the synoecism (e.g. Dionysus from Eleutheræ). Later acquisitions, Salamis, Eleutheræ, Plataea, Oropus, did not become part of Attica. Attica was less affected than most of Greece by the great migrations, and continuity from Mycenaean to Hellenic times is well demonstrated in its remains.

Down to the sixth century the country districts had a vigorous and largely independent life, as is shown by finds of rich sanctuaries and cemeteries, particularly in the Mesogeia. During the fifth century, with the adoption of an aggressive foreign policy depending on sea-power and sea-borne trade, Attica became an appendage to Athens which might be disregarded in emergency (as in the Peloponnesian War), but Aristophanes shows the survival of an Attic, as distinct from Athens-Piraeus, patriotism. See also ACHARNAE.

General literature: W. Wrede, *Attika* (1934); *Attische Mauern* (1933); E. A. Gardner and M. Cary, *CAH* iii. 571 ff.; A. Milchhöfer and W. Judeich, *PIV*, s.v. 'Attika'. Topography: E. Curtius and A. Milchhöfer, text to *Karten von Attika* (1881-1900). Special subjects: R. Lepsius, *Geologie von Attika*; S. C. Atchley, *Wild Flowers of Attica* (1928). History: S. Solder, *Die Auserwählten Kulte und die Einigung Attikas* (1931). See also ATHENS. Maps: Greek Staff, 1:20,000; British Staff, 1:100,000; Curtius-Kaupert, *Karten von Attika* 1:25,000; of remains visible in 1881-1900, some have disappeared, some are not ancient.

T. J. D.

ATTICUS (1), TITUS POMPONIUS (109-32 B.C.), a Roman *eques*, was an intimate friend and correspondent of Cicero. He derived his surname from long residence at Athens (88-65), whereby he escaped Sulla's proscription. His sympathies were with the *Optimates*, but even after his return to Rome he took no active part in politics, and lived on good terms with conservatives and Caesarians alike. His vast wealth was founded on his estates in Epirus and increased by his manifold business activities, which ranged from banking to publishing; he also inherited a large fortune from his miserly uncle Q. Caccilius. Though frugal, he was a discriminating patron of the arts, with a real appreciation of Greek culture, and his house on the Quirinal was a well-known literary centre. He survived the Civil Wars by consistently showing himself a friend to all and an ally to none (see esp. Nepos, *Att.* 8), and he enjoyed the favour of Octavian until his death.

Atticus' calculating policy of neutrality is hard to justify even when covered by the cloak of Epicureanism, but he had many attractive qualities. His urbanity, discretion, and ready sympathy made him an ideal confidant for Cicero. Atticus himself published the full, though one-sided, correspondence between the two.

Cicero's *Letters to Atticus* (in sixteen books) illuminate the character of both; a letter to him from Brutus also survives (*ad Brut.* 17). His own letters have perished with his other literary works. Cornelius Nepos' *Life* is detailed, but fulsome and uncritical.

G. Boissier, *Cicero and His Friends* (Engl. Transl. 1897); H. Ziegler, *Titus Pomponius Atticus als Politiker* (U.S.A. 1936).

J. M. C.

ATTICUS (2), JULIUS, like Graecinus (q.v.), a Latin writer on vines in Tiberius' time, who was a source for Columella (3. 17. 4).

ATTICUS (3) (c. A.D. 150-200), Platonist, opposed the infiltration of Peripatetic elements into Platonism, but himself introduced into it certain doctrines proper to Stoicism.

PIR ii. 2247.

ATTIS, in mythology, the youthful consort of Cybele (q.v.) and prototype of her eunuch devotees. The myth exists in two main forms, with many variants. According to the Phrygian tale (Paus. 7. 17. 10-12; cf. *Am. Adv. Nat.* 5. 5-7), the gods castrated the androgynous Ardastis (q.v.); from the severed male parts an almond tree

sprang and by its fruit Nana conceived A. Later Agdistis fell in love with him, and to prevent his marriage to another caused him to castrate himself. Agdistis is clearly a doublet of Cybele, though Arnobius brings them both into his account. Ovid (*Fasti* 4. 221-44) and others change many details, but keep the essential aetiological feature, the self-castration. In a probably Lydian version A., like Adonis, is killed by a boar. The story of Atys, son of Croesus, who was killed by the Phrygian Adrastus in a boar-hunt (Hdt. 1. 34-45) is an adaptation of this, and attests its antiquity, though the Phrygian is probably the older version.

In Asia Minor A. bears his native name only in the Neo-Phrygian inscriptions, though the high priest and, under the Empire, all members of the priestly college at Pessinus had the title Attis. A. is sometimes called Papas or Zeus Papas. He appears only rarely in Greece, but at Rome attained official status under Claudius. Like Adonis, he was fundamentally a vegetation god and the equinoctial spring festival centred about his death and resurrection. Under the Empire he was invested with celestial attributes, and became a solar deity, supreme, all-powerful, and sometimes it seems a surety of immortality to his initiates. In art he is generally represented as an effeminate youth, with the distinctive Phrygian cap and trousers. See ANATOLIAN DEITIES; CYBELE; EUNUCHS, RELIGIOUS.

ATTIUS, see VARUS (1).

AUCTOR AD HERENNIIUM, see RHETORICA AD II.

AUCTORITAS PATRUM, see PATRUM AUCTORITAS.

AUDAX (probably 6th c. A.D.), grammarian, whose *De Scauri et Palladii Libris excerpta* is extant (ed. Keil, *Gramm. Lat.* 7. 320-62).

Cf. Teuffel, § 408, 4 and § 482, 4; Schanz-Hosius, § 1105.

AUFIDIUS (1) BASSUS (fl. 1st c. A.D.), the Imperial historian, an Epicurean and subject to ill health, which prevented a public career, wrote on the German Wars (*Bellum Germanicum*), probably under Tiberius and glorifying his achievements. He also wrote a history of his times, probably under Claudius, which may have begun with Caesar's death, certainly included Cicero's death (Sen. *Suas.* 6. 18; 23), and was continued by the Elder Pliny under the title *a fine Aufidii Bassi*. This indicates an inconspicuous closing point, which may fall in A.D. 31, but is, on the evidence of Tacitus' use of Pliny, better set in A.D. 50. Cassiodorus followed him for the consul lists of 9 B.C.-A.D. 31. In authority he ranks among the great historians of the early Empire (Quint. 10. 1. 103).

H. Peter, *HRRel* ii (1906), pp. cxxxv, 96; Ph. Fabia, *Les Sources de Tacite* (1893), 185, 355; cf. F. Münzer, *Rh. Mus.* 1907, 161. F. A. Marx, *Klio* 1933, 323. A. H. McD.

AUFIDIUS (2), GNAEUS, in Cicero's boyhood wrote a 'Graeca historia', possibly of Rome (*Tusc.* 5. 112).

AUFIDIUS (3), MODESTUS, commentator on Virgil and Horace, in the first century A.D.

AUGE, see TELEPHUS.

AUGURES, official Roman diviners, forming a *collegium* which consisted originally of three but was gradually increased to sixteen members (Livy 10. 6. 7-8 and *periocha* 89; Dio Cassius 42. 51. 4), one of the *quattuor amplissima collegia*. Etymology uncertain; the traditional derivation from *au*- + *ger*(o) would give **auger*, not *augur*; that from the root *aug*(eo), see E. Flinck in

Ann. Acad. Scient. Fennicae xi (1921), 3 ff., suggests rites of fertility rather than divination, but the transition is not impossible, cf. AUGURUM CANARIUM. Their business was not to foretell the future, but to discover by observation of signs, *auguria*, either casually met with, *oblative*, or watched for, *impetrative*, whether the gods did or did not approve a proposed action. The most characteristic signs were given by birds (hence the traditional etymology). These might be chickens, which were carried by armies in the field for the purpose; food was given to them, and if they ate it so as to drop some from their beaks, that was an excellent sign ('tripudium solistimum', Cicero, *Div.* 2. 72, where see Pease). If wild birds were observed, the augur marked out a *templum* (cf. DIVINATION), i.e. he designated boundaries by word of mouth (see e.g. Varro, *Ling.* 7. 7-8, which gives the formula) within which he would look for signs, and divided this space into *sinistra*, *dextra*, *antica*, and *postica* (*pars*); the significance of the flight or cry of the bird varied according to the part in which it was heard or seen. The officiant faced south or east (Rose in *JRS* xiii (1923), 82-90). Such observations prefaced every important action public or (at least in early times) private, but to accept or reject augural advice was the responsibility of the magistrate or other person performing the action. For *augurium salutis*, see SALUS, and for augury in general see DIVINATION; ETRUSCANS, para. 4.

Bouché-Leclercq, *Histoire de la Divination* iv. 209 ff.; Wissowa, *RR*² 523 ff.; H. J. R.

AUGURINUS, SENTIUS (? *Serius*), a young friend praised by Pliny (*Ep.* 4. 27; 9. 8) for writing 'Poems in Little' (*poemata*) marked by charm and tenderness, but sometimes by satire. Pliny quotes eight hendeca-syllabics by him in the manner of Catullus and Calvus.

Baehr. *FPR*; Morel *FPL*.

J. W. D.

AUGURUM CANARIUM. Ateius Capito in Festus, p. 358, 27 Lindsay, says that reddish (*rutilae*) bitches were sacrificed *canario sacrificio pro frugibus*, to 'deprecate' the fierceness of the Dog-star. Cf. Fest. (Paulus), p. 39, 13, from which it would appear that the place was near the Porta Catularia and the time fairly late summer, since the crops were yellowing (*flavescentes*). This seems to be the *sacrum canarium* of Daniel's Servius on G. 4. 424. The ritual name, however, was *augurium canarium*, as is shown by Pliny, *HN* 18. 14, who quotes from the *commentarii pontificum* (q.v.) the direction that the days (*dies*); it is not clear whether the rite lasted more than one day or the various days for different years are meant) for it should be fixed 'priusquam frumenta uaginis exeant nec (et *codd.*, *corr.* Ulrichs) antequam in uaginas perueniant', that is to say some time in spring (see L. Delatte in *Ant. Class.* vi (1937), 93 ff.). The name probably means 'augurium of the dog-days'. It is most unlikely that it was a sacrifice to the Dog-star; it may have been an augury in the sense that omens for the result of the harvest were taken from the victims, but if the second etymology given under 'AUGURES' is right, it is tempting to make it mean 'ceremony of increase for the dog-days'. There is no evidence, though some probability, that the augurs took part and no reason to suppose it performed in honour of any god. H. J. R.

AUGUSTA, title of Imperial ladies, see AUGUSTUS, AUGUSTA.

AUGUSTA (1) EMERITA (now Mérida), a colony in south-western Spain founded by Augustus (25 B.C.) chiefly with veterans of legions V and X. Connected with Bactica by a 64-arch bridge over the Anas (*Gua-diana*), it was the terminus of many roads leading to the north and west. It became the capital of the province of Lusitania (q.v.). The city was indebted to

Agrippa for its theatre (restored by Hadrian), to Otho for economic favours, to Trajan for its bridge. Many of its Roman monuments have been preserved.

J. R. Mérida, *Mérida* (1929).

J. J. V. N.

AUGUSTA (2) PRAETORIA (now *Aosta*), a colony founded with 3,000 Praetorians on the Duria Major in Cisalpine Gaul by Augustus (24 B.C.); it was here that Terentius Varro had encamped the previous year when subjugating the Salassi (Strabo 4. 206; Cass. Dio 53. 25). Standing at the Italian end of the Great and Little St. Bernard Passes over Pennine and Graian Alps respectively, Augusta became and still remains the capital of this whole region (*Val d'Aosta*).

For inscriptions see P. Barocelli, *Inscriptiones Italiae* i, fasc. 1 (1932); for Roman monuments, F. Haverfield, *Ancient Town Planning* (1913). F. Eyssenhardt, *Aosta und seine Alterthümer* (1896). P. Toesca, *Aosta* (1911). E. T. S.

AUGUSTA (3) TAURINORUM (now *Torino, Turin*), an important Augustan *colonia* in Cisalpine Gaul, situated at the foot of the Mont Genève Pass over the Cottian Alps and at the confluence of the Duria Minor and the Po, which here became navigable (Pliny, *HN* 3. 123). Originally the capital of the Taurini, who were probably Celticized Ligurians, it is apparently identical with the Taurasia captured by Hannibal, 218 B.C. (App. *Hann.* 5). Tacitus (*Hist.* 2. 66) records its burning in A.D. 69. Ancient authors seldom mention it. The modern city preserves the ancient street plan.

F. Haverfield, *Ancient Town Planning* (1913), 87; G. Bendinelli, *Torino Romana* (1928). E. T. S.

AUGUSTA (4) TREVERORUM (now *Trier or Trèves*) was founded by Augustus. It rapidly became the chief city of north-east Gaul, and an important trade-centre between Gaul and the Rhineland; its colonial status, if not already conferred by Augustus, may date from Claudius. It was the seat of the *procurator provinciae Belgicae et duarum Germaniarum*; Postumus made it his capital, a precedent followed by Maximian and Constantius Chlorus, and it remained the capital of the Prefecture of Gaul from 297 until early in the fifth century, when it was abandoned to the Franks. Its bishop enjoyed a corresponding importance.

Trèves grew far beyond the original settlement, to cover 700 acres. Notable ruins, mostly of the period when the city was frequently the Imperial residence, were standing till recently—the 'Porta Nigra' (a late Roman gateway), remains of public halls incorporated in the cathedral and another church, baths, and the first-century amphitheatre; the modern bridge rests on Roman piers. Excavation has revealed an extensive temple quarter (already used in pre-Roman times) outside the town, comprising about seventy shrines, a theatre, and priests' dwellings. Pottery (including Samian ware) and cloth manufactured in Trèves were widely exported; the city had an Imperial mint from at least 296 and was also a centre of the Moselle wine trade.

Rau, s.v. 'Treveri' in *PW* vii 2320 ff. K. Schumacher, *Siedlungs- und Kulturgeschichte der Rheinlande*, Bd. ii (1923). O. B.

AUGUSTA (5) VINDELICORUM (now *Augsburg*) probably dates from c. A.D. 6–9, when the legion stationed at Oberhausen nearby was sent away. It lay at the centre of a network of important roads and was from the first the administrative and trading centre of Raetia (cf. Tac. *Germa.* 41). Hadrian raised it to municipal status (122–3), and after the reorganization under Diocletian it remained the civil capital of Raetia Secunda. It became the seat of a bishop. Nothing of Roman Augsburg remains above ground, but numerous sculptures and smaller objects have been found.

O. B.

AUGUSTALES, see RULER-CULT.

AUGUSTINUS, AURELIUS (St. Augustine, A.D. 354–430), was born at Tagaste in Numidia, 13 November A.D. 354, of a father Patricius, a heathen town-councillor in straitened circumstances, and a Christian mother, Monnica. Educated at Tagaste, Madauros, and Carthage, he was highly distinguished in his studies, more so in Latin than in Greek. His view of life was greatly influenced by Cicero's lost dialogue *Hortensius*, and he belonged to the Manichean sect for several years. He left Carthage to reside in Rome (383) and obtained a chair of rhetoric in Milan, 384. There the preaching and private influence of Ambrose (q.v.) helped towards his conversion, 386. Nor must the great influence of Neoplatonism on his mental make-up be ignored. In 387 after baptism he left Milan, and after a period in Rome reached his native country towards the end of 388. He received priest's orders, 391, at Hippo Regius, where he became co-bishop, 395, and subsequently sole bishop. Except for many short journeys in the interests of the Faith he remained there till his death, 28 Aug. 430.

With a loving and sympathetic nature, an excellent education, tireless industry, and an unwearied devotion to the Christian faith, when once he had surrendered to it, it is not surprising that Augustine has exercised on subsequent Christian thought a greater influence than any other Father. He fulfilled all the duties of a bishop, preaching and writing in a manner never surpassed.

His surviving works are in bulk about six times those of Cicero. In his *Retractationes* he reviewed his writings down to 427 and pointed out what he then regarded as errors in them. Here there is space to allude merely to the most important: *De Doctrina Christiana* (4 books); *Confessiones* (c. 400) in thirteen books, of which the first ten are autobiographical and the others concerned with the earlier chapters of Genesis; *De Catechizandis Rudibus*, a manual of Christian education; *De Trinitate* (completed 416), his greatest dogmatic work; *De Consensu Evangelistarum*, on the 'synoptic problem'; *De Civitate Dei* (22 books, 413–26), the most carefully written, the most learned, and the greatest of his works, in which ancient paganism may be said to have received its death-blow (see PHILON 4); *Enarrationes in Psalmos*, his longest work and his finest piece of exposition; *Tractatus in Evangelium Iohannis*, 125 sermons on the Fourth Gospel; *Contra Iulianum* and *Opus Imperfectum contra Iulianum*, a refutation of the most learned of the Pelagians; some 500 sermons, interesting also from the semi-colloquial latinity in which they abound; about 300 epistles, mostly of dogmatic import. It should be mentioned that Augustine was also a careful reviser of certain portions of the Latin Biblical text, such as the *Psalms* and the *Epistles of St. Paul*, in this respect quite worthy to be named beside Jerome, though his inferior in purely linguistic knowledge.

Works: Migne, *PL* 32–47; new sermons by G. Morin, *Miscellanea Augustiniana* i (1930); many works in *CSEL*; *Confessiones*, F. Skutella (Teubner, 1934), annotated, Gibb and Montgomery (1927); *De Civitate Dei*, Dombart and Kalb (Teubner), C. Weyman (Munich); *De Catech. Rud.*, J. P. Christopher (U.S.A. 1926); cf. E. Gilson, *Introduction à l'Étude de Saint Augustin* (1931). A. S.

AUGUSTODUNUM (modern *Autun*), a town in Gallia Belgica, founded c. 12 B.C. in the plain of the Arroux to replace the hill-town Bibracte. It was laid out on a large scale (area c. 490 acres), and important buildings (including two town gates) survive. It was celebrated as a centre of learning both in the first and in the fourth centuries A.D. It suffered for its fidelity to Claudius II (A.D. 269), and was ruined after a seven-month siege. Its restoration under Constantius I is celebrated by Eugenius, master of the local 'Schola Maenianae'. But the reduced perimeter of the town wall shows its depopulation.

H. de Fovigny, *Autun et ses Monuments* (1876); F. J. Haverfield, *Ancient Town Planning* (1913), 121–2; *Gallia*, *Mérid.* i, 337–43. C. E. S.

AUGUSTUS (63 B.C.-A.D. 14). C. Octavius, born on 23 Sept. 63 B.C., was brought up by his mother Atia (q.v.), Caesar's niece, as his father C. Octavius (q.v.) died in 59. His teachers gave him a taste for literature and philosophy, but Caesar himself introduced him to Roman life. Aged twelve, he pronounced the *laudatio* of his grandmother Julia; he was appointed pontifex; in 46 B.C. he accompanied his great-uncle in his triumph. Despite delicate health, he joined Caesar in Spain in 45. At Apollonia, where he had been sent with his friends, M. Agrippa and Salvidienus Rufus, to complete his studies, he learnt of Caesar's sudden death. The opening of Caesar's will revealed that Octavius had been adopted and made his chief heir by the dictator. He decided to return to Italy and to avenge Caesar. The unexpected situation imposed new duties and stimulated new ambitions. Caesar had lived long enough to afford an inspiring example, but had died soon enough not to destroy the Roman traditionalism of his heir. Octavius was cautious and superstitious, but exceptionally mature, clever, and decided. In Italy he gained Cicero's sympathy and Antony's distrust. He celebrated the *ludi Victoriae Caesaris* and, while linking himself with the moderate Republicans, did not overlook Caesar's veterans. During the conflict between Antony and Dec. Brutus (q.v. 6) he obtained from the Senate the rank of senator and propraetor, and emerged victorious from the war of Mutina (43 B.C.). But when the Senate refused their champion due honours, his legionaries forced his appointment as consul. He was recognized as Caesar's adopted son under the name of Gaius Julius Caesar Octavianus. He soon reached a compromise with Antony and M. Lepidus (q.v. 3). By the *Lex Titia* (27 Nov. 43) they secured official acknowledgment of themselves as *triumvirs rei publicae constituendae* for five years. Octavian obtained Africa, Sicily, and Sardinia as his provinces. When on 1 Jan. 42 Caesar was recognized as a god, Octavian became *divi filius*. In the triumviral proscriptions (q.v.) he was as ruthless as his colleagues: ambition and a touch of puritanical fanaticism made him cruel. During the campaign of Philippi he suffered from ill health. Thereafter he received Spain, Sardinia, and for a short time Africa, and supervised the distribution of land to the veterans. This task and the suppression of the rebellion of L. Antonius (q.v. 6), in which Salvidienus Rufus, M. Agrippa, and C. Maecenas became his close collaborators, strengthened his hold on Italy and Gaul (40 B.C.). In a transitory attempt to conciliate Sextus Pompeius, who held Sicily and Sardinia, Octavian married his relative Scribonia (q.v.). In Oct. 40 the pact of Brundisium sealed a new reconciliation with Antony, who married Octavian's sister, Octavia; Virgil's fourth Eclogue records the contemporary enthusiasm. Octavian divorced Scribonia and married Livia (q.v.), who shared his traditionalism and simplicity and thus became a permanent force in his life. Salvidienus Rufus was now condemned to death, since he was suspected of meditating revolt. In 38, when war with Pompeius broke out, Octavian probably assumed the *praenomen* of *imperator* (q.v.), which was ratified in 29 by the Senate. In 37 at Tarentum Antony and Octavian confirmed their agreement and had their triumviral powers extended for another five years (until Dec. 33?). With the defeat of Pompeius and the downfall of Lepidus (36) the West was in the hands of the *divi filius*.

2. Octavian was already winning over public opinion in Italy. He put himself under the protection of Apollo. He was perhaps granted *sacrosanctitas* or some other form of tribunician privilege. He disbanded legions and founded colonies. He saw definitely that his task was to establish peace and restore Italy. The opposition to Antony and Cleopatra reinforced his position at a moment in which the consciousness of a united Italy was just formed. Between 35 and 33 B.C. his campaigns

in Illyricum and Dalmatia, although not entirely successful, strengthened the eastern borders of Italy. Great attention was given to the adornment of Rome, especially under the aedileship of Agrippa (33 B.C.). Octavian's party had originally won more support from the Italian municipalities, but now a considerable part of the Roman aristocracy joined. Antony's callousness towards Octavia added a family justification to the rivalry. The triumvirate was not renewed, but Octavian, like Antony, did not abandon power and prepared for war against his partner. In Oct. 32 Italy and the western provinces swore allegiance to Octavian. They became his clients—an important step towards the Principate and a substitute for his triumviral powers. War was declared only against Cleopatra. In 31 Octavian's position became more regular when he assumed the consulship, which he held every year until 23 B.C.

3. Octavian overthrew Antony in the campaign of Actium (Sept. 31), founded Nicopolis (q.v.), and ascribed his success to Apollo. In August 30 he became master of Egypt and its treasure. His arrangements in the East mainly preserved the dispositions of Antony. In 30 libations for his *genius* were granted by the Senate; his tribunician competence was perhaps extended; he was authorized to create patricians. In 29 he celebrated his triumph and the temple of Janus was closed. Many legions were disbanded; new distributions of land were granted. In 28 Octavian held the census with Agrippa, reduced the Senate to some 800 members (later to 600), was appointed *princeps senatus*, revived ancient religious ceremonies, and dedicated a temple of Apollo on the Palatine. His policy was increasingly founded upon his prestige as victor, peace-bringer, and defender of Roman tradition. He was teaching the Italian people that Roman traditions were their traditions and old Roman virtue the eternal foundation of the Roman State. Poets, historians, and artists were at his side. The Republic had to be solemnly restored, because the Republic was deeply rooted in tradition. Yet the restoration had to be reconciled with the obvious fact that Octavian never seriously thought of laying down his power. He effectively controlled the State through his money and his soldiers (see *ARMIES, ROMAN*, 4).

4. On 13 Jan. 27 B.C., Octavian transferred the State to the free disposal of the Senate and People, but he received Spain, Gaul, and Syria (in addition to Egypt) for ten years as his province with the greater part of the army, while preserving his consulate (see *IMPERIUM*). On 16 Jan. he received among many honours the title Augustus (see following article), which proclaimed his superior position in the State. The month Sextilis was called Augustus. A golden shield was set up in the Senate-house with an inscription commemorating his valour, clemency, justice, and piety. Possibly he was granted other powers. The Republic was restored, because his powers depended on the Senate and were formally to last only for ten years. Yet the forces in his hands were overwhelming and supported a moral authority even greater. Half the Empire had already sworn allegiance to him. The oath was extended to the other provinces, and probably the soldiers took a special oath of allegiance to him. In the East the cult of Augustus was associated with the existing cult of Roma. In the West many forms of worship, especially of his *genius*, were widespread.

5. Expansion of the frontiers and reinforcement of the Roman penetration in semi-conquered territories were equally considered. The frontiers between Egypt and Ethiopia were secured by the campaigns of Cornelius Gallus (29 B.C.) and C. Petronius (25). Augustus himself directed the main phase of the final submission of Spain and the urbanization and organization of Spain and Gaul (27-25). In 25 Terentius Varro (q.v. 4) Murena crushed the Salassi in Val d'Aosta, but Aelius Gallus failed to

conquer Arabia Felix (25-24). Galatia was annexed (25) and Juba appointed king of Mauretania. These were difficult years: Augustus was critically ill in 25 and 23 B.C. In 26 Cornelius Gallus (q.v. 3) was condemned. In 23 the conspiracy of Terentius Varro Murena was discovered and young Marcellus (q.v. 7), who had married Augustus' daughter Julia in 25, died. As Augustus had no son, the problem of a successor was urgent. Constitutional reforms seemed necessary. In 24 Augustus had been granted dispensation from certain laws. In July 23 he resigned the consulship, but obtained an *imperium proconsulare maius* in the senatorial provinces and the *tribunicia potestas* for life; this included the absolute right of veto and involved complete control of the State—the very end of the Roman Republic. Agrippa was honoured with an eastern command (23) and the hand of Julia (21); their sons Gaius and Lucius were eventually regarded as the future heirs. In 22 Augustus refused the dictatorship, but accepted the *cura annonae*; Gallia Narbonensis (in 22) and Hispania Baetica were transferred to senatorial administration. Augustus' travels in Sicily, Greece, and Asia (22-19) were probably of great importance for the civil organization; the most apparent result was the reconciliation with Parthia, which recognized the Roman protectorate in Armenia. An expedition against the Garamantes in Africa was successful (19). Possibly some consular privileges were granted to Augustus by the Senate in 19. Moral and religious reforms marked the years 18 and 17 B.C. The *lex Iulia de adulteriis* made adultery a public crime; the *lex Iulia de maritandis ordinibus* made marriage nearly compulsory and offered privileges to married people. A *lex sumptuaria* tried to reduce luxury. Members of senatorial families were forbidden to marry into families of freedmen. In 17 the *ludi saeculares* were celebrated. In 18 the powers of Augustus were extended for five years, while a coregency was conferred upon Agrippa, and a new *lectio senatus* was held. In 17 Augustus adopted Gaius and Lucius, and in 14 he gave the Bosphoran kingdom to Polemo of Pontus—an unsuccessful settlement. Three years of residence by Augustus in Gaul (15-13) marked the importance of the organization of Gaul and its frontiers. T. Statilius Taurus was left in Rome as *praefectus urbi*. In 16-15 Raetia and Noricum were annexed as Imperial provinces. About 15-14 the Imperial mint of Lugdunum was founded, and the Senate was reduced to controlling the copper coinage. At latest from 12 B.C. (when a new *lectio senatus* was made), the organization of the senatorial and equestrian orders and the *iuvenes* (qq.v.) was complete. In 13 the powers of Augustus and Agrippa were extended for five years. Agrippa's death in 12 was a blow. The death of Lepidus left the post of Pontifex Maximus open: Augustus, the head of the Roman Empire, became also the head of the Roman religion (12).

6. The substitution of Tiberius' and Drusus' influence for that of Agrippa was marked by new military activity. In several campaigns the frontier of Illyria was advanced to the Danube (13-9 B.C.) and later Moesia was made a province. Meanwhile Drusus attempted to advance the Rhine frontier to the Elbe. In 9 the *Ara Pacis* (q.v.) was dedicated and (in 7?) the *collegia* (see *CLUBS, ROMAN*) were revised. In 8 the powers of Augustus were extended for ten years. Some time between 12 B.C. and A.D. 1 the Homonadeis in southern Galatia were defeated and in 6 Paphlagonia was added to Galatia. In 6 Tiberius received *tribunicia potestas*, but shortly afterwards retired to Rhodes through jealousy of Gaius Caesar, who in 5 was proclaimed *princeps iuventutis*.

7. The great creative period of the life of Augustus was over. His best collaborators were dead, including the poets, Virgil and Horace. Livy was left to witness his decline, Ovid to experience the severity of his moral code. Augustus politically favoured the

upper classes, but he was careful to appeal in some measure to every class. The division of Rome into fourteen *regiones* in 7 B.C. gave the opportunity for associating the cult of the *genius* of the Emperor with the popular cult of the *Lares Compitales*. By the *leges Fufia Caninia* (2 B.C.) and *Aelia Sentia* (A.D. 4) manumission was limited and certain classes of slaves were excluded from the possibility of Roman citizenship. Augustus was also conservative in bestowing citizenship on provincials. In 2 B.C. he was saluted as *pater patriae*; he also banished Julia (q.v. 2). The deaths of Lucius Caesar (A.D. 2) and Gaius Caesar (A.D. 4) thwarted Augustus' plans for the succession, and he was compelled to adopt Tiberius, who again received *tribunicia potestas* for ten years. In A.D. 3 Augustus' own powers were extended for ten years. In A.D. 6 a new system was introduced to pay discharged soldiers from an *aerarium militare* (see *AERARIUM*); this superseded the necessity of founding military colonies, the last revolutionary survival. The privileged position of Italy in taxation was reduced by the imposition of two new taxes on legacies and sales. A body of seven *cohortes of vigiles* (q.v.) was established. In foreign affairs the year A.D. 6 was marked by the annexation of Judaea as a province and by the Pannonian rebellion which suddenly revealed the weakness of the Roman army, which had been reduced to twenty-eight legions (apart from the *auxilia*) and had been posted on the borders without a central reserve. Tiberius took three years to crush the rebellion (6-9), while the loss of three legions under Varus (q.v. 2) in Germany in 9 confirmed the insufficiency of the military organization. Augustus was shocked and decided to abandon Germany and to retain only twenty-five legions: conquest would involve increasing the army. The year A.D. 9 saw the last social law (*lex Papia Poppaea*), which mitigated the *lex Iulia de maritandis ordinibus* and offered further inducements to having children. In A.D. 13 Tiberius received *tribunicia potestas* and *imperium proconsulare* for another ten years. Augustus himself was granted ten more years of power. In April A.D. 13 he deposited his will in the house of the Vestals. It included a *breviarium totius imperii* (a summary of the military and financial resources) and the so-called *Monumentum Ancyranum* (q.v.). His mausoleum had been ready for many years. He died on 19 Aug. A.D. 14 at Nola, and on 17 Sept. the Senate decreed that he should be accepted among the gods of the State.

8. He had preserved the calm beauty of his person until his old age. He had never forgotten his studies, but no philosophic influence is demonstrable in his government. He wrote a pamphlet against Brutus about Cato Uticensis, an exhortation to philosophy, an autobiography dealing with the period before about 25 B.C., a biography of Drusus, a short poem about Sicily, a book of epigrams—all lost—and planned a tragedy on Ajax. His style was clear and simple, but, if necessary, majestic as his mind. When he entered political life, republican liberty was already dead. He tried to establish a government in which an accurate balance of classes and of countries gave the predominance to Roman tradition and Italian men without offending the provinces and without diminishing the Greek culture. He gave peace, as long as it was consistent with the interests of the Empire and with the myth of his glory. But he intended especially that the peace was to be the internal peace of the State. He assured freedom of trade and wealth to the upper classes. He did his enormous work in a simple way, living a simple life, faithful to his faithful friends. His superstition did not affect the strength of his will. Yet, as he never thought of real liberty, so he never attained to the profound humanity of the men who promote free life.

AUGUSTUS, AUGUSTA (Gk. Σεβαστός, Σεβαστή). On 16 Jan. 27 B.C. Octavian received the title 'Augustus' from the Senate, wisely preferring this to the alternative offer of 'Romulus'. The word *augustus* had been used in Republican times at Rome only in a religious context—'sancta uocant augusta patres', Ovid wrote (*Fast.* i. 609)—and was readily contrasted with *humanus*. Though Augustus apparently intended that the title should be carried by his successor (Suet. *Tib.* 26), Tiberius at first hesitated to accept it (Dio Cass. 57. 2. 1; 8. 1. Compare the similar conduct of Vitellius in A.D. 69, Tac. *Hist.* 2. 62; 80.). It was held by all Roman emperors except Vitellius, and never by any other member of the Imperial family. The title 'Augusta' was bequeathed by Augustus to his wife Livia, granted by Gaius to his grandmother Antonia, by Claudius to his wife Agrippina, and by Nero to Poppaea. From Domitian's time it was normally conferred, on the initiative of the Senate, upon the wife of the reigning emperor. J. P. B.

AULE, see HOUSES, GREEK.

AULIS, where the Greek fleet collected before sailing to Troy, is a small hill on the Euripus with a little landlocked harbour north and a deep bay south. The emigrants to Aeolis also claimed to have sailed thence (Strabo 9. 401), and Hesiod names it as a port (*Op.* 651); but it had no important later history. T. J. D.

AULOS, see MUSIC, § 9.

AURELIA, Caesar's mother, of the house of Cotta, detected P. Clodius (q.v. 1) at the celebration of the Bona Dea. She died in 54 B.C.

AURELIANUS, LUCIUS DOMITIUS (c. A.D. 215–75), played a prominent part in the military plot that destroyed Gallienus (q.v., early A.D. 268). Appointed by Claudius II to the chief command of the cavalry, he served with distinction against the Goths, and, after the death of Claudius, was raised to the throne by the army in place of Quintillus (c. Mar. 270).

2. Barbarian invasions claimed his first attention. He defeated the Vandals in Pannonia and then repulsed a dangerous attack on Italy by the Juthungi, after a serious defeat at Placentia. A victory over the same people on the Danube, usually placed earlier, may belong to this same campaign. He then visited Rome, punished disaffected senators, quelled a serious rising of the 'monetarii', and surrounded Rome with walls, to prevent a surprise attack by the barbarians (see WALL OF AURELIAN). He also disposed of three rivals in the provinces—Septimius, Urbanus, and Domitianus.

3. Zenobia (q.v.), ruling Palmyra for her young son, Vaballathus, had occupied Egypt and Asia Minor up to Bithynia. Coins were struck for Vaballathus at Alexandria and Antioch as colleague of Aurelian. But the Emperor refused the compromise. He marched eastward, stopping on the way to repulse the Goths on the Danube

and withdraw the Romans from old Dacia to new Dacia on the right bank, and was only delayed for a short time by the siege of Tyana. The main Palmyrene army under Zabdas met him north of Antioch on the Orontes. Aurelian won a complete victory, occupied Antioch, stormed a post at Daphne, and advanced to Emesa. Here he again triumphed with some difficulty over the Palmyrene heavy cavalry. The provincials were won over by Aurelian's leniency, and Zenobia now withdrew to Palmyra. Aurelian followed and began the siege. Hampered at first by the desert tribes, Aurelian soon broke down resistance. Zenobia was captured on her way to seek aid from Persia, and Palmyra surrendered. At Emesa Aurelian held a trial and condemned Zenobia's chief adviser, Longinus, to death (summer 272).

4. Marching back westward, Aurelian defeated the Carpi on the Danube, but was recalled by the revolt of Palmyra. Striking without delay, Aurelian deposed the new king, Antiochus, and reduced Palmyra to a village. A wealthy merchant of Alexandria, Firmus, who tried with the aid of the Blemmyes to save Zenobia's cause, was soon crushed.

5. Aurelian now turned west and ended the Gallie Empire at Châlons, assisted by the desertion of the Emperor Tetricus himself (early 274). Tetricus, led with Zenobia in Aurelian's triumph, was then appointed 'corrector Lucaniae'.

6. Early in 275 Aurelian set out against Persia, but was murdered at Caenophrurum, near Byzantium, in a military plot, fostered by his secretary Eros (Mnesteus?). Some six months passed before Tacitus was appointed to succeed him—the army offering the choice to the Senate, the Senate shirking the dangerous responsibility.

7. Aurelian was an able but stern administrator. He suppressed informers and peculators, cancelled arrears of debts, issued bread in place of corn to the poor of Rome, and distributed free oil, pork, and salt. He seems to have given public organization to the guilds of bakers and shippers. He reformed the coinage, issuing new money for the old. In 274 he instituted the State cult of *Sol dominus imperii Romani*, with *pontifices* of senatorial rank. To the Senate he was a severe *paedagogus*. Towards the Christians he was at first not unfriendly and decided the strife between Paul of Samosata and Domnus for the see of Antioch in favour of the latter. But at the time of his death he was planning to renew the persecutions. Excessive severity marred a career of notable public service.

H. Mattingly, *CAH* xii. 297 ff.; Parker, *Roman World*, 194 ff.; L. Homo, *Essai sur le règne de l'empereur Aurélien* (1904); E. Groag, *PIV*, s.v. 'Domitius (36)'. H. M.

AURELIUS (1), MARCUS (*M. Annii Verus*) (A.D. 121–80), was son of Annii Verus (of consular Spanish stock, and brother of Faustina the Elder, q.v.) and Domitia Lucilla. He early gained the favour of Hadrian, who justly nicknamed him 'Verissimus', made him a Salian priest when only eight, betrothed him in 136 to the daughter of L. Aelius (q.v. 4), and supervised his education, the best teachers of rhetoric, grammar, philosophy, and law being employed to form his frank, serene, and sensitive character. With Aelius' son Lucius (= L. Verus, q.v.), he was adopted (as 'M. Aelius Aurelius Verus Caesar') by Antoninus Pius (q.v.) in 138. Quaestor in 139, and consul I with Pius 140, he was betrothed to Pius' daughter (his own cousin Faustina the Younger, q.v.), whom he married in 145, as cos. II; a daughter's birth (146) brought him also tribunician and proconsular power. Now aged twenty-five, a son-in-law of Pius, himself a father, and enjoying limited co-government with Pius, Marcus held a position clearly excelling that of Lucius (not cos. I until 154). This student, frail and yet austere athletic, continued to live with Pius in close friendship and trust, ever loyal and deferential.

About 146-7 he deserted rhetoric, taught by his faithful Cornelius Fronto, for Stoic philosophy, which inspired all his future life.

2. Succeeding, as M. Aurelius Antoninus, on 7 Mar. 161, Marcus immediately petitioned the Senate that L. Verus, his fellow-consul, should receive (as L. Aurelius Verus) tribunician and proconsular power, and the title 'Augustus', in joint authority with himself; for the first time the Principate was collegiate, and the tie was emphasized by Verus' betrothal to Marcus' daughter Lucilla (q.v.), commemorated by a fresh alimentary institution. Revolt in Britain and Chattan aggression were settled; but in the East the Parthians, seizing Armenia, defeated two Roman armies and, in March 162, Marcus sent Verus thither with a strong force. Indulgent and dilatory, Verus did not arrive until 163; but Statius Priscus soon recovered Armenia (163-4), and Avidius (q.v.) Cassius invaded Mesopotamia and made it a Roman protectorate (166). Returning, Verus' troops brought a pestilence which swept the world. German tribes poured across the upper and lower Danube about 166, attacking even north Italy. Two new legions were hastily recruited; able generals and Marcus' insistence on a strong Dacia, now made a 'consular' province with two legions, saved a critical situation. Marcus and Verus reached Aquileia in 168; the invaders sought terms, and Italy was freed. Returning to Rome with Marcus in early 169, Verus died of apoplexy, relieving Marcus of an embarrassing partner.

3. Marcus now contemplated the permanent subjection of central and south-eastern Europe north of the Danube. After auctioning Imperial treasures to replenish the treasury, and marrying Lucilla to Ti. Claudius (q.v. 15) Pompeianus, he left Rome (169). From 170 to 174 he fought the Marcomanni and Quadi; and he successfully attacked the Sarmatian Iazyges (175). 'Marcomannia' and 'Sarmatia' came near provincialization. But plans were shelved when Avidius (q.v.) Cassius revolted; and Marcus merely defined a neutral zone north of the Danube, and settled, in depopulated areas south of the river, semi-romanized tribesmen under obligation to defend the frontiers—the first step in the de-romanization of the frontier-provinces. Cassius, proclaimed emperor (175) in Syria and Egypt, was soon murdered. But Marcus set out in alarm for Syria. In 176 he visited Egypt (uneasy since a Delta revolt in 172), and returned, via Syria, to Rome, to celebrate a great triumph. In 177 German tribes again vexed Pannonia, and Marcus, leaving Commodus (now 'Augustus', consul, holder of tribunician and proconsular power, and married to Crispina) in Rome, went north, defeating the Marcomanni (178). Now he could have possessed their territory, with that of the Quadi and Iazyges; but he died, swiftly and peacefully, on 17 Mar. 180. Consecrated by acclamation, he was sincerely mourned; the famous sculptured column was set up to commemorate his exploits.

4. Ironically, war thus dominated the philosopher's reign. To this is due much of the intensity of his 'Meditations'—devotional reflections, compiled in solitude during his campaigns, and breathing high Stoic principles. But Stoicism endangered Empire: 'self-sufficiency' did not encourage wide administrative experience based on personal contact: hence Marcus' faulty judgement in choosing Commodus as successor, and hence, too, increased bureaucracy. Circuit judges (*iuridici*) were revived for Italy (see HADRIAN); *alimenta*, *fiscus*, *annona*, and even the care of minors, were controlled by permanent officials; registration of free-born children was compulsory; the various grades of officialdom received distinguishing titles. Marcus' obvious duties were faithfully discharged: jurisdiction claimed his full care; and Senate and Knights were honourably treated. But generally he was an improver rather than an innovator; foresight and imagination were lacking. Long wars and

many largesses (seven—a total of 850 *denarii* per head) emptied a treasury which auctions could not relieve; even the silver coin in currency dropped sharply in volume. The plague further depressed a weakening economy; local towns (their finances tottering) had commissioners imposed; and municipal initiative declined.

BIBLIOGRAPHY

ANCIENT SOURCES. (a) *Literary authorities*. The substantive but uncritical life of Marcus in the *Historia Augusta* is confused by interpolation. Copious excerpts from bks. 71-2 of Dio Cassius furnish useful material. The lives of L. Verus, Avidius Cassius, and Commodus in the *Historia Augusta* bear on that of Marcus. Minor references in Aurelius Victor and Eutropius. The *Meditations* of Marcus and Fronto's *Letters* are valuable evidence for Marcus' personal character. See A. S. L. Farquharson, *The Meditations of the Emperor Marcus Antoninus*, 2 vols. (1945).

AURELIUS (2) ANTONINUS, MARCUS (A.D. 188-217), commonly called CARACALLA, became emperor in A.D. 211 (for early career see SEPTIMIUS SEVERUS, PLAUTIANUS).

After Septimius' death he made peace with the Caledonians and returned to Rome, where he assassinated his brother Geta, and became sole emperor in defiance of his father's wishes (212) (see GETA 1). To secure his position he bought the support of the Praetorians and the Legio II Parthica, and persecuted his brother's partisans.

In 213 Caracalla set out for Germany. Realizing that the army was his mainstay, he sought by indulgences to his soldiers to win for himself a popularity which his cruel and cowardly nature did not spontaneously arouse. Yet he was not devoid of strategical ability. The stone wall from Hienheim to Lorch was completed, and the Pfahlgraben in Upper Germany received its final form. In September the Alamanni were defeated and the Cenni (? Chatti) bought off by a subsidy.

Caracalla's next objective was the East, where in his assumed role of a second Alexander he hoped to realize his Utopia of a Romano-Iranian Empire. The year 214 was spent on the Danube fighting the Carpi and mobilizing an army, which included a phalanx of 16,000 equipped on the Macedonian model. Reaching Antioch in 215 the Emperor delayed his declaration of war against Parthia till the next year owing to disturbances in Alexandria. In 216 he invaded Media and spent the winter at Edessa preparing for a more intensive campaign, but was assassinated near Carrhae in April 217 (see OPELLIUS MACRINUS).

Caracalla's chief reform was his edict granting citizenship to all communities inside the Roman Empire except the *dediticii* (q.v. and see CITIZENSHIP, ROMAN). To pay for his extravagances (e.g. Baths at Rome) he increased by 5 per cent. the taxes on inheritances and manumissions, and resorted to a policy of monetary inflation by the issue of a new coin called the *Antoninianus*.

AURELIUS (3) VICTOR, SEXTUS, an African, governor of Pannonia Secunda, A.D. 361, and *praefectus urbi*, 369, published *Caesares*, probably in 360, from Augustus to Constantius (360). Based on Suetonius, this Imperial history treated biographical material after a moralizing fashion, in the tradition of Sallust and Tacitus; the writer is heathen, interested in prodigies. The *Origo Gentis*

Romanae and *De Viris Illustribus* (Republican biography) associated with the *Caesares* in a *historia tripartita* are not by his hand; nor is the *Epitome de Caesaribus* (to Theodosius I, A.D. 395), which at the beginning follows the *Caesares*.

Ed. F. Pichlmayr (1911).

A. H. McD.

AURELIUS, see also ANTONINUS, CARINUS, CARUS, COMMODUS, COTTA, MAXENTIUS, NUMERIANUS, PROBUS, SEVERUS.

AUREOLUS (proclaimed emperor A.D. 268), commander of the new cavalry corps based on Milan, helped Gallienus (q.v.) to overthrow Ingenius in Pannonia (A.D. 258-9) and then, in 261, through his lieutenant Domitianus, crushed the Macriani, advancing westwards, on the borders of Thrace. Serving with Gallienus in Gaul in 263, by slackening his pursuit he allowed Postumus (q.v.) to escape. In 268, while Gallienus was fighting the Goths, Aureolus revolted in Raetia. Gallienus, returning, defeated him and besieged him in Milan. Coins of that mint, struck in the name of Postumus, prove Aureolus' alliance with the Gallic emperor. When Gallienus was assassinated, Aureolus surrendered to Claudius, but he had been proclaimed emperor during the siege, and his own soldiers killed him.

H. M.

AURUM CORONARIUM, a contribution in gold exacted by generals of the Roman Republic for the provision of crowns at their triumph. This gold seems to have been provided partly by the conquered people and partly by the province which the *triumphator* had governed. A law of Caesar (59 B.C.) enacted that it should not be demanded until a triumph had been formally decreed. Augustus prided himself on refusing *aurum coronarium* from the cities of Italy (*Mon. Anc.* 21). Later emperors accepted it fairly freely from the provinces (Spain and Gaul provided crowns to celebrate the conquest of Britain), but seldom from Italy. In the fourth century the burden of providing it fell upon the *decuriones* (q.v.).

G. H. S.

AUSONES, see CAMPANIA.

AUSONIUS, DECIMUS MAGNUS (d. c. A.D. 395), was born at Bordeaux about the beginning of the fourth century. His studies were pursued at Bordeaux and Toulouse. For thirty years he taught in his native town, first as *grammaticus*, then as *rhetor*. Distinguished enough to attract the attention of the court, he was called by Valentinian to Trèves to be tutor to Gratian. He was on the staff of father and son in the campaigns against the Alamanni (368-9). After holding minor positions he became governor of Gaul, and later of other provinces. Finally, in 379, he was made consul. After the murder of Gratian (383) he returned to his early home, and added to the number of his poems, enjoying epistolary intercourse with various eminent men.

His numerous poems, written in various metres (hexameter, elegiae, hendecasyllabic, etc.), do not come so near the classical standard as those of Claudian, but are nevertheless of considerable interest, both in subject-matter and style. There are over a hundred epigrams, some of which are in Greek and others translated from Greek. There are twenty-five letters. His correspondence with Paulinus (q.v.) of Nola is the most notable part of these. The *Ephemeris* includes many poems in various metres, dealing with daily life. The *Parentalia* is a collection of short poems in memory of deceased relatives of the poet. The *Commemoratio Professorum Burdigalensium* is of great interest for the history of education. The *Ordo Nobilium Urbium* describes twenty notable cities of the Roman world. This account by no means exhausts the list of the

minor poems, throughout which the author's minute knowledge of Virgil is apparent and his Christian faith is not obtruded. See also CENTO (LATIN).

His most important poem is the *Mosella*, still a charming guide-book to that river. It is in 483 hexameters, and describes in considerable detail the various fish to be found in it as well as some of the fine buildings on the banks and other features, not forgetting the vines, to be expected in such a laudatory poem.

Ed. R. Peiper (Teubner, 1886); H. G. Evelyn White, 2 vols. (Loeb, 1919-21); *Mosella*, C. Hosius (3rd ed., 1926). A. S.

AUSPICIUM, a term used by the Romans for certain types of divination, particularly from birds (*avis, specio*), designed to ascertain the pleasure or displeasure of the gods towards matters in hand. Despite ancient and modern attempts at definition, *auspicia* are hardly to be differentiated from *auguria*, and are not limited to signs derived from the number, position, flight, cries, and feeding of birds—particularly the sacred chickens, for which see *AVGURES*—but extend to other animals (Paul. ex Fest. p. 244 M. s.v. *pedestria auspicia*) or to inanimate phenomena. Festus and Paulus, pp. 261-262 M., record five types: *ex caelo, ex avibus, ex tripudiis, ex quadripedibus, ex diris*. Private auspices were early largely abandoned, save for weddings (Cic. *Div.* 1. 28), but public ones, taken by magistrates possessing the *ius auspiciorum* (or *specio*) were important in civil and military life, and were retained by Cicero in *Leg.* 3. 10. They appear at elections, inauguration into office, entrance into a province, etc., and in the conduct of wars the phrase *ductu auspicioque* frequently recurs (*Thes. Ling. Lat.* v. 2171, 8-27). Since ex-officials, however, and, later, imperial legates lacked the *ius auspiciorum* (Cic. *Nat. D.* 2. 9, *Div.* 2. 76-7), even public auspices eventually fell into neglect, and at times pains were taken to avoid observing signs divinely vouchsafed (Cic. *Div.* 2. 77-8).

Observation was usually made from a *tabernaculum*, by a professional attendant of the magistrate (Cic. *Div.* 2. 71-2 preserves the ritual in the case of the sacred chickens), and *auspicia minora* (of the lesser magistrates) were sometimes superseded by *auspicia maiora* of consuls, praetors, or censors (Gell. 13. 15. 4). *Vitium*, a ritual defect or oversight, often nullified auspices, but *perennia*, or rites at the crossing of streams (Cic. *Div.* 2. 77, Serv. *Aen.* 9. 24) provided against one type of *vitium*. Recrossing the *pomerium* (the bound between the civil and military spheres) required the taking of new auspices in order to avoid *vitium*, a famous instance being narrated by Cic. *Div.* 1. 33. For the military *auspicia ex acuminibus* see especially Cic. *Div.* 2. 77 and Pease ad loc.

For the subject in general and for bibliography, see DIVINATION.

A. S. P.

AUTOCRATES, called an Athenian writer of Old Comedy by Suidas, who adds (no doubt wrongly) *ἐγραφε καὶ τραγωδίας*. We know of only one play, *Τυμπανιστῆς* ('The Drummers').

FGC i. 270; CAF i. 806.

H. J. R.

AUTOLYCUS (1), in mythology, maternal grandfather of Odysseus. He 'surpassed all men in thievery and (ambiguous) swearing', by favour of Hermes (whose son he is in later accounts), *Od.* 19. 394 ff.; one of his thefts, *Il.* 10. 267; later stories in von Sybel in Roseher's *Lexikon*, s.v.

H. J. R.

AUTOLYCUS (2) of Pitane (fl. c. 310 B.C.), astronomer and author of the earliest Greek mathematical text-book that has come down to us entire, *On the Moving Sphere* (*Περὶ κινουμένης σφαίρας*), a geometrical work treating of the poles and the principal circles of the sphere; many of its propositions are used by Euclid in his *Phaenomena*. Another work of Autolycus, in two books, is *Περὶ ἀνατολῶν καὶ δύσεων*, *On risings and settings* ('true' and 'apparent').

Both works are edited by F. Hultsch (Teubner, 1885); see also Pappus (bk. 6) on the 'Little Astronomy' (*Μικρὸς ἀστρονομούμενος*). Autolyeus, in a controversy with Aristotherus, criticized Eudoxus' hypothesis of concentric spheres on the ground that it did not account for the planets being at different distances from the earth at different times (Simpl. on *De Caelo* 504-5 Heib.).

PW ii. 2602.

T. H.

AUTOMEDON, in mythology, Achilles' charioteer, son of Dioreas (II. 17. 429 and often); hence by metonymy, any charioteer, as Juvenal 1. 61.

AUTONOMY, one of the leading ideas of the Greek *polis* (q.v.), meant to the *polis* not merely the right of self-government, but the right and the possibility of using its own laws and constitution. Therefore in the Peloponnesian War Sparta pretended to be fighting for the autonomy of the Greek States, which in the Athenian Empire had been forced to establish democratic governments. Autonomy was mostly connected with, but not clearly distinguished from, the idea of freedom (*eleutheria*). Though mainly concerning the interior life of the *polis*, autonomy was, since the fourth century B.C., an instrument of inter-Hellenic policy, and the chief reason of the failure of all attempts to create a Greek empire. As Persian and Macedonian supremacy over Greek towns was mainly based on local tyrants or oligarchies, autonomy thereafter implied a free democratic constitution. Under the Hellenistic kings, however, the autonomy of the Greek States was often very precarious, and sometimes it did not exclude even a royal garrison, compulsory taxation, or actual supervision by a king's official.

V. Ehrenberg, *Der Griechische Staat* (Gereke-Norden, *Einleitung in d. Altertumswissenschaft* iii (part 3), 43 f., 82 ff.); A. Heuss, *Stadt und Herrscher des Hellenismus*, 240 ff.

V. E.

AUTRONIUS PAETUS, **PUBLIUS**, was consul designate with P. Cornelius Sulla in 66 B.C., but their election was declared void because of bribery. He joined Catiline in the two unsuccessful conspiracies. He escaped arrest in 63, but was condemned in 62. He went into exile at Epirus, where he still was during Cicero's banishment.

A. M.

AUXESIA and **DAMIA**, obscure goddesses of fertility (Hdt. 5. 82. 2 ff.), worshipped at Epidaurus and Aegina, with ritual abuse (ibid. 83. 4); at Troezen, with ritual stone-throwing (*Λιθοβολία*, Paus. 2. 32. 2), where the local legend made them Cretan virgins stoned in a disturbance. See **BONA DEA**.

H. J. R.

AUXILIA. During the last two centuries of the Republic Rome made good her deficiency in cavalry and light-armed troops with contingents raised outside Italy. These *auxilia* greatly increased in number during the civil wars and formed the nucleus of the permanent auxiliary army established by Augustus (see **MERCENARIES**). This force was recruited from provincials who had not yet received the franchise. Thus in the Julio-Claudian period Gallia Comata and Hispania Tarraconensis provided a large quota of *auxilia*, while Narbonensis and Baetica, two romanized provinces, were areas for legionary recruiting. Service was sometimes, as with the Batavi, accepted in lieu of tribute. At first the different units were normally stationed near their homes, but after the revolts in Pannonia (A.D. 6-9) and of Civilis (A.D. 69) this policy was gradually abandoned. Spanish auxiliaries are found in Illyricum as early as the Principate of Tiberius, and after A.D. 70 many German and Gallic units were sent to Britain. As their numbers were kept up by local recruiting, the *auxilia* gradually lost their native character, and the titles borne by the units ceased to indicate the origin of their soldiers. Exception must be made of the Oriental cohorts of archers, which were maintained at strength by drafts from their home countries.

2. The auxiliary units bore titles which were normally geographical (*Asturum, Lusitanorum, Gallica*), but sometimes honorific (*Augusta, Pia, Fidelis*), or indicative of the general or *princeps* who raised them (*Siliana, Aelia*). They were numbered, but not consecutively, a fresh series starting when new regiments were enlisted some time after the original levy. This inconvenient system renders difficult any assessment of the total strength of the *auxilia*. Probably it ranged from 130,000 under Augustus to approximately 225,000 in the second century.

3. The *auxilia* comprised both cavalry and infantry, the former organized in *alae*, the latter in *cohortes*, either 1,000 or 500 strong, while there were some mixed units (*cohortes equitatae*). They were commanded by *praefecti*, who at first were commonly tribal chiefs or ex-centurions and later young equestrians. Under them were centurions and decurions.

4. After twenty-five years' service, which in the second century coincided with his discharge, an auxiliary soldier received the franchise for himself and his descendants. After A.D. 140 these privileges were restricted to personal citizenship and legalization of future but not existing offspring.

5. During the second century the *auxilia* became assimilated to the legions and after Caracalla's edict their distinctive character was largely lost. In the barbarian invasions of the third century many units were destroyed, and in the Constantinian reorganization *alae* and *cohortes* are relegated to the *Limitanei*. See **ALAE**, **COHORS**, **DIPLOMA**, **PRAEFECTUS**.

G. L. Cheesman, *The Auxilia of the Imperial Roman Army* (1914); W. Wagner, *Die Dislokation der römischen Auxiliarformationen in den Provinzen Noricum, Pannonien, Moesien und Dakien* (1938).

H. M. D. P.

AUXUME, see **AXUMIS**.

AVENTINE, an abrupt plateau overlooking the Tiber and separated from the other hills of Rome by the Murcia valley. It formed *regio* XIII of Rome, while an eastward lobe (*regio* XII, *Piscina publica*) was known as *Aventinus* to Dionysius, Varro, and Festus, and later as *Aventinus minor*, though perhaps not originally so called (Cic. *Div.* 1. 107, quoting Ennius). The hill was *ager publicus* (q.v.), given to the *plebs* for settlement in 456 B.C. It already held two pre-Republican temples, to Diana, patroness of a Latin league, and to Luna; also the Loretum, reputed a regal tomb, and the *armilustrum* (where arms were ritually purified). These connexions are with Latium rather than Rome, and the hill lay until A.D. 49 outside the *pomerium* (q.v.). Other early temples were those of Juno Regina (396-392 B.C.) and Jupiter Libertas (238 B.C.), the latter housing Varro's library presented by Asinius Pollio. Here also dwelt Ennius (q.v.), in the plebeian quarter whose early and thriving prosperity is represented by the *clivus Publicius*, a street development of 238 B.C.

I. A. R.

AVERNUS, a deep lake near Puteoli. Its unusual name (fancifully derived from *ἀ-εργία*), its reputed immense depth, and its situation amid gloomy-looking woods and mephitic exhalations inspired the belief that it led to the underworld (Strabo 5. 244; Verg. *Aen.* 6. 237 f.; Lucr. 6. 740 f.; Livy 24. 12). Agrippa temporarily remedied its lack of a natural outlet.

E. T. S.

AVERRUNCUS, minor Roman deity who averts (*averruncat*) evil, Varro, *Ling.* 7. 102.

AVIANUS (fl. c. A.D. 400). Roman fabulist; he dedicated his forty-two fables in elegiac metre to Macrobius (q.v.) Theodosius, author of the *Saturnalia*. Nothing more is known of his life. His chief source is the Greek fabulist, Babrius. With few exceptions, his fables are expanded

paraphrases of their Babrian prototypes; and the exceptions are probably based on lost fables of Babrius. A.'s style is picturesque; he expands his models by elaborating the descriptive element; but his effort to introduce Virgilian and Ovidian phrases produces a strained and sometimes mock-heroic effect. Mingled with classical echoes, there are frequent instances of a degenerate Latin (R. Ellis ed. xxxvi ff.). The metre is correctly Ovidian except for a few lapses showing the decline of metrical strictness in A.'s age. Paraphrases, scholia, and quotations show that A. was popular in medieval schools. Stronger evidence is afforded by the *promythia* and *epimythia* attached to some of the fables to point a moral. Most of these were composed in medieval times; but some *epimythia* may come from A. himself.

Texts: E. Baehrens, *PLM* v (1883); R. Ellis (1887); (with translation) J. W. and A. M. Duff, *Minor Latin Poets* (Loeb, 1934). A. M. D.

AVIDIUS (1) NIGRINUS, GAIUS, probably son of Avidius Nigrinus, plebeian tribune in A.D. 105, governed Achaëa (perhaps temporarily an imperial province) with special powers (*SIG*³ 827; cf. *CIL* iii. 107). Possibly he was also governor of Upper Moesia. Rich, influential, and well connected (he was father-in-law of L. Aelius, q.v. 4), he was thought to be Hadrian's selected successor; but he became involved in the conspiracy of the four 'consulars' against Hadrian (q.v.) in 118, and was killed by senatorial order, with his complicity unproved or at least unpublished.

S.H.A. *Had.*; Dio Cassius, bk. 69; *PIR*², A 1408; cf. *CAH* xi (1936), 220. C. H. V. S.

AVIDIUS (2) CASSIUS, GAIUS (d. A.D. 175), son of the equestrian C. Avidius Heliodorus (a rhetorician of Cyrrhus in Syria, and an official under Hadrian and Antoninus Pius), was consul early in the reign of M. Aurelius (q.v. 1) and afterwards governor of Syria. He sternly drilled the Syrian legions into efficiency, thrust east against Parthia, subdued Mesopotamia and captured Seleucia and Ctesiphon (A.D. 165-6). Subsequently given supreme command over all the East (with Egypt, where he quelled a revolt in 172), he proclaimed himself emperor in 175, with the support of Egypt and of all the East save Cappadocia and Bithynia; false reports of M. Aurelius' death helped him, and even Faustina the Younger (q.v.) was said to be in collusion. Three months later he was assassinated. Avidius issued no coinage.

S.H.A. *Avidius Cassius*; Dio Cassius 72; *PIR*², A 1402; P. Lambrechts, *La Composition du Sénat romain . . . (117-192)* (1936), p. 117, no. 694. See also under AURELIUS (1). C. H. V. S.

AVIENUS, FESTUS RUF(1)US (4th c. A.D.), Latin writer to whom are ascribed: (i) *Descriptio Orbis Terrae* (title varies), 1,394 extant hexameters (material based, sometimes closely, but with omissions, additions, and amplifications, on Dionysius Periegetes, q.v. 10) describing noteworthy things in physical and political geography, and reproducing in vigorous style much ancient ignorance which learned contemporaries could have corrected; (ii) *Ora Maritima*, 703 extant iambs (from a much larger work?) mostly about the coast from Massilia to Gades, with little order and much irrelevance, full of ancient nomenclature and ignorance, but giving interesting material from early records of Greek and Carthaginian voyages in the Atlantic c. 500 B.C.; (iii) *Aratea Phaenomena* (1,325 extant hexameters) and *Aratea Prognostica* (552 hexameters) based on Aratus, sometimes closely,

often expanding, attractive in style; (iv) three short works (two personal, one on the Sirens and Ulysses) Avienus, born at Vulsinii, held high office. See DIDACTIC POETRY, LATIN.

Texts: A. Holder (1887); *Ora Maritima*, A. Schulten and P. Bosch-Gimpera (1922); A. Berthelot (1934). E. H. W.

AVILLIUS FLACCUS, AULUS, a friend of Tiberius and prefect of Egypt (A.D. 32-8). He was friendly to the Greek elements in Egypt and therefore his policy was anti-Jewish. Philo (q.v. 1) directed *Εἰς Φλάκκον* against him. In 38 he was unexpectedly arrested, condemned at Rome, perhaps on a charge of plotting with Ti. Gemellus and Macro, banished to Andros, and later put to death.

H. I. Bell, *CAH* x. 309; H. Box, *Philonis Alexandrini in Floccum* (1939); A. v. Premerstein, *Alexandrinische Geronten vor Kaiser Gaius* (1939). A. M.

AVITUS, ALCIMUS ECDICIUS, Bishop of Vienne (c. A.D. 490-518), a vigorous opponent of Arianism, author of sermons, letters, a biblical epic in five books, and a short poem on chastity.

Edition: Peiper, *MGH* (1883).

AXAMENTA (n. pl.), hymns in Saturnian verse sung by the Salii, apparently not addressed to individual gods (Paul. ex Fest. p. 3, 12 tr.).

AXE, DOUBLE, in Minoan religion, see RELIGION MINOAN-MYCENAEAN), para. 1.

AXINOMANCY, see DIVINATION, para. 6.

AXIONICUS, Middle Comedy poet, perhaps late in the period (fr. 2 mentions Gryllis, a parasite of one of Alexander's generals). In *Φιλευπινίδης*, 'Lover of Euripides', fr. 4 is modelled on a tragic monody.

FCG iii. 530 ff.; *CAF* ii. 411 ff.

AXONES, the white wooden tablets of laws, in the Prytaneum at Athens, revolving on an axis. Draco's and Solon's laws were written on them, and they were quoted by the number of the *axon*; the highest known number is sixteen (Plut. *Sol.* 23. 4). Copies of Solon's laws were published on similar pillars of stone, the so-called *κύρβεις*. They were used elsewhere, too, as a fragment found at Chios shows.

Swoboda, *PW*, s.v.

V. E.

AXUMIS or **AUXUME** (mod. *Axum*), a city in the Tigré province of Abyssinia. In the first century A.D. it became the royal seat of the Habashat or Axumites, who, through their port Adulis, traded busily with Arabians, Greeks, Romans, and Indians, eclipsing Meroë. In the second century A.D. the Axumites were powerful in Somaliland and possibly in Arabia also, controlling much of the traffic to India from that time until far in the Byzantine era. Fragments of their history are known from inscriptions and classical references. Some of the kings were Christians, and important relations were maintained with the West. The summit of Axumite influence was reached in the fourth and fifth centuries A.D.

See A. Wylde, *Modern Abyssinia* (1901) (for antiquities); Warrington, *Indian Commerce*, index, 'Axumites' (for commerce); J. Bent, *The Sacred City of the Ethiopians* (1893), appendix by D. Müller (inscriptions); Pietschmann, *PW*, s.v. E. H. W.

B

BABRIUS, **VALERIUS** (?), probably a hellenized Roman, who composed not later than the second century A.D. (POxy. 10, n. 1249) *μυθίαφοι Αἰώπαιοι*, being versions in choliambic metre of existing fables, together with some original additions. The work was originally in ten books (Suidas); in the existing MS. tradition it consists of two, of which the second is incomplete. The metre and the language, which is that of everyday life, are well adapted to the subject-matter. The collection enjoyed great popularity.

Sources: Suidas; Avianus (*proem.*). Editions: W. G. Rutherford (comment., 1883); O. Crusius (Teubner, pref., 1897). Criticism: O. Crusius, 'De B. actate', *Leipz. Stud.* ii (1879). W. M. E.

BABYLON (1) (mod. *Bâbil*), ancient capital of the south Semitic kingdom of Mesopotamia (see **BABYLONIA**) on the river Euphrates. It was one of the greatest cities in the ancient world. Herodotus, who claimed to have visited it, gives a somewhat inaccurate description of its wonders (1. 178-87). It attained its highest prosperity under the Chaldean kings of the New Babylonian Empire. Its history thenceforward is one of gradual decline. The Persians, who conquered it in 538 B.C., made it the chief city of the Babylonian satrapy; it was the winter residence of the Great King. Alexander, like Cyrus, entered Babylon without resistance; his project of rebuilding it and making it the capital city of his empire was frustrated by his death there in 323.

In Hellenistic times Babylon was still a prosperous city with a considerable Greek population. A frequent bone of contention among Alexander's successors and twice the centre of revolt against the Seleucids, it was more than once sacked. It suffered still more from the foundation of Seleucia (q.v. 1) as the new commercial centre of Babylonia (Pliny, *HN* 6. 122). In the Parthian period Babylon again became the chief city of a satrapy, but it declined rapidly; Trajan in A.D. 115 found little but ruins. Many of the public buildings, temples, palaces, etc., and the city walls have been excavated.

R. Koldewey, *Der wiedererstellende Babylon* (Engl. Transl. 1915). E. Unger, *Babylon* (1931).

(2) Fortified town at the head of the Delta of Egypt; the head-quarters of a Roman legion under the Early Empire.

M. S. D.

BABYLONIA, the more southerly of the two ancient kingdoms of Mesopotamia. Its geographical limits were not clearly defined. Ptolemy (5. 20) says that it was bounded by Mesopotamia, Arabian desert, the Persian Gulf, and the river Tigris. It was sometimes included in the wider designation Assyria (q.v.).

In 538 B.C. the New Babylonian Empire fell before the Persians, and the country became an Achaemenid satrapy. Conquered by Alexander and intended as the centre of his empire, it was disputed among the *Diadochi*; Seleucus I Nicator founded Seleucia (q.v.) to replace Babylon as the capital city. When the eastern portion of the Seleucid Empire passed to the Parthians, Babylonia became an important commercial and administrative centre; Ctesiphon, the Parthian residence, became the capital of the Sassanids.

Through all vicissitudes, until the Sassanian epoch, Babylonia retained its ancient civilization, the religion, cuneiform writing, and economic organization which it had inherited from Sumer. An attempt of Antiochus Epiphanes to hellenize it failed. In the Greek cities the native element was at first segregated, but most of the numerous Greek residents became orientalized, as the numerous business documents from Babylon and Orchoi

(Uruk) testify. The country played an important part, politically and commercially, as the bridge between East and West. It was far more extensively cultivated than to-day, and was proverbially fertile (Hdt. 1. 193; Strabo 16. 742).

Clay, *Legal Documents from Erech* (1913); M. Rutten, *Contrats de l'époque séleucide* (1935); S. Smith, *Babylonian Historical Texts* (1924).

M. S. D.

BACCHAE, see **MAENADS**.

BACCHANALIA, the Latin name of the Dionysiac *orgia*. They are especially known because of the harsh measures taken by the Roman Senate to repress them. The decree of 186 B.C. is preserved (*CIL* i. 196; *ILS* 18), and Livy (39. 8-18) has a long account. They were widespread in southern Italy. The first trace is an inscription of the fifth century B.C. from Cumae forbidding those who were not initiated into the Bacchic mysteries to be buried in a certain place (figured in Cumont, op. cit. infra, p. 197). Evidently they came from Campania to Rome, bringing much disorder under the cover of religion. It has been suggested that there is a connexion between the decree mentioned and a regulation of the Bacchic mysteries in Egypt by Ptolemy IV at the end of the third century B.C. (C. Cichorius, *Römische Studien*, 1922, p. 21). In the first centuries A.D. the Dionysiac mysteries were very popular, as is proved e.g. by the many sarcophagi with Dionysiac motifs and the paintings in the Villa Itern at Pompeii (their interpretation is highly controversial). Very important is the large inscription of Agrippinilla from the beginning of the second century A.D. enumerating the officials of a Bacchic *thiasus*. Cumont is of the opinion that Oriental elements were dominant, but it seems that these mysteries were fundamentally Greek.

F. Cumont, *Les Religions orientales dans le paganisme romain*, 195 ff.; T. Frank, *CQ* xxi (1927), 128 ff. The inscription in the Metropolitan Museum is edited by A. Vogliano and F. Cumont, *AJArch.* xxxvii (1933), 215 ff. M. P. Nilsson in *Studi e materiali della storia di religioni*, x (1934), 1 ff. The paintings of the Villa Itern, A. BACCHIADAE, see **CORINTH** (para. 2), **CYPSELUS**.

BACCHEIUS (*Βακχεῖος*) **GERON**, author of an *Εἰσαγωγή τέχνης μουσικῆς*, lived in the time of Constantine (A.D. 274-337). The work is in the form of question and answer; while following in the main the tenets of Aristoxenus, it borrows freely from other schools of musical theory.

Ed. C. Jen, *Music Scriptores Graeci* (1895), 283-316. *PW* ii. 2790.

W. D. R.

BACCHUS, see **DIONYSUS**, para. 3.

BACCHYLIDES (fl. 5th c. B.C.), lyric poet, of Iulis in Ceos, son of Midylus (*EM* 582, 20) and nephew of Simonides (Strabo 486, Suid. s.v. *Βακχύνιδης*). He may have been born about 524-521 (*Chron. Pasch.* 304. 6), though Eusebius-Jerome gives his *floruit* both in 467 B.C. and in 431 B.C. Remains of fourteen epinician odes and six dithyrambs found in 1896 at Al-Kussiyah may be arranged tentatively in a chronological order. He seems to have followed the fortunes of his uncle Simonides and to have been employed by the same patrons, a fact which sometimes brought him into competition with

Pindar, who was almost his contemporary. His first activities may have been in Thessaly (fr. 15, Ode 14) and Macedonia, where he wrote his Encomium for Alexander son of Amyntas (fr. 20 B). About 487 B.C. he wrote Ode 13 for Pytheas of Aegina, and Ode 12 may belong to the same period. Again like his uncle, he wrote dithyrambs for the competitions at Athens, notably Ode 19, and Ode 18, which is unique in being a dialogue between the leader of the chorus, who takes the part of Aegeus, and the remainder, who represent his followers. It is not clear whether this is a survival of an older form of dithyramb or has been influenced by the technique of Attic drama. Ode 17, which may belong to the early years of the Delian League, is really a paean sung by a Cean choir at Delos. The date of Ode 10, written for an Athenian victor in the Isthmian Games, is not known. About 476 B.C. Bacchylides accompanied Simonides to Sicily as the guest of Hieron (Ael. *VH* 4. 15) after writing Ode 5 for Hieron's victory in the horse-race at Olympia, an event celebrated by Pindar in *Ol.* 1. In Sicily he seems to have incurred the dislike of Pindar, who is thought to make disparaging references to him in *Ol.* 2. 86-8, *Pyth.* 2. 72-3, *Nem.* 3. 80-2. It is not known how long he stayed in Sicily, but his connexion with it was maintained with Ode 4 for Hieron's victory in the Pythian horse-race of 470 B.C., for which Pindar wrote *Pyth.* 1, and Ode 3 for the Olympian chariot-victory of 468 B.C., when Pindar may have written *Pyth.* 2. To his later years belong Odes 6 and 7 for Lachon of Ceos in 452. He is said to have been exiled to the Peloponnese (Plut. *De exil.* 14), and in this period he may have written Ode 9 for Automedes of Phlius, and the dithyramb *Idas* for the Lacedaemonians (20). The date of his death is not known.

Bacchylides also wrote hymns (frs. 1-2), paeans, of which fr. 4 contains a fine eulogy of peace, procession songs (frs. 11-13), maiden-songs (Plut. *Demus.* 17), hyporchemata (frs. 14-16), enomia, like that to Alexander (fr. 20 B) and to Hieron (fr. 20 C). His reputation has suffered by the comparisons with Pindar, which are at least as old as 'Longinus' (*De Subl.* 33). His gifts are of a different kind: a brilliant clarity and sense of narrative, a real love for the games which he describes, an absence of didactic fervour, a choice command of epithets, and occasional moments of magical beauty.

Text: B. Snell (Teubner, 1934). Commentaries: R. C. Jebb (1905); H. Jurenka (1898); A. Taccone (1907). Criticism: A. Severyns, *Bacchylide* (1933); W. K. Prentice, *De Bacchylide Pindari artis socio et imitatore* (Diss. Halle, 1900). C. M. B.

BACIS. Although used by Herodotus (8. 20) as if a proper name, later references make it clear that B. was the generic title of a class of inspired prophets, characteristic of the growth of ecstatic religion in the seventh and sixth centuries B.C.

E. Rohde, *Psyche* (Engl. Transl. 1925), 292 ff.

BACTRIA with southern Sogdiana (northern Afghanistan and part of Russian Turkestan) was the country of the middle Oxus, a fertile irrigated land known to Greeks as the Jewel of Iran. Traditionally the home of Zoroaster and the Zend Avesta, it formed a Persian satrapy which also included part of the Jaxartes basin (northern Sogdiana) and was often governed by an Achaemenid prince. It fought desperately against Alexander, and the Seleucids had Sogdian blood through Seleucus' wife Apama. In Persian times it was middleman for the Siberian gold supply, but the route was cut before the Greek period. As an independent kingdom under Euthydemus and his son Demetrius (qq.v.) the country attained great prosperity and included, besides Sogdiana, Merv, part of Khorasan, and Ferghana (Kwarizm its kings never ruled). Bactria had no gold and little silver, and Euthydemus' attempt to restore the gold route failed; its strength, which enabled it to hold off the nomads and annex

northern India, was due to its fertility, good government, and extensive trade; it was middleman for the overland trade between India and the West, and was beginning to reach out to Mongolia and China. The Seleucid eparchies (subdivisions of satrapies) were turned into satrapies, i.e. primary units of administration, an example followed throughout Asia. The capital, Alexandria-Bactra (*Balkh*), was probably only semi-Greek, and few Greek cities are recorded, but there was a large Greek settlement, which implies many military colonies; the essential matter, however, was that the Euthydemids made a united country, both securing the co-operation of the Iranian barons, who furnished its famous cavalry, and transforming the open peasant villages into quasi-autonomous communities within walls. After Demetrius' death Eucratides' line ruled till about 130 B.C., when Bactria was conquered by the nomad Yueh-chi (Kushans). As Tocharistan, they governed it for centuries; the country became a centre of Buddhism, and (after 106) Bactra was the clearing-house for the overland Chinese trade.

W. W. Tarn, *The Greeks in Bactria and India* (1938), *passim*.
W. W. T.

BAEBIUS TAMPHILUS, MARCUS, praetor in 192 B.C., with an advance guard covered the Roman landing in Greece against Antiochus. Consul in 181, he transported 40,000 mountain Ligurians to Samnium (*Ligures Cornelianii et Baebiani*, *ILS* 6509). To him are attributed the Baebian measure on the number of praetorships (Livy 40. 44. 2) and the *Lex Baebia de ambitu* (Livy 40. 19. 11).

Livy 35. 20-4; 36; 40. 38. F. Münzer, *Röm. Adelsparteien und Adelsfamilien* (1920), 195. A. H. McD.

BAETICA, the heart of the province originally (197 B.C.) called Farther Spain. As the territory occupied by the Romans increased, a clear-cut line between Hither and Farther Spain was formed beginning at the Mediterranean south of Carthago Nova (*Cartagena*) and running west-north-west to the Anas (*Guadiana*) at Lacimurga (*Villavieja*); thence northward to the Pyrenees. Augustus separated the prosperous and pacified area from the less settled west (Lusitania, q.v.) by a line roughly parallel to the Anas from Lacimurga to the Atlantic, and assigned the new province, Baetica, to the Senate. Four *conventus* (Gades, Corduba, Astigi, Hispalis) made convenient judicial circuits for the 175 towns of the province (Pliny, *HN* 3. 7). Most important was the rich Baetis (*Guadalquivir*) valley from which wine, oil, wheat, honey, sheep, fish, copper, lead, cinnabar, and silver were exported to Rome. The wealth of the country attracted pirate-bandits from Africa (A.D. 178), while the Vandals tarried there long enough to attach their name to the country (*Andalusia*). The cultural contribution of Spain to Rome was made by the predominantly Baetic Spanish school of letters of the first century A.D.

R. Thouvenot, *Essai sur la province romaine de Bétique* (1940).
J. J. VAN N.

BAGAUDAE, Gallic peasants of the later Empire who took to brigandage. A rebellion of Bagaudae was crushed by Maximian in A.D. 285, but they are mentioned in the fifth century as still active against the State.

Julian, *Hist. de la Gaule* vii. 51-6; viii. 174-6; *MGH* ix. 660; Salvian, *de Gubernatione Dei* v. 24.

BAIAE, a town on an inlet of the Bay of Naples, reputedly named after Baios, Odysseus' companion (Strabo 5. 245). Baiae never became a *municipium*; originally perhaps the port of Cumae, it remained Cumaeen territory. Its sulphur-springs (whence its earlier name *Aquae Cumanae*: Livy 41. 16), mild climate, and beautiful surroundings made it a fashionable, even licentious, resort (Mart. 11. 80). Imposing villas were erected here by

Julius Caesar, Caligula, Nero, Alexander Severus, and others. Balaic declined owing to malaria, already present in Republican times (Cic. *Fam.* 9. 12), and earthquakes.

E. T. S.

BALBINUS, DECIUS CAELIUS CALVINUS and PUPIENUS MAXIMUS, MARCUS CLODIUS, members of a board of twenty appointed for the defence of Italy against Maximinus, were after the deaths of Gordian I and II chosen joint emperors by the Senate (A.D. 238). The former belonged to a noble family, the latter was an experienced officer. Constitutionally, on the model of the consulate, they had equal powers, each being Pontifex Maximus; but Balbinus was entrusted with the civil administration and Pupienus with the command of the army. To placate the soldiers, Gordian III was given the status of Caesar.

At the news of Maximinus' murder Pupienus proceeded to Aquileia and sent back the former's legions to their provinces, and with his German bodyguard returned to Rome to share a triumph with Balbinus and Gordian. For a few days the joint government worked smoothly, but soon the Emperors became jealous. The issue was, however, decided by the Praetorians, who resented the Senate's action and disliked the presence of a German bodyguard in Rome. The two Emperors were dragged from their palace and murdered after ruling for three months (see GORDIAN I and II).

For bibliography see MAXIMINUS (1).

H. M. D. P.

BALBUS (1), MARCUS ATIUS, born at Aricia, was husband of Caesar's sister Julia, and father of Atia, Augustus' mother. Praetor before 59 B.C., he was commissioner for the *Lex Julia agraria* (59).

M. Grant, *From Imperium to Auctoritas* (1946), 150 ff.

BALBUS (2), LUCIUS CORNELIUS (Maior), of Gades, acquired Roman *civitas* for service against Sertorius, taking his *nomen* probably from the consul of 72 B.C. (cf. Cic. *Balb.* 19). He removed to Rome, where his political sense and the wealth derived from his adoption (c. 59) by Theophanes of Mytilene gave him enormous influence. Chief architect of the coalition of 60 B.C., he gradually shifted his allegiance from Pompey to Caesar, serving the latter as *praefectus fabrum* in Spain and Gaul, and later managing his interests in Rome. In 56 he was prosecuted for illegal usurpation of the *civitas*, and successfully defended by Cicero in the extant speech. In the Civil War he was outwardly neutral, and persistently tried to persuade Cicero and Lentulus (q.v. 7) Crassus to join him. Actually he favoured Caesar, and after Pharsalus became, with Oppius, Caesar's chief agent in public affairs. In 44 he supported Octavian, though cautiously, and in 40 became Rome's first foreign-born consul. Author of a published diary (now lost), and recipient and editor of Hirtius' commentaries, he had wide literary interests over which he constantly corresponded with Cicero. He bequeathed 25 *denarii* to every citizen of Rome.

On the difficult constitutional questions connected with Balbus see F. Münzer, *PIW*, s.v. 'Cornelius (69) Balbus', 1261 ff. See also R. Syme, *The Roman Revolution* (see Index), and M. Grant, *From Imperium to Auctoritas* (1946), 6.

G. E. F. C.

BALBUS (3), LUCIUS CORNELIUS (Minor), nephew of Balbus (2), joined Caesar in the Civil War, and in 44-43 B.C. was quaestor to Asinius Pollio, who complained of his tyrannical conduct at Gades and of his absconding with the pay-chest. He was honoured by Augustus with a pontificate and consular rank, was proconsul of Africa, and triumphed over the Garamantes (19 B.C.). Balbus built a 'new town' and docks at Gades and a theatre in Rome.

Cicero, *Fam.* 10. 32; Strabo 3. 169; Velleius 2. 51; Dio Cassius 54. 25. Modern literature: Drumann-Grebe, *Græk. Res. III.* 313-5.

G. W. R.

BALEARES INSULAE. The name *Gymnesiae* (*Γυμνησαί*), used by early Greek voyagers, was replaced by *Baliares* or *Baliarides* from an Iberian original. The spelling was changed to *Baleares* in the Augustan period. Roman names of each island were *Maiorca* (formerly *Columba*), *Minorca* (formerly *Nura*), *Capraria*, *Menaria*, *Tiquadra*, and *Cunicularia* (formerly *Hannibalis*). Urban units included Iberian *Tuci*, Phoenician *Bocchori* and *Guintum*, and Roman *Palma* and *Pollentia* on Maiorea. Minorca had Iberian *Sanisera* as well as Phoenician *Mago* and *Iamo*. The characteristics of the natives most frequently mentioned by classical writers were their cave-homes, the absence of gold and silver, inhumation, polyandry, and their exceptional skill in the use of the sling. Although Roman title to the islands was recognized by the treaty of 202 B.C., they were only pacified in 121 by Q. Caccilius Metellus (Balaricus). Copper coins were minted under Tiberius by some of the towns, all of which received the Latin Right (see *IUS LATI*) from Vespasian. For administrative purposes the islands were attached to the *conventus Carthaginiensis* of Hither Spain. Diocletian made them an independent province. Escape from the severity of barbarian invasions may be inferred from the late reference (*Not. Dign.* 11. 71, ed. Seeck) to the Balearic dye-works, *bafiu*.

J. J. VAN N.

BALL GAMES. We know from Homer that ball games were played in early Greece, for it was a lost ball that roused Odysseus from his sleep in the bush and led to his discovery by Nausicaa. At Athens in the fifth century they were overshadowed by gymnastic exercises, but they were popular with youths, as recent archaeological evidence shows. A sculptured relief built into the Themistoclean ring-wall at Athens, and rediscovered in 1922, shows the details of a 'hockey match'. The ball is on the ground in the middle; two youths with sticks are engaged in a 'bully' for it; on either side of them stand two other pairs of youths with sticks.

Another relief represents a throw-in from the touch-line: one youth is preparing to throw, the rest are waiting either to seize the ball in the air or to tackle the next possessor. This game, *Phaeninda*, was played with a small, hard ball and bore some resemblance to our Rugby, except that the ball was thrown and never kicked. Another game, more akin to our lacrosse, was played with a lighter ball, the Greek *sphaيرا*, Latin *foliis*. Here tackling was not allowed, and the ball was thrown from hand to hand while the players were running at full speed. In a third type of game (*trigon*), the players were three in number and stood at the corners of a triangle, throwing balls quickly one to the other; both hands were used and caddies supplied the players with missiles.

Galen, *On the small ball* (*Scripta Minora* i, p. 93).

F. A. W.

BALLISTA (or *Callistus*), praetorian prefect of Valerian, rallied the Romans at Samosata after his capture and dealt severe blows to the Persians on the Cilician coast. In A.D. 260, he joined Macrianus in setting up the younger Macrianus and Quietus as rivals to Gallienus. When the Macriani marched west, Ballista stayed with Quietus in Emesa, but, after their defeat, fell a victim to Odenathus.

II. M.

BALLISTA, see SIEGECRAFT, ROMAN.

BANKS. Loans and deposits were known to the Indo-European and Semito-Hamitic tribes, as their languages prove. The Ancient Oriental cultures had even an encashment business and exchange bills. But banking as a trade could not develop until the invention of coins allowed specialized bankers sufficient opportunities for a living. Institutions which may be called private banks are found in Mesopotamia from the seventh century B.C.; but banking business was here not separated from the administration of large estates. In early Greece the

temples (e.g. the Artemisium at Ephesus) had almost regional monopolies of banking. But in the classical period the *ραπεζῖται*, who originated in the sixth century as money-changers and set up their 'tables' at festivals and markets, took over the business of the temples. By the fourth century they provided most of the loans and held most of the deposits, and individual bankers of note appeared (see *PASION*). Whether endorsements could be performed in classical Greece and in contemporaneous Mesopotamia is not certain; various new types of loans appear in our sources at this time (see *BOTTOMRY LOANS*, *USURY*). On the other hand, banking remained a risky trade. A banker's death meant loss of valuable customers and connexions, if not bankruptcy. The firms were small and banking terminology and book-keeping remained simple. Many bankers combined banking with commerce or manufacture.

2. In the city-states of the Hellenistic age the more important temples, private firms, and the cities themselves carried on the banking business without much change. But the Ptolemaic Empire created a public banking system which represents for us the most highly developed banking organism of antiquity. A network of royal banks was spread over the whole of Egypt with a central bank in Alexandria, provincial banks in all district capitals, branch establishments in smaller localities, and institutes of minor importance, which were let out to private bankers under the State bank's control. Thousands of employees found occupation in this vast institution, which had a monopoly for the banking business of Egypt, collected revenues, and paid out the charges of the monarchy. Endorsements (*PTeb.* 890) and even primitive exchange bills occur here. Lending was not monopolized by this State bank; the owners of large estates and the temples lent large sums to peasants and business people.

3. The Roman banks of the second and first centuries B.C. were comparatively small firms. The main business was done by *equites* and other men of wealth and not by specialized bankers. Their methods, however, were progressive. The so-called *permutatio*, a method of clearing between banks in and outside Rome, allowed payments to provincial residents and vice versa without actual transfer of money.

4. Augustus divided the Egyptian State bank into small and independent local institutions. The banking structure of Republican Rome (with local variations) spread over the whole Empire. Slowly the banks of the Principate lost most of their paying business (money exchange and lending) to local owners of large estates, a primitive state of affairs which became common throughout the rural districts of the Byzantine Empire. The few banks which survived the breakdown of the Roman coinage during the third century A.D. were indispensable for financial State transactions, and were therefore compulsorily enrolled in the *corpus collectariorum*, which was controlled by the government. Most of the earlier banking procedure was codified by Justinian and preserved by Europeans and Arabs throughout the Middle Ages.

'Banken' in *PIW* Suppl. iv; F. Oertel in R. von Pöhlmann, *Geschichte der sozialen Frage und des Sozialismus in der antiken Welt*, ii³ (1925), 529 f.; Cl. Préaux, *L'Economie royale des Lagides* (1939), 280 f.; W. L. Westermann, *Journ. of Economic and Business History* iii (1931), 30 ff. F. M. H.

BANTIA, an Apulian or possibly Lucanian town near Vcnusia (Pliny, *HN* 3. 98; Hor. *Carm.* 3. 4. 15), nowadays *Santa Maria di Banzi*. The great Marcellus fell near

here in 208 B.C. (Livy 27. 25). Its (originally Messapic?) inhabitants spoke Oscan in Republican times, as a surviving copy of its municipal regulations demonstrates (the famous *Tabula Bantina* of c. 120 B.C.: R. S. Conway, *Italic Dialects* i. 22 f.). Under the Empire Bantia was a *municipium*. E. T. S.

BARBATUS, see *SCIPIO* (1).

BARCINO (nowadays *Barcelona*), *Colonia Faventia Iulia Augusta Pia*, a native foundation with traditions of origin both Greek and Phoenician. Granted colonial immunity by Caesar, Barcino received full colonial status from Augustus. It was far less important to the Romans than Tarraco, but gradually took the lead in the third century. Inscriptions record the gifts of wealthy citizens and the service of many Imperial-cult officials. These, like the literary references, are chiefly of late date.

J. J. VAN N.

BARYGAZA (*Broach*), near the mouth of the Nerbudda, on the Gulf of Cambay. After discovery by Hippalus (q.v.) of the use of monsoon winds, Greek ships sailed thither direct from Aden; conducted by royal pilots from the Kathiawar coast and towed to the town, they brought merchandise, presents, and Roman coins. To Barygaza were brought Indian and Chinese products from the north through Modura (*Mutra*) and Ozene (*Ujjain*), and from eastern and central India chiefly through Tagara (*Thair?*) and Paethana (*Paithan*). Barygaza sent Indian ships to the Persian Gulf, Somaliland, and Arabia. It was the chief port for Greek and Persian trade in north India.

Periplus Mar. Rubr. passim; Ptol. *Geog.* 7. 1-6. Warmington, *Indian Commerce*, index (for commerce). E. H. W.

BASILICA, a Roman form of building consisting of a rectangular roofed hall, with or without exedras, which served as a social or commercial meeting-place, associated with a forum. The earliest known was at Rome, built by Cato (184 B.C.). More important, because still preserved, is that at Pompeii, c. early first century B.C., a hall about 185 feet × 71 feet (exclusive of porch at east and tribunes at west end), containing inner hall about 148 feet × 40 feet surrounded by columns; in effect the Greek peripteral temple turned outside in, and possibly influenced by Greek or Hellenistic pillared halls. An advance was made with the Basilica Julia (central area 260 feet × 60 feet) and Basilica Aemilia, in the Roman Forum, both c. 50 B.C. and later, which had double surrounding aisles with arcades (open on one side to the Forum) and galleries, above which the central area was lit by a clerestory. This type of building—of which Trajan's Basilica had the important addition of two semi-circular halls—influenced Christian basilican churches in fourth and later centuries, but more important structurally was the Basilica Nova of Maxentius, near the Roman Forum, finished by Constantine, c. A.D. 313, and doubtless derived from the central halls of the *Thermae* (see *BATHS*). This was in essence a vast vaulted hall, 265 feet × 195 feet, with only four internal supports linked by arches to piers projecting from side walls, and providing a buttressed superstructure to the central clerestoried compartment roofed with a groined vault in three bays; each compartment of the aisles being barrel-vaulted at a lower level. The clear span of the central vault was 76 feet; the height from floor to crown of vault 114 feet.

See *ARCHITECTURE*, and R. Schultze, *Basilika* (1928)

T. F.

BASSAE, in south-west Arcadia, near Phigaleia, the site of one of the best-preserved Greek temples. This was dedicated to Apollo, and built by Ictinus, the architect of the Parthenon. The orientation, determined seemingly by that of an earlier building, was towards the

north instead of east, and the early sunlight, instead of entering through the main doorway, was admitted to the *adytum* through an opening of unique kind in the eastern side-wall. Unique too were the ten engaged Ionic columns which decorated the side-walls of the *cella* internally, and the single central Corinthian column—one of the earliest of its kind, and one of the most beautiful—between the *cella* and the *adytum*. The sculptured frieze (now in the British Museum) shows that it belonged to the late fifth century. See ICTINUS.

Paus. 8. 41. 7 ff.; C. R. Cockerell, *The Temples . . . at Aegina and . . . Bassae* (1860); W. B. Dinsmoor, 'The Temple of Apollo at Bassae', *Metz. Mus. Studies* iv. 204 ff.; *AJArch.* 1939, 27 ff.
T. J. D. and H. W. R.

BASSARIDES, see MAENADS.

BASSULUS, see POMPONIUS (5).

BASSUS (1), CAESIUS (1st c. A.D.), a friend of the satirist Persius and editor of his work. He himself was a lyric poet, and Quintilian (10.1.96) mentions him as the only one whose name might appear with that of Horace in a canon of Roman lyric poets. He is possibly the author of a metrical work to which later writers refer and part of which is preserved in a corrupted form under the name of Atilius Fortunatianus (ed. Keil, *Gramm. Lat.* vi. 255–72). The treatise *De Metris* printed in Keil, *Gramm. Lat.* vi. 305–12, is spurious.

Cf. Teuffel, § 304, 1–2; Schanz–Hosius, § 385.

J. F. M.

BASSUS (2), SALEIUS, an epic writer of poetic genius who died young (Quint. *Inst.* 10. 1. 90, Juv. 7. 80). Vespasian assisted him financially (Tac. *Dial.* 5. 2; 9. 8).

BASSUS, see also AUFIDIUS, GAVIUS, LOLLIVS (3).

BASTARNAE, a roving tribe which first appeared on the lower Danube c. 200 B.C. They were enlisted by Philip V and Perseus of Macedon against their enemies in the northern Balkans, and by Mithridates against the Romans. They defeated C. Antonius c. 62 B.C., but were subdued by M. Crassus (29–28), and henceforth they generally appear as subject-allies of Rome. They were transplanted to the southern bank of the Danube by Probus. Earlier writers were uncertain as to the nationality of the Bastarnae, but it may be inferred from Strabo (7. 306), Pliny (*HN* 4. 100), and Tacitus (*Germ.* 46. 1) that they were Germans.

M. C.

BATAVI, a German tribe on the Rhine delta. They were an offshoot of the Chatti (Tac. *Germ.* 29). They probably became allies of Rome between 16 B.C. and 13 B.C.; and about 8 B.C., owing to the importance of their territory as a naval base, they were brought into the Empire as a *gens foederata*, supplying men for the Roman army but paying no taxes. Their contingents were organized into auxiliary regiments under their own chiefs (Tac. *Hist.* 1. 59; 4. 12); Batavi also served in the Imperial bodyguard (Suet. *Calig.* 43). After the revolt of their chieftain Civilis (q.v.) in A.D. 69–70, the Batavian regiments were disbanded, and the new *cohortes Batavorum* of second-century inscriptions were sent to serve away from their homeland. The Batavi disappear after 300, on the arrival of Salian Franks in their country, but their name is preserved in the district of Betuwe. See also NOVIOMAGUS.

O. B.

BATHS, the most important buildings of the Romans, probably the earliest to arrange halls and rooms in association symmetrically. Evidence exists in most provincial towns, but the great Baths (*Thermae*) in Rome itself overshadowed all others in size and magnificence. The earliest, the Baths of Acrippa (c. 20 B.C.), led the way; those built by Caracalla and Diocletian are the best preserved; all conformed, with variations, to a general type of community centre, cultural as well as physical, and on a vast scale.

The Baths of Caracalla had a main building, approximately a rectangle of 750 feet × 380 feet, placed in an enclosed and nearly square space about 33 acres in extent, raised 20 feet above surrounding ground level with vaulted storerooms underneath. A vaulted Central Hall (not a *tepidarium*) 183 feet × 79 feet was the kernel of the building: it gave access at its ends through spacious vestibules to enclosed courts (*palaestrae*, with separate baths for athletes), on its south side to the *tepidarium* and thence to the domed *calidarium*—a circular chamber about 115 feet in diameter, flanked by rooms for poets and philosophers—and on its north side to a large swimming-pool (*frigidarium*), perhaps partly unroofed, flanked by halls for spectators and dressing-rooms (*apodyteria*); a nobly conceived plan and an impressive treatment, as the immense vaulted roof of the central hall—with clerestory windows—rose high above the adjacent roofs.

The surrounding enclosures of the great *Thermae* were treated with equal care, partly garden (*xystus*)—either colonnaded or laid out with formal trees—and partly open-air gymnasium, with, on east and west and (partially) north or south sides, various promenade rooms; on the south side the central space contained a theatre and a stadium. The main buildings were heated by underground furnaces and floor ducts (hypocausts), which conveyed warmed air to flues behind the walls of the various compartments. Architectural accessories were sumptuous, marble mosaic being used for the floors; marble for the columns, the casing of the superstructure, seats, etc.; and painted decoration for the stuccoed upper walls and vaults.

Anderson, Spiers, and Ashby, *The Architecture of Ancient Rome* (1927), ch. 6; G. T. Rivoira, *Roman Architecture* (1925). T. F.

BATO (1), the Dalmatian, chieftain of the Daesitiae, raised rebellion in Illyricum in A.D. 6, raided the Dalmatian coast, fought against the Romans in the valley of the Save, and, after the capitulation of his Pannonian allies in A.D. 8, retreated southwards. After vainly defending several forts against the Romans, he surrendered and was interned at Ravenna (A.D. 9). R. S.

BATO (2), the Pannonian, like his Dalmatian namesake, revolted, tried to capture Sirmium (A.D. 6), and shared in the subsequent fighting, but surrendered in A.D. 8 at the river Bathinus. Soon after, however, the Dalmatian chieftain captured and killed him. R. S.

BATON (Βάτων), New Comedy poet in the first half of the third century B.C.; an anecdote links him with Cleanthes (d. 251) and Arcesilaus (d. 240). The fragments mainly deride the inconsistency of philosophers, but praise Epicurus.

FCG iv. 499 ff.; CAF iii. 326 ff.

W. G. W.

BAUBO (Babo), a female daemon of primitive and obscene character, doubtless originally a personification of the *cumulus*. She appears in the Orphic version of the Rape of Kore (Kern, *Orph. Frs.* 49 ff.), and on inscriptions from Paros and Asia Minor, and is mentioned by Asclepiades of Tragilus (Harpektion s.v. Βαυβίης) as mother of the Anatolian Miso. She has been thought to have a part in the Eleusinian Mysteries (Ch. Picard in *Rev. Hist. Rel.* xciv (1927)), but see L. Deubner, *Attische Feste* (1932), 83, n. 3. She survives in modern folklore (R. M. Dawkins in *JHS* xxvi (1926)). Other references in Picard, l.c. and W. K. C. Guthrie, *Orpheus and Gk. Rel.* (1935), 136. W. K. C. G.

BAUCIS, see PHILEMON (1).

BAVIUS (1st c. B.C.), a poetaster, rescued from oblivion by Virgil's contempt (*Ecl.* 3. 90).

BEE-KEEPING had the same importance for non-tropical antiquity from palaeolithic times onwards as sugar production has now. The culture of bees seems to have begun as early as the Mesolithic period. Solon introduced a law which regulated bee-keeping. Greek towns (Teos, Theangela) and the Ptolemaic Empire introduced special taxes on bee-keeping and carefully organized enterprises for honey-production. Different methods of bee-keeping and breeds of bees were developed, the most important progress being made during the centuries between Alexander and Augustus. One bee-hive would produce 1-2½ and occasionally 3 *chous* (c. 6-18 pints) of honey at one harvesting. The best honey came from Attica (Hymettic region), Theangela, Chalybon, Cos, Calymna, Rhodes, Lycia, Coracesium, Thasos, Cyprus, several districts of Syria, Sicily (especially the Hyblaean region near Syracuse), Liguria, Noricum, and the south of Spain, the main honey-exporting countries of the Ancient World. The practical experience of many generations of Greek and Roman bee-masters was finally codified by a number of Greek and Latin authors, the most distinguished being Aristotle, Virgil, Varro, and Columella.

P. D'Hérionville, *Mus. Belge* xxx (1926), 161 f.; J. Klek, *PW*, s.v. 'Bienenzucht' (Suppl. iv); J. Klek and L. Armbruster, *Archiv für Bienenkunde* i. 6; ii. 17; iii. 8; vii (1919-26); Olck, *PW*, s.v. 'Biene', 'Bienenzucht'; L. Robert, *Ant. Class.* iv (1935), 170 f. F. M. H.

BELGAE. According to Caesar, a population-group of this name occupied lands to north of Seine and Marne. They were the fiercest inhabitants of Gaul and boasted of their German blood (cf. Strabo 4. 196). Certain tribes, he says, had settled in Britain, and Belgae are actually located there by later geographers. The Gallic Belgae were subdued by Caesar in 57 B.C., but continued to give trouble for thirty years more.

Among the Gallic Belgae, archaeology distinguishes two cultural provinces separated by the Ardennes. The northern part is a backward region with Hallstatt characteristics; to the south, traditions of the Marne culture, notably the pedestal-urn, persist. Both experienced German penetration, cremation (a German practice) being normal. The northern group was reinforced under the Empire by new settlers and rose suddenly to great prosperity under the stimulus of the Rhine market.

An exodus from the southern (pedestal-urn) group into Britain occurred c. 75 B.C., which developed into the kingdom of Cassivellaunus, whose descendants extended their rule over all the south-west. About the time of Caesar's conquest, or perhaps after, a further exodus settled in Hampshire and Berkshire, spread over west (but not east) Sussex, and influenced the culture of the neighbouring Durotriges. Their rulers were the house of Commius (q.v.) and their culture was characterized by Bead-rim pottery.

Characteristics of the Belgae were their preference for woodland sites both for towns and for agricultural development, and their fondness for things Roman, which, however, made them no less hostile to Roman invasion; it appears, indeed, that it was Belgic areas which led opposition to the Roman conquerors.

C. F. C. Hawkes and G. C. Dunning in *Arch. Journ.* lxxvii. 150-335. The 'Second Belgic Invasion' has been attacked by Mrs. Cunningham (*Antiquaries Journal* xii. 27-34) and R. E. M. Wheeler (ib. xv. 275; *JRS* xxix. 88); but Hawkes has defended himself (*Proc. Hampshire Field Club* xiii. 160-3). C. E. S.

BELISARIUS, see JUSTINIAN.

BELLEROPHON (Βελλεροφών, Βελλεροφόντης). In *Il.* 6. 155 ff., Glaucus the Lycian gives the following account of his ancestor Bellerophon; the genealogy is Sisyphus—Glaucus I—Bellerophon—Isandros, Hippolochus and Laodameia, Sarpedon being the son of Laodameia, and Glaucus II of Hippolochus. He was a man of remarkable beauty and valour, a native of Ephyre

(generally identified with Corinth). Proetus, king of the Argives,* had a wife Anteia (Sthenoboea in later accounts) who tried to tempt Bellerophon, and when he refused, told Proetus that he had tried to seduce her (cf. ACASTUS; Stith Thompson, *K* 2111). Proetus then sent Bellerophon to Lycia (in later accounts the king of Lycia, Iobates, was Proetus' father-in-law) with a letter to the king asking for his execution (cf. Stith Thompson, *K* 978). On reading this, the king set him first to fight the Chimaera (q.v.), then the Solymi, then the Amazons, and finally laid an ambush for him. Bellerophon survived all these trials, and the king made peace with him and married him to his own daughter. Afterwards, Bellerophon became 'hated of all the gods' and wandered along on the *πεδίον Ἀλγίων* (to Homer at least the 'plain of wandering'). Later, he accomplishes his tasks with the help of the winged horse Pegasus, which Athena helped him to catch (*Pind. Ol.* 13. 63 ff.); he used him to take vengeance on Sthenoboea (Euripides, *Sthen.*) and offended by trying to fly on him to heaven (Eur. *Beller.*). See further Rose, *Handb. Gk. Myth.* 270 f. H. J. R.

* In Homer there is no hint that Ephyre was not in his domains; later, e.g. schol. *Il.* 6. 155, the geography is modernized, and Bellerophon has to leave Corinth because of a blood-feud and take refuge at Argos.

BELLO AEGYPTIACO (sive ACTIACO sive ALEXANDRINO), CARMEN DE, fragments of a papyrus from Herculaneum, possibly part of Rabirius' poem on Antony's defeat (E. Bickel, *Gesch. d. röm. Lit.* (1937), 441).

Bachrens, *PLM* i. 218; see Papyrology, LATIN.

BELLONA, the Roman war-goddess, older *Duellona*, rarely *Bellola*. Whether independent in origin or an offshoot of Mars, she is early, her name occurring in the formula of *devotio* (Livy 8. 9. 6). She had, however, no *flamen* and no festival, and her temple was vowed in 296 B.C. and built somewhat later (Livy 10. 19. 17). It was in the Campus Martius, near the altar of Mars, and often used for meetings of the Senate when held *extra pomerium* (Platner-Ashby, 82). Before it stood the *columna bellica*, used in formal declarations of war, cf. FETIALES. She was occasionally identified with Nerio, the ancient cult-partner of Mars (Augustine, *De civ. D.* 6. 10), commonly with the Greek war-goddess Enyo, and in Imperial times at latest with the Cappadocian goddess Mā.

Wissowa, *RK* 151, 348; Nock, *GAH* xii. 425.

H. J. R.

BELLUM AFRICUM, a record of Caesar's war in Africa (winter 47-46 B.C.). Its ninety-eight chapters are monotonous to the layman, but as military history it is painstaking and straightforward. Both style and matter suggest that the author was a trained soldier, tribune or centurion, who took part in the campaign, though not a man in Caesar's confidence; however, the claims of Hirtius (q.v.) to editorship are still upheld.

O. Seel, 'Hirtius', *Klio*, Beiheft 1935; cf. T. Rice-Holmes, *The Roman Republic* iii (1923), 274. G. E. F. C.

BELLUM ALEXANDRINUM, a work continuing Caesar's commentary on the Civil War. Thirty-three chapters describe the war at Alexandria from the point at which Caesar left off; then follow the campaign of Calvinus (q.v. 2) against Pharnaces (chs. 34-41), the war in Illyricum (chs. 42-7), and the disturbances during Q. Cassius' tenure of Spain (chs. 48-64), both in the winter 48-47, and finally Caesar's campaign against Pharnaces (chs. 65-78) ending in the victory of Zela (2 Aug. 47). The style is cultured and the writer was well informed; he may well have been Hirtius (q.v.), who, however, took no part in the Alexandrian war.

For bibliography, see HIRTIIUS, with T. Rice-Holmes, *The Roman Republic* iii (1923), 483-4. G. E. F. C.

BELLUM CIVILE. (1) Caesar's books on the war begun in 49 B.C. (2) The poem of 295 hexameters introduced into Petronius' *Satyricon* (119-24) to illustrate Eumolpus' implied criticism on the management of the same subject by Lucan, who is not named.

J. W. D.

BELLUM HISPANIENSE, an account of the campaign which ended at Munda (45 B.C.), written by an eyewitness, probably from Caesar's army. The text is deplorable; but many meaningless passages are caused by the author's illiteracy and his incapacity to understand anything difficult. The work is interesting mainly as a study in half-educated Latin, which combines colloquialism with quotations from Ennius and schoolboy rhetoric.

Cf. O. Seel, 'Hirtius', *Klio*, Beiheft 1935; T. Rice-Holmes, *The Roman Republic* iii (1923), 298.

G. E. F. C.

BELLUM HISTRICUM, a lost epic on the Istrian War of 125 B.C. by Hostius, probably grandfather of Propertius' 'Cynthia', i.e. Hostia (4.20.8).

See Morel, *FPL* 33.

BELLUM SEQUANICUM, historical epic (lost) by Varro Atacinus (q.v.) written in Caesar's time on his war with Ariovistus.

Morel, *FPL* 99.

BELUS (*Bēλος*), hellenization of Ba'al, Bel, sometimes recognized as a divine title (Zeus Belus, Hdt. i. 181. 2; Marduk?), oftener taken as the name of an ancient oriental king (of Assyria, Serv. on *Aen.* i. 642); father of Dido (ibid.); ancestor of the founder of the dynasty of the Heraclidae in Lydia (Hdt. i. 7. 3); father of Danaus (q.v.); founder of the rulers of Persia (Ov. *Met.* 4. 213). It thus forms a stopgap name for foreign genealogies, as Creon for Greek.

H. J. R.

BENDIS (*Βένδης*, *Βενδῆς*), a Thracian goddess, worshipped with orgiastic rites in Thraec (Strabo, 10. 3. 16, p. 470); at the Piraeus, where her cult was introduced during Socrates' lifetime (Plato, *Resp.* 327 a, 354 a), presumably by resident Thracians (cf. W. S. Ferguson, *Hellenistic Athens* (1911), 216), she had processions, a torch-race on horseback, and a vigil. The date was Thargelion 19 (Deubner, *Att. Feste*, 219). She was apparently represented as carrying two (hunting?) spears (Hesych., s.v. *δίλογγον*). Cf. now Ferguson, *Harv. Theol. Rev.* 1944.

H. J. R.

BENEVENTUM, on the river Calor in southern Italy. Originally a stronghold of the Hirpini Samnites named Malventum, it fell some time after 300 B.C. to the Romans, who made it a Latin colony, changing its ill-sounding name to Beneventum, 268 B.C. (Vell. Pat. 1. 14; Festus p. 25 L.). Thereafter its *territorium* expanded and Beneventum flourished. Under the Republic it was a military base, later an opulent *municipium*; under the Empire a *colonia* and important road-centre (Viae Appia, Traiana); under the Lombards a duchy. The ancient remains include Trajan's arch. (Polyb. 3. 90; Livy 27. 10, etc.; Strabo 5. 250.)

Beloch, *Röm. Gesch.* 489, for magistrates; A. Sambon, *Monnaies antiques de l'Italie* i (1903), 114, for coins.

E. T. S.

BERENICE. (1) BERENICE I, daughter of Lagus (father of Ptolemy I) and Antigone, was born c. 340 B.C., and died between 281 and 271. She married a Macedonian Philippos. The issue of this marriage were Magas, king of Cyrene, Antigone (m. Pyrrhus of Epirus), and other daughters. Berenice, already a widow, came to Egypt with her aunt Eurydice, who married Ptolemy I. The step-sister of the king, she presently (c. 317) became his mistress and succeeded Eurydice as his wife. Their children were Arsinoë II and Ptolemy II Philadelphus.

(2) BERENICE SYRA, daughter of Ptolemy II and Arsinoë I, was born c. 280 B.C. She married the Seleucid king Antiochus II after the Second Syrian War (252). Laodice, the king's divorced first wife, murdered Berenice and her son by Antiochus after his death in 246, before Ptolemy III could bring help.

(3) BERENICE II, daughter of King Magas of Cyrene and of Apama, daughter of Antiochus I, was born c. 273 B.C. She was betrothed to Ptolemy III, but after Magas' death Demetrius, a Macedonian prince, was called in by her mother to marry her. Berenice led a rebellion against them both, and Demetrius was killed by her orders. She married Ptolemy III in 247, who called a star 'Berenice's curls' after her, as Callimachus and Catullus tell us. After her husband's death she became joint ruler with her eldest son Ptolemy IV, but was murdered by him in 221. He nevertheless appointed a special Alexandrian priestess in his mother's honour in 211-210, the *ἀλλοφώρας Βερενίκης Εὐεργετίδος*. See PTOLEMY.

F. M. H.

BERENICE (4) (b. A.D. 18), daughter of Agrippa I (q.v.), was married first to Marcus, brother of Ti. Julius Alexander, then to her uncle Herod of Chalcis. On his death (48) she lived for long with her brother Agrippa II, in incest, it was said. To quiet scandal she induced Polemon II, then king of Olba in Cilicia, to marry her c. 65, but soon parted from him and returned to her brother. Titus fell in love with her when he was in Judaea (67-70), and when she visited Rome in 75 lived openly with her. He was, however, dissuaded from marrying her, and when she revisited Rome in 79 repulsed her advances.

A. H. M. J.

BERENICE, the name of several Hellenistic towns. Chief among them were: (i) a foundation of Ptolemy II on the Egyptian coast of the Red Sea below *Ras Benas*, connected with Coptus on the Nile by a desert camel-track supplied with cisterns and stations. It became the chief Egyptian port for Arabia, east Africa, and India in the first and second centuries A.D. (Warrington, *Indian Commerce*, 6 fl., 51 fl., 73 fl.); (ii) *Berenice Panchrysos*, on the African coast of the Red Sea near the gold-mines of *Jebel Allaki*; (iii) *Berenice Epideiris* on the same coast at the Straits of Bab-el-Mandeb.

E. H. W.

BEROSUS or **BEROSSUS** (*Βηρωσός*) (fl. c. 290 B.C.), priest of Bel, author of history of Babylon (*Βαβυλωνιακά*) in three books dedicated to Antiochus I. Book 1 dealt with origins to the Flood, bk. 2 reached Nabonassar (747 B.C.), and bk. 3 the death of Alexander. Value lay in transmission of Babylonian history and astronomy to the Greek world.

FHG ii. 495.

E. A. B.

BERYTUS (mod. *Beirut*), a Phoenician city. It issued a municipal coinage, inscribed both in Greek and in Phoenician, from the reign of Antiochus IV, at first as Laodicea in Phoenice, later under its old name. In 80 B.C. it became a free city, and in c. 15 B.C. a Roman colony, with *ius Italicum*, two legions being settled in it by Agrippa. It received at this time a large accession of territory, including Heliopolis, which it lost under Septimius Severus. A great trading town, it was also famed for its wine and linen, and from the third century for its school of Roman law.

A. H. M. J.

BESTIA, LUCIUS CALPURNIUS, an Optimate politician. As tribune in 120 B.C. he recalled Popilius Laenas from exile. As consul (111) he was sent to Numidia, against Jugurtha (with Scaurus as legate); having wisely admitted Jugurtha to terms, he was condemned in 110 under the Mamilian commission (see MAMILIUS 3). He later returned from exile, but left Rome again in 92, to escape trial under the Varian law (see LEX, LEGES).

M. H.

BETROTHAL. In Greece a formal betrothal (ἐγγύησις) was a necessary preliminary to a wedding. At Rome this ceremony (*sponsalia*) did not inevitably lead to a marriage, and was merely a preliminary business arrangement. The intending bridegroom, or his father, approached the girl's father and opened negotiations, which were concerned chiefly with the amount of her dowry. If the bride's father gave his consent, the affair was settled, nor was the lady consulted. It was usual to celebrate the occasion with a family party where the future bride and bridegroom exchanged gifts, which were forfeited if either party later broke the contract. This, however, was the only penalty in Roman law, which did not allow breach-of-promise actions. F. A. W.

BIBACULUS, MARCUS FURIUS, born at Cremona 103 B.C. (Jerome), is coupled with Catullus as a lampooner by Quintilian and Tacitus, by the latter expressly as attacking 'the Caesars', and has been conjecturally attached to Catullus' circle. A few phalaecians preserved by Suetonius (*Gram.* 11) suggest humour and felicity of phrase. Horace (*Sat.* 2. 5. 40) twits him with tripe-inspired epic bathos, and Acron (ad loc.) credits him with an epic on Caesar's Gallic Wars, to which some lines quoted from a Furius by Macrobius (*Sat.* 6. 1) not improbably belong. He is also assigned an *Aethiopsis*.

Certain difficulties (notably age-discrepancy as regards Catullus; anti-Caesarianism and Caesarian epic) commend the suggestion that Bibaculus is divisible into: (1) Jerome's M. Furius Bibaculus, the epic poet, (2) a younger Bibaculus, the lampooner, born about 82 B.C.

Morel, *FPL* 80-3.

E. P. B.

BIBRACTE (modern *Mont-Beuvray*), a hill-fort, the original capital of the Aedui. Herc in 52 B.C. the supreme command was conferred by a pan-Gallic council upon Vercingetorix. Its inhabitants were transferred c. 12 B.C. to a new town in the plain, Augustodunum (*Autun*), but inscriptions—*deae Bibracti*—at Autun kept the old name alive, and a cult survived on the site itself. Excavations have revealed numerous houses of the Gallic town, all rectangular and of dry stone, some with *atria* and even hypocausts. An important metal-workers' and enamellers' quarter was also revealed.

Bulliot, *Fouilles du Mont Beuvray* (1899); Déchelette, *Fouilles du Mont Beuvray de 1897 à 1901* (1904); id. *Manuel* ii. 946-57.

C. E. S.

BIBULUS (1) **MARCUS CALPURNIUS**, Caesar's colleague in aedileship and praetorship, and finally in the consulate of 59 B.C., when after being forcibly prevented from vetoing the agrarian law he attempted from his house to invalidate legislation by 'watching the heavens'. His only departure from strict Republicanism was to propose Pompey's consulate in 52. In 51 he governed Syria, and resisted the Parthians tenaciously. In the winter 49-48 he wore himself to death, trying to prevent Caesar's crossing to Epirus. He married Porcia, daughter of Cato and future wife of Brutus. G. E. F. C.

BIBULUS (2) **LUCIUS CALPURNIUS**, son of (1) and Porcia, joined his stepfather Brutus and was proscribed; but after Philippi he passed over to Antony, and became his *praefectus classis* and finally governor of Syria, where he died in 32 B.C. He frequently attempted mediation with Octavian. His book on Brutus was an (indirect?) source of Plutarch (*Brutus* 13; 23).

PW iii. 1367; H. Peter, *HRRel.* ii, p. lxxvii; R. Syme, *The Roman Revolution* (1939), see index. A. M.

BIDENTAL. By Etruscan use, when lightning had struck any place, the supposed fragments of the bolt were collected, buried while a formula was pronounced (Lucan 1. 606-7), and the place walled in (ibid. 8. 864)

and inscribed *fulgur conditum* or the like; it was tabu (ibid. 1. 608, 'dat . . . numen'), and anyone touching it was *incestus* (Hor. *Ars P.* 471). This was called a *bidental*.

See C. O. Thulin, *Etruskische Disciplin* (1909), i. 92 ff. H. J. R.

BIOGRAPHY, GREEK. The impulse to celebrate the individual finds early expression in the dirge and funeral oration; but not until the fifth century, with its conscious recognition of the individual in various arts, do the first traces of biographical literature appear in Greece. Many of THUCYDIDES' sketches approximate to this *genre*; and ION OF CHIOS and STESIMBROTUS described important contemporary figures. In the fourth century appeared ISOCRATES' *Evagoras* and XENOPHON'S *Memorabilia* and *Agessilaus*, all forerunners of biography proper; though Isocrates' claim that the *Evagoras* was the first prose encomium of a living person is exaggerated. Meanwhile the Platonic corpus was developing the figure of Socrates.

2. ARISTOTLE gave biography a new impetus. Under his influence interest in ethical and cultural problems encouraged the writing of *βίαι*, 'ways of life' of peoples and individual types (e.g. CLEARCHUS; DICAERCHUS); simultaneously the history of rhetoric and the chronology of refinements in that art were recorded in compilations, and Aristotle himself gave such researches a literary form. Directly associated with THEOPHRASTUS was ARISTOXENUS, who stamped the so-called peripatetic biography with its most typical characteristics—combinations of legendary material, scandal, polemics, an interest in literary innovations, and a popular literary form in which character was revealed through a man's actions. DURIUS was more directly interested in personality, a trend carried further by PHAENEAS, IDOMENEUS, and NEANTHES, who treated not only literary figures but also, occasionally, men of action. CHAMAELEON set a popular fashion by deducing wild stories from the works of those for whom reliable biographical data were scanty, a precedent followed by HERMIPPUS OF SMYRNA, SATYRUS, who ignored the distinction between men of letters and men of action, and SOTTON, who instituted the *διαδοχή*—a semi-biographical account of successive teachers and pupils in various fields.

3. About 240 B.C. ANTIGONUS OF CARYSTUS displayed a new accuracy in describing contemporaries from personal knowledge; and in the scholarly atmosphere of Alexandria there grew up a biographical form, which revalued the findings of the Peripatetics and re-established their chronological data. Commentaries and epitomes called for biographical introductions, which generally shed their narrative character: between the particulars of a writer's birth and death short notes gave specific details of his mode of life, friends, students, works, etc. Typical of this school is Posidonius' pupil, JASON; and HERACLIDES LEMBUS took still further a literary form which led ultimately to Suetonius.

4. Meanwhile, historians too, after Alexander, stressed the individual personality; POLYBIUS, in his *Histories* (e.g. 10. 2) and *Life of Philopoemen*, and after him PANAETIUS, are associated with a development to which such memoir-writers as ARATUS had contributed. There is, however, no proof that peripatetic biography continued, treating political and military figures (as Leo claims). Two hundred years later PLUTARCH'S *Lives* mark a new achievement, without continuous links with either previous biographers or Hellenistic historians. Like the Peripatetics Plutarch is discursive, and in contrast to the Alexandrians normally lets his hero's character be deduced from his actions; though his scheme is flexible, each *Life* forms a whole, generally with a strong moral bias. The *Comparisons* reveal his keen interest in psychology.

5. Later PHILOSTRATUS rhetoricized and EUNAPIUS broke up the Alexandrian form; Alexandrian too in

origin, though more learned, were the Neoplatonist biographies of PORPHYRY and MARINUS. Of the abridging and synthesizing of the materials of the literary biography an example survives in DIOGENES LAERTIUS. Much of Greek biography has perished. It seems clear, however, that the Peripatetic form, for all its weaknesses, constituted an artistic unity, though it failed to portray the development of character; whereas the Alexandrian studies, which had most influence at Rome, remained an accumulation of material lacking internal cohesion.

F. Leo, *Die griech.-röm. Biographie nach ihrer litt. Form* (1901); W. Uxkull-Gyllenband, *Plutarch u. die griech. Biographie* (1927); D. R. Stuart, *Epochs of Gk. and Roman Biography* (U.S.A. 1928); N. I. Barbu, *Les Procédés de la peinture des caractères . . . dans les biographies de Plutarque* (1934). F. W. W.

BIOGRAPHY, ROMAN (including AUTOBIOGRAPHY and MEMOIRS). The Romans from early times had customs which laid foundations for biography without Greek influence; songs at banquets praising illustrious men (Cic. *Tusc.* 4. 3); and dirges (*neniae*) at their funerals; eulogies at the obsequies of eminent citizens (*laudationes funebres*). Dionysius (*Ant. Rom.* 5. 17) records the oration on Brutus by Valerius Publicola; he does not know whether this was a new custom, but he is positive that it was of Roman origin. These were early committed to writing (Cic. *Sen.* 12) and preserved as family records in a wing of the atrium, where were also exhibited masks of distinguished ancestors, arranged so as to form a family-tree. Finally, a Roman's career was recorded in his funerary inscription, which was highly prized and looked forward to during life. These condensed biographies, especially the *laudationes*, were gradually elaborated by such details as justification of a person's conduct, domestic affairs, including regularly his property, and sometimes intimate private matters, as in the *laudatio Mvrdiae* (CIL vi. 2. 10230). Leo (op. cit. infra, 226), denies the derivation of Roman biography from the *laudationes*, but the opposite view is convincingly upheld by Stuart (op. cit. infra, chs. 7 and 8). On autobiography as original with the Romans, though not under that name, which is modern, see West, *Roman Autobiography*.

2. Direct information on the subject is scanty, because of the small number of surviving works, an inconsiderable part of those which once existed. Jerome (Migne, PL xxiii. 821, *prolog. ad Dextrum in librum de illustribus*; cf. Suet. *Reliquiae* ed. Reifferscheid (1860), p. 3), besides Suetonius' *Tranquillus*, from whose lost preface to the *De Viris Illustribus* the saint derived his information, names as his predecessors Varro, Santra, Nepos, and Hyginus. The omission of Tacitus is noteworthy; the *Agricola* is certainly a biography, but might naturally be regarded by Suetonius as history. Varro's place in the list suggests him as the founder of the genre, and doubtless Suetonius so regarded him; nothing of Varro's in that line has survived, for the *Imagines* is not biography. Of Santra we know little; he approved the work of Curtius Nicias on Lucilius (Suet. *Gram.* 14), and expressed an opinion as to the authorship of Terence's plays (id. *Poet.* 4). On Nepos as biographer, see under his name. Of Julius Hyginus' works Gellius (1. 14. 1) cites book 6 of *De Vita Rebusque Illustrium Virorum*, and (6. 7. 1. 2) *A Life of Scipio Africanus* (cf. 3. 4. 1); Asconius (Pis. 12) cites his *De Viris Claris*. On Suetonius and Valerius Probus, see Suetonius (2).

3. The impulse to justify or to exalt an individual led to the writing of memoirs, autobiographical and biographical. Of the former we know of those of C. Gracchus (Cic. *Dir.* 1. 36); of M. Aurelius Scaurus in 3 books (Cic. *Brut.* 112); of P. Rutilius Rufus in 5 books (Charisius, *Gramm.* 1. 139. 18 Keil; Suet. *Rel.*, p. 105 Reiff.); of Q. Lutatius Catulus (Cic. *Brut.* 132); of Sulla (bk. 22 was finished by Cornelius Epicadus, Suet. *Gram.* 12; *Rel.*, p. 110 Reiff.); of Verro (Charisius, *Gramm.* 1. 89. 28

Keil); Cicero wrote a prose account of his own consulship in Greek (whether the Latin version was made is uncertain) and a poem on the same subject (*Att.* 1. 19. 10); of Augustus in 13 books, extending to the Cantabrian War (Suet. *Aug.* 85); of Agrippa (*Schol. Bern.* on Verg. *G.* 2. 162); of Tiberius (Suet. *Tib.* 61); of Claudius (id. *Claud.* 41.3); of Agrippina the younger (Tac. *Ann.* 4. 53); of Hadrian (S.H.A. *Had.* 16); of Severus (S.H.A. *Sev.* 18). The only surviving autobiography, the *Confessions* of Augustine, differs from the others in showing the development of a human soul. Memoirs written by others are very numerous: on Pompey and on Pompey's father by L. Voltacilius Plotus (Suet. *Rhet.* 3; *Rel.*, p. 214 Reiff.); on Caesar by Oppius (id. *Jul.* 53, cf. 52. 2); on Cicero by Tiro in 4 books (*Asc. Mil.* 43); on Cato Uticensis by Cicero (*Att.* 12. 40. 1); by Fadius Gallus (Cic. *Fam.* 7. 24. 2); by Brutus (Cic. *Att.* 12. 21); and by Munatius Rufus (Plut. *Cat. Min.* 37); on Drusus by Augustus (Suet. *Claud.* 1. 5); on Pomponius Secundus by the elder Pliny (Plin. *Ep.* 3. 5. 3); on Thrasca Pactus by Arulenus Rusticus and on Helvidius Priscus by Herennius Seneccio (Tac. *Agr.* 2); on Ambrosius by his secretary Paulinus. The custom of eulogizing the emperor on receiving the consulship was common, as in some of the twelve surviving *Panegyrici Latini* (q.v.).

BION (1) (c. 325-c. 255 B.C.), frequently referred to as *Bion the Borysthenite*, son of a freedman and of a former hetaira of Borysthenes (= Olbia). Because of a fraud committed by his father the family was sold into slavery. But as slave of a rhetorician Bion received a good education, was later set free, and inherited the fortune of his master. He went to Athens and studied in the Peripatos (under Theophrastus) and the Academy (probably under Xenocrates). But he was more strongly influenced by Crates the Cynic and by Theodorus the atheist and hedonist. Diogenes Laertius includes him among the adherents of the Academy. But he did not follow any particular philosophical creed. He imitated the caustic humour, the criticism of conventions, and the shamelessness of the Cynics, and preached the Cyrenaic doctrine that happiness is achieved by adapting oneself to circumstances. He wandered from town to town lecturing for money. In his writings, which later influenced Roman satire, he used a highly eclectic style.

Sillographi Graeci, ed. C. Wachsmuth, 73-7; Diogenes Laertius 4. 46-58. R. Heinze, *De Horatio Bionis imitatore* (1889); R. Dudley, *A History of Cynicism* (1937), 62-9; *Ph* ii. 483. K. von F.

BION (2) (fl. probably c. 100 B.C.), of Philossia near Smyrna. Seventeen fragments have been preserved from his *Bucolica*. Some pieces seem complete, others to be excerpted from longer poems (? a *Hyacinthus*, a *Galatea*). The bucolic element is very slight. The theme of several pieces is playfully erotic, but in others B. is sententious and in one fragment, where he dwells on the vanity of human effort, seems to strike a more personal note. B.'s style is easy and the language simple. Since the Renaissance B. has also been credited with the *Lament for Adonis*, a highly coloured composition in ninety-eight hexameters, which some MSS. wrongly assign to Theocritus. While this has the same theme as Theocritus 15 and in certain features (e.g. the refrain) recalls Theocritus 1, the lyrical treatment is more akin to that found in certain hymns of Callimachus, though B. goes far beyond the latter in emotionalism. The chief argument for B.'s authorship of the *Lament for Adonis* is drawn from the references to the poem in the *Lament for Bion*, a work of some disciple of B., not, as some MSS. assert, of Theocritus or Moschus. According to the *Lament for Bion* B. spent most of his life in Sicily. The

fragmentary *Epithalamius of Achilles and Deidameia*, an epyllion introduced by two bucolic interlocutors, has also been assigned by some to B., but without real justification.

Texts: U. von Wilamowitz-Moellendorf, *Bucolici Graeci*² (1910), 122, 130, 140; Ph. LeGrand, *Bucoliques grecs* II (1927), 185-218. General literature: G. Knaack, 'Bion (6)', in *PW* III. 481-2. E. A. B.

BIOTTUS (2nd c. B.C.), Greek comic poet, mentioned only in didascalie lists. His *Πουτήης* was produced in 168-167 B.C., followed later by his *Ἀγνοῶν* (*IG* II². 2323, 212 and 238). No fragments remain.

CAF III. 366.

BIRDS, SACRED, see ANIMALS, SACRED; some further particulars are given here. One of the most noteworthy associations of a bird with a deity is that of the swan with Apollo (for material, see Sir D'A. W. Thompson, *Glossary of Greek Birds*², 180-4, q.v. in general for legends concerning birds). It was a fixed ancient belief that it could sing, at least when dying, an idea perhaps founded on the cry of the Whooper Swan; certainly no other species makes any but a harsh noise. It was also the form taken by Zeus to approach Leda (refs. *ibid.* 183), and there are several stories of metamorphoses into swan-form; when Horace hopes to become one, *Carm.* 2. 20. 9 ff., he means that he is to be recognized as a true poet, Apollo's singer. The connexion of the sparrow (*σπομβός*) with Aphrodite, as Sappho, fr. 1. 10, is not unreasonably to be explained by its fertility and lustfulness; the dove (*περιστέρα*) is associated with her most probably because of her Oriental connexions, it being the sacred bird of more than one Asianic mother-goddess (Atargatis, Lucian, *Syr. D.* 14; Ishtar and others). In the case of deities with pre-Hellenic connexions, the occasional bird-form which they assume (cf. ATHENA, para. 1) may plausibly be associated with the epiphanies of Minoan divinities in that shape (see Nilsson, *Minoan-Mycenaean Religion*, 285 ff.); but some birds, e.g. Hermes' cock and Hera's peacock, are much later than their owners, being comparatively recent introductions into Greece. H. J. R.

BIRTHDAY (*γενέθλιος ἡμέρα*, *natalis*, sc. *dies*). The classical Greeks seem to have paid but little attention to the anniversary of their births. A child's birth was the occasion of congratulatory visits from friends and relations, and presents might be made to the child (Aesch. *Eum.* 7-8); but this was not confined to the actual day of the birth, but was carried out when the child was first seen by the giver, hence the name *ὑπτήρια* for such a present (Callim. *Dian.* 74, there given to an infant three years old); the word also means a sacrifice made by the father on first seeing the child (Eur. *Ion* 1127). Another word was *γενέθλια*, also used both of the sacrifice (*ibid.* 653, 805) and of the gift (Hesych., s.v.). But there is no definite proof of the yearly recurrence of this or of the family festival which accompanied it (Plato, *Symp.* 203 b) earlier than the date (conjecturally late 4th c.) of the Greek original of Plautus, *Pseudolus*, in which much stress is laid on it being Ballio's birthday (165 ff.). The nearest approach is the fact that the days of the month associated with gods are interpreted as being their birthdays as early as Hesiod, *Op.* 771 (a passage doubtfully part of the original poem) and *Hymn. Hom. Merc.* 19; it may therefore have been the custom to have some kind of remembrance, monthly rather than yearly, of the birthdays of human beings.

2. In Hellenistic times birthdays were more observed, particularly in the case of kings and other great persons. One of the most familiar instances of this is found on the Rosetta stone (*OGI* 90. 46), where the Egyptian clergy decree solemnities for 'the day on which the birthday feast of the King is held'. This may of course have been connected in other cases, as it certainly was in this one, with the divine or quasi-divine honours given them; we

may compare the celebration after their deaths of the birthdays of distinguished men in and just before that period, as Aratus at Sicyon (Plut. *Arat.* 53) and the founders of various philosophical schools. These had in some cases been regularly heroized and in others received from their followers and successors in the schools something like heroic honours, analogous to those paid to the founder of a city or colony. But some royal personages themselves kept their own birthdays as feasts, analogous to but more splendid than those of ordinary individuals in Rome or a modern country; Cleopatra VII is an example, Plut. *Ant.* 73, where it is expressly noted that on a special occasion she refrained from making any display on her birthday. It is quite possible that the growing belief in the personal *daimon* has something to do with the increased importance of the birthday in the case of private individuals (e.g. *Anth. Pal.* 6. 227; the epigrammatist Crinagoras sends a friend a piece of plate for a birthday present); to celebrate the birthday was to celebrate the anniversary of the deity's first manifestation of his care. See, for the belief, Th. Hopfner, *Griechisch-ägyptischer Offenbarungszauber* I, par. 117 ff.

3. In Rome certainly a like belief had a direct connexion with birthday ceremonies, which are testified to from Plautus onwards (supposing that not all his references are taken over from Greek models) and even for quite humble persons, as Verg. *Ecl.* 3. 76, where a slave is speaking. This was the universal cult of the *Genius* (q.v.), attested for birthdays by Tibullus (2. 2. 5); at a birthday sacrifice 'ipse suos *Genius* adsit uisurus honores'. It was to him, then, that the ceremonial of the day was directed. Since in classical times he was precisely equivalent to the Greek personal *daimon*, it may be that Greek influence played a part; but certainly the Romans celebrated not only private birthdays and those of emperors but also the *natales* of cities and all manner of institutions, since every one of them had its *genius*. The *natalis* of a temple, however, is presumably an annual honour done its god.

W. Schmidt, *Geburtstag im Altertum* (1908), and in *PW* VII. 1135 ff. H. J. R.

BIRTHDAY POEMS, see GENETHLIACON.

BITHYNIA, a territory in north-west Asia Minor, originally confined to the peninsula of Chalcedon, but gradually extended eastward to Heraclea and Paphlagonia, southward to the Mysian Olympus, and westward to Mysia and the Propontis. Although much of the land is mountainous, the Sangarius river and the valleys that run back from the Propontis form fertile plains and provide relatively easy communications. It was a well-watered region producing good timber, excellent pasture, and all manner of fruits and grains (except olives), possessing fine quarries of marble, and good harbours, and crossed by the chief roads to the Anatolian plateau and to Pontus.

2. The Bithynians were of Thracian origin, and long kept their tribal identity among the peoples about them. They warred constantly with the Greek colonies on the coast, preserved a measure of autonomy under the Persian régime, and in 297 B.C. founded a dynasty of Thracian stock, beginning with King Zipoetes. By a combination of aggressive policies and judicious alliances (especially with the Galatians, whom they invited into Asia in 279), the Bithynian kings protected themselves against the Seleucids and their rival Heraclea and extended their power to Inner Paphlagonia, to the valleys of Nicaea and Prusa, and finally to the cities of the coast. They were active founders of cities, especially Nicomedes I and II and Prusias I, fostered commerce, to which the tribesmen had previously been inhospitable, and showed an interest in Greek culture. Wars with Pergamum in the second century lost Prusias I and II some territory,

but otherwise there were slight changes until in 74 Nicomedes IV bequeathed his kingdom to Rome (see NICOMEDES I-IV).

3. In organizing the province of Bithynia-and-Pontus Pompey apparently divided all the land among the cities for convenience in maintaining order and collecting taxes. Nicaea, for instance, extended in later times as far as Dorylaeum. In the early Empire Bithynia-and-Pontus was at first a senatorial province, but the importance of the great highway to the eastern frontier and of maritime connexions with the Euxine coasts led imperial procurators to assume more than their regular authority. Special legates were sent under Trajan and Hadrian (Pliny and Julius Severus), and finally Marcus Aurelius made it Imperial. In the time of Pliny and Dio Chrysostom peculation by magistrates, unwise and extravagant building, bitter rivalries between cities, and social discontent within individual cities (for the native Bithynians, long an inferior class, were pressing for equal privileges) created a bad situation, which they did their best to remedy.

BITON (Βίτων) (3rd or 2nd c. B.C.), the author of a small extant work on siege-engines (*Κατασκευαὶ πολεμικῶν ὀργάνων καὶ καταπαλτικῶν*) and of a lost work on optics.

Ed. A. Rehm and E. Schramm, *Abh. d. Bayer. Akad. d. Wissench., Ph.-hist. Abt.*, N.F. ii, 1929. *PIV* iii. 545.

BITON, see also CLEOBIS.

BLAESUS of Caprene (? 2nd or 1st c. B.C.), author of *σπουδογέλοια* (perhaps akin to Menippus' satires).

Kaibel, *CGF* 191.

BLANDUS, RUBELLIUS, from Tibur, as the first *eques* to teach rhetoric, marked the rise in professional status (Sen. *Controv.* 2, *praef.* 5). He trained Papirius Fabianus who in turn taught the younger Seneca. He is perhaps the historian cited by Servius on Verg. *G.* 1. 103.

BLITHO, SULPICIUS, see SULPICIUS.

BOADICEA, see BOUDICCA.

BOCCHUS, king of Mauretania at the time of the Jugurthine War. Bestia (q.v.) in 111 B.C. rejected Bocchus' offer of alliance. He took the part of his son-in-law, Jugurtha, in the later stages of the war, though at the price of the cession of all western Numidia. With Jugurtha, he nearly defeated Marius at Cirta; but was finally induced by Sulla's daring diplomacy to surrender Jugurtha. He retained western Numidia. Bocchus II ruled with his brother Bogud (q.v.), c. 50-38 B.C., and alone until c. 33.

BOEOTIA, a district of central Greece, bordering on Attica, and of similar extent. Its heart consisted of the plains of Orchomenus and Thebes, which were good wheat-land and bred horses (for the flooding of the northern plain, see ORCHOMENUS, CORAIS). The south is rough and mountainous, with good harbours on the Corinthian Gulf, but not easy of access; the north is hilly country with a narrow seaboard; the east rolling country watered by the Asopus. The south-east frontier is formed by Cithaeron and Parnes, the north-west, with Phocis and Locris, is not clearly marked.

The Boeotians came from Thessaly before the Dorian invasion. Their dialect is most closely related to Thessalian and Aeolic, but has west Greek (Dorian?) elements, and, in the south-east, traces akin to Arcadian. Orchomenus and the Oropus district were relatively late additions to the Boeotian territory. Twenty-nine small Boeotian towns are named in the Homeric Catalogue.

Some disappeared, others were absorbed by more powerful neighbours; in classical times the independent cities numbered about a dozen. The importance of Boeotia in Greek history varied with the degree of Theban control (see THEBES 1), though some of her rivals, Thespieae and Plataea, had more attractive histories. The Boeotians were, on the whole, a self-contained agricultural people who did not share in the overseas expansion of Greece. The proverb *Βοιωτίαν ὕν* referred to their riches, and the slowness with which the Athenians taunted them. It is preserved by Pindar, the greatest of a number of Boeotian poets from Hesiod downwards who give it the lie. The Boeotian contribution to ancient music was also important. Artistically Boeotia was always backward.

Paus. bk. 9 and Frazer's commentary; Strabo 9. 400 ff. A. W. Gomme, 'The Topography of Boeotia', *BSA* xviii. 189 ff.; W. A. Heurtley, 'Notes on the Harbours of S. Boeotia', ib. xxvi. 38 ff.; W. R. Roberts, *The Ancient Boeotians* (1895); M. Feyel, *Polybe et l'histoire de Béotie* (1942). T. J. D.

BOEOTIA, CULTS AND LEGENDS. Stories of the earliest population are scanty and poor (see Paus. 9. 1. 1 and 2; cf. Cauer in *PIV* iii. 640-2). We may instance the shadowy figure of Aon, eponym of the Aones (Steph. Byz., s.v.; schol. Stat. *Theb.* 1. 33), son of Poseidon. Most of the tradition concerning Orchomenus is lost (cf. MINYAS) and the bulk of the surviving tales are Theban (see ADRASTUS, AMPHIARAUS, AMPHION, ANTIGONE, CADMUS, ETEOCLES, OEDIPUS). Much of what we know is owing to Pausanias. Cf. HERACLES.

Of cults, several are remarkable. Plataea had the Daedala, apparently a sacred marriage (see MARRIAGE, SACRED), combined with a remarkable fire-ceremony (Paus. 9. 3. 3 ff., cf. Plutarch, vol. vii, pp. 43-50 Bernardakis). At Orchomenus existed the ancient cult of the Charites (Pind. *Ol.* 14. 4; Paus. 9. 38. 1, cf. Farnell, *Cults* v. 428). On Helicon was the shrine of the Muses, said to have been founded by Otus and Ephialtes (Paus. 29. 1 ff., Farnell, *ibid.* 435). Thespieae had the cult of Eros (Paus. 27. 1), and a virgin priestess of Heracles (*ibid.* 6); Lebadea the oracle of Trophonius (q.v.). At Chaeirona a stick said to be the sceptre of Agamemnon was the chief deity (Paus. 40. 11, see de Visser, *Die nicht menschengestaltigen Götter* (1903), 112). At Thebes itself may be mentioned the cult of Apollo *Σαῖός*, the very ancient worship of Aphrodite, the so-called tomb of Amphion and Zethus and the fertility-magic attaching, Athena's title of Onca and the imported cult of Hector (Paus. 11. 1 and 2; 16. 3; 17. 4; 18. 5), also the remarkable sanctuary of the Cabiri (q.v.) (*ibid.* 25. 5; see Kern in *PIV* x. 1437 ff.). For a list of Boeotian cults, see Nilsson, *Griechische Feste*, topographical index under 'Böotien'.

For contacts with Arcadian myths and cults, see V. Bérard, *Les Cultes arcadiens* (1894), index under 'Béotie'. H. J. R.

BOEOTIAN, see DIALECTS, GREEK.

BOETHIUS, ANICIUS MANLIUS SEVERINUS (c. A.D. 480-524), son of the consul for 487, was *cos.* in 510. He was high in the confidence of Theodoric at Ravenna since early manhood, but, becoming involved in a charge of high treason brought against his friend Albinus, he was thrown into prison and executed. He wrote in prison the *De Consolatione Philosophiae*, a dialogue between himself and a figure representing philosophy, interspersed after the fashion of the Menippean Satire with verses in various metres, in which, though a Christian, he employs arguments of pagan philosophy. He was a prolific writer and exercised a wide influence in the Middle Ages by his works on arithmetic and music, and his translations and commentaries (see ENCYCLOPÆDIA LÆRING); he wrote on Aristotle's *Categories*, on his *Περὶ Ἑρμηνείας*, on Porphyrius' *εἰσαγωγή* to Aristotle's *Categories*, and on Cicero's *Tofica*. He had projected translations (with

commentaries) of the whole of Aristotle and Plato, but the plan was only partly carried out. He wrote also theological treatises on the Trinity and in opposition to Eutyches and Nestorius.

T. Hodgkin, *Italy and her Invaders* (1892-9), iii. 466 ff.; H. F. Stewart, *Boethius, a Study* (1891); *Cons. Phil.* ed. Weinberger (1934).
R. M. H.

BOETHUS (1) (2nd c. B.C.), sculptor and metal-worker, son of Athenaion, of Calchedon. Works (dated): (a) signature of dedication made by Boethus to Athena of Lindus about 180 B.C. in gratitude for the office of proxenus; (b) signature of statue of Antiochus IV (175-164 B.C.) in Delos (undated); (c) boy strangling a goose, bronze; marble copies in Munich, etc. (Winter, *KB* 370. 1-2). Herodas (4. 31) mentions an earlier marble group of the same subject (perhaps Winter, *KB* 370. 3); (d) statue of Asclepius as a boy; (e) signed bronze archaizing herm, found in the sea near Mahdia, probably support for winged boy also found there (Winter, *KB* 310. 1); (f) hydria, an heirloom stolen by Verres from Pamphilus of Lilybaeum; (g) a particular kind of couch, 'lectus Boethiacus', may have been invented by Boethus.

Overbeck, 1597-9, 2167, 2184; G. M. A. Richter, *Sculpture and Sculptors* (1930), 297; F. Studniczka, *Artemis und Iphigenie* (1926), 69; R. Herzog, *JÖAI* 1903, 215.
T. B. L. W.

BOETHUS (2) (2nd c. B.C.), sculptor, son of Apollodorus, of Carthage. Known from signature in Ephesus and Pausanias' description of gilded boy in Heraeum at Olympia (Overbeck, 1596).

BOETHUS (3) of Sidon (fl. 2nd c. B.C.), pupil of Diogenes of Babylon, was an unorthodox member of the Stoic school. In distinction from Chrysippus' monistic psychology he propounded a dualistic one, in which the rational faculties *νοῦς* and *ἐπιστήμη* were opposed to the irrational, *ὄρεξις* and *αἰσθησις*. A similar dualism appears in his derivation of soul from air and fire, of which the latter was probably regarded as the basis of reason. Similarly he rejected Pantheism and divided the universe into a part which was divine—the sphere of the fixed stars—and a part which was not. His divergences from orthodox Stoicism seem to be due to Aristotelian influence. He devoted himself specially to the study of astronomy and meteorology. Works: a commentary on Aratus' *Phaenomena*, *Περὶ φύσεως*, *Περὶ εἰσαρμένης*.

Testimonia in von Arnim, *SVF* iii. 265-7; *PW* iii. 601.

W. D. R.

BOETHUS (4) of Sidon, Peripatetic philosopher of the time of Augustus, a pupil of Andronicus of Rhodes and probably also of Xenarchus. After Andronicus' death he seems to have been head of the school at Athens. His commentaries on Aristotle are referred to by later Greek commentators, but none of them has survived.

PW iii. 603.

W. D. R.

BOGUD (*Bogudes*, *Βόγος*, *Βογόνας*), king of Mauretania Tingitana, became Caesar's ally in 49 B.C.; in 48 he helped Q. Cassius in Spain; in 45 in the battle of Munda his cavalry played a decisive part. He declared for Antony, and after an unhappy attack on Spain, lost his kingdom. He fell at Mcthone in the Peloponnese fighting against Agrippa (31).

A. M.

BOII, Gauls who entered Italy c. 400 B.C. (reputedly via the Great St. Bernard) and established themselves between the Po and the Apennines, ousting Etruscans and Umbrians. Their chief city was Bononia. Their Iron Age civilization was not altogether primitive. Defeated by Rome c. 282 B.C., they signed a 45-year truce. They were conquered again at Telamon (225) and submitted until Hannibal's arrival encouraged them anew; with Ligurian and other allies they continued fighting Rome until they were subjugated, massacred, and mulcted of

half their territory in 191. Military roads and colonies (Bononia, Parma, Mutina) consolidated the Roman victory and the Boii disappeared from Italy either through expulsion or assimilation (Livy 5. 35; 21-35; Polyb. 2. 17 f.; 3). Boii are also recorded in Gaul, where they supported the Helvetii, were defeated at Bibracte (58 B.C.), and settled on Aeduan territory (Caes. *B.Gall.* 1. 5. 28; 7. 9). Bohemia, which preserves their name, likewise contained Boii from early times until their extermination by Burebistas the Dacian c. 50 B.C.

The relationship of these various Boii is commonly but somewhat unconvincingly explained as follows (Strabo 5. 213): large numbers left the parent Gallic stock, entered Italy, were expelled thence after 191 and settled in Bohemia.

For bibliography see CISALPINE GAUL.

E. T. S.

BOIO, an ancient Delphic priestess, to whom was attributed an *Ὀπιθόγονία* (description of transformations into birds) of unknown date.

J. U. Powell, *Collectanea Alexandrina*, 23-4.

BOLANUS, see VETTIUS (4).

BOLUS of Mendes in Egypt, writer of the third or second century B.C. He is mentioned in Suidas (s.v. *Βῶλος Δημοκρίτειος* and *Β. Μενδήσιος Πυθαγόρειος*, who is the same person) as writer of *mirabilia* and magical books. Some of these were fastened on Democritus' name, especially the medicine-book 'On sympathies and antipathies'. Later B.'s own name may have been used for similar pseudo-Democritean literature.

See PARADOXOGRAPHERS.

Susemihl, *Gesch. gr. Lit. Alex.* i. 482, 901; ii. 674; E. Oder, *Rh. Mus.* 1890, 70 f.; *PW* iii. 676.
K. O. B.

BONA DEA, a Roman goddess worshipped exclusively by women. Her proper name was allegedly Fauna, daughter (Varro ap. Macrobius *Sat.* i. 12. 27) or wife (Sex. Clodius ap. Arn. *Adv. Nat.* 5, p. 190, 2 Reifferscheid, cf. Plut. *Quaest. Rom.* 20) of Faunus (q.v.). Her official nocturnal ceremonial was held yearly at the house of the chief magistrate, under the leadership of his wife and with the assistance of the Vestals (Cic. *Har. Resp.* 37; Plut. *Caes.* 9). The room was decorated with vine-branches and other plants and flowers, myrtle, however, being excluded. Wine was brought in, but called milk and the covered jar containing it a honey-pot (Macrobius *ibid.* 25, and the other passages cited). It is not known how much of this was native and how much due to the superimposed ritual of Damia (cf. *AUXESIA*; *Festus*, p. 60, 1 ff. Lindsay). The sacrifice to Bona Dea was a sow (Macrobius *ibid.* 23), and her temple on the Aventine below the *saxum*, hence her title *Subsaxana* (Platner-Ashby, 85).

See *WISSOWA RK* 216 ff.

H. J. R.

BONONIA (1) (mod. *Bologna*), in Cisalpine Gaul, has always been a place of consequence. Villanovan settlements occupied the site from c. 1050 until 500 B.C. when Etruscans founded Felsina there. Felsina became the chief Etruscan city north of the Apennines (Pliny, *HN* 3. 115), but fell first to the Boii then to Rome (196 B.C.), and acquired the name Bononia (Livy 33. 37). Subsequently as Latin colony, *municipium*, Imperial colony, or part of the Ravenna exarchate, Bononia was always important (Livy 37. 57; *Festus* p. 155 L.; Tac. *Ann.* 12. 58; Procop. *Goth.* 3. 11). Antony, Octavian, and Lepidus met near here to establish the Second Triumvirate (*CAH* x. 19). As a centre of the north Italian road system (Strabo 5. 216 f.), Bononia flourished and was able to survive a conflagration in A.D. 53 and Alaric's attack in 410 (Tac. *loc. cit.*; Zosim. 6. 10). (2), see GESORIACUM.

For BONONIA (1) see the bibliography under CISALPINE GAUL, and A. Grenier, *Bologne, Villanovienne et Etrusque* (1912); A. Ducati, *Storia di Bologna* (1928).
E. T. S.

BONOSUS (3rd c. A.D.), son of a Gallic mother, but of British descent, was commander of the Roman fleet at Colonia Agrippinensis on the Rhine. Losing a squadron through carelessness to the Germans and fearing punishment, Bonosus revolted. He found some support in Gaul and among the barbarians, but was crushed by Probus after a bitter struggle (A.D. 280). H. M.

BONUS EVENTUS, personified 'good result', originally good harvest (Varro, *Rust.* 1. 1. 6), then success in general. He had a temple on the Campus Martius (Amm. Marc. 29. 6. 19), and was a popular deity, to judge by the many inscriptional dedications to him.

See Wissowa, *RK* 267.

H. J. R.

BOOKS, GREEK AND LATIN. I. GREEK.

1. Although there is now ample evidence of the use of writing in the Near East (Egypt, Palestine, Syria, Mesopotamia, Crete) long before the earliest Greek literature, and a consequent presumption of its use in Greece, there is nothing to show what writing-material was used for the Homeric and Hesiodic works. Presumably it was either leather or papyrus. Herodotus (5. 58) records a tradition that the Ionians had once, when papyrus was scarce, made use of skins, as certain barbarous peoples did in his day. The word for 'book' among the Ionians was *διφθέρα*, which seems to imply a primitive use of leather as writing-material, at any rate in Asia Minor; but the form in which Herodotus states the fact proves that, so far back as Greek memory went in his day, papyrus was the normal material. It may therefore be taken as certain that, at least from the beginning of the period of the lyric poets, books were normally written on papyrus; and this continued to be the case throughout the classical and Hellenistic periods.

2. From the classical period no specimens survive. Papyrus is a perishable material, and it is practically only from the exceptionally dry soil of Egypt that Greek MSS. on papyrus have been recovered. These all date after the introduction of Greek settlers by Ptolemy I. The first discovery of papyri was made in 1778 (with partial publication, 1788), but it is only since 1877, and especially since 1891, that they have been discovered in considerable quantities, so that now we possess several hundreds of literary MSS. (generally in fragments only) from the last quarter of the fourth century B.C. to the first half of the seventh century A.D. How fully their evidence applies to the earlier period can only be matter for conjecture.

3. Papyrus, as a writing-material, was made from the pith of a water-plant (*Cyperus papyrus*), which then grew plentifully in the Nile (Plin. *HN* 13. 68 ff.). The pith was cut into thin strips, which were laid down in two layers, in one of which the fibres were laid horizontally, and in the other vertically. The two layers were fastened together by water, glue, and pressure, and the surface polished to perfect smoothness. The size of the sheets was governed by the length to which the strips could be cut without weakness, the widest being the best. Specimens are known as broad as 15 in., but normal measurements from Greek times range from about 9 in. downwards. In height a roll might be as much as 12 or 13 in. (one Egyptian papyrus reaches 19 in.); but 8 or 9 in. is a more normal size for literary rolls, ranging down to 5 in. for a book of poetry, or even 2 in. for a booklet of epigrams. In the Roman market names were given to various qualities according to their size; but these categories cannot be identified in the extant specimens.

4. The sheets thus formed (*κολληματα*) could be used singly (as for letters) or glued together side by side to form a roll. Pliny states that a roll (*scapus*) never consisted of more than twenty sheets (i.e. about 15 ft.); but this can only apply to the unit of sale. For practical use the *scapus* could be cut up if less were needed, or length-

ened by attachment to another. Egyptian rolls are known which exceed 100 ft.; but for Greek rolls the evidence shows that 30-35 ft. was about the maximum. This, with a normal writing, would suffice for one book of Thucydides; a book of Plato's *Republic* would require not much more than half of this.

5. The writing was arranged in columns (*σελίδες*), which do not correspond with the *κολληματα*. For poetry the width of a column was dictated by the length of the verse; in a sumptuous Homer it may reach 9½ in., but 5 in. would be more normal. For prose, 4 in. (including margin) is exceptionally wide, 2 to 3 in. normal. The number of lines varies with the height of the column and the size of the writing; but numbers less than 25 or more than 45 are exceptional. The number of letters in a line varies. There were fixed rules governing the division of words at the end of a line, and to meet these the outer (right-hand) edge of the column was uneven. About 18 to 25 letters to a line is normal; less than 16 is almost unknown. Conjectures based on the number of lines in a column or of letters in a line are therefore precarious.

6. The writing on papyrus was normally on the side on which the fibres lay horizontally (*recto*); but frequently the other side (*verso*) of a document or literary text was subsequently utilized. Such copies were, however, for private use, or, possibly, represent a form of cheap production for the market. Very rarely the text on the *recto* is continued on the *verso*; such rolls are known as *opisthograph*, and references to them occur in ancient authors, as marks either of the poverty of the writer or the excess of his matter (Lucian, *Vit. Auct.* 9; Ezek. 2. 10; Pliny, *Ep.* 3. 5. 17; Juv. 1. 6). Since the writing on the *recto* almost invariably precedes that on the *verso* (there are a few exceptions in the 3rd c. B.C.), valuable evidence for dating may sometimes be obtained from this fact.

7. Margins between columns are generally small, but those at the top and bottom of a roll (especially the finer specimens) may extend to 1½ or 2 in., or even more. Here lines or words accidentally omitted are sometimes written, generally with an arrow to indicate the place where they should be inserted. Marginal annotations are rare in extant papyri.

8. Helps to the reader are strikingly rare. Words are not separated; enlarged initials are not used. Accents are very rare, the chief exceptions being in lyric poems, such as the papyri of Alcman and Bacchylides; and even here their occurrence is only sporadic. A rough breathing is occasionally inserted where misunderstanding might arise. Punctuation is uncertain and arbitrary; it takes the form either of a single point, generally about level with the top of the letter (there is no systematic use of high, medial, and low points), or of leaving a short space at the end of a clause. A short stroke (*παράγραφος*) is sometimes placed below the beginning of a line in which a break occurs; and the same symbol is used in dramatic pieces to indicate a change of speaker. Titles are placed at the end (see *SUBSCRIPTIONES*); but in the Herodas MS. titles of individual poems have been prefixed by the original scribe, and in the Bacchylides MS. they have been added in the margin by another hand. The normal means of identifying the content of a roll was a label (*σάλλεβος*) of papyrus or vellum, which projected from it as it lay on a shelf or in a box (see *LIBRARIES*).

9. The papyrus roll continued to be the main vehicle of literature down to the end of the third century A.D.; but it is now evident, from recent discoveries in Egypt, that at least from the beginning of the second century papyrus books were sometimes produced in *Codex* form, i.e. the modern form with leaves arranged in quires. Whether this was actually an invention of the Christian community in Egypt, with the object of being able to include more than a single Gospel or Epistle in one book, is unknown, but it was certainly predominantly used by

them; for while all pagan MSS. in the second century and 95 per cent. of them in the third century are rolls, the majority of Christian MSS. are codices.

10. A papyrus Codex was formed by taking a sheet twice the width of the page desired, and folding it once vertically, thus producing a quire of two leaves. By similarly treating a number of sheets simultaneously, a quire could be made of any desired size. Specimens exist from quires of 2 leaves (Chester Beatty Gospels and Acts) to quires of 118 leaves (Chester Beatty Ezekiel, Daniel, and Esther); but these seem to have been early experiments, and eventually it was found convenient to form quires of 10 or 12 leaves. All the later codices are of this type. Since usually sheets which were to form a quire were laid, before folding, with the *recto* uppermost, after folding *verso* pages preceded *recto* in the first half of each quire, and *recto* preceded *verso* in the second half. If it was desired, for the sake of uniform appearance, to have *recto* pages facing *recto*, and *verso verso*, at each opening of the Codex, this result could be obtained by laying the sheets, before folding, with *recto* and *verso* alternately uppermost; and examples of this exist.

11. Most extant papyrus codices have only one column to a page, but there are some examples with two, e.g. the Chester Beatty Numbers and Deuteronomy. A few early codices are exceptionally tall and narrow; e.g. the Chester Beatty Ezekiel (14 × 5 in.), *PAmh.* 460 (11 × 4½ in.), but most range between about 12 × 8 and 8 × 7 in.

12. Besides the change from papyrus roll to codex, which barely affects non-Christian literature before the fourth century, the beginnings of the use of vellum have to be observed. Vellum or parchment (there is no regularly observed distinction between the terms) is a development of the use of leather, being a material produced by the preparation of the skins of cattle, sheep, and goats. The skins are washed, scraped to remove the hair, smoothed with pumice, and dressed with chalk. There is a slight difference between the hair-side and the flesh-side, the former tending to be darker, but to retain the ink better.

13. According to Varro (Plin. *HN* 13. 70) vellum was invented at Pergamum when Ptolemy (Epiphanes, 205–182 B.C.) placed an embargo on the export of papyrus, in order to hamper the growth of the library of his rival bibliophile, Eumenes II of Pergamum (197–159 B.C.). Vellum cannot in fact have been then first used as a writing-material, since documents on vellum have recently been found so far away from Pergamum as Dura on the Euphrates, with dates equivalent to 196 and 190 B.C.; but it may well be that Eumenes was the first to use it as a vehicle for literature, and this is somewhat confirmed by its Greek name, *περγαμηνή*. Its use at this early date was, however, local, and probably temporary; for it is certain that papyrus remained in use as the principal book-material until a much later date. The evidence from Egypt shows that in that country at least vellum made no headway before the end of the third century. Two fragments may be as early as the end of the first century, but the total number earlier than the fourth century is negligible. It is likely that the use of vellum was greater in other countries, but all present evidence goes to show that the main change-over from papyrus to vellum took place in the first half of the fourth century. Constantine, on his acceptance of Christianity as the State religion, ordered 50 copies of the Scriptures for the churches of Constantinople, and these were to be written on vellum; and at about the same time Jerome records that the papyrus MSS. in the library of Caesarea, having become worn by use, were replaced by vellum copies. Even from Egypt there is a marked increase in the number of vellum fragments discovered, while the quality of the papyrus MSS. deteriorates. From this period also come the first and finest vellum codices now extant, the Vatican and Sinaitic codices of the Greek Bible; and

the earliest Latin codices (Virgil, Cicero, Terence, Livy, N.T.) are assigned to the fourth or early fifth century. But this is to pass from the classical period to the history of the transmission of texts of classical authors through the Middle Ages down to the invention of printing.

II. LATIN.

1. Latin literature depends almost wholly on Greek, and it is practically certain that Latin books in the Classical period followed the Greek model. The Romans themselves had little knowledge of any earlier stage. Livy quotes no authority earlier than the second century B.C. for the existence of archives written on linen (*libri lintei*) of the time of the kings; and the word *liber* itself seems to imply a time when writings were inscribed on bark. But no literature survives (if it was ever written down) from these earlier periods, and for all practical purposes it may be taken as certain that the main vehicle of Latin literature as we know it was the papyrus roll (*charta, volumen*).

2. For the exterior form of Latin books we have more evidence from contemporary descriptions and allusions than we have for Greek, but much less in the way of extant specimens. Egypt has produced far fewer Latin fragments than Greek, and these add practically nothing to our knowledge of the form of papyrus books. What has been said of Greek books must be taken as applying to Latin. Allusions in Catullus, Propertius, Tibullus, and especially Martial add details of their external appearance. A good example is the description in Catullus' poem on Sufferus, 22. 4–8. The better class of rolls were furnished with rollers (no specimens of these have been found in Egypt), the projecting knobs of which (*cornua, umbilici*) might be made ornamental in colour or material. The roll when not in use might be enclosed in a vellum cover (*membrana, paenula*), which could be coloured and fastened with coloured strings. The papyrus itself might be soaked in cedar oil (Hor. *ArsP.* 332), and the title attached to it (*titulus, index*) might be coloured. When not in use, rolls were stored in boxes or buckets (*capsa, capsula, scrinium*), or laid on shelves or in pigeon-holes (*nidii*). The booksellers' shops in Rome were to be found mainly in the Argiletum, with advertisements of their wares suspended on the columns of the porticos in their front (Cic. *Att.* 12. 32; Mart. 1. 117. 9 ff.).

3. The Latin authors also contain many references to another form of writing-material, namely the tablets (*tabellae, pugillares*) which were used as note-books. These were normally of wood, which could either be whitened to receive ink, or covered with wax, on which writing was inscribed with a *stilus*. Two tablets fastened together with string (which could be secured with a seal, if desired) could form a closed letter which the recipient, after smoothing over the wax, could return with his answer (Ovid, *Am.* i. 12. 1; August. *Ad Rom.*: Migne, *PL* xxxiii. 80). Or they could contain a legal contract, the substance of which, for greater convenience and security, was repeated on the outside. Or again several tablets could be fastened together with thongs, forming a sort of wooden codex.

4. It is indeed probable that the tablet with several leaves gave the original idea of the Codex as a book form, and that vellum first came into use for note-books, and was treated in the same way. *Membrana*, the Latin word for vellum, also means note-book (Hor. *Sat.* 2. 3. 2); the *μεμβράνα* mentioned in St. Paul (2 Tim. iv. 13) were probably his note-books. Evidence of the early use of vellum for books is provided by Martial, who in his descriptions of gifts at the Saturnalia includes a number of books (14. 183–95). Some of these are specifically said to be in *membranis*, implying that the others were of the more ordinary material, papyrus; but their exact nature is a puzzle. All are of large works, totally out of scale for

a Christmas present, and a point is made that a great work is comprised in a small compass; the *Iliad* and *Odyssey* in *pugillares membranae*, all Virgil in a *brevis membrana*, all Livy even *pellibus exiguis*. Evidently some form of extract or epitome is meant, and all the evidence is against the use of vellum as a serious competitor with papyrus until the fourth century, from which time fine vellum codices are extant, and vellum became the principal vehicle of Latin literature. See also LIBRARIES.

W. Schubart, *Das Buch bei den Griechen und Römern*², (1921); F. G. Kenyon, *Books and Readers in Ancient Greece and Rome* (1932). Earlier works, still useful, but lacking the information derived from the most recent discoveries of papyri in Egypt, are: Th. Birt, *Das antike Buchwesen* (1882); V. Gardthausen, *Griechische Palaeographie, I. Das Buchwesen im Altertum* (1911); E. Maunde Thompson, *Introduction to Greek and Latin Palaeography* (1912). F. G. K.

BOOKSELLERS, see SOSII.

BOREAS, the North wind. Cult of or magic practices directed towards winds are fairly common in Greece (see WIND-GODS and Farnell, *Cults* v. 448-9; more in Fiedler, *Antiker Wetterzauber* (1931)). The most famous worship of Boreas was in Attica (Hdt. 7. 189, for his help against the Persians at Artemisium). Mythologically, he was 'son-in-law' of the Athenians, having carried off his bride, Oreithyia, daughter of King Erechtheus, from the Areios Pagos or the banks of the Ilissus (Plato, *Phdr.* 229 c-d). By her he had two sons, Zetes and Calais (see CALAIS AND ZETES).

Apart from this, hardly anything is told of him which does not arise from his physical characteristics. He is, for instance, son of Eos and Astraeus (Hes. *Theog.* 378-80), along with Zephyrus and Notus; in other words, winds come down out of the sky, where the stars and dawn are an idea which competes with the conception of them as underground beings (as a kind of ghosts, cf. HARPYIAE, or because they come from below the horizon?), to whom black victims are sacrificed (e.g. Ar. *Ran.* 847). Even his begetting of horses (as *Il.* 20. 223) is a simple mythologizing of the speed of wind, or perhaps of some such belief as that in Verg. *G.* 3. 275, that mares can be impregnated by wind. H. J. R.

BORYSTHENES, a river of Scythia (modern *Dnieper*). According to Herodotus (4. 53) it was the largest river after the Nile and the Ister (*Danube*), being navigable for forty days from the sea. This statement, and his failure to mention the falls at Dniestroï, show that Herodotus was unacquainted with the upper course of the Borysthenes. But the glowing terms in which he described its fisheries and meadows were not ill founded. The Borysthenes was the chief Greek trade route into Scythia, but this trade (as the record of finds shows) did not extend beyond the region of Kiev. M. C.

BOSCOREALE, a village on the slopes of Vesuvius near Pompeii. Several *villae rusticae*, buried in the eruption of A.D. 79, have been found in its vicinity. One, excavated in 1893-4, is famous for the discovery of a treasure of silver plate, but the rustic character of the villa suggests that the treasure was brought from elsewhere at the time of the catastrophe. The villa was mainly agricultural, and the arrangement of the rooms can be determined with certainty. A second villa, discovered four years later, was residential in type and remarkable for a beautiful series of wall-paintings of the first century B.C. R. C. C.

BOSPORUS, a narrow strait joining the Black Sea with the Mediterranean and dividing Asia and Europe. Its direction is NE.-SW. and it is 17 miles long, and from 600 yards at the narrowest to 3,300 at the broadest in width. The current runs swiftly from the Black Sea into the Mediterranean, breaking against Serai Point, the

shores of ancient Byzantium. The strait has been worn away in a fairly recent geological past as the exit for the water of the Black Sea, which was originally a lake. The Bosphorus is noted for its wealth of fish, and many ancient Greek coastal towns bore fish as the device on their coins. The name records the legend of the crossing of Io (q.v.). In antiquity it was called the Thracian Bosphorus to distinguish it from the Cimmerian Bosphorus connecting the Sea of Azov and the Black Sea. S. C.

BOSTRA, a commercial town in the north of the Nabataean kingdom. In A.D. 105 it was refounded by Trajan as the capital of the province of Arabia. From c. 125 it was the camp of Legio III Cyrenaica and was made a colony by Severus Alexander. The ruins are considerable.

BOTANY. Among the Greeks, as among other peoples, knowledge of herbs was linked with medicine. It was somewhat esoteric and, from an early date, certain drugs were imported from overseas, notably from Egypt, Mesopotamia, and even India. Plant-lore was the special preserve of the rhizotomists (*ρίζοτομικοί*), who were differentiated from the physicians and doubtless represent an earlier cultural stratum. They were sometimes of evil reputation; Sophocles speaks of them almost as poison-mongers. In gathering plants they practised complex rituals of which fragments are preserved by Theophrastus and Pliny.

2. The Hippocratic Collection mentions some three hundred herbal drugs but tells almost nothing of the plants themselves. Nevertheless, in the first half of the fourth century botany was emerging as a separate discipline and attention was paid to it at the Academy even before it was taken up at the Lyceum. Perhaps under the influence of the former, but chiefly inspired by Sicilian pneumatic views (see ANATOMY AND PHYSIOLOGY), is the Hippocratic work *On the nature of the embryo* of about 360 B.C. It discusses germination of seeds and growth of plants and contains the first attempt at a vegetable physiology.

3. Aristotle treated plants as a lower order of beings than animals, linked with them through the 'zoophytes', continued downward into non-living matter, and possessing only the lowest of the three faculties of soul. Of his work *On Plants* only a corrupt abstract survives. We have, however, several treatises on plants by his pupil Theophrastus (372-287 B.C.), and among them are the only ancient botanic works worthy of the name of science.

4. Theophrastus felt the need of a technical terminology and began to develop it. Like his master he was deeply interested in generation and, having examined the germination of seeds, with extraordinary acuteness made the distinction between monocotyledons and dicotyledons. In this and in many other matters he showed himself fully capable of following morphological homologies. Though ignorant of the nature of sex in flowers he had an approximately correct notion of the relation of flower and fruit, distinguished hypogynous, perigynous, and epigynous types, and regarded the relation of flowers to fruit as the essential floral element. He had a clear view of plant distribution as dependent on soil and climate and, benefiting by the knowledge available from Alexander's expeditions, came near to a statement of geographical plant regions. He has numerous good descriptions of the forms, habits, habitats, fructification, cultivation, and uses of plants, of which he discusses more than 400 kinds.

5. The Alexandrian school produced no botanical works of significance. Important, however, was the work of the rhizotomist Crataeus (q.v., c. 100 B.C.), who served Mithridates VI of Pontus. He wrote a herbal in which

each plant was represented by a figure. Of this there survives a substantial fragment, copied from a very ancient and perhaps almost contemporary original. Since Crateus plant representation has been an important department of botany.

6. The *Natural History* of Pliny (A.D. 23-79) records many current views on the nature, origin, and uses of plants. Being quite uncritical it is more interesting for folk-lore than for botany. On a higher plane is the *Materia Medica* of Dioscorides (c. A.D. 60), which consists of a series of short accounts of plants arranged without system but accompanied with terse descriptions which sometimes include habits and habitats. It is the most widely read botanical work ever penned. Early MSS. of versions and translations of it are to be numbered by the hundred. Many of its plant names have passed into modern terminology. After Dioscorides there was no extension of botanical knowledge in antiquity.

7. Difficulties in identifying the plants of Dioscorides led very early, perhaps during his lifetime, to the preparation of copies of his herbals provided with pictures of the plants. A magnificent representative of this practice in uncial letters is the Juliana Anicia MS. of 515 at Vienna, the earliest surviving complete Greek herbal. Illustrated Latin versions, abridgements, and modifications of Dioscorides were prepared in the time of Cassiodorus (A.D. 490-585), and a Latin work based on one of these versions but bearing the name of Apuleius is the commonest early medical text. A splendid half-uncial MS. of this *Herbarius Apuleii* at Leyden is almost contemporary with Cassiodorus himself and is our earliest complete Latin document of this type.

8. The question of the identification of plants mentioned by classical writers frequently arises and can be answered for certain distinctive or economically important species. The question, however, ignores the semantics of plant-names. A modern plant-name—even a 'popular' one—presupposes a conception of species and of their constancy and limitations and an idea of classification that was absent in antiquity. Greek and Latin writers, like modern unlettered peasants, constantly called the same plant by different names and different plants by the same name. The question as to what a particular writer meant by a particular plant-name is therefore, with the exceptions mentioned above, normally unanswerable.

BOTTOMRY LOANS (ναυτικόν, ναυτικός τόκος; *fenus nauticum* or *pecunia traiectica*), are known from the fourth century B.C. They took the place of modern shipping-insurance, because they were repayable only if the ship or the cargo which had been pledged for them (especially in Greek law), safely reached its place of destination (ἐπερόπλουν) or returned to the original port (ἀμφοτερόπλουν), according to the terms of a written contract. The debt was not forfeited if ship or cargo was lost by the debtor's fault. Creditors and debtors could be groups of persons in partnership.

The biggest loan we know of amounts to 70 minae. During the fourth century the rate charged for a voyage from Athens to the Pontus and back was 30 per cent. on the amount of the loan, from Sestus to Athens 12½ per cent., and from Byzantium to Athens 10-12 per cent. Roman law from Justinian onwards allowed a rate (*usurae maritimae*) up to 12½ per cent. on *fenus nauticum*.

The creditor had the right to send a supercargo (ἐμπόλος), often a freedman or slave, with the ship to control loading, unloading, and repayment. Attic as well as Roman law made elaborate regulations for this institution, which represented an important form of capital investment.

F. M. H.

BOUDICCA (name uncertain, but 'Boadicea' has neither authority nor meaning), wife of Prasutagus, who was established as client-king of the Iceni (East Anglia) by the Romans. On his death (A.D. 61) he had left the Emperor coheir with his daughters, but imperial agents maltreated his family. Under Boudicca the Iceni, assisted by the Trinovantes, rose in rebellion while the governor, Suetonius Paulinus, was occupied in the west. Colchester, London, and Verulamium were successively sacked. Venturing a battle, however, with Paulinus' main force, Boudicca's troops were easily routed, and she herself took poison.

C. E. S.

BOULE in Greek States, originally the council of nobles which the king summoned to advise him; later a specially appointed council to undertake, on behalf of the citizen-body, the day-to-day affairs of State. Its range of competence was equal to that of the citizen Assembly. In an oligarchy it might be in some respects independent of the Assembly—e.g. it might have the right of summoning the Assembly only when it wished; in a democracy it was its servant, acting as a general purposes committee. In the former, members might be elected by vote (perhaps from a restricted number of citizens) or sit by hereditary right, for a term of years, or for life; in a democracy, members were generally chosen by lot, and served for a year only. Every 'constitutional' State (hereditary monarchy, oligarchy, or democracy) had a Boule of one kind or another.

2. In Athens, Solon (q.v.) established a Boule of 400, 100 from each *phyle* (q.v.), perhaps elected by vote, its members not confined to the rich, and serving for a year only; its especial duty was to prepare business for the Ecclesia, which was thus freed from the control of the Areopagus. This Boule survived the tyranny; Cleisthenes enlarged it to 500, 50 from each of the new *phylae*, 50 many from each deme in proportion to its population (see *DEMOI*), elected by lot to serve for a year. All citizens over thirty were eligible, but no one could serve more than twice, and not in successive years. Its members were paid, 5 obols a day in Aristotle's time. It met daily except on festival days; and its functions were to carry on all the business of the State in conjunction with the magistrates, and to prepare business for the Ecclesia: nothing that it had not considered could come before the Ecclesia (q.v.); all magistrates therefore had to bring proposals before it first. Its presidents, who prepared its business, were from its own members; and it also provided the presidents of the Ecclesia; both Boule and Ecclesia were thus free of control by the magistrates. Its meetings were normally open to the public; but it could sit in secret if it so decided. See also *PRYTANIS*, *GRAMMATEIS*, *PROEDROI*.

3. It had a very wide competence. It conducted many forms of *dokimasia* (q.v.). It received all foreign envoys. It had special duties in relation to the navy—the care of the ships and of the docks, the provision of new ships each year. Its financial duties were also important, the letting of State property and receiving of rents, the borrowing from temple treasuries, the handing over of funds from each annual group of treasurers to their successors, the receiving of the allies' tribute in the fifth

century—all was done in its presence; and it supervised the magistrates' accounts of public money (see EUTHYNA, LOGISTAI). It had the care of public buildings, and of certain State cults and sacrifices (with ten *hieropoioi* from its own members). It was responsible for the preservation of all State archives (see GRAMMATEIS).

4. It had certain judicial powers in matters which would come before the Ecclesia (by *eisangelia*, q.v.), such as treason, conspiracy against the constitution, or public riot: it could arrest citizens pending trial, and could itself fine up to a limit of 500 drachmas.

5. The Boule was the keystone of the democratic constitution; but it never dominated the State, as one might expect a body with its wide powers to have done. This was due to its constantly changing membership, which precluded the growth of an exclusive corporate feeling. Since a large proportion of the citizen-body (not less than one-third in the fifth century, and one-half in the fourth) passed through its ranks, it accurately reflected popular sentiment.

Aristotle, *Ath. Pol.*, passim.

BOUPHONIA, see SACRIFICE.

BOVIANUM UNDECIMANORUM, capital of the Pentri Samnites: modern *Bojano*. Conquered by Rome c. 311 B.C., it remained loyal during the Hannibalic War. In the Social War, after temporarily serving as a capital for the Italians, it was reduced to a village by Sulla. Under Vespasian veterans from Legio Undecima Claudia colonized it: hence its name.

Strabo 5. 250; Livy 9. 28. 31; 25. 13; App. *BCiv.* 1. 51; Pliny, *HN* 3. 107.

E. T. S.

BOVIANUM VETUS, capital of the Caraceni Samnites and, in Imperial times, a colony of veterans: modern *Pietrabbondante*, with well-preserved remains of a theatre and temple. Rome first captured it in 298 B.C.

Livy 10. 12; Pliny *HN* 3. 107; Mommsen, *CIL* ix. 257.

E. T. S.

BOXING. There were three stages in the history of ancient boxing, depending largely upon the methods of protecting or reinforcing the fist. Until 400 B.C. it was customary to wind soft strips of leather—*μελιχαι*—round the hands and arms, which served like our light gloves to protect the knuckles and so increased the power of attack, but did not in themselves add to the severity of the blow. Early in the fourth century the *μελιχαι* were superseded by gloves—*σφαίραι*—made of hard pieces of leather with protecting and cutting edges, like our knuckle-dusters. From these the Roman *caestus* was developed, where the glove was weighted with pieces of iron and metal spikes placed in position over the knuckles.

In Greek boxing there was no ring and therefore little close fighting; there were no rounds and therefore the pace was slow; there was no classification by weight, and therefore the heavier the man the greater his chance of success. As thongs or gloves were always used on the hands, wrestling was impossible and the defence was all-important. Body-hitting was not practised to any extent, and in the later periods a fight was usually decided by a knock-out blow on the jaw. But in the earlier times the Greek boxer used both hands freely, was active on his feet, and had a considerable variety of attack.

Theocritus, 22. 87-111. K. T. Frost, *JHS* 1905, 213 ff.

F. A. W.

BRANCHIDAE, see DIDYMA.

BRASIDAS (d. 422 B.C.), Spartan general. Though prominent from 431, he held only subordinate commands until 424, when he was sent with a small force of Helots and Peloponnesians to damage Athenian interests in

Thrace. After saving Megara from an Athenian attack, he hurried northwards and rapidly won several important cities, including Amphipolis and Torone. He continued operations in Thrace after the conclusion of the armistice between Athens and Sparta in 423, by supporting the revolt of Scione and Mende, though he was unable to protect them adequately. In 422 he heavily defeated and killed Cleon in a surprise attack at Amphipolis, but was himself mortally wounded.

Brasidas' resourcefulness and his talent for winning confidence wherever he went gained the admiration of Thucydides and permanently injured the Athenian cause in a vital area.

Thucydides, bks. 4-5.

H. D. W.

BRAURONIA, see ARTEMIS.

BRENNUS (1), the Gallic king who traditionally captured Rome (in 390 B.C. or, according to Polybius' chronology, 387), and made the famous utterance: 'Vae victis.' Since neither Polybius nor Diodorus mentions him, it has been suggested that Brennus is a title which was mistaken for a name, or that historians transferred to him the name of the Gallic chieftain who invaded Greece in 279 B.C. But the former hypothesis is disproved on philological grounds, and the Greek accounts of Brennus, which can be traced back to fourth-century authors, are anterior to the coming of the Celts. P. T.

BRENNUS (2), leader of the Galatian invasion in 279 B.C. Following on the heels of another body of Gauls under Bolgius, Brennus overran Macedonia and invaded Greece in autumn. Checked by a Greek coalition at Thermopylae, he detached a column into Aetolia, turned Thermopylae by the pass into Doris, and attacked Delphi. The detachment in Aetolia and the main column under Acichorius were harassed by guerrilla tactics, while Brennus was wounded at Delphi. During the general retreat northwards the Gauls were attacked by the Thessalians; Brennus committed suicide, and few escaped.

N. G. L. H.

BREVIARIUM, see EPITOME (LATIN), PERIOCHIAE.

BREVIS BREVIANS, Latin phonetical tendency between fourth and first centuries B.C., a 'short' syllable 'shortening' a following long one which is preceded or followed by an accent. Hence *calēfacio* (from *calēficio*), but *ferūfacio*. A comprehensive study setting out the conditions under which shortening becomes permanent (*benē* and *malē*, but cf. e.g. *probē*) is wanted. Poetry in general accepts the shortened forms only when they have become stabilized, but early drama shows *brevis brevians* in active operation in scansion like *bonis*, *quid est*, *pessim(e) ōrnatus*. Cf. PLAUTUS, para. 5 (Prosody). O. S.

BRIAREŌS, see HECATONCHEIRES.

BRIDGES. Remains of pre-Roman bridges in the Hellenic world are few and their dating rests upon no sound basis. Culverts near Mycenae are indistinguishable from remains assigned to the fifth century near Epidaurus, while bridges in the neighbourhood of Athens are even less securely dated. The Bosphorus bridge of Darius was built by Mandrocles of Samos (Hdt. 4. 83, 87-8). The Etruscan 'bridges', as at Veii and Vulci, are tunnelled spurs of natural rock, the built structures in stone being in fact Roman. For, while the wooden bridge (*pons sublicius*) is associated with the very existence of Rome, the stone bridge is a relatively late development, the earliest dated example being *pons Aemilius* (Livy 40. 51. 4) of 179 B.C., given an arched superstructure in 142 B.C., and followed by *pons Mulvius* (q.v.) in 109 B.C. and *pons Fabricius* in 62 B.C. Typical of the state of affairs outside Rome is Strabo's description (4. 1. 12) of the Narbonne

via Domitia or the statement of Augustus (*Mon. Anc. 4. 19*): 'refeci uiam Flaminiam . . . [. . . et pontes in ea] omnes praeter Muluuium et Minucium.' Nearly all monumental bridges thus belong to the Imperial age. In Italy the most complete are those of Augustus at Ariminum and of Hadrian at Rome, the most imposing those of Augustus at Narnia and at Ausculum, the most curious the bold foot-bridge of Val de Cogne (*JRS 1939, 149*). But they are far outclassed in length by the Augustan bridge at Emerita and in height by the famous bridge which several Spanish communities combined to erect over the Tagus gorge at Alcántara (A.D. 106). The tradition of wooden bridge-building, however, continued in the hands of military engineers (*BSR xiii. 34*). Caesar's description of his temporary wooden bridge on the Rhine (*B Gall. 4. 17*) is famous (cf. *CR 1908, 144*). Vegetius (1. 10) describes pontoon bridges of boats, while many bridges of timber more durably constructed than these must have carried even the most important trunk roads. Bridges spanning powerful rivers, however, were usually built with stone piers and wooden superstructure, as the Flavian Rhine bridge at Moguntiacum or Trajan's Danube bridge, the latter some 1,120 metres long, with stone piers and segmental arches of timber. British examples are the Thames bridge at London, the Tyne bridges at Corbridge and Newcastle upon Tyne (*pons Aelius*), where stone piers of the same kind are known to have been used. At Arelate (*Arles*) there was a famous permanent bridge of boats (*Auson. Ordo Nob. Urb. 77. Not. Scav. 1914, 286*).

R. Delbrück, *Hellenistische Bauten in Latium* i (1907); Ashby-Anderson-Spiers, *Architecture of Ancient Rome*; I. A. Richmond, *BSR xiii. 7, 28*. I. A. R.

BRIGANTES, the most populous tribe in Britain (*Tac. Agr. 17*), whose territory, spanning the island (*Ptol. Geog. 2. 3. 16*), included the legionary fortress of Eboracum (*York*), a capital at Isurium (*Aldborough*), forts at Olicana (*Ilkley*), Cataractonium (*Catterick*), and Vinovium (*Binchester*), and native *oppida* at Camulodunum (*Almondbury*), Stanwick, and Rigodunum (perhaps *Ingleborough*). Native coinage is confined to Yorkshire. Early relations with Rome were friendly; later strife in the royal household compelled annexation by Cerialis and Agricola in A.D. 71-9 (*Tac. Agr. 17, 20*). The Pennines and the forests of Lancashire and Durham were intersected by garrisoned roads (*Tac. Agr. 20*) and lead-mining began by A.D. 81 (*CIL vii. 1207*). In the Ouse basin civil life gave rise to a town at Isurium and widespread villas, as at Well, Castledykes, Gargrave, or Dalton Parlours. Systematic pacification of the uplands was a commonplace under Hadrian (*Juv. 14. 196*), but under Pius the tribe apparently lost much territory following unlawful raiding (*Paus. 8. 43*). The eponymous goddess *Brigantia* won local fame (*CIL vii. 200, 203, 875, 1062; Eph. Epigr. vii. 920; ix. 1120, 1141*). I. A. R.

BRIGANTIA (mod. *La Coruña*?), one of the mystery towns of Roman Spain. The name, obviously Celtic, is found in Dio, Orosius, and two itineraries (*Bricantia* in *Rav. Cosm.*). The evidence from the itineraries and Ptolemy would place it in or near modern Betanzos. But the lighthouse ascribed to it by Dio and Orosius is apparently that of *La Coruña* (*CIL ii. 2559, 5639*). Ptolemy's name, *Flavium Brigantium*, marks it as a recipient of Vespasian's grant of the Latin Right (see *IUS LATII*). J. J. Van N.

BRIMO, name or title of a goddess, often identified with Persephone (q.v.; as *Etym. Magn. 213, 49*), Hecate (q.v.; as *ibid.*; *Ap. Rhod. 3. 861*), or Démeter (q.v.; as *Clem. Alex. Protr. p. 13, 4 Stählin*). At Eleusis it was proclaimed that she had borne 'a holy child Brimos' (*Hippolytus, Haer. 5. 8. 40, p. 96 Wendland*, where both names are said to mean 'strong'). H. J. R.

BRISEIS, in mythology, daughter of Briseus of Lyrnessus and widow of Mynes; Achilles' slave-concubine, taken from him by Agamemnon and afterwards restored (*Il. 1. 392; 19. 60, 296 and contexts*).

BRITANNIA (the form *Περαννικαὶ νῆσοι*, used apparently by the earliest Hellenic visitor, Pytheas (c. 300 B.C.) should be cognate with Irish (q-Celt) *cruithin* (= Picts)). At the beginning of the Christian era the culture of Britain was divided fairly sharply by a line from Tyne to Exe, corresponding to a geological contrast of the Palaeozoic 'Highland' and the Caeozoic 'Lowland' zone. In the 'Highland zone', Bronze Age conditions prevailed among peoples of neolithic ancestry; in the 'Lowland' waves of Celts had imposed Iron Age cultures, the latest of whom, the Belgae (q.v.), overran the south-east (first arrival c. 75 B.C.). Caesar's invasions (55 and 54 B.C.), at least, retarded the formation of a Belgic 'imperium', which was, however, realized by Cunobelinus (d. c. A.D. 41); but disturbances in his old age invited intervention. A grotesque demonstration by Caligula (A.D. 40) indicated the trend of Roman policy, which was resumed by Claudius, who invaded Britain after Cunobelinus' death (A.D. 43). The army (four legions with accompanying *auxilia*) quickly overran the 'Lowland Zone' (A.D. 43-48), and a revolt under Boudicca (q.v.; A.D. 61) was crushed; but where Celtic civilization was combined with 'Highland Zone' conditions, as in east Wales (Silures) and Yorkshire (Brigantes), little was effected until the campaigns of an able succession of Flavian governors. The last of these, Agricola (probably A.D. 78-85), advanced far into Scotland, but after his recall the army was reduced to a garrison footing of three legions (making with the *auxilia* a strength of c. 50,000). After a period of optimism, the destruction of a legion IXth compelled a decision, and c. A.D. 122 a definite frontier-line was drawn (Hadrian's Wall). Rome had lost the initiative in Britain, a fact which anticipates the high-water mark of progress soon reached in the Empire itself. Britain, indeed, is, in every respect of romanization, last in advance, first in retreat. This is its historical significance.

2. Britain was a typical imperial province, and its local government imitated the Gallic cantonal system. A late author (Gildas, 3) mentions twenty-eight *civitates*, which included, eventually, four *coloniae* (Colchester, Lincoln, Gloucester, York). New towns were created in Roman style, where even artisans wrote Latin. The negative aspect of romanization, however, was the virtual extinction of an attractive native art, based on the La Tène style. Moreover, the social organization was hardly advanced enough to respond to rapid urbanization and certain excavated towns show immediate and accelerating decay (Uriconium, Verulamium).

3. Rural life follows closely the lines of pre-history. Areas of easy settlement, heavily populated since the Bronze Age, continue so, and the normal unit of habitation, the village of rough huts, persists, as it does in the little romanized 'Highland zone'. Elsewhere the farm isolated, though often in local groups, is the norm. Less romanized (and far less literate) than the towns, the villas and even the villages show increased prosperity, so that a system of rural exchange, based on barter and a mainly fiduciary coinage, attained by the fourth century a surprisingly high level of stability. Moreover, the mineral wealth (mainly in argentiferous lead mines, worked as early as A.D. 49) increased the value of the province to Rome.

4. After Hadrian, political history was fairly uneventful. The northern tribes continued troublesome, and c. A.D. 142 Antoninus Pius decided to push the frontier up to the Forth-Clyde isthmus (Antonine Wall). But the new line was never very satisfactory, and by the end of the century (exact date still controversial) was abandoned.

5. The usurpation of Albinus (A.D. 193-6) illustrates an evil from which the province was later to suffer, the removal of its garrison for overseas adventures; an incursion from the north ensued. The campaigns of Severus, however (A.D. 208-11), re-established the *status quo* behind Hadrian's Wall, which he had restored. Meanwhile a policy of entrusting responsibilities of defence to semi-independent *gentes* with military support behind had been tried out in Wales, perhaps as early as Hadrian, and was eventually employed in the north. It coped well enough with attacks from Ireland and Scotland; but the growing strength of Saxon piracy made necessary the erection of signal-stations and forts along the eastern and southern coasts (begun c. A.D. 280).

6. Britain, however, held firm, and the attempt of a Menapian seaman, Carausius, to blackmail Diocletian, by seizing it, into recognizing him as colleague caused little internal disturbance. Carausius, in fact, was assassinated in A.D. 294, and in A.D. 297 the Imperial authority was re-established by Constantius Chlorus. From now Britain, already divided into two by Severus, was administered as four provinces. Christianity began to reach it, but old ways were still strong, and pagan temples were actually built *de novo*.

7. Continuous attacks, however, were undermining its powers of resistance and recovery; and a general assault in A.D. 367 was accompanied by a revolt of the frontier garrison. Order was restored with difficulty, but a vast capital destruction had been suffered. Adventurers, Maximus (A.D. 385) and Constantine (A.D. 409), withdrew the garrison, and it is doubtful whether after A.D. 409 there was ever a Roman army there again. Left to itself, Britain resisted its invaders; but it was the leaders of the Celtic *gentes* of the west who came to the front, and Roman ways gave place to the underlying Celtic. To compensate for the vanished garrison, Saxons from overseas were enrolled as *foederati*; they soon revolted and invited their Teutonic fellows. In the struggle of Celt and Teuton, Roman Britain disappeared almost completely (the precise extent of survival is very controversial), even Christianity vanishing from the Lowland zone. But, in truth, the Roman element was already in retreat, and in the Highland zone, though men spoke of 'Romania' and wrote Latin on the tombstones, the spirit was Celtic and the old Celtic art broke forth, though hesitatingly, once more.

Chief sources: Caesar, *BGall.* 4, 20-36; 5, 8-23. Tacitus, *Ann.* 12, 31-40; 14, 29-39; *Agriicola*. Dio Cassius 60, 19-23; 76, 11-13. Chief modern works: T. Rice Holmes, *Ancient Britain and the Invasions of Julius Caesar* (1907); F. Haverfield and G. Macdonald, *Roman Occupation of Britain* (1924); R. G. Collingwood, *Archaeology of Roman Britain* (1930); R. G. Collingwood and J. N. L. Myres, *Roman Britain and the English Settlements* (1937; fundamental, with full bibliography); C. H. V. Sutherland, *Coinage and Currency in Roman Britain* (1937); T. D. Kendrick, *Anglo-Saxon Art* (1938). C. E. S.

BRITANNICUS (TIBERIUS CLAUDIUS CAESAR) (A.D. 41-55), son of Claudius and Messalina. His stepmother Agrippina induced Claudius to adopt her son L. Domitianus (Nero), and contrived to remove the tutors and officers of the guard who were loyal to Britannicus, thus ensuring her son's succession on the Emperor's sudden death in 54. The death of Britannicus in 55 was no doubt due to foul play. According to the general belief he was poisoned by Nero's order.

Tacitus, *Ann.* bk. 11-13; Dio Cassius, bks. 60-1. B. W. Henderson, *Life and Principate of the Emperor Nero* (1903). G. W. R.

BRITOMARTIS (the name means 'sweet maid' in Cretan, Solinus 11, 8), a Cretan goddess, identified with Artemis (Solinus loc. cit. and Hesychius s.v.). She had a temple near Cydonia (Strabo 10, 4, 13). Minos loved her; she avoided him for nine months and finally, to escape him, leaped over a cliff into the sea, was caught in fishermen's nets (hence called Dictynna from *δίctynon*),

got away to Aegina, escaped from him again into a grove of Artemis, and was thenceforth worshipped there as Aphaea (q.v.).

See Callimachus, *Dian.* 189 ff.; Pausanias 2, 30, 3; Antoninus Liberalis 40 (no author quoted); [Verg.] *Ciris* 286 ff.; Rose, *Handb. of Gk. Myth.* 117f. H. J. R.

BRIZO, a goddess worshipped by women at Delos, especially as protectress of sailing (Semus of Delos ap. Athen. 8, 335 a-b = *FHG* iv, 493). Her name is derived from *βρίζειν* 'to sleep', and she was credited with sending prophetic dreams. Bowls of all sorts of food, except fish (cf. *FISH*, SACRED), were offered to her in sacrifice. F. R. W.

BRONZE. The ancients used the words *χαλκός, aes*, indiscriminately for copper and for the harder and more fusible bronze, the compound of copper and tin. Implements of bronze are found in Egypt and Mesopotamia before 3000 B.C., and by 2000 B.C. (the Middle Minoan period of Crete) the general use of bronze and the normal composition of the mixture (one part of tin to nine of copper) were established. Until the introduction of iron bronze remained the sole metal for utilitarian purposes, and afterwards it continued in general use to the end of antiquity for sculpture and many domestic objects. Brass (*ὀρείχαλκος, orichalcum*, a mixture of copper and zinc) is not found before Roman Imperial times, when a white metal formed by the addition of lead to bronze is also in use.

Copper is widely found in classical lands, where the principal sources of supply are, for Greece, Chalcis in Euboea and Cyprus, and, for Italy, Bruttium, Etruria, and Elba, while under Roman rule Spain produced largely. Tin (q.v.) is much rarer, though a little is still worked in Asia Minor; but Herodotus speaks of the metal as coming from the extremities of Europe (3, 115), and Spain, Brittany, and Cornwall seem to have been the main sources.

Several varieties of bronze were distinguished in antiquity—Corinthian, Delian, Aeginetan, Syracusan, Campanian—but these cannot be identified. The technical processes employed were: hammering into plates which were riveted together (*σφυρήλατον*), used in the making of utensils and, during the archaic period, of statues; and casting with wax, either solid (usually in the case of small statuettes) or hollow over a core of clay or plaster (*πρόπλασμα, argilla*) to produce large-scale sculpture. Relief decoration was produced in repoussé work (*μπαυστική*); incised ornament is also common, especially on mirrors. Tin and copper solders were used in addition to riveting for joints. The dull patina of bronzes in museums is the result of time; ancient bronzes were kept bright, and the surface was often coated with gold or silver, or variegated with damascening and inlay, while enamelling on bronze was a Celtic practice.

Pliny, *HN* bk. 34. H. Blümner, *Technologie und Terminologie der Gewerbe und Künste bei Griechen und Römern* iv; Kluge and Lehmann-Hartleben, *Die Antiken Gussbronzen*; W. Lamb, *Greek and Roman Bronzes* (1929); see also the introductions to the *Catalogues of Bronzes of the British Museum* (by H. B. Walters, 1893) and of the Metropolitan Museum, New York (by G. M. A. Richter, 1915). F. N. P.

BRUCTERI, a powerful German tribe which in the time of Augustus dwelt north of the Lippe, separated by the Teutoburger Wald from the Cherusci, whom they joined in the wars of A.D. 9-17. Within their territory lay the important sanctuary of Tamfana. After 58 they spread southwards into lands vacated by the Usipi, and encouraged by their prophetess Veleda they played an important part in the war of Civilis (69-70). They resumed hostilities c. 75-8, but were defeated, and Veleda was captured; about 97 they were disastrously defeated by the Chamavi and Angrivarii. They later probably joined the Frankish confederation. O. B.

BRUNDISIUM (*Βρενέσιον*), the best harbour on the east coast of Italy, consisting of two sea-arms which penetrate deeply into the land, and the nearest Italian town to the east Adriatic coast. It was believed to have been occupied by Cretan colonists in prehistoric times, and to have subsequently received settlers from Tarentum; but it usually figures as a native Messapian town until 246 B.C., when the Romans constituted it a Latin colony. It became the terminal point of the extended Via Appia (q.v.), and since the Illyrian War (229) it was the regular port of embarkation for Roman armies crossing to Greece or Epirus. In 49 Caesar vainly attempted to cut off Pompey's retreat from Italy by capturing it. In 40 it was put under siege by Antony when Octavian sought to prevent his return to Italy, and was the scene of the subsequent negotiations between the triumvirs. In Roman times it was also of continuous importance as the starting-point of passenger traffic to Greece.

For the sieges, see Caesar, *BCiv.* i. 24-8; Dio Cass. 48. 27-30. M. C.

BRUTEDIUS (BRUTIDIUS) NIGER, aedile A.D. 22; prosecuted Silanus for *maiestas* (Tac. *Ann.* 3. 66). He was a pupil of Apollodorus (Sen. *Controv.* 2. 1. 35-6). He was tempted to woo imperial favour by delation, and is probably the Brutidius of Juv. 10. 83. His account of Cicero's death (Sen. *Suas.* 6. 20 f.) comes from an historical work by him.

Peter, *HRRel.* 2. 90-1.

J. W. D.

BRUTII inhabited the rugged south-west peninsula of Italy (modern Calabria; the name Bruttium lacks ancient authority). Earlier inhabitants were Morgetes and Oenotri (= Sicels?) and Chones (= Illyrians). Sabelian Lucani appeared near Laus c. 390 B.C., defeated the Thurians (Polyaenus 2. 10), and imposed their Oscan language on the peninsula. In 356 the oscanized inhabitants, asserting their independence from the Lucani, became known as Bruttii—probably a pre-Sabellian name which the Lucani adopted as their word for 'run-aways' (Diod. 16. 15; Strabo 6. 253 f.; Justin. 23. 1). The Bruttii conquered several Greek colonies on the fertile coastlands, became themselves partly hellenized (Festus, p. 31 L.), and reached their apogee in the third century. Rome, however, subjugated them for supporting Pyrrhus and seized half the Sila Forest (Zonar. 8. 6; Dion. Hal. 20. 15). When they revolted to Hannibal, Rome confiscated additional territory, ringed them round with colonies (Buxentum, Tempa, Vibo, Croton, Thurii), and practically enslaved them (App. *Hann.* 61). Consequently the separate nation of Bruttii disappeared. In 71 B.C. Spartacus, following Hannibal's example, based his operations on Bruttian territory. Once famous for its ships' timber and pitch, Hannibalic depredations started its decline (but see Cassiod. *Var.* 8. 31). Chief towns: Consentia, Clamptia, and Greek coastal colonies.

R. S. Conway, *Italic Dialects* i (1897), p. 3; H. Kanter, *Kalabrien* (1930); J. Wharmouth, *Foundations of Roman Italy* (1937), 335; G. Slaughter, *Calabria, the First Italy* (U.S.A. 1939). E. T. S.

BRUTUS (1), LUCIUS JUNIUS, the founder of the Roman Republic, is probably an historical figure; there is no reason to suppose that he was a god, or that his exploits were retrojections of achievements by later members of the *gens Iunia*. His consulship in 509 B.C., and his alleged attempt to humanize some primitive cults, may be later embellishments. The story of the capital punishment which he inflicted on his sons, and of his victory over the Etruscans at Silva Arsia, where he was killed, form part of an early popular legend.

W. Schur, *PW*, Suppl. v. 356 ff.

P. T.

BRUTUS (2) **CALLAICUS**, DECIMUS JUNIUS (*cos.* 138 B.C.), subjugated Lusitania and Callaëcia, 'triumph-

ing' in 136. He accompanied C. Sempronius Tuditanus against the Iapudes (129) and opposed C. Gracchus (121). He was a patron of poets, especially of Accius.

F. Münzer, *PW* x. 1021.

BRUTUS (3) **DAMASIPPUS**, LUCIUS JUNIUS, a leading Marian and praetor in 82 B.C. During Sulla's campaign in Italy Brutus, at Rome, received a message of despair from the younger Marius, then besieged at Praeneste; and, as a result, he assassinated many leading citizens, including P. Antistius, C. Carbo, L. Domitius, and Scaevola, the Pontifex Maximus. He was soon afterwards defeated and killed by Sulla.

M. H.

BRUTUS (4), MARCUS JUNIUS, tribune of the plebs 83 B.C., proposed that Capua should be made a colony. In 77 as Lepidus' partner he commanded the forces in Cisalpine Gaul. He surrendered to Pompey, but was slain.

F. Münzer, *PW* x. 972.

BRUTUS (5), MARCUS JUNIUS (QUINTUS CAEPIO) (probably 85-42 B.C.), the tyrannicide, son of Marcus Junius Brutus (tribune 83 B.C.) and adopted by his uncle Q. Servilius Caepio. In 58 he accompanied Cato to Cyprus, and in 53 was quaestor to Appius Claudius in Cilicia. He joined Pompey in the Civil War, but was pardoned by Caesar after Pharsalus. In 46 he was governor of Cisalpine Gaul, and in 44 *praetor urbanus*. After the conspiracy against Caesar, in which he played a leading part, Brutus found it impossible to remain in Rome; he was given a corn commissionership, but in August (probably), after a quarrel with Antony, left Italy for Greece. With the support of Q. Hortensius, governor of Macedonia, he raised an army, won over the troops of Vatinius in Illyricum, and captured Gaius Antonius in Apollonia (March 43). The Senate gave him command of the forces in the Balkan peninsula and (after Mutina) an *imperium maius* in the eastern provinces (co-ordinate with that of Cassius). After a campaign against the Bessi in Thrace he crossed to Asia Minor, subjugated the Lycians, and returned with Cassius to Thrace to encounter Antony and Octavian (42). He committed suicide after his defeat in the second battle of Philippi.

Brutus impressed his contemporaries by his moral earnestness and independence, but he was naturally a student rather than a man of action. He had a considerable reputation as an orator, and was the author of political and philosophical works (see also under *DIALOGUE*, *LATIN*).

In 46 Brutus divorced his first wife, Claudia, to marry Cato's daughter Porcia, who died shortly before him.

Gelzer in *PW* x. 973-1020 for a more sympathetic appreciation); M. Radin, *Marcus Brutus* (1939). G. W. R.

BRUTUS (6) **ALBINUS**, DECIMUS JUNIUS, son of Decimus Brutus (consul 77 B.C.) and adopted by a Postumius Albinus. As a young man he served under Caesar in Gaul and distinguished himself by his naval victory over the Veneti (56). He successfully commanded a Caesarian fleet at Massilia in 49, and was appointed governor of Transalpine Gaul, where he suppressed a rebellion of the Bellovacii (46). Decimus Brutus took part in the conspiracy against Caesar in spite of the marked favour shown him by the dictator (he was consul designate for 42). In December 44 he refused to surrender Cisalpine Gaul to Antony, was besieged in Mutina, and released by the victory of Hirtius and Octavian. He was then given chief command of the senatorial forces and crossed the Alps to encounter Antony in Gallia Narbonensis. Deserted by Plancus (governor of Gallia Comata),

he planned to join Marcus Brutus in Macedonia, but was abandoned by his army, captured by a Gallic chief, and put to death by Antony's order.

BRYGUS, potter, in Athens, late sixth to early fifth century B.C. Known from nine signatures. His best artist, the Brygus painter, decorated red-figure cups, plastic vases, etc. Note particularly Komos (Würzburg), Sack of Troy (Paris).

BRYSON of Heraclea on the Pontus, sophist, was probably a pupil of Euclides of Megara and a teacher of Pyrrhon (qq.v.). He is best known as the author of an inconclusive attempt to square the circle (Arist. *An. Post.* 75^b4; *Soph. El.* 171^b16, 172^a3).

PK³ iii. 927.

BUBASTIS, a local cat-headed goddess of the city of Bubastis. Early identified with Isis, she was also identified by the Greeks with Artemis. A temple of Bubastis existed at Memphis, one of the many temples in the great complex of sacred structures there. Bubastis appears with the Egyptian deities, or with some of them, at Delos, Ostia, Nemi, and Rome. T. A. B.

BUCEPHALUS (or **BUCEPHALAS**), favourite horse of Alexander the Great, died after the battle on the Hydaspes (326 B.C.). In its memory, Alexander founded the town of Bucephala on the site. See also HORSES.

BUCOLICA, see PASTORAL POETRY.

BUILDING MATERIALS. I. GREEK. The regions surrounding the Aegean and Adriatic are rich in limestones, and it was by these, and particularly by certain marbles, that the character of classic Greek architecture was largely determined. The white marbles, including that from Mt. Pentelicus, which was used on the Parthenon (q.v.), were generally preferred, and when possible were used for almost every visible architectural part, even roof-tiles and ceilings of small span. In some cases (e.g. the Erechtheum—q.v.) even ceilings of comparatively large span were worked in marble; but wood was more usual, cedar being preferred. Construction of entire buildings in marble was, however, only possible in a few places. Elsewhere the less important parts were usually in one of the coarser limestones, loosely included in the term *poros*. In such cases a marble-like appearance was often obtained by applying a skin of fine marble stucco. Temple cells of plastered sun-dried brick were not unknown. The finest masonry was usually entirely or mainly mortarless, the blocks being worked to a very fine joint and bonded by concealed cramps of bronze. Externally bronze was used for the openwork grilles of temples and for many decorative purposes.

II. ROMAN. The Romans also made great use of limestones, though in their outlying lands they used whatever material was at hand. For Vitruvius, as for his Greek masters, marble was the preferred material. Rome herself, in addition to the Greek marbles and Egyptian granites which she imported under the Empire, was well supplied locally. The hard, strong, honey-coloured limestone, travertine (sometimes classed as a marble), from Tibur (Tivoli), was excellent for most structural purposes, and as a facing hardly inferior to marble; while the soft, light, easily worked volcanic *tufa*, abounding in the immediate vicinity, was useful for general purposes, and particularly

as a filling for the cores of walls, vaults, substructures, etc. and as an aggregate and surface-key for plaster in concrete work.

III. The volcanic dust, *pozzolana*, deserves mention for the peculiar strength which it lent to Roman mortar and concrete. Conerete, little used before the Hellenistic period, became under the Empire a material of major importance. Replacing the puddled clay rubble, it soon grew, because of its superior strength, to be the chief weight-bearing agent—the facings being often reduced to mere protective or decorative skins. The through-stones and bonding courses necessary in the older technique were, however, often retained as safeguards, and in the great vaults and domes of the emperors, whose construction was greatly facilitated by the use of concrete, light arches and groins of brick were used to direct the stresses conveniently. The loads were sometimes reduced by the insertion of hollow pots or light fillings of tufa or pumice. Baked brick came into general use with concrete, and was much used in combination with it, as well as by itself and in combination with sun-dried brick. Bronze was used for decorative purposes, and occasionally for the framework of roofs. Windows of glass or mica were fairly common in Rome in the first century A.D., and large transparent conservatories for fruit were known to Martial.

IV. GENERAL. The Homeric poems, with their admiration for cedar and ivory, and for polished stone and burnished metal-work, always had an effect on the choice of materials and finishes. For work of the less permanent kinds sun-dried brick, usually raised on a stone footing, often plastered internally and externally, and at times combined with timber reinforcements or framing, was an almost universal walling material. So too was unwrought stone, dry-jointed or mortared with clay. Thatch of grass or reeds seems to have been fairly common in pre-classic times, and continued in use in certain districts, for humble classes of work. Tiles of terra-cotta were widely used, and in some regions the old tradition of terra-cotta roof-ornaments continued unbroken. Plaster finishes were generally very good, and when polished were hardly distinguishable from marble.

Vitruvius, *De Architectura*; see also bibliography s.v. ARCHITECTURE. H. W. R.

BUPHONIA, see SACRIFICE.

BURDIGALA, a town in Gallia Aquitania, modern Bordeaux. An important port, trading even with Britain, it had many strangers in the population. A praetor is mentioned as executive magistrate. Of remains, the amphitheatre (Palais-Gallien, perhaps as early as second century) and the important temple of Tutela (destroyed by Louis XIV) are notable. In the late Empire a reduced enceinte, c. 700×450 m., rectangular with bastions, was built. It was the birthplace (c. A.D. 320) of Ausonius, who celebrated its university. It fell under Visigothic rule from c. A.D. 413.

C. Jullian, *Inscriptions romaines de Bordeaux (1837-90)*; Grenier, *Manuel* i. 410. C. E. S.

BUREBISTAS, king of the Dacians, built up an extensive but impermanent empire in the Danubian lands (c. 60-44 B.C.). With the aid of a priest called Deceneos he carried out a religious and moral reform in Dacia, pulling up all the vines (Strabo, 303 f.). In Pannonia he defeated and annihilated the Boii and other Celts; he harried the Greek cities on the coast of the Pontus; and he spread his power southwards over the Danube into Thrace. Pompey negotiated with him for assistance in 48 B.C. (cf. *SIG¹ 762*: decree in honour of the ambassador Acornion of Dionysopolis). Caesar was intending to march against him in 44. But Burebistas himself was assassinated about this time and his empire broke up into four or five separate kingdoms. R. S.

BURIAL, *see* DEAD, DISPOSAL OF.

BURRUS, **SEXTUS AFRANIUS**, procurator of Livia, Tiberius, and Claudius, came from Gallia Narbonensis (Dessau, *ILS* 1321). As Agrippina's favourite, he was appointed sole *praefectus praetorio* by Claudius in A.D. 51 and retained his post under Nero. He was Nero's tutor and adviser for many years and with Seneca responsible for the first period of Nero's government (*see* NERO). Unaffected in 55 by an unfounded accusation of conspiracy, he played an uncertain part in Agrippina's murder, but opposed Nero's designs against Octavia. He died in 62, probably not by poison.

P. v. Rohden, *PW* i. 712; *PIR*², A 441.

A. M.

BUSIRIS, according to Greek mythology, an Egyptian king, son of Poseidon, who slaughtered on the altar of Zeus all foreigners who entered Egypt. Heracles is said to have come to Egypt and killed the wicked king with all his followers. Among classical writers, Herodotus, Euripides, Isocrates, Diodorus, Virgil, Arrian, and others, it was a popular myth.

T. A. B.

BUTEO, *see* **FABIUS** (4).

BUTES, name of several figures of Attic legend: (1) son of Teleon, an Argonaut who, charmed by the Sirens' song, plunged into the sea, but was rescued and taken to Lilybaeum by Aphrodite, by whom he became the father of Eryx. (2) Son of Poseidon Erechtheus (or of King Pandion), legendary ancestor of the family of the Eteobutadae, hereditary priests of that god in the Erechtheum. (3) Son of Boreas, driven mad by Dionysus for the rape of the nymph Coronis.

R. A. B. M.

BYBLIS, *see* **NYMPHS**.

BYRSA, *see* **CARTHAGE** (TOPOGRAPHY).

BYSSUS (βύσσος). The exact nature of this substance is uncertain. It was probably a variety of flax rather than cotton, and of Egyptian origin. Mummies in Egypt were wrapped in white byssus, and the Persians wore belts

of the same stuff (Hdt. 2. 86; 7. 181). But there was also a byssus, golden in colour and almost worth its weight in gold, which was grown in Greece at Elis, and was woven at Patrae into a very light tissue, like our crêpe de chine, suitable for women's garments.

Tertullian, *De cultu feminarum*, 13.

F. A. W.

BYZANTIUM was reputed to have been founded by Megarian colonists in 667 B.C. on a pre-existing settlement called Lygos. It was situated at the apex of a promontory bounded on the south by the Propontis, on the north by the Golden Horn, and projecting eastwards into the Bosphorus. The area occupied corresponded roughly with the present area of the Old Serai, extending westwards to a point near the Column of Constantine. Finds of early Hellenic pottery and inscriptions near this point establish the limits of the city. A secondary colonization from Megara followed in 628. The wealth of the city was almost certainly founded on the fisheries of the Bosphorus. Byzantium was seized by the Persians in the reign of Darius, but later joined in the Ionian revolt. After the battle of Plataea Pausanias freed it from the Persians. In 440 the Byzantines revolted from the Athenian rule, and again in 411, but were subdued in 408 by Alcibiades. Byzantium was captured by Lysander in 403 after the battle of Aegospotami. When the Ten Thousand arrived at its gates, they were inhospitably treated and, in retaliation, occupied the city. It was besieged by Philip of Macedon in 340, and subsequently assaulted continuously by Gallic tribes resident in Thrace. The divine intervention of Hecate in 340 was commemorated on coins of the city by the symbol of the Crescent and Star, which thus reached Islam from a Greek source. Other Bosphoran cities also used this symbol, which was later inherited by the Turks. It was besieged and captured by Septimius Severus in A.D. 196 and then for the first time was organized on Roman lines. Septimius constructed the Hippodrome and other buildings in the neighbourhood. On 11 May 330, it was officially re-founded by Constantine and renamed New Rome. This name, however, soon gave way to that of Constantinopolis.

S. C.

C

CABIRI, non-Hellenic deities, probably Phrygian (earlier theories of Phoenician origin are not borne out by recent researches, Kern, *Rel. d. Griech.* i. 235 ff.), who promoted fertility and (at least from the fifth century) protected sailors. Their numbers varied, but one tradition gave four names, Axierus, Axiocersa, Axiocersus, Cadmilus (schol. Ap. Rhod. 1. 917). The Greeks also gave them the common title of *Μεγάλοι θεοί*, and connected their worship in different places with more familiar cults, those of Demeter (material in Farnell, *Cults* iii. 367, n. 256), Hermes (ib. v. 11 and 16) and Dionysus. With the first and last they had certainly an initial kinship, if the assumption of Phrygian origin is correct. (This would also facilitate the identification with the Corybantes and Curetes which took place in the Hellenistic period.) Their chthonian nature is confirmed by phallic rites and the presence of sacrificial pits at Samothrace and Thebes (Kern, l.c.). The historic centre of their worship was Samothrace, where mysteries were celebrated (Hdt. 2. 51; Ar. *Pax* 276), but it existed on other islands, notably Lemnos, and in Asia Minor (*see*

MYSTERIES). On the mainland, the cult is found from the sixth century at Anthedon on the Boeotian coast and near Thebes. Pausanias' statement (4. 1. 7) that the Theban cult was founded from Athens was denied by Wilamowitz, but may be true. Probably under Orphic influence (W. K. C. Guthrie, *Orpheus and Gk. Rel.* 123 ff.), it acknowledged an elder Cabirus and a child, and identified the former with Dionysus. The *ἀνακτες παῖδες* worshipped at Amphissa were thought by some to be the C. (Paus. 10. 38. 7: cf. s.v. **ANAKES**). After Alexander the cult spread rapidly over the Greek world. At Samothrace it was patronized by the Ptolemies, and later by the Romans (*BCH* xlix (1925), 245 ff., 258; Kern, op. cit. iii. 118; K. Lehmann-Hartleben, *Arch.* xliii (1939), xlv; J. H. Oliver, ib. xliii. 464 ff.). In this period the C. were often confused with the Dioscuri (q.v.), who shared their character as seamen's gods. In art we have representations of a pair of C., a younger and an older, the older, bearded figure usually reclining while the younger stands, (best exemplified by the *Καβίρος* and *Παῖς* at Thebes, but there are traces of the same pair in Samothrace),

and later they became a pair of youths indistinguishable from the Dioscuri; so on coins, where also a hammer-wielding C. appears.

For a summary of the Cabiri n art, see O. Kern in *PIV* x. 1477 ff.

W. K. C. G.

CACUS and **CACA** (etymology uncertain; connexion with Caeculus founder of Praeneste, of whom a miracle involving fire is related, Servius on *Aen.* 7. 678, has often been suggested but remains unproved). The former is represented in *Aen.* 8. 190 ff. (cf. Dion. Hal. *Ant. Rom.* 1. 39. 2 ff., Prop. 4. 9) as a savage fire-breathing monster, son of Volcanus (q.v.), who lived on the Palatine (Aventine, Virgil, but the Scalae Caci on the Palatine, see Platner-Ashby, 465, go far to prove him wrong) and terrified the country-side with his brigandage till he stole some of the cattle of Geryon from Heracles (q.v.), and was overcome and killed by the latter. Servius on *Aen.* 8. 190 says that he was betrayed by his sister Caca, and by way of reward she was given a shrine 'in quo ei pervigili igne sicut Vestae sacrificabatur' (so the best MS., F; 'in quo ei per virgines Vestae sacrificabatur' the rest). This makes it tolerably plain that originally Cacus and Caca were a divine pair, the fire-god and fire-goddess of the Palatine settlement.

CADMEA (*Καδμεία*), see **CADMUS** and **LEONTIADES**.

CADMUS, in mythology, son of Agenor, king of Tyre. When his sister Europa (q.v.) disappeared, Agenor sent Cadmus with his brothers Cilix and Phoenix (the eponyms of Cilicia and Phoenicia), to seek her, with instructions not to return without her. Cadmus arrived at Delphi and was advised to settle where a cow, which he should find on leaving the temple, lay down. She led him to the site of Thebes, where he built the Cadmea, the citadel of the later town. To get water he killed a dragon, the offspring of Ares, and had to undergo a term of servitude. By advice of Athena, he sowed the dragon's teeth, and there came up a harvest of armed men, whom he killed by setting them to fight one another. Five survived and became the ancestors of the nobility of Thebes, the Spartoi (traditionally 'sown men'). He married Harmonia, daughter of Ares and Aphrodite, to whom he gave a robe and a necklace made by Hephaestus; the latter especially played a part in later events, see **AMPHIARAUS**. Their children were Ino, Semele, Autonoe, and Agaue (see **ACTAEON**, **ATHAMAS**, **DIONYSUS**, **PENTHEUS**). Cadmus introduced writing into Greece (i.e., the 'Phoenician', or North Semitic alphabet). In their old age he and Harmonia went away to Illyria and finally were turned into serpents. See **ALPHABET**.

O. Crusius in Roscher's *Lexikon*, s.v.

H. J. R.

CADMUS OF MILETUS, see **LOGOGRAPHERS**.

CAECILIA (1) **METELLA**, daughter of L. Metellus Delmaticus, wife of M. Aemilius Scaurus (*cor.* 115 B.C.), and afterwards fourth wife of Sulla. She bore him twins, Faustus (quaestor in 54) and Fausta (later wife of Milo). In 86 she escaped to Greece. In 81 Sulla divorced her, when she was dying, to avoid contaminating his triumph.

CAECILIA (2) **METELLA**, daughter of Q. Caecilius Metellus Creticus, wife of a certain M. Crassus, probably the triumvir's son. Her tomb is preserved almost intact on the Via Appia (Dessau, *ILS* 881).

CAECILIA (3) **ATTICA** (b. 51 B.C.), daughter of Atticus. She was married to Agrippa through the good offices of Antony (37 B.C.). Subsequently suspicion of misconduct led to the removal of her tutor, a freedman of Atticus. She was the mother of Vipsania Agrippina (q.v.).

Cornelius Nepos, *Atticus* 12.

CAECILIUS (1) **STATIUS** (d. 168 B.C.), an Insubrian Gaul, came to Rome as a slave and was subsequently manumitted. After initial failure he was enabled by the support of Ambivius (q.v.) Turpio to succeed Plautus as Rome's chief comic dramatist. He is said to have died one year after his friend Ennius. We possess about forty titles (mostly Greek) and nearly 300 lines of his comedies. Volcacius ranks him above all other writers of *palliatae*; elsewhere he is praised for plot (presumably he followed well-chosen originals unusually closely), *gravitas*, and emotional power. Gellius cites three passages (about 30 lines in all) from his *Plocium*, together with the original Greek, to show how he has sacrificed subtlety and natural grace for cheap effects. The passages quoted, while certainly coarser than the Menander, are perhaps more vivid as well as more farcical. Emotional power is shown in the angry father's outburst (quoted by Cicero):

egone quid dicam? egone quid uelim? quae tu omnia tuis foedis facis facis ut nequiquam uelim . . .

His *gravitas* appears in such familiar maxims as

saepe est etiam sub palliolo sordido sapientia,

or the reference to the tree-planter, who
serit arbores quae saeclo prosint alteri.

There is some suggestion of satirical power in the references to an unmercenary courtesan and a lover who finds his father embarrassingly—openhanded! Cicero calls Caecilius a bad Latinist; Velleius attributes to him 'dulces Latini leporis facetiae'.

Text: (with trans.) E. H. Warmington, *Remains of Old Latin* (Loeb, 1935) i.

W. B.

CAECILIUS (2) of Novum Comum, one of Catullus' friends, composed a poem on Cybele (Catull. 35).

CAECILIUS (3) **EPIROTA**, **QUINTUS**, a man of letters of the Augustan age. He was the freedman of Atticus and the friend of Cornelius Gallus, after whose death (26 B.C.) he opened a school where he taught small groups of pupils. According to Suetonius (*Gram.* 16), he was the first to give public lectures on Virgil and other contemporary poets.

Cf. Teuffel, § 263, 1; Schanz-Hosius, § 352.

J. F. M.

CAECILIUS (4) of Calacte, a freedman of Jewish stock (originally Archagathus), taught rhetoric at Rome under Augustus. Of his writings only fragments remain (ed. by E. Ofenloch, 1907). Two works dealt with history; and a *τέχνη*, a lexicon (Attic), and an important treatise *On figures* (Kroll, *Rhet.* § 33) represented his technical writings. More significant were his critical works, two of which, including *K. φρυγῶν*, were attacks on Asianism; while his treatise *II. τοῦ χαρακτήρος τῶν δέκα ῥητόρων*, embodying the first mention of the earlier canon, was notable for its biographical sketches and aesthetic appreciations. Other studies included an inquiry into the authenticity of Demosthenes' orations, a criticism of Lysias, comparisons of Demosthenes with Aeschines and Cicero, and a treatise (*II. ψῶν*), which drew from 'Longinus' his famous work. Together with Dionysius of Halicarnassus he helped to disengage literary criticism from technical instruction and to establish Attic standards in oratory and prose style.

J. W. H. A.

CAECILIUS (5) **JUCUNDUS**, Lucius (1st c. A.D.), a Pompeian auctioneer, known from a pair of 'herms' found in his atrium, which bore realistic busts of the owner, and from a series of 127 waxed tablets, mostly receipts recording the proceeds of auction sales that Jucundus conducted, and dating with two exceptions from A.D. 52 to 62.

CIL iv. 3340.

R. C. C.

CAECILIUS (6) AFRICANUS, **SEXTUS** (c. A.D. 150), a Roman jurist, disciple of Salvius (q.v.) Julianus. He attended the courses of his teacher even in his riper years, and published the precious and instructive material collected during his discussions with him. His only known work, *Quaestiones* (9 books), contains for the most part the views (*responsa* and *quaestiones*) of his master, edited without any systematic arrangement, and introduced with a simple 'ait', 'inquit', or 'respondit', without the name of his author (Julian). He is not a fluent writer, indeed his texts are sometimes hardly intelligible. A reconstruction of this work has been edited by D. Lenel, *Sav. Zeitschr.* li (1931). Another work, *Epistulae*, is known only by its title.

A. B.

CAECILIUS, see also **METELLUS**.

CAECINA (1) SEVERUS, **AULUS** (cos. suff. 1 B.C.), a *novus homo* and an experienced soldier. Attested as legate of Moesia in A.D. 6, when he rescued Sirmium from the Pannonian insurgents, but had to protect his province from Dacian and Sarmatian raiders. In 7, commanding with M. Plautius Silvanus an army of five Roman legions, he won a great battle north-west of Sirmium and marched to join Tiberius at Siscia. In 14 he was legate of Germania Inferior and had trouble with a mutiny. In the following year he nearly suffered a serious disaster when crossing the 'pontes longi' on his return from the Ems to the Rhine. In 21 he proposed without success that wives should not be permitted to accompany their husbands on provincial commands.

R. S.

CAECINA (2) ALIENUS, **AULUS** (cos. suff. A.D. 69), born at Vicetia, was quaestor of Baetica in 63 and active for Galba. He is described as 'decorus iuventa, corpore ingens, animi immodicus, scito sermone' (Tac. *Hist.* 1. 53). Legate of a legion in Germania Superior, he was largely instrumental in the elevation of Vitellius, one of whose army-columns he led across the Great St. Bernard to Italy and to victory at Bedriacum. Honoured and enriched by Vitellius, and dispatched northwards to arrest the Flavian invasion, he negotiated with the enemy and was deposed from command by his own troops. Rescued after the fall of Cremona, Caecina acquired the favour of Vespasian, but conspiring, so it is alleged, with Eprius (q.v.) Marcellus c. 78-9, he was summarily executed.

R. S.

CAECUS, see **CLAUDIUS**.

CAELIUS RUFUS, **MARCUS**, of equestrian birth, associate of Catiline (63 B.C.), and protégé of Cicero and Crassus, supplanted Catullus as lover of Clodia (q.v.); but by the year 57 the affair was over, and litigation began against the Atratinii, backed by Clodia, culminating in 56 when Caelius, defended by Cicero in the existing speech, was acquitted of *vis* (including poisoning). Tribune and opponent of Pompey in 52, in August 50 Caelius, now aedile, declared for Caesar; but in 48 Caesar's reluctance to cancel debts shook his enthusiasm, and as *praetor peregrinus* he opposed the official policy of Trebonius, *praetor urbanus*. The *senatus consultum ultimum* (q.v.) being passed, Caelius fled, joining Milo to start insurrection in Italy. He was captured and executed at Thurii (48).

Seventeen letters to Cicero (*Fam.* 8) show brilliant political insight, with agreeable attacks on the more pompous personalities; fourteen are written to Cilicia on Roman affairs. His wit made him a master of invective, of which Quintilian (4. 2. 123) quotes a superb example from his prosecution of C. Antonius (59 B.C.). He is addressed in Catullus 77 and almost certainly in 79.

G. E. F. C.

CAELIUS, see also **BALBINUS**.

CAENEUS (*Kaueús*), a Lapith (see **CENTAURS**), of whom three principal stories are told. (1) He was invulnerable, and therefore the Centaurs disposed of him by hammering him into the ground (Pind. fr. 150 Bowra, cf. Hyg. *Fab.* 14. 4 and Rose ad loc.). (2) He set up his spear to be worshipped (schol. in Ap. Rhod. 1. 57, in *Il.* 1. 264). (3) He was originally a girl, Caenis, loved by Poseidon, who gave her (invulnerability and) a change of sex (*Aen.* 6. 448 and Servius there, and scholiasts as above). He was son of Elatus of Gyrtone (*Il.* 2. 746 and schol. 1. 264, Ap. Rhod. 1. 57).

H. J. R.

CAEPIO (1), **QUINTUS SERVILIUS** (cos. 106 B.C.), leader of the Optimate party during the rise of Marius. He triumphed in 108 B.C. for achievements as propraetor in Lusitania. Elected consul for 106 about the time of Metellus' triumph, Caepio struck at Marius' partisans the *Equites* by his law (*Lex Servilia Caepionis*) which probably transferred the jury-courts to the Senate. In Gaul he took and plundered Tolosa, and in 105, as proconsul, refused to co-operate with the consul Cn. Mallius, a *novus homo*, against the Cimbri; both their armies were heavily defeated at Arausio. Caepio was deprived of his *imperium* by popular vote, was accused by the tribune Norbanus, and was condemned in 103. There had previously been a *quaestio extraordinaria* about the *aurum Tolosanum* which had been largely lost in transit. Caepio retired to Smyrna.

J. Lenge, *Hermes* 1931, 302 ff.

M. H.

CAEPIO (2), **QUINTUS SERVILIUS**, son of Caepio (1), was quaestor in 100 B.C.; he opposed Saturninus and in return (in 99) was unsuccessfully charged with *maiestas*. In 92-1 he supported the *Equites* against the Senate and his own brother-in-law Drusus, and vainly accused M. Aemilius Scaurus, who counter-attacked with a charge of *ambitus*. He fell in the Social War in 90.

Münzer, *Röm. Adelsparteien*, 292-4, 298-302.

H. H. S.

CAEPIO (3), **FANNIUS**, headed a conspiracy against Augustus in 22 B.C. When prosecuted by Tiberius before the *quaestio maiestatis* he attempted to escape but was betrayed and executed.

Velleius 2. 91 and 93; Macrobius, *Sat.* 1. 11. 21.

CAERE (modern *Cervetri*) was one of the wealthiest Etruscan cities, situated 6 miles from the coast and 30 miles north of Rome. Dionysius and others state that an important town preceded the Etruscan; this is confirmed by Villanovan graves. Caere always maintained good relations with Rome; indeed Roman youths were sent there for education. It was granted *hospitium* in 390 and *civitas sine suffragio* later (see **CAERITES**). Of the city and its port Agylla little trace remains, but there are extensive cemeteries which include many monumental tumuli. The graves are laid out in streets like a town; the passages and chambers which pierce the great tumuli are often replicas of the living-rooms in an Etruscan house. These are cut in the tuff; and the tumulus above them, sometimes 40 or 50 yards in diameter, is finished with masonry and earth. The earliest tumuli are of c. 700 B.C.; they continued in use down to the fourth century B.C. The most famous is the Regolini-Galassi. Its contents (now in the Vatican Museum), together with the princely tombs of Praeneste and Vetulonia, form our most valuable source of information for the best orientaling period of art and commerce. Results of recent excavations are in the Villa Giulia Museum at Rome.

Mengarelli, *Studi Etruschi* i (1927), 145; xi (1937), 77. D. R. MacI.

CAERITES. The ancient accounts of the so-called Caerite franchise are contradictory. They confuse together the earliest and the final stages of development of *civitas sine suffragio*. Caere received this status (see *MUNICIPIUM*) either as a reward for protecting the Vestal Virgins during the Gallic invasion of 390 B.C. (Gellius' and Strabo's view), or as a punishment for an otherwise unspecified revolt during the third century, which was possibly Livy's view. The latter is more probable, because the connexion with the Gallic invasion is unknown to Livy, and the common belief that the status of Caere was *ignominiosum* fits only the later date. The notion that Caere was the first *municipium* is a deduction from the improbable connexion of its franchise with the events of 390 B.C.

Mommsen, *Rom. Staatsr.* iii. 1. 572, n. 3; A. N. Sherwin-White, *The Roman Citizenship* (1939), 50 ff.; and see under *MUNICIPIUM*.

A. N. S.-W.

CAESAR (1), GAIUS JULIUS, b. 102 B.C. (Mommsen's date; traditionally 100; 101, according to Carcopino, *Mélanges Bidez* i. 36), was nephew of Marius' wife; Sulla, in sparing his life, said he could see many Marii in him. The significance of his early actions is doubtful: he served in Asia and Cilicia (81-78) and in 77 prosecuted Dolabella (*cos.* 81); as quaestor in 68 he extolled the *gens Julia* in a funeral oration over his aunt, Marius' widow, and on his return from his province, Spain, intrigued with the Transpadani. Certainly by his aedileship in 65 he was Crassus' (q.v.) ally, and was accused of complicity in a plot to murder the consuls (the 'First Catilinarian conspiracy') and in designs on Egypt. In 63 he engineered the trial of C. Rabirius (q.v.), and again upheld the 'popular' view of the *senatus consultum ultimum*, when he opposed the execution of the Catilinarians, proposing instead confinement in the municipalities. In the same year, after heavy bribery, he was elected Pontifex Maximus. His praetorship (62) was temporarily suspended when he supported Metellus Nepos (q.v.), and in the Bona Dea trial (May 61) he refused to depose against Clodius (q.v.), though he divorced his wife Pompeia, for 'Caesar's wife must be above suspicion'. His praetorian province was Hispania Ulterior, whence he returned in 60, asking that while he waited outside Rome for a triumph he might stand for the consulate. The Senate under Cato's influence refused, whereupon Caesar surrendered the triumph and by forming an alliance with Pompey and Crassus (the 'First Triumvirate') secured the consulate of 59. From the outset he raised troops and disregarded the veto of his colleague Bibulus (q.v.): wags spoke of 'the year of Julius and Caesar'. The *publicani* received remission on the Asiatic tax contracts for 61; two *leges agrariae*, the second distributing Campanian land, provided land for Pompey's veterans, and Pompey's Eastern *acta* were confirmed; Caesar colonized Novum Comum, passed a useful *Lex de repetundis*, compelled publication of the Senate's transactions, and transferred Clodius to the plebeians. But the chief measure of the year was a *Lex Vatinia*, which revoked the Senate's allocation to Caesar of an insignificant province, and conferred on him Cisalpine Gaul and Illyricum for five years, incidentally legalizing his possession of an army. The Senate added Transalpine Gaul, and Caesar left early in 58, to be engaged for the next nine years on the Gallic Wars (q.v.). Starting as a dangerous *popularis*, he returned as the resolute destroyer of the Republic. At first Piso, his father-in-law (*cos.* 58), and Clodius (q.v.) protected his interests; but by April 56 the attacks of Domitius (q.v. 3) looked dangerous, and Caesar met Pompey and Crassus at Luca. Pompey and Crassus became consuls for 55, and renewed Caesar's command for five years more, themselves receiving equivalent terms of *imperium* under a *Lex Trebonia*. Caesar was temporarily safe; thereafter he received from the Senate supplications of

unprecedented length for his Gallic successes, and bribed nobles in Rome, and cities and kings abroad, to foster his designs. But in 54 his daughter Julia (q.v. 1) died, and in 53 Crassus was killed. Caesar approved of Pompey's measures in 52 (*B.Gall.* 7. 6), and gained on balance from Pompey's *Lex de Iure Magistratum*, for his tribunes could now veto attempts to recall him before he could stand for the consulate, which a law of this year enabled him to do *in absentia*. But the crux was whether Pompey, who now had a fresh *imperium*, would support these attempts at recall. Although he opposed in 51 the motion of M. Marcellus (q.v. 4), after much hesitation he threw in his lot with Caesar's opponents. The final compromise of Caesar's tribune Curio (q.v. 2) failed, and on 1 January 49 the Senate voted that Caesar lay down his command. On 10 January Caesar crossed the Rubicon.

2. Caesar rapidly overran Italy, but failed to prevent Pompey's crossing to Greece. He therefore turned to Spain, where he forced Pompey's lieutenants Afranius and Petreius to surrender after some brilliant manœuvring near the town of Ilerda. In 48 he effected a crossing to Epirus, Antony later bringing the bulk of his army. Shortage of troops frustrated his blockade of Pompey at Dyrrhachium, and a sortie by Pompey inflicted considerable loss. But reinforced by Domitius Calvinus in Thessaly, Caesar fought a set battle against Pompey's force (still far superior numerically) at Pharsalus, where the courage of his veterans in withstanding cavalry brought complete victory (9 August 48). He pursued Pompey to Egypt, and was involved through the winter in a difficult war against Ptolemy XIII and the Alexandrians, which ended in the establishment of Cleopatra, now his mistress, as queen. He proceeded to Asia Minor and defeated Pharnaces (q.v. 2) of Bosphorus at Zela, the battle which occasioned his famous boast, 'Veni, vidi, vici'. He returned to Rome, but in January 46 landed in Africa, where after four months he overcame the Pompeian forces under Scipio at Thapsus. The wars seemed over, and he celebrated four triumphs, Gallic, Alexandrian, Pontic, and African; but in 45 he was called to Spain to fight Pompey's sons and Labienus, and his victory at Munda was his hardest battle.

3. On his return from Ilerda Caesar was made dictator to hold elections, in October 48 he was again appointed, in 46 he became dictator for ten years, and in 44 for life. He secured his consulate for 48, and in 46 and 45 held nine months' consulates, the last without a colleague. In 44 he received tribunician *sacrosanctitas*, in 46 a *prae-fectura morum*. Other powers and honours, including a full *tribunicia potestas*, he refused, but received extraordinary emblems of royalty; statues, a purple robe, a temple to his Clementia, and a *flamen* (M. Antonius); and his head appeared on coins of 45-44. But full deification was given only after his death. The reforms of his period of power were necessarily sporadic and incomplete: he reduced the number of recipients of corn dole and abolished *collegia* (q.v.), but settled veterans in Italy and outside, founding numerous colonies, many for commercial reasons, especially Corinth and Carthage; he curtailed indiscriminate emigration and ordained that at least one-third of Italian herdsmen be freemen; he carried out public works in Italy, prepared standard regulations for Italian municipal constitutions, carried sumptuary laws, introduced the Julian calendar (beginning 1 Jan. 45 = 709 A.U.C.), and abolished tax farming in Asia and perhaps in other provinces. His revision of debts was moderate, and offended extremists like Caelius (q.v.). He was lavish in granting citizenship (Cisalpine Gaul received it from a *Lex Roscia* in 49), and went outside Italy in recruiting the Senate, which he enlarged to 900. At the time of his death he was preparing wars against Parthia and Dacia. His famous 'clemency', which reached its climax with the recall of M. Marcellus (q.v.), did much to conciliate the aristocracy. But his powers and honours, and especially

perhaps his control of offices, even though he refused the title *Rex* in 44, were intolerable even to men who had been of his party, and on the Ides of March 44 he fell to a conspiracy led by M. Brutus and C. Cassius, and died at the foot of Pompey's statue. To every citizen he left 300 sesterces, repeating a previous gift; his largesse to his soldiers had also been considerable, though their loyalty to him, the chief factor in his power, was in the main spontaneous. He married Cornelia, daughter of Cinna, who died in 68, then Pompeia (above), and in 59 Calpurnia (q.v.); among his numerous mistresses the most famous after Cleopatra was Servilia, half-sister of Cato, and mother of Brutus.

4. WRITINGS: seven books *De Bello Gallico*, each covering a year from 58 to 52 (completed to 50 by Hirtius, q.v.) and three *De Bello Civili* (text—R. du Pontet, O.C.T., 1900). Both works show Caesar as the simple, efficient patriot, fighting necessary wars; but the propaganda (cf. *BCiv.* 1. 1-11; 3. 31-3, 82-3) never breaks unduly the masterly descriptions of warfare, studied in all later ages. The Commentaries were a new literary genre; their style (cf. Cicero, *Brutus*, 262; Hirtius' preface to bk. 8) is lucid and compressed, entirely free from rhetoric, and the diction is simple but brilliantly chosen. Caesar was an atticizer, and there exists a verse epigram to Terence, the 'puri sermonis amator' (*FPL*, 91); his *Analogia* and *Anticato* (see CATO 5) have not survived. As an orator he was second only to Cicero.

5. Caesar's style mirrors the clear vision which was his outstanding quality. His generalship, unsurpassed in antiquity, rested chiefly on his sense of the moment to strike. As a statesman he had abandoned the palliatives of earlier reformers, and the urban populace was no longer first in his mind: the inchoate programme of his dictatorship finds coherence in the promotion of good government, economic development, and greater social equality in Italy and in the Empire as a whole. Yet his radicalism, however far-seeing, went too far for the Italy of his day; and though the storics of trousered Gauls in the Senate or of an intended transference of the capital to the East are fabrications, they point the direction in which Caesar was moving. But he legislated almost in spite of himself: the man who by 46 could say 'satis diu uel naturae uixi uel gloriae' (*Cic. Pro Marcello* 32) had personal position rather than reform as his ambition, and the Civil War (see *Caes. BCiv.* 1. 9. 2) was fought to save his *dignitas*. He was not, like Augustus, economical in the powers he held, nor did he understand the indirect exercise of *auctoritas*; again, the exaggerations of our sources about his honours, royal and divine, reveal something which even contemporaries thought about him. But his impatience was characteristic of his zest for life; his continued accessibility moved the reluctant Cicero, and his culture is another proof of his astonishing versatility, which makes him one of the most impressive characters of antiquity.

BIBLIOGRAPHY

ANCIENT SOURCES (a) Documents: Bruns, *Fontes Iuris Romani*⁷, 15-18, 28. (b) Literary: Caesar's own writings (above), with the *Bella* (*Alexandrinum*, *Africanum*, *Hispaniense*, qq.v.); Cicero, Correspondence (ed. Tyrrell and Purser, esp. vol. vii, Index), and Speeches (esp. *De Provinciis Consularibus*, *Pro Marcello*, *Pro Ligario*, *Pro Rege Deiotaro*, *Philippics* 1 and 2); Sallust, *Bellum Catilinae* (a moderate Caesarian's propagandist attempt to show Caesar's dissociation from extremism), in *Caesarem senem* 1 (contemporary, if not Sallustian), and cf. H. Last, *CQ* 1923-4). Of later writers Suetonius (*Divus Iulius*) is the most valuable, based on a collation of varied contemporary sources, not always used with judgement; Plutarch, *Caesar* (and cf. *Pompey*, *Cicero*, *Cato Minor*, *Brutus*, *Antony*) perhaps draws on Nepos; Dio, bks. 36-44, probably drawing on Livy, an important source for Caesar's honours, but often anachronistic and apt to record proposals as facts; Appian, *BCiv.* 2, has not the merits of bk. 1; Lucan, *De Bello Civili*, is a source for the Civil War.

C.

CAESAR (2), LUCIUS JULIUS (cos. 90 B.C.), an Optimate politician, in spite of his democratic connexions. As consul in the Social War, Caesar passed the *Lex Iulia* admitting loyal allied communities to citizenship; he registered them in eight old or ten new tribes as censor, with P. Crassus, in 89. He commanded in Campania in 90, with some success, and was continued in command in 89. He was murdered in 87 by Fimbria. M. H.

CAESAR (3), LUCIUS JULIUS (cos. 64 B.C.), son of Caesar (2) and uncle of M. Antonius. He was *duumvir perduellionis* with Caesar (63) and voted for the death of the Catilinarians. He was legate of Caesar in Gaul (52-49) and prefect of the city (47). After Caesar's death he became a Republican and was proscribed, but was saved through the appeals of his sister Julia. He wrote a book *De Auspiciis*.

F. Münzer, *PW* x. 468.

A. M.

CAESAR (4), SEXTUS JULIUS, fought in Spain against Pompey (49 B.C.); in 47 he was quaestor and afterwards governor of Syria, where he was killed (46).

F. Münzer, *PW* x. 477.

CAESAR (5), LUCIUS JULIUS, son of Caesar (3), as Pompey's follower and Caesar's relative played an important part in the negotiations of 49 B.C. between Caesar and Pompey. He repaired to Africa and in 46 was with Cato in Utica. Though pardoned, he was afterwards killed.

F. Münzer, *PW* x. 471.

M. H.

CAESAR (6), GAIUS, eldest son of Agrippa and Julia, born in 20 B.C. and adopted by Augustus in 17. In 5 B.C., when he assumed the *toga virilis*, he was designated consul for A.D. 1, admitted to the Senate, and saluted by the *equites* as *Princeps Iuventutis*. In 1 B.C. he was sent to the East, where he had a conference with the Armenian king and installed a Roman nominee on the Armenian throne. He was, however, seriously wounded in the siege of Artagira, and died in Lycia on his way back to Italy (A.D. 4).

Monumentum Ancyranum 3. 1 and 5. 29; Velleius 2. 101-2; Dio Cassius, bks. 54 and 55. G. W. R.

CAESAR (7), LUCIUS, second son of Agrippa and Julia, born in 17 B.C. and adopted by Augustus. In 2 B.C., when he assumed the *toga virilis*, he received the honours previously conferred on his brother Gaius. He died at Mas-silia, on his way to Spain, in A.D. 2.

Monumentum Ancyranum 3. 1; Velleius 2. 102; Dio Cassius 54. 18; 55. 9-12. G. W. R.

CAESAR (8) STRABO, GAIUS JULIUS VOPISCUS, orator, curule aedile 90 B.C., killed by the Marians with his elder brother Lucius in 87, was responsible for a novel and stagey kind of pleading, presumably influenced by his own tragedies.

Cic. Brut. 177; *De Or.* 3. 30; Malcovati, *ORF* ii (1930), 193 ff.

CAESAREA (1) OF CAPPADOCIA (formerly Mazaca), was created by the Cappadocian kings to be their capital. Ariarathes V gave it a Greek constitution (the laws of Charondas, q.v.) under the name of *Eusebeia* under the *Argaeus*, which was changed to *Caesarea* by Archelaus in 12-9 B.C. From A.D. 17 it was the capital of the province of Cappadocia and an Imperial mint. A. H. M. J.

CAESAREA (2) OF PALESTINE (previously Strato's Tower) was captured by Alexander Jannacus (a Jewish king of the Maccabean dynasty) in 104 B.C., restored by Pompey in 63, and granted in 30 by Octavian to Herod, who from 22 to 10 rebuilt it on a grandiose scale and provided it with a huge artificial port, renaming it *Caesarea*, and the harbour *Portus Augusti*. The population was mainly Syrian, but there were many Jews, who under Nero unsuccessfully claimed the citizenship; they were massacred in A.D. 66. Vespasian made Caesarea a colony, immune from *tributum* (q.v.) *capitis*; Titus added immunity from *tributum soli*. It was the capital of Judaea under both the procurators and the legates. An important commercial town, it also had a purple dyeing industry.

A. H. M. J.

CAESAREA (3) (modern *Cherchel*), a seaport in Mauretania. The old Carthaginian trading-station of *Iol* became Caesarea when Juba II (q.v.) and Cleopatra Selene made it the capital of their Mauretanian kingdom and a centre of Greek art. Under Claudius it received a colony of veterans and became the residence of the procurator of Mauretania Caesariensis. With a population of 100,000, Caesarea became the third most important African port; it traded with the Mediterranean and Atlantic, and was a naval base. Its best-known citizen was Macrinus (q.v.). Sacked by Moors and Vandals, it was refortified by Belisarius.

P. M. Duval, *Cherchel et Tipasa* (1946).

W. N. W.

CAESARION was the nickname conferred by the Alexandrians upon Ptolemy Caesar (47–30 B.C.), a son of Cleopatra VII. He was titular joint ruler of Egypt with his mother from 42, and was destined to be her successor. The paternity of Caesarion is under dispute. Cleopatra and Antony proclaimed him a son of Caesar, and this was the prevalent, albeit not the universal, belief of ancient writers. (For the opposite view, see J. Careopino, *Annales de l'école des hautes études de Gand* 1937, 37 ff.) Octavian, who saw in him a possible rival, put him to death.

M. C.

CAESELLIUS VINDEX, Lucrus (early 2nd c. A.D.), wrote a miscellany (now lost) entitled *Stromateus* or *Lectiones antiquae*.

Cf. Teuffel, § 352, 1; Schanz-Hosius, § 593.

CAESENNIUS, see **PAETUS**.

CAESTUS, see **BOXING**.

CAESURA, see **METRE**, **GREEK**, II.

CAKES. The ancients, especially the Greeks, had an enormous variety of cakes and bread (lists in Pollux 6. 72 ff., Athenaeus 643 e ff., cf. the lexicographers under the names of the different kinds). Of these, many were used in sacrifices (material collected in Lobeck, *Aglaophamus*, 1060 ff.; see also Eitrem, *Opferitus*, index under 'Kuchen'). Examples are the *ἀμφιβώων*, stuek with lights and sacrificed to Artemis Munichia (Ath. 645 a; the *βαούβια*, of wheat-flour and honey, sacrificed to Iris (ib. 645 b); many kinds were in shapes of animals, etc. (ib. 646 e, 647 a; schol. Thuc. 1. 126. 6, and often). Cakes are the poor man's offering (Porphyry, *Abst.* 2. 16), and often prelude a greater sacrifice (as Ar. *Plut.* 660 and schol.). The usual Latin name for a sacrificial cake is *libum* (as Ov. *Fasti* 1. 127–S).

H. J. R.

CALABRIA, in antiquity the flat and arid but fertile south-eastern promontory or 'heel' of Italy, inhabited by Messapii (q.v.). Its prehistoric monuments resemble those of Sardinia. The Lombards seized Calabria c. A.D. 700, whereupon the Byzantines transferred its name to the south-western promontory or 'toe' of Italy—the Calabria of to-day.

Strabo 6. 277–S3; Pto1, *HN* 3. 99–103.

F. T. S.

CALAIS and **ZETES**, in mythology, sons of Boreas (q.v.), hence often called together the Boreadae. They took part in the expedition of the Argonauts (q.v.), and, being winged, freed Phineus from the Harpies (q.v.). They persuaded the others to leave Heracles behind at Cios (see **HYLAS**), for which he afterwards killed them, setting over their grave two stones, of which one moves when the north wind blows (Ap. Rhod. 1. 211, 1298; 2. 240 ff.).

H. J. R.

CALAMIS (c. 480–450 B.C.), Greek sculptor. No works survive that can be attributed to him. But he was the author of what was probably one of the first colossal-scale bronze statues ever made, the Apollo at Apollonia Pontica, which was 30 cubits in height and cost 500 talents to make. The silver coins of this city preserve a version of the statue as a design. He was distinguished for his grace and refinement and for his skill at making figures of horses, but almost nothing is really known about his style. Neither the school nor the place of origin of Calamis is known.

S. C.

CALCEUS, see **DRESS**, para. 4.

CALCHAS, in mythology, son of Thestor; a diviner who accompanied the Greek army to Troy (*Il.* 1. 69 ff.). He reveals the reason for the plague on the camp (*ibid.*) and foretells the length of the war (2. 300 ff.). After Homer he is introduced into several episodes, as the sacrifice of Iphigenia (q.v.; Aesch. *Ag.* 201 ff., from the *Cypria* directly or otherwise); the building of the Wooden Horse (Verg. *Aen.* 2. 185, cf. Quint. Smyrn. 12. 3 ff.), and generally the actions fated to capture Troy. After the war he went to Claros, and there met Mopsus (q.v.). It had been foretold that Calchas would die when he met a better diviner than himself; Mopsus answered a question which he could not answer (the number of figs on a tree), and Calchas died of mortification (Strabo 14. 1. 27). Another story of his death is that he died laughing at a prophecy that he would not live to drink the wine of his vineyard (Servius on Verg. *Ecl.* 6. 72); cf. **ANCAEUS**.

H. J. R.

CALEDONIA, the name used by Tacitus and Dio Cassius for the Scottish Highlands, beyond the *civitates trans Bodotriam sitas* (*Agr.* 25). Others use the adjective, sometimes of inland Britain (Florus 1. 45. 18; Stat. *Silv.* 5. 2. 142), mostly of north Britain, referring to its seas (Lucan 6. 37), its north cape and monument with Greek letters (Solinus 22; Mommsen, *Addit.* 234), its frosts (Claudian *IV Cons. Hon.* 26), fauna (id. *I Cons. Stil.* 2. 247), pearls (Auson. *Mos.* 68), and people (Mart. 10. 44. 1; Claudian, *Laus Serenae* 45; Sid. Apoll. *Carm.* 7. 89). Its wooded hills (*saltus*) were early famous (Florus 1. 17. 3, 1. 45. 18; Plin. *HN* 4. 102) but vaguely located (op. cit.) until Ptolemy (*Geog.* 2. 3. 8) placed *δρυμὸς Καληδόνιος* south-west of Beaulieu Firth. The name survives (Watson, *Celtic Place-names of Scotland*, 21) in Dunkeld, Rohallion, and Schichallion. It occurs as a personal (*Eph. Epigr.* vi. 1077) and tribal (*ILS* 4576) name.

Agricola (q.v.) defeated the *Caledonii* without conquering them. In A.D. 197 they broke a treaty with Rome (Dio Cass. 75. 5), were reduced by Severus in 209, but broke faith again in 210–11 (id. 76. 15). Dio (76. 12) divides non-Roman Britain into *Caledonii* and *Maeatae*; his description does not reflect Iron Age conditions and may go back much earlier (cf. Hübner, *PW*, s.v.). Ammianus (27. 8. 5) distinguishes *Dicalydonii* (cf. Ptol. *Geog.* 2. 3. 1, *ὑπερασὸς Δουρικαληδόνιος*) and *Veturiones*, the latter of Fortrenn (Watson, op. cit. 68–9).

I. A. R.

CALENDARS. Almost every ancient community had a calendar of its own, differing from others in names of months and date of New Year. All were, at least

originally, lunar or soli-lunar (see TIME-RECKONING). The months were either simply numbered (Protos was the first month in Phocis, September the originally seventh month in Rome) or named after festivals held or deities specially worshipped in them (Dios and Apellaïos, the first two Macedonian months, from Zeus and Apollo; Anthesterion at Athens, from the Anthesteria; Martius in Rome and several other Italian communities, from Mars). Some of the Greek month-names are at least as old as Hesiod (Lenaëon, *Op.* 504; 8th c. ?); both they and the Italian names are usually adjectival, the word for 'month' being expressed or understood.

2. Greek months were divided into thirds, at least where we have any information as to a division. The first ten days were the 'rising' month, *μὴν ἰστάμενος*, and numbered forwards, as with us: *Βοηδρομιῶνος ἰσταμένου πέμπτῃ*, on Boedromion 5; the next ten also numbered forwards, and most commonly in the style *Βοηδρομιῶνος πέμπτῃ ἐπὶ δέκα*, Boedromion 15; the last ten or nine, the 'waning' (*φθίνων*) month, were numbered backwards, or forwards from the twentieth, *εἰκάδες*. The last day of the month was commonly called *τριάκας*, or thirtieth, in Athens *ἐνν καὶ νέα*, 'old and new'. In Italy, at all events in Rome, days were numbered backwards from the three fixed points, the *kalendae* (new moon), *idus* (full moon) and *nonae* (the ninth day, counting inclusively, before the Ides). Thus *ante diem octavum kalendas Aprilis* is 25 March; *pridie nonas Iunias* is 4 June.

3. Of Greek calendars, the least imperfectly known is the Athenian. It began as near as might be to the summer solstice (longest day), and its months were Hecatombaëon, Metageitnion, Boedromion, Pyanopsion, Macmacterion, Poseideon, Gamelion, Anthesterion, Elaphebolion, Muni-chion, Thargelion, and Scirophorion. All are named after festivals, some very obscure to us and probably to fifth- and fourth-century Athenians, which occur in them. The intercalary month (see TIME-RECKONING) was obtained by inserting a Second (*δεύτερος*) or Later (*ὕστερος*) Posei-deon. Every month was either 'full' (*πλήρης*) or 'hollow' (*κοῦλος*), i.e. respectively thirty and twenty-nine days long; normal total $29\frac{1}{2} \times 12 = 354$ days.

4. The original Roman calendar consisted of ten months only, the later March–December, and must therefore have had an uncounted gap in the winter, between years (see especially Ov. *Fasti* 1. 27 ff., with Frazer's note; cf. Nilsson, *Time-Reckoning*, 223). The Republican calendar, represented for us by the fragmentary *Fasti Antiates* (see Mancini in *Not. Scav.* 1921, 140 for first publication) and literary descriptions (notably Censorinus 20. 4 ff., Macrobian *Sat.* 1. 13. 1 ff.; their chief ultimate sources are no doubt Varro and Verrius Flaccus), was introduced from Etruria by Tarquinius Priscus (so Junius Gracchus ap. Censorinus, *ibid.*), as is shown among other things by the month-name *Iunius*, pure Latin *Iunonius*, clearly connected with the Etruscan form of Juno's name, *Uni*. It is earlier, however, than the Capitoline temple (traditionally not dedicated till after the expulsion of the kings), for of the feast-days which it marks in large capitals none is connected with that cult. January, as containing the festival (**Ianuar*, presumably the *Agonium* of later calendars, 9 Jan.) of the god of gates who was on his way to be a god of all beginnings, must have been intended to be the first month, but the revolution which expelled the Etruscan dynasty put a stop to this and March remained the first of the year till 601/153. March, May, Quintilis (July), and October had 31 days each (Ides on 15th, Nones on 7th), February 28 and the rest 29 (Ides on 13th); total, 355.

5. To intercalate, a 'month' of 22 or 23 days, called *Mercedonius* or *Intercalaris*, was placed between the 23rd and 24th of February. This intercalating was so clumsily done that by the time of Julius Caesar the civic year was about three months ahead of the solar. In his capacity of *Pontifex Maximus*, he intercalated sufficient days to bring

the year 708/46 to a total of 445 days (Censorinus, *ibid.* 8), which was thus the 'last year of the muddled reckoning', 'ultimus annus confusionis' (Macrobian *ibid.* 14. 3). From the next year onwards the Egyptian solar calendar (see TIME-RECKONING) was adapted to Roman use, by inserting enough days in the shorter months to bring the total up to 365 and arranging for the insertion of a day, not a month, between 23 and 24 February in leap year (hence called bissextile year, since the date *a. d. vi. kal. Mart.* occurs twice in it; the non-existent date '29 February' is a modern absurdity). No substantial change was made thereafter till the reforms of Gregory XIII (promulgated by Bull, 24 Feb. 1582), whose calendar is now in general use.

6. The official year of the consuls (and of most other Roman magistrates) was appointed in 153 B.C. to begin on 1 Jan. That of the *tribuni plebis* began on 10 Dec.

W. Kubitschek (see TIME-RECKONING); M. P. Nilsson, *Primitive Time-Reckoning* (Lund, 1920); 'Entstehung und religiöse Bedeutung des griechischen Kalenders', in *Lunds Universitets Årsskrift*, N.F., Avd. 1, Bd. 14, Nr. 21; 'Zur Frage von dem Alter des vorclassischen Kalenders', in *Strena philologica Upsalensis* (1922); G. Thomson, 'The Greek Calendar' (*JHS* 1943, 52 ff.); F. Altheim, *History of Roman Religion* (1938), p. 104 ff. H. J. R.

CALES, an Auruncan or Sidicinian town on the borders of Campania, nowadays *Calvi* (Strabo 5. 237; Polyb. 3. 91; Verg. *Aen.* 7. 728; Beloch, *Röm. Gesch.* 388). In 334 B.C. the Via Latina was probably extended to Cales, which became a Latin colony and the centre of Roman supremacy in Campania (Livy 8. 16; 10. 20). A *quaestor navalis* was stationed there (Tac. *Ann.* 4. 27; text uncertain). Cales was an important base in the Hannibalic War but, sustaining heavy losses, refused Rome further aid in 209 (Livy 27. 9). Rome reinforced it in 184 B.C. (Dessau, *ILS* 45). In Ciceronian and Imperial times Cales was a *municipium* (q.v.), and the birthplace of Vinicius, Velleius Paternulus' patron (Cic. *Leg. Agr.* 2. 86; Tac. *Ann.* 6. 15). The fertile Ager Calenus was famous for its pottery. Numerous monuments survive.

A. Sambon, *Monnaies antiques de l'Italie* i (1903), 353; C. L. Woolley, *JRS* 1910, 199; K. J. Beloch, *Röm. Gesch.* 489. E. T. S.

CALIDARIUM, see BATHS.

CALIDIUS, MARCUS, practor 57 B.C., a leading Atticist pupil of Apollodorus in oratory (q.v.; cf. RHETORIC, LATIN). His gifts in speaking are handsomely praised by Cicero (*Brut.* 274 ff.).

Fragments: H. Malcovati, *ORF* iii.

CALIGA, see DRESS, para. 4.

CALIGULA, see CAIUS (1).

CALLEVA ATREBATUM, modern *Silchester*, on the Hampshire–Berkshire border. Recent excavations have not revealed pre-Roman occupation, so that the significance of CALLEV on coins of Epillus, son of Commius, is obscure. A Roman town was enclosed by a polygonal earthwork, perhaps after Boudicca's revolt (A.D. 61), and c. 100 was laid out in *insulae*. A flint wall erected c. 200 reduced the enclosed area to c. 100 acres. The land within it was completely excavated 1890–1909. Shops, a dyeing industry, and some 60 houses were exposed, and of public buildings a *forum* with *basilica*, baths, a presumed *hospitium*, five small temples, and a small Christian church. The population was perhaps c. 2,000. The town was eventually deserted after a period of slumdom.

Recent excavations (Mrs. Cotton) unpublished; those of 1890–1909, *Archaeologia* lii–lxii; earlier work (important) *ib.* xl. 403–16; xlv. 329–65; l. 263–80. Partial summaries in *VCH (Hants)* i. 271–84, 350–72. Pottery: T. May, *Catalogue* (1916). C. E. S.

CALLIAS (1) (5th c. B.C.), son of Hipponicus, of one of the richest families in Athens. He was cousin to Aristides (q.v.), and married Elpinice, sister to Cimon (q.v.). He is said to have distinguished himself at the

battle of Marathon; he won the chariot-race at Olympia three times. He is chiefly known as the head of the embassy which went to conclude peace with Persia in 449, a peace which recognized each party's sphere of influence—Persia agreeing not to send a fleet west of Phaselis in south Asia Minor and of the Bosphorus, nor to send troops within three days' march of the west coast, Athens leaving to Persia all to the east of that line, as well as Cyprus and Egypt. The reality of this treaty was impugned by Theopompus, and has been doubted by modern scholars (see Grote, pt. ii, ch. 45; *CAH* v. 469–71). He is also said to have been one of the negotiators of the Thirty Years' Peace with Sparta (446–445).

A. W. G.

CALLIAS (2), Athenian comic writer, victorious in 446 B.C. (*IG* ii². 2318, 2325), and said to have been a rival of Cratinus (Schol. Ar. *Eq.* 527). He was perhaps still active, as a litigant or a dramatist, after 403. His *Πεδήται* mentions Socrates as a teacher of Euripides (fr. 11) and Aspasia of Pericles (fr. 15) and so is attributable to c. 431. (The Callias who wrote a *γραμματικὴ τραγωδία* (Ath. 7. 276 a; 10. 448 b, 453 c) was a different person, an elder contemporary of Strattis).

FCG i. 213 f.; *CAF* i. 693 ff.; *Demianczuk, Supp. Com.* 27 f.; *Capps in CPhil.* i. 219.

M. P.

CALLIAS (3) (c. 450–370 B.C.), an Athenian nobleman, notorious for his wealth and his extravagance. He was ridiculed by comic poets, and attacked by Andocides, whom he accused of sacrilege. More sympathetic pictures of his house and life are given by Xenophon (*Symposium*) and Plato (*Protagoras*). He was general in 391–390, and took part in the famous victory of Iphicrates (q.v.) over Spartan hoplites. As an old man, he was a member of the embassy sent to Sparta in 371–370.

Swoboda, *PhW*, s.v. 'Kallias (3)'.

V. E.

CALLIAS (4) of Syracuse, lived at the court of Agathocles, tyrant of Syracuse (316–289 B.C.), and wrote a history of his reign in twenty-two books, variously described as *Τὰ περὶ Ἀγαθοκλέα, Περὶ Ἀγαθοκλέα ἱστορίαι*, etc. It so favoured Agathocles that Callias was suspected of accepting bribes; so Diod. Sic. (21. 17. 4) who, however, probably only knew Callias through the medium of Agathocles' enemy, Timaeus. The history had little influence on the tradition, which remained unfavourable to the tyrant, although, apart from the account written by Agathocles' brother, Antandrus, it was the first important work on this subject.

Flig. ii. 382 and iv. 657.

G. L. B.

CALLICRATES (1), a Greek architect of the fifth century B.C. He was associated with Ictinus and the sculptor Phidias in the building of the Parthenon (q.v.).

CALLICRATES (2) (d. 149–148 B.C.) of Leontium, the Achaean pro-Roman statesman, in opposition to Lycortas after the death of Philopoemen, announced in Rome in 181–180 B.C. his policy of subservience to Rome. General in 180–79, he repatriated Spartan and Messenian exiles, and restored Spartan local rights. In 168 he prevented assistance to Egypt. After the Third Macedonian War, with the detention of the leading independent Achaean politicians in Italy, he maintained his ascendancy with Roman support, despite his unpopularity with the masses, until his death.

Peph. 24. 8–10; 29. 23–5; 30. 13, 29, 32. G. Colin, *Rome et la Grèce* (1905), 233. De Sanctis, *Sic. Rom.* iv. 1, pp. 247, 347.

A. H. McD.

CALLICRATIDAS, Spartan admiral, who succeeded Lysander (q.v.) in 406 B.C. Though hampered by partisans of Lysander and rebuffed by Cyrus, he increased the Peloponnesian fleet, defeated a squadron under Conon at Mytilene, and blockaded it there. Leaving 50 ships to maintain the blockade, he proceeded with 120 to attack

an Athenian relief fleet of 150. In a battle off the Arginusae Islands he suffered a heavy defeat and was drowned. He displayed energy, spirit, and sincerity, but his qualities are perhaps overrated by authorities hostile to Lysander.

Xenophon, *Hellenica* i. 6. 1–33; Diodorus 13. 76–9, 97–9; Plutarch, *Lysander* 5–7. 11. D. W.

CALLIMACHUS (1), Athenian polemarch and commander-in-chief in the campaign of Marathon (490 B.C.). He accepted Miltiades' plan to meet the Persians in the field. His part in the actual battle, in the last stage of which he was killed, has been obliterated by the personality and achievements of Miltiades, but his share in the victory was fully recognized in the wall-paintings on the Stoa Poikile (c. 460 B.C.), where he was portrayed among the Athenian gods and heroes, and in two surviving epigrams (Tod, *Greek Historical Inscriptions*, 13).

H. Berve, *Miltiades* (1937), 78 ff.; C. Robert, *Die Marathon-schlacht in der Poikile* (1895), 19 ff. P. T.

CALLIMACHUS (2), Greek sculptor, perhaps an Athenian. He was reputed to have been the inventor of the Corinthian capital in architecture. This may well be true, since the Corinthian capital first occurs (at Bassae) in the third quarter of the fifth century, the period when Callimachus seems to have been active. He was noted as the first artist to employ the running-drill as a major instrument in carving. It is first so used about 440 B.C. He was known to artists as *κατατηγέτης*—the man who spoiled his art by over-elaboration. This may well have been the consequence of his peculiar use of the drill.

S. C.

CALLIMACHUS (3) (c. 305–c. 240; Aul. Gell. 17. 21, 40 puts his *floruit* shortly after 264), of Cyrene, son of Battus (hence Battiades in *Epigr.* 35; Catull. 65. 16; Ov. *Am.* i. 15. 13, etc.). He is described as pupil of Hermocrates of Iasos. Early in life C. migrated to Alexandria and became a schoolmaster in its suburb Eleusis. Soon he was recommended to Ptolemy Philadelphus and given employment at the library, apparently with the title *νεαρίσκος τῆς ἀλλῆς* (Tzetzes in Kaibel, *CGF* 31. 13). Employed as cataloguer of the library, he produced a *catalogue raisonné* in 120 volumes with the title *Πίνακες τῶν ἐν πάσῃ παιδείᾳ διαλαμπάντων καὶ ὧν συνέγραψαν*, the first scientific literary history. He was on intimate terms with the courts of Philadelphia and Euergetes and their consorts. Nevertheless his literary critics were numerous and persistent, including such well-known names as Aselepiades and Posidippus. It is possible that the dispute originated, early in C.'s career, over the merits of Antimachus' poetry (cf. *Anth. Pal.* 9. 63 (Aselepiades); 12. 168 (Posidippus); Callim. fr. 74 b). Soon the controversy turned on C.'s own poetic abilities, his opponents declaring that he was incapable of composing 'one continuous poem in many thousands of verses', i.e. an Epic in the traditional manner. C. met them by the assertion that such compositions were out of date, and confined himself to the production of short poems complete in themselves or loosely connected in a larger work (see *EPYLLION*). In C.'s later years the *Argonautica* of Apollonius Rhodius marked a rebellion in principle against C., Apollonius' former teacher, and provoked the famous quarrel. *Hymn Ap.* 105–13 and the *Retort to Critics* (*POxy.* 2079) are concerned with this later phase, Pontus in the former being perhaps Apollonius, and the Telchines, Pontus' offspring in myth, his supporters. C. was victorious and Apollonius retired to Rhodes. Soon afterwards, in 246–245, C. wrote the *Lock of Berenice*. His death may be dated c. 240.

WORKS

Verses: C.'s longest and most famous work was the *Actis* (*Ἄκτις, Caenis*), produced probably c. 270, but re-issued with a new preface, the *Retort to Critics*, towards

the close of his life. It was a narrative elegy in four books and contained 3,000–4,000 lines. In the prologue (cf. *Anth. Pal.* 7. 42) C. described himself as transported in a dream from Libya to Helicon and there interrogating the Muses about myth, history, and ritual. It is uncertain how far in the poem this framework was maintained; as also what continuity existed between the various *Aetia* or elegies. The new *Diegesis* (Expositions) of C.'s poems (*PMil.* 18), which include bk. 4 and the end of bk. 3, testify to a certain degree of grouping by subject-matter. The longest fragments all come from papyri, *Acontius* and *Cydippe* (fr. 9 Pf.), *Pollis' Banquet* (fr. 8 Pf.), *Sacrifice of Zancle* (*POxy.* 2080). While the *Aetia* secured for C. his supremacy in Elegy (Quintilian, *Inst.* 10. 1. 58 calls him 'princeps elegiae'), he also wrote numerous elegies of the occasion. The best known is the *Lock of Berenice* (Catullus 66, cf. Barber in *Greek Poetry and Life*, 343–63). Others were a *Victory Ode for Sosibius* (fr. 60 Pf.) and an *Epithalamus for Arsinoë* (fr. 196). The *Iambi* were a collection of thirteen or fourteen shortish pieces. In 1–3, 5, and 14 C. satirizes contemporary morals; in 4 and 13 he deals with his literary critics; 6 describes Phidias' statue of Zeus at Olympia for an intending tourist; 7–11 are more on the lines of the *Aetia*; 12 celebrates the birth of a daughter to a friend Leon. The favourite metres are the scazon and iambic trimeter, but some pieces are in epodic form and there are other experiments. A veritable *lanx satura*, the *Iambi* must have influenced Roman Satire. Of C.'s Lyrics (*Méla*) very little survives, but enough to prove his skilful use of a variety of metres, some of them his own invention. His galliambics probably served as a model to Catullus and Varro. The longest fragments (Fr. 1 Pf.) come from the *Funeral Ode for Arsinoë* (d. 270), in archaebuleans. Epic on the grand scale was avoided by C. on principle. Instead he composed epyllia (see EPYLLION), the most famous being his *Hecale*, a poem of perhaps 1,000 lines, narrating Theseus' encounter with the Bull of Marathon, but working in an account of the hero's earlier life and devoting most space to the old dame Hecale, at whose hut he spent the night previous to the encounter, and concluding with her death and the honours paid to her by Theseus. The poem also contained a remarkable digression in which the speakers are birds; the connexion of this with the main narrative remains obscure. Another branch of epic is represented by the *Hymns*, of which I–IV and VI are in hexameters, V in elegiacs. Up to a point C.'s model is the *Homeric Hymns*. C.'s *Hymns*, however, were not intended to be recited at a public festival, still less to accompany religious ritual. They are literary pieces, meant for reading or recitation to a select audience. I, II, and IV contain political propaganda. The style varies. I (Zeus) reads at times like a humorous report of a learned controversy. III (Artemis) approximates to an epyllion. IV (Delos), which competes with the Homeric Hymn to the Delian Apollo, comes nearest to the traditional manner. II (Apollo), V (Bath of Pallas), and VI (Demeter) represent C.'s greatest originality in this department. By a combination of dramatic mime and lyric the poet brings to life the spectacle itself and the emotions of the spectators. In V and VI a 'Holy Story', pathetic in V, grotesquely gruesome in VI, contributes an epic element. I–IV are in the epic dialect, V–VI in Doric. Of C.'s *Epigrams* some sixty survive. More interesting than the dedications and epitaphs, though some of the latter are excellent, are the occasional pieces, prompted by C.'s own experiences and emotions, especially during his early manhood. Of C.'s tragedies, comedies, and satyr-plays mentioned by Suidas nothing now survives. Almost as shadowy are a riddle poem on Athena and the *Graphieum*, which contained literary criticism. The *Ibis*, a wilfully obscure poem in mockery of Apollonius, gave Ovid the idea for his poem with the same title, but cannot be reconstructed from the latter. The *Diegesis*, for example,

show that Ovid's *Ibis* incorporates several stories from the *Aetia*.

Prose. Besides the *Pinakes* C. wrote many other works in prose, e.g. a *Chronological Register of the Athenian Dramatic Poets*, a study of Democritus' writings and language, numerous encyclopaedias (*About Nymphs, Birds, Games, Winds, Rivers*, etc.), collections of Paradoxa, and Glosses.

The time is not yet ripe for a just appreciation of C. The publication of further new fragments is imminent, and still more material is known to exist. Already, however, it is clear that C. was a poet of far greater originality and wider compass than was commonly allowed. His amazing productivity (Suidas credits him with more than 800 volumes) was accompanied, as regards his poetry, by a boldness in experiment and a versatility of style which offended the conservatives of his generation, but justify the great reputation he enjoyed in later ages.

TEXTS: U. von Wilamowitz-Moellendorf, *Callimachi Hymni et Epigrammata* (1925); O. Schneider, *Callimachea* (1870, 1873); R. Pfeiffer, *Callimachi Fragmenta Nuper Reperta* (ed. maior 1923); *Oxyrhynchus Papyri* xvii (1927), 45–72; A. Vogliano, *Papiri della R. Università di Milano* i (1937), 66–173. For further references to the new texts see H. Herter, *Bursian's Jahresbericht* lv (1937), 82–217, and E. Cahen in A. Couat, *La Poésie alexandrine sous les trois premiers Ptolémées* (1882, Engl. Transl. by J. Loeb, 1931), 548 ff. A. W. Mair, *Callimachus, Lycophron, Aratus* (Loeb, 1921), and E. Cahen, *Callimaque* (1922) give the hymns, epigrams, and a selection of the fragments, new and old.

GENERAL: H. Herter, 'Kallimachos (6)', in *PW*, Supplementband v. 386–452; E. Cahen, *Callimaque et son œuvre poétique* (1929); id. *Les Hymnes de Callimaque* (1930). E. A. B.

CALLINUS, elegiac poet, of Ephesus, lived in the first half of the seventh century B.C., when Cimmerians and Tretrians were attacking Phrygia, Lydia, and Ionia (Strabo 627, 647). He refers to them in frs. 3 and 4. He also refers to the destruction of Magnesia by the Ephesians (Ath. 525 c.). His one long fragment (fr. 1) summons men lying at a feast to take up arms and defend their country, and attributes the rank of demi-god to the brave fighter. It is written in epic language, but with certain originalities of phrasing.

Text: E. Diehl, *Anth. Lyr. Graec.* i. 1, pp. 3–5. Commentary: T. Hudson-Williams, *Early Greek Elegy* (1926), 71–81. Criticism: C. M. Bowra, *Early Greek Elegists* (1938), 13–16. C. M. B.

CALLIPHON, philosopher of uncertain date (probably not before Ariston of Chios and Hieronymus of Rhodes, who flourished c. 250 B.C.). Cicero says he held that the supreme good consists in the union of pleasure and virtue.

PW x. 1656.

CALLIPPUS (1), an Athenian, of Lamptrae, one of the early pupils of Isocrates, mentioned by him with others of his disciples to whom golden crowns were awarded for their public services (Isoc. 15. 93). We are not justified in identifying him with the man against whom Demosthenes wrote a 'private' speech for Apollodorus (see Dem. c. *Callippum*). Another Callippus, of Paeania, was prosecuted by Hegesippus for proposing an illegal decree ([Dem.] 7. 43).

CALLIPPUS (2) of Cyzicus (c. 370–300 B.C.), perhaps the greatest Greek astronomer of his time, went with Polemarchus to Athens, where he stayed with Aristotle. He corrected and added to Eudoxus' theory of concentric spheres designed to account for the movements of the sun, moon, and planets (Simpl. in *Cael.* 493, 5–8 Heib.); Callippus added two more spheres in each case for the sun and moon, and one more for each of the planets (as to these changes see Arist. *Metaph.* 1073^b 32–8, Simpl. l.c. 497, 17–24). Callippus proposed the '76-year cycle' containing 27,759 days and consisting of 940 months—28 intercalary—as an alternative to Meton's cycle of 19 years (Geminus, *Isagoge* 8. 57–60); the first 76-year cycle began in 330–329 B.C. T. II.

CALLIRHOË (1), in mythology, daughter of the river Achelous; for her story, see ACARNAN, ALCMAEON; (2) a virgin of Calydon, vainly loved by Coresus, priest of Dionysus there, in a romantic and obviously late legend (Paus. 7. 21. 1-5).

CALLISTHENES of Olynthus, Aristotle's nephew, already known for works on Greek history, but not a wise man, accompanied Alexander's expedition as its historian. In his history he wrote up Alexander as champion of Panhellenism, partly propaganda against the Greek opposition; but he also made him son of Zeus, a far-reaching extravagance. He quarrelled with Alexander in 327 by opposing the introduction of *proskynesis* (his reasons remain doubtful), and was executed for alleged complicity in the Pages' conspiracy, which made the Peripatetic school Alexander's enemies for ever. See ALEXANDER (3), Bibliography, Ancient Sources. W.W.T.

CALLISTO, probably in origin a by-form of Artemis *Καλλίστη*; in mythology, daughter of Lycaon. She was loved by Zeus and bore him Arcas (q.v.). Either Artemis, angered at her unchastity, or Hera then turned her into a she-bear; or she was shot by Artemis. In her transformed shape, either Artemis mistook her for a real bear and killed her, or her own son pursued her (as a quarry, or because she was trespassing on the precinct of Zeus Lycaeus), when Zeus took pity on them and transformed him into the constellation Arctophylax, her into the Great Bear.

See Apollodorus 3. 100-1; Ps.-Eratosthenes 1 and 8; Ov. *Met.* 2. 495 ff., *Fasts* 2. 155 ff. H. J. R.

CALLISTRATUS (1), a διδάσκαλος of Old Comedy, possibly himself a comic poet, but better known as the man under whose name Aristophanes produced his three earliest plays.

CALLISTRATUS (2) of Aphidna, nephew of Agyrrhius (q.v.), was a talented orator and financier, who influenced Athenian policy from 377 to 361 B.C. Having prosecuted the ambassadors who proposed peace with Sparta in 391, he was elected strategus in 378 when the Second Athenian Confederacy was founded. He is known to have organized the finances of the confederacy and is believed to have inspired its liberal constitution. With Iphicrates he prosecuted Timotheus for misconduct in 373 and acted as strategus in 372, when Spartan naval power was broken. Realizing that Thebes was becoming more dangerous than Sparta, he negotiated the peace of 371 with Sparta (Xen. *Hell.* 6. 3. 10 f.). Endeavouring to maintain the balance of power between Thebes and Sparta, he proposed the dispatch of Iphicrates to aid Sparta in 369. Since his policy failed to check Thebes, he was impeached and only saved by his oratory (366). When Timotheus' policy of imperialism failed, Callistratus perhaps regained popular favour by negotiating alliance with Arcadia, but in 361 he was impeached, and was condemned to death *in absentia*. After reorganizing the finances of Macedonia for Perdiccas II, he landed in Attica and was put to death. A realist and constructive statesman, he was thwarted by the rise of Thebes.

P. Cloché, *La Politique étrangère d'Athènes 404-338 B.C.* (1934). N. G. L. H.

CALLISTRATUS (3), pupil of Aristophanes of Byzantium, edited Homer and other authors, and wrote *Σύμμικτα*, quoted by Athenaeus. He attacked his fellow-pupil Aristarchus for departing from his master's doctrines.

CALLISTRATUS (4), a Roman jurist of the later Classical period (first half of the 3rd c. A.D.). He was of Greek origin, his Latin is full of Greek reminiscences, and his interest lay in the legal life of the Hellenistic provinces and the Imperial rescripts directed to them.

Works: Quaestiones, four books *De Iure Fisci, Institutiones*, an exposition of the edictal law (with a title of which the meaning is not quite clear: *Ad Edictum Monitorium*), and of the procedure *extra ordinem* (*De Cognitionibus*). A. B.

CALLISTRATUS (5) (3rd or 4th c. A.D.), a sophist who wrote *Ἐκφράσεις* (descriptions) of fourteen statues, in imitation of the *Εἰκόνες* of Philostratus of Lemnos.

Text, C. Schenkl and E. Reisch (Teubner, 1902). Translation, A. Fairbanks (Loeb, with Philostratus, 1931).

CALLISTUS, GAIUS JULIUS, a freedman of the Emperor Gaius, who took part in the conspiracy leading to Gaius' murder in A.D. 41. Under Claudius he acquired great wealth and power in the post of a *libellis*. (On the question whether he was appointed later than A.D. 43, see A. Momigliano, *Claudius*, 103.) He prudently refused help to Narcissus in accomplishing Messalina's downfall, but later was unsuccessful in championing the claims of Lollia Paulina to be Claudius' (fourth) wife. Agrippina, no doubt, secured his dismissal after Claudius' death, for nothing more is heard of him (see CLAUDIUS 1). J. P. B.

CALLISTUS, see also BALLISTA.

CALLIXENUS (fl. c. 155 B.C.), a Rhodian Greek, wrote *Περὶ Ἀλεξανδρείας*. Athenaeus (5. 196 a; 203 c) quotes C. on ships built by Ptolemy Philopator and on a πομπή of Philadelphus.

PW x. 1751-4.

CALPURNIA (1), daughter of L. Piso Caesoninus (cos. 58 B.C.), married Caesar in 59, cementing an alliance between her husband and father. Though Caesar would have divorced her to marry Pompeia in 52, her affection for him was great, and she attempted to keep him from the Senate on the Ides of March (Plut. *Caes.* 63). After Caesar's murder she handed his papers and 4,000 talents to Antony. G. E. F. C.

CALPURNIA (2), second wife of Pliny the Younger, whom she accompanied to Bithynia.

CALPURNIUS (1) **SICULUS**, TITUS (fl. A.D. 50-60), was the author of seven pastorals associated until 1854 with four others which Haupt proved to be by Nemesianus (q.v.). C.'s Neronian date is clear from allusions to the comet of A.D. 54 (1. 77-83), to the amphitheatre of 57 (7. 23-24), to Nero's speech for the people of Ilion (1. 45), and to the handsome young and divine ruler welcomed as the restorer of a Golden Age in 1, 4, and 7. These are his three courtly poems, placed at the beginning, middle, and end of the collection, while 2, 3, 5, and 6 are more strictly rural. In 2 Crocale's praises are sung alternately by a shepherd and a gardener (an innovation in pastorals); in 3 (possibly the earliest) Lycidas has thrashed his faithless sweetheart but swears repentance in a pretty love-song; 5 is an old herdsman's advice to his foster-son on managing goats and sheep, while 6 is a singing-match broken off by the ill temper of the competitors. Of the court-pieces, 1 represents two shepherds finding a poem by Faunus cut into the bark of a tree to prophesy a new Golden Age—they hope that their poetry will reach the Emperor through their patron Meliboeus; and 4, the longest eclogue (169 lines), hints that they have had some success; 7 gives Corydon's impressions of the amphitheatre built by Nero at Rome.

The problems concerning C. have produced many theories. His name may imply that he was son of a freedman of C. Calpurnius Piso, who conspired against Nero in 65; the epithet 'Siculus' may mean literally 'Sicilian' or symbolize the poet's debt to Theocritus. 'Meliboeus' in 1 and 4, described as learned and a new Maeonias, has been questionably identified with Seneca, with Piso, and others. An additional question touches the authorship of the contemporary *Einstele* eclogues.

(q.v.), which some have unconvincingly ascribed to C. It has further been debated whether he could have written the *Laus Pisonis* (q.v.).

The situations, names, and phraseology in C.'s poems are often reminiscent of Virgil, to whom he does notable homage in 4. 64–72. There are signs of the influence of Ovid, Propertius, and Tibullus. C. can take a cue from Theocritus and follow it up with some independence. He shows skill in coherent dialogue when he employs amoeban verse in eclogues 2, 4, and 6. *See also* PASTORAL POETRY, LATIN, para. 5.

LIFE AND WORKS. Clementina Chiavola, *Della vita e dell' opera di Calpurnio Siculo* (1921).

TEXT: E. Baehrens, *PLM* iii; H. Schenkl, *Calp. et Nemes. bucolica* (1885) and in Postgate, *GPL*; C. Giarratano, *Calp. et Nemes. bucolica* (1924).

SPECIAL STUDIES: M. Haupt, *De carminibus bucol. Calp. et Nemes.* (1854) ('Meliboeus' = Calp. Piso); F. Chytil, *Der Eclogendichter Calp. u. seine Vorbilder* (1894) ('Meliboeus' = Columella); F. Skutsch, 'Calp. Sic.' in *PIW*; J. Hubaux, *Les Thèmes bucoliques dans la poésie latine* (1930); E. Cesareo, *La poesia di Calpurnio Siculo* (1931). J. W. D.

CALPURNIUS (2) FLACCUS (2nd c. A.D.), author of declamations (*see* DECLAMATIO, para. 1) from fifty-three of which excerpts survive (Sehantz-Hosius-Krüger, *Röm. Lit. Gesch.* 1922, 153).

G. Lehnert, *Calp. Flacc. Declamationes* (1903).

CALPURNIUS, *see also* AGRICOLA, BESTIA, BIBULUS, CRASSUS, PISO.

CALVINUS (1), GAIUS SEXTIUS (cos. 124 B.C.), in 123, following Flaccus' war in south Gaul, defeated the Salluvii, and founded a small settlement of Roman veterans at Aquae Sextiae (*Aix-en-Provence*).

CALVINUS (2), GNAEUS DOMITIUS, with C. Memmius, his fellow-candidate for the consulate in 54 B.C., made an infamous compact with the then consuls (Cic. *Att.* 4. 17. 2); this Memmius disclosed, but despite the disturbances which followed Calvinus was elected consul in July 53 for the rest of that year. In the war he fought for Caesar, against Scipio in Thessaly, against Pharnaces who defeated him at Nicopolis, and in Africa. In 42, while bringing reinforcements to the triumvirs, he was trapped on the Adriatic by Ahenobarbus, and lost his whole force. But he was made consul again in 40, and afterwards governed Spain, with notorious severity to the troops; in 36 he triumphed, and from his spoils decorated the Regia (q.v.). G. E. F. C.

CALVISIUS SABINUS, GAIUS, served under Caesar in the Civil War, and was appointed governor of Africa (45 B.C.). He was consul in 39, and commanded a fleet for Octavian in 38. In 28 he triumphed 'ex Hispania'.

Appian, *BCiv.* 5; Dio Cassius, bk. 48.

CALVUS, GAIUS LICINIUS MACER (82–47 B.C.), Roman orator and poet, son of the annalist C. Licinius Maezer (d. 66 B.C.). He left twenty-one speeches; the names of five have been preserved, one of which was against Vatinius, defended on the occasion (54 B.C.) by Cicero. Calvus was an orator of the Attic school. His speeches were the product of careful research and painstaking polish and compression, but lacked ease, vigour, and freshness (Cic. *Brut.* 283–4; *Fam.* 15. 21. 4; Quint. 10. 1. 115; Tac. *Dial.* 18, 21, 25). His poetic output was somewhat similar to that of Catullus, whose friend he was and with whom he is grouped by Horace (*Sat.* 1. 10. 19), Propertius (2. 25. 4), and Ovid (*Am.* 3. 9. 62). He wrote light, sportive pieces, fierce lampoons, elegies (including a lament for his wife or mistress, Quintilia, Prop. 2. 34. 89–90; cf. Catull. 96), an epithalamium,

and an epyllion entitled *Io* (presumably presenting many Alexandrian features), from which Ovid probably borrowed. Fragments of his speeches and poetry are few and brief.

H. Malcovati, *ORF* iii (1930), 167 ff.; W. Morel, *FPL* (1927); F. Plessis, *Calvus* (fragments, commentary, *testimonia*, biographical and literary study, 1896). A. M. D.

CALVUS, *see also* SCIPIO (3).

CALYPSO (Καλψώ, 'she who conceals'), a nymph, daughter of Atlas (q.v.; *Od.* 1. 14 and 50 ff.). She lived on the island of Ogygie, 'where is the sea's navel', i.e. a great way from any known land, and there received Odysseus when shipwrecked on his way from Circe's island (cf. OYSSSEUS). Though she promised to make him immortal if he would stay and be her husband (5. 209), he desired to return home; therefore, at the command of Zeus, conveyed by Hermes (5. 105 ff.) she let him go in the eighth year (7. 259–61), providing him with materials and tools to construct a makeshift boat (σχεδὴν, 5. 251; the description shows that it was not a 'raft'). After Homer, little is added to her story. In the *Odyssey* nothing is said of her having children by Odysseus; but in Hesiod, *Theog.* 1017–18 (an interpolation?) she has two sons, Nausithous and Nausinous. More commonly her son (by Odysseus or Atlas; in post-Homeric genealogies she is often daughter of Oceanus or Nereus) is Auson, eponym of Ausonia (S. Italy), also called son of Circe (see, e.g., schol. Ap. Rhod. 4. 553 and Eustathius on Dionysius Periegeta, 78). H. J. R.

CAMARINA, a Dorian colony near mod. *Scoglitti* in southern Sicily, was founded (599 B.C.), then destroyed (553), by Syracuse. Hippocrates of Gela refounded (491), and Gelon of Syracuse again destroyed it (484). Founded a third time—again by Gela (461)—Camarina became prosperous but, itself comparatively weak, necessarily supported stronger States, e.g. Leontini (427) and then Athens (424) against Syracuse, Syracuse against Athens (413). The Camarinaeans, disobeying Delphi, drained a nearby marsh, thus exposing their city: hence the proverb *μη κίνει Καμάριναν* (= 'let sleeping dogs lie'). After 406 Camarina was subject to Carthage, was temporarily liberated by Timoleon (339), and was finally destroyed during the First Punic War (258).

Hdt. 7. 154 f.; Thuc. 4. 25; 6. 5, 75; Diod. 11. 76; 13; 14; 16; 19; 20; 23; Polyb. bk. 1. B. Pace, *Camarina* (1927); J. Bérard, *Bibliogr. topogr.* (1941), 44. E. T. S.

CAMBYSES (*Kambuiya*), son of Cyrus the Great; king of Persia 529–521 B.C. The main achievement of his reign was the conquest of Egypt in 525 B.C. (Hdt. 3. 1–15). He planned further military expeditions against Carthage, Ethiopia, and Siwa Oasis, but the first proved impracticable, the second was a partial failure, and in the third the Persian force perished in the desert. These misfortunes may have changed him from a wise and tolerant ruler to the tyrannical madman of Herodotus' account. He died in Syria while returning to suppress the rebel Gaumata, the pseudo-Smerdis.

J. V. Prašek, 'Kambyses', *Alte Orient* xiv. 2 (1913); *PIW*, s.v. 'Kambyses' (C. F. Lehmann-Haupt). M. S. D.

CAMELS. The camel of the Graeco-Roman and Iranian worlds, including Bactria, was the one-humped Arabian species; the two-humped 'Baetrian' camel belonged to India, China, and central Asia; the 'Baetrian' camel sent to Xerxes with the Saca tribute is depicted at Persepolis as an Arabian with two humps. Camels were common draught animals in Ptolemaic and Roman Egypt; Alexander and Ptolemy I utilized swift dromedaries for messages across the desert; Antiochus III had a camel corps, as had Romans (*dromedarii*) and Parthians later. But the real use of camels in war was shown by Surenas (q.v.), though seemingly he had no imitators. W. W. T.

CAMENAE, Roman goddesses, identified since Livius Andronicus (*Odissia*, fr. 1) with the Muses. They seem, however, to be water-deities, having a grove and spring outside the Porta Capena (Plut. *Numa* 13; Platner-Ashby, 89) whence the Vestals drew water daily, also a little shrine (*aedicula*, Servius on *Aen.* 1. 8, who says it was of bronze and dedicated by Numa; its dedication-day was 13 Aug., *fast. Antiates*). Libation was made to them with milk and water (Serv. Dan. on Verg. *Ecl.* 7. 21). Their shrine, being struck by lightning, was removed to the temple of Hercules Musarum (Servius, first citation above).

See Wissowa, *RK* 219.

H. J. R.

CAMEOS, see GEMS.

CAMERINUS, see SULPICIOUS (3).

CAMILLA, a legendary Volseian maiden, whose father, Metabus, in flight fastened her to a javelin, dedicated her to Diana, and threw her across the Amisenus river. After life as a huntress she joined the forces of Turnus, engaged in battle, and was killed by the Etruscan Aruns. Virgil alone (*Aen.* 7. 803; 11. 539-828) relates her story. See HARPALYCE.

A. S. P.

CAMILLUS (1), MARCUS FURIUS, the saviour and second founder of Rome after the Gallic invasion (387 B.C.). The splendour of his career is emphasized by the continuous embellishments which the account of it underwent from the fourth century B.C. onwards. Political pamphleteers, especially from the time of Sulla, exploited the story of Camillus for propaganda purposes: so Livy (5. 51 ff.) puts into his mouth a programme foreshadowing the Roman traditionalism of Augustus' policy. Camillus' earliest and greatest victory was the capture of Etruscan Veii (c. 396 B.C.); soon afterwards he reduced Falerii. As a war memorial a golden basin was dedicated to Apollo in the treasury of the Massiliotes at Delphi. This fact need not be questioned, since contacts had already been established, through Etruria, between Rome and the Greek world, while Greek fourth-century historians (e.g. Aristotle) dealt with Camillus' career. Tradition alleged that Camillus, who had been exiled for appropriating some booty, retired to Ardea in exile, where he was appointed dictator when the Gauls attacked Rome: he levied an army, defeated the Gauls, and recovered the gold with which the Romans had bought off the invaders. Whether Camillus was ever actually exiled or not, the story was obviously invented to balance the defeat on the Allia and, despite traces of accounts drawn from the contemporary legends, the main elements in it were borrowed from the trial of the Scipios. If Camillus did nothing to prevent the catastrophe, nobody contributed more whole-heartedly to Rome's subsequent recovery. Although his home policy aimed at reasserting patrician influence, and he crushed the secession of M. Manlius (q.v. 1) by force, his military reforms proved nevertheless favourable to the plebeians, since they gave recognition to individual merit and provided public pay, and he supported the plebeian claims to the supreme magistracies. Camillus' policy of appeasement at home enabled him successfully to lead the Romans against the Aequi and Volscians, although his subsequent victories were undoubtedly exaggerated by tradition.

For source-criticism: Mommsen, *Röm. Forsch.* ii. 321 ff.; O. Hirschfeld, *Kl. Schriften* (1913), 273 ff.; E. Täubler, *Klio* 1912; E. Bueck, *Die Erzählungskunst des T. Livius* (1934), 109 ff.; F. Altheim, *Epochen d. röm. Gesch.* i (1934), 164 ff.; A. Momigliano, *CQ* 1942, 111 ff.

P. T.

CAMILLUS (2), LUCIUS FURIUS, a son of Camillus (1). As consul in 349 B.C. he defeated the Gauls through the

efforts of Valerius (q.v. 3) Corvus. Probably this success, and not a fictitious Auruncan victory in 345, induced him to dedicate the temple of Juno Moneta.

Livy 7. 28. F. E. Adcock, *CAH* vii. 587.

E. T. S.

CAMILLUS (3), LUCIUS FURIUS, a grandson of (1). In 338 B.C. he and his fellow-consul, C. Maenius, crushed the Latins and dissolved the Latin League—an exploit that earned them honorific statues in the Forum (Livy 8. 13). Camillus' second consulship (325) was undisputed owing to illness (Livy 8. 29).

E. T. S.

CAMILLUS, an acolyte in Roman cult, fern. *camilla*. They might be the children of the officiant, but must have both parents alive (*pueri patrimi et matrimi*), be below the age of puberty, and of course free-born.

See Marquardt-Wissowa, *Staatsverw.* iii. 2. 227.

CAMPANIA lies between the Apennines and the Tyrrhenian Sea in Italy, extending from Latium to the Surrentine promontory. This fertile, volcanic plain annually produced three, sometimes four, cereal and vegetable crops. Its roses, fruits, olives (from Venafrum), and wines (from the isolated mountains Vesuvius, Gaurus, Massicus, Calliula) were also famous. In the Bay of Naples it possessed an excellent harbour, and Puteoli (q.v.) became Italy's chief port. The mild climate and beautiful luxuriousness of Campania constantly attracted invaders and reputedly sapped the martial energies of its inhabitants (Polyb. 3. 91). After 750 B.C. Greeks began colonizing the coast, drove back the indigenous population (known traditionally as *Ausones*), and extended their influence even to Rome (see CUMAE). In the interior c. 600 an invading Etruscan minority established a league of twelve cities headed by Capua, but failed to capture Cumae (Polyb. 2. 17). The Greeks indeed badly defeated these Campanian Etruscans in 474. Invading Sabelli (q.v.), however, proved irresistible: they captured Capua c. 440, Cumae c. 425, and imposed their language on and merged with the indigenous population (Diod. 12. 31. 76; Livy 4. 37); henceforth the Campanians are called Osci (q.v.). This name, as its *-co-* suffix shows, is pre-Sabellian (for Sabellian tribal names had an *-no-* suffix, *-eo-* like *-(a)ti-* being non-Sabellian. Cf. Ardeates, Ardeatini). These Osci, although more civilized than their Samnite or Roman neighbours and although skilled mercenary soldiers, were no match for fresh Sabellian invaders and consequently sought Roman protection c. 343 B.C. Thereafter, although the Oscan and Greek languages long survived here, Campanian history is linked with Roman (see CAPUA). Campania witnessed heavy fighting in the wars of the Republic and suffered disasters like the eruption of Vesuvius. Nevertheless it remained a prosperous area with an excellent road-system and numerous villas. After Augustus Campania included Latium; indeed the name was ultimately restricted to Latium, the *Campagna* of to-day.

Peterson, *Local Cults of Campania* (Rome, 1919); J. Day, *Yale Classical Studies* iii (1932), 167 (well documented); J. Wharmouth, *Formation of Roman Italy* (1937), 292; G. Spano, *La Campania felice nelle età più remote* (1941).

E. T. S.

CAMPS. When the Roman camp (*castra*) was described by Polybius (6. 27-32) about 143 B.C., its stereotyped form was already taken for granted; indeed, no Roman historian troubles to describe it. It is associated with the earliest annals of Roman history (cf. Livy 10. 32. 9; 34. 46. 8; 40. 27. 1-7; 41. 2. 11), but its origins are doubtful. R. Lehmann-Hartleben assigns its introduction to the Etruscans and would connect it with Assyrian war-entrenchments (*Die Tränenfale* (1926), 10), while others

would connect it with the *terremare* (q.v.) settlements of prehistoric Italy, too often assumed to be normally symmetrical (*Antiquity* xiii. 320). The augural principles associated with its planning certainly appear in the earliest Roman colonies of which we have archaeological knowledge, and its development is undoubtedly a Roman invention.

Polybius describes a camp for a consular army of two Roman legions with an equivalent number of Italian allies. It is square, and faces in the most convenient direction (contrast *Veget.* i. 23). Its plan is based upon the general's tent (*praetorium*, q.v.) and the 100-foot street (*via principalis*), parallel therewith. The legions (each grouped as 1,200 *hastati*, 1,200 *principes*, 600 *triarii*, and 1,200 *velites*) and the bulk of the allies were encamped by *centuriae* (then of 60 men each) and *turmae* in parallel divisions along streets at right angles to the *via principalis*, and were divided at the position of the fifth cohort by a second large cross-street, hence called *via quintana*. The *praetorium* is flanked by six tribunes' tents disposed along the *via principalis*, with open spaces behind them serving respectively as *forum* and *quaestorium*. Then comes a third cross-street, behind which lay the *extraordinarii* (selected allied troops) with *auxilia* (foreign levies) on the flanks. The enclosing rampart (*vallum*) and ditch (*fossa*) were divided from the host by an *intervallum* 200 feet wide, serving for booty, and probably for the *velites*, about whose position there is ambiguity (Stolle, *Das Lager und Heer der Römer* (1912), 94-104). There are many points of resemblance between this Polybian plan and the camps of the second century B.C. excavated by A. Schulten at Numantia (q.v.), though the allotment of space differs considerably, maniples being grouped round a square rather than in long narrow *strigae*.

An imperial camp of the third century A.D. (*Rh. Mus.* xlviii. 243) is described in the anonymous treatise *De Munitionibus Castrorum*. While Polybius had tried to describe common practice, this imperial camp is treated as a mere exercise in castrametation, using factors unlikely to be found in conjunction. The differences are striking. The proportion of the whole work is not square but *tertiata*, one-third being called *praetentura* and two-thirds *retentura*. Auxiliaries and irregulars take the place of *extraordinarii* and occupy the whole *praetentura*. The *via quintana* has moved to behind the *praetorium*. The legionaries are quartered around the whole encampment, lying between the *intervallum* and a street called *via sagularis*. The unit for all regulars is no longer the manipulus, but the *centuria* of 80 men. The *quaestorium* has moved to behind the *praetorium* and such institutions as the hospital (*valetudinarium*), of which Polybius makes no mention, have appeared. Archaeology does not supply examples of Imperial camps on so large and detailed a scale as the Republican camps at Numantia. For defences and outlines, the British groups of Northumberland and Scotland are unrivalled. At Masada, west of the Dead Sea, there is a remarkable series of small siege-camps, filled with temporary buildings in the manner of Numantia, while the manœuvre-camps of Cawthorn should also be noted.

Schulten, *Numantia i-iv* (1914-31); Kromayer-Veith, *Heerwesen und Kriegsführung der Griechen und Römern* (1928); for Northumberland examples, I. A. Richmond, *Northumberland County History* xv. 116-29; for Scottish examples, W. Roy, *Military Antiquities of the Romans in North Britain* (1793); for Masada, *Antiquity* iii. 195 f. and *Zeitschrift des Deutschen Palästina-Vereins* lvi; *De Munitionibus Castrorum*, ed. Lang (1848), von Domaszewski (1887). I. A. R.

CAMPUS MARTIUS, originally the Tiber flood-plain bounded by the Pincian, Quirinal, and Capitoline hills of Rome, was once pasture, though Tarquin grew corn there, and, being outside the *pomerium* (q.v.), was used for army musters and exercises, for the *comitia centuriata*, and for foreign cults, as of Pluto and Proserpine, Apollo (431 B.C.), and Bellona (296 B.C.). Republican public

works, the *Villa Publica* (435 B.C.), *Forum Holitorium*, *Circus Flaminius* (221 B.C.), *Porticus Octavia* (168 B.C.) and *Minucia* (110 B.C.), and many unidentified temples, as in the *Forum Boarium* and *Piazza Argentina*, soon overran its south end. The *Theatrum Pompei* (52 B.C.), with huge *porticus*, foreshadows the immense buildings of the Augustan *virii triumphales*, the temple of Neptune by Domitius Ahenobarbus (c. 32 B.C.), *amphitheatrum Tauri* (29 B.C.), the *Mausoleum*, gardens, and crematorium of Augustus (28 B.C.), *porticus Octaviae* (27 B.C.), the *Saepta Julia* (q.v., 26 B.C.), Agrippa's Baths, water-garden, aqueduct (q.v.), Pantheon (q.v.) and *porticus Argonautarum* (25 B.C.), the theatres of Marcellus and Balbus (the latter with *Crypta*) of 13 B.C., a monumental sun-dial (10 B.C.) of which the gnomon was an obelisk of Psammetichus II, and the *Ara Pacis* (q.v., 9 B.C.). Imperial buildings came to fill the remaining space. Gaius projected an amphitheatre, and perhaps built the *Iseum et Serapeum* vowed by the triumvirs. Nero built *thermae* (A.D. 62-4). Domitian erected the *Templum Divorum (Vespasiani et Titi)*, a *stadium* (now Piazza Navona), and *odeum*. Hadrian added the *basilicae* of Matidia and Marciana, with a temple to the former. Pius honoured Hadrian with a temple (A.D. 145), and is himself commemorated by a crematorium and *columna Divi Pii*, with famous panels on its base, while the *templum divi Marci* is associated with the more famous Column, with spiral reliefs of the Marcomannic wars. I. A. R.

CAMULODUNUM, modern Colchester (Essex). A site to the west of the Roman (and modern) town, was occupied c. 10 B.C. by the Belgic conquerors of the Trinovantes and was the capital and mint of Cunobelinus (q.v.), as well as the principal trading port of Britain (cf. Fox, *Proc. Prehist. Soc. E. Anglia* vii. 159). Captured in Claudius' campaign of A.D. 43, it served as a base for the conquest of Britain, and in 50 a colony (*colonia Victricensis*) was founded close by, which was probably at first the provincial capital. This unwall'd town was sacked by Boudicca in 61 and was subsequently rebuilt in regular *insulae* to cover an area of c. 108 acres. Its defences were a clay bank, to which, as appears, a stone wall was added c. A.D. 100. Important remains are the substructures of a temple (probably not that of Divus Claudius), an underground structure with drains (possibly a Mithraeum), and the monumental west (Balke) gate. Samian pottery was made here in the second century. Its subsequent history is virtually unknown: a *censitor civium Romanorum* is mentioned (*ILS* 2740, 2nd c.), and it was possibly the seat of a bishopric (*Eng. Hist. Rev.* lii. 196, n. 1).

Summaries in *CIL* vii. 33-6; *JRS* ix. 139-69; *Royal Commission on Historical Monuments* (NE. Essex), 20-32. Recent excavation (mainly on the pre-Roman site) summarized in *JRS* and *Trans. Essex Arch. Soc.* See also C. F. C. Hawkes and M. R. Hull, *Camulodunum* (1947). Pottery: T. May, *Catalogue* (1930). C. E. S.

CANABAE, the name given to the civil settlements that grew up around the legionary fortresses, e.g. at Moguntiacum, Carnuntum, and Lambaesis. Their inhabitants were Roman citizens, many of whom were discharged soldiers returning to the scene of their military service. *Canabae* were *vici* (q.v.) and had magistrates with the titles of *magistri* or *curatores*, and probably a local council. During the second century A.D. many of them were given the status of *municipia* (q.v.).

Soldiers who give *castris* as their birthplace were born in the *canabae* of the camp where their fathers, who had contracted an illegal marriage, were stationed.

M. Rostovtzeff, *Social and Economic History of the Roman Empire* (1926), *passim*. H. M. D. P.

CANALS. Although the science of irrigation was highly developed in Mesopotamia and Egypt, and was familiar to the Romans, whose irrigation works in the province of Africa enabled it to provide Rome with corn, few

navigable canals were constructed in antiquity. Proposals to canalize rivers by diverting their course met with some religious opposition (Hdt. 1. 174; Tac. *Ann.* 1. 79). Xerxes' famous canal across Athos was seldom imitated. From very ancient times (Hdt. 2. 158) a canal, which was reopened by Trajan, connected the Nile with the Gulf of Suez. The idea of constructing a canal across the Isthmus of Corinth appealed to Caesar and Caligula, and work was begun on it under Nero (Suet. *Nero* 19; Plin. *HN* 4. 45), but not completed. Tacitus (*Ann.* 13. 53) mentions a scheme for connecting the Moselle to the Saône by a canal, to connect the North Sea and the Mediterranean. Pliny (*Tra.* 41-2, 61-2) asked Trajan for the services of an engineer (*librator*) to connect a lake in Bithynia with the sea by means of a canal; his letters show that the Romans were familiar with the use of the sluice (*cataracta*). Nero proposed the construction of a canal from the Bay of Naples to the Tiber (Tac. *Ann.* 15. 42; Suet. *Nero* 31). The most successful canals made by the Romans were near the mouths of rivers. Corbulo connected the Meuse with the Rhine (Tac. *Ann.* 11. 20), and Drusus linked the Rhine with the Zuyder Zee (ib. 2. 8). Marius facilitated the approach to the Rhône by the construction of the *Fossae Marianaë*, through which seafaring ships were enabled to enter the east mouth of the river (Strabo 4. 183, Plut. *Mar.* 115).

M. L. de la Blanchère, *Dar.-Sag.*, s.v. 'Fossa'.

G. H. S.

CANDIDATUS, a candidate for a magistracy. Officially named *petitor* (his rivals were therefore styled *competitores*), he was called *candidatus* because he wore a white, or whitened, toga when greeting electors in the forum. He was then accompanied by a slave (*nomenclator*) who reminded him of the names of the electors, and by a crowd of partisans (*sectatores*), mostly freedmen, whose task was to secure votes by bargaining and bribing, either directly or through special agents. The *divisores* were charged with distributing money to the voting members of the tribes. To prevent or limit canvassing, legislation *de ambitu* (see **AMBITUS**) was enacted, but unsuccessfully. A radical change occurred when Tiberius 'recommended', that is in fact appointed, at least some of the candidates. From Vespasian onwards all candidates were recommended by the emperors, who conferred upon them the title of *candidati Caesaris* as a mark of favour.

Mommsen, *Röm. Staatsr.* p. 477 ff.; ii³. 921 ff.; W. Kubitschek, *PW*, s.v. P. T.

CANIDIUS CRASSUS, **PUBLIUS**, was legatus to Lepidus in 43 B.C., and subsequently one of Antony's most trusted officers. He fought in the Perusine War and became *consul suffectus* after the peace of Brundisium. He was sent to Armenia in 37, subdued the Iberians and Albanians in the Caucasus, and subsequently joined Antony in the Parthian expedition. Canidius was left in command of Antony's army at Actium, escaped before its surrender, and rejoined Antony in Egypt, where he was put to death by Octavian after the occupation of Alexandria.

Velleius 2. 85-7; Plutarch, *Antony*; Appian, *BCit.* 5. 50; Dio *Caesari* 49. 24. G. W. R.

CANINIUS (1) REBILUS, **GAIVS**, a *notus homo* and legate, who served Caesar well against Vercingetorix. In 49 B.C. he was sent by Caesar to Pompey to arrange a compromise. He fought in Africa and later in Spain. On the last day of 45, on the sudden death of a consul, Caesar appointed him consul for a few hours. A. M.

CANINIUS (2) RUFUS, of Comum, a neighbour of the younger Pliny, much occupied with his land estates, but possessing an epic bent which Pliny encouraged, as he did in the case of Octavius Rufus and others. His literary interests are discernible from Pliny's letters to him (1. 3; 2. 8; 3. 7; 6. 21; 7. 18; 8. 4; 9. 53). J. W. D.

CANIUS RUFUS, from Gades, a poet friend of Martial, who alludes to his versatility and merriment in epigram 3. 20 (cf. 1. 61. 9; 1. 69).

CANNAE, a village on the south bank of the Aufidus in Apulia, the site of Hannibal's great victory in 216 B.C. L. Aemilius Paullus and C. Terentius Varro (qq.v.) with perhaps 48,000 infantry and 6,000 cavalry (rather than the 90,000 which Polybius implies) faced Hannibal's 35,000 infantry and 10,000 cavalry. Hannibal's convex crescent-shaped formation gradually became concave under pressure of the Roman centre which, being thus encircled and finally surrounded by Hannibal's cavalry in the rear, failed to break through and was cut to pieces. The long-debated question whether the battlefield lay north or south of the river now appears to be settled in favour of the south by the reported discovery of a large military cemetery there.

Polybius 3. 107-18. Livy 22. 43-9. See also **PUNIC WARS**. For excavations, see *Arch. Anz.* 1938, 717. H. H. S.

CANTABRI, a sea-coast and mountain tribe of Spain situated east of the Astures (q.v.). Their poverty and primitive characteristics are described by Strabo (3. 3. 7-8, pp. 155-6), who ascribes to them a sort of gynaeocracy (3. 4. 18, p. 165). They were finally reduced by the Romans in campaigns from 26 to 19 B.C. which were led by Augustus (26-25) and Agrippa (19). Those who survived this Cantabrian War were either deported from their mountain homes or remained under the supervision of Roman troops. Juliobriga (nowadays *Reinosa*) is the only known Roman foundation. Pliny mentions *plumbum nigrum*, or lead, and magnetic iron, as natural resources.

On the wars see D. Magic, *CPhil.* 1920, and R. Syme, *AJPhil.* 1934. A. Schulten, *Los Cantabros y Astures* (1943). J. J. VAN N.

CANTHARUS, Athenian comic poet, victorious in 422 B.C. (*IG* ii². 2318). His *Συμψυχία* seems to have dealt with the ostracism of Hyperbolus in 417.

FCG i. 251; *CAF* i. 764-6; Demiańczuk, *Suppl. Com.* 28.

CANTICA, the lyric or musical portions of a Latin comedy (e.g. in Plautus) as contrasted with *diverbum*. Lyric *cantica* scarcely exist in Terence. See **METRE**. **LATIN, I (B)**.

CANTORES EUPHORIONIS, see **NEOTERICI**.

CANULEIUS, **GAIVS**, tribune of the plebs in 445 B.C., is reputed to have enacted a *rogatio* or *Lex Canuleia* that allowed intermarriage between patricians and plebeians, probably by recognizing the legitimacy of children of plebeian mothers, and by admitting them to the patrician *gentes*. Livy's lively but historically almost worthless account contains difficulties (e.g. the carrying of the law in the tribal assembly, and its connexion with the first plebeian attempts to win admission to the consulate), but the fact and approximate date of the law are indisputable.

G. De Sanctis, *Stor. d. Rom.* ii. 55 ff. On the question of intermarriage between patricians and plebeians see now H. Last, *JRS* 1945, 31 ff. P. T.

CANUS, see **JULIUS (3)**.

CANUSIUM (nowadays *Canosa*), on the river Aufidus, was an Apulian city, probably of Daunian origin (cf. Pliny, *HN* 3. 104), although late-Canosan pottery, necropolis finds, coins, and language indicate much hellenization by 300 B.C. (cf. Hor. *Sat.* 1. 10. 30). After submitting to Rome (318 B.C.), Canusium remained faithful until the Social War, which apparently caused it to decline somewhat (Strabo 6. 283; Livy 9. 20; App. *BCit.* 1. 42, etc.). However, situated on the Via Traiana, it soon recovered to become a *municipium*, an Antioch

colonia, and the chief Apulian city in the sixth century (Procop. 3. 18). For a list of its decurions (A.D. 223) see Dessau *ILS* 6121 (cf. 8703 b, 5188).

N. Jacobone, *Canusium* (1925).

E. T. S.

CAPANEUS (Καπανεύς), in mythology, son of Hippo-nous and father of Sthenelus (*Il.* 4. 367; *Hyg. Fab.* 70. 1); one of the Seven against Thebes, cf. *ADRASTUS*. As he climbed on the walls, boasting that not even Zeus should stop him, he was destroyed by a thunderbolt (Aesch. *Sept.* 427; *Eur. Phoen.* 1172 ff. (from the cyclic *Thebais*?)).

H. J. R.

CAPELLA, MARTIANUS, see MARTIANUS CAPELLA.

CAPER, FLAVIUS (late 2nd c. A.D.), grammarian, whose lost treatises *De Latinitate* (containing citations from old Latin authors) and *De Dubiis Generibus* were freely used by later writers. The *Orthographia* and *De Verbis Dubiis* extant under his name (ed. Keil, *Gramm. Lat.* vii. 92-107; 107-12) are apocryphal.

Cf. Teuffel, § 374, 3; Schanz-Hosius, § 599.

J. F. M.

CAPITE CENSI, see CENTURIA.

CAPITO (1), GAIUS ATEIUS, tribune of the plebs 55 B.C., opposed Pompey and Crassus. He announced adverse prodigies (which Crassus disregarded) and was consequently punished in 50 with a *nota censoria* (Cic. *Div.* 1. 29).

CAPITO (2), GAIUS ATEIUS, a Roman jurist of the first decade of the Empire. He came of a modest family, but obtained the consulship (in A.D. 5), and was *curator aquarum* from A.D. 13 to 22, the year of his death. With his contemporaries 'maximae auctoritatis fuit' (Pompon. *Dig.* 1. 2. 47). As a disciple of the jurist Ofilius, he was contemporary and rival of Antistius (q.v. 2) Labeo. Their political, scientific, and personal antagonism was the origin—if Pomponius' account is true—of the schools of jurists, the Sabinians (Sabinus was a disciple of Capito) and Proculians. Capito was conservative in his legal doctrines, whilst Labeo was an independent innovator. They were also political adversaries, but in an inverse sense: Capito approved of the new constitution, Labeo was an obstinate republican, even under the new régime. His activity as a writer was considerable: a comprehensive work *De Iure Pontificio*, a large collection entitled *Comiectanea* (there was a chapter *de iudiciis publicis*, another *de officio senatorio*); a monograph *De Iure Sacrificiorum*. He is rarely quoted by the jurists, but more plentifully by non-legal authors (Gellius, Plinius, Festus, Macrobius).

P. Jörs, *PW*, s.v. 'Ateius (8)'; B. Kübler, *Geich. d. röm. Rechts* (1925), 259 ff. Collection of passages preserved in non-legal authors' works in Huschke-Seckel-Kübler, *Jurisprudencia aeneiustiniania* 1^a (1908), 62-72.

A. B.

CAPITO, see also SINNIUS.

CAPITOL, **CAPITOLIUM**, or **MONS CAPITOLI-NUS**, one of the hills of Rome: an isolated mass left by erosion, with two peaks, Capitolium proper and Arx. At all periods it constituted less a part of the inhabited area of the city than a citadel and sanctuary: it is mentioned chiefly in connexion with religious observances, especially triumphs, and with military operations. It was crowned by the Tarquins' temple, dedicated in 509 B.C. by a first consul of the Republic to Jupiter Optimus Maximus, Minerva, and Juno, who had been previously installed on the Quirinal (Varro, *Ling.* 5. 158). The original platform of the temple (55 m. by 60 m. in area), still exists; but the original temple, embellished in 296, 275, 193, 179, and 142, was burnt in 83 B.C. The new temple of Lutatius Catulus (69 B.C.), renovated and repaired by Augustus in 26 and 9 B.C., was burnt down in A.D. 69, while Vespasian's temple perished in the fire of A.D. 80. Domitian's building, dedicated two years later, cost 12,000 gold talents and lasted until A.D. 455, when Gaiseric the Vandal plundered it. The Tarpeian Rock

(q.v.) lay close by, on the south-west shoulder of the hill. On the north summit of the hill, originally distinguished as the *arx*, lay the temple of Juno Moneta (344 B.C.), the *auguraculum* (an augur's observation post with primitive hut), and the temple of Concordia (216 B.C.). On the col between the hills lay the curious *aedes Veiovis* (Vitr. 4. 8. 4) and the *asylum inter duos lucos* associated with Romulus. The east face of the hill was occupied by the Tabularium (q.v.) and the approach-road (*clivus Capitolinus*), paved in 174 B.C.

Both hill and the temple of Jupiter were reproduced in many cities of Italy and the Roman West, and either hill or temple or both in Roman Byzantium; Jerusalem, as refounded by Hadrian, was styled *Alia Capitolina*. The right to erect such *Capitolia* was at first probably reserved for Roman *coloniae*. A. W. V. B. and I. A. R.

CAPPADOCIA at one time designated the whole region between the Halys and the Euphrates, and from the Euxine Sea to Cilicia; but the northern part became 'Cappadocian Pontus' or simply 'Pontus' (q.v.), and the central and southern part Greater Cappadocia. This latter consists of a rolling plateau, almost treeless in its western portion, some broken volcanic areas in the centre and west (the cone of Mt. Argaeus reaches 12,000 ft.), and the ranges, for the most part well watered and well timbered, of the Taurus and Antitaurus. A rigorous winter climate limits production to hardy cereals and fruits. Grazing was always important; the Persian kings levied a tribute of 1,500 horses, 50,000 sheep, and 2,000 mules, and Roman emperors kept studs of race-horses there. Mines are mentioned of quartz, salt, Sinopic earth, and silver. Since the passes were frequently closed in winter the country was isolated, and consequently developed slowly.

The Medo-Persian conquest led to the formation of an Iranian nobility with feudal dominion over considerable districts. Besides these there existed large areas owned by temples and ruled by priests, such as the territories of Ma of Comana and Zeus of Venasa. Nobles and priests often rivalled the authority of the kings. The ordinary people lived in villages on the large estates or as serfs on the temple territories, supplying their masters with labour and revenues and the raw material for an active slave-trade.

The satrap Ariarathes refused to submit to Alexander; his descendants added Cataonia to their possessions, and were recognized as kings from c. 255 B.C. Ariarathes IV supported Antiochus III against Rome at Magnesia in 190, but he and his successors thereafter adopted a philo-Roman policy. Their efforts at hellenization and urbanization made slow progress, as Mazaca and Tyana remained almost the only cities. Devastated by Tigranes of Armenia in the Mithridatic Wars, Cappadocia was restored by Pompey, who gave the king large loans for reconstruction. Antony replaced this line, which had proved disloyal in the Parthian invasion, with the energetic Archelaus, who renamed Mazaca Caesarea and founded Archelais (Garsaura). He lost favour in Rome in his old age, and the military importance of Cappadocia led to its annexation in A.D. 17. A procuratorial province until Vespasian, it was joined with the Galatian complex under a consular legate until Trajan, after whom Pontus and Cappadocia remained united to the time of Diocletian. The eleven royal *strategiai* remained the basis of the provincial administration. Development of commerce from the West, the transfer of legions to the upper Euphrates, and the system of military roads aided the belated advancement of native communities to city rank, but at most they hardly occupied a third of the territory. Imperial estates, beginning with the royal properties, steadily increased through confiscations.

T. R. S. B.

CAPRARIA, *see* DALEARES INSULAE.

CAPREAE (nowadays *Capri*), a beautiful, mountainous island near Naples (Strabo 5. 248). Neolithic people once dwelt here, and, in prehistoric times, legendary Teleboac (*Mon. Ant.* 1924, 305; Verg. *Aen.* 7. 735). In historical times Capreae was Neapolitan territory until Augustus, who often stayed here, gave Neapolis Aenaria in exchange (Suet. *Aug.* 92). Tiberius spent his last ten years on Capreae, amid wild debaucheries according to incredible ancient records. Ruined villas afford tangible memorials of his sojourn; he is said to have built twelve, named after various deities (Tac. *Ann.* 4. 67). After Tiberius the Caesars avoided Capreae except as a place of banishment, e.g. for Commodus' wife and sister (Dio Cass. 72. 4). Although arid, Capreae was fertile, but in antiquity never experienced municipal organization. The Romans knew its famous Blue Grotto.

H. E. Trower, *Book of Capri* (1924); A. Maiuri, *Breviario di Capri* (1938).
E. T. S.

CAPROTINA, a title of Juno (q.v.), derived from the Nonae Caprotinae (7 July), i.e. Nones of the Wild Fig (*caprificus*), under which maid-servants had a sham fight with stones, etc., and abused each other. It seems to be an old rite of fertility (fig-juice as equivalent to milk? cf. the Akikuyu rite in *Man* 1913, No. 3), grown unintelligible and relegated to slaves, though free-born women also sacrificed on that day (Macrob. *Sat.* 1. 11. 36); see further Wissowa, *RK* 184.
H. J. R.

CAPSA, CAPSULA, *see* BOOKS, II. 2.

CAPUA, a city of Campania. Archaeological evidence indicates that Capua was founded c. 600 B.C., probably by Etruscans; it was certainly Etruscan in the sixth century (Vell. Pat. 1. 7; Livy 4. 37). Capua gave its name to the entire surrounding plain, *Ager Campanus* (i.e. *Capuanus*), later called Campania (q.v.). But it specifically dominated the immediately neighbouring territory (Falernus Ager, Casilinum, Calatia, Suessula, Acerrae, Atella). Other Campanian cities (Suessa, Teanum, Nola, Nuceria, Neapolis, Cumae) pursued independent policies. After 474 B.C. Etruscan power in Campania declined and c. 440 Sabelli (q.v.) seized Capua, indefensible owing to its position in the open plain, and osanized it (Diod. 12. 31). Henceforth the Campani of Capua are frequently mentioned. Threatened by fresh Sabellian invaders c. 343, they sought Roman protection but immediately proved treacherous. Accordingly Rome confiscated the Falernus Ager, gave Roman citizenship to the *equites Campani* and *civitas sine suffragio* (*see* *MUNICIPALIUM*) to the other Campani (Livy 7. 29-8. 14). Capua, however, retained its Oscan language and magistracies (*meddices*), the latter with somewhat curtailed powers after 318 when *praefecti Capuam Cumas* were appointed (Mommsen, *Röm. Staatsr.* ii³. 608). After 312 the Via Appia linked Capua still more closely to Rome. In the Samnite Wars Capua behaved equivocally and witnessed much fighting (Diod. 19. 76; Livy 9. 25); it continued, however, to prosper, becoming indeed proverbial for its luxuriousness and pride (Ath. 12. 36). By 218 it rivalled Carthage and Rome (Florus 1. 16. 6). In 216 Capua revolted to Hannibal, but in 211 Rome recaptured and severely punished it, executing its prominent citizens, depriving the remainder of political rights and confiscating its territory, which as Roman public domain was partly used for colonies (194) but mostly rented out at a substantial profit until distributed to 20,000 colonists by Julius Caesar (59) (Livy 23. 2 f.; 26. 12 f.; Cic. *Leg. Agr.* 1. 7; Vell. Pat. 2. 44). Capua itself remained a populous town, but without municipal privileges until after 90 B.C. (Cic. *Sest.* 10). It suffered in the wars of the late Republic but under the Empire was a prosperous colonia, Augustus particularly favouring

it (Dio Cass. 49. 14). It had declined somewhat, but was still a considerable city when Vandals sacked it (456). Saracens finally destroyed Capua (840), the church of Santa Maria alone escaping to give the town its modern name (*Santa Maria di Capua Vetere*). Its refugees settled at Casilinum, the Capua of to-day. Capuan perfumes and bronzes were famous (Cic. *Sest.* 19; Pliny *HN* 34. 95). Its large amphitheatre proves its fondness for gladiatorial shows; *see also* SPARTACUS.

J. Heurgon, *Capoue préromaine* (1942); R. S. Conway, *Italie Dialects* i (1897). 99; A. Sambon, *Monnaies antiques de l'Italie* i (1903). 387; Nol. *Scav.* 1924, 353 (for the magnificent Mithraeum); also *see* bibliography under CAMPANIA.
E. T. S.

CAPUT, *see* DEMINUTIO CAPITIS.

CAPYS (1), father of Anchises (*Il.* 20. 239); (2) companion of Aeneas (*Aen.* 10. 145) and founder of Capua; (3) king of Alba Longa (Livy 1. 3. 8).

CARACALLA, *see* AURELIUS (2).

CARATĀCUS (the form Carataeacus is found only in an inferior manuscript), son of Cunobelinus. With his brother Togodumnus he led the south-eastern Britons in the early struggles against the Roman invaders, and after the capture of Camulodunum (A.D. 43) he escaped to the tribes of the West (Silures and Ordovices), where he renewed hostilities against the governor Ostorius Scapula, by whom, however, he was defeated somewhere in the hills of the Welsh border. He fled to Cartimandua, queen of the Yorkshire Brigantes, who surrendered him to the Romans (51). Tacitus puts into his mouth a rhetorical speech delivered at Rome to Claudius, who spared his life. A Welsh genealogy of some authority (*Y Cymmrodor* ix. 151) indicates that his great-grandson took a name Scaplaut (= Scapulatus) cognate with that of his conqueror, and the name Carataeacus itself reappears (e.g. *Eph. Epigr.* ix. 982).

Tacitus, *Ann.* 12. 33-7; Collingwood-Myres, *Roman Britain*, 75-96.
C. E. S.

CARAUSIUS, MARCUS AURELIUS MAUS(AEUS?) (cf. Dessau, *ILS* 8928), a Menapian of mean origin who was appointed c. A.D. 287 to a command in the English Channel. He aroused, however, the suspicions of Maximian and fled to Britain, where he proclaimed himself Emperor. An unsuccessful attempt to suppress him led to a settlement whereby he could represent himself as a colleague of the Emperors (c. 290) and extend his rule over north-eastern Gaul. His remarkable realm utilized the support of Franks and possibly Piets; and he may have instituted the fortification of the Saxon shore. The Caesar Constantius, however, ejected him from Boulogne (293), and he was assassinated by his *rationalis* Allectus. His name was perpetuated by post-Roman 'tyrants' (cf. *Num. Chron.* vii. 191-219; *Inscr. Christ. Brit.* 136) and in mediæval fable.

P. H. Webb, *Reign and Coinage of Carausius* (1907) (reproducing sources); C. Julian, *Hist. de la Gaule vii.* 75-84; E. Stein, *Gesch. der spätromischen Reiche* (1921), 97, 110; Collingwood-Myres, *Roman Britain*, 276-7; C. H. V. Sutherland, *Coinage in Roman Britain* (1937), 62-71.
C. E. S.

CARBO (1), GAIUS PAPIRIUS (d. 119 B.C.), a strong supporter of the Agrarian Law of Tiberius Gracchus, and a *IIIvir* for its execution from 129 B.C. As tribune, in 131, he furthered democratic legislation. His desertion of C. Gracchus at the end of 122 is perhaps a symptom of Gaius' alienation of moderate opinion. It won him the consulship for 120, when he defended Opimius; but when L. Crassus accused him, in 119, he committed suicide. Perhaps the story that Carbo had assassinated Scipio Aemilianus dates from this trial. Carbo's motives are usually taken to have been purely self-seeking, but Crassus' later regret for his part in Carbo's fall is a reason for doubt. Cicero praises his oratorical powers.

J. Carcopin, *Auteur des Gracques* (1915).

M. II

CARBO (2), GNAEUS PAPIRIUS (d. 82 B.C.), Marian leader, chief helper of Cinna, and chief party-leader after his death, was consul in 85, 84, and 82 B.C. Little is known of his career, apart from the war against Sulla in Italy. Carbo then led the Marians in north Italy; honours were even when he met Sulla at Clusium, and Carbo never lost a battle except when he and Norbanus failed in an attack on Metellus Pius' camp near Faventia, losing 10,000 killed besides 6,000 by desertion. Carbo fled to Africa with an army after Sulla's victory in Italy; thence he went to Sicily, where he was captured. Pompey had him executed in 82.

M. H.

CARCERES, see CIRCUS.

CARCINUS (1), son of Xenotimus of Thoricus, a tragic poet mercilessly ridiculed, with his sons, by Aristophanes (*Pax* 781 ff., *Vesp.* 1497 ff.) and other comic poets. He is probably identical with the general mentioned by Thucydides (2. 23).

CARCINUS (2), son of Xenocles (1) and grandson of Carcinus (1), a tragic poet who is said to have written 160 plays (Suidas, s.v.) and won 11 victories (*IG*² ii. 2325, according to a probable restoration) in the fourth century. He passed much time at the court of the younger Dionysius of Syracuse (Diod. Sic. 5.5.1). He is referred to by Aristotle, *Poet.* 16 (the recognition scene in the *Thyestes*) and 17 (a mistake in theatrical management in the *Amphiaraus*), *Eth. Nic.* 7. 8 (the endurance of Cercyon in the *Alope*), *Rhet.* 2. 23 (an argument in the *Medea*—apparently she did not kill her children in this play) and 3. 16 (arguments of Iocasta in the *Oedipus*), and Plutarch (*De Glor. Athen.* 7) praises his *Aërope*. The phrase *Καρκίνου ποικίλματα* is said to have been applied to obscure poems (Suidas s.v., etc.) but only on the strength of a single passage in the *Orestes*.

TGF 797-800.

A. W. P.-C.

CARCINUS (3) OF NAUPACTUS (? 7th-6th c. B.C.), epic poet, probable author of the *Naupactia*, a Catalogue of Famous Women. See EPIC CYCLE.

EGF 198-202.

CARIA, a region of south-western Asia Minor, extending northward in historical times to the river Maeander. Its interior is on the whole less rugged than that of southern Asia Minor in general, and in ancient times it was noted for its excellent figs; but it is cut off from the seaboard by coastal ranges. The Carians were probably a native people, akin to the Lydians; they dwelt in villages under cantonal dynasts. In the prehistoric age they settled in the Cyclades and perhaps also in Crete, and Greek authors attributed to them a short 'thalassocracy' in the eighth century. In historical times they often went abroad on mercenary service, but they lost their overseas possessions. Under Persian rule they constituted a separate satrapy; but they participated actively in the Ionian Revolt, and some of their communities joined the Delian League (till c. 440 B.C.). In the fourth century the dynasts Hecatomnus (397-377) and Mausolus (q.v.; 377-351) spread Greek culture in Caria, and its urbanization progressed under Hellenistic and Roman rule. It frequently changed hands in the Hellenistic period; in 129 B.C. it became part of the Roman province of Asia.

Strabo 651-64. Büchncr, *PIV*, s.vv. 'Karer', 'Karia'. M. C.

CARINUS, MARCUS AURELIUS, elder son of Carus (q.v.), left by him as Caesar in the West, when he marched against Persia (A.D. 282). Made Augustus before his father's death, Carinus succeeded him as colleague of Numerian and crushed the rebel 'corrector Venetiae', Julianus, in battle near Verona. Early in 285 Dioeletian, appointed Emperor to succeed Numerian, ended a

difficult campaign at the battle of the Margus in Moesia. Carinus, victorious in the fight, was killed by an officer whose wife he had seduced. He bears an evil name for luxury and cruelty, but some allowance must be made for the enmity of the rival faction.

CAH xii. 321 ff. Parker, *Roman World*, 219 ff.

H. M.

CARISTIA, a Roman family feast, otherwise *cara cognatio*, celebrated on 22 Feb., immediately after the *dies parentales* (Feb. 13-21); Ovid (*Fasti* 2. 617 ff.), who says it was a reunion of the surviving members of the family after the rites to the departed; Valerius Maximus (2. 1. 8), adding that no outsiders were admitted and any family quarrels were then settled. It is mentioned under the date in the calendar of Philocalus and under February in the *Menologia Rustica*.

H. J. R.

CARMEN, a term having a range of extended applications to oracular responses, prophecies, incantations, *carmina triumphalia*, *neniae*, epitaphs (*Carmina Epigraphica*, Bücheler, 1895-7), or legal formulae even in prose (Livy 1. 26. 6, 'lex horrendi carminis'). Apart from its broad meaning of 'poetry' including epic, drama, lampoon, it remains the regular Latin word for either actual song or poetry of lyric type. It is in this sense that the term is applied to Horace's *Odes* or his *Carmen Saeculare*; and it is also in this sense that it is applied to the earliest remains of Latin in ritual hymns or heroic lays. Some of these may be mentioned here.

2. The *carmen arvale* and *carmen Saliare* represent the few surviving remains of the older native Latin literature in Saturnian metre. The name 'Saturnian' testifies to their antiquity, being attributed to the metre later in order to link it up with 'the age of Saturn'. The *carmen arvale* (q.v. for linguistic aspects), discovered at Rome in the latter part of the eighteenth century, is one such relic. It is a late (early 3rd c. A.D.) copy of an ancient litany of the *fratres arvales* (q.v.), an official group of twelve men whose business it was to perform the lustral ceremonies of the spring agricultural festivals by means of dances (*tripudium*) and sacrifices (*suovetaurilia*) and prayer. The actual inscription which we possess is an invocation to the Lares and to Mars, who seems to appear here as a god of vegetation. The brotherhood survived certainly till A.D. 240, under the third Gordian, as is proved by an inscription found at Rome in 1914 (Dessau, *ILS* 9522).

3. The *carmen Saliare* (q.v. for linguistic aspects) is represented by a few fragments surviving from verses (*axamenta*) chanted by the Salian priests (who also were priests of Mars) during the March processions when the sacred shields were carried. The text (E. Diehl, *Poet. Rom. Vet.* 1) is doubtful, and in later times was hardly understood even by those who recited or recorded it, if we may judge from what Horace and Quintilian tell us.

4. We have the evidence of Cicero (*Tusc.* 4. 3; *Brut.* 75; cf. Varro ap. Non. Marcell. 76), who quotes the authority of Cato's *Origines*, that among the earlier Romans it was the custom at banquets to sing the praises of famous men to the flute. This evidence led Niebuhr in the nineteenth century to put forward the theory that there originally existed a large body of popular epic poetry in Latin, which contained accounts of the glorious deeds of old, from which these banquet songs (*carmina convivialia*) and the legendary tales recounted by Livy drew their material. This theory was warmly welcomed at the time, but, in view of material evidence and the attacks made upon it by Taine, it has now been generally abandoned. Rostagni, however (*La Letteratura di Roma*, 1939, 45 ff.), holds that the epic germs in these primitive *carmina* were not entirely destroyed by Hellenism but influenced Roman poets.

5. Of a later composition, the *carmen Nelei* (q.v.), five fragments are preserved by Festus and Charisius. This

was in iambic senarii, perhaps a tragedy or a dramatic descriptive poem. Neleus' exposure was dealt with by Sophocles in his play *Tyro*, now lost, and the *carmen Nelei* may possibly derive from it. It is mentioned by Charisius in connexion with Livius' *Odissia*, and this together with its archaic vocabulary shows it to be of a similar date. It may mark the transition to the *fabulae praetextae* introduced by Naevius.

6. In the primitive Saturnian *carmina* lay the rudimentary beginnings of Latin lyric, but much development had to take place under the influence of Greek models before the literary *carmina* of the first century B.C. could be produced (see LYRIC POETRY, LATIN). Pliny (*Tra.* 96. 7) uses *carmen* in the traditional meaning of 'hymn' when he reports that the Christians 'carmen Christo quasi deo dicere secum inuicem'. A. L. P.

CARMEN ARVALE (see CARMEN, para. 2). The Arval ritual-hymn would be invaluable if we possessed a correct copy. Unfortunately what we have (text: E. Diehl, *Alllateinische Inschriften*, 118) is most corrupt and its interpretation therefore doubtful. *Lases* equals *Lares*, *enos* may be *nos*, and *Marmar*, *Marmor* may be reduplicated forms of *Mars*. If *semunis*, *advocabit* represent *sēmōnes*, *advocabit* then they show dialectal changes, the former *ō > ū*, the latter (Faliscan?) *b > p*. It was already obscure before the time of Aelius Stilo (see Schanz-Hosius i, p. 18). E. Norden, *Aus altrömischen Priesterbüchern* (1939), thinks the hymn not a pure relic of Italian ritual but influenced by Greek. P. S. N.

CARMEN DE FIGURIS, anonymous Latin poem (c. A.D. 400), describing figures of speech in 186 hexameters. Three lines are devoted to each figure, explaining its name and giving one or two examples. Material largely taken from Rutilius (q.v. 2) *Lupus*. Prosody late, aphæresis of final *s*, and ancient forms (*indupetravi*, *prosiect*) imitating pre-classical poetry. See DIDACTIC POETRY, LATIN.

Bachr. *PLM* iii. 272.

O. S.

CARMEN DE PONDERIBUS ET MENSURIS, a Latin didactic piece of 208 hexameters, fourth to fifth century A.D., at one time erroneously ascribed to Priscian, but of uncertain authorship (see Teuffel or Schanz). It deals with weights and measures (giving Greek and Latin names), with the specific weight of different liquids, and with a test for an alloy of silver and gold. See DIDACTIC POETRY, LATIN.

Bachr. *PLM* v.

J. W. D.

CARMEN NELEI. Of this dim work five fragments (19 words) survive, embedded in Charisius and Festus. Charisius ranks it for age with the *Odissia* of Livius. The metre and content of three fragments suggest, if anything, a drama.

Bachr. *FPR*. See also CARMEN.

CARMEN SALIARE. The fragments of the ritual-hymn of the Saliar priests (text: E. Diehl, *Poet. Rom. Vet.* 1) have come down in far too corrupt a state to allow us certainty of interpretation. It was already unintelligible in Republican times to the priests themselves. Interesting are the syncopated form *cante* (= *canite*), the termination of *tremonti* (cf. Dor. *τέποντι*), the diphthong, and -*is* of *Leutesie* (= *Lucerie* 'god of light'), and the archaic superlative *dextimum*. The rest is quite uncertain and obscure.

Schanz-Hosius, i. 18.

P. S. N.

CARMENTIS or **CARMENTA** (the latter form is found in Greek authors and very rarely in Latin, as Hyg. *Fab.* 277. 2), mythologically a prophetess, mother of Evander; she (Hyg. *ibid.*; Isid. *Etym.* 1. 4. 1 and 5. 39. 11) or more commonly he (as Tac. *Ann.* 11. 14. 4) taught the Aborigines to write. As she is also called a nymph

(as *Aen.* 8. 336), she may have been a water-goddess; certainly she was a goddess of birth, worshipped by matrons (Plut. *Rom.* 21, *Quaest. Rom.* 56). Hence there are sometimes two Carmentes, Prorsa and Postverta (Varro ap. Gell. 16. 16. 4); her, or their, relation to the triad Parca Nona Decima, or Nona Decuma Morta (*ibid.* 3. 16. 11) is obscure, as is also the question whether Carmentis or the Carmentes are the older.

See Wissowa, *RE* 220.

H. J. R.

CARMINA MARCIANA, see MARCIUS (1, *vates*).

CARMINA TRIUMPHALIA, songs sung, in accordance with ancient custom, by soldiers at a *triumphus* (q.v.), either in praise of their victorious general or in a satiric ribaldry supposed to avert the evil eye from him.

Cf. Livy, 3. 29; 4. 53; 5. 49; 45. 38; Suet. *ul.* 49; 51; 80; Plin. *HN* 19. 144; Bachr. *FPR*, 330 f.

J. W. D.

CARNEA (*Κάρνεια*), a Doric festival, whose frequent occurrence is proved by the name of the month Karneios (Aug./Sept.) which is common to most Doric calendars; this month was considered to be holy. Details are known from Sparta. A meal took place in bowers like tents in a military fashion and there was a race of youths called *σπαρτιάδοι*. A youth put *taeniae* on his head and ran away; if he was overtaken by the others, it was a good omen, if not, a bad one. The festival belonged to Apollo, but he has certainly ousted an old god Karnos or Karneios. The fact that *κάρνιος* signifies 'ram' has given rise to various hypotheses; the interpretation of the festival is uncertain.

S. Wide, *Lakonische Kulte* (1893), 74 ff.; M. P. Nilsson, *Griech. Feste*, 118 ff.; *Gesch. d. griech. Rel.* i. 501 f.

M. P. N.

CARNEADES (214/213–129/128 B.C. (Apollod. ap. Diog. Laert. 4. 65, etc.)), of Cyrene, son of Epicomus (Diog. Laert. 4. 62, etc.), founder of the so-called Third or New Academy (Sext. Emp. *Pyr.* 1. 220, etc.). He became president of the Academy after his teacher Hegesinus. Together with the Stoic Diogenes of Babylon and the Peripatetic Critolaus he was a member of the famous Athenian delegation of philosophers sent to Rome in 156–155. The lectures he delivered there became famous because of their dialectical and rhetorical power as well as their moral independence (Plut. *Cat. Mai.* 22; Cic. *Luc.* 137; Gell. 6. 14. 8, etc.). The school flourished under his presidency (Cic. *Luc.* 16; *De Or.* 1. 45; *Acad. Index Here.* col. 23 f.; D.L. 4. 63), which he resigned in 137–136. His younger namesake C. succeeded him (Apollod. fr. 98 Jacoby; *Acad. Index* col. 29. 38; 30. 1; 24; 28). Shortly before his death he went blind (D.L. 4. 66). He was worshipped by his school (Suid. s.v.) and won great fame in Greece and Rome. He left no writings (Cic. *Luc.* 98; D.L. 4. 65).

2. Carneades gave a new systematic form to the criticism of dogmatic philosophies, and religious and moral opinions. His polemic against theological views, especially those of the Stoa, against their anthropocentric theory of providence against any sort of fatalism, and against divination, penetrated deeply into the mind of the later Greco-Roman world. The subject of his lectures in Rome was a *disputatio in utramque partem*, after the Academic manner, on the problem of justice. Cicero used them for the third book of the *De Re Publica*; so it is possible in this case to learn from a wider context the power and independence of his reasoning.

3. In a discussion of all aims of human endeavour, the later so-called *Carneadea divisio* (Cic. *Fin.* 5. 16 f.), he disputed the pros and cons of each. Such a discussion, which brought all philosophies down to the same argumentative level, is an important preparation for the forthcoming eclecticism.

4. There was a positive side to C.'s scepticism, his

theory of probability. Like Arcesilaus he denied all possibility of knowledge, and applied this especially to the Stoic criterion (Sext. *Emp. Math.* 7. 159-65). As in the case of his predecessor, this argument leads to the withholding of judgement (ἐποχή; Cic. *Luc.* 108; *Nat. D.* 1. 11; etc.). Nevertheless he admitted different stages of clearness in human perception. A perception which carries conviction C. called 'convincing or probable presentation' (πιθανή φαντασία; Sext. *Math.* 7. 184 f.).

5. Carneades might well be called the greatest systematic figure in ancient scepticism. He developed and systematized its polemic side, and by his theory of probability he devised a new philosophical method.

H. von Arnim in *PIW* x. 1964, s.v. 'Carneades'; see also the bibliography under SCEPTICS. K. O. B.

CARNEISCUS, Epicurean of the third or second century B.C., author of *Φιλίστας*, a discussion of friendship in which Praxiphanes (q.v.) was criticized.

Ed. W. Crönert, *Kolotes u. Menedemos* 60 (1906). *PIW* x. 1993.

CARNUNTUM, on the Danube between Petronell and Deutsch-Altenburg, was the most important Roman fortress on the Danube frontier. Near the ancient Celtic settlement an earth camp for one legion was erected, probably under Augustus; this was converted into a stone fortress in A.D. 73. First belonging to Norieum, Carnuntum was added to Pannonia, probably in A.D. 16 or later when legio XV Apollinaris was transferred there. This legion remained at Carnuntum (except A.D. 62-71) till it was relieved by legio XIV Gemina (114 or earlier). The civil town became a *municipium* (q.v.) under Hadrian, and a *colonia* (q.v.) (*Septimia*) under Septimius Severus, who was proclaimed Emperor there. It was often visited by emperors: thus M. Aurelius wrote there the second book of his *Meditations*; Diocletian, Galerius, and Maximian met there in 308; Valentinian stayed at Carnuntum in 375, and ordered the camp to be reconstructed. Carnuntum was flourishing in the second century before its destruction in the Marcomannic Wars, after which it was soon rebuilt. Under Septimius Severus the civil town increased largely, but later diminished. About 400 Carnuntum was burnt down. Temples, private houses, baths, two amphitheatres, military and civil burial-places have been excavated.

Kubitschek, *PIW*, s.v. 'Carnuntum'. *RLÖ* i (1900)-xviii (1937), passim. W. Kubitschek-S. Frankfurter, *Führer durch Carnuntum*³ (1923). R. Noll, etc., *Carnuntum 1885-1935* (Vienna, 1935). *Berichte des Vereines Carnuntum in Wien*. F. A. W. S.

CARPENTUM, see CARRIAGES.

CARRHAE (mod. *Charran*), in north Mesopotamia, was the site of the battle (53 B.C.) which ended Crassus' invasion of Parthia. Crassus, deficient in cavalry and with unacclimatized troops, reached the Belik river below Carrhae, where Surenas was awaiting him with his 10,000 horse-archers and his camel train, reinforced by 1,000 cataphraets (mailed knights). Though outnumbered thrice over, his horse-archers poured arrows into the Roman square with impunity till dark; in the night most of the survivors, abandoning their wounded, found temporary refuge in Carrhae. After a rest, Crassus tried to escape by night; but his army, completely demoralized, broke up, and when at daybreak Surenas overtook him, the troops refused to fight. He surrendered to Surenas, who meant to send him alive to Orodes, but a scuffle started in which he perished. Of his 44,000 men, 10,000 escaped; the rest were killed or captured.

W. W. Tarn, *CAH* ix. 606 ff.

W. W. T.

CARRIAGES were in common use from the beginnings of Roman history (Livy 1. 34), and a great variety of types are mentioned. Driving in the streets of Rome, and probably of other towns, was forbidden except to high officials on great occasions, but the complaints of

Seneca and Juvenal about the noise of vehicles suggests that the rule was not strictly enforced (Sen. *Ep.* 56; Juv. 3. 237). For rapid journeys the carriage most frequently used was the two-wheeled *cisium* or *essedum*, which attained considerable speeds. A form of two-wheeled carriage used at festivals was the *carpentum*, which was also used for travelling. The usual vehicle to employ on long journeys was the four-wheeled *rheda*, which held several people and baggage (Juv. 3. 10). A similar type was the *carruca*, in which it was possible to sleep. Carriages were sometimes highly ornamented and plated with silver and gold (Mart. 3. 72). The horses or mules were harnessed to a yoke, and traces were used only when several animals were required. Change of horses was provided at the *mansiones* on the great roads, and thus Caesar was enabled to travel 100 miles a day (Suet. *Jul.* 57).

W. A. Becker, *Gallus* (Engl. Transl. 1898), 345 ff.

G. H. S.

CARRUCA, see CARRIAGES.

CARTHAGE (*Kart-Hadasht*; *Καρχηδών*; *Carthago*). The traditional foundation of the great Tyrian colony at Carthage in north Africa about 814 B.C. has been immortalized by Virgil in his story of Queen Dido. But the vigorous Phoenician seamen, who founded 'the New City', do not appear to have instituted monarchy; it was under aristocratic rule that they soon outstripped Utica, Hadrumetum, and other older foundations. Carthage's situation opposite the western end of Sicily presented an opportunity of dominating the shores of the western Mediterranean, while the Bagradas valley supplied food in abundance. Her nobles seemed to have kept their blood pure; but the lower class intermarried with the native Berbers or Libyans, and this mixed Libyphoenician stock built up the wealth of Carthage as seamen and farmers.

2. That Carthage took the lead among the colonies, factories, and trading-stations along the African coast, after Tyre had been weakened by Assyria, was largely due to her oligarchical constitution. This made for stability and roused the admiration of Aristotle (*Pol.* 2. 8). Her chief magistrates were two shophets (Lat. *suffetes*), who were elected annually; they worked with the Council of Three Hundred and the Popular Assembly. But these two bodies gradually lost power to the Court of the Hundred and Four Judges and the Boards of Five. Only rarely could the Assembly assert its power against the nobles, as when Hannibal used it after Zama to attack the venality and corruption of the mercantile oligarchy. Warned by the attempt of Malchus and the fears inspired by Mago's family in the sixth century, the ruling class used the Court and the Boards successfully to guard against an ambitious shophet using the army to make himself dictator.

3. There was a party which favoured the acquisition of a land empire; Carthage occupied some territory in the Bagradas valley, and taught the Berbers agriculture in such places as Thugga (q.v.) and civic government by shophets. This expansion was made possible by a mercenary army, officered by Carthaginians. But the predominant party looked to the sea. Eastward Greek encroachments were checked at the Syrtis (q.v.), and the grudging allegiance of Leptis and Oea (qq.v.) was secured. The Phoenician colonics, which stretched westward to Tingi (q.v.) and Lixus (modern *Larache*), acknowledged Carthaginian leadership, though Utica remained aloof. From these ports Carthage drew a revenue which made her the richest city in the western Mediterranean by the third century B.C.

4. The northern shore of the Mediterranean and the great islands presented a different problem. From c. 600 B.C. it was clear that rival claims to control them must lead to war between Etruscans, Carthaginians, and

Greeks. The westward thrust of Phocaea and Massilia was crushed off Alalia in Corsica by the Etruscan and Carthaginian fleets (c. 535). The latter gradually established its influence in Corsica and Sardinia, as Etruscan power weakened, and revived the Tyrian hold on Gades, Malaca, and other parts of southern Spain. Earlier Malchus had won successes in Sicily, and the western end of the island was held for Carthage by Panormus, Lilybaeum, and Drepanum.

5. For three centuries Carthaginians and Greeks fought intermittently for Sicilian territory and the allegiance of Sicans, Sicels, and Elymians. In 480 B.C. a great Carthaginian army under the shophet Hamilcar was defeated at Himera by the tyrants Gelon and Theron. His grandson, Hannibal, avenged him by destroying Himera (409); but the ensuing wars with Dionysius of Syracuse ended with Carthaginian power confined to the west of the island. Agathocles carried the war into Africa, but was defeated near Tunis (307).

6. With Rome Carthage had concluded treaties in 508 and 348, in which she guarded jealously her monopoly of maritime trade, while abstaining from any interference in Italy. When Pyrrhus attacked (280), her fleet helped Rome to victory. But sixteen years later Sicilian politics brought the two Powers into conflict and precipitated the Punic Wars (q.v.), which ended with the destruction of the city (146).

7. Rome decreed that neither house nor crop should rise again. But Carthaginian blood survived. The grim pantheon, which had nerved the Phoenician warriors in battle and siege, still persisted, and Africa continued to worship Baal-Hammon, Taanit-pene-Baal, Eshmoun, and Melkart. Proof of the practice of human sacrifice is found in the bones dug up on Djebel Bou Kornein and 'Tiberius' decree of repression. Urban life and the rule of shophets continued in many Berber towns. Mercantile and maritime ability went on, though there were no more great long-distance voyages, such as that of Hanno in 550. Carthage never developed an art of her own, and was content to copy Greece and Egypt. She manufactured and exported carpets, rugs, purple dyes, jewelry, pottery, lamps, tapestry, timber, and hides. Her great carrying trade passed to Italians and Greeks. Her agricultural skill, which had made excellent use of the richly phosphated Tunisian plain, profited her Roman conquerors and her Berber subjects; Mago's thirty-two books on scientific farming were translated into Latin.

8. The site of Carthage was too attractive to remain unoccupied for long. The attempt of C. Gracchus (q.v.) to establish the colony of Junonia on the suburban land failed, but the city site was colonized by Caesar and Augustus. It received colonial rank (see COLONIZATION, ROMAN) and became the capital of proconsular Africa. Great buildings rose on Byrsa Hill, and by the second century A.D. Carthage had become one of the most flourishing cities of the Empire. A few urban troops and a cohort of the Third Augustan legion sufficed to keep order. But through his control of the African corn-trade, the proconsul was a potential danger to the emperor, as was shown by the rebellions of Clodius (q.v.) Macer and the Gordians (q.v.).

9. Carthage became an outstanding educational centre, especially famous for orators and lawyers. In the third century the genius of Tertullian and the devotion of Cyprian made her a focus of Christianity. Her bishop held himself the equal of the bishop of Rome, and she played a great part in establishing western Christianity on lines very different from the speculations of the Greek churches. As a great Catholic stronghold, she fought against the Donatist heresy. When the Vandals (q.v.) overran Africa, she became the capital of Gaiseric and his successors. After Belisarius' victory Catholicism was restored on stricter lines. Carthage remained loyal to

the East Roman Empire and bent off the earlier Moslem invasions, until captured in 697.

Carthaginian inscriptions in *CISem.* i (1881); L. Möller, *Numismatique de l'Afrique ancienne* (1860-74); S. Gsell, *Histoire ancienne de l'Afrique du Nord* (1914-28); G. De Sanctis, *Stor. Rom.* iii (1) (1916); O. Meltzer, *Geschichte der Karthager*, i-ii (1879-96), iii (by U. Kahrstedt, 1913); V. Ehrenberg, *Karthago* (1927); M. P. Charlesworth, *CAH* viii. 484 ff. W. N. W.

CARTHAGE (Topography). Carthage was situated on part of a peninsula projecting seawards within the Gulf of Tunis. Topographical details are extremely controversial and the remains of Punic Carthage small. The earliest settlement (probably c. 800 B.C.; there is no archaeological evidence to support the late tradition of a prior settlement in the 13th c.) perhaps lay near the coast east of the Byrsa Hill, to which it gradually spread (this view is supported by recent excavation—*Comptes Rendus* 1939, 294 ff.). Despite some modern doubts, the traditional identification of the Punic citadel (the *Byrsa*) with the Hill of St. Louis, and of the ancient harbours with the Salamambo lagoons, may be retained. The Byrsa walls, which probably measured 1,060 metres in length (*Revue Africaine* 1934, 336), were destroyed in 146 B.C. and refortified by Theodosius II (A.D. 424) and Belisarius (553). If the walls of Punic Carthage were twenty-one miles in circumference (Livy, *Epit.* 51), a large part of the area must have been sparsely populated. The main harbour (Cothon) was artificial; it comprised an inner circular naval port and an outer rectangular commercial basin. Many cemeteries have been found, the earliest burials being seventh century B.C. There are traces of Roman colonial delimitation of the land: plots of 125 acres for Junonia, of 1½ acres for the settlement of Caesar and Augustus (C. Saumagne, *Journ. d. Savants* 1931, 56). Remains of cisterns, an aqueduct, amphitheatre, theatre, houses, and the proconsular palace survive from Roman Carthage. See especially Appian, *Pun.* 8. 95 ff., Strabo 17. 3. 4, Orosius 4. 22.

Besides the articles named above, see R. Oehler, *PIW*, s.v. 'Karthago'; H. P. Hurd, *The Topography of Punic Carthage* (U.S.A. 1934); D. B. Harden, *Greece and Rome* ix. 1; P. Gauckler, *Néropoles puniques de Carthage* (2 vols. 1915); R. Cagnat, *Carthage, Tingide, Tebessa* (1912); A. Audollent, *Carthage romaine* (1901). Cf. S. Gsell, *Rev. Historique* 1927, 225; L. Carion, *Pour visiter Carthage* (1924). H. H. S.

CARTHAGO NOVA, a town in Hispania Citerior, to-day *Cartagena*. It lay on a peninsula within one of the best harbours of the Mediterranean. Originally named Mastia, it was refounded as New Carthage by Hasdrubal in 228 B.C. as a base for the Carthaginian conquest of Spain. It was captured by Scipio Africanus in 209, visited by Polybius in 133 (described in 10. 10), and made a colony (*Col. Julia Victrix N.C.*) by Julius Caesar or more probably by Octavian after a prior grant of Latin rights by Julius (cf. M. Grant, *From Imperium to Auctoritas* (1946), 215 ff.). During the Empire it was overshadowed by Tarraco, though remaining an important city until its destruction by the Vandals (A.D. 425). It was famous for the neighbouring silver-mines, which brought the Roman treasury a daily revenue of 25,000 *drachmae*, for a fish sauce called *garum*, for mackerel, and for esparto grass (*spartum*) used for ropes, baskets, and sandals.

For the topography see H. H. Scullard, *Scipio Africanus* (1930). Appendix I, and the literature there cited. H. H. S.

CARUS, MARCUS AURELIUS, praetorian prefect of Probus, rebelled in Raetia in A.D. 282, and, after Probus had been murdered by his troops, announced to the Senate his accession as Emperor. Leaving Carinus as Caesar in the West, Carus marched east against Persia with his younger son and Caesar, Numerian. On the way he defeated the Quadi and Sarmatae on the Danube. Carus invaded Persia and captured Ctesiphon, but, venturing on a further advance, was killed by a thunder-

bolt'—more probably by treachery on the part of Aper, the praetorian prefect. Suspect to the Senate as a nominee of the army, Carus yet ranks as 'medius', between good and bad emperors.

CAH xii. 321 ff.; Parker, *Roman World*, 219.

H. M.

CARVILIUS (1) MAXIMUS, SPURIUS, twice consul with Papirius Cursor, in 293 B.C. when he conquered the Samnites at Cominium and dedicated a statue of Jupiter Capitolinus made from their armour (Livy 10. 43; Pliny, *HN* 34. 43); and in 272, when he closed the series of triumphs over the Samnites (Zonar. 8. 6). His censorship (Vell. Pat. 2. 128) probably belongs to 289. E. T. S.

CARVILIUS (2), freedman of Spurius Carvilius Maximus, one of the consuls of 235 B.C. 'The Romans were late in beginning to teach for payment, and the first of them to open an elementary school was Spurius Carvilius' (Plut. *Quaest. Rom.* 59). It is unlikely that Carvilius' school was the first to be opened at Rome, where literacy is attested c. 450 B.C. (Livy 3. 44). Cicero's statement, that boys in the early Republic were required to learn the XII Tables by heart, points to the probability of schools existing before 250. Plutarch's statement simply means that Carvilius was the first to open a school for pay, earlier teachers having depended on voluntary gifts from pupils.

According to Plutarch, Carvilius was the first to differentiate between the letters C and G (*Quaest. Rom.* 54). Some scholars have attributed the distinction to Appius Claudius.

T. J. H.

CARYATIDES, a Greek term for columns or pilasters the shafts of which were carved in the form of draped females. The most famous caryatides are those of the Athenian Erechtheum, one of which is now in the British Museum. Others have been found at Delphi. The term seems to have been sometimes used for non-columnar statues.

H. W. R.

CASCA LONGUS, PUBLIUS SERVILIUS. Two Servilii Cascae were conspirators against Caesar. Publius was the first to strike. Tribune of the plebs (43 B.C.), he was compelled to flee and joined Brutus. The two brothers killed themselves after Philippi (*Anth. Latina*, no. 457).

F. Münzer, *PIW* ii A. 1788.

A. M.

CASPIAN SEA (also called 'Hyrcanian' from its SE. coast). This large and brackish inland water was correctly described by Herodotus as a lake. In spite of partial exploration by Greeks, all subsequent writers thought that the Oxus and Iaxartes flowed into it; many believed that it was joined to the Black Sea (by the river Phasis), or to the Sea of Azov; and the prevalent view was that a channel linked it with a not far distant Northern Ocean. The first of these opinions may have had apparent support from the remains of a prehistoric channel between the Caspian and the Aral Sea, and the last may have been prompted by a vague knowledge of the Volga. About 285 B.C. Patrocles (q.v.) sailed up both sides, but failing to reach the north end, gave currency to the belief that one could sail from the Caspian to India by the Northern Ocean. Renewed exploration after the reign of Tiberius led to the rediscovery of the Volga ('Rha' in Ptolemy), and Ptolemy restated the truth that the Caspian is a lake, though he got its shape wrong.

Cary-Warrington, *Explorers*, 136 ff.; A. Herrmann, *PIW*, s.v. 'Kaspisches Meer'.

E. H. W.

CASSANDER (c. 358–297 B.C.), son of Antipater (q.v.), joined Alexander in Asia (324). They seem to have disliked one another intensely, but the tradition which makes him Alexander's murderer is false. When the

Empire began to split up, Cassander drove the regent Polyperchon from Macedonia and most of Greece (319–316); henceforth his aim was to keep what he held, which involved resisting the efforts of Antigonus to reunite the Empire under himself. These efforts he finally joined in defeating (with Ptolemy, Lysimachus, and Seleucus) by the decisive victory of Ipsus (301). His last four years were devoted mainly to consolidating his position at home.

Ruthlessly efficient though he was in politics, Cassander was no barbarian. He founded two great cities, Cassandreia and Thessalonica (*Salonica*), and he rebuilt Thebes. As befitted the slayer of Alexander's mother, son, and widow, he had friends among the Peripatetics, the literary group which did most to create a tradition hostile to Alexander.

Diodorus, bks. 18–20; W. W. Tarn, *CAH* vi, ch. 15, and vii, 75 ff.

G. T. G.

CASSANDRA or **ALEXANDRA**, in mythology, daughter of Priam (q.v.). In Homer, nothing is said of her being a prophetess; she is mentioned (*Il.* 13. 365) as being the most beautiful of Priam's daughters, and (in 24. 699 ff.) she is the first to see the body of Hector being brought home. Nor is it clear that post-Homeric epic enlarged on the Homeric picture; its principal new episode, assuming that Homer did not already know of it, is her mishandling by Aias (q.v. 2) the Locrian. How old the tradition of her prophetic gifts is we do not know, but in surviving literature it appears first in Pindar, *Pyth.* 11. 33 (474 or 454 B.C.; if the latter, then later than Aeschylus, *Agamemnon*, with which it has points of contact; perhaps both draw on the *Oresteia* of Stesichorus). In *Agam.* 1203 ff., Apollo has given her the power of prophecy, to win her love; as she cheats him, he turns the blessing into a curse by causing her always to be disbelieved. Later authors follow this form of the story, which indeed Aeschylus seems to imply was already well known when he wrote. There is, however, another (schol. *Il.* 7. 44 and Eustathius p. 663, 40) which says that she and Helenus, when children, had their ears licked by serpents while asleep and so got their prophetic gift. She commonly appears, in Tragedy and elsewhere, as foretelling vainly the evil results of successive events, such as the birth of Paris, and finally warning the Trojans against the Wooden Horse (as Verg. *Aen.* 2. 246). On the basis of this, Lycophron (*Alexandra*) takes occasion to put into her mouth a forecast of mythological and historical adventures of both Trojans and Greeks from the war to his own day. For her story see AGAMEMNON, AIAS (2). For her cult, or that of a goddess confounded with her, see Farnell, *Hero-Cults*, 329 ff. H. J. R.

CASSIANI, see SABINUS (2).

CASSIODORUS (FLAVIUS MAGNUS AURELIUS CASS. SENATOR, c. A.D. 487–583), scion of a distinguished Bruttian family, was, except for Boethius, the most important writer of the sixth century A.D. After serving in public capacities (consul, *magister officiorum*, praetorian prefect) for forty years, he retired (c. 550) to the monastery of Vivarium, which he founded in Bruttium, and there devoted himself to collecting a library and writing theological and encyclopaedic works. During his official career he published: *Orationes* (fragments ed. by L. Traube in Mommsen's ed. of *Variae*, 465–84); *Chronica*, a universal history from Adam to A.D. 519 (ed. Mommsen, *MGH, auct. ant.* xi. 120–61); *Historia Gothica* in twelve books (known only from extracts made by Jordanes); and *Variae*, a collection in twelve books of correspondence and official documents for which he had been responsible (ed. Mommsen, *MGH, auct. ant.* xii. 10–385). After his retirement he published: *Institutiones divinarum et saecularium litterarum* (see ENCYCLOPAEDIC LEARNING), of which the second part, preserved in longer

and shorter versions, was widely used in the Middle Ages (ed. R. A. B. Mynors, 1937); *De Orthographia* (ed. Keil, *Gramm. Lat.* vii. 143-210), and various biblical commentaries (in Migne *PL*, vols. lxxviii (under name 'Primasius') to lxxx). He also edited a translation made by his friends from Josephus; and to a certain Epiphanius he entrusted the compilation of a *Historia ecclesiastica tripartita* (in Migne, *PL*, vol. lxxix). His importance lies not only in his writings but also in the example he gave to the monks of his own and other foundations not to neglect the literature and learning of pagan Rome.

CASSIOPEIA (Cassiepeia or Cassiope), see ANDROMEDA.

CASSITERIDES ('Tin Islands'), a name applied generically to all the north Atlantic tin lands, but especially to Cornwall and the Scillies (which may have served as depots for Cornish tin). They were probably first discovered by Phoenicians or Carthaginians from Gades; the latter eventually established an open-sea route from north-west Spain. A Greek named Midaeritus (c. 600 B.C.?) is recorded to have imported tin from Cassiteris island (Plin. *HN* 7. 197), but it is doubtful whether he actually reached the Cassiterides. The Carthaginians kept their tin-routes secret, hence Herodotus (3. 115) doubted the existence of the Cassiterides. Pytheas (q.v.) visited the miners of Belerium (*Land's End*) and their tin depot at Ictis (q.v., *St. Michael's Mt.*); but it was left to a Roman, P. Crassus (probably a governor in Spain c. 95 B.C.), to make the tin-routes generally known. Strabo, who enumerates ten Cassiterides (the Scillies group contains 30 islands), describes the Cornish tin and lead mines and the black cloaks and long tunics of the natives. The importance of the Cornish mines declined in the first century A.D., after the discovery of tin deposits in Spain. See also TIN.

Strabo 3. 175-6; T. R. Holmes, *Ancient Britain* (1907), 483 ff.; F. J. Haverfield, *PIV*, s.v. 'Kassiterides'. E. H. W.

CASSIUS (1) **VECELLINUS**, SPURIUS, consul in 493 B.C., yet bearing a plebeian name, mediated the treaty made then between Rome and the Latins. This established peace throughout Latium, providing for mutual military assistance on equal terms, and held good till c. 380. Dubious legends attached to the name of Spurius need cast no doubt upon the treaty. Its effect is discernible beneath the surface of Livy's narrative, which tends, through pride, to obscure the fact that Rome was only an equal partner.

For bibliography, see under LATINI. A. N. Sherwin-White, *The Roman Citizenship* (1939), 20 ff. A. N. S.-W.

CASSIUS (2) **HEMINA**, LUCIUS, the first Latin annalist, treated Roman history from early Italian times (bk. 1) and the founding of Rome (bk. 2) to the Second Punic War (bk. 4), writing before the Third Punic War (cf. the title *Bellum Punicum posterior* of bk. 4); but fr. 39 (146 B.C.) indicates an extension. His interest in Italian origins, in etymological, religious, and social antiquities, and in synchronism (fr. 8), reflects the influence, especially, of Cato's *Origines*.

H. Peter, *HRRel.* 7 (1914), pp. cliv and 98. T. Frank, *Life and Literature in the Roman Republic* (1930), 172. A. H. McD.

CASSIUS (3) **DIONYSIUS** of Utica, wrote (1) (88 B.C.) a Greek translation (with additions) of the work of the Carthaginian Mago on agriculture, which became the standard work on the subject, used by all its successors in antiquity; (2) *Περὶ τροφῆς*, a compilation much used by Pliny the Elder.

PIV iii. 1722.

W. D. R.

CASSIUS (4) **LONGINUS**, GAIUS, consul 73 B.C. with M. Terentius Varro Lucullus, brought forward the *Lex Terentia Cassia*, which distributed five *modii* of corn a month to a limited number of recipients (40,000 people?) in Rome, not necessarily gratis. He was defeated by Spartacus near Mutina in 72. He testified against Verres (70), and supported the Manilian law (66, see MANILIUS 2).

F. Münzer, *PIV* iii. 1727. For the *lex*: M. Rostovtzeff, *PIV* vii. 174. A. M.

CASSIUS (5) **LONGINUS**, QUINTUS, was Pompey's rapacious quaestor in Spain in 54 B.C. In 49, as one of the two tribunes who supported Caesar, he fled to his camp and later summoned the Senate. Sent to Spain, he was surprised by a rebellion of provincials and soldiers, while preparing an expedition against Juba (48). With the help of Bogud he resisted, but left his province on the arrival of his successor, and perished by shipwreck.

F. Münzer, *PIV* iii. 1740.

A. M.

CASSIUS (6) **LONGINUS**, GAIUS, the tyrannicide, was quaestor to Crassus in 53 B.C., rallied the defeated army after Carrhae, and won a military reputation by his defence of Syria against Parthian attacks. He was tribune in 49. In the Civil War he commanded a Pompeian fleet, but was pardoned by Caesar after Pharsalus and may have taken part in the campaign against Pharnaces. *Practor peregrinus* in 44, he played a leading part in the conspiracy against Caesar. Prevented by popular hostility from discharging his duties in Rome, he was given a corn commissionership, but left Italy in August (probably) for Syria, where Staius Murcus and Marcius Crispus put their armies at his disposal. The rebel Caecilius Bassus followed suit, a force on its way from Egypt to Dolabella was intercepted, and Dolabella's army captured in Laodicea (probably July 43). The Senate had given Brutus and Cassius supreme authority in the eastern provinces after Mutina, but after Octavian's *coup d'état* they were outlawed. In 42, having subdued the Rhodians, who refused their support, Cassius crossed with Brutus to Thrace and encountered Antony and Octavian at Philippi. In the first battle his camp was captured, and probably under the impression that the battle was entirely lost he committed suicide.

More keen-sighted and practical than Brutus, Cassius seems nevertheless to have been less respected and less influential. He was a man of violent temper and sarcastic tongue, a strict disciplinarian, and ruthless in his exactions. The charge of covetousness may have been well founded; but there is no convincing evidence that he was influenced by petty motives in the conspiracy against Caesar. Cassius married Junia Tertia (Tertulla), sister of Brutus.

Cicero, *Letters and Philippics*; Caesar, *BCiv.* 3. 5 and 101; Velleius, bk. 2; Josephus, *AJ*, bk. 14; Plutarch, *Crassus*, *Caesar*, and *Brutus*; Appian, *BCiv.* bks. 2-4; Dio Cassius bks. 40-7. Modern literature: Tyrrell and Purser, *Correspondence of Cicero*, *VI*, pp. cii-cviii; Drumann-Groebe, *Gesch. Röm.* ii. G. W. R.

CASSIUS (7) **LONGINUS**, GAIUS, a prominent Roman jurist, *cor. ruff.* A.D. 30, *proconsul* of Asia 40-1, *legatus* of Syria 45-9. Exiled by Nero in 65 to Sardinia, he was recalled by Vespasian and died soon after. His principal work was the *Libri iuris civilis*, known through a revised edition of Javolenus and citations in later jurists' works. Cassius was a disciple of Sabinus and enjoyed high authority as a teacher and respondent, so that after the death of Sabinus he became the leader of the Sabinian school; hence its name *schola Sabiniana* (*Caniani*). See SABINUS (2). A. B.

CASSIUS LONGINUS, see also LONGINUS

CASSIUS (8) PARMENSIS (i.e. of Parma) was, like Cassius (6) Longinus, among Caesar's murderers. Horace (*Epist.* 1. 4. 3) thinks of Albius (Tibullus) as writing poetry to surpass that of this Cassius (confused by the scholiasts with an inferior poet Cassius Etruscus, *Hor. Sat.* 1. 10. 61). J. W. D.

CASSIUS (9) SEVERUS, Augustan orator whose speeches were brilliant but bitter (*Sen. Controv.* 3 *praef.*; *Quint. Inst.* 10. 1. 116; 12. 10. 11; *Tac. Dial.* 19 and 26). Like T. Labienus (q.v.), he had his works publicly burned (*Tac. Ann.* 1. 72; 4. 21; *Suet. Calig.* 16). He died in the 25th year of his exile about A.D. 34 (*Euseb. Chron.*) J. W. D.

CASSIUS (10) CHAEREA, a centurion in Lower Germany in A.D. 14. In 41, as a tribune in the Praetorian Guard, he was mocked by Gaius for his supposed effeminacy. He played a leading part in the latter's murder (41). On Claudius' accession he was executed. J. P. B.

CASSIUS (11), a Roman physician of the time of Augustus and Tiberius (31 B.C.-A.D. 37). His specific for the relief of colic was famous in antiquity. *PIV* iii. 1678.

CASSIUS (12), *Ἱατροσοφιστής*, the author of *Ἱατρικαὶ ἀπορίαι καὶ προβλήματα φυσικά*, not earlier than the 3rd century A.D. The author must have been a rather eclectic member of the pneumatic school of medicine.

Ed. J. L. Ideler, *Physici et Medici Graeci Minores* (1841) i. 144. *PIV* iii. 1679. W. D. R.

CASSIUS DIO, see DIO CASSIUS.

CASSIUS, see also AVIDIUS (2).

CASSIVELLAUNUS, king presumably of the Catuvellauni (Herts.), appointed supreme commander of the south-eastern Britons on the occasion of Caesar's second invasion (54 B.C.). After an initial defeat in Kent, he endeavoured to avoid battle and hamper his enemies' foragers—strategy which much embarrassed Caesar, who was able, however, to capture his capital (probably Wheathampstead, cf. R. E. M. Wheeler, *Verulamium*, 20). A peace was arranged through Caesar's agent Commius, by which Cassivellaunus agreed to pay a tribute and allow the independence of the Trinovantes (Essex). His coinage is believed to be represented by the uninscribed 'Whaddon Chase' type (Brooke, *Antiquity* vii. 278).

Caesar, *B Gall.* 5. 11. 8; 18-22. Collingwood-Myres, *Roman Britain*, 46-51. C. E. S.

CASTOR AND POLLUX. The cult of the Dioscuri (q.v.) was introduced into Rome at an early date, traditionally (*Livy* 2. 20. 12; 42. 5) in 484 B.C., in consequence of a vow made by A. Postumius at the battle of Lake Regillus. In this connexion the famous legend (of Greek origin) arose, that they actually took part in the battle and brought word of it to Rome (*Dion. Hal. Ant. Rom.* 6. 13. 1-2). Their temple was in the Forum (cf. Platner-Ashby, 102), and was commonly called *aedes Castoris*, the two brothers being not infrequently referred to as *Castores*. Several indications point to the introduction of the cult from Tusculum (Wissowa, *op. cit. infra*, 269 f.); there is no evidence that it was under the control of the *quindecimviri* (q.v.), like normal Greek or other foreign worship. The most outstanding feature of the ritual was the close connexion of the brethren with the *equites*, whose ceremonial parade (*transvectio equitum*) took place on 15 July, the traditional date of the battle (*Dion. Hal.*, *ibid.* 4). For the age of this, see S. Weinstock in *SMSR* xii (1937), pp. 10 ff. A controversial point is the connexion of the Castores with Juturna, whose *lacus* in the Forum is near their temple. F. Altheim, 'Griechische Götter im alten Rom' (*RGV*

xxii, 1 (1930), pp. 4 ff.), argues that her name has an Etruscan suffix (*hur*), means 'daughter of Jupiter' or the like, and indicates close association between her and them. This is controverted by several scholars, who would hold the nearness of the places of worship to be merely fortuitous.

G. Wissowa, *RK* 268-71 for convenient assemblage of references. H. J. R.

CASTOR OF RHODES, rhetorician, possibly to be identified with the son-in-law of Deiotarus, the Galatian Tetrarch, published *Χρονικά*, synchronistic tables of Oriental, Greek, and Roman history, from the Assyrian Belus and Ninus and the Sicyonian Aegialeus to Pompey (61-60 B.C.), adding the mythical period of Greek kings to the tables of Eratosthenes and Apollodorus; the work was used by Varro, Julius Africanus, and Eusebius.

FGH ii B, 1130; *BD*, 814.

A. H. McD.

CASTULO, a city of the Oretani situated near the upper Baetis (*Guadalquivir*) in the Salus Castulonensis (*Sierra de Segura*). Its importance, indicated by the title *urbs valida ac nobilis*, derived from the lead and silver mines nearby, and from its situation on an old route from Valentia to Corduba. Hannibal chose a wife from Castulo. The Corneli in its inscriptions are apparently descendants of natives enfranchised by the Scipios who campaigned in the district during the Hannibalic War.

M. Acedo, *Castulo* (1902).

J. J. Van N.

CATACOMBS, a term derived from *κατὰ κύμβας*, a locality close to the church of St. Sebastian on the Via Appia, three miles south of Rome. The name may refer to the natural hollows across which the road passes or to an inn-sign, but was in use in the fourth and fifth centuries A.D. for the Christian cemetery associated with St. Sebastian's in the form *ad catacumbas* or *catacumbae*. This famous cemetery was a series of narrow underground galleries and tomb-chambers, cut in the rock. Their walls were lined with tiers (up to seven are known) of coffin-like recesses for inhumation, holding from one to four bodies apiece and sealed with a stone slab or with tiles. The affinity to *columbaria* (q.v.) is evident, but the type itself seems to have been immediately derived from Jewish catacombs (H. W. Beyer and H. Lietzmann, *Die Katakomben Torlonia* (1930)), where Jews, like Christians, remained a household of the faithful, united in death as in life. Catacombs were not confined to Rome: examples are known at Albano, Alexandria, Hadrumetum, Kertsch, Naples, Malta, and Syraeuse. All are associated with soft rocks, where tunnelling was easy.

The catacombs at Rome, however, are much the most extensive, stretching at least 350 miles. Their distribution, along the main roads outside the city, is explained by their growth out of, or side by side with, pagan cemeteries lying beyond the city boundary in conformity with the law. That of St. Priscilla, on the Via Salaria, grew out of the burial-ground of the Aeilii Glabrones (q.v.), persecuted under Domitian. Domitilla's contemporary catacomb, on the Via Ardeatina, developed from the vestibule of the Flavii. St. Paul's catacomb, on the Via Ostiensis, contains dated epitaphs of A.D. 107, 111, and 217. Other important groups include those of St. Sebastian, where the bodies of SS. Peter and Paul rested; St. Callixtus, containing the bodies of fifteen popes, and St. Praetextatus, all on the Via Appia.

The tomb-chambers (*cubicula*), containing table-tombs and arched recesses (*arcosolia*) for the bodies of saints, martyrs, and popes, are important for the development of later Christian crypts and depositories of relics; while the catacombs also saw the first development of Christian art, with frequent reference to acceptable Jewish legend and to Christian miracles, and with less obvious reference to Christ as Orpheus or the Kriophoros. The catacomb

of St. Pontianus contained a baptistery. Heretical Gnostic beliefs are represented in the *hypogaeum* of Trebius Justus, on the Via Latina. Minor furniture included lamps, portrait medallions of glass, and *ampullae*, whose contents may well have varied between perfumes, consecrated wine, and martyrs' blood.

The presence of these large cemeteries is explained partly by the size of the Christian community in Rome and partly by the long periods of toleration. By about a century after the official recognition of the Church, the catacombs passed into desuetude, becoming centres of pilgrimage.

CATALEXIS, see METRE, GREEK, I (3).

CATANA (Κατάνη, modern *Catania*), a Greek colony, was founded by Naxos in 729 B.C. on Sicel territory in eastern Sicily. Like other Chalcidian States it used the legislation of its semi-mythical lawgiver Charondas (q.v.), and incurred Syracusan enmity: Hieron actually drove the Catanacans to Leontini, replacing them with Dorian colonists (476). These latter, however, were soon ejected: they went to Inessa-Aetna (see AETNA), Catana's Chalcidian inhabitants returned (461), and the city prospered. During the Syracusan expedition (415) Catana was the Athenian base of operations (Thuc. bk. 6). Subsequently it was subject successively to Dionysius' Campanian mercenaries, Carthage, Callippus, Mamercus, Timoleon, Agathocles, Carthage again, Pyrrhus, Rome. A *civitas decumana* under the last, Catana was a flourishing grain port (and, appropriately, an ancient centre of Ceres-worship). Servile wars, earthquakes, and eruptions from nearby Aetna, during one of which Catana's celebrated *Pii Fratres* rescued their parents after the manner of Aeneas, merely interrupted its prosperity. Catana became a *colonia* under Augustus (Pliny, *HN* 3. 89) and has always remained a large city.

CATAPULT, see ARTILLERY, SIEGECRAFT.

CATILINE (LUCIUS SERGIUS CATILINA) was an active lieutenant of Sulla, both in the Civil War and in the proscriptions. After governing Africa as propraetor for two years, he returned to Rome in 66 B.C. to find that an impending prosecution for misgovernment prevented him from standing for the consulate (Asconius 79 f.). The candidates elected, Autronius and P. Sulla, had been unscathed for bribery; with them he concerted a wild scheme to murder the new consuls at the beginning of 65 (Cic. *Cat.* 1. 15). The plot was exposed, but a senatorial inquiry was soon abandoned.

After trial and acquittal in 65 Catiline stood for the consulship of 63 with C. Antonius. His defeat by Cicero embittered him, and in 63 he came forward again with a programme for the abolition of debts, calculated to appeal to all the discontented classes (Cic. *Cat.* 2. 18 ff.). After a second defeat he abandoned constitutional methods and organized a far-reaching conspiracy. Cicero was well informed of Catiline's plan and, supported by the 'last decree' of the Senate (21 Oct. 63; Asconius 5),

took active steps to foil the projected rising. On 8 Nov., after being openly attacked by Cicero in the Senate, Catiline himself withdrew from Rome to the forces his lieutenant Manlius had collected in Etruria. By the help of some Gaulish informers Cicero was able to expose and execute Lentulus (q.v. 4) and the other ring-leaders in Rome. Catiline's army was outnumbered and ill equipped; unable to break through to Gaul, he turned to face the army of Antonius near Pistoria (Jan. 62) and fell fighting bravely.

Of great physical strength, reckless, ambitious, and unscrupulous, Catiline yet had a certain plausible charm which blinded many to his true nature (Cic. *Att.* 1. 2; *Sull.* 81; *Cael.* 12 ff.). It seems, however, clear that neither Caesar nor Crassus, who had supported his candidature in 64, was implicated in the second plot.

ANCIENT SOURCES: Cicero's letters and speeches (esp. *In Catilinam*, 1-4, and *Pro Sulla*) and Asconius' *Commentarii* are of the first importance. Sallust's *Bellum Catilinae* must be regarded as a political pamphlet, exonerating Caesar. Dio Cassius (bks. 36 and 37), Appian (*BCiv.* bk. 2), Suetonius (*Jul.*), and Plutarch's *Life* are also helpful.

Hardy, *The Catilinarian Conspiracy* (1924); M. Cary, *CAH* ix, ch. 11 (1932); J. Vogt, *Cicero und Sallust über die catilinarische Verschwörung* (1938). J. M. C.

CATIUS, TITUS, an Insubrian, mentioned by Cicero (*Fam.* 15. 16) as a recently deceased writer on Epicureanism.

CATO (1) 'CENSORIUS', MARCUS PORCIUS (234-149 B.C.), was born of peasant stock in Tusculum. He fought as a youth in the Second Punic War and was at Metaurus (207). His proof of legal ability and stern traditional morality impressed L. Valerius Flaccus, with whom he began his political career. Quaestor in 204, he was in Sicily, and on his return via Sardinia brought Ennius to Rome (203-202). Plebeian aedile in 199, he became praetor in Sardinia in 198, expelling usurers; *Leges Porciae de sumptu provinciali* and *de provocatione* are probably to be dated here. Consul in 195 with L. Valerius Flaccus, he opposed the repeal of the *Lex Oppia* and took the province of Spain; here, after extensive operations, he settled the administration and initiated the development of Roman rule.

2. After distinguished service under Manius Acilius Glabrio at Thermopylae (191), he prosecuted Q. Minucius Thermus (190), and, himself a candidate, supported charges of peculation against Glabrio in the censor elections for 189. He instigated and openly helped the attacks on L. Scipio, aiming to destroy the predominance and Hellenistic influence of Scipio Africanus. His success led to his censorship in 184 with L. Valerius Flaccus, at a time when social deterioration among nobles and people gave his doctrines full scope. He taxed luxury, strictly revised the senatorial and equestrian rolls, and checked the publicani; he also spent heavily on building, e.g. 1,000 talents on the sewerage system. He represented a policy of reconstruction, moral, social, and economic. The character of colonization at this time does not necessarily prove a predominantly agrarian policy on his part; he treated senators, *equites*, people, Latins, and provincials with equal regard to their traditional place in the State. This conservatism was associated with hatred of things Greek entering into Roman life, and he disguised his wide knowledge by a rustic pose in the cultivated senatorial society, which added ill manners to his natural robustness. He supported the *Lex Baebia* in 181, and opposed its modification and the repeal of the *Lex Orchia*; he attacked M. Fulvius Nobilior after the latter's censorship (179-178). In 171 he was patron in the Spanish appeal against extortion, prosecuting P. Furius Philus. He supported the *Lex Voconia* (169), favoured the independence of Macedonia, and rejected war against

Rhodes (167), and attacked Sulpicius Galba for his opposition to Aemilius Paullus' triumph. In 155 he spoke against the Athenian embassy of philosophers, and in 154 upheld the case of Ptolemy Philometor in the Egyptian question.

3. His embassy to Carthage (157 or 153), when he saw the new prosperity of the old enemy, brought into his policy the demand for the destruction of Carthage. The reason probably lies less in any commercial consideration than in distrust of Carthaginian resurgence and moral indignation at its character. In 151 he supported the return of the Achaean hostages, favoured Attalus II in a dispute with Prusias II, and approved of the prohibition of reelection to the consulship. In 150, despite the opposition of Scipio Nasica, he saw war declared on Carthage. In 149 he attacked Sulpicius Galba on behalf of the Lusitanians. He died in 149 aged eighty-five years, leaving two sons, Cato Licinianus by his first wife, Cato Salonianus by a second marriage; the latter was grandfather of Cato Uticensis.

4. Cato's whole policy appears based on a conception of traditional government and life, with the single aim of establishing social solidarity again in Rome and Italy, administrative control in the West, but no more than security, with justice, in the East. His thought found expression also through his strong natural literary talent. He published his speeches: Cicero knew more than 150, and we have fragments of 80. He wrote an encyclopaedia for his first son, including agriculture, rhetoric, and medicine, and separate treatises on medicine, jurisprudence, and military science. We know of letters to his son, apophthegmata, and the *Carmen De Moribus*, a gnomic book of morality; the *Catonis Disticha* date from Imperial times.

5. The *De Agri Cultura*, written c. 160 B.C., dealt with the development of vine, olive, and fruit-growing and grazing for profit in Latium and Campania; for all its lack of form, its details of old custom and superstition, and its archaic tone, it was an up-to-date work directed from his own knowledge and experience to the new capitalistic farming. The *Origines* in seven books, written from c. 168 to 149, following the Hellenistic *κτῶεις* histories and the senatorial historiography, included Aeneas, the founding of Rome (751 B.C.), the kings in bk. 1, the foundation traditions of the Italian cities in bks. 2 and 3, the Punic Wars to Cannae in bk. 4, the Rhodian debate of 167 B.C. in bk. 5, the prosecution of Sulpicius Galba (149) in bk. 7. He used Fabius Pictor, Hellenistic legends, local traditions, inscriptions, later inserting his own speeches; his treatment was discursive (*capitulativum*) and pragmatic, and, unlike the senatorial historiography, omitted the names of generals. The work, the first of its kind in Latin, inspired historical study and founded prose style; for to the principle of 'rem tene, verba sequentur' he joined plain rhetorical device, including imitation from Greek, and a sense of effect in sentence structure and vocabulary. The style is the man, and if his talent moved narrowly in the expanding field of imperial politics, it touched greatness in his literary stimulus to the Roman tradition.

A. H. McD.

CATO (2), GAIUS PORCIUS (*cos.* 114 B.C.), grandson of Cato (1). Once a follower of Tiberius Gracchus, he changed sides—presumably before or during C. Gracchus' agitation. He was condemned *de repetundis* after his defeat, as consul in 114 B.C., by the Scordisci in Macedonia, was exiled in 110 by the Mamilian Commission for his dealings with Jugurtha and died at Tarraco. M. H.

CATO (3), LUCIUS PORCIUS (*cos.* 89 B.C.), as tribune in 100 B.C. opposed Saturninus. In the Social War he defeated the Etruscans in 90, and as consul (89) defeated the Marsi, but was killed in a subsequent skirmish.

CATO (4), GAIUS PORCIUS (*trib.* 56 B.C.), 'adulescens nullius consili, sed tamen cuius Romanus et Cato' (Cic. *QFr.* i. 2. 15), in 59 B.C. openly called Pompey 'priuatus dictator' when prevented from prosecuting Gabinius. In 56 as tribune, it was supposed in Crassus' pay, he attacked Pompey again over the Egyptian business and tried to deprive Lentulus Spinther of his Cilician command. But after Luca he postponed the consular elections in the interests of Pompey and Crassus. Milo made him ridiculous by buying his gladiators and auctioning the 'familia Catoniana'. In 54 he was accused of violating the *Leges Fufia* and *Iunia Licinia* (see *LEX*, *LEGES*), and though apparently acquitted he is not heard of again. G. E. F. C.

CATO (5) UTICENSIS, MARCUS PORCIUS (95-46 B.C.), great-grandson of Cato (1), nephew of Livius Drusus, and brought up in the Livian household with the children of his mother's marriage to Cn. Servilius Caepio. His reputation for rectitude was already formed when in 63 he became tribune-designate to check Metellus Nepos (see *METELLUS* 10), supported Murena's (q.v.) prosecution, and intervened powerfully in the Senate to scure the execution of the Catilinarians. As tribune he conciliated the mob by increasing the doles of cheap corn, but in all else remained uncompromising; Cicero (*Att.* i. 18. 7; 2. 1. 8) deplores the impracticability by which he prevented revision of the Asian tax-contracts (61 B.C.) and frustrated every overture of Pompey (q.v.) until the 'Triumvirate' was formed. In 59 he opposed Caesar obstinately and was temporarily imprisoned, but next year Clodius removed him by compelling him to undertake the annexation of Cyprus, over which, though King Ptolemy killed himself and Cato's accounts were lost on the voyage home, his reputation for fairness remained unimpaired. After Luca he persuaded his brother-in-law Domitius (q.v. 3) not to despair of the consulate, but the two were driven from the field; and Vatinius by bribery defeated Cato for the praetorship, which he subsequently obtained in 54. In 52, forsaking his principles, he supported Pompey's consulate; he himself stood for 51, but failed. In the war he strove to avert bloodshed of citizens but resolutely followed Pompey: he served in Sicily, whence Curio expelled him, then in Asia, and during the campaign of Pharsalus held Dyrrhachium. After Pompey's defeat he joined the Pompeians in Africa, composed their quarrels, and had Scipio made general. During the war he governed Utica with great moderation, and was honoured by the inhabitants when after Thapsus he compassed his famous death.

His character was unamiable: his first wife Antistia proving unfaithful he lent the second, Marcia, daughter of Philippus (*cos.* 56), to Hortensius. But his constitutionalism, a mixture of Stoicism and old Roman principles, was genuine. After death he was more dangerous than ever to Caesar, who in his *Anticato*, a reply to Cicero's pamphlet *Cato*, pitched the hostile case too high, and left the fame of Cato's life and death to give respectability to the losing side, and to inspire 'Republicans' a century later: 'uictrix causa deis placuit, sed uicta Catoni' (Lucan i. 128).

Sources: Plutarch's *Cato Minor* is wholly laudatory but rich in anecdote. See also the sources cited s.v. CAESAR (1). G. E. F. C.

CATO, *see also* VALERIUS (12).

CATREUS (Καρπύς), in mythology, son of Minos and Pasiphaë, father of Althaemenes, Aërope, Clymene, and Apemosyne. In consequence of the prophecy that one of them should kill him (*see* ALTHAEMENES) he sold Aërope and Clymene, who, however, married respectively Pleisthenes, who here replaces Atreus as father of Agamemnon and Menelaus, and Nauplius, her sons being Palamedes and Oeax. Apemosyne was killed by Althaemenes, who did not believe her when she told him that she had been violated by Hermes, and supposed her unchaste. *See* Apollod. 3. 12 ff.

H. J. R.

CATTIGARA (τὰ Καττίγαρα), important city-port of the Sinae (Southern Chinese) near the mouth of river Cottiaris. *Circa* A.D. 100, one Alexander discovered it by sea from India, on a gulf inhabited by fish-eaters. Cattigara may be *Hanoi* or *Kian-chi* in the Gulf of Tongking, or possibly *Canton*. After the Gulf of Siam Ptolemy makes the Chinese coast face west, so that by mere calculation with his figures Cattigara would fall in Borneo.

Ptol. Geog. 1. 14. 4-10, etc.; 7. 3. 3; 8. 27. 14. G. E. Gerini, *Journ. Royal Asiatic Soc.* 1897, 551 ff.; Warmington, *Indian Commerce*, 109, 125-6, 129, 177; A. Herrmann, *PIV*, 2.v. 'Kattigara'.

E. H. W.

CATULLUS (1), **GAIVS VALERIUS** (c. 84-c. 54 B.C.), Roman lyric, erotic, and epigrammatic poet, was born at Verona. Jerome (*Chron. Euseb.*) says he was born in 87 B.C. and died aged thirty; but he was alive in 55 when Caesar first invaded Britain and Pompey obtained his second consulship (Catull. 11; 29; 45; 113). Most probably he lived from 84 to 54. His father was notable enough to entertain Julius Caesar, doubtless in Cisalpine Gaul (Suet. *Jul.* 73) on his assize circuit. Catullus himself was wealthy (4; 31; 44; 68. 35) in spite of temporary embarrassments (10; 13). He came to Rome about 62 and quickly made friends in literary and fashionable society. His infatuation for the 'Lesbia' of his poems began this year. She was, it is now generally held, Clodia (q.v.), sister of Cicero's enemy P. Clodius (q.v. 1) Pulcher and wife of Q. Caecilius Metellus (q.v. 8) Celer, governor of Cisalpine Gaul in 62 and consul in 60. About ten years his senior, a woman of many lovers, she but played with the youth's affections. It seems she at one time encouraged him to hope for marriage (70), but before Metellus' death in 59 Catullus knew her inconstancy. The same year his brother died in the Troad. In deepest sorrow Catullus went home to Verona for a while; returning to Rome, he found established in Clodia's affections M. Caelius (q.v.) Rufus, Cicero's friend and correspondent. Agonized pleadings and reproaches had no effect and he tried to steel his mind against love (76). In 55 he composed a bitter and final farewell to Lesbia (11). Meanwhile, in 57, he had gone to Bithynia on the staff of the propraetor C. Memmius (q.v. 2). After visiting his brother's tomb near Troy (101), he returned by yacht to Italy in 56 (46; 31; 4) with the poet Cn. Helvius Cinna (q.v. 4). At the end of this journey he wrote his rapturous salutation to the promontory of Sirmio on Lake Garda. His last years were spent in or near Rome in literary composition and social pleasures. Besides Cinna, his literary friends were C. Licinius Calvus, Q. Cornificius, Furius Bibaculus, Q. Hortensius, Cornelius Nepos, and others. He was anti-Caesarian personally, if not politically; some of his bitterest satire is directed against Caesar and his *praefectus fabrum* Mamurra (29; 54; 57; 93). But finally Catullus was reconciled with Caesar (Suet. *Jul.* 73).

2. One hundred and sixteen poems are extant; but three (18-20) are spurious and omitted in modern editions. Arranged neither by chronology nor by subject, they nevertheless fall into three main groups: (a) 1-60,

short poems on various topics in lyric, sportive, erotic, abusive, or satiric vein; the metres are varied, but phalaeceans (hendecasyllabics) and, to a lesser degree, scazons prevail; (b) 61-4, longer pieces; two wedding hymns (61 and 62); the *Attis* (63), a story in tempestuous galliambics of a youth who became a eunuch-acolyte of Cybele; the *Marriage of Peleus and Thetis* (64), an epyllion (q.v.) in 408 hexameters; (c) 65-116, all in elegiac metre. Of these 65-8 and 76 may be called elegies. The rest are short poems of epigram type, as miscellaneous in spirit and content as 1-60. Poems on Lesbia occur in both (a) and (c).

3. Though Catullus' sources are mainly his own experience, observation, and genius, he owes much to earlier models. Laevius set the example of fitting Greek lyric metres to the Latin language; part of 64 contains imitations of his contemporary Lucretius; otherwise his debt to Roman literature is slight. But he draws for metre, technique, and sometimes for content on Greek poets, especially Sappho (notably 51), Pindar, Archilochus, Hipponax, and the Alexandrians. For many Catullan motifs, prototypes exist in the Greek Anthology (O. Hezel, *O. und das griechische Epigramm* (1932); A. L. Wheeler, *see* bibliography *infra*). But Catullus freely alters his models according to personal experience; his poems therefore bear a highly individual stamp.

4. Alexandrian influence was strong in his circle. The epithet *doctus* applied to him later (Ovid, *Am.* 3. 9. 62; Tib. 3. 6. 41; Mart. 1. 61. 1) practically means Alexandrian. Catullus' Alexandrianism (q.v.) is shown in his avoidance of drama and epic, his translation of Callimachus' *Lock of Berenice* (66), his experiment in epyllion (64), his adoption of Hellenistic motifs, his mythological and geographical allusions (especially in 11; 55; 64-6; 68), his use of balanced antithesis and various poetical artifices such as anaphora in manifold forms (J. van Gelder, *Woordherhaling bij C.*, 1933), and a partly symmetrical scheme (O. Friess, *Darstellungsumst Catulls*, 1929). He avoids, however, the worst Alexandrian faults: obscurity, over-cleverness, excess of erudition and allusiveness. *See also* ARCHAISM.

5. His great virtue is sincerity. Strong and simple utterance is given to deep feeling, whether love or hate for Lesbia, sorrow for his brother, or rapture over a friend's home-coming; he ranks with Sappho and Shelley among the greatest lyric poets of all time. His tenderness can appear even when he is not portraying his own concerns, as in the picture of babe and parents in 61. 209-13. His satire is sharp, lucid, and direct, whether aimed at miser, kleptomaniac, or dull writer, at ugliness, peculation, or immorality. Equally sincere is his feeling for nature. His raptures over Sirmio come straight from the heart. His similes are often drawn from Alpine scenery or from plants and flowers (e.g. 11. 22; 61 *passim*; 62. 39; 68. 57). He can construct word-pictures of extraordinary vividness, and here his fondness for colour is often apparent.

6. Catullus' diction, prevaillingly clear, direct, and simple (perhaps influenced by Italian folk-songs), presents some noticeable features. His lighter poems have a colloquial ring. He makes sudden changes in the person, animal, or thing addressed (3; 27; 28; 46). For himself he uses the first person or *Catullus* or *tuius Catullus* or apostrophizes himself in the vocative, often changing his practice within a single poem (6; 7; 8; 11; 13; 14; 38; 44; 56; 58; 72; 76; 79). Diminutives are frequent (Ellis, *Comm.* xxx), many doubtless of his own creation. Sometimes they have real diminutive force, but more often express tenderness or contempt.

7. In his hexametric poems (62 and 64) he is much more polished and less protaic than Lucretius. He only once (64. 141) ends a word at the end of the second foot without a strong caesura in that foot. Elision is comparatively rare. He has an Alexandrian tendency towards

spondaic fifth feet. His frequent closing of the sense at the end of lines with the corresponding rarity of enjambement makes for monotony. In elegiacs Catullus is uncouth compared with later elegists. The pentameter is marred by elisions at its caesura and in its later feet; it often ends in a word of three, four, or five syllables.

8. Catullus' influence was insufficiently recognized in antiquity. His adoption of Greek lyric metres and refinement of the hexameter pointed the path to Horace and Virgil respectively. To his epigrams Martial is indebted; and, as Catullus played a part in developing elegy out of epigram, he may be called the precursor of the Roman elegists. In the fourteenth century much is owed to him by Petrarch and other Italian humanists.

CATULLUS (2), a well-known Neronian mime-writer (Juv. 8. 185 ff., 13. 111; Mart. 5. 30. 3), whose lost works include a noisy piece *Phasma* (The Ghost) and a realistic one, *Laureolus*, in which the crucifixion of a notorious bandit was staged (Mart. *Spect.* 7. 4; Suet. *Calig.* 57; Joseph. *AJ* 19. 1. 13). J. W. D.

CATULUS (1), GAIUS LUTATIUS, was consul in 242 B.C. when Rome determined to renew naval warfare against Carthage. His great service was his decision to attack when a Carthaginian fleet appeared off Aegates Insulae (W. Sicily); there he terminated the First Punic War by a naval victory, 10 March 241. He negotiated peace terms with Hamilcar. H. H. S.

CATULUS (2) QUINTUS LUTATIUS (cos. 102 B.C.), an Optimat leader and the first of his family to reach the consulship for over a century, became one of the chief men of the State. He was, however, defeated three times in his candidature for the consulship, during the coalition of *Equites* and Democrats: his successful rivals were C. Atilius Serranus, 106 B.C.; Cn. Mallius, 105; C. Flavius Fimbria, 104. As Marius' colleague in the consulship in 102 Catulus failed to prevent the entry of the Cimbri into Italy: he had awaited them near Verona, and was forced back into the plains, but avoided a decisive battle. In 101, with Marius, he destroyed the Cimbri at Vercellae: according to surviving accounts, Catulus' army bore the brunt of the fighting. Catulus was active against Saturninus in 100. He served in the Social War. Having been proscribed by the Marians in 87, he committed suicide.

An aristocrat of the highest education and culture, Catulus had close connexions with the Scipionic circle, and succeeded Laelius Sapiens as a centre of culture (Cic. *Tusc.* 5. 56). He thus became a link between that circle in its latest phase and its most brilliant intellectual descendant, Cicero. Like Scipio Aemilianus, he combined military, political, and literary prestige, though the group of figures around him, such as Antipater of Sidon and Archias, Furius of Antium, Q. Roscius, and Valerius Aedituus, were rather representative of literature. His learned freedman Lutatius Daphnis, originally bought for 700,000 sesterces, was, Suetonius tells us (*Gram.* 3), jokingly called 'Pan's darling' by the Laevius Melissus whom some identify with Laevius (q.v.), author of an *Erotopaegnia*, and others consider non-existent (F. Lammer, *Hermes* lxii (1927), 251-3). Büttner's contention that Porcius Licinus (q.v.) belonged to the Scipionic

circle in Catulus' time is unlikely in view of Porcius' biased verses on Terence's relation to his patrons (D'Alton, *Roman Literary Theory and Criticism* (1931), 64). As a philosopher, Catulus was according to one source (Cic. *Acad. Pr.* 2. 148) an Academic-Sceptic of the school of Carneades, according to another (*De Or.* 3. 182) a Peripatetic. He composed speeches, among them a funeral oration on his mother Popillia—the first instance of a Roman woman so honoured. The charm and purity of his style are often praised by Cicero, who introduced him as a character in the *De Oratore*. Cicero eulogizes his fine pronunciation of Latin, while his command of Greek won the admiration of the Greeks themselves. He wrote a memoir on his own consulship in a charming Xenophontean style, which has probably coloured our accounts of the period. A work *communis (-es) historia (-ae)* is attributed to him, apparently a popular treatment of myths and local legends similar to 'Timaeus' *koivai istoriai*. We know further of two erotic epigrams. In one, imitating a theme of Callimachus, the author declares his desire to recapture his lost soul that his beloved Theotimus possesses, but fears that if he does so he may lose his body too. The other epigram addresses the actor Roscius.

Cf. Malcovati, *ORF* ii, 66 f., 154 f.; W. Morel, *FPL* 43; R. Büttner, *P. Licinus u. der literarische Kreis des Q. Lutatius Catulus* (1893). M. H. and L. R. P.

CATULUS (3), QUINTUS LUTATIUS (cos. 78 B.C.), opposed the subversive intrigues of his colleague Lepidus (q.v. 2) and finally defeated him outside the walls of Rome. In 70 Catulus acted as *iudex* at the trial of Verres, and shortly afterwards he became *princeps senatus* in all but name and title. As the recognized leader of the conservative party he opposed the proposals of Gabinius (q.v. 2; 67) and Manilius (q.v. 2; 66). In 65 he held the censorship with Crassus (q.v. 4), but the divergence between their aims led to stalemate (Plut. *Crass.* 13). His defeat by Caesar in the pontifical election of 63 was a bitter blow to him. He died in 61 or 60.

Catulus was a 'conservative' who was not blind to the faults of the Senate (Cic. *Verr.* 1. 15. 44). He was neither a brilliant general nor an outstanding orator; but his steadiness and his integrity were universally acknowledged (Cic. *Leg. Man.* 17. 51; *Sest.* 47. 101).

CAUCASUS. For long the Greeks knew only the name and great size of this range. Herodotus describes it as a vast high mountain with many primitive peoples, skirting the west side of the Caspian, and he knew of the Derbent pass. Others believed that it contained many lakes and large rivers. Alexander mistook the Hindu-Kush for part of the Caucasus, thus causing some confusion in Greek literature. Not much more was learnt until Pompey subdued the Iberi (see *IBERIA*). Strabo could give details of the Caucasus—a well-wooded barrier between the two seas and connected with the Armenian heights and Mt. Taurus; he described the customs of the natives and their use of snow-shoes and hides which served as toboggans. No accounts survive of subsequent discoveries.

Strabo 11, esp. pp. 499-506; Ptol. *Geog.* 5. 9. 14, 15. E. H. W.

CAUDEX, see **CLAUDIUS** (5).

CAUDINE FORKS, the narrow defile where a Roman army was trapped by, and surrendered to, Gavius Pontius (q.v.), 321 B.C. (Livy 9. 2-6). It lay in the territory of the Caudini Samnites, somewhere between Capua and Beneventum, but cannot be certainly identified. The Arienzo-Arpaia valley, the traditional site, contains the significantly named hamlet Forchia, but seems too small;

an objection that applies also to the valley between S. Agata de' Goti and Moiano. The plain between Arpaia and Montesarchio, although large enough, does not fit Livy's description.

See E. T. Salmon, *JRS* 1929, 12 and the literature there cited.

CAUPONES, see **COMMERCE**, para. 7.

CAVALRY, see **ARMIES**, **AUXILIA**.

CAVES, SACRED. It would appear that Greek cave-sanctuaries mostly belong either to pre-Hellenic cults or to Oriental importations: an exception is perhaps the cave-shrines of the Nymphs, common from Homer (*Od.* 13.347 ff.) on. The most famous is that of Zeus on Mt. Dictæ in Crete (cave of Psychro, Nilsson, *Minoan-Mycenaean Religion*, 393). This was vaguely remembered as his birthplace and belongs to the cult of the Cretan god identified with him. Hardly less celebrated was the cave of Trophonius at Lebadea (Farnell, *Hero-Cults*, 21; description, Paus. 9. 39. 5 ff.). Here the date of the cult is unknown. In Italy, one of the most celebrated holy caves was the Lupercal on the Palatine, where the Luperci met for their ritual (see Platner-Ashby, 321). This is undoubtedly old, but we have no reason to suppose the ceremony pre-Italic. Of imported cults in both countries, that most closely connected with caves, or artificial underground vaults, was Mithraism (see **MITHRAS**).

For Cybele and caves, cf. L. Robert, *Mélanges Bidez* (1934), 795 ff.; A. J. Festugière, *Rev. Bibl.* xliiv (1935), 382 f. H. J. R.

CEBES of Thebes, pupil of Philolaus the Pythagorean, and later of Socrates, plays an important part in the discussions in the *Phaedo*, and in the *Crito* is represented as one of those who were prepared to spend money in helping Socrates to escape from prison. The extant dialogue (probably belonging to the 1st c. A.D.) called *Κέβητος Θηβαῖος Πίναξ* makes no pretence to be by Socrates' friend, and has been ascribed to him by a mere error. It presents an eclectic doctrine which in spite of its Pythagorean setting owes more to Plato, Aristotle, and the Stoics than to the Pythagoreans.

Ed. K. Praechter (1893). *PIV* xi. 102.

CECROPS (*Κέκροψ*), mythical first king of Athens (though Actaeus is sometimes called first king), was a child of the Attic soil, though some late writers said that he was of Egyptian or Cretan origin. Sometimes it is said that his father was Hephaestus. As an indication of his autochthonous origin Cecrops is often represented as of serpent shape below the waist. By Aglauros or Agrauros, daughter of Actaeus, he had three daughters, Pandrosos, Herse, and Aglauros II. He was succeeded upon the throne by Cranaus. According to some writers there were two Cecropes who had ruled in Athens, the second being a son of Erechtheus.

Among late writers Cecrops had the reputation of having been a great benefactor of mankind. The story that he had instituted monogamy among men had its origin in a rationalistic interpretation of his double nature. He was also credited with the institution of burial of the dead and with the invention of writing. During his reign the contest of Athena and Poseidon for possession of Athens took place, and in some accounts he was judge of the contest. In a small structure on the Acropolis at the south-west corner of the Erechtheum the Athenians saw the tomb of Cecrops.

CELSUS (1) **ALBINOVANUS**, a friend of Horace (*Epist.* 1. 3. 15-20; 8. 1) and author of poems in which he showed himself too free a borrower.

CELSUS (2), **AULUS CORNELIUS**, under Tiberius (A.D. 14-37), wrote an encyclopaedia comprising agriculture, medicine, military science, rhetoric, and probably philosophy and jurisprudence (see **ENCYCLOPAEDIC LEARNING**). Apart from a few fragments of the other sections only the medical books are preserved. The work, dealing with the whole of medicine, is most important for the reconstruction of Hellenistic doctrines. The introduction outlines briefly but admirably the history of medicine up to the author's time. Celsus, a layman, writing for his own instruction and that of other laymen, selected with sound judgement his material from different sources (see **SURGERY**, para. 7). In philosophy he was a follower of the Sextii; in medicine he was influenced most strongly by Themison. The Latin of Celsus, the '*Cicero medicorum*', became the model of Renaissance writing when his book, almost unnoticed in antiquity and in the Middle Ages, was rediscovered and printed at a very early date.

CELSUS (3), **PUBLIUS JUVENTIUS**, a distinguished Roman jurist, was born before A.D. 77, praetor 106 or 107, *legatus* of Thrace, twice consul (the second time 129), member of Hadrian's *consilium*. He was chief of the school of Proculians and successor to his father, Juventius C., in this position. Probably his disciple, he surpassed the father considerably. Author of *Epistulae*, *Commentarii*, *Quaestiones*, and of excellent, chiefly casuistic *Digesta* (in 39 books)—a later work, written probably after the new redaction of the *Edict* under Hadrian. Celsus had a profound knowledge of the earlier literature, which he often cites, but he is not seldom a severe and even rude critic of other jurists' views, being himself an independent-spirited thinker. His constructions are original; his language is clear and as independent as his mind: no jurist's vocabulary is so rich in cutting expressions as his.

F. Stella Maranca, *Intorno ai frammenti di Celsio* (1915). A. B.

CELSUS (4), author of the first comprehensive philosophical polemic against Christianity, the *Ἀληθὴς λόγος*, written c. A.D. 178-80, of which the greater part is quoted in Origen's *Contra Celsum*; and of a book of advice to converts from Christianity. Celsus wrote from the standpoint of a Greek and a Platonist, but put certain objections to Christianity in the mouth of Jews in Egypt familiar with the *Logos*-theory. The *Ἀληθὴς λόγος* is important evidence for the knowledge of, and attitude towards, the Christianity of the Greek world; it shows knowledge of Gnostic sects as well as of the 'Great Church'. Celsus' criticism became part of the material for the Neoplatonic polemic against Christianity.

CELSUS, see also **ARMENTIUS** (3).

CELTIBERIANS, a powerful people of north central Spain. The name should be interpreted as proof of an intrusion of Iberians into territory once held by Celts (Schulten, *op. cit. infra*). A mingling of blood and of cultures resulted, but the combination was dominantly

Iberian. The poverty of the country dictated a simple life. Possibly the most valuable and certainly the most valued possession was the military equipment of the individual. The Hispanic (Iberian) sword, which became standard equipment for the Roman legionary, attained its best form and quality in Celtiberian workshops. The most dramatic events of their long struggle with Rome (intermittently from 195 to 133 B.C.: first Celtiberian War 181-179, second 153-151, third or Numantine 143-133) are concerned with Numantia (q.v.), the most important town of Celtiberia. Even after the Celtiberi were conquered their influence persisted. The comb and mantilla of nineteenth-century Spain have been traced to Celtiberian originals.

A. Schulten, *Numantia*, 4 vols. (Munich, 1914-31): a completely documented introduction (i. 1-160) describes the land and people of Celtiberia. For a different view of Celtiberian origins, see P. Bosch Gimpera, *Etnología de la Península Ibérica* (1932). J. J. Van N.

CELTS, a name applied by ancient writers to a population group occupying mainly lands north of the Mediterranean region from Galicia and Ireland in the West to Galatia in the East. Their unity is recognizable by common speech and common artistic tradition. (1) Dialects of Celtic are still spoken (Ireland, Scotland, Wales, Brittany), or are attested by inscriptions, quotations, and place-names in this area. The language seems closely akin to the Italian group, showing like it a division between 'q' and 'p' renderings of the velar guttural. The significance of this division is still obscure. (2) The artistic unity is expressed in the La Tène style (called from the Swiss type-site), which appears c. 500 B.C. It derived principally from living Italo-Greek styles, but archaic Hellenic motives which had survived in a Villanovan backwater are also noticeable, as well as eastern influences conveyed by way of Scythia. Out of these chronologically and regionally different borrowings the Celts evolved a very idiosyncratic art of swinging, swelling lines, at its best alive and yet reposeful.

2. This Celtic culture obviously flowed over earlier cultural regions, and the origin of the Celts is still uncertain, not least because the La Tène style appears somewhat catastrophically, and its relations to the preceding Hallstatt artistic phase are difficult to determine. It is generally supposed that a Celtic diffusion from southern Germany was part of the general migrations induced by worsening climatic conditions in the later Bronze Age. Bosch Gimpera sees the earliest Celtic movement in an invasion of Catalonia (c. 900 B.C.); subsequent movements overflowed France and north-west Spain. Celts may have reached the British islands in the later Bronze Age (c. 900), and the Hallstatt invasions of the sixth century and later were fairly certainly Celtic. Southward the Celts penetrated Italy, sacking Rome in 390; eastward they penetrated into Bohemia (Boii), descended the Danube, and raided Delphi (279). Another band crossed the Hellespont (278), and founded a State (Galatia), where Celtic was still spoken in the fifth century A.D.

3. The ancients knew the Celts as fierce fighters and superb horsemen, and noticed the savagery of their religious rites conducted by the priesthood, the Druids, who derived their doctrine from Britain. But Celtic political sense was weak, and they were crushed between the migratory Germans and the power of Rome, to be ejected (e.g. from Bohemia and south Germany), or more or less assimilated (as Belgae, q.v.) by the former, and conquered outright by the latter. Only in the far West did a vital Celtic culture persist, to borrow again from the Mediterranean, and to flower in works of art such as the Book of Kells, and of the spirit, as in the achievement of the Celtic saints, Columbanus, Gallus, and Aidan.

CENOMANI, Gauls, reputed to be Auleri, who established themselves in Cisalpine Gaul c. 400 B.C. (Polyb. 2. 17; Strabo 5. 216). Their territory lay around Lake Garda. Chief towns: Brixia and probably Verona and Bergomum (Livy 5. 35). The Cenomani usually supported Rome, e.g. in 225 B.C. against Boii and Insubres and in 218 against Hannibal (Polyb. 2. 23, 24, 32; Livy 21. 55). In 200, however, they joined Hamilcar, but were quickly subjugated and romanized, disappearing from history (Livy 31. 10; 32. 30). In 49 B.C. Gallia Transpadana, including the Cenomani district, obtained Roman citizenship. For bibliography see **CISALPINE GAUL**.

E. T. S.

CENSOR (cf. *censere*, to estimate) was the title of a Roman magistrate who, although lacking *imperium* and the right to an escort of lictors, nevertheless possessed great authority, since he controlled public morals and supervised the leasing of public areas and buildings. The censorship was probably instituted c. 443 B.C. as a patrician and civil magistracy, in order to make up and maintain the official list of citizens, or *census* (q.v.). If a citizen was found guilty of suppressing or delaying information about his status and property, the censors (who always numbered two, in obedience to the principle of collegiality) were empowered to take judicial proceedings against him. The enrolment of the population, which generally took place in spring (probably in May), ended in a religious ceremony called *lustrum* ('cleansing', see **LUSTRATION**). Originally this ceremony was held *quinto quoque anno*, i.e. every four years, but from 209 B.C. onwards the formula was taken to mean every five years, and the interval between two celebrations was called a *lustrum*. The censors entered their office in early spring and the tenure lasted for eighteen months, the revised roll being issued twelve or fifteen months after their appointment. This registration took place in a special building in the Campus Martius. The *equitum census*, i.e. the making up of the list of those liable to cavalry service, was held in the Forum. The censors had the right of striking off the names of those who had given false statements, or who no longer merited the privilege of fighting as knights, owing to unbecoming behaviour at home or on military service, for bad administration of provinces, public property, and the like.

The censorship became accessible to the plebeians at the latest in 351 B.C., and one of the *Leges Publiciae* of 339 declared that at least one censor must be a plebeian, although two collegiate plebeian censors were not elected until 131. The power of the censors reached its zenith in the third and second centuries, largely owing to the *Lex Ovinia* (c. 312 B.C.), which empowered the censors to keep the senatorial rolls and revise them periodically, a function previously fulfilled by the consuls: they were to strike off such senators as had not observed the *ordo magistratum* or had acted against law and public morality. The authority of the censorship was greatly reduced by Sulla and, although down till the Augustan age several distinguished citizens still filled the office, yet the censorship was doomed, and was rendered a dead

letter when Domitian appointed himself censor for life. Thereafter other officials were entrusted with the censorial functions.

Mommsen, *Röm. Staatsr.* ii³, 1, 334 ff.; J. W. Kubitschek, *PIV*, s.v.; H. F. Jolowicz, *Hist. Introduction to the Study of Roman Law*³ (1939), 36 f., 50 ff.; A. Klotz, *Rh. Mus.* 1939; R. V. Cram, *Hav. Stud.* 1940 (fasti). P. T.

CENSORINUS (3rd c. A.D.), a Roman grammarian, (Prisc. 1. 4. 17) wrote *De Accentibus* (lost), and a 'De Die Natali uolumen illustre' (Sid. Apoll. *Carm.* 14 (Epist. § 3)), which is preserved. It is dedicated to Q. Caerellius on his forty-ninth birthday in A.D. 238. The parade of crudition is affected. The first part deals with human life from birth to death, and the influence of the planets; the second with time and its divisions, apparently an abstract of Varro, *Antiquitates rerum humanarum*, bks. 14-19. In the archetype MS. the last pages were lost as well as the beginning of an encyclopaedic work which was copied along with it, and has been quoted (since L. Carrion's edition, Paris, 1583) as *fragmentum Censorini*.

Editions: O. Jahn (1845); F. Hultsch (1867); J. Chlodniak (1889). On sources (Suetonius, etc.), Schanz-Hosius-Krüger, *Gesch. röm. Lit.* iii (1922). G. C. R.

CENSUS, a national register which was prepared at Rome from the time of the kings for taxation and military service. The holding of a census was at first the duty of the king, then of the consuls, and from 443 B.C. of the censors (q.v.). A census was normally held at intervals of five years. The citizens were registered in tribes and distributed into five classes according to their wealth: each class was subdivided into *seniores* and *iuniores*. They were required to state their full name and age and the amount of their property (*Lex Iulia Municipalis*, 145). The names of women and children were not included in the census, but parents gave information about their families (Dion. Hal. *Ant. Rom.* 4. 15). Under the later Republic the census was taken very irregularly, but it was revived by Augustus, who held it three times (*Mon. Anc.* 8). The last regular census was held in Italy by Vespasian and Titus: it had come to be unnecessary here, as Italians had become exempt from direct taxation and normally from compulsory military service. The taking of a census was concluded with a religious purification (see *Lustration*). In the *Lex Iulia Municipalis* the chief magistrates of Italian towns are ordered to take a census simultaneously with the holding of one in Rome, and this must have been done earlier in communities possessing Roman citizenship (see Livy 29. 15).

In some provinces, e.g. Sicily (Cic. *Verr.* 2. 131), a local census was held even in Republican times, but it was not till the reign of Augustus that the census was organized by the Imperial Government. Information could be easily acquired in the municipalized senatorial provinces. Augustus was well informed by 7 B.C. about the wealth of the people of Cyrene (*SEG* ix. 1. 8). But new machinery had to be set up in the more backward provinces, where organized city life did not exist. A census was held in Gaul in 27 B.C., A.D. 14 and 61, and the census held in Judaea after its annexation in the governorship of Quirinius is famous. Most of the inscriptions referring to officials of the census come from imperial provinces. The governor was normally responsible and records the fact in his inscriptions, but many other men of senatorial and later of equestrian rank were concerned with the matter (*ILS* iii, Index, p. 351), and unimportant officials were entrusted with the duty in particular districts, e.g. Q. Aemilius Secundus, who when prefect of a cohort conducted the census of Apamea under Quirinius (*ILS* 2683). The census-return included full details of the character and extent of cultivated land and the number of slaves owned (*Dic.* 4. 15. 4), and of other forms of property. This information was necessary to those responsible for levying the *tributum soli* and

tributum capitis. It was probably the duty of governors to keep the register up to date, but no regular census-period seems to have been prescribed.

A. H. J. Greenidge, *Roman Public Life* (1901), 221 ff., 429 ff. G. H. S.

CENTAURS, a tribe of wild, beast-like monsters usually thought of as having the upper part of a human being and the lower part of a horse. Centaurs live in woods or mountains of Elis, Arcadia, and Thessaly. In the *Iliad* they are described as 'beasts' (*φῆρες*; and cf. *Od.* 21. 303). Possibly the conception of horse-shaped centaurs originated with the horse-breeders of Thessaly. Myths of Centaurs must be very old, since they occur in Homer, in late Mycenaean, and in early orientaling art. For the Greeks Centaurs are representative of wild life, animal desires, and barbarism. They are lustful and over-fond of wine. Their fight against the Lapiths, whose king Peirithous invited Centaurs to his marriage (*Il.* 1. 262; 2. 742; *Od.* 21. 295 ff.; [Hes.] *Sc.* 178 ff.) is famous. Either one (Eurytion) or several Centaurs attempted to rape the Lapith women. In the ensuing fray the Centaurs were routed, although they killed the invulnerable Caeneus. Heracles had a clash with Centaurs when he visited the Centaur Pholus. Attracted by the smell of wine, Centaurs assailed Heracles with rocks and stones, but were beaten back with fire-brands and arrows and fled to Cape Malea.

Individual Centaurs have myths of their own. Nessus offered to carry Deianira across the river Euenus and then attempted to rape her (Arehilochus in Dio Chrys. 60). Heracles killed him with his sword or with arrows. This scene is a great favourite with archaic vase-painters. Before Nessus died he gave to Deianira the garment which later caused the death of Heracles (Soph. *Trach.*). Chiron is the wise and kind old medicine-man among the Centaurs. He is of divine origin, son of Kronos and Philyra (Apollod. 1. 9; Pherecyd. in schol. Ap. Rhod. 1. 554), well versed in medicine (*Il.* 4. 219) and other arts, and educates divine children and heroes, Achilles, Asclepius, and Jason. He also helps Peleus to woo Thetis (*Cypria* fr. 2; Apollod. 3. 170). Chiron had a cult in Thessaly.

The Centaurs are sometimes children of Ixion (q.v.), but in Pindar the offspring of Centaurus, son of Ixion and Nephelē, who mated with mares near Mt. Pelion (Pind. *Pyth.* 1. 36).

In art, the earliest Centaurs brandish boughs or hunt. The Nessus episode appears in the seventh century B.C. (J. M. Cook, *BSA* 1934-5, 191). The fight with the Lapiths occurs on the famous François vase and in sculpture on the pediment of the temple of Zeus in Olympia. Later, Centaurs join the Dionysiac *thiasos* and are so shown on Roman funeral reliefs. (Cf. Nonnus, *Dion.* 14. 49, 143, 193.)

P. V. C. Baur, *Centaurs in Ancient Art* (1912); J. E. Harrison, *Prel. to the Study of Greek Religion* (1922), 380; P. Kretschmer, *Glossa* 1919; H. Payne, *Neocorinthia* (1932). G. M. A. H.

CENTO. I. GRÆC. A patchwork (*cento*, a patchwork cloak) of existing verses, sometimes humorous in intention, sometimes not. 'Trygaeus' improvisation at Ar. *Pax* 1090-4 is an early example, and in the *Frogs* (1264 ff., 1285 ff., and 1309 ff.) the cento is pressed into the service of literary criticism. Lucian (*Symp.* 17) mentions a 'very funny song', made of a medley of Hesiod, Anacreon, and Pindar. Cf. also *Anth. Pal.* ix. 381-2. 'Opportunity' were composed in Byzantine times, e.g. by the Empress Eudocia in the fifth century A.D. Many parodies, e.g. the one of Homer quoted by Dio Chrysostom in *Or.* 32 (see Brandt, *Corpus poet. ep. graec. iudic.*, pp. 100 ff.) are virtually centos.

G. Kassel, *Fragmenta Graeca et Latina antiqua* (1933), 1009; E. Simplicius, *De Sophist. in der griech. Lit.* (1912), 101-3. J. B. D.

II. **LATIN.** In Latin, cento-making originated when an age fertile in perversity began to look for amusement in Virgil. Lines from his poems, learned by heart in school, were strung together to form a new whole, 'de inconexis continuum, de diuersis unum, de seriis ludicrum' (Ausonius, *Cent. Nupt.*, praef.). Such works were the *Medea* of Hosidius Geta, a contemporary of Tertullian, the anonymous *De Alea*, and Ausonius' *Cento Nuptialis*, written at Valentinian's request c. A.D. 368, an unpleasantly clever poem whose preface clearly explains the author's method and purpose.

Parody gave way to demonstrations of Virgil's 'anima naturaliter Christiana'. In the fourth century, the poetess Proba wrote biblical history in cento form; Pomponius modelled his *Tityrus* on the first Eclogue. Other centos are the *De Incarnatione Verbi* (formerly attributed to Sedulius) and the *De Ecclesia*, in which the author (probably Mavortius, author also of a *Iudicium Paridis*) deprecates the title 'Maro Iunior'. In 494 Pope Gelasius decreed 'centimetrum de Christo, Vergilianis compaginatum uersibus, apocryphum'.

References in Isidore show continued interest in cento; it reappears in Columban (6th c.), Waldrum (9th c.), and in the tenth-century *Ecbasis Captivi*, although other authors besides Virgil are now drawn upon.

R. G. A.

CENTUMVIRI, a special court of justice in Rome, created not before 240 B.C. and probably about 150 B.C., for more important civil lawsuits, particularly for all kinds of *vindicationes* and for *causae hereditariae* (*hereditatis petitio, querella inofficiosi testamenti*). The *centumviri* functioned only in the second stage of civil proceedings in place of the private *unus iudex*; the procedure *in iure* in these cases was reserved for the magistrate as in normal proceedings. For each particular case allotted to the *centumvirale iudicium* a special tribunal was selected, presided over firstly by a magistrate, later by a member of the Decemviral College (see **VIGINTISEXVIRI**), and composed of an unknown and rather numerous group of judges taken from the *centumviral* panel. It is noticeable that the whole college did not number a hundred persons, but 105 (three from each *tribus*), and later even 180. We do not know precisely for what reasons a matter was brought before the *centumviri*; it may be that the special importance of the case (for instance the high value of an inheritance) was decisive for this purpose, perhaps also a consideration of a procedural character, such as an agreement or a common petition of both the parties. The question whether the stage *apud iudicem* should come before the *centumviri* had to be settled in the preliminary proceedings *in iure*, because in such cases procedure by *legis actio sacramento* was prescribed even in later times, when the formulary procedure was otherwise obligatory. The practice of the *centumviral* courts had a great influence on the development of the Roman law of succession.

A. B.

CENTURIA was the smallest unit of the Roman legion. Each legion contained 60 centuries (see **LEGION**, para. 1; **MANIPULUS**).

According to tradition, Servius Tullius founded a new political assembly based on the centuries. The real date of this reform is doubtful, and many scholars prefer the middle or the end of the fifth century B.C. The assembly consisted of 18 centuries of horsemen, 6 of which were called *sex suffragia*, and 170 centuries of foot-soldiers. The foot-soldiers were divided into five *classes* (q.v.) according to their census. The first class fell into 40 centuries of *iuniores* (between 17 and 45 years) and 40 of

seniores (between 46 and 60); the second, the third, and the fourth into 10 centuries of *seniores* and *iuniores* apiece, and the fifth into 15 of each category. Five centuries of non-combatants, including one of *capite censi* (*proletarii*), were attached; two of these centuries (of *fabri*) were apparently ranked with the first class. The age limit of sixty for the *seniores* disappeared in the centuries of the *comitia*.

Between 241 and 218 B.C. the distribution of the centuries underwent a reform about which Livy (i. 53. 12) and Cicero (*Rep.* 2. 22. 39) leave us uncertain, except to show that its object was to correlate the centuries and the local tribes, and that the first class was reduced to 70 centuries. Some scholars hold that each class was now equally divided into 35 centuries of seniors and 35 of juniors; but others hold that the number of the centuries remained fixed at 193.

The name *centuria* was also used for the block of 100 *heredia* (little allotments, theoretically each of 2 *iugera*), which was the unit for the delimitation of the *ager publicus*.

See **COMITIA**.

A. M.

CENTURIO. The centurions were the principal professional officers in the Roman army. There were sixty in each legion. In the post-Marian army each of the ten cohorts had six centurions: *pilus primus*, *pilus posterior*, *princeps prior*, *princeps posterior*, *hastatus prior*, and *hastatus posterior*. Apart, however, from those of the first cohort there was little difference in rank among the six centurions of each cohort. Consequently a centurion was promoted from cohort to cohort, not infrequently with a change of legion, until he reached the first cohort. He had now entered the *primi ordines*, and inside this group a strict seniority was observed, with the post of *primus pilus* as the final honour.

During the Republic centurions were selected from the common soldiers; under the Principate some of them were *ex equite Romano*, i.e. men who had started and then resigned an equestrian career, or ex-praetorians (*evocati*). They were attracted by high pay (five times that of the praetorian soldier), and good prospects on retirement. See also **PRIMPILUS**.

In the pre-Marian army the maniples (see **MANIPULUS**) was commanded in battle by the centurion of the right-hand century; when the cohort (*sec cohors*) superseded the maniples each was probably commanded by its *pilus prior* centurion.

Centurions are also found in the *Auxilia* and the Praetorians (qq.v.), but without the distinguishing titles of their legionary counterparts.

H. Wegeleben, *Die Rangordnung der römischen Centurionen*; A. von Domaszewski, *Die Rangordnung des römischen Heeres* (1908); H. M. D. Parker, *The Roman Legions* (1928).

H. M. D. P.

CEPHALAS, CONSTANTINUS, a Byzantine Greek of the tenth century, compiled the great Palatine Anthology (q.v.) of Greek epigrams. Little is known of his personality: he was one of the many industrious collectors, like 'Suidas', who were set to work to preserve relics of classical antiquity by the learned emperor Constantine VII Porphyrogenetos (912-59).

G. H.

CEPHALUS, a hero, apparently Attic. He is eponym of the Attic *genos Κεφαλίδαι* (Hesych. s.v.), marries Procris (q.v.), and lives at Thoricus (Pherecydes, infra).

He has, however, connexions outside Attica, for he takes part with his hound in the hunt for the Teumessian vixen (see AMPHITRYON), in the Cyclic *Epigoni* (fr. 2 Allen); he marries Clymene daughter of Minyas (*Nostoi*, fr. 4 Allen). His principal adventures are: (1) his affair with Eos (q.v.), first in Hesiod (*Theog.* 986), where their son is Phaëthon the attendant of Aphrodite. Generally (e.g. *Ov. Met.* 7. 704, supported by much earlier evidence from art, see Roscher's *Lex.* s.v.), she carries him off. (2) His jealousy of Procris. To test her, he stayed away for eight years, came back in disguise, and succeeded in obtaining her favours (schol. V on *Od.* 11. 321, citing Pherecydes). (3) Her jealousy of him, because he spent so much time hunting (Pherecydes, *ibid.*, cf. Ovid, *ibid.* 796 ff.). Learning that he was accustomed to call for a cloud, *νεφέλη* (Pherec.), or a breeze, *aura* (Ovid), to cool him, she supposed this the name of a mistress, followed him in hiding, and was killed by his throwing-spear, which he flung at her supposing her to be a beast (the spear never missed, *Ov.*, *ibid.* 683; further fanciful details of the legend, *Hyg. Fab.* 189). That Cephalus was eponym of Cephallenia (Arist. in *Etym. Magn.* 144. 26), is hardly more than a pun. His father is regularly Deion or Deioneus.

H. J. R.

CEPHEUS (*Κηφεύς*), name of four or five mythological persons, the best-known being the father of Andromeda (q.v.). Though generally called an Ethiopian from Euripides on, he and consequently the whole legend are very variously located; for particulars cf. Tümpel, in Roscher's *Lexikon* ii. 1109-13.

H. J. R.

CEPHISODORUS (1) (fl. c. 400 B.C.), writer of Old Comedy (*IG* ii². 2325; *Lys.* 21. 4 *Κηφισοδότω* codd.). The *Ἀντίλας* satirized the *ἐταῖρα* Laïs.

FCG i. 267-9; CAF i. 800-2.

CEPHISODORUS (2) of Thebes, pupil of Isocrates, wrote a history of the Sacred War and a treatise directed against Aristotle.

FHG ii. 85-6.

CEPHISODOTUS (1), sculptor, Athenian, probably father of Praxiteles (q.v.), and a brother-in-law of Phocion. Pliny dates 372, probably by the Irene group. Selected works: 1. Irene and the infant Plutus, on the Areopagus (the Irene cult was introduced 375); marble copies at Munich, etc. (Winter, *KB* 293. 3). 2. Hermes with the infant Dionysus; attributed from likeness to Irene. 3. Dionysus; marble copies in the British Museum, etc. (Winter, *KB* 293. 4). 4. Hygieia; original head in Athens, copies in Melchett collection, etc. Cephisodotus develops Phidian tradition, forerunner of Praxiteles.

Overbeck, 878, 1137-43; B. Ashmole, *BSR* x. 1. T. B. L. W.

CEPHISODOTUS (2), sculptor, Athenian, son of Praxiteles. Pliny dates 296 B.C. (inscription of 344-343, published as signature of Cephisodotus, probably refers to dedicator). Selected works: 1 (with his brother Timarchus). Lycurgus and his sons, probably after Lycurgus' death 323. 2 (with Timarchus). Menander, in the theatre at Athens, probably after Menander's death, 291; copies of head at Boston, etc. (Winter, *KB* 320. 4). 3 (with Timarchus). Statues on the altar of the Asclepeion at Cos (Herod. 4. 1-26); fragments have been discovered. 4 (with Euthykrates, son of Lysippus). Anyte (fl. 284). 5. Symplegma (erotic group) in Pergamum. 6. Leto, later on the Palatine; reproduced on the Sorrento base. He continued the Praxitelean tradition into the third century.

Overbeck, 1331-41; M. Bieber, *JDAI* 1923-4. 242. T. B. L. W.

CEPHISSUS (*Κηφισεύς*), the name of several rivers, the best known being the Attic and the Boeotian Cephisus. The Attic Cephisus was the main river of the Plain of

Athens, gathering all sources of the mountains around, and emptying itself into the bay of Phalerum; its water, divided into many trenches, irrigates the plain west of Athens (cf. *Soph.* *OC* 685). The Boeotian Cephisus springs from the northern Parnassus, near Lilaea, and waters the plains of Phocis and northern Boeotia, debouching into the lake Copais.

Bölke, *PIW*, s.v. 'Kephissos'.

V. E.

CERBERUS, monstrous dog guarding the entrance to the lower world. According to Hesiod (*Theog.* 311) C. is the son of Typhon and Echidna, has fifty heads and a voice like bronze. He is often referred to simply as 'the dog of Hades'. The canonical type of C., established in late archaic and classical literature and art (*Eur. HF* 611), shows him with three heads and mane or tail of snakes. C. is most frequently mentioned in connexion with the descent of Heracles to Hades (*Il.* 8. 367; *Apollod.* 2. 5. 12). With the permission of Hades Heracles dragged C. out of the lower world, showed him to Eurystheus, and then returned him to Hades. This episode is depicted with much gusto on the Caeretan *hydriae* in the Louvre and the Museo Villa Giulia (E. Pfuhl, *Malerei und Zeichnung der Griechen*, pl. 36, fig. 154, and G. Q. Giglioli, *Arte etrusca*, 1934, pl. 128, 3). The same scene appeared on the Amyclaeon throne (*Paus.* 3. 18. 9, Frazer).

S. Eitrem, *PIW*, s.v. 'Kerberos'.

G. M. A. II.

CERCIDAS (c. 290-c. 220 B.C.), of Megalopolis, was friendly with Aratus of Sicyon, who sent him c. 226 to Antigonos Doson to ask the latter's intervention on behalf of the Achaean League against Cleomenes (Polyb. 2. 48). In 222 before the battle of Sellasia C. is mentioned as the leader of 1,000 men from Megalopolis (Polyb. 2. 65). Other authorities refer to C.'s success as a lawgiver, alluding probably to the restoration of liberty at Megalopolis after the tyranny of Lydiadas (235). An alternative description of C. as a Cretan (*Diog. Laert.* 6. 76) may indicate his residence in the island during that tyranny. Outside politics, C. attained fame as a Cynic philosopher and poet.

WORKS. Literary sources have preserved only nine short fragments of C.'s verse. Of these one (fr. 14 Powell) is cited from the *Iambi*. It proves that the work was in the choliambic or seazon metre and may come from a diatribe against luxury. An attempt has been made (by A. D. Knox, *The First Greek Anthologist*, 1922) to claim C. as the editor of an anthology of moralizing verse preserved in several papyri, and possibly the author of some of the pieces written in seazons. But C.'s best-known work was his *Meliambi*, i.e. poems lyrical in form, but satiric in content. Substantial remains, preserved in *POxy.* 1082, show that C. was a skilful and original metrist and a keen critic of social conditions in his day. Though a member of the property-owning class, he makes himself in these poems the mouthpiece of the poor and oppressed, and attacking the cult of wealth and its attendant vices exhorts his fellows to mend their ways while there is yet time. In his use of verse to inculcate the Cynic view of life and in his mixture of the earnest and the jesting C. was clearly influenced by Crates of Thebes, whose example was followed about the same time by Menippus of Gadara (qq.v.); but his opinions seem to have been formed chiefly by the example of the sect's founder, Diogenes, to whom he pays a glowing tribute (fr. 1), and by the teaching of Bion (q.v.) the Borysthenite. The so-called 'Diatribe Style', of which Bion is the reputed founder, finds frequent illustration in C.'s verse, but he combines with it other features, such as new and lengthy compounds, which derive rather from the dithyramb, Old Comedy, and Tynon of Phlius. His skilful use of citations from Homer, of whose poetry he is said to have been a warm admirer, and from Euripides is in the Cynic

vein. The language of the *Meliambi* is a literary Doric which avoids local peculiarities and pedantic consistency. See also IAMBIC POETRY, GREEK.

Texts: J. U. Powell, *Collectanea Alexandrina* (1925), 201-19; A. D. Knox, *Herodes, Cercidas, and the Greek Choliambic Poets* (Loeb, 1929), 190-238; E. Diehl, *Anthologia Lyrica* iii (1923), 305-14. General literature: G. A. Gerhard, 'Kerkidas (2)', in *PW* ix. 294-308, also *Phoenix von Kolophon* (1909); J. U. Powell and E. A. Barber, *New Chapters in the History of Greek Literature* (1921), 1-12. E. A. B.

CERCOPS OF MILETUS (? 6th c. B.C.), epic poet, to whom (or to Hesiod) is ascribed the *Aegimius* (on the Dorian hero Aegimius who fought against the Lapithae).

EGF 82-5.

CEREALIS, see JULIUS (4).

CERES, an ancient Italian corn-goddess, commonly identified in antiquity with Demeter (q.v.). Her name (Oscan *Kerri*-, see the 'Curse of Vibia', Conway 130, 1) suggests that of Cerus ('in carmine Saliari Cerus manus intellegitur creator bonus', Festus, p. 109, 7 Lindsay), but in cult she is found associated not with him but with Tellus Mater (q.v.). This is shown by the juxtaposition of their festivals (Fordicidia, to Tellus, 15 April; Cerialia, 19 April) and the fact that the *feriae sementinae* are celebrated in January in honour of both (Ov. *Fast.* 1. 657 ff., on which cf. Frazer). The occurrence of the Cerialia on the calendars and the existence of a *flamen Cerialis* testify to the antiquity of Ceres' cult at Rome, but her whole early history is extremely obscure, particularly her relations, if any, with non-Italian (Greek) deities; see, for some ingenious conjectures, Altheim, *Terra Mater* (1931), 108 ff. One of the many difficulties is to determine whether the rite of swinging attested by 'Probus' on Verg. *G.* 1. 385-9 as used at the *feriae sementinae* is really, as he says, borrowed from the Attic *αἰώπα* (see ERIGONE) or an independent development. Another is the question whether the long list of minor deities invoked by the officiant on the same occasion (Servius on *G.* 1. 21) arises out of genuinely early ideas or is a relatively late priestly elaboration (see Rose in *JRS* iii (1913), 233 ff.).

There is, however, no doubt that Ceres' most famous cult, that on the Aventine (introduced 493 B.C.), is largely under Greek influence. She is there worshipped with Liber and Libera, the triad apparently representing the Eleusinian group of Demeter, Kore, and Iacchus (but see Altheim, op. cit. 15 ff.). The temple became a centre of plebeian activities, was supervised by the plebeian *aediles Ceresis*, and was connected with the *ludi Cerialis* which became a prominent feature of the Cerialia. To this Greek cult belongs also, no doubt, the annual festival conducted by the women in August, called Greek and an initiation by Cicero (*Leg.* 2. 21); also probably Ceres' occasional association with the underworld (as in the 'Curse of Vibia', above), the purely Roman goddess in this connexion being Tellus (as Livy 8. 6. 10). See also MUNDUS.

Wissowa, *RK* 191 ff., 297 ff.; F. Altheim, *A History of Roman Religion*, passim. H. J. R.

CERIALIS CAESIUS RUFUS, QUINTUS PETILLIUS (cos. suff. A.D. 70, cos. II suff. 74), a relative of Vespasian. Legate of Legio IX Hispana in Britain, he suffered a serious defeat in the revolt of Boudicca (61). With the Flavian forces at the capture of Rome, he was sent to restore order in Gaul and the Rhineland. He won a battle at Rigodulum, captured the city of the Treveri, and then proceeded to deal with Civilis and Classicus: after confused fighting the latter capitulated (towards the end of 70). Cerialis was next appointed legate of Britain (71-4), in which command he shattered the power of the Brigantes and made extensive conquests in northern England (cf. Tac. *Agr.* 17). Nothing more is heard of him after his second consulship. R. S.

CERSOBLEPTES, a king of the Odrysae in south-east Thraee from 360 to 342 B.C. In the early part of his reign he was a rival of Athens for the possession of the Thracian Chersonese. Hampered by the presence of two pretenders to his throne, he ceded to the Athenians the whole peninsula except the town of Cardia (358-357). He subsequently drew closer to Athens, under the threat of Macedonian aggression, but he did not obtain an alliance; and was excluded from the peace of 346. In the same year he capitulated to Philip of Macedon, and after a rebellion in 342 he was deposed. M. C.

CERVIDIUS, see SCAEVOLA (5).

CESTIUS (1) (EPULO), GAIUS, tribune and praetor of the Augustan age; among his heirs was M. Agrippa. A pyramid was erected on the Via Ostiensis as his tomb (*ILS* 917).

PIR³, C 686.

CESTIUS (2) PIUS, LUCIUS, Augustan rhetor, a Greek from Smyrna; a popular teacher distinguished for his conceit, his outspoken wit, and his dislike of Cicero, to several of whose speeches he wrote answers (Sen. *Controv.* 7 *praef.* 8-9).

CESTIUS (3) GALLUS, GAIUS (cos. suff. A.D. 42), was legate of Syria from 63 (or 65) to 67. In 66 he marched into Palestine to restore calm, but failed to occupy Jerusalem and on his withdrawal was defeated at Beth-horon. He died in 67.

PIR³, C 691.

CETHĒGUS, GAIUS CORNELIUS, a Roman senator who conspired with Catiline. He was left in Rome with P. Lentulus Sura to murder the leading senators. He was condemned to death (63 B.C.).

CETO, see GORGO.

CEYX, in mythology, (1) king of Trachis, friend of Heracles, and father-in-law of Cyrenus son of Ares (*[Hesiod]*, *Sc.* 354 ff.). (2) Son of the Morning Star; husband of Alcyone daughter of Aeolus (1) or (2). He and his wife were turned into the birds which bear their names (see Sir D'A. W. Thompson, *Glossary*², s.vv.) as punishment for calling themselves Zcus and Hcra (Apollod. 1. 52); or, he was drowned and she, finding his body, leaped into the sea and both were changed by the pity of the gods (Ov. *Met.* 11. 410 ff.). H. J. R.

CHABRIAS (d. 357 B.C.), a professional soldier who after 390 B.C. fought successfully for Athens and for the rebellious kings of Cyprus and Egypt. He invented a useful method of defence against hoplites. After the naval victory over Sparta near Naxos (376) he gained many allies for the Athenian Confederacy, together with Timotheus (q.v.), whom he subsequently impeached. He was elected general several times. Finally accused of treachery, but acquitted (after 366), he once more supported an Egyptian king, Tachus, against Persia, together with old Agesilaus (q.v.; 360). In 357 he fell at Chios, fighting gallantly.

Nepos, *Chabrias*; Xen. *Hell.* 5. 1 ff.; Diod. 15. 29 ff. Cf. *Prosop. Att.* 15086. H. W. Parke, *Greek Mercenary Soldiers* (1933). V. E.

CHAEREA, see CASSIUS (10).

CHAEREMON (1); tragic poet of about the middle of the fourth century B.C., wrote a *Centaur* which Aristotle (*Poet.* 1) calls 'a rhapsody in which all metres were mixed'. The term 'rhapsody' may imply some affinity to epic poetry; his plays were better adapted for reading than for performance (Arist. *Rh.* 3. 12) and indulged in far-fetched and artificial metaphors, some of which might almost be parodies of the style of Aeschylus, though others are picturesque. Athenaeus' description of him (13, p. 608 d)

as 'especially fond of flowers' is supported by several fragments in which they are mentioned, and a passage from the *Oeneus* shows some descriptive power and feeling for beauty of colour. A few epigrammatic and even cynical lines also survive.

TGF 781-92.

A. W. P.-C.

CHAEREMON (2), a Stoic, teacher of Nero, wrote, *inter alia*, on astronomy, history, and grammar (*Σύνδεσμοι παραπληρωματικοί*). Not extant.

CHAEREPHON, of Sphettus in Attica, an enthusiastic disciple of Socrates. He was banished by the Thirty Tyrants and returned with Thrasybulus in 403, but died before the trial of Socrates in 399. He is best known as having drawn from the Delphic oracle the saying that Socrates was the wisest of men; the story is related both by Plato and by Xenophon, and there is no reason to doubt its truth. Suidas refers to works of Chaerephon, but these were early lost.

PIV iii. 2028.

W. D. R.

CHAERIS, a pupil of Aristarchus, whose text of Homer he defended, wrote also a commentary on Pindar and Aristophanes, and a *Τέχνη γραμματική*, all lost.

CHAERONEA (*Χαίρωνεια*), in the Cephissus valley, was the northernmost town of Boeotia. It was subject to Orchomenus in the fifth century. It owes its fame to its position on the through route from northern Greece, and to the defeat of the Athenians and Thebans by Philip in 338 B.C., which is commemorated by a colossal stone lion. In 86 Sulla won a decisive victory there over Mithridates' armies. Plutarch was born and lived at Chaeronea, and kept alive its customs.

N. G. L. Hammond, 'The two battles of Chaeronea', *Klio* xxxi (1938), 136 ff.; G. Soteriades, *Ath. Mitt.* xxviii (1903), 301 ff.; xxx (1905), 113 ff.

T. J. D.

CHALCEDON, a Megarian colony, situated across the Bosphorus at seven stadias distance from Byzantium, and now occupied by the suburb of *Kadiköy*. It was reputed to have been founded seventeen years before Byzantium, and Herodotus relates how the Persian general Megabazus called it the 'city of the blind' because its founders had failed to perceive the superior advantages of the site of Byzantium.

S. C.

CHALCIDICE, the southern projection of Macedonia, ending in the three promontories of Pallene, Sithonia, and Aete. Its population consisted of two tribes, the Chalcidians and the Bottiaci, who were closely related to the Greeks, and of settlers from Greece proper (mostly from Chaleis and Eretria), who colonized the promontories in the seventh and sixth centuries. The principal Greek cities were Olynthus and Potidaea (qq.v.) on the isthmus of Pallene; Scione and Mende on its sheltered south-west face; and Torone on the south-west face of Sithonia. Chalcidice in general supplied timber to Greece, and Mende exported wine.

For protection against Macedonian expansion after the Persian Wars the Chalcidian Greeks joined the Confederacy of Delos, but in 424 B.C. Olynthus and several other towns were freed from Athenian control by Brasidas, and the remainder became independent in 404. Under the leadership of Olynthus the Chalcidian cities now formed a league which was extended to comprise the Macedonian town of Pella (c. 385). The league was disbanded after a siege of Olynthus by the Spartans (383-381), but was promptly re-formed. It joined the Second Athenian Confederacy, but soon broke away, and so became an easy prey to Philip of Macedon, who transplanted many of its inhabitants and repopled Chalcidice with Macedonian veterans.

E. Hamilton, *CO* 1912, 93, 165; A. D. West, *History of the Chalcidian League* (Madison, 1919). See also CLAUDIUS.

M. C.

CHALCIS, the chief city of Euboea (q.v.), commanding the narrowest part of the Euripus channel. In the eighth century B.C. Chaleis planted colonies in Sicily, and in the seventh on the north Aegean shores. It was a great manufacturing and trading city, famous for its pottery and metal-work, and was a successful rival with its neighbour Eretria for control of the Lelantine plain; but in 506 it was compelled to cede part of the plain to Athenian cleruchs. The city made common cause, however, with Athens during the invasion of Xerxes. She led a revolt of Euboea against Athens (446), but was defeated and became a tributary ally until 411. A member of the second Athenian Confederacy, from 350 she was a focus of Macedonian intrigues until 338, when, by imposing a Macedonian garrison, Philip II created here one of the three 'fettlers' or 'keys' of Greece. The city was a great trade centre of Hellenistic Greece, but was involved in the Macedonian and Syrian wars against Rome. For its participation in the Achaean League's struggle against Rome, Chaleis was partly destroyed (146); sixty years later it served as a base for the Pontic general Archelaus.

Strabo 10. 445-8.

W. A. L.

CHALDAEI, *see* ASTROLOGY.

CHALKOTHEKE, *see* ACROPOLIS.

CHALYBES, a people of the south-east coast of the Euxine, famed in Greek legend as the first workers of iron, which from early times they sent southward across Asia Minor and westward to the Aegean. Geographical sources locate them at various points from Paphlagonia to Colchis. Xenophon and Strabo appear to place them among the mountain tribes south of Trapezus, but both also mention other Chalybes near Cerasus who worked iron mines. The traveller W. J. Hamilton saw ancient iron workings near this spot.

T. R. S. B.

CHAMAELEON of Heraclea Pontica, Peripatetic writer, perhaps Theophrastus' contemporary; no biographical details exist. C. wrote works on satyric drama and comedy, and studies of a number of early poets, probably including Sophocles and Euripides, deducing biographical data from their works and references to them in comedy. These works, which were anecdotal and uncritical, are often cited by Athenaeus. His philosophical writings (*Προτρεπτικός*, *Περὶ μέθης*, *Περὶ ἡδονῆς*) (this last attributed to Theophrastus), *Περὶ θεῶν* closely followed the Aristotelian tradition.

Fragments in E. Kēpke, *De Cham. Heracleota* (1856); additions listed by Wendling, *PIW*, s.v.

F. W. W.

CHAONES, *see* EPIRUS.

CHAOS. 'The very first of all Chaos came into being', says Hesiod (*Theog.* 116); it is noteworthy that he implies by the verb (*γένετο*, not *ἦν*) that it did not exist from everlasting. What it was like he does not say; the name clearly means 'gaping void'. Later, presumably influenced by the *ἄπειρα πάντα* of Anaxagoras (q.v.), it is described (*Ov. Met.* 1. 5 ff.) as a mixture of the 'seeds' (*semina*) or potentialities of all kinds of matter. H. J. R.

CHARAX of Pergamum, living probably late in the period between Nero and the 6th c. A.D., published a World History in forty books, the *Ἰστορίαι* including at least ten books on Greek saga in Euhemeristic and allegorical fashion; Roman history began in bk. 12, with a second syntaxis for the Empire. He also wrote *Χρονικά*.

IGH ii. A. 432; C. 312.

A. H. McD.

CHARES (1), Athenian general and condottiere who after 366 B.C. was engaged in various successful wars for Athens. In 357, after obtaining the surrender of the Chersonesus from Cerybleptes (q.v.), he became commander in the Social War in succession to Chabrias, but

went off to join the rebellious satrap Artabazus (q.v.). After the peace (355) he accused his colleagues, and became one of the military leaders against Philip, fighting at Olynthus, in Thrace, at Byzantium, at Chaeronea. His surrender being demanded by Alexander (335), he escaped to Sigeum, and in 332 he commanded in Mytilene on the Persian side. He died soon after, probably in Sigeum.

Prosop. Att. 15292. H. W. Parke, *Greek Mercenary Soldiers* (1933). V. E.

CHARES (2), of Mytilene, Alexander's chamberlain, wrote a history of him such as a chamberlain would write, full of court ceremonial and personal gossip; but he probably witnessed the attempt to introduce *proskynesis* (prostration as a sign of obeisance), which he described. See ALEXANDER (3), Bibliography, Ancient Sources. W. W. T.

CHARES (3), a writer of *Γνώμαι*, from which over fifty lines are preserved, in a mutilated state, in a papyrus of the early third century B.C.

Powell and Barber, *New Chapters* i. 18.

CHARIDEMUS (4th c. B.C.), Euboean mercenary leader. He fought alternately for the Athenians, whose citizenship he gained, and for their enemy, the Thracian king Cotys (c. 360 B.C.). Having joined the satraps' revolt (362), he again went to Cotys, and after his murder he supported Cotys' young son Cersobleptes, whose sister he married. He was, however, highly honoured by Athens for helping to restore the Chersonesus to Chares. Expelled from Thrace by Philip of Macedon, he was Athenian general again, but met with little success. After Chaeronea, he was to be surrendered to Alexander (335), but escaped and entered Persian service. He is said to have been executed by Darius for his outspokenness (333).

Prosop. Att. 15380. H. W. Parke, *Greek Mercenary Soldiers* (1933). V. E.

CHARISIUS, FLAVIUS SOSIPATER (late 4th c. A.D.), African grammarian. His *Ars grammatica* is a compilation and alongside of elementary material contains sections copied from learned sources which he names (e.g. Remmius Palaemon, Julius Romanus) and from which he took citations of Ennius, Lucilius, Cato, etc. It is to these borrowings that his work owes its value. Of the original five books, the first lacks its introduction, the fourth (dealing with style and metre) has gaps, and the fifth has to be pieced together from various sources. H. Keil's edition (*Gramm. Lat.* i. 1-296; 534-65) is now superseded by that of K. Barwick (1925).

Cf. Teuffel, § 419, 1-2; Schanz-Hosius, § 833. J. F. M.

CHARITES, goddesses personifying charm, grace, and beauty. Like the Nymphs and the Horae, the C. are originally indefinite in number and stand for the joy and beauty produced by the blessings of fertile nature and by other things that evoke spontaneous emotion of pleasure. They make roses grow (Anacr. 44. 1 Bergk), they have myrtles and roses as attributes, and the flowers of Spring belong to them (*Cypria* ap. Ath. 15. 682 c). Their varying names bespeak their qualities: *Thalcia*, the Flowering; *Auxo*, the Grower; *Kale*, the Beautiful; *Euphrosyne*, Joy; *Aglaia*, the Radiant, etc. In their further development C. reflect the development of the truly Greek notion of *charis*. As representatives of beauty and grace they are naturally connected in mythology with Aphrodite (Paus. 6. 24. 7), but they are also present at all divine and human celebrations where Olympian joy prevails. They bestow their qualities of beauty and charm, on the one hand physical beauty (*Anth. Pal.* 7. 60), on the other intellectual, artistic, and moral 'wisdom, beauty, and glory' (Pind. *Ol.* 14. 6). In the Hellenistic poet Hermesianax, Peitho (q.v.), Persuasion, becomes one of the Charites. C. are fond of

poetry, singing, and dance (Hes. *Th.* 64; Theog. 15) and perform at the wedding of Peleus and Thetis. *χάρις* is, however, not only grace but also favour and gratitude for favour. In Athens, statues of benefactors and decrees in their honour were placed in the precinct of Demos and Charites (W. S. Ferguson, *Hellenistic Athens*, 212, 238), and Aristotle says that 'the sanctuary of the C. is placed in a prominent position' so that those seeing it may be reminded to requite one another's benefits (*ἀνταπόδοσις*, sc. *χάριτος*, *Eth. Nic.* 5. 1133^a3).

Charites are always daughters of Zeus, but their mothers vary. From Hesiod on (*Th.* 907) their usual number is three. They play secondary parts in many myths and are connected with many divinities. Their most important cults were in Orchomenus, Paphos, Athens, and Sparta (Paus. 9. 35). Statues of C., shown as draped female figures, were seen in many archaic and classical sanctuaries. The type of three nude C., known through countless Roman copies, may go back to a famous Hellenistic painting. The Charites were Latinized as *Gratiae*.

S. Gsell, in Dar.-Sag., s.v. 'Gratiae'. G. Rodenwaldt, *JRS* 1938, 60. G. M. A. H.

CHARITON, author of a Greek novel called *Chaereas and Callirhoe* (*Τὰ περὶ Χαίρεαν καὶ Καλλιρόην*), describes himself as a native of Aphrodisias and secretary to the orator Athenagoras. The names of the author, his birth-place, and his employer are so closely relevant to his story that all have been suspected; there is, however, inscriptional evidence for the names Chariton and Athenagoras at Aphrodisias in Caria. Papyrus fragments date C. not later than the second century A.D., and the introduction of a genuine historical character (Hermocrates) confirms his position as the earliest extant Greek novelist.

Chaereas and Callirhoe, in the novel, are married at Syracuse; but soon after, in a fit of jealousy, Chaereas strikes his wife so severely that she is taken for dead and duly buried. Tomb-robbers find her alive, take her to Miletus, and sell her as a slave. For the sake of Chaereas' child she consents to marry her master, Dionysius. Chaereas, in the course of his search, is himself captured and enslaved. His master competes with Dionysius for the affections of Callirhoe, and the Persian king, asked to arbitrate, joins the competition. News of the revolt of Egypt separates the suitors. Chaereas escapes and joins the Egyptians, whose fleet he leads to victory. He captures the women of the Persian court, including Callirhoe, with whom, in spite of the defeat of the Egyptian army, he sails back to Syracuse and lives happily ever after.

Chariton's style, though rhetorical, is simpler than that of most of the novelists. He introduces a number of Homeric tags and quotes or reflects New Comedy on occasion; but he tells a complicated story with commendable clarity and does not indulge in irrelevant discussions.

Text: W. E. Blake (1938). Commentary: J. P. D'Orville (1950). Translation: W. E. Blake (1939). Style and diction: St. Heibges, *De clausulis Charitoneis* (1911) (full bibliography in Blake's edition). Life and work: A. Calderini, *Le avventure di Cherea e Calliroe* (1913); B. E. Perry, *AJPhil.* 1930. See also under NOVEL, GREEK.

R. M. R.

CHARMADAS (fl. c. 107 B.C.), member of the New Academy and pupil of Carneades. Sextus Empiricus describes him as having founded, with Philon of Larissa, the Fourth Academy. We learn from Cicero that he attacked the ordinary schools of rhetoric as Plato had done in the *Phaedrus*.

PIV iii. 2172.

W. D. R.

CHARMIDES (d. 403 B.C.), an Athenian of noble family, nephew and ward of Critias, uncle of Plato, and member of the Socratic circle. He is mentioned in *Pl. Symp.* 222 b, *Prt.* 315 a, *Xcn. Mem.* 3. 6. 1, 7. 1-9, and plays a large part in the Platonic dialogue that bears his

name. According to Xen. (*Mem.* 3. 7) he was encouraged by Socrates to take up political life. He assisted Critias in the oligarchic revolution of 404 and fell with him in battle in 403, when the democrats returned under Thrasybulus.

PIV iii. 2174.

W. D. R.

CHARMS, *see* AMULETS.

CHARON (1), in Greek mythology, the aged ferryman in Hades who for an obolus conveyed the shades of the dead across the rivers of the lower world. As a fee for C. the Greeks used to put a coin into the mouth of the dead. He is first mentioned in the *Minyad* and by Aeschylus (*Sept.* 842) and introduced by Aristophanes in the *Ranae* (183). In art he is first seen on a terra-cotta of the sixth century B.C. He was painted by Polygnotus in Delphi (Paus. 10. 28. 1) and is often shown on white-ground *lecythi*. The Etruscans knew a demon *Charun* who is perhaps a hellenized native hammer-god. Virgil's famous description of C. (*Aen.* 6. 298-315) embodies some Etruscan features.

O. Waser, *Charon, Charum, Charos* (1898); F. De Ruyt, *Charum* (1934). G. M. A. H.

CHARON (2), son of Pythocles, of Lampsacus, reputed born under Darius, and alive 'in the Persian War' (Suidas) is quoted for Themistocles' arrival in Persia (465-464 B.C.), and as an earlier contemporary of Herodotus, and (like Hellanicus) as his model. But neither Herodotus nor Thucydides seems to use him. Plutarch, criticizing Herodotus, treats C. as independent and trustworthy. He wrote *Περσικά*, *Ἑλληνικά*, and other descriptions of peoples and cities, including his birthplace (*Ἄρροι Λαμψακηνῶν*); on a *Journey beyond the Pillars of Hercules*; and on *Magistrates of Laedaemon*, perhaps chronological. Fragments illustrate his concise descriptions and narratives, his interest in romances, local legends, and folk-lore. He thus stands between the 'older historians' (Dion. Hal. *Thuc.* 5) and the rationalized history of Herodotus. Unlike Dionysius of Miletus, he attempted *Ἑλληνικά* as well as *Περσικά*; unlike Hellanicus, a general history of the Greeks. He stands to Sparta and Crete as Hellanicus to Athens and Argos. But he wrote neither chronology and literary history like Damastes, nor technology like Hippas (q.v. 2).

FIG i. 32-5, ii. 627-8; Jacoby, *Stud. Ital.* N.S. xv (1898), 207; L. Pearson, *Early Ionian Historians* (1939), ch. iv. J. L. M.

CHARONDAS, the lawgiver of his native town Catana, and other Chalcidic colonies, especially Rhegium. He is often associated with Zaleucus (q.v.), but he lived later, probably in the sixth century B.C. Aristotle emphasizes the precision of his laws, but he may have included later measures under the name of Charondas. His laws were plainly much concerned with family right, but they seem to have embraced almost all departments of life. We do not know whether he established a new constitution, but he certainly was an aristocrat.

Aristotle, *Politica*, *passim*; Diodorus, 12. 11-19. Adcock, *CHY* ii (1927), 95 ff.; Mühl, *Aklio* xxi (1929) 105 ff., 432 ff. V. E.

CHARYBDIS, a sort of whirlpool or maelstrom in a narrow channel of the sea (later identified with the Straits of Messina, where there is nothing of the kind), opposite Scylla (q.v.; *Od.* 12. 101 ff.); it sucks in and casts out the water three times a day and no ship can possibly live in it. Odysseus, carried towards it by a current when shipwrecked, escapes by clinging to a tree which grows above it and dropping into the water when it is cast out (432 ff.).

Hence proverbially, a serious danger, as Horace, *Carm.* 1. 27. 19; Augustine, *In Evang. Iohan.* 36. 9. H. J. R.

CHATTI, a powerful German tribe who inhabited the wooded, hilly country of the upper Weser basin, into which they moved c. 100 B.C. from lands on the Ruhr.

On the migration eastwards of the Suebi they expanded into the Main valley and across the Taunus. They joined with the Cherusci in the rising against Varus, and Germanicus in revenge destroyed their chief town, Mattium (probably the Altenburg, by Metze-Niedenstein). After the recall of Germanicus they fell out with the Cherusci and were mainly responsible for their permanent eclipse. A sub-tribe, the Mattiaci, which had established itself around Wiesbaden, made terms with Rome, but the Chatti themselves were a constant menace. Domitian drove them from the Taunus (A.D. 83 and 89) and created the Roman *limes* to guard it. The Chatti again made raids in 162 and 170, and fought Caracalla in 213. The Alamanni drove them out of the Main basin and thereafter they are not mentioned, but it is possible that they joined the Franks in their wars with the Empire. It is generally held that the Hassi (Hessi) mentioned by St. Boniface and Einhard are their descendants.

L. Schmidt, *Geschichte der deutschen Stämme* ii² (1915), 347-66. O. B.

CHAUCI. The Chauci (Maiores and Minores), one of the chief West German tribes at the time of the Augustus-Tiberian wars, occupied the coastlands between Ems and Elbe, and a wide stretch of territory inland. The coast-dwellers inhabited artificial hillocks in the marshes (Plin. *HN* 16. 2 f.). The Chauci became clients of Rome in A.D. 5, but by 41 they had regained their independence, and in 41 and 47 they made raids on the Gallic coast; in 69-70 they helped Civilis (q.v.). It is thought that at a later date they became merged with the Saxons. O. B.

CHERSONESUS. (a) The Thracian *Chersonesus* or Gallipoli peninsula. This territory had a double importance in Greek history, as a wheat-growing district which produced a surplus for export, and more especially because it lay on a main passage between Europe and Asia. It was occupied in the eighth and seventh centuries by settlers from Miletus and other Ionian towns, the chief colonies being Cardia (near the Bulair isthmus) and Sestos (q.v.), at the principal crossing-point of the Dardanelles. It passed into the hands of the elder Miltiades, probably by arrangement between Pisistratus and the native Thracian population, for whose protection he fortified the Bulair isthmus (c. 560 B.C.). It remained in the possession of his family until 493, when the younger Miltiades (q.v.), who had held the peninsula as a vassal of King Darius, abandoned it to the Persians. After the Persian Wars it was at once brought into the Delian League by the Athenians, who established colonies at Sestos, Callipolis, and elsewhere (c. 450). After a period of Spartan domination (404-386) the Athenians recovered control, but had some difficulty in keeping out the Thracian dynasts, and in 338 they ceded the peninsula to Philip of Macedon. After passing through the hands of various Hellenistic rulers, most of the Chersonese became a domain of the Pergamene kings (189). In 133 a large part of it was converted into Roman *ager publicus*, and under Augustus into an imperial estate.

(b) The *Tauric Chersonesus* or Crimea. The main attractions of the Crimea to the Greeks were the fisheries of the Cimmerian Bosphorus (Straits of Kertch), the cornlands of the interior, and the partial protection which its peninsular situation gave against the mainland peoples of Russia. It was colonized by Milesians and other Ionians in the seventh century. The principal settlement was Panticapaeum on the Bosphorus. In 438 most of the Chersonese came under the rule of a dynasty of Thracian stock but of Hellenic culture, under whom it attained great prosperity as a granary of Greece (*see* *FRANZBURG*).

(c) The city of *Chersonesus*, situated on the Crimean Riviera near Sevastopol, in a vine-growing district. This Milesian colony was refounded at some later date by Darians from Heraclea Pontica. After a long period of independence it sought protection from Mithridates VI

against Scythian inroads (c. 115 B.C.), and from his death in 63 B.C. until the third century it remained in the hands of his descendants, who held it as vassals of Rome. Nero provided it with a Roman garrison, and Hadrian gave it further protection by means of a wall across the Crimea. It remained an outpost of Greek civilization until the thirteenth century.

E. H. Minns, *Scythians and Greeks* (1913), 493-553. S. Casson, *Macedonia, Thrace and Illyria* (1926), 210-28. M. C.

CHERUSCI, a German tribe on the middle Weser. In A.D. 4 Tiberius incorporated them in the Empire as *foederati*; troops were recruited from them, and members of their ruling house, including Arminius, were made Roman citizens. The Cherusci headed the rising of A.D. 9 and after the destruction of Varus' army they maintained their ascendancy. Arminius was able to meet Germanicus in open battle and inflict heavy loss upon him, and to defeat King Maroboduus (q.v.). The Romans, however, fomented the jealousies in the Cheruscan royal house, and Arminius gradually lost power. The Cherusci were also weakened by internal strife and protracted wars with the Chatti, and the Chauci seized much of their land. Rome furnished them with a king in 47; another of their kings, Chariomerus, driven out by the Chatti because of his pro-Roman policy, was befriended by Domitian. The Cherusci then disappear from history. O. B.

CHILDREN. The role of children in the religious life of antiquity was not inconsiderable, no doubt partly because of their sexual purity (see E. Fehrle, *Die kultische Keuschheit* (1908-10), 112). Hence also in magic the prescription of child-mediums (*PGM* 5. 1; S.H.A. *Did. Iul.* 7. 10; in black magic, child victims, *Hor. Epod.* 5. 12 ff.; *Lucan* 6. 710). In family cult, an unmarried daughter would on occasion sing or lead off the hymn at the beginning of a symposium, when the third libation was poured (*Aesch. Ag.* 243 ff.). In like manner, after a Roman family dinner, one of the children would announce that the portion of food offered to the household gods was acceptable ('deos propitios', Servius on *Aen.* 1. 730; more in W. Warde Fowler in Hastings, *ERE* iii. 545). This was readily extended to public cult. Apart from the common occurrence of choirs of boys, girls, or both (Fehrle, loc. cit.), a striking instance is the ceremony of the Arrhephoroi at Athens, wherein little girls, after long preparation, were entrusted with the carrying of very sacred objects from the Acropolis to the temple of Aphrodite in the Gardens (*Paus.* 1. 27. 3, cf. L. Deubner, *Attische Feste*, 9 ff.). Cf. also the ritual at Brauron (see ARTEMIS). That the vestals (q.v.) develop out of the services of young daughters in domestic hearth-cult is practically certain. Generally speaking, the presence of a *παῖς ἀμφιβαλῆς*, *puer patrimus et matrimus*, was necessary for all manner of rites, public and private, as diverse as a Roman marriage and the cutting of the olive-garlands at Olympia. H. J. R.

CHILDREN'S SONGS, GREEK. Pollux (9. 123) gives a list of eighteen *παιδιαί*, children's songs often accompanied with some sort of action, and adds details about *χαλκή μύα*, a kind of Blind Man's Buff, *χελιχελώνη* a kind of Prisoner's Base, and (9. 113) *χυτρίνδα*, a kind of Catch. Another such game was *ἀνθεμα* (*Ath.* 629 c).

Diehl, *Anth. Lyr. Graec.* ii. 202-4; J. M. Edmonds, *Lyra Graeca* iii. 536-43. C. M. B.

CHILDREN'S SONGS, LATIN. Children's singing-games and nursery songs, such as those of English origin published by Cecil Sharp and Alice Gomme in recent years, must have been known to children throughout the ages, and there can be no doubt that songs were sung to children, and by children, in Latin as in any other language, but they have suffered the fate of other childish things at the hands of grown-up *littérateurs*. Our informa-

tion about Latin songs is very meagre. From a scholium on Persius (3. 16) it appears that nurses used to sing *lalla, lalla* as a lullaby to squalling children who refused to go to sleep, and references elsewhere to the way in which nurses talk to babies tell us no more than we should have known without them. The ditty (*puerorum nenia*) used by children playing King-of-the-castle is quoted by Horace (*Epist.* 1. 1. 59-63) and the scholium gives a fuller version of the words: 'rex erit qui recte faciet; qui non faciet, non erit.' Another quotation ('habeat seabiem quisquis ad me uenerit nouissimus') apropos of a tag in the *Ars poetica* (417) seems to have a similar origin. The 'ancient lays' sung at banquets by *pueri modesti* (Varro ap. Non. 76) are obviously not to be classed as children's songs. A. L. P.

CHILON (*Χίλων*), Spartan ephor (556/5 B.C.), was the first to yoke the ephors alongside the kings (*Diog. Laert.* 1. 68). The statement that he aided King Anaxandrides to overthrow the tyrannies at Sicyon and Athens (*PRyl.* 18) seems impossible on chronological grounds. He is credited by modern scholars with a stricter enforcement of the Spartan training and a change in Sparta's foreign policy. Universally accepted as one of the 'Seven Sages' (*Plato, Prt.* 343 a), he was worshipped as a hero at Sparta, but mainly for his political services (*Paus.* 3. 16. 4).

G. Dickins, *JHS* 1912, 17 ff.; J. Wells, *Studies in Herodotus* (1923), 44-54; V. Ehrenberg, *Neugründer des Staates* (1925), 7-54. A. M. W.

CHIMAERA, properly 'she-goat'; a triple-bodied monster, 'lion before, serpent behind, she-goat in the middle' (*Il.* 6. 181), of divine race (*Hesiod, Theog.* 319 ff., explains that it was the offspring of Typhon and Echidna) and fire-breathing, slain by Bellerophon (q.v.). In art, the goat is represented by the head and neck of one protruding from the creature's back, as in the famous bronze Chimaera at Florence (*CAH*, vol. i of plates, pp. 336-7). This is so oddly inorganic as to suggest an early misunderstanding of some kind, and there is much to be said for the theory of Anne Roes (*JHS* liv. (1934), 21 ff.) that originally (in Oriental art) it had wings ending in a goat-like head, a type known to exist (*ibid.* 23 and illustrations there). H. J. R.

CHIONIDES, called by Suidas *πρωταγωνιστῆς τῆς ἀρχαίας κωμῳδίας* and dated by him eight years before the Persian War, i.e. 487-486 B.C., when he probably gained the prize at the first official competition in 486. When Aristotle says (*Poet.* 3. 1448^a33) that Chionides and Magnes came some time after Epicharmus (fl. 487), he probably means no more than that Epicharmus was an older contemporary of theirs. Three fragments of his *Ἦρωες* survive (*Poll., Suid.*). The genuineness of his *Πρωχοί* was doubted even in antiquity (*Ath.* 4. 137 c, 14. 638 d). Suidas mentions also a *Πέρσαι ἢ Ἀσσύριοι*. Wilamowitz (*Hermes* ix. 335 ff.) believed that all three plays were the work of later writers. See COMEDY, OLD, paras. 2 and 3.

FCG i. 27 ff.; *CAF* i. 4-7.

M. P.

CHIOS, a large island lying off the Erythraean peninsula, roughly oblong in shape, but narrowing towards the centre through the broad indentation on the lengthy western side. The mountains of the north give way to fertile plains in the south. Chios was renowned in antiquity for its wine, corn, figs, and gum-mastic. The city of Chios, the focus of political, economic, and cultural life, was founded at the finest harbour of the eastern seaboard, and became highly prosperous. From the time of Homer (whose birthplace it claimed to be) Chios had a distinguished literary tradition, and schools of artists working in stone and metal flourished on the island.

After its occupation by Ionian settlers Chios was a consistent ally of Miletus against Phocaea, Erythrae, and

Samos. Incorporated in the Persian Empire under Cyrus, it fought heroically in the Ionian Revolt, and was devastated after Lade. As a member of the Delian Confederacy, Chios remained loyal until 413; Athenian efforts to retake the city proved ineffective. It was pro-Athenian during the fourth century B.C. until the Social War (357-355), which resulted in a temporary Carian domination. Its relations with Rome were cordial; in 86 it was sacked by Zenobius, Mithridates' general, the inhabitants being transported to Pontus. Sulla restored them to their homes, and Chios enjoyed the privileges of a free city under the Empire, until these were suspended by Vespasian.

L. Büchner, *PIV*, s.v. 'Chios'.

CHIRON (Χίρων), see CENTAURS, para. 2.

CHITON (χιτών), see DRESS, para. 2.

CHLAMYS, see DRESS, para. 2, and EPHEBI.

CHLOË, i.e. 'green', title of Demeter as goddess of the young green crops. She had a shrine near the Acropolis at Athens (Paus. 1. 22. 3) and a festival, the Chloia, perhaps on Thargelion 6 (Deubner, *Attische Feste*, 67).

CHOERILUS (1), an Athenian tragic poet, according to Suidas (s.v.) wrote plays from 523 B.C. onwards, competed against Aeschylus and Pratinas, and, as some said, made innovations in the tragic mask and costume. Only one of his plays, the *Alope*, is known by name. One or two bold metaphors are quoted from him (*TGF* 719-20). He is probably not the Choerilus described in a line of an unknown writer (quoted by Plotius *de metris*) as 'King among the Satyrs'.

A. W. P.-C.

CHOERILUS (2) OF SAMOS, epic poet; admirer and friend of Herodotus; employed by Lysander to celebrate his exploits; ended his days in Macedon, at the court of Archelaus; author of a *Persica*, on the Athenian victory over Xerxes, which was decreed at Athens to be recited with Homer's poetry, and of a *Samitica*; several times cited by Aristotle. See EPIC CYCLE.

EGF 265-72. Criticism: A. F. Nüke, *Choerili Samii quae supersunt*... (1817).

W. F. J. K.

CHOERILUS (3) OF IASUS, epic poet; travelled with Alexander the Great; paid to celebrate him; a bad poet (Hor. *Epist.* 2. 1. 232-4; id. *ArsP.* 357-8; Porphyrio ad loc.).

EGF 308-11

CHOËS (Χόες), see ANTHESTERIA.

CHOLIAMBUS=scazon; see METRE, GREEK, II (3).

CHOREGIA. The main part of the expense of the production of dithyramb, tragedy, and comedy at the Dionysiac festivals at Athens was laid upon individual citizens of sufficient wealth. For dithyramb these *choregi* were chosen by the ten tribes (Arg. ii to Dem. *Meid.*, cf. Ar. *Av.* 1403-4); for tragedy and comedy by the *Archon Eponymus* (Arist. *Ath. Pol.* 56); about the middle of the fourth century B.C. the appointment for comedy was transferred to the tribes (ibid.). No one could be obliged to serve as *choregus* until a year had elapsed after his last period of office (Dem. *Lept.* 8), but any citizen might volunteer to serve (Lys. 21. 1-6; Aeschin. *In Tim.* 11-12; Harp. s.v. ὄρι νόμος). No one under forty years of age might be *choregus* to a dithyrambic chorus of boys. The smaller expenses of dithyrambs performed at the Thargelia, Panathenaea, and Hephaestea were also laid upon individual *choregi* (Antiphon 6. 11, Lys. 21. 2) and the same system was applied to some other entertainments, such as the exhibition of pyrrhic dancers (Isac. 5. 36). *Choregia* for the men's dithyramb, which involved a

chorus of fifty members and the most highly skilled flute-players, was much more expensive than for tragedy; the boys' dithyramb and comedy might cost less than either (Lys. 14. 29, 42; 21. 1-5).

Choregia at the Great Dionysia probably began shortly before 500 B.C. for dithyramb and tragedy, and about 486 for comedy. The dates for the Lenaea are unknown. For a few years from 405 onwards, when there may have been a lack of rich men, *choregia* at the Great Dionysia was shared between two *choregi* (Schol. Ar. *Ran.* 404); this arrangement probably terminated in the city about 394. (Such *synchoregia* at certain Rural Dionysia is attested by several inscriptions of later dates in the fourth century). About 318 a State-appointed *agonothetes* was instituted to manage the festivals and share the expense with the State, which is frequently named in inscriptions as *choregus* (ὁ δῆμος χορηγῆται), but *choregi* reappear, with or without an *agonothetes*, in inscriptions of the first century A.D. (See Haigh, op. cit. inf., 54, 55.)

Dithyrambic poets were assigned to the several *choregi* by lot, and the *choregi* then drew lots for the order of choice of a flute-player—a matter of great importance (Dein. *Meid.* 13-14; Antiphon 6. 11). It is probable that tragic and comic poets were also assigned by lot, but there is no record. *Choregi* had nothing to do with the selection, payment, or dresses of actors (see Haigh, op. cit., pp. 57 ff.), but they selected the members of the chorus, with the help of an agent (χορολέκτης, Arist. *Pol.* 3. 3), provided a room for their practices, and paid the expense of their costumes and training (Arg. i to Dem. *Meid.*; Pseudo-Xen. *Ath. Pol.* 1. 13, etc.). As it was a misfortune for a *choregus* to be assigned to a bad poet, so it was important for a poet to have a liberal *choregus*, since it depended upon him whether a play was well or badly presented in respect of costumes, mute characters (attendants, etc.) and other additions to the setting (παράχορηγήματα). An ambitious or public-spirited *choregus*, like Nicias, might provide a magnificent spectacle and so win the victory; a mean one, hiring cheap costumes, could ruin a play (Antiphon fr. 204; Dem. *Meid.* 16, 61; Arist. *Eth. Nic.* 4. 6; Pollux 7. 78), though a negligent *choregus* might be brought to book by the archon (Xen. *Hieron* 9. 4).

The prize won by a successful *choregus* for dithyramb was a tripod, which he subsequently dedicated, often as a part of a more elaborate monument—the extant monuments of Lysicrates and Thrasyllus are instances—and the locality where most of the Dionysiac tripods were collected was named 'the Tripods'. Those gained at the Thargelia were erected in the precinct of Apollo Pythius (Paus. 1. 20. 1, etc.). The *choregi* for comedy did not receive the tripod, nor, almost certainly, did the *choregi* for tragedy; they erected tablets commemorating their victory, and some of these survive. There remain also some laudatory inscriptions erected by fellow-tribesmen or citizens in honour of public-spirited *choregi*. The choregic system was in use in many cities besides Athens, and a large number of inscriptions testify to its continuance in these to the end of the second century B.C., and in some much later. See also LITURGY.

CHORUS, see TRAGEDY, COMEDY, DRAMA (ROMAN).

CHREIA, a collection of witty or clever sayings, so called because designed for utility (χρησιμότης) like Hermogenes' *Prog.* c. 3); one of the varieties of *progymasmata* (q.v.). Such collections were already being made in the fourth century B.C., e.g. by Theocritus of Chios

and Demetrius of Phalerum. Some biographies of philosophers, e.g. that of Diogenes by Diogenes Laertius, consist largely of *Chreiai*. The greatest extant collection is the *Gnomologium Vaticanum*, published in *Wien. Stud.* ix-xi (1887-9). The *Chreia* of Machon (q.v.) is a collection of scurrilities.

J. D. D.

CHREMONIDES (fl. 270-240 B.C.), Athenian nationalist statesman, pupil of Zeno. In 267-266 he carried a decree by which Athens joined the Peloponnesian anti-Macedonian coalition, supported by Ptolemy (*IG* ii². i. 686 and 687). The subsequent war, named after him (*Ath.* 6. 250 f.), ended with the surrender of Athens in 263-262. He found refuge with Ptolemy, and as Egyptian admiral was defeated off Ephesus by Agathostratus of Rhodes (258); he was still admiral c. 240.

CHRISTUS PATIENS, a play in 2,610 verses describing the Passion of Our Lord, bearing the name of Gregory the Nazianzene, but probably written by a Byzantine of the eleventh or twelfth century. It contains a very great number of lines from Euripides, and some from Aeschylus and Lycophron. It is of doubtful use for the textual criticism of Euripides (see Murray's Euripides, *O.C.T.* vol. i, p. viii), but portions of the lost end of the *Bacchae* have been recovered from it (*O.C.T.* vol. iii).

Text: J. G. Brambs (Teubner, 1885). J. D. D.

CHRYSEIS (*Χρυσήϊς*), in mythology, daughter of Chryses, priest of Apollo at Chryse. She was taken prisoner and given to Agamemnon as his gift of honour (*γέρας*). On his refusal to let her father ransom her, Apollo, at Chryses' prayer, sent a plague on the Greek camp, which was not stayed till she was returned to him. Agamemnon compensated himself by taking Briseis (q.v.) from Achilles, thus starting the quarrel between them (*Il.* i. 11 ff.). In a late legend (*Hyg. Fab.* 121) she has a son by Agamemnon.

H. J. R.

CHRYSIPPUS (c. 280-207 B.C.), son of Apollonius of Soli (Cilicia), successor of Cleanthes as head of the Stoa. He came to Athens about 260 and there first attended the lectures of Arcesilaus, then head of the Academy. From him he got the training in logic and dialectic which he later used to great advantage in fighting the scepticism of Arcesilaus and the Middle Academy. He was converted to Stoicism by Cleanthes, whom he succeeded in 232. He devoted his life to elaborating the Stoic system in almost innumerable works and to defending it against the attacks of the Academy. He was so successful that his philosophy became identified with Stoic orthodoxy, and obscured that of his predecessors, from whom he differed in many points, especially in his logic and theory of knowledge. The catalogue of his works given by Diog. Laert. 7. 189-202 is not completely preserved.

Fragments: von Arnim, *SVF* ii. 1-348; iii. 3-205; Diogenes Laertius 7. 179-202; M. Pohlenz, 'Zenon und Chrysipp', *Nachricht. Götting. Gesellsch. Fachgruppe* i, N.F. ii, no. 9. *PW* ii. 2502.

K. von F.

CHRYSOGONUS, LUCIUS CORNELIUS, Sulla's favourite freedman, placed the name of the murdered Sex. Roscius on the list of the proscriptions in order to purchase his confiscated property and afterwards accused Roscius' son of parricide (see ROSCIUS 1).

F. Münzer, *PW* iv. 1281.

CHRYSOTHEMIS, see AGAMEMNON.

CHYTROI (*Χύτροι*), see ANTHESTERIA.

CICERO (1), MARCUS TULLIUS, third successive bearer of the name, was born at Arpinum, 3 Jan. 106 B.C., and put to death in the proscriptions, 7 Dec. 43. His family was connected with the Marii. His mother, Helvia, was

a careful housewife (*Fam.* 16. 26). His father who, being delicate, was devoted to literature rather than agriculture, took a house in the Carinae at Rome, to give his sons Marcus and Quintus (b. 102) a good education. Plutarch says C. distinguished himself at school. In these early days he began his lifelong friendship with Atticus, three years his senior, and he met Caesar (probably, J. Carcopino, *Mélanges Bidez*, 35-69) five years his junior (*Prov. Cons.* 17. 40). Though Atticus took him to the lectures of the Epicurean Phaedrus (*Fam.* 13. 1), he preferred those of the Academic Philon of Larissa (*Brut.* 306). But the residence in his father's house of Diodotus, the blind Stoic, from 87, made him familiar with Stoic tenets (*Tusc.* 5. 113, *Att.* 2. 20. 6). In 91 he assumed the *toga virilis*, and in 89 during the Social War had brief military experience on the staff of Pompeius Strabo, when doubtless he met Pompey, his junior by half a year. In Rome he attended the receptions of Scaevola the augur, and after his death those of Scaevola the Pontifex Maximus. His preparation for public life was prolonged by the troublous times. As a boy he had listened to the great orators, M. Antonius and L. Crassus; at nineteen he heard Apollonius Molon lecture in Rome. His first appearance in the senatorial courts was in a civil case, *Pro Quinctio*, in 81. His real début was a successful defence of Sex. Roscius of Ameria on a charge of parricide in 80, in which his bold invective against Chrysogonus (q.v.), Sulla's favourite, was covered by skilful flattery of Sulla. He also maintained the right of a lady of Arretium to sue and be sued, although Sulla had disfranchised her native town. In 79 he went abroad for two years (for his health, *Brut.* 314, not for fear of Sulla, as in Plut. *Cic.* 3), attended the lectures of Antiochus, Philon's successor, at Athens, and received instruction in rhetoric from Demetrius there, and at Rhodes from Molon, who cured him of a tendency to the redundant ornament of the Asiatic school. At Rhodes he must have sat under Posidonius.

2. Returning to Rome established in health, he spoke for Roscius the actor (some think it was ten years later) and pleaded other *causas nobiles* (*Brut.* 318). About this time he married Terentia; their daughter Tullia was probably born in 76, when his public career began with the quaestorship. He was an Italian *eques* and the *Equites* were then estranged from the *Optimates*. In 75 he was sent to Lilybaeum under the good governor Sex. Peducaeus. A later governor was the infamous Verres, who systematically robbed the Sicilians, relying on bribery of his future judges and the support of the Metelli. The scandal created by his behaviour, and the energy of C. in securing evidence and obtaining a conviction nine days after the opening of the trial (70), led to the passing of the *Lex Aurelia* which left to senators only a third of the membership of the courts. In this case C. established his equality with Hortensius as leader of the Roman Bar. Of the Verrine orations he delivered only his claim to be prosecutor (*Div. Caec.*) and in substance the first pleading, but he also published his second pleading in five parts, as a damning indictment of senatorial misgovernment. Prosecution was unusual for him, and soon afterwards he defended Fonteius on a charge of misgoverning Narbonensis. In 69 he held the office of curule aedile, the expense of which he says (*Off.* 2. 59) was not great; Plutarch says the grateful Sicilians financed him. In 68 he acquired his villa at Tusculum, which, though he offered it for sale in 57, he retained till his death. In 66 he was praetor, and presided at the trial and condemnation of the historian Macer (*Att.* 1. 4. 2). He successfully defended Cluentius, charged with poisoning.

3. In his first *contio* he supported the Manilian Law to supersede Lucullus by Pompey for the Mithridatic War. He hoped to be Pompey's nominee for the consulship, and took the popular side in defending Cornelius on a charge of *maiestas*. He summoned Atticus from

Athens to assist his canvass, and to conciliate Atticus' 'noble' friends (*Att.* 1. 2. 3). But he would hardly have been elected for 63, had not his chief opponent been Catiline who, formerly a Sullan, was now dangerous from the senatorial point of view as an open advocate of *novae tabulae*. C. on the other hand, as a representative *eques*, was a safe man.

4. Once elected, he was obliged to oppose the various moves of the *populares* under the leadership of Caesar and of Crassus, who was obsessed by dislike of Pompey. C. succeeded in defeating the agrarian measures of the tribune Rullus, but was unable to prevent the condemnation of the aged senator Rabirius for the murder of Saturninus, thirty-seven years before. When Catiline was again rejected at the polls for 62 (Sept. ?), C., who knew that an armed insurrection was about to break out in Etruria, denounced Catiline to his face in the Senate on 8 Nov., and caused him to leave Rome, explaining to the people next day what had happened. By good luck, he secured from the Allobrogian envoys, then in Rome, evidence of the guilt of the chief remaining conspirators, including the praetor Lentulus, and five were arrested. C. described the conspiracy to Senate and People; on 5 Dec. the Senate met to consider their fate. Silanus, consul-elect, proposed the death penalty, Caesar confiscation of property and life imprisonment, thereby admitting that the Senate had to take action. C. (in a speech not extant) said he would execute either penalty, but Cato turned the scale in favour of death. Their execution, however, was dangerous to C., since after the condemnation of Rabirius no *popularis* would admit that C. was really authorized to execute them.

5. On 5 Jan. 62 Catiline and the rebels in the field were annihilated; but before that Metellus Nepos arrived straight from Pompey's camp and was elected tribune. He showed his hand by forbidding C. to address the people on laying down office, and in the early months of 62 continued to attack C. with Caesar's support, proposing to summon Pompey from the East. The Senate suspended both praetor and tribune; so Caesar went off to Spain and Nepos returned to Pompey. That there had been an anarchic conspiracy can hardly be doubted, for Sallust paints Catiline as black as C. does, and C. claims to have crushed it by reconciling *Equites* and Senate in a *concordia ordinum*, which, however, soon began to break up. Pompey returned and disbanded his troops before he had secured lands for them. Having, in spite of C.'s support, failed to get this by the *Lex Plautia*, he formed a secret alliance with Caesar, consul-elect for 59, and Crassus; C. was invited to join this coalition and did not finally refuse until Dec. 60 (*Att.* 2. 3. 3). This involved his retirement from public life in 59, and as he still declined appointments which would have implied submission to the Triumvirs and ensured his personal safety, his banishment by the law of the tribune Clodius followed early in 58. C. bitterly resented the apathy of the senatorial leaders and ascribed this to jealousy (*Att.* 3. 15. 2; 4. 5. 1). Soon Pompey found Clodius intolerable, and C. was recalled by law and compensated in 57.

6. He then resumed his practice at the Bar (*For Sestius*, *For Caelius*, *Against Vatinius*) and Pompey made Quintus his legate in Sardinia. But when C. gave notice of a motion in the Senate to reconsider Caesar's agrarian legislation, Caesar acted with his usual celerity. After seeing Crassus at Ravenna, he met Pompey at Luca, and the Triumvirate was patched up. C. was notified both through his brother and directly that he must submit or suffer, and in his speech *On the Consular Provinces* came to heel, eulogizing Caesar, but gratifying his animosity against Piso and Gabinius, the consuls of 58 who had helped to exile him, by proposing their recall from Macedonia and Syria. From then till the outbreak of the Civil War he was on friendly terms with Caesar, who appointed Quintus his legate, and with Pompey. But when, after

the deaths of Crassus and Julia, the two became estranged, C. learnt more and more to Pompey, who was driven into the arms of the *Optimates*. During these years he had to defend personal enemies, Vatinius who was acquitted and later showed gratitude, and Gabinius who was condemned; but he also had an extensive private practice. He could not save Milo from condemnation *de vi* (the speech we have is worked up for publication), but the death of Clodius relieved him of personal fears. From 52 to 46 his voice was hardly heard in the courts or Senate. In 51 very unwillingly he went as proconsul to Cilicia, where, though he had not to face a Parthian invasion, he superintended military operations on Mt. Amanus.

7. By the time of his return civil war was inevitable. After long hesitation he went to Pompey's camp, but after Pharsalus submitted to the conqueror, before whom he pleaded *For Marcellus* and *For Ligarius* in 46, *For King Deiotarus* of Galatia in 45. He had nothing to do with Caesar's murder, though, when once convinced that Caesar would not rule constitutionally but establish a despotism, he applauded the deed. After Caesar's death he became violently opposed to Caesar's pinch-beck imitator, the consul Antony, with whom, however, he was anxious not to break as late as 21 June 44 (*Fam.* 16. 23. 2). Before the end of 47 he had divorced Terentia; he does not seem to have been on good terms with her since 57, thinking her dishonest in money matters. In 46 he married his young ward Publilia, but after Tullia's death (Feb. 45) he sent her away, and refused to take her back. He then solaced himself with writing, in which he was immersed at the time of Caesar's murder.

8. On 17 July 44 he set out for Athens to visit his son, but, hearing of a meeting of the Senate called for 1 Sept., determined to return, and reached Rome on 31 Aug. Antony having attacked him in his absence on 1 Sept., he delivered the *First Philippic* as his ultimatum in Antony's absence on 2 Sept. Antony renounced his friendship, retired to Tibur to compose an invective, and delivered it on 19 Sept. The *Second Philippic*, an elaborate answer, was not delivered, but (probably) made public after Antony finally left Rome on 25 Nov. C. returned to Rome on 9 Dec. and led the Senate in opposition to Antony, delivering many speeches of which we possess twelve, until Octavian marched on Rome and assumed the consulship, 19 Aug. 43. Of the last miserable months of C.'s life we know little. On 7 Dec. 43 he bravely faced death, having been sacrificed by Octavian to the animosity of Antony.

WORKS

1. Verse, original and translation. *Prose translation*. An heroic poem on Marius; an early effort, for Scaevola praised it (*Leg.* 1. 1); but the fifteen lines we possess seem mature in style. We hear from Plutarch (*Cic.* 2) of a *Pontius Glaucus* in trochaic tetrameters. Of his translation of Aratus' *Phaenomena* 500 lines remain, and of his *Prognostica*, mentioned in 60 (*Att.* 2. 1. 11) and perhaps a youthful work revised, twenty-seven (*see* DIDACTIC POETRY, LATIN). His much derided poem on his consulship was written in 60, and that on his exile (*De Temporibus Sui*) after 57. Besides, we have numerous passages from Homer and the tragedians, metrically rendered, in his philosophical works. His frequent quotations from Ennius, Terence, and other early poets show his familiarity with the national poetry.

He tells his son (*Off.* 2. 24. 87) that at nineteen he translated Xenophon's *Oeconomicus*; he also translated Plato's *Protagoras*, and the speeches of Demosthenes for, and of Aeschines against, Ctesiphon; but the short preface to them mentions the trial of Milo and was not written before 52.

2. Orations (58, some incomplete, survive; about 48

are lost). *Pro Quinctio* (81). *Pro Sex. Roscio Amerino* (80), *Pro Roscio Comoedo* (77?), *In Caecilium Divinatio*, *In Verrem* Act. I, Act. II. i-v (70). *Pro Tullio*, *Pro Fonteio*, *Pro Caecina* (69), *Pro Lege Manilia*, *Pro Cluentio* (66), *Contra Rullum* I-III, *Pro C. Rabirio perduellionis reo*, *In Catilinam* I-IV, *Pro Murena* (63). *Pro Sulla*, *Pro Archia* (62). *Pro Flacco* (59), *Post reditum ad Quirites*, *Post reditum in Senatu*, *De Domo sua* (57). *De Haruspicio responso*, *Pro Sestio*, *In Vatinius*, *Pro Caelio*, *De Prov. Cons.*, *Pro Balbo* (56). *In Pisonem* (55). *Pro Plancio*, *Pro Rabirio Postumo* (54). *Pro Milone* (52). *Pro Marcello*, *Pro Ligario*, (46). *Pro Rege Deiotaro* (45). *Philippicae* I-XIV (44-43).

3. *Rhetorica*. *De Inventione* (84), the first instalment of an unfinished work (he uses *Auctor ad Herennium*). *De Oratore*, three books dedicated to Quintus (55). *Oratoriae Partitiones*, a dialogue with his son (c. 54). Fragment, *De Optimo Genere Oratorum* (52). *Brutus* or *De Claris Oratoribus* (surveying the past century of oratory) and *Orator*, mainly autobiographical, both dedicated to Brutus (46). *Topica* adapted from Aristotle, and written in seven days (44).

4. *Philosophica* (in dialogue (q.v.) form, most fully developed in *De Leg.*). *De Republica*, six books imperfectly preserved, published in 51 (*Att.* 5. 12. 2; *Fam.* 8. 1. 5); here he seems to have used Plato, Panaetius, and Polybius. The sublime 'Dream of Scipio', with which the work ends, following the heroic soul into a future life, was alone known, till in 1820 Cardinal Mai discovered almost a third of the treatise in a fourth- or fifth-century Vatican palimpsest.

De Legibus. Three books are preserved, but Macrobius quotes from a fifth. It was probably begun in 52 (*Leg.* 2. 17. 42), but as it is not given in the list in *Div.* 2. 1, was probably not published till after his death. In 48 Matius (*Fam.* 11. 27. 5) urged him to write on philosophy. He did not begin till Feb. 45, after Tullia's death, with the lost *De Consolatione*. After Munda (17 March) he wrote *Hortensius*, adapted from Aristotle, the exhortation to the study of philosophy which so powerfully influenced St. Augustine. Then came the first draft of the *Academica* in two books. In the first (lost) Catulus expounded the position of Carneades. In the second Lucullus attacked it and C. defended suspense of judgement. Later he recast the work in four books, dedicated to Varro, of which we possess part of the first (*Academica Posteriora*) and Lucullus (*Academica Priora*). He must have largely followed the *Sosus* of Antiochus (*Acad.* 2. 11). The work gave him much trouble (*Att.* 13. 16; 13. 25. 3). By 29 May he had begun *De Finibus Bonorum et Malorum*, five books on views of the chief Good and chief Evil. He refuted the positions of both Epicureans and Stoics, probably using Antiochus as his authority. The work was dedicated to Brutus. *Tusculanarum Quaestionum libri quinque* grew out of discussions with Hirtius, Pansa, and Dolabella at Tusculum in 46. It is not certain what author he followed. He quotes Crantor verbatim 3. 12 and criticizes Antiochus 5. 22. Bk. I 'On fear of death'; II 'Is pain an evil?'; III and IV 'On distress and its alleviation, pain and its remedies'; V 'Virtue is sufficient for happiness'. Concurrently with these he wrote three books *De Natura Deorum*, expounding Epicurean, Stoic, and Academic theologies, following Zeno, Posidonius, and Clitomachus respectively. The Academic spokesman is careful to reconcile his philosophic scepticism with maintenance of the traditional Roman religion. To this *De Divinatione* in two books, and *De Fato*, dedicated to Hirtius, are appendixes: superstition is differentiated from religion, and determinism from fatalism. *Cato Maior*, or *De Senectute*, and *Laelius*, or *De Amicitia*, both dedicated to Atticus, were reliefs to his mind after the Ides of March. When he wrote *Paradoxa Stoicorum* is uncertain; probably parts are of different dates. *De Officiis* in three

books, in the first two of which he follows Panaetius, but not slavishly (2. 17. 60) and in the third writes independently, was dedicated to his son and completed by 5 Nov. 44. To the list the lost *Cato*, which provoked replies from Caesar and Hirtius, and the lost *De Gloria* must be added. The total output between Feb. 45 and Nov. 44 and the high quality of the work so rapidly done are astonishing.

5. *Letters* (931 in Tyrrell and Purser). Sixteen books *Ad Familiares*, arranged and successively published by Tiro, his freedman and literary executor. Sixteen books *Ad Atticum* covering (with gaps) the years 68 to 44. Nepos saw them, and says they almost gave a connected history of the period. But Asconius (A.D. 54) did not know them, and they are first quoted by Seneca, c. A.D. 62-5. What led to their publication about 60 we do not know. Petrarch in 1345 rediscovered them with the three books to Quintus, and two books of correspondence with Brutus, a mere fragment of the nine books that once existed (Nonius). The authenticity of the extant letters to Brutus (with one possible exception) has been vindicated by Purser and Sjögren; but the epistle to Octavian is spurious.

6. Cicero's verse, though derided by Juvenal (10. 122-6), is interesting for the development of the Latin hexameter. It can be claimed that he transmitted to Lucretius and Catullus the older type of Latin versification, but he was not in sympathy with contemporary Alexandrianism, the *νεώτεροι* (*Att.* 7. 2. 1) or *cantores Euphorionis* (*Tusc.* 3. 19. 45). Jerome (*Chron.* ad ann. Abr. 1922) says he 'emended' Lucretius' poem, about which he and his brother corresponded soon after the poet's death in 54 (*QFr.* 2. 9. 3 is unfortunately corrupt). As an orator he was supreme in the courts for years. His *copia uerborum* is sometimes excessive ('no word can be added to Cicero', Quint. *Inst.* 10. 1. 106), but his vocabulary is rich and impeccable. In passionate passages of the *Catilinarians* and *Philippics* he equals Demosthenes. When (*Phil.* 2. 119) he quotes *Cat.* 4. 2. 3, and repeats his twenty-year-old assurance that death cannot come untimely to a senator, this is surely unique in history. He himself thought the Attic style of Calvus, Caesar, and Brutus frigid and jejune, while he equally disliked the other extreme, the Asianism of Hortensius. In philosophy he only claims to be a translator (*Att.* 12. 52. 3) 'ἀπόγραφα sunt; uerba tantum adfero quibus abundo', but more truly he is an adapter of Greek thought and often an independent critic, as of Epicurus in *Fin.* 2. From the Academy's suspense of judgement, and reliance on probability as a sufficient guarantee of truth and guide of life, he never departed. He was the first important prose author to introduce Greek philosophy to Roman readers, and he created a Latin philosophical vocabulary.

7. Of his letters nine-tenths were written unaffectedly to relations and intimate friends, without thought of publication; occasionally, when this is not so, we see the difference in the rhythmical structure (*Att.* 4. 1; *Fam.* 1. 9; letters to Appius Claudius in *Fam.* 3). He did not contemplate publication till 9 July 44 (*Att.* 16. 5), and the intention was not carried out. See LETTERS (LATIN), paras. 2 and 3.

Cicero moulded the Latin language into an incomparably clear and effective vehicle of thought, so that, in spite of brief reactions, his style affected centuries, and his rhythms were stereotyped in the Papal Chancery (see RHETORIC, LATIN, para. 2). Finally Erasmus had to write his *Ciceronianus* to claim liberty to add to his vocabulary and not to use pagan terms for Christian subjects. C. constantly maintained the necessity for an orator to have a basis of literary culture (*Orator* 12) and thus strengthened his power of writing (see LITERARY CRITICISM, LATIN, para. 2). He was, for a Roman, unusually witty

and skilled in repartee (for a specimen of *altercatio* see *Att.* 1. 16. 10), and he made enemies (Clodius and Octavian) by his smart utterances. He did not cast himself for the statesman's part, though the consulship was to him, as to all upper-class Romans, the goal of ambition, but twice in his life he had to face emergencies. He was obliged subsequently to praise his action in 63 (it was a mistake to speak of his *res gestae* to Pompey) just because it was attacked as illegal and unnecessary (*Quint. Inst.* 11. 1. 18); in rhetorical and philosophical writings he is uniformly modest, cf. *Tusc.* 4. 52. In the second crisis he staked and lost his life. Because we know so much from himself of his preliminary vacillations we are apt to forget how he acted. Quintilian quotes him as saying: 'I am not timid in facing dangers, but in attempting to guard against them.' As to his alleged 'conceit', it is only fair to quote *Planc.* 64-5 or *Att.* 4. 5. 1. Any public man whose private letters were published would be exposed as much as Cicero to the charge of insincerity. In political life he was not, *pace* Mommsen, a trimmer, but a moderate man who was loyal to the Constitution. He was not far-sighted or politically wise enough to initiate reforms himself, but he was resolute in opposing reform by violence or revolution. Nepos (*Att.* 16. 4) says of him: 'he not only foretold what happened in his lifetime, but even predicted what is taking place to-day.'

CICERO (2), QUINTUS TULLIUS (102-43 B.C.), shared the education of his elder brother Marcus (1), but though he accompanied him to Athens in 79 did not take to oratory or philosophy. He had, however, a library of Greek and Latin books (*QFr.* 3. 4. 5) and some literary taste: thus he relieved the tedium of winter-quarters in Gaul by writing tragedies (*QFr.* 3. 6. 7). Marcus did Quintus a bad turn by bringing about his marriage with the masterful Pomponia, Atticus' sister, in 69 (Nepos, *Att.* 5), but the ill-assorted union (*Att.* 5. 1. 3-4) lasted till 44. Pilia, Atticus' wife, took the husband's side (*Att.* 5. 11. 7).

2. Quintus' career followed his brother's. He was plebeian aedile in 65 and praetor in 62. He probably wrote the *Commentariolum Petitionis* to assist Marcus' election to the consulship. In 61 he went as proconsul to Asia; *QFr.* 1. 1 and 2 are long letters of advice for his third year of office. The brothers did not meet till M.'s return from exile, which Q. did his best to promote. Pompey then made Q. his legate in Sardinia, and through him M. was warned to submit to the Triumvirs (56). Early in 54 M. procured Q.'s appointment as legate to Caesar in Gaul. In winter 54-53 he held out against the Nervii till relieved (*BGall.* 5. 52), but in 53, when in charge of Aduatuca, he disobeyed orders and nearly caused a disaster (ib. 6. 36 ff.). He was in Gaul winter 52-51 (ib. 7. 90); but was available in the middle of 51 to go as M.'s legate to Cilicia, where he conducted military operations.

3. Like his brother, Q. joined Pompey, but after Pharsalus he and his son tried to ingratiate themselves with Caesar by blaming M. (*Att.* 11. 9 and 10). That the brothers were subsequently reconciled is shown by Q.'s introduction as an interlocutor in *De Div.* and *De Leg.*, though there are no letters, the correspondence to Q. only covering 60-54 B.C. They were together at Tusculum when they heard they were proscribed, and started to flee, but soon parted. Q. and his son, being betrayed by slaves—while M.'s did all they could to save their master—were put to death (Dec. 43).

4. Quintus had wit and power of self-expression, but his lack of self-control and tendency to exaggeration (*Fam.* 16. 26 and 27) stood in his light. Though a competent soldier, he had no political capacity; he owed to his brother's aid his praetorship and province, and acquitted himself fairly well in both offices.

See W. Wiemer, *Q. Tullius Cicero* (Diss. Jena, 1930). G. C. R.

CICERO (3), QUINTUS TULLIUS junior (67-43 B.C.), son of (2) and nephew of the orator (1), was educated under his uncle's supervision during his father's absences from Rome in Sardinia and Gaul. He told his uncle about 'the squabbles of our womenfolk' (*QFr.* 2. 5. 2). In Cilicia his uncle found him deceitful and difficult to manage. He gave him the *toga virilis* at Laodicea, 17 Mar. 50; the youth had then managed to reconcile his parents (*Att.* 6. 7. 1). After Pharsalus he showed bare ingratitude in abusing his uncle to Caesar and the Caesarians; but Hirtius snubbed him, and Dolabella and Pollio both wrote to warn Cicero. After acting as aedile at Arpinum in 46, he went to Spain, then turned to Antony (*Att.* 14. 17. 3) and afterwards to Brutus (*Att.* 15. 19. 2; 21. 1). He shared his father's fate in Dec. 43.

G. C. R.

CICERO (4), MARCUS TULLIUS (b. 65 B.C., *Att.* 1. 2), only son of the orator (1) and Terentia, was educated under his father's supervision, but needed the spur (*Att.* 6. 1. 12). Along with his cousin he was taken to Cilicia and visited King Deiotarus (*Att.* 5. 17. 3). In March 49 he received the *toga virilis* at Arpinum (*Att.* 6. 6. 1), and then commanded a cavalry squadron in Greece (*QFr.* 2. 13. 45). After serving as aedile at Arpinum in 46 he wanted to go to Spain (*Att.* 12. 7. 1), but consented instead to attend

Cratippus' lectures at Athens. He was idle and extravagant, but wrote to Tiro promising amendment (*Fam.* 16. 21). He then served under Brutus, who praised him (*Brut.* 2. 3. 6), and a legion of C. Antonius surrendered to him (*Phil.* 10. 6. 13). After Philippi he joined Sextus Pompeius, but took advantage of the amnesty of 39 B.C. As colleague of Octavian in the consulship (from 13 Sept. 30) he overthrew the statues of Antony and executed the *damnatio memoriae*. He was afterwards proconsul of Asia (in 29–28 according to M. Grant, *From Imperium to Auctoritas* (1946), 385) and (perhaps or) legate of Syria. Seneca remarks (*Ben.* 4. 30) that he owed his consulship to his father, and he was chiefly remembered as a toper (Plin. *H.N.* 14. 147). G. C. R.

CILICIA, a region of south Asia Minor, of varying extension. The name was sometimes applied to the entire mountain zone of south Asia Minor, and to Cappadocia; but it usually referred to two districts of widely different character, (1) Cilicia Tracheia ('Rough Cilicia'), a deeply fissured limestone plateau of the central Taurus range, and (2) Cilicia Pedias, the plain between Mts. Taurus and Amanus.

Cilicia Tracheia was of little consequence, except as a haunt of pirates, who established their bases here from prehistoric to Roman times, and as a source of ship-timber for the navies of Egypt. Cilicia Pedias was important both by reason of its abundant crops (especially of flax and grapes) and as a land of passage between Asia Minor and Syria (by way of the 'Cilician Gates' in Mt. Taurus and the 'Syrian Gates' in Mt. Amanus). It received immigrants from Greece in prehistoric times, in the early first millennium, and in the Hellenistic age, the chief settlements being at Soli, Mallus, and (later) Alexandria-ad-Issum. Under their influence the natives became partly hellenized and founded cities of their own, e.g. at Tarsus (q.v.). After a period of vassalage under Assyrian monarchs Cilicia Pedias passed into Persian hands, but retained its own dynasts. In the Hellenistic age it was a bone of contention between Seleucids and Ptolemies; from 246 to 197 it was mostly under Ptolemaic rule.

The Romans first constituted a province of Cilicia in 102; but this was merely a chain of coastguard stations along the mountain rim of south Asia Minor. After the pirate drive of Pompey (67) the province was extended to include the mountainous interior and Cilicia Pedias. Under Augustus it probably disappeared altogether, the mountain zone being transferred to Galatia, and Cilicia Pedias to Syria. Under Vespasian Cilicia Pedias and Tracheia were re-combined into a separate province.

Strabo, 533–51, 667–76; Jones, *Eastern Cities*, ch. 8. M. C.

CIMBRI, a German tribe from north Jutland, where the district of Himmerland preserves their name. Towards the end of the second century B.C. over-population and encroachments by the sea drove them to migrate, in company with the Teutoni (q.v.) and Ambrones. From the Elbe they arrived, by a roundabout route, in Noricum, where they defeated a Roman consular army (113 B.C.). They then turned west and entered the Helvetian territory between the Main and Switzerland, where a few of them settled; vestiges of a Cimbric element in the population are perhaps implied by inscriptions to Mercurius Cimbrianus at Miltenberg and Heidelberg (*ILS* 4595, 4596, cf. 9377). About 110 they entered the Rhône valley, defeating M. Junius Silanus and then turning into the centre of Gaul. In 105 they were again in the south, where they won the great victory of Arausio (*Orange*), and then entered Spain, whence the Celtiberians drove them out. They now moved towards Italy. Marius defeated the Teutoni and Ambrones, who took the western route, at Aquae Sextiae (*Aix-en-Provence*) in 102, and in 101 destroyed the Cimbri, who had travelled

round the Alps and entered Italy by the north-east, near Vercellae, in the Po valley. A few of the Germans had remained in northern Gaul; the later Aduatuci were their descendants. A remnant of the Cimbri was found in Jutland by the naval expedition sent by Tiberius in A.D. 5 (*Mon. Anc.* 26).

L. Schmidt, *Geschichte der deutschen Stämme. Die Westgermanen* (1938), i. 3 ff.; Tacitus, *Germania*, ed. Anderson (1938), 171 ff.

O. B.

CIMMERIANS (Κιμμέριοι), to Homer a fabulous people 'on whom the sun never looks'. They emerged into history when from south Russia they entered Asia Minor over the Caucasus (there may have been a subsidiary invasion by the north-west) towards the end of the eighth century B.C. They settled round Lake Van and fought the Assyrians until, under Essarhadon (681–668 B.C.), they moved westwards into Asia Minor on a destructive plundering expedition resembling that of Timur in A.D. 1402. They broke the power of Phrygia, overran Lydia (Sardes was captured about 657); and attacked the Greek cities on the west coast, with varying success. The effect of the Cimmerian invasion was to weaken Lydian pressure on the Greek cities and to leave Phrygia devastated and an easy prey to Lydia. W. M. C.

CIMON (c. 512–449 B.C.). Athenian statesman and soldier, son of Miltiades (q.v.). On his father's death in 489 he paid the fine of fifty talents which had been imposed upon him. Circa 480 he married Isodice, grand-niece of Cleisthenes, thus connecting himself with the Alcmaeonidae. Elected *strategus* in 478–477, he helped Aristides to form the Delian League. He was again *strategus* when he drove Pausanias (q.v.) out of Byzantium and later captured Eion, the last Persian stronghold in Thrace (perhaps both in 476). Soon after he captured Scyros, and brought from there 'the bones of Theseus' in triumph to Athens. He is not said to have taken part in the war against Naxos (469 or 468), though the anecdote of his giving judgement for Sophocles against Aeschylus at the Dionysia represented him as *strategus* in 469–468. His greatest military achievement soon followed (in 468 or 467)—the Eurymedon campaign, in which the Persian fleet was totally destroyed, and several Greek cities, as far east as Phaselis, joined the League. He reduced Thasos, which had seceded from the League, after a two years' siege (465–463). He was prosecuted on his *euthyna* (q.v.) by the democrats when he returned in 463, but was acquitted. He persuaded the Athenians to assist Sparta against the insurgent helots, and himself led out a large force of hoplites (462). He was, however, soon sent home by the Spartans (who suspected Athenian intrigues with the helots), and with this ignominy Cimon's great influence at Athens ended. The democrats, led by Ephialtes and Pericles, stripped the Areopagus (q.v.) of most of its powers either during his absence or after his failure, and he was ostracized in 461. Four years later Cimon asked to be allowed to fight against the Spartans at Tanagra to prove his loyalty; this was refused, but he was recalled soon after. He took little part in politics, however, till 451 or 450, when he arranged a Five-Year Truce with Sparta. He led a last expedition against Persia in 449, to recapture Cyprus. On this campaign he died, and peace with Persia followed (see CALLIAS 1).

In the later biography, represented by Plutarch, Cimon figured as a large-hearted, expansive, genial conservative; his policy one of goodwill towards the allies, friendship with Sparta, and war against the national enemy—the opposite in all things of Pericles. There is some truth in this, but the Egyptian war took place during his exile, and he was as active as Pericles in opposing by force secession from the League; attacks were made on his character, some of them by Stesimbrotus, who came from Thasos.

Plutarch, *Cimon*.

A. W. G.

CINAEDIC POETRY, verses recited by *κιναιδολόγοι*, such as Sotades and Timon of Phlius. Originally accompanied by oriental instruments (Demetr. *Eloc.* 37; Polyb. 5. 37. 10), they were later recited (Plin. *Ep.* 9. 17. 1; Strabo 648). They were of a satirical and scurrilous character (Petron. *Sat.* 23. 2) and said to be of Ionian origin (Ath. 620 c; cf. Plaut. *Stich.* 769). C. M. B.

CINAETHON OF LACEDAEMON, epic poet, of uncertain date; supposed author of a *Telegonia* (? *Theogonia*), an *Oedipodea*, the *Ilias parva*, a *Heraclea*, and perhaps genealogies; to be distinguished from Cynaethus (q.v.). See EPIC CYCLE.

EGF 4, 8, 38, 196-8, 212.

CINCINNATUS, LUCIUS QUINCTIUS, an historical figure, although details of his career probably were derived from popular poetry. In 458 B.C., according to tradition, when Minucius was besieged by the Aequi on Mt. Algidus, Cincinnatus was appointed dictator and dispatched to his rescue. He defeated the Aequi, freed Minucius, resigned his dictatorship after sixteen days, and returned to his farm beyond the Tiber. The story later underwent embellishments (e.g. the *Prata Quinctia* may have suggested the name of the hero, and various features may have been borrowed from the account of the rescue of C. Minucius in 217 B.C.), but undoubtedly it is based on more than the misinterpretation of some monument, a false etymology, or reduplication. But the story of Cincinnatus' second dictatorship in 439 has no foundation. P. T.

CINCIUS ALIMENTUS, LUCIUS, Roman senator and historian, was praetor in Sicily in 210-209 B.C., and was captured by Hannibal (Livy 21. 38. 3). His history of Rome, written in Greek, set the foundation of the city in 729-728 B.C. and reached his own times. With the work of Fabius Pictor, it formed the basis of the senatorial historical tradition, especially of the Second Punic War. The constitutional antiquarian of the same name wrote towards Augustan times.

H. Peter, *HRRel.* i² (1914), pp. ci, 40; M. Gelzer, *Hermes* 1934, 48; A. H. McD.

CINEAS, a skilful Thessalian diplomat, famous for his observations that Rome's Senate was an assembly of kings and war with Rome a battle with a hydra. King Pyrrhus (q.v.) sent him at least once and possibly twice to Rome to negotiate peace. His terms, however, proved unacceptable.

Livy, *Epit.* 13; Plut. *Pyrrh.* 11 ff.; Appian, *Sam.* 10 f. E. T. S.

CINESIAS (c. 450-c. 390 B.C.), dithyrambic poet, of Athens, connected with the abolition of the Chorus from Attic comedy (Schol. Ar. *Ran.* 404), twice engaged in legal proceedings with Lysias, who disapproved of him (Lys. 21. 20; fr. 73). No fragments of interest survive from his work, but Aristophanes refers to him at *Au.* 1377; Lys. 860; *Ecl.* 330; *Ran.* 1437; fr. 198, and Plutarch (*De mus.* 30) regarded him as a corrupter of Attic music. See MUSIC § 10. C. M. B.

CINNA (1), LUCIUS CORNELIUS (cos. 87, 86, 85, 84 B.C.), patrician leader of the democratic party and father of Cornelia, first wife of Julius Caesar. As consul for 87, he impeached Sulla, whom he had sworn to support. On Sulla's departure for the East he proposed the recall from exile of Marius and his partisans. His colleague Cn. Octavius defeated this proposal, and the Senate deposed Cinna from the consulship; whereupon he raised a force of Italians, and with Sertorius' help blockaded Rome. Their entry with Marius into the city was followed by a massacre of Sulla's supporters.

Cinna's successive consulships with democratic colleagues—Marius, and then L. Flaccus, in 86; Cn. Carbo, in 85 and 84—amounted to a 'dictatorship'. We know

little (and that only from hostile sources) of the measures then taken, apart from Flaccus' law remitting three-fourths of debts and the restoration of Sulpicius' distribution of the Italian voters throughout the tribes—carried out by censors of 86, or at any rate completed by 84. Cinna's government, however, must be credited, most probably, with the return to the issue of pure silver coinage, after a period of debased *denarii* (see MARIUS 3).

Cinna made great preparations to resist the return of Sulla after his campaigns in Greece, but was killed in a mutiny at Brundisium. M. II.

CINNA (2), LUCIUS CORNELIUS, son of (1) above, took part in the revolt of Lepidus, joined Sertorius in Spain, and returned under the *Lex Plotia de reitu Lepidanorum*. Praetor in 44, he expressed approval of the murder of Caesar, was attacked on his way to attend the Senate (17 Mar.), and rescued by Lepidus. He procured the recall of the exiled tribunes Flavius and Marullus. His wife was the daughter of Pompey.

Plutarch, *Brutus*, 18 and 20; Appian, *BCiv.* 2. 121 and 126. Drumann-Groebe, *Gesch. Roms* ii. 508 f. G. W. R.

CINNA (3), GNAEUS CORNELIUS, son of (2) above and Pompeia, daughter of Pompey. He plotted against Augustus during his absence in Gaul (possibly 16-13 B.C.), but was pardoned at the instance of Livia and was consul in A.D. 5.

Seneca, *Clem.* 1. 9; Dio Cassius, 55. 14 and 21 f. G. W. R.

CINNA (4), GAIUS HELVIUS, tribune 44 B.C., carried a law deposing his colleagues Flavius and Marullus, who had offended Caesar. After Caesar's funeral he was mistaken for L. Cornelius Cinna and lynched by the mob. He is usually identified with a friend of Catullus', of whose works only fragments survive. See ZMYRNA.

G. W. R.

CINXIA, see JUNO.

CINYRAS, mythical king of Cyprus and ancestor of the Cinyrades, the priests of Aphrodite-Astarte at Paphos (Tac. *Hist.* 2. 3). C. represents the Phoenician culture in Cyprus, and so is called king of Byblos (Strabo 755) or son of Sandocus, a Syrian immigrant to Cilicia (Apollod. *Bibl.* 3. 14. 3). Founder of the cult of Aphrodite in Cyprus, C. introduced sacred prostitution (q.v.) there. He was the father of Adonis (q.v.) through unwitting incest with his daughter, Myrrha or Smyrna (Ov. *Met.* 10. 298 ff.); this story was sometimes told of Theias, who is also given as the father of C. As musician and seer, C. is the son and favourite of Apollo. His name became proverbial for riches and beauty.

Cf. Roscher, *Lex.* and *PIW*, s.v. 'Kinyras'; J. G. Frazer, *Adonis Attii Oniris* i, ch. 3. F. R. W.

CIRCE, in Homer (*Od.* 10. 210 ff.) a goddess living on the fabulous island of Aeaea (ib. 135), later identified, in Italy, with the promontory of Circeii in Latium. She is very powerful in magic; her house is surrounded by wild beasts who fawn on new arrivals (later, as *Aen.* 7. 19-20, they are men changed by her spells) and she turns Odysseus' men into swine. He is helped by Hermes to resist her spells by means of the herb moly, forces her to restore his men, and lives with her for a year, after which she gives him directions for his journey home. See ODYSSEUS. She is sister of Aeetes and daughter of Helios and Perse (*Od.* 137-8). In Hesiod (*Theog.* 1011 ff., spurious?) she bears Odysseus two sons, Agrios and Latinus (see further ODYSSEUS). She touches the Argonautic legend, receiving Jason and Medea, and purifying both from the murder of Absyrtus (Ap. *Rhod.* 4. 557 ff.). H. J. R.

CIRCUS, an enclosure for chariot-racing, planned with parallel sides and semicircular end, all fitted with seats, and with an axial rib (*spina*) marked at each end by

turning-posts (*metae*) dividing the area into two runs. The seating was arranged in storied groups. At the open end were the curved stables (*carceres*) for twelve teams of horses, who competed four, six, eight, or even twelve at a time under the colours of the different factions. These were red and white at first (Tertull. *De Spect.* 5 and 9) and presently green (Suet. *Gaius* 55) and blue (Suet. *Vit.* 7), Domitian's purple and gold (Suet. *Dom.* 7) being temporary. There were seven laps to each race, measured by movable eggs and dolphins, the emblems of the Heavenly Twins and Neptune, the horse gods (Dio Cass. 49. 43. 2).

The earliest example of a *circus* at Rome is the *Circus Maximus*, in the Murcia valley between the Palatine and Aventine hills, reputed to be of kingly origin, adorned during the Republic (Livy 8. 20. 1; 33. 27. 4; 39. 7. 8; 40. 2. 1; 41. 27. 6), and rebuilt by Caesar (Pliny, *HN* 36. 102). The second was the *Circus Flaminius* of 221 B.C., in the Campus Martius. The third was the *Circus Gai et Neronis* (Pliny, *HN* 36. 74) or *Vaticanus* (ib. 16. 201), the site of Christian martyrdoms, close to the later St. Peter's basilica. Best preserved of all is the Circus of Maxentius on Via Appia, outside the city, dedicated in A.D. 309 (*ILS* 673).

In Italy, the *circus* is not infrequent, examples being known at Bovillae, Asisium (*CIL* xi. 5390), and Aquileia. The hippodromes of Constantinople, Alexandria, and Antioch were famous throughout the East. In the West, examples are known in Gaul at Lugdunum (*CIL* xiii. 1919), and Vienne; at Emerita, Toletum, Tarraco, Balsa, Zafra, and Urso in Spain, which was famous for its racing-stables (Plin. *HN* 8. 166).

I. A. R.

CIRIS (κείρις), see APPENDIX VERGILIANA.

CIRRHA, the port of Delphi in the Crisaean Gulf in classical times, identified with the modern *Maghoulā*. The name is the same as Crisa (q.v.), so that the two places are sometimes confused. The settlement was destroyed c. 600 B.C. by the Amphictionic League, because its inhabitants had molested the pilgrims to Delphi. It possessed prehistoric tin-works.

O. D.

CIRTA (modern *Constantine* in Algeria), a strong rock-fortress, commanding the gorges of the Ampsaga (*Rumel*), was the capital of Syphax and then of Masinissa, who encouraged the settlement of Italian merchants, and linked Cirta to the ports of Rusicade (*Philippeville*) and Chullu (*Collo*). Micipsa strengthened its fortifications, and introduced Greeks from Cyrene. Jugurtha captured it from Adherbal (112 B.C.) and massacred the Italian inhabitants. For help in overthrowing Juba I, Sittius (q.v.) was granted Cirta and the surrounding country by Caesar (46 B.C.). His veterans settled there, and the new colony remained the capital of a rich agricultural district. Among communities associated politically and economically with Cirta were Rusicade, Chullu, Cuicul (*Djemila*), Milev (*Milah*), and Thibilis (*Announa*). Cirta's great prosperity in the second and third centuries A.D. depended on its crops, marbles, and copper-mines. Its best-known citizen was Fronto (q.v.). Cirta became a centre of the Donatist heresy and was weakened by religious quarrels. But, rebuilt by Constantine, it retained its importance under Byzantine rule.

L. Leschi, *Rev. Africaine* 1937.

W. N. W.

CISALPINE GAUL, the fertile, populous region between Apennines and Alps in north Italy. The migration of Gauls into Italy via the Brenner (c. 400 B.C.) was one phase of the great Celtic expansion (Livy 5. 33 f. mistakenly makes the Gauls arrive via the Western Alps c. 600). These Gauls, although successfully resisted by the Veneti, gradually ousted the Etruscans, pushed back the Umbrians and Ligurians, and made the Cisalpine area their own. Their gift for poetry, their art and

material culture imply a certain degree of civilization; their iron implements, e.g. badly tempered swords, have been recovered from their inhumation burials. But in many ways they were savages: they practised head-hunting and human sacrifice and were addicted to drunken brawling. Occasionally they built excellent fortifications, but many Gallic settlements were mere collections of primitive huts. The Gauls were not very cohesive; they tended to form in groups around individual and often mutually hostile chieftains. Expert horsemen, they were savage fighters, ever ready to live either by plunder or by serving as mercenaries. In the fourth century B.C. their marauding bands, one of which captured Rome (390), terrorized Italy. After 330, however, with an adaptability perhaps not surprising in so unstable a nation, these restless adventurers settled down about the Po and became skilful agriculturalists. However, they retained their fighting qualities, as their annihilation of a Roman army at Arretium (284) proves. Subsequently they waged long and ultimately unsuccessful wars against Rome: see BOII, CENOMANI, INSUBRES, SENONES. Since any *tumultus Gallicus* threatened the national existence Rome pursued a policy of denationalization and even extermination; by 150 B.C. few Gauls remained in the Cisalpine plain (Polyb. 2. 35; Sall. *Iug.* 114; Cic. *Phil.* 8. 3). South Italians, including many Romans, replaced them and Cisalpine Gaul became known as Gallia Togata. Cimbri, who threatened it in 101, were repulsed by Marius. In 89 the Transpadane region received *Ius Latii*, the Cispadane apparently Roman citizenship. Probably it was Sulla who organized the Cisalpine province with the Rubicon as its southern boundary (but see O. Cuntz, *Polybius u. s. Werk* (1902), 32). Roman citizenship was extended to the Transpadane region in 49, and in 42 the province was incorporated into Italy. Under Augustus the tribes inhabiting the Alpine foothills were conquered; thus the Alps became the frontier of Italy (Pliny, *HN* 3. 138). Its remarkable productivity and flourishing woollen trade enriched Cisalpine Gaul. 'Est enim ille flos Italiae, illud firmamentum imperii populi Romani, illud ornamentum dignitatis' (Cic. *Phil.* 3. 13). In Strabo's time (5. 217 f.), as in ours, it contained more large wealthy towns than any other part of Italy.

ANCIENT SOURCES: Strabo (5. 212 ff.) gives a valuable general account of Cisalpine Gaul, marred by anachronisms. Polybius' historical and geographical outline of Cisalpine Gaul down to the Hannibalic War, despite certain inaccuracies, is sober and scientific (books 2 and 3). For events after 202 the chief source is Livy 30-36, a confused account vitiated by rhetorical elaborations. Justin, Diodorus, Appian, and Dio Cassius are the principal subsidiary sources.

CISIUM, see CARRIAGES.

CITHARA, see MUSIC, § 9.

CITIZENSHIP, GREEK (πολιτεία, a word which also denotes (i) the citizen body, (ii) the constitution). In Greek city-states citizenship was originally not an individual right; it meant membership of a political and social community (see POLIS). Descent from full citizen parents always conferred citizen status, and also membership of the smaller communities of family, *genos*, and *phratría* (qq.v.). This was an inheritance from the aristo-

cratic *Polis*. In oligarchies, however, it was more important to own landed property or to be wealthy than to be well born, and in democracies the rule of descent from citizen parents (ἐξ ἀποφύων ἀποτῶν) was not strictly enforced until democracy became well established. Besides, the State could grant and withdraw citizenship. Such grants were seldom made in earlier times, except occasionally by tyrants or other leaders bent on increasing the number of their adherents; but they became frequent after the fourth century B.C. Inscriptions recording grants of citizenship were very numerous in all cities. Finally citizenship became an empty honour which might be obtainable by purchase, and in many cases people obtained two or more citizenships. Citizenship was lost either by *atimia* (q.v.) or banishment. The rights of full citizens were equal in substance, and so were the duties (taxes, military service, etc.). The general duties of a citizen, e.g. submission to law, defence of the State and its Constitution, worship of the State gods, were often confirmed by oath. In most cases citizenship granted to a stranger carried all the rights of a born citizen. In the Hellenistic Leagues every citizen of a member-state acquired a second citizenship, that of the League.

V. E.

CITIZENSHIP, ROMAN. Roman citizenship depended either upon birth—descent from Roman parents on both sides, though one parent might be a *peregrinus* possessing *conubium*—or upon a grant made by the People. It implied rights, privileges, and duties, *iura, honores, munera*. All citizens, after the union of the Orders, possessed *conubium* etc., and, under the Republic, voting rights (*suffragium*) in the various assemblies, unless specifically disfranchised (*acerarii*). The system of wealth classification limited the value of the *suffragium* and determined eligibility for magistracies (*honores*) and liability to *munera* (q.v.), especially military service. *Honores* were thus supplementary; there was no *ius honorum*. Rome gradually extended her citizenship to her allies and subjects, in whose incorporation *civitas sine suffragio* (s.v. *MUNICIPIUM*) or *ius Latii* (q.v.; also *LATINI*) formed an intermediary stage. Citizenship brought the new Romans within the orbit of *iura, munera, and honores*, and entailed the surrender to Rome of the sovereignty of the community concerned. Thus Roman citizenship was incompatible with that of another State. Incorporated communities retained, however, some rights of local self-government (see *MUNICIPIUM*). These principles, worked out in the incorporation between 380 and 250 B.C. of those places which formed the Roman territory down to 90 B.C., were revived by the incorporation of all Italy after the Social War (see *SOCII, MUNICIPIUM, COMMERCIIUM, LATINI*). The consequent increase in the number of *municipia* inaugurated a change in the theory of Roman citizenship. Rome ceased to be a city-state and became the *communis patria* of all Italy. Municipal affairs began to supplant the Forum as the centre of interest for the mass of citizens. Next came the extension of the citizenship to provinces. In the Second Triumvirate colonies and municipalities were regularly established overseas, provincial peoples were granted Latin rights and citizenship. Throughout the Principate these processes continued, accelerated by the regular grant of citizenship to legionary recruits and discharged auxiliaries of provincial extraction, until the western provinces became Roman both in civilization and social rights (see *COMMERCIIUM*). Finally the *constitutio Antoniniana* conferred citizenship upon all free inhabitants of the Empire (A.D. 212), without, however, affecting the status of their communities. (Cf. *MUNICIPIUM, COLONIZATION, IUS ITALICUM*.) The citizenship gradually lost its political importance, apart from the value of *ius recrea-*

tionis (see *APPELLATIO*): the *munus militare* disappeared with the disuse of compulsory recruiting; the abolition of *comitia* made the *ius suffragii* illusory; senatorial *honores* fell to only the most distinguished of provincial citizens, though the municipal aristocracy commonly aspired to equestrian rank. But the social content remained unchanged, despite some assimilation of the rights of *peregrini* to those of citizens (cf. s.v.). By the age of the Antonines, however, citizenship was mainly valued as a symbol of imperial unity, for the doctrine of the incompatibility of two citizenships had broken down with the frequent extension of the franchise to individual members of non-Roman communities (see *PEREGRINI*), and the political ambitions of ordinary men were fully satisfied by the service not of Rome but of their local municipalities. Consequently the spread of *civitas Romana* led to the elaboration of the theory that Rome was the *communis patria* of the whole civilized world.

For bibliography, see *COLONIZATION, LATINI, MUNICIPIUM*. A. N. S.-W.

CITY-FOUNDERS (κτίσται, οἰκιστῆς, *conditores*) played an important part in the city-state. In the Greek homelands, where the true origin of cities was no longer known, a god or legendary hero was looked upon as founder. But the founder is of greatest significance in the period of Greek colonization. No city sent out a band of colonists without appointing a founder, who had complete power over the colony until the new city's foundation was accomplished. If a band of exiles founded a city they selected one of their number to be founder. When a colony founded a colony in its turn, it always summoned a founder from the mother-city. The founders received heroic honours (see *HERO-CULT*) after death; there was probably no *polis* without a founder's cult. Sometimes a city changed its founder, thus symbolizing some important change in its constitution or fortunes, as when Amphipolis ousted Hagnon for Brasidas. Hadrian through his benefactions received the name of founder from many cities.

J. E. F.

CIVILIS, GAIUS JULIUS (1st c. A.D.), a noble Batavian and commander of a Batavian cohort, had personal grievances against the Roman government. When Antonius Primus wrote to him in A.D. 69, inciting him to create a diversion and so prevent Vitellian reinforcements from going to Italy, Civilis fomented a war of liberation under pretext of supporting Vespasian. With help from Germans beyond the Rhine he attacked the legionary camp of Vetera, but was beaten off. The revolt, however, spread widely, finding support in the winter of A.D. 69-70 among Gallic tribes like the Treveri and Lingones. Roman troops at Novesium took an oath of allegiance to the 'imperium Galliarum' and Vetera fell at last. But meanwhile the Flavian generals were approaching. Civilis (q.v.) won a battle near Trier and the Gallic movement collapsed. After mixed fighting along the Rhine towards the Batavian territory, Civilis finally capitulated. His fate is not known.

E. Stein, *PR*, s.v. *Julius* (186).

R. S.

CIVITAS (territorial), like the Greek *πόλις*, from meaning originally any autonomous State, came to be applied under the Empire to any self-governing municipal unit, irrespective of its civic category. But technically it denoted the least privileged grade of provincial communities possessing local autonomy, however circumscribed (see

PEREGRINI). Their form of government was republican, with magistrates, council, and a constitution fixed according to local custom. The development of *civitates* out of an unorganized village or tribal system was the first step in the municipal development of backward areas, notably in Spain and Africa. The *civitates*, which might later be given Roman municipal status (see *MUNICIPIUM*), were the basis of the provincial administration. The governors and procurators worked through them, leaving to the local authorities the actual performance of e.g. the census surveys and collection of taxes (see *DECURIONES*, *MUNUS*, *MUNICIPIUM*).

For bibliography see *MUNICIPIUM*, *SOCI*.

A. N. S.-W.

CLAROS, seat of a cult and oracle of Apollo near Colophon. It was a very ancient sanctuary, undoubtedly of pre-Hellenic origin, but it seems unlikely that the oracle was anything like so old. The cult-myth connects the oracular establishment with Delphi and the prophet Calchas. But Herodotus never mentions it, and the earliest evidence belongs to the fourth century B.C. Only in the Roman Imperial period does it appear to have attained great renown.

The god's vehicle was a male prophet, who heard only the names and number of the consultants, then retired into a grotto, drank the waters of a sacred spring, and uttered his responses in verse. He was assisted by a priest and a thespioide.

Ancient sources: Strabo 642 f.; Tacitus, *Ann.* 2. 54; Iamblichus, *Myth.* 3. 11. Modern literature: K. Buresch, *Klaros* (1889); Ch. Picard, *Ephèse et Claros* (1922). Such excavation as has been done is reported by Th. Macridy-Bey and Ch. Picard in *BCH* xxxix (1915), 33-52. J. E. F.

CLASSICIANUS, GAIUS JULIUS ALPINUS, perhaps originated from the Treveri. As procurator of Britain (A.D. 61) he favoured a policy of conciliation, and begged Nero to recall the harsher Suetonius (q.v.) Paulinus. His tombstone was found in London.

F. Cottrill, *Antiquaries Journal*, 1936, p. 1; E. Birley, *ib.* 207; R. G. Collingwood, *Roman Britain* (1937), 103. A. M.

CLASSICUS, JULIUS, of royal stock among the Treveri (related presumably to C. Julius Classicianus, q.v.), and commanding as *praefectus* a cavalry regiment of his own tribe, joined Julius Civilis (q.v.) when his revolt spread into Gaul at the beginning of 70. Julius Tutor and the Lingonian Julius Sabinus were his close associates in the founding of the 'imperium Galliarum'. Classicus displayed great dash and vigour, shared in most of the fighting against the remnants of the Rhine legions and the generals of Vespasian, and remained loyal to Civilis, apparently to the end. His ultimate fate is unknown.

R. S.

CLASSIS was at first the whole Roman army; later it was a division of the army in the reform attributed to Servius Tullius. Connected with the ancient meaning is also *classis* as 'navy'. In the Servian constitution the property owners were divided into five *classes* (apart from 18 centuries of *equites* and 4 centuries of *fabri*, *cornicines*, and the like). The first three *classes* were infantry of the line, the last two light-armed troops.

The property ratings of the *classes* were perhaps at first expressed in terms of land or agrarian produce, and subsequently in terms of money. The monetary scales are variously given by ancient writers; probably they underwent several alterations (Livy 1. 43; Dion. Hal. 4. 16; Polyb. 6. 23. 15; 6. 19. 2; Gellius 6. 13; Gaius 2. 274; ps.-Asc. *Verr.* 2. 1. 41; Dio Cassius 56. 10; Cic. *Rep.* 2. 22.). See *CENTURIA*.

A. H. J. Greenidge, *Roman Public Life* (1901), 68; G. De Sanctis, *Stor. Rom.* ii. 198, iii. 1, p. 353; H. Stuart Jones, *CAH* vii. 432; T. Frank, *Econ. Survey* i. 19; A. Piganiol, *Annales d'histoire économique et sociale* v (1933), 113; E. Cavaignac, *Rev. Phil.* 1934, 72; H. Mattingly, *JRS*, 1937, 99; E. F. D'Arms, *AJPhil.* 1943, 424. A. M.

CLAUDIAN (CLAUDIUS CLAUDIANUS) lived in Rome and in Milan, A.D. 395-404. Born probably in Alexandria (his first writings were in Greek), he eulogized in Latin the consuls of 395, and became poet-laureate of Stilicho and the Emperor Honorius. Claudian's panegyrics, invectives, and short poems are important historical documents: after 404, when he married a protégée of Serena, niece and adopted daughter of Theodosius, he disappears completely. His statue in bronze, erected by the Emperor 'poscente senatu' (25. 9), bore an honorific inscription (*CIL* vi. 1710), now in Naples Museum.

WORKS. (1) *Panegyric on Probinus and Olybrius*, 395. (2) *Against Rufinus* (2 books), attacking the praetorian prefect, whose murder and dissection are exultantly rehearsed. (3) *War against Gildo* (526 vv., incomplete). (4) *Fescennine Verses*. (5) *Epithalamium of Honorius and Maria* (Stilicho's daughter), 398. (6) *Against Eutropius* (2 books), attacking the eunuch chamberlain, consul 399. (7) *Panegyrics on consulships of Honorius* (396, 398, 404), Manlius (399), Stilicho (400). (8) *Gothic War*, on Stilicho's victory over Alaric, 402. (9) *Shorter Poems: The Old Man of Verona* (idyll, 22 vv.), eulogy of Serena, epithalamium of Palladius and Celerina, *Gigantomachia* (unfinished). (10) *Rape of Proserpine* (unfinished and undated, 3 books), mythological epic, showing skill in picturesque description.

With amazing command of Latin, Claudian, even in official poems, can attain the standard of Silver Age poets (see *EPIC POETRY*, *LATIN*, para. 3). He is a master of allegory, mythological allusion, elaborate similes; his bold imagination and splendour of diction give power and elevation to many passages. His poems show occasional grace and charm, but much epigram, terse and vigorous, and conceits such as 'nusquam totiensque sepultus' (5. 453); in the political panegyrics and invectives eulogy and savage satire are unrestrained. He writes enthusiastically of Rome the Mother (24. 150 ff.).

CLAUDIUS (1) (TIBERIUS CLAUDIUS NERO GERMANICUS, 10 B.C.-A.D. 54), the Emperor, was born at Lyons on 1 Aug. 10 B.C. and was the youngest son of the elder Drusus (q.v. 3) and of Antonia minor. Overshadowed by the strong personality of his elder brother Germanicus, and hampered by a weak constitution and continual illness (he suffered from some sort of paralysis: see T. de C. Ruth, *The Problem of Claudius*, Baltimore, 1924), he received no public distinction from Augustus beyond the augurate and held no magistracy under Tiberius, who considered his 'imminuta mens' an obstacle to high preferment (Tac. *Ann.* 6. 46). He first held office when on 1 July A.D. 37 he became suffect consul with his young nephew, the Emperor Gaius; for the rest, he received little from Gaius but insults. His proclamation as emperor in 41 was largely accidental. After Gaius' murder he was discovered in the palace by a soldier, hiding behind a curtain in fear of murder; he was dragged to the Praetorian Camp and saluted by the Praetorian Guard while the Senate was still discussing the possibility of restoring the Republic. The Senate did not easily forgive him, and many senators supported the fruitless revolt of Scribonianus in Dalmatia in the following year. Chosen by the Guard, Claudius emphasized his interest in the army—a policy all the more necessary because of his own lack of military distinction. Claudius took a personal part in the invasion of Britain (43) and

was present at the capture of Camulodunum. By the end of his principate he had received twenty-seven imperial *salutationes*.

2. Though he was consul four times during his principate (in 42, 43, 47, and 51) and censor in 47-8, in policy he reverted from the pretentious absolutism of Gaius (who was, however, spared an official *damnatio memoriae*) to a less autocratic form of principate. He went farther than his predecessors in extending the *civitas* (see e.g. the Volubilis inscription) and in the foundation of new colonies (e.g. Camulodunum in Britain). This liberal aspect of his policy is well revealed in his speech advocating that the chiefs of Gallia Comata should be granted the *ius honorum* (Dessau, *ILS* 212). With the Senate he was unpopular, not because he curtailed its powers, but from the circumstances of his accession and because of the insistence with which he urged its members to take their responsibilities seriously (see e.g. *BGU* 611). Other causes of his unpopularity were his intense interest in jurisdiction, especially the hearing of cases *intra cubiculum principis*, and the political power of his wives and freedmen. Claudius' principate is marked by the emergence of rich and powerful freedmen, especially Narcissus, his *ab epistulis*, and Pallas, his *a rationibus*. These private secretaries exercised ministerial functions and were, no doubt, heavily bribed by candidates for preferment. Claudius was incurably uxorious. His first wife bore him two children who died in infancy. Aelia Paetina, his second wife, bore him a daughter (Claudia Antonia, A.D. 27-66). He was married at the time of his accession to Valeria Messalina, and had by her a daughter Octavia (born before 41, and later married to Nero) and a son, Britannicus (q.v.), born in 41 or 42. Messalina succumbed in 48 to the intrigues of Narcissus, and Claudius then married his niece Agrippina, who could count on the support of Pallas. She persuaded Claudius in 50 to adopt her son Nero as guardian of his own son Britannicus (four years Nero's junior). Four years later Claudius died; it was generally believed that Agrippina handed him a poisoned dish of mushrooms (13 Oct. A.D. 54). He was, nevertheless, consecrated and was the first emperor after Augustus to receive this distinction. The *Apocolocyntosis*, probably by Seneca, is a satire on his consecration.

3. Claudius had in his youth acquired from Livy a thorough knowledge of Roman history and great respect for Roman religion and tradition. He celebrated the *Ludi Saeculares* in A.D. 47, founded a College of Haruspices, expelled Jews from Rome (though in Judaea and in Alexandria he did his best to still the disturbances resulting from the anti-Semite policy of Gaius), and in Gaul he suppressed Druidism. He wrote books on Etruscan and Carthaginian history, on dice and on the history of Augustus' principate ('*a pace civili*'—i.e. from 27 B.C.). He also wrote an autobiography. None of these works has survived.

4. Claudius added a number of provinces to the Roman Empire: Britain (whose invasion had, perhaps, been contemplated by Gaius), the two provinces of Mauretania (whose last king, Ptolemy, had been deposed and executed by Gaius), and Thrace (in A.D. 46).

5. Ancient writers ascribed the responsibility for Claudius' administration, both on its good and its bad side, to his freedmen and wives. This view is now untenable for the early part of his principate, thanks to the fortunate chance that Claudius thought and wrote in a style as inimitable as it is grotesque. A large number of imperial enactments are preserved in inscriptions and on papyri, covering a great variety of administrative problems. Unquestionably they were dictated by Claudius himself and they show, all of them, however grotesque their thought and language, profound administrative common sense. In the last four years of his principate,

however, his powers were failing and Agrippina and Pallas exercised strong influence on his policy.

ANCIENT SOURCES: Tacitus, *Annals* bks. 11-12 cover the period A.D. 47-54, but we do not possess Tacitus' account of the first six—unquestionably the best and most important—years of Claudius' principate. For the rest, we depend chiefly on Dio Cassius bk. 60 and on Suetonius, *Divus Claudius*. For other sources, see *CAH* x. 973 f. The most important inscriptions and papyri (all of which are published by M. P. Charlesworth in *Documents illustrating the reigns of Claudius and Nero* (1939)) are the letter to the Alexandrians (see H. I. Bell, *Jews and Christians in Egypt*), the Volubilis inscriptions (*Ann. Epig.* 1916, 42; 1924, 66), the Anauni edict (*ILS* 206), the speech on the *ius honorum* of the Gauls (*ILS* 212; see on this, Ph. Fabia, *La Table Claudienne de Lyon*), and *BGU* 611.

MODERN LITERATURE: A. Momigliano, *Claudius* (1934); M. P. Charlesworth, *CAH* x. 667-701 and full bibliography *ibid.* 975-7; V. M. Scramuzza, *The Emperor Claudius* (U.S.A. 1940). J. P. B.

CLAUDIUS (2) II (GOTHICUS), MARCUS AURELIUS (VALERIUS), one of the chief officers of Gallienus, chosen, after his assassination, to succeed him as emperor (early A.D. 268). Whether privy to the murder or not, he soon established friendly relations with the Senate, which had hated Gallienus. He calmed the troops by a donative, and interfered in Rome to check the massacre of Gallienus' friends.

His first act was to dispose of Aureolus, who surrendered in Milan, but was put to death by his own men. His second was to defeat the invading Alamanni near Lake Benacus, after an initial cavalry defeat. Aurelian was appointed to command the horse.

In the west, the Gallic Empire, under Postumus and his successors, Marius and Victorinus, continued to hold aloof. But Spain returned to its allegiance, and a corps was placed at Grenoble, under Placidianus, to protect Narbonensis. When Augustodunum (Autun) revolted, however, Claudius sent no aid, and the city had to surrender to Victorinus.

The main achievement of Claudius was the decisive defeat of the Goths, who, even after Gallienus' great victory, were plundering the Balkans. Claudius won two great battles, at Doberus and Naissus, and finally broke up their great host, absorbing many as soldiers or *coloni*. At the same time he took energetic steps against the pirate squadrons in the Aegean.

In the east, the Palmyrene government had begun by recognizing Claudius, but before the end of his reign had occupied Egypt and had pushed northward to Bithynia.

Claudius died of plague at Sirmium early in 270. He had ruled in harmony with the Senate and was acclaimed as the great patriot, who had 'devoted' his own life to the State and had earned the title of 'Gothic conqueror'.

CAH xii. 189 ff., 225, 231; Parker, *Roman World*, 185 ff.; P. Damarau, *Kaiser Claudius II Gothicus* (1934). H. M.

CLAUDIUS (3), APPIUS (decemvir, 451 B.C.), despite his patrician descent, supported the plebeian claims for a written code of laws and became the leader of the decemvirs. While his policy and high birth attracted the patricians, he pleased the plebeians by sharing power with their representatives at least in his second year of office. He thus hoped that the plebeians would compromise, and consent to abolish the tribunate in return for admission to the highest magistracies. His success as a lawgiver is attested by the survival of the decemviral code despite the violent opposition which his policy aroused. His ultimate failure (that he was murdered or escaped assassination by suicide is probable but not certain) together with the gloomy recollections of the civil struggle in which his dictatorship ended (see VIRGINIA), gave rise to the legend of Appius' tyranny, which, embellished with details taken perhaps from the deeds of the later Claudii, ultimately overshadowed his work and memory.

Mommsen, *Röm. Forsch.* i. 235 ff.

P. T.

CLAUDIUS (4) CAECUS, APPIUS (con. 307 and 266 B.C.), stands out as the first clear-cut personality in Roman history. He has rightly been compared with

the aristocratic founders of Athenian democracy for, although a patrician, Appius used his censorship (c. 312 B.C.) to increase the part taken by the lower classes in managing public affairs. He made citizens of low birth and even sons of freedmen senators. Their support, and also heavier taxation, enabled him to build during the eighteen months of his censorship the first aqueduct (*Aqua Appia*) and the Via Appia (q.v.) on which he founded a market (*Forum Appi*). Whether he distributed the landless citizens of Rome throughout all the existing tribes, independently of their income, in order to establish a balance of power between the urban and the agrarian population, which alone had hitherto enjoyed full political rights, is a matter of dispute, although the step accords with his policy. He transferred the cult of Hercules from private to public superintendence, and perhaps helped Cn. Flavius (q.v.) to publish a book of forms of legal procedure. Despite his reforms Appius could still rely on senatorial support, as his subsequent career shows. As consul in 307 and 296 (when he dedicated a temple to Bellona) and praetor in 295, he took an active part in the wars against the Etruscans, Sabines, and Samnites. Despite his old age and blindness, Appius was still one of the most authoritative statesmen when he persuaded the Senate to reject Pyrrhus' peace proposals (c. 280). The speech he delivered on that occasion soon became famous, was poetically elaborated by Ennius, and still circulated in the age of Cicero. Appius was the first Roman prose-writer and author of moral apophthegms (e.g. 'faber est suae quisque fortunae'), which probably owed much to Graeco-Pythagorean sources.

Mommsen, *Röm. Forsch.* i. 301 ff.; P. Lejay, *Rev. Phil.* 1920; K. J. Beloch, *Röm. Gesch.* 481 ff. P. T.

CLAUDIUS (5) CAUDEX, APPIUS (cos. 264 B.C.), formally commenced the First Punic War by crossing to Sicily with two legions. He relieved Messana by successive attacks on the camps of Hieron and Hanno (Polyb. i. 11-12, 15). Philinus, however, described these Roman engagements as unsuccessful.

H. H. S.

CLAUDIUS (6) PULCHER, PUBLIUS, held the Sicilian command as consul in 249 B.C. To intensify the naval blockade of Lilybaeum he attacked the Carthaginian fleet at Drepana. The Carthaginian admiral, however, fell on the flank of the Roman line as its head entered Drepana harbour. Claudius lost 93 of his 123 ships in this the only serious Roman naval defeat in the First Punic War. The pious attributed his defeat to his disregard of religious form before the battle: when told that the sacred chickens would not eat, he drowned them: 'let them drink'. He was court-martialled and fined, and died soon afterwards.

Polybius, i. 49-52.

H. H. S.

CLAUDIUS (7), QUINTUS, *tribunus plebis* in 218 B.C., was author of a law which forbade senators and their sons to own sea-going vessels capable of carrying over 300 *amphorae* (c. 225 bushels). Small vessels would suffice to transport their agricultural produce. Perhaps he is to be identified with the praetor of 208.

Livy 21. 63.

H. H. S.

CLAUDIUS (8) PULCHER, GAIUS, augur (195 B.C.), praetor (180), was consul in 177, when, after repatriating Latins in Rome, he closed the Istrian War and crushed a Ligurian rising, recapturing Mutina in 176. He was military tribune in Greece in 171. Censor in 169 with Ti. Sempronius Gracchus, he intervened in the levies for Greece; his severity against the *Equites* brought a prosecution in which he was nearly convicted. On the commission for settling Macedonia he died in 167. Strong-willed and conservative, he represented the traditional authority of the Senate in Roman and Italian affairs.

Livy 40. 37; 41. 9-18; 43. 14-16; 45. 15. De Sanctis, *Stor. Rom.* iv. 1, p. 611.

A. H. McD.

CLAUDIUS (9) PULCHER, APPIUS, as consul (143 B.C.) defeated the Salassi in Transpadane Gaul and was censor, probably in 136, with Q. Fulvius Nobilior. As *Princeps Senatus*, he gave powerful support to the programme of his son-in-law, Tiberius Gracchus, serving with him and Gaius on the first board of *IIIviri* under the *Lex Agraria* of 133. He died perhaps in 130.

J. Carcopino, *Autour des Gracques* (1928), 200.

M. H.

CLAUDIUS (10) PULCHER, APPIUS, was praetor in 89 B.C. His soldiers in Campania deserted to Cinna (87). He was expelled from the Senate (86). He was consul (79) with P. Servilius, and proconsul in Macedonia, where he won some victories against the neighbouring tribes; he died in 76.

Münzer, *PW* iii. 2848.

A. M.

CLAUDIUS (11) QUADRIGARIUS, QUINTUS, the Sullan annalist, wrote a history of Rome in at least twenty-three books, from the Gallic sack to his own times. Bk. 3 included the Pyrrhic War, bk. 5 the battle of Cannae, bk. 6 the year 213 B.C., bk. 9 (probably) Ti. Gracchus at Numantia, bk. 13 the year 99 B.C., bk. 19 the year 87 B.C.; the latest date preserved is 82 B.C., the latest book 23. If he is the Claudius who translated Aclius (Livy 25. 39. 12; 35. 14. 5), he presumably adapted the senatorial historian's material to his own annalistic form; the *ἑλεγχος χρόνων* of Κλάδιος (Plut. Numa 1) is scarcely his. The choice of opening point shows his care in handling tradition, although in composition he may have used the Hellenistic, especially the Isocratican, methods of narrative elaboration. This, however, was probably not exaggerated, as by Valerius Antias. His style, as the fragments show, was simple, his vocabulary plain, with an archaic grace (Gellius 9. 13; 15. 1; 13. 29 (28)). He ranks with Valerius Antias as the leading annalist before Livy, and Livy followed him throughout his work.

A. H. McD.

CLAUDIUS (12) PULCHER, APPIUS, son of no. 10, accompanied his brother-in-law Lucullus to Asia. He was praetor (57 B.C.), then governor in Sardinia. As consul (54) with L. Domitius Ahenobarbus, he made a notorious compact to secure their successors' election for money. He was proconsul in Cilicia (53-51) and after two prosecutions censor (50). He followed Pompey in 49 and died before Pharsalus. He wrote a work on augural discipline, the first book of which he dedicated to Cicero. He appears in the *De Re Rustica* of Varro and was a correspondent of Cicero's.

F. Münzer, *PW* iii. 2849.

A. M.

CLAUDIUS (13), TIBERIUS, a freedman from Smyrna, served the emperors from Tiberius to Domitian. Secretary *a rationibus* of Nero, he was given equestrian rank by Vespasian, banished by Domitian, but recalled on the intercession of his son Claudius Etruscus (Statius, *Silv.* 3. 3).

Stein, *PW* iii. 2670; *PIR*² C 763.

A. M.

CLAUDIUS (14) ETRUSCUS, the wealthy son of (13) above and (Tettia?) Etrusca, patron of Statius and Martial, was probably knighted by Vespasian. He obtained from Domitian the recall of his exiled father. Statius' *Silvae* 3. 3 is dedicated to him.

Stein, *PW* iii. 2719; *PIR*² C 860.

A. M.

CLAUDIUS (15) POMPEIANUS, TIBERIUS, son of an equestrian of Antioch, rose to senatorial rank and pursued a brilliant career: c. A.D. 167 he was governor of Lower Pannonia, where he stemmed the German invasions. Subsequently cos. I, he married Lucilla (q.v.),

widow of L. Verus (q.v.), in 169, holding a second consulship in 173. He was now the trusted friend of M. Aurelius (q.v. 1), and his commander in all major campaigns. Under Commodus (q.v.) he retired into private life, thus escaping the repercussions of Lucilla's plot, but, though aged and infirm, emerged again under Pertinax, who, like Didius Julianus after him, vainly pressed him to a share of the imperial administration.

PIR², C 973; P. Lambrechts, *La Composition du sénat romain*... (117-192) (1936), p. 120, no. 705. C. H. V. S.

CLAUDIUS (16) **MAMERTINUS** is the author of a speech delivered on 1 Jan. A.D. 362 in Constantinople, in which he thanked the Emperor Julian for the gift of the consulship. The kernel of the speech is an exaggerated eulogy of Julian. Involved in an embezzlement charge, he fell into disgrace in 368. See PANEGYRIC, LATIN. A. S.

CLAUDIUS, see also BRITANNICUS, DRUSUS, MARCELLUS, NAMATIANUS, NERO, TACITUS.

CLAUSULA, see PROSE RHYTHM.

CLAVUS ANGUSTUS, LATUS. The *angustus clavus* was a narrow, the *latus clavus* a broad, purple stripe (possibly two stripes) stitched to the border of the Roman toga. The former indicated equestrian, the latter senatorial, rank. Under the Roman Empire the *latus clavus* was worn before admission to the Senate, on the assumption of the *toga virilis*, by sons of senators as a right (though, perhaps, the formal consent of the emperor was required; cf. Suet. *Aug.* 38. 2); by others who aimed at a senatorial career (e.g. Ovid and his brother, *Trist.* 4. 10. 28 f.; Dio Cass. 59. 9. 5), with the emperor's special permission. Military tribunes in the legions were distinguished as *tribuni angusticlavii* or *tribuni laticlavii* according as they were pursuing the equestrian or the senatorial *cursus honorum*. J. P. B.

CLEANTHES (331-232 B.C.), son of Phantias of Assos, disciple of Zeno of Citium and his successor as head of the Stoic School from 263 to 232. With him the sober philosophy of Zeno became pervaded by religious fervour. He considered the universe a living being, God as the soul of the universe, the sun as its heart. In ethics he stressed disinterestedness, saying that doing good to others with a view to one's own advantage was comparable to feeding cattle in order to eat them. He contended that evil thoughts were worse than evil deeds, just as a tumour that breaks open is less dangerous than one which does not. Most famous among his works is his hymn to Zeus.

A. C. Pearson, *The Fragments of Zenon and Cleanthes* (1891); H. von Arnim, *SFV* I. 103-39; Poetical Fragments, J. U. Powell, *Coll. Alex.* (1925), 227-31; Diog. Laert. 7. 168-76; *PF* xi. 558. K. von F.

CLEARCHUS (1) (c. 450-401 B.C.), a Spartan officer and a stern disciplinarian, held commands in the Hellespontine region from 409 onwards. He refused to withdraw from Byzantium in 403, was ejected by Spartan troops, and sought refuge with Cyrus II, who commissioned him to recruit, and later to command, the Greek mercenaries forming the core of his army. At Cunaxa his refusal to expose his right flank made possible the decisive Persian cavalry charge. He held his troops together after the battle, but, with the other officers, was treacherously arrested at a conference with Tissaphernes and executed. D. E. W. W.

CLEARCHUS (2), Middle Comedy poet, late in that period, his name standing among the victors four places before Timocles (*JG* ii. 2325. 154). Fr. 3 (*The Corinthians*) says no one would carouse if the headache came before the debauch!

FCG iv. 552 ff.; C&F ii. 428 ff.

W. G. W.

CLEARCHUS (3) of Soli, in Cyprus (*fl.* c. 250 B.C.), a polymath, wrote *βίοι* (of people and individuals), paradoxes, an encomium on Plato, and zoological and mystical works. These are learned but sensational; attacks on luxury reveal a Peripatetic background (*FHG* ii. 302).

O. Stein, *Philol.* 1931, 258-9.

F. W. W.

CLEDONIUS (5th c. A.D.), grammarian who taught in Constantinople and wrote an *Ars* (ed. Keil, *Gramm. Lat.* v. 9-79) which is explanatory of the *Ars* of Donatus. The treatise is preserved only in a sixth-century Berne codex which is our oldest MS. of a grammatical work.

Cf. Teuffel, § 472. 1; Schanz-Hosius, § 1101.

J. F. M.

CLEDONOMANCY, see DIVINATION, para. 5.

CLEIDEMUS or **CLEITODEMUS** (*fl.* c. 350 B.C.), the oldest athidographer, if we except Hellanicus. The *Atthis*, in more than four books, was his chief work. The first two books dealt with the monarchic period, and are most often cited, his main interest being presumably in the earlier history. These two books are also referred to under the title *Ἱπρωτογονία*. The fragments show a tendency to rationalize myths and an interest in etymology.

FHG i. 359.

G. L. B.

CLEISTHENES (1) (6th c. B.C.), Athenian statesman, son of Megacles (q.v.) and Agariste (see CLEISTHENES 2). He was of the family of Alcmaeonidae (q.v.), which had quarrelled with Pisistratus; though it is possible that he returned from exile and became archon c. 525-524 B.C. If so, the Alcmaeonidae were exiled again, perhaps after the murder of Hipparchus in 514. An attempt by them to overthrow the tyranny failed at Leipsydrium (date uncertain; perhaps before 514). While in exile the Alcmaeonidae had gained influence at Delphi, and induced the oracle to urge Sparta (then engaged in driving out tyrants and setting up oligarchies in many States and thereby extending the Peloponnesian League) to overthrow the tyranny at Athens. With Spartan help Hippias was expelled; but the noble families at Athens soon quarrelled, and Cleisthenes joined or formed a democratic party to oust his rival Isagoras. The latter was elected archon in 508-507, and called in Sparta again (perhaps the Spartan troops had helped to secure his election). Cleisthenes withdrew, but was soon recalled, and his democratic constitution finally established. According to a doubtful story in Herodotus, he attempted to get help from the Persian satrap at Sardes for the probable war with Sparta; but the terms, complete submission to Persia, were too high. Nothing further is known of him; the complete darkness which veils his last years is one of the curiosities of history.

For his constitutional reforms see ARCHONTES, BOULE, ECCLESIA, DEMOI, PHYLAE, STRATEGI.

A. W. G.

CLEISTHENES (2) of Sicyon, the greatest tyrant of the house of Orthagoras, which ruled for the record period of a century (c. 665-565 B.C.). His reign (c. 600-570) was marked by a strong movement against the Argive Dorian culture and ascendancy; the three traditional Dorian tribes were renamed *Pisgites*, *Swinetes*, *Assites*, while the non-Dorian was called *Archelaoi* (Rulers); Argive rhapsodes were suppressed and the ancient Argive hero Adrastus persuaded to find a tomb elsewhere. His daughter Agariste (mother of the Athenian Cleisthenes) married the Alcmaeonid Megacles, after her suitors had spent a year in the tyrant's palace like successors of the suitors of Penelope. In the First Sacred War (q.v.) Cleisthenes took a leading part; he destroyed Crisa and for a while appears to have controlled the sea approach to Delphi.

Herodotus 5. 67-91; 6. 125-31. P. N. Ure, *Origin of Tyranny* (1922), 255-64, footnotes. P. N. U.

CLEITARCHUS of Alexandria, Alexander-historian, was a secondary writer who was never in Asia and wrote under Ptolemy II, some time after 280 B.C. Little certainty can be obtained about his history, but the belief that Diodorus bk. 17 substantially represents it is baseless; probably it was a bad historical novel, unfavourable to Alexander and making him an imitative character with a taste for massacres. His sources were probably largely popular beliefs, though he sometimes used and embellished Aristobulus and may have drawn on the poets who accompanied Alexander. Diodorus and Curtius did use him, but as secondary material only. No critic of antiquity has a good word for him; but he was much read under the early Roman Empire, and influenced the Romance. See ALEXANDER (3), Bibliography, Ancient Sources. W. W. T.

CLEITODEMUS, see CLEIDEMUS.

CLEITUS (1) ('the Black') (c. 380–328 or 327 B.C.), a Macedonian of noble birth and some distinction as a commander of cavalry. His fame, however, rests on two events: he saved Alexander's life at the battle of the Granicus; and he was himself killed by Alexander nearly seven years later, in a drunken quarrel, though the underlying grounds of difference were political questions of the first importance (Arrian, *Anab.* 4. 8. 1 ff.; Plutarch, *Alex.* 51, and—more hostile to Alexander—Curtius Rufus 8. 1. 19 ff.).

Berve, *Alexanderreich*, no. 427.

G. T. G.

CLEITUS (2) (d. 318 B.C.), a Macedonian noble, served under Alexander in Asia without distinction. Sent home with Craterus and the 'veterans' (324), he played an important part in the Lamian War as admiral of the Macedonian fleet which closed the Dardanelles to the Greeks after two victories (322). For his continued loyalty to Antipater he was rewarded with the satrapy of Lydia (321), from which Antigonus expelled him (319). He became Polyperchon's admiral with the task of preventing Antigonus from invading Europe, but was defeated by Nicanor near the Bosphorus and killed in Thrace soon afterwards.

G. T. G.

CLEMENS, FLAVIUS (cos. A.D. 95), son of Flavius Sabinus and husband of Flavia Domitilla (the niece of Domitian), a person of inoffensive habits ('contemptissimae inertiae'), who was put to death, along with his wife, for *maiestas* soon after he laid down the consulate. They are said to have been guilty of *ἀθεότης*, or following Jewish practices (Dio 67. 14), and may have been Christians, as later tradition alleges. Domitian intended the succession to go to the two small sons of Clemens; they are not heard of after 96.

R. S.

CLEMENT OF ALEXANDRIA (TITUS FLAVIUS CLEMENS) was born c. A.D. 150, probably at Athens, of pagan parents. He was converted to Christianity and travelled extensively seeking instruction from Christian teachers and finally from Pantaeus, head of the Catechetical School of Alexandria, at that time an unofficial institution giving tuition to converts. Clement had a wide acquaintance with Greek literature; his writings abound in quotations from the Platonic and Stoic philosophers; also from Homer, Hesiod, and the dramatists (frequently drawn, it is thought, from anthologies and other secondary sources). His *Protrepticus* shows familiarity with the Greek Mysteries. After ordination he succeeded Pantaeus as head of the school, some time before 200, and held the office till c. 202, when, on the outbreak of the persecution under Septimius Severus, he left Alexandria and took refuge, perhaps with his former pupil Alexander, then bishop of Cappadocia and later of Jerusalem. Clement died between 211 and 216.

Much of his writings is lost, but the following im-

portant works survive nearly complete. These are: (1) The *Προτρεπτικός πρὸς Ἕλληνας* or 'Hortatory Address to the Greeks' (c. 190), designed to prove the superiority of Christianity to the pagan religions and philosophies. (2) The *Παίδευσις* or 'Tutor' (c. 190–5), an exposition of the moral teaching of Christ, not only in its general method, but also in detailed application to special points of conduct, such as eating and drinking, dress, and the use of wealth. (3) The *Στρωματεῖς* or 'Miscellanies' (probably c. 200–2), in eight books, the first seven dealing in the main with the subordination and inferiority of Greek to Christian philosophy. The eighth book is a fragment on Logic. In one of the MSS. two further pieces follow, generally known as *Excerpta ex Theodoto* and *Eclogae propheticae*.

The *Quis dives salvetur?* (*Τίς ὁ σωζόμενος πλούσιος*;) is an extant homily urging detachment from worldly goods. The *ὑποτυπώσεις* or 'Sketches' (of which only fragments survive) was probably an exegetical work consisting of notes on passages of the Scriptures.

Clement's conception of Christianity has been criticized as tinged with Hellenism and humanism and as doctrinally imperfect. His name is often found in Christian calendars on 4 Dec., but in 1748 Benedict XIV expressly excluded him from the Roman martyrology. His writings, however, have much charm and are characterized by serenity and hopefulness.

CLEOBIS and BITON, the two Argive brothers mentioned by Solon to Croesus, in Herodotus' story (1. 31), as among the happiest of mortals. Their mother, presumably as Cicero says (*Tusc.* 1. 47) a priestess of Hera, found that her oxen were not brought in time for a festival, and they drew her car the 45 stades to the temple. She prayed to the goddess to grant them the greatest boon possible for mortals, and Hera caused them to die while they slept in the temple. The Argives honoured them with statues at Delphi, which have been discovered, their identity being ensured by an inscription.

CLEOMEDES (probably c. A.D. 150–200), astronomer, author of a popular work *Κυκλική θεωρία μετεώρων* (*De Motu Circulari Corporum Gaesestium*), largely founded on Posidonius, but with a certain number of optical discoveries which appear to be original.

Ed. H. Ziegler (1891). *PIV* xi. 679.

W. D. R.

CLEOMENES (1) I (reigned c. 519–487 B.C.), a Spartan king, the son of Anaxandridas by his second wife, and half-brother to Dorieus, Leonidas, and Cleombrotus, whom Anaxandridas' first wife bore him later. He pursued an adventurous and at times unscrupulous policy in Greece. He sought to embroil Athens with Thebes by referring the request of the Plataeans for help against Thebes to Athens (probably early in his reign, as Thuc. 3. 68 implies). He launched an unsuccessful attack upon the Athenian tyrant Hippias in 511, but taking the field in person expelled him in 510. Three years later he interfered unsuccessfully on behalf of Isagoras against Cleisthenes, and in 506, when he mobilized the full Peloponnesian levy to restore Hippias, he was frustrated by the defection of the Corinthians and the obstruction of his colleague Demaratus (q.v.).

Disliking distant commitments, he refused to interfere in the affairs of Samos (c. 515), and to support the

Ionian Revolt. His ruthless destruction of the Argive army near Tiryns (probably in 494) was a wanton attack on an unoffending neighbour. His attempt to punish Aegina for submitting to Darius was thwarted by Demaratus, but with support from a Delphic oracle he secured Demaratus' deposition on a charge of illegitimacy. When this was proved to be baseless, he fled and stirred up revolt among the Arcadians. Recalled to Sparta, he soon met a violent end. According to Herodotus he killed himself in a fit of insanity.

Herodotus (5. 39 ff.) underrates Cleomenes; J. Wells, *Studies in Herodotus* (1923), 74 ff., is too lenient. A. M. W.

CLEOMENES (2) III (c. 260–219 B.C.), son of Leonidas, king of Sparta, imbibed ideals of social revolution from his wife Agiatis, Agis IV's widow. Becoming king in 235, he first moved in 229, when he annexed Tegea, Mantinea, Orchomenus, and Caphyae from Aetolia. Having provoked Achaea into war (228), he secured victories at Mt. Lycacus and Ladoecia (227); he now seized despotic power at home (winter 227–226) and set up a 'Lyeurgan' régime, cancelling debts, dividing up land, and restocking the citizen body from *perioeci* and metics. After his capture of Mantinea and victory at Hecatombaeum, a peace conference was called, but postponed owing to his illness; but meanwhile Aratus had opened negotiations with Antigonos III and war recommenced. By seizing Argos (225) and besieging Corinth (224) Cleomenes threatened to shatter the Achaean League; but Antigonos reached the Isthmus, Argos revolted, and Cleomenes was reduced to the defensive. In winter 223 he took Megalopolis; but after a decisive defeat at Sellasia (July 222) he fled to his patron Euergetes in Egypt. Imprisoned by Euergetes' successor, he broke out, tried in vain to stir up revolution in Alexandria, and committed suicide (winter 220–219).

An idealist and a nationalist, Cleomenes used social revolution as the tool of Spartan expansion. He was able to inspire allegiance, and his ideals lived on after him; but he devised no means of securing his gains.

Polyb. 2. 45–70; Plut. *Cleomenes*, *Aratus*. F. W. Walbank, *Aratus of Sicyon* (1933); W. H. Porter, ed. *Plutarch's Aratus*, introd. (1937). F. W. W.

CLEOMENES (3) of Naucratis was appointed financial manager of Egypt and administrative chief of the eastern Delta district by Alexander in 332–331 B.C. He was entrusted with the completion of Alexandria, and became a citizen of it. He made himself satrap of the whole of Egypt after a few years without the consent of Alexander, but was afterwards recognized and pardoned by him. Cleomenes became *hyparchus* of Egypt, with Ptolemy I as satrap, in 322–321; but the future king of Egypt brought serious charges against him, and executed him afterwards. The tricks with which Cleomenes exploited Egypt's wealth and collected 8,000 talents are described in Ps.-Aristotle's *Economics*.

A. M. Andreades, *Bull. Corr. Hell.* liii (1929), 1 f.; F. M. Heichelheim, s.v. 'Sitos' in *PI²*, Suppl. vi. 823 f.; G. Mickwitz, *Vierteiljahrheft für Soz.- und Wirtschaftsgesch.* xxxii (1939), 11 f.; F. Stähelin, s.v. 'Cleomenes' in *PI²*. F. M. H.

CLEON (d. 422 B.C.), Athenian politician, the son of a rich tanner. His first known action in politics was to attack Pericles in 431 and 430; he succeeded him as 'leader of the people'. He proposed the decree to execute all the men of Mytilene after its revolt in 427 (rescinded next day). In 426 he attacked the *Babylonians* of Aristophanes as a libel on the State. Next year, after the Athenian victory at Pylos, he frustrated the Spartan peace proposals, and later accused the generals in charge of the siege of Sphacteria of incompetence. Nicias offered to resign the command to him, and he was compelled to take it; he was completely successful, forcing the Spartans to surrender. In 425 he carried a measure doubling or trebling the tribute paid by the allied States,

and increased the *dieasts'* pay from two to three obols. In 423 he proposed the decree for the destruction of Seione and the execution of all its citizens. In 422–421 he was strategus and set out to recover Amphipolis for Athens, but miserably failed, being defeated by Brasidas and killed.

We have a vivid picture of Cleon in Thucydides and Aristophanes. Both were clearly prejudiced against him, but the portrait must be in essentials true: a very forcible speaker, as ready to tell the people their faults as to flatter them, vulgar in manner, vain (his one success at Sphacteria carried him away), above all, narrow-minded and short-sighted. He wore the mantle of Pericles, but was as inferior to him in ability as he was different in manner. By the fourth-century orators he is spoken of with respect; in the later history he is the conventional vulgar demagogue. A. W. G.

CLEONIDES (beginning of 2nd c. A.D.), author of an *Εἰσαγωγή ἀρμονική*, one of the best sources for the harmonic theory of Aristoxenus (q.v.) of Tarentum.

Ed. C. Jan, *Musici Scriptores Graeci* (1895), 167–207, and H. Menge, *Euclidis Opera* 8 (1916), 186. *PI²* xi. 729. W. D. R.

CLEONYMUS (fl. 305–270 B.C.), younger son of Cleomenes II, guardian to his nephew Areus, who ascended the Spartan throne in 309–308. In 303–302, answering a Tarentine appeal with 5,000 mercenaries, he forced the Lucanians to make peace, annexed Metapontum, and seized Corcyra. When Tarentum revolted he returned to Italy, but was defeated, and soon lost Corcyra. In 293 he helped Boeotia ineffectively against Demetrius; in 279 he seized Troezen, and attacked Messene and Megalopolis. Banished from Sparta c. 275 (Plut. *Pyrrh.* 26), he last appears accompanying Pyrrhus' Laconian invasion (272). Violent, and soured by missing the throne, he was a constant foe of the Antigonids.

K. J. Beloch, *Griech. Gesch.* iv (1925).

F. W. W.

CLEOPATRA I (c. 215–176 B.C.), daughter of Antiochus III and Laodice. She married Ptolemy V in 193 and ruled after her husband's death in 180 as regent for her young son, Ptolemy VI, but died four years later. Her foreign policy was pro-Seleucid, as was natural, and she was therefore called *Syra* by her subjects. Her official name was *θεά επιφανής* and *μήτηρ*. F. M. H.

CLEOPATRA II, daughter of Ptolemy V and Cleopatra I, was born between 185 and 180 B.C. She married her brother, Ptolemy VI, c. 175–174. Later she was co-regent with Ptolemy VI and his brother Ptolemy VIII from 170 until Ptolemy VI was restored as sole ruler. After his death in 146 Cleopatra's further life was a continuous struggle for power against her brother Ptolemy VIII by open war (short regency for Ptolemy VII in 146, rebellion 132–124) or diplomacy (marriage to Ptolemy VIII in 144, conciliation in 124). She survived her second husband, but died in 116 or 115. F. M. H.

CLEOPATRA III, daughter of Ptolemy VI and Cleopatra II. Ptolemy VIII seduced and married her in 142 B.C., and made her co-regent, as a counterweight against her mother's influence. After his death in 116 her eldest son, Ptolemy IX, was made co-regent against her will. She incited unsuccessful rebellions in 110 and 108, but succeeded in 107 in giving her second son, Ptolemy X, his brother's throne. Her last years were filled with quarrels with this second son, who was accused by many of matricide. See *PTOLEMY*. F. M. H.

CLEOPATRA VII was second daughter of Ptolemy (q.v.) Auletes. Her traditional portrait is partly a product of Roman hatred. A Macedonian princess, with no Egyptian blood, she was attractive rather than beautiful,

highly educated, a good organizer, fearless, and amazingly alive. Brought up at a corrupt court, she was always her own law. Some Alexandrians apart, she was popular in Egypt; alone of Macedonian monarchs she spoke her people's language, and if her interest in their religion was as much political as personal, she did feel herself daughter of Re (the sun-god) more seriously than Alexander had felt himself son of Ammon. Almost certainly she never loved any man. Her two love affairs were to gain power, for the keynote of her character was intense ambition; that, and her fire, her mysticism, and her legend, bring her nearer to Alexander than any other of his successors. An exile of 22 when Caesar reached Egypt, she became his mistress to recover her throne, bore him a son, and followed him to Rome in the hope of something greater. After his death she returned to Egypt, until in 41 Antony summoned her to Tarsus. She became his mistress, and he visited her at Alexandria, where he treated her, not as a Roman client-queen, but as an independent monarch; but in 40 he quitted Alexandria, and she did not see him again for four years. Then, late in 37, convinced that further co-operation with Octavian was impossible, he again came eastward, and this time married her; she was the stronger of the two, but was loyal to him to the end. Next year she persuaded him that war with Octavian was inevitable and that he must make one supreme effort for victory. Any Macedonian had much to avenge upon Rome, but few more audacious schemes have ever been conceived than her design of conquering Rome by means of Romans. At Antony's triumph over Armenia in 34 she publicly appeared in the guise of Isis; and at the following 'Donations of Alexandria' he expressly made her overlord of the East as Queen of Kings; the real meaning, not expressed, was that he was Roman Emperor and she Roman Empress. An unknown Greek prophesied that after overthrowing Rome she would reconquer Europe and Asia and inaugurate the reign of Justice and Love; whether she had any such thoughts cannot be said. In any case, Antony's dual position as Roman magistrate and Cleopatra's husband steadily became impossible, and at Actium the refusal of his fleet (i.e. his legions) to fight ended her dream. Egypt offered to rise for her, but she forbade the useless sacrifice; she hoped Octavian would crown one of her sons in her stead. Octavian played her till he had secured her person and treasure and then disillusioned her and gave her an opportunity for suicide. She used an asp, because it was Re's minister; her death meant that she went home to her father the Sun-god. Whatever her faults, the Roman conquerors raised an unwilling monument to her greatness: they had feared her, a woman, as they had feared none other but Hannibal.

W. W. Tarn, *JRS* 1932, 135 (the Cleopatra prophecy); *CAH* x, chs. 2 and 3.

W. W. T.

CLEOPHON (1) became the democratic leader at Athens after the restoration of democratic rule in 410 B.C. He introduced the *δωβελία*, a dole of two obols a day, the allotment of which is unknown. He apparently managed Athenian finances between 410 and 406; he was honest and died poor, and seems to have been efficient. But he was as violent in his manner as Cleon. He attacked both Critias and Alcibiades; and prevented the peace terms offered by Sparta after Cyzicus in 410 from being accepted, and again after Aegospotami in 405. He was prosecuted and condemned to death in 404.

A. W. G.

CLEOPHON (2), Athenian tragic poet of whose plays some titles (Suidas, s.v.) but no fragments survive. Aristotle mentions his lack of idealism (*Poet.* 2), his prosaic style (*ibid.* 22; *Rh.* 3. 7), and illustrates from him a method of evading a question (*Soph. El.* 15).

A. W. P.-C.

CLEOSTRATUS of Tenedos, *see* CONSTELLATIONS, para. 3.

CLEPSYDRA, *see* CLOCKS.

CLEROMANCY, *see* DIVINATION, para. 6.

CLERUCHY (*κληρουχία*), a special type of Greek colony, in which the settlers retained their original citizenship and did not form an autonomous community. It was almost confined to Athens in the time of the Empire. Every settler was allotted a parcel of land (*κλήρος*), normally sufficient to maintain him as *zeugites* (q.v.) and so as a hoplite; they were chosen from the poorest citizens. The cleruchy thus served a double purpose: it helped the poor of Athens and provided a garrison, to prevent either disaffection or attack from without. The most important cleruchies were in Salamis (c. 509 B.C., but perhaps earlier), Chalcis (506-490), Lemnos and Imbros (perhaps before 480), Scyros (c. 475), Hestiaea in Euboea (445), Naxos, Andros, and the Chersonese (c. 450), Aegina (431), Lesbos (427). All these, except Salamis, were abolished in the last stages of the Peloponnesian War. Early in the fourth century Lemnos, Imbros, and Scyros were resettled, and remained Athenian till Roman times; Samos was colonized in 360-350, but lost in 322.

Though the settlers retained their Athenian citizenship, their military duties kept them in their new homes, where they formed communities with self-government in local affairs: they had a boule, ecclesia, *phylae*, magistrates on the Athenian pattern. In the fourth century at least they were supervised by yearly *epimeletae* and *strategi* from Athens. An archon was sent from Athens to Salamis; but the settlers there could exercise political rights in Athens. The cleruchs had the military duties of citizens, and often served abroad; they participated in Athenian festivals.

The size of the cleruchies varied from 1,000 settlers or more (Lemnos, Imbros, the Chersonese) to 200 (Andros). The cleruchs may have numbered 10,000 all told by 430.

CLIBANARI, *see* ARMS AND ARMOUR, ROMAN.

CLIENS. In Ancient Rome a client was a free man who entrusted himself to another and received protection in return. In the late Republic and early Empire, clientship was essentially a social hereditary status consecrated by usage and reflected in the law. The rules of the law were far more binding for the special ease of the freedman, who was *ipso facto* 'clients' of his former owner (*see* FREEDMEN). The ordinary client might receive daily food, often converted into money (*sportula*), or assistance in the courts. In return he helped his patron in his political and private life, and showed him respect, especially by greeting him in the morning. Client and patron could not bear witness against one another, or at least the evidence could not be enforced. Dionysius (*Ant. Rom.* 2. 9-10) records other rules, many of which were out of use or are mere conjectures, for instance that the client must try to ransom his patron.

The Twelve Tables recognized the tie of clientship: 'patronus si clienti fraudem fecerit sacer esto'.

In Imperial times the client was practically confused with the parasite. Martial describes himself as a client. Clients were called *salutatores* because of their duty of daily salutation and *togati* because custom compelled them to wear the toga, by that time obsolescent.

In the provinces (especially in Gaul) the Roman clientship superimposed itself on pre-existing local forms of social ties.

CLYPEUS, *see* ARMS AND ARMOUR, ROMAN.

CLITOMACHUS (Κλειτόμαχος), (187/6-110/9 B.C.), Academic (*Acad. index Herc.* col. 25. 15). He was a Carthaginian, originally called Hasdrubal (i.e., col. 25. 1 f.; Diog. Laert. 4. 67; etc.). After having studied Greek for four years, at the age of twenty-eight he became a pupil of Carneades. In 140-139 he opened a school of his own in the Palladium, and in 127-126 he was elected president of the Academy (*Acad. index*). During a serious illness he committed suicide (Stob. *Flor.* 7. 55).

Clitomachus, a rigid sceptic, was the literary exponent of Carneades, who had left no writings. He is said to have composed about 400 books (D.L. 4. 67), often, however, only notes of Carneades' lectures (cf. Cic. *Tusc.* 3. 54). Well-known writings of his were four books *About the withholding of assent* (Περὶ ἐποχῆς, cf. Cic. *Luc.* 98); *On the sects* (Π. αἰρέσεων, D.L. 2. 92); a work dedicated to the Roman poet Lucilius, another to L. Censorinus, on the principles of the theory of knowledge (Cic. *Luc.* 102). Moreover, it is likely that the greater part of the account of the New Academy in Cicero, Plutarch, and Sextus Empiricus is based on C.

PW xi. 656.

K. O. B.

CLITUMNUS, a river near Trebia in Umbria, famous for the white sacrificial kine on its banks (Verg. *G.* 2. 146). It flowed into the Tinea, and subsequently into the Tiber. Shrines of the personified Clitumnus and other deities adorned its source (called *Sacraria* in the Itineraries), attracting numerous tourists (Pliny, *Ep.* 8. 8; Suet. *Cal.* 43).

E. T. S.

CLIVUS PUBLICIUS, *see* AVENTINE.

CLOACA MAXIMA, a canalized stream draining north-east Rome from the Argiletum to the Tiber by way of the Forum Romanum and Velabrum. Tradition ascribed its regulation to Tarquinius Superbus, and branch drains of the fifth century B.C. do exist. Much of the existing sewer, nowhere older than the third century B.C., is due to M. Vipsanius Agrippa in 33 B.C.

I. A. R.

CLOATIUS VERUS, Augustan grammarian, who besides other works (e.g. Macrobi. *Sat.* 3. 6. 2) wrote three books on derivations (some sound, some unsound) of Latin words from Greek (Gell. 16. 12); probably the 'Cloatius' cited six times by Verrius.

Teuffel, § 263.

CLOCKS. The hours (ὥραι, *horae*, not in the modern sense till Aristotle; δωδέκα μέρεα τῆς ἡμέρας, Hdt. 2. 109. 3, but see J. E. Powell in *CR* liv. 69 f.) were told in antiquity (1) by the sundial, ὥρολόγιον or -ειον, *solarium*, consisting of a pointer, γνώμων, casting its shadow (hence the instrument is sometimes called σκιοβήρας) upon a convex surface, σκάφη (also πόλος, as being a sort of model of the sky) or (less commonly) a flat one. The inventor was Anaximandros (Favorinus ap. Diog. Laert. 2. 1; Pliny, *HN* 2. 187 says Anaximenes), and the idea itself Babylonian (Hdt. loc. cit.). (2) By the water-clock, κλεψύδρα, *clepsydra*, ἐὶδρασκοπέειον, consisting of (a) a vessel from which water flowed through a small orifice, (b) a graduated container into which the water flowed. But if the water-level in (a) was allowed to grow lower, the rate of flow would decrease; hence it was necessary either to keep the level in (a) constant or in some other way to compensate for the decrease. See Heron of Alexandria, vol. 1, p. 506. 23 Schmidt (Teubner, 1899), and the elaborate clock of Ctesibius (Vitruvius, *De arch.* 9. 8. 2 ff.). Ordinary clocks were, however, anything but accurate (Seneca, *Apocol.* 2. 2).

Convenient assemblage of facts in A. Rehm, *PW*, s.v. 'Hermokleus'. Cf. W. Kubitschek, *Geschichte der antiken Zeitrechnung* (1945), 188 ff.

H. J. R.

CLODIA, sister of Clodius (q.v. 1) and wife of Q. Metellus Celer; already before her husband's death (59 B.C.) the most profligate woman of the aristocracy, possessing also considerable political power. Catullus (q.v.) made her into his Lesbia; by 58 Caelius (q.v.) was her lover, but later branded her as a 'quadrantaria Clytaemnestra'. Cicero's *Pro Caelio* is the most vivid picture of her; in his *Letters* she is *βωῶνις* (Juno), accused of incest with her brother (cf. Catull. 79).

L. Schwabe, *Quaestiones Catullianae* (1862), 54 ff.; T. Frank, *Catullus and Horace* (1928), 81; Teuffel-Schwabe, *History of Roman Literature* (1900), i. 392.

G. E. F. C.

CLODIANUS, *see* LENTULUS (3).

CLODIUS (1) **PUBLIUS**, brother of App. Claudius Pulcher (cos. 54), preached mutiny to Lucullus' troops in 68 B.C., and appeared as collusive prosecutor of Catiline in 64. In December 62 he caused a political crisis by appearing in woman's clothes at the festival of Bona Dea, held in the house of Caesar (*Pontifex Maximus*), whose wife Pompeia was his mistress. Though Clodius was finally acquitted of sacrilege by bribed jurors, Cicero had given evidence destroying his alibi; and to be revenged Clodius eventually obtained through Caesar in 59 a *tractio in plebem*, and was elected tribune for 58. He bribed the people with free corn and restoration of *collegia*; then, after repealing the *Leges Aelia* and *Fufia* (*see* LEX, LEGES), he passed a law outlawing anyone who had put citizens to death without trial. Cicero went into exile; Clodius removed Cato (q.v. 5) to Cyprus, and rewarded for their acquiescence the consuls, Gabinius and Piso, with the provinces of Syria and Macedonia. Clodius then turned against Pompey, allowing the escape of Tigranes, son of the Armenian king, threatening Pompey's life, and perhaps suggesting repeal of the *Lex Julia Agraria*. He continued these attacks after Cicero's recall, over the questions of the corn supply and Egypt; but after Luca he lost Caesar's backing, and the rest of his life was spent in brawls against the rival gangs of Milo (q.v.), whom Pompey originally set against him. On 18 January 52 Milo murdered Clodius, then candidate for the praetorship, and the people, regarding Clodius as their champion, burned the Senate house as his pyre.

Sources: Cicero, esp. *De Domo*, *Pro Sestio*, and *Correspondence* (ed. Tyrrell and Purser, vols. i and ii); Asconius, esp. pp. 6-10, 26-49, RS.; and the texts and general modern works cited s.v. CAESAR (1) in the present work. On Clodius as Caesar's agent in 58-56 see L. G. Pocock, *CQ* 1924-5.

G. E. F. C.

CLODIUS (2) **MACER**, **LUCIUS**, *legatus* in Africa in A.D. 68, revolted to Galba and cut off the corn-supply of Rome. He acted as a champion of the Senate, called himself propraetor, and raised a new legion I Macriana liberatrix. Galba had him executed.

E. Groag, *PW* iv. 79; *PIR*, C 1170; H. Mattingly, *B.M. Coins of R.E.* i. 285.

A. M.

CLODIUS (3) **QUIRINALIS**, **PUBLIUS**, from Arelate in Gaul, taught rhetoric in the Neronian age.

CLODIUS (4) **ALBINUS**, **DREMIUS**, a native of Hadrumetum in Africa, belonged to a noble family. After distinguished military service he was at the time of Commodus' death governor of Britain. As a potential candidate for the principate he was at first placated by the title of Caesar, but after Niger's death was proclaimed by Septimius a public enemy on the score of alleged treasonable correspondence with the Senate. In reply Albinus was saluted Augustus by his army, and in A.D. 196 he crossed to Gaul in the vain hope of securing the support of the German legions before marching on Rome. He was killed in a battle near Lugdunum in 197.

Hieronym. 2. 15. 1-7-5; Dio Cassius, lxx. 21; O. Hirschfeld, *Kleine Schriften* (1923), 411 ff. See also *NOTES*, *NOTES*.

H. M. D. P.

CLODIUS, *see also* **PETREIUS** s.v. **BALEBIS**, **TUTICUS**.

CLOELIA, a Roman girl given as hostage to Porsenna (q.v.). She escaped to Rome by swimming the Tiber, but was handed back to Porsenna who, admiring her bravery, freed her and other hostages. An equestrian statue on the Via Sacra celebrated her exploit, in which modern hypercriticism sees an aetiological myth woven round an image of Venus Equestris.

CLOTHO, see FATE.

CLUBS, GREEK. The clubs here discussed may be defined as voluntary associations of persons more or less permanently organized for the pursuit of a common end, and so distinguishable both from the State and its component elements on the one hand, and on the other from temporary unions for transitory purposes. Despite the large number and great popularity of clubs in the Greek world, both in the Hellenistic and in the Greco-Roman period, literature makes surprisingly few references to them, and the available evidence consists almost entirely of inscriptions and, in the case of Egypt, papyri. These provide a picture which, if incomplete, is at least vivid and detailed.

2. Greek clubs, sacred and secular, are attested as early as the time of Solon, one of whose laws, quoted by Gaius (*Dig.* 47. 22. 4), gave legal validity to their regulations, unless contrary to the laws of the State; and we hear of political clubs (*ἐταίρια*) at Athens in the fifth century B.C. (Thuc. 3. 82; 8. 54; 65). In the classical period the societies known to us are mostly religious, carrying on the cult of some hero or god not yet recognized by the State, such as the votaries (*ὀρχεῶνες*) of Amynus, Aselepius, and Dexion, the heroized Sophocles. With the close of Greek freedom, clubs become much more frequent and varied, and though many of them have religious names and exercise primarily religious functions, their social and economic aspects become increasingly prominent and some of them are purely secular. They are found throughout the Graeco-Roman world, but are specially common in the cosmopolitan trade-centres such as Piraeus, Delos, Rhodes, in Egypt, and in the flourishing cities of Asia Minor, and they appear to have played a valuable role in uniting in a common religious and social activity diverse elements of the population—men and women, slaves and free, citizens and aliens, Greeks and 'barbarians'. On the titles and aims of these guilds, their cults and festivals, their social and economic aspects, their membership and officials, their organization and finance, much light has been thrown by inscriptions, fully discussed by Poland (see below).

3. From the multifarious societies so revealed, incapable of a wholly satisfactory classification, three groups may be singled out for mention.

(a) Among the religious guilds a leading place is taken by those of the Dionysiac artistes (*οἱ περὶ τὸν Διόνυσον τεχνῖται*), which devoted themselves to the promotion of music and the drama. The earliest and most prominent of these was the Attic *σύνδοξος*, founded probably in the early third century B.C. (though some scholars assign it to the late fifth) and traceable down to the close of the Roman Republic. Slightly later and less influential was the Isthmian and Nemean *κοινόν*, a federation of several local *σύνδοξοι* with its centre at Thebes and branches at Argos, Chalcis, and elsewhere. To the third century belongs a similar *κοινόν* in Asia Minor, *οἱ ἐπ' Ἰωνίας καὶ Ἑλλησπόντου*, with Teos as its original centre, favoured by the Attalid kings, while in Egypt and Cyprus a guild of *τεχνῖται* flourished under the patronage of the Ptolemies. Under the Empire further titles and privileges were showered, especially by Hadrian, on the *σύνδοξος*, a federal reorganization of the Dionysiac guilds, *οἱ ἀπὸ τῆς οἰκουμένης περὶ τὸν Διόνυσον τεχνῖται*, the existence of which is last attested in A.D. 291.

(b) In various cities wholesale merchants (*ἐμποροὶ*) formed associations of their own (Poland, 107 ff.), and in Athens they combined, for some purposes at least, with the shippers (*ναύκληροὶ*). In the second century B.C. two vigorous and wealthy societies, in which these two elements unite with the warehousemen (*ἐγδοχεῖς*), meet us on the island of Delos, the *Heracleistae* of Tyre and the *Poseidonistae* of Berytus (W. A. Laidlaw, *History of Delos* (1933), 212 ff.); the large and well-appointed clubhouse of the latter, which apparently served religious, social, and commercial ends, has been completely excavated (*Explor. archéol. de Délos*, vi).

(c) Numerous guilds, some of which probably date from the classical period, are composed of fellow-workers in the same craft, industry, or trade, such as doctors, bankers, architects, producers of woollen or linen goods, dyers, fullers, launderers, tanners, cobblers, workers in metal, stone, and clay, builders, carpenters, farmers, gardeners, fishers, bakers, pastry-cooks, barbers, embalmers, transport workers. Their main function was religious and social rather than economic; and though we hear of troubles at Ephesus in which the guilds play a leading part (Acts xix. 24 ff.; *Anatolian Studies presented to W. M. Ramsay*, 27 ff.), their chief object was not to modify conditions of labour or to champion the interests of the workers against their employers, but to offer their members opportunities of pleasurable intercourse in leisure hours.

4. Religious feeling and observance entered deeply into every department of Greek life, and among a people with so developed a social sense religion naturally tended to be an affair of the group rather than of the individual. Hence arose one of the main incentives to the formation of associations, and such glimpses as we gain of their activities suggest that religious rites played a prominent, though rarely (except at the earliest stage) the sole role therein. Deities not recognized by the State were thus worshipped by their devotees, groups of compatriots settled in some foreign city, e.g. the Phoenicians and the Egyptians resident in Delos or Piraeus, maintained their native cults, most of the club-gatherings probably opened with some religious ceremony, and we have numerous references (e.g. *IG* ii². 1275) to the participation of the guild in the funeral rites of its members, the provision or protection of their tombs, or the perpetuation of their cult as 'heroes'. Significant also is the large proportion of guild-names (Poland, *Geschichte*, 33 ff.; 57 ff.) which indicate religious activities (*συνθύραι*, *θεραπευταί*, *ὀρχεῶνται*, *μύσται*, etc.) or are derived from divinities (*Ἀθηναῖοι*, *Ἀφροδισιασταί*, *Ἡρακλεῖοι*, etc.), while their officials frequently bear titles of an unmistakably religious character. 'No point', remarks Poland, 'is more important for the historical evolution of the whole phenomenon than its relation to the deity. This is far more prominent than in the case of the Roman *collegia*; indeed, for many associations these religious aspects are the only thing which we learn about them.' A picture of unsurpassed vividness and detail is presented by an inscription (*SIG* 1109, translated in Tod, op. cit. inf. 86 ff.) of the second half of the second century A.D., which records the proceedings, punctuated by the interjections of enthusiastic members, of a general meeting of the Athenian society of Iobacchi, followed by a verbatim text of the new statutes of the society unanimously adopted thereat. These deal with the admission and subscriptions of members, the dates of periodical meetings, the maintenance of order and the penalties imposed for any disorderly behaviour, the religious ceremonies (including a sermon and a dramatic performance by officers and members of the society) which marked the principal meetings, the celebration of any auspicious event in the life of any member, the duties and privileges of the treasurer, and the attendance of members at the funeral of any of their number. There we see the por-

trayal of typical club-life, the social activities of which are founded upon and suffused by a common religious interest and loyalty.

In general see E. Ziebarth, *Dos griech. Vereinstwesen* (1896); J. Oehler, *Zum griech. Vereinstwesen* (1905); F. Poland, *Geschichte d. griech. Vereinstwesen* (1909); M. N. Tod, *Sidelights on Greek History* (1932), 69 ff. For specific aspects or regions: M. San Nicolò, *Aegyptisches Vereinstwesen zur Zeit der Ptolemäer u. Römer* (1913-15); J. P. Waltzing, *Les corporations professionnelles* (1895); P. Foucart, *Des associations religieuses chez les Grecs* (1873); F. Poland, s.v. 'Technitae' in *PIW* vi. 2473 ff.; M. Radin, *Legislation of the Greeks and Romans on Corporations*. The decrees and laws of the Attic societies are collected in *IG ii.* 1249-369; those of the Delian corporations in *Inscriptions de Délos*, 1519-23; for a selection of inscriptions relating to clubs *SIG* 1095-120, Michel, 961-1018; for Egyptian religious associations A. D. Nock, etc., *Horv. Theol. Rev.* xxix. 39 ff. M. N. T.

CLUBS, ROMAN. The Latin words corresponding most closely to the English 'club' are *collegium* and *sodalitium* (*sodalitas*). The former was the official title of the four great priestly colleges, *pontifices*, *Viri epuloni*, *XViri sacris faciundis*, and *augures*, and the word had religious associations even when the object of the club was not primarily for worship. Few, if any, *collegia* were completely secular. Some took their name from a deity or deities, e.g. Diana et Antinous (*ILS* 7212), Aesculapius et Hygia (ib. 7213), Hercules (ib. 7315, etc.), Silvanus (ib. 7317), and their members were styled *cultores*. Even when their name was not associated with a god *collegia* often held their meetings in temples, and their clubhouse (*schola*) might bear the name of a divinity (*ILS* 7218: *Schola deae Minervae Aug.*). The *collegia* illustrate the rule that all ancient societies from the family upwards had a religious basis.

2. Plutarch (*Numa* 17) attributes to Numa the foundation of certain *collegia*, but it is doubtful whether many existed before the Second Punic War. Complete freedom of association seems to have prevailed down to the last century of the Republic, though the action taken by the Senate against the *Bacchanales* in 186 B.C. shows that the government might intervene against an objectionable club. In the Ciceronian age the *collegia* became involved in political action; many were suppressed in 64 B.C. and again by Caesar, after a temporary revival by Clodius. By a *Lex Iulia* (probably A.D. 7, *ILS* 4966) Augustus enacted that every club must be sanctioned by the Senate or Emperor. This sanction is sometimes recorded on club inscriptions, and it undoubtedly was freely given, though the policy of different emperors varied (Trajan absolutely forbade the formation of clubs in Bithynia: Plin. *Tra.* 34). An extant *senatus consultum* (*ILS* 7212) shows that general permission was given for burial clubs (*collegia funeraticia* or *tenuiorum*), provided that the members met only once a month for the payment of contributions. In practice these clubs engaged in social activities and dined together on certain occasions, e.g. the birthdays of benefactors. After A.D. 100 the government seems to have viewed the clubs with little suspicion.

3. Many *collegia* were composed of men practising the same craft or trade, e.g. smiths, clothworkers, carpenters, sailors; but there is no evidence that their object was to maintain or improve their economic conditions. In most cases they were probably in name burial clubs, while their real purpose was to foster friendliness and social life among their members. Many clubs of *iuvenes* existed mainly for sport, and associations were formed among ex-service men (*veterani*). Several lists of members survive (e.g. *ILS* 6174-6; 7225-7). These are headed by the names of the *patroni* (*ILS* 7216 f.), wealthy men, sometimes of senatorial rank, who often had made gifts to the clubs. The members bore titles recalling those borne by municipal officials. The presidents were *magistri* or *curatores* or *quinquennales* (who kept the roll of members). Below these came the *decuriones*, and then the ordinary members (*plebs*). The funds were sometimes

managed by *quaestores*. In these clubs the humbler population found some compensation for their exclusion from municipal honours. The fact that at the distributions of money or food a larger share was given to the officials or even to the *patroni* implies that the object of the clubs was not primarily philanthropic, though they no doubt fostered goodwill and generosity among their members. See also *INDUSTRY*, paras. 2, 5, and 7.

4. The evidence is almost entirely epigraphic, though Cicero often refers to the political activity of *collegia*. See *ILS* ii. 2, ch. 15 and iii. 2, pp. 710-25. Modern works: J. P. Waltzing, *Étude historique sur les corporations professionnelles chez les Romains* (1895 ff.); E. Kornemann, s.v. 'Collegium' in *PIW*; S. Dill, *Roman Society from Nero to Marcus Aurelius* (1905), 251 ff.; E. G. Hardy, *Studies in Roman History* i (1906), 129-50 (Christianity and the *Collegia*). G. H. S.

5. As stated above, there existed in Rome (and elsewhere in the Roman world) many private *collegia* (*sodalicia*, *sodalitates*, etc.): for a list of the names in use, see A. De-Marchi, *Il culto privato di Roma antica*, pt. ii (1903), p. 75, the standard work on the subject), all theoretically dedicated to the cult of some deity or deities. The general objection to *sodalicia* which existed under the Empire did not extend to societies of this kind, provided they conformed to the rigid regulations laid down in a *senatus consultum* preserved for us at least in part in the records of the *cultores Dianae et Antinoi* of Lanuvium (*CIL* 14. 2112, and cf. *Dig.* 47. 22. 1). The two classes of *collegia* which were allowed or tolerated seem to have been (a) those consisting wholly of poor persons who made small contributions to a common end (frequently the burial of deceased members; this was the purpose of the Lanuvian association already mentioned and of many others which are known). Such societies might meet once a month, presumably for business purposes, for our inscriptional evidence (see De-Marchi, loc. cit. 90) testifies to more frequent meetings which were purely social or purely religious. (b) Societies wholly and genuinely religious in their character, provided of course that the *religiones* in question were not in themselves objected to, as in the classical instance of the Bacchanalian conspiracy (Livy 39. 8 ff., and the *S.C. de Bacanalibus*, Bruns, *Fontes* 7, no. 36). Such an attitude seems implicit in the words (*Dig.*, ibid. 1), '*religionis causa coire non prohibetur*'. It would seem that one handle against the Christians was that they formed illicit associations (Pliny, *Tra.* 96 (97). 7), and some slight evidence that they associated themselves on occasion under some such inconspicuous title as *cultores Verbi* (De-Marchi, op. cit. 162, note 4). Very often, however, the *collegium* was religious in little more than the adoption of a patron deity. One of the commonest forms of association was a trade-guild or a local group of fellow-craftsmen. Thus, we hear of a group of *cultores Liberi patris caupones* (*CIL* 8. 9409), where the worship of the wine-god by tavern-keepers is obviously appropriate. In other cases the divine patron might be unconnected with the trade but generally or locally prominent, as in the *collegium fabrum Veneris* of *CIL* 3. 1981. Other *sodalicia* would appear to have been merely clubs meeting for some kind of common entertainment. Political associations were frowned upon by the emperors (Pliny, loc. cit. and ibid. 34 (43). 1). H. J. R.

CLUENTIUS HABITUS, Aulus, of Larinum, was the central figure in two remarkable criminal cases. In 74 B.C. he charged his stepfather Oppianicus with attempting to poison him. Each side practised wholesale bribery, and finally Oppianicus was condemned by seventeen votes to fifteen. In the hands of the tribune Quinctius, who had conducted the defence, the trial assumed political importance. Oppianicus died in 72; in 66 his

son charged Cluentius with his murder. The brilliant advocacy of Cicero probably secured his acquittal. See Cicero, *Pro Cluentio*, and, for the political implications of both trials, W. Peterson's edition (1899). J. M. C.

CLUSIUM, the modern *Chiusi*, situated in central Italy near Lake Trasimene, was conquered later than the coastal towns by the Etruscans. Seldom mentioned in history after the episode of Lars Porsenna (q.v.), it is very important archaeologically. Originally the Umbrian *Chamars*, it retained much of its pre-Etruscan individuality, notably in burial customs. Cremation was never replaced by inhumation. The consequent use of anthropomorphic urns led to the remarkable development of a sensitive plastic talent. Seen first in 'canopics' it develops in figures and bas-reliefs. Examples in Chiusi, Florence, and (totally neglected) Palermo museums. Round Chiusi are fine painted tombs.

R. Bianchi-Bandinelli, *Clusium* (1925); D. Levi, *Il Museo civico di Chiusi* (1935). D. R.-MacI.

CLUVIUS, see RUFUS (7).

CLYMENE, name of a dozen different heroines (for one see CATREUS), the best known being the mother of Phaeon (q.v.), wife of Merops, king of Ethiopia. Meaning simply 'famous', it is a stopgap name, like Creusa, Leucippus, etc., used where there was no genealogical or other tradition. H. J. R.

CLYMENUS, (1) euphemistic title of Hades, especially at Hermione (Paus. 2. 35. 9, cf. Lasos ap. Athen. 624 c). (2) The fabulous founder of the temple there, an Argive (Paus. *ibid.*). (3) Name of several other mythological persons, the best known being the father of Harpalyce, see ALASTOR. Variants to the story given there are that his daughter's transformation (to an owl, in this account) took place while she was fleeing from him (*Paradoxographi*, p. 222 Westermann), where she is called Nyctimene, apparently by confusion with a like story of Epopeus, king of Lesbos (Hyg. *Fab.* 204), and that he killed her (*ibid.* 206) and himself (*ibid.* 242. 4, Parthenius 13). H. J. R.

CLYTEMNESTRA (*Clytaem(n)estra*, *Κλυταιμνήστρα*; the shorter form is better attested; *Clutāemestra*, Livius Andronicus, trag. 11, by iambic shortening), daughter of Tyndareos, sister of Helen and the Dioscuri and wife of Agamemnon (qq.v.). For her murder of her husband, see AGAMEMNON.

Her legend was a favourite one among post-Homeric authors, and the central interest being her infidelity and murder, all manner of motives are discovered; for in Homer she is a weakly good woman (*Od.* 3. 266), overpersuaded by the energetic scoundrel Aegisthus, and 'hateful' (*ibid.* 310) or 'accursed' (11. 410) only in retrospect. Her sole active cruelty is to kill Cassandra (11. 422). Stesichorus (fr. 17 Dichtl) blames Aphrodite, who made Tyndareos' daughters unfaithful because he had neglected her. Aeschylus (*Ag.* *passim*) and others after him (but the motive may be earlier, see Pindar, *Pyth.* 11. 22 ff., cf. CASSANDRA) give her a double incentive, the sacrifice of Iphigenia (q.v.), and anger at Agamemnon's infidelities, the latter a non-Homeric reason. He also makes her a strong character, the leader in the whole affair, while Aegisthus is a blustering weakling (cf. *Od.* 3. 310, *ἀνάγκη δὲ Ἀγιάσθαι*). Sophocles and Euripides in their *Electras* still make her the more prominent figure, but tend to increase the relative importance of Aegisthus again; Euripides (*El.* 1105-6) makes her somewhat sorry for all that has happened. In Aeschylus, again, she tries to resist Orestes (*Cho.* 889 ff.) and threatens him with the Erinyes (924), whom her ghost afterwards stirs up against him (*Eum.* 94 ff.); in the other tragedians she merely pleads for life.

Her part in other legends is small; she brings Iphigenia to Aulis (Eur. *IA* 607 ff.), and Telephus (q.v.) gets a hearing from the Greeks by acting on her advice (Hyg. *Fab.* 101. 2; ? Euripidean). Her name occasionally occurs as a common noun meaning 'adulteress' (as Quintilian, *Inst.* 8. 6. 53), or 'murderess' (see Horace, *Sat.* 1. 1. 100, where 'fortissima Tyndaridarum' stands for Clytaemnestra). See further ELECTRA.

Abundant ancient and modern references in Höfer in Roscher's *Lexikon* ii. 1230 ff. H. J. R.

CNIDOS, a Greek colony (probably from Argos), situated at the south-west tip of Asia Minor. It produced a famous vintage, and by the sixth century it had trade connexions with Egypt (Naukratis) and southern Italy (Tarentum). But its chief titles to renown were its medical school, its statue of Aphrodite (by Praxiteles), and the observatory of its chief citizen, the astronomer Eudoxus (q.v.).

After a vain attempt to isolate itself by perforating the isthmus on which it stood, Cnidos fell under Persian rule (c. 540 B.C.). In the fifth century it formed part of the Delian League, but little is known of its political connexions after 400. It repeatedly changed rulers in Hellenistic times, and in 129 became a *civitas libera* in the Roman province of Asia. Remains of two temples and of the town walls are still visible.

C. T. Newton, *Travels and Discoveries in the Levant* (1865) ii, ch. 44. M. C.

CNOSSOS (*Κνωσός*, *Κνωσός*) covers a low hill in the Kairatos valley three miles from the sea in the centre of the north coast of Crete. Its history begins with the earliest known habitation of Crete in the Neolithic Age. A deep deposit shows the gradual progress of human culture over a long period of time and that Cnossos even then was an important and populous place. In the late Neolithic Age small huts with two rooms were in use. With the beginning of the Early Bronze Age (c. 3000 B.C.) and contacts with Egypt and Asia Minor which lasted throughout till the final destruction of the Palace, the standard of life improved and houses with two stories arose. Though finds of pottery prove that Cnossos was continuously inhabited, architectural remains are few, since the levelling and terracing of the hill for the building operations which began early in the Middle Bronze Age swept away earlier structures. In this Middle Bronze Age (2200-1600) the hill-top became a large central court with independent blocks of buildings grouped round it. Beyond these to the north and west lay other courts, and approaches from the north-south road across the island were made to Cnossos as an official centre. The Palace grew as the period progressed. The isolated blocks were linked together, the west court enlarged, magazines built on the west and north-west, the north, south, and west entrances were made, the drainage system laid out, and the later Domestic Quarter was begun.

2. At the end of the second phase of the period (c. 1700) the Palace suffered disaster, perhaps the first of a series of earthquakes, and the third phase marks the rise of the Palace as it appears to-day. New architectural features occur in the construction of floors, of columns, and of ashlar masonry. The Grand Staircase with its five flights and the Domestic Quarter in its main lines were built. The north and south entrances were remade, and in the magazines and shrines treasure cists were provided. The theatrical area or north court was extended. This Palace, richly decorated with frescoes, suffered from another earthquake just before the close of the period (c. 1600) and this involved more remodelling. The west porch was built, the west court extended, the central court paved, and the south porch received its final form and generally, except for the Throne Room, the Palace took the form which has survived. The Royal Tomb,

half tomb and half shrine, was built at this time. Some large private houses adjoining the Palace began to encroach upon it and a flourishing and populous town had now grown up all round it. The first and second phases of the Late Bronze Age (c. 1600-1400) added little except the Throne Room system and much fresco work applied to walls repaired and replastered. The built tombs at Isopata nearby belong to this age. About 1400 the Palace was destroyed by fire either caused by yet another earthquake or by an enemy attack. In the last phase of the Bronze Age the Palace was partially reoccupied, and to this stage belong the shrine of Double Axes and a large cemetery. The site lay deserted from the opening of the Early Iron Age and a Greek temple was later built over the ruins. Knossos, however, continued as a town through the Early Iron Age and the Greek settlement of the island. Tombs of this and the succeeding orientalizing and archaic periods show that it passed through the same stages of cultural evolution as other Greek cities. Through the classical and Hellenistic periods it was one of the leading Cretan States and the rival of Gortyn, to which its leadership passed after the Roman conquest. Knossos was a powerful and rich city, made foreign alliances, struck coins, and survived till about the fourth century A.D. Its ruins have yet to be explored. See also MINOS.

COCCEIUS, see NERVA.

CODEX, see BOOKS, I. 9.

CODEX (legal). The earliest collections of Imperial constitutions, made for the use of practitioners and scholars, were the *Codex Gregorianus* (published c. A.D. 291) and *Hermogenianus*, a supplementary collection to the first, with constitutions of Diocletian and his co-regents of 293 and 294 (published 295). Some constitutions of the subsequent years were inserted later. Whilst these collections were private compilations (of unknown authors; written presumably in Beyrout), the *Codex Theodosianus*, a creation of Theodosius II (published 438), was an official code. It contains in sixteen books constitutions from the time of Constantine.

Following the example of Theodosius, Justinian ordered in 528 (only half a year after his accession to the throne) the compilation of Imperial constitutions, but this publication (edited on 7 April 529) at once became obsolete because of the very copious legislation of 530 and the concurrent composition of the *Digesta* (q.v.) by an editorial commission presided over by Tribonianus (q.v.). A new edition was therefore an urgent necessity: it appeared as *Codex repetitae praelectionis* (534), a year after the *Digest*. Tribonianus was again the head of the editorial commission, the members of which were former collaborators in the composition of the *Digest*. The collection comprehends in twelve books constitutions of various types from Hadrian to Justinian (the latest is of 4 November 534). The three codes mentioned above were used in its preparation; the greatest part of the collection is occupied by constitutions of Diocletian. Earlier constitutions are not rarely interpolated in a similar manner as the jurists' works in the *Digest* but not so freely.

Justinian's constitutions issued after the publication of the second Code (written mostly in Greek) are called *Novellae Constitutiones*; but a collection of them was not published by the Emperor, though he intended to do so. Three unofficial collections are known; the largest one was published under Tiberius II.

The last edition of Justinian's *Codex* is that of P. Krueger, *Corpus Iuris Civilis III* (1929). The 3rd vol. of the *Corpus Iuris Civilis*, edited by H. Sobott and W. Kroll (4th ed., 1912) contains the *Novellae*. Important works of reference: C. Lertz, *Vocabulaire des Constitutions de Justinien* (Paris, Int. Inst. Inst. Rom. 3);

R. v. Mayr, M. San Nicolò, *Vocabularium Codicis Iustiniani* i (1920), ii (1923). Fr. Schulz, in *Studi Bonfante* i, *Acta Congressus Iuridici Internationalis* i (1935); P. Noailles, *Lex Collections de Novelles* i, ii (1912, 1914). A. B.

CODRUS, an early king of Athens. According to the story current in the fifth century his father Melanthus, of the Neleid family in Pylos, came as a refugee to Attica, championed Athens against Boeotia in single combat, and became king. When Attica was invaded by the Dorian Heraclids, who had heard from Delphi that they would be victorious if Codrus' life were spared, a friendly Delphian informed the Athenians of this oracle. Codrus thereupon went forth in woodcutter's garb, invited death by starting a quarrel with Dorian warriors, and so saved his country (see Lyeurg. *Leoc.* 84-7). For this deed he was worshipped as a hero; he was succeeded by his son Medon (by another version, the kingship ended with Codrus). Other sons led the Attic colonization of Ionia.

No family of Codridae or Melanthidae is known in Athens. On this ground the historical character of Codrus has been denied. But the Medontidae were a leading family—Solon, Pisistratus, and Plato belonged to it; there was a (presumably ancient) shrine of Neleus, Basile, and Codrus at Athens (*IG* ii. 94); and Codridae are known in Ionia.

J. E. F. and A. W. G.

COELE SYRIA, see SYRIA, para. 1.

COELIUS (1) **ANTIPATER**, LUCIUS, jurist, rhetorician, and historian, the teacher of L. Crassus, writing after 121 B.C., introduced to Rome, from Hellenistic models, the form of the historical monograph. He wrote in seven books on the Second Punic War, Cannae appearing in bk. 1, Scipio's landing in Africa in bk. 6, the capture of Syphax in bk. 7; the work was dedicated to L. Aelius Stilo, the grammarian. Coelius used not only Roman sources, including family archives (*Livy* 27. 27. 13), but Silenus' Carthaginian account (*Cic. Div.* 1. 24. 49); his relation to Polybius is uncertain. Some antiquarian fragments indicate perhaps another work, certainly digressions. His style was Asiatic, with rhythm, echoes of Ennius, striking word-order, and vivid presentation; he composed speeches within the narrative. The work was epoch-making, and its authority was recognized by Cicero, Brutus, Livy, who used him, and Hadrian.

H. Peter, *HRRel.* ii (1914), pp. cxi, 158; O. Meivert, *De L. Coelio Ant.* (1867); E. Norden, *Antike Kunstprosa* i (1923), 176; De Sanctis, *Stor. Rom.* iii. 2. 176. A. H. McD.

COELIUS (2) **CALDUS**, GAIUS, a *homo novus*, was tribune in 107 B.C.; he obtained the extension of written voting to trials for *perduellio* (*Lex tabellaria*). He was praetor (99) and consul (94).

COEMPTIO, see MANUS.

COERCITIO, the right, held by every higher magistrate, of compelling reluctant citizens to obey his orders and enactments, by inflicting punishment. Against this compulsion, which magistrates exercised not as judges but as the holders of executive authority, no appeal was admitted. The law of *provocatio*, however, made it illegal to issue a capital sentence as a purely coercive measure. *Coercitio* was, therefore, applied in historical times in the case of minor offences only, and took the form of imprisonment, exactment of pledges, fine, relegation, and possibly flogging. But in military law magisterial compulsion always retained much of its primitive severity. See also LAW AND PROCEDURE, III. 10.

Meivert, *Röm. Recht*, p. 143 ff.; *Röm. Recht*, (1904), 37 ff.; J. L. Suetonius-Davidson, *Problems of the Roman Criminal Law* (1912) 49 ff.; R. J. Neumann, *PR*, 1.1. P. T.

COGNATIO, see PATRIA POTESTAS.

COGNITIO, see LAW AND PROCEDURE, II. 5 and III. 3.

COHORS. In the early Roman Republic the infantry provided by the *socii* was organized in separate *cohortes* of varying strength under Roman and native *praefecti*. In the legions the cohort was first used as a tactical unit by P. Scipio in Spain, and after the Marian reforms permanently superseded the maniples. There were ten cohorts in a legion, and for administrative purposes each was subdivided into three maniples and six centuries (see MANIPULUS).

In the *Auxilia* the infantry units numbering either 500 or 1,000, and bearing territorial or honorific surnames (e.g. *Gallica*, *fidelis*), were called cohorts; they were commanded by *praefecti* or *tribuni*.

The Praetorians, perhaps on the model of the *cohortes praetoriae* or Republican general's bodyguard, the urban troops, and the *vigiles*, were organized in cohorts 1,000 strong under tribunes. Troops specially levied were also grouped in cohorts, e.g. *cohortes voluntariorum*, *cohortes levis armaturae*. (See ALAE, AUXILIA.)

Kromayer-Veith, *Heerwesen und Kriegführung der Griechen und Römer* (1928). H. M. D. P.

COINAGE, GREEK. Greek coinage began in the metal trade: merchants dealing in the precious metals made up their goods in lumps of a handy size and stamped these with their marks as a guarantee of quality. The earliest examples come from western Asia Minor, and may be of the ninth century B.C.; the metal used is the natural alloy of gold and silver now called electrum. The coins were marketed as bullion, so that standardization of weight was unnecessary, though local standards can be traced in some groups; the marks all seem to be of private persons, and the only legend known, 'I am the mark of Phanes', supports this idea. Such private ventures would have no value as specie. The first series of coins struck closely to standard comes from Lydia, and was probably issued by the Mermnadae (see LYDIA), who could require their subjects to accept them at forced values. Their lead was followed by the Greek cities of the coast, whose badges begin to appear on coins probably before 700; and the Aeginetans, the partners of those cities in the trade with Egypt, took up the idea and struck coins of silver, the metal of which they had the best supply.

2. In Greece the measure of values, at this time, was a conventional one expressed in a handful of iron spits, the drachma; to this the first Aeginetan coins seem to have had no fixed relation, but were regarded as staters, i.e. units of bullion, and fractions of staters. But about 650 Pheidon of Argos reformed the currency within his sphere of influence, by giving the Aeginetan unit the value of two drachmas, and so replacing the iron tokens by silver ones. This created the Aeginetan standard for coinage, in which an ingot of about 90 grains of silver represented a drachma. When the fact that an artificial value could thus be set on a lump of metal was realized, other States which controlled supplies of silver started coinages on their own standards, Corinth soon after 650 and Chalcis in Euboea about 625. These both got their metal from the Paeonian mines in the Balkans, not, as did Aegina, from the islands, and adopted lighter standards, Corinth one of about 45 grains of silver to the drachma and Chalcis about 65, with a common stater.

3. Till about 600 most of the currency of Greece was probably struck at these three centres, either with their own badges or with those of their commercial clients, in the form of their units of coinage, didrachms at Aegina and Chalcis and tridrachms at Corinth. But in the sixth century the use of coins for local business became more general, and many cities began to issue smaller denominations for retail trade; Boeotia provides a good instance of this practice. The greatest development was at Athens, where Solon made the Euboean drachma into a

commercial weight, and Pisistratus adopted the tetradrachm as his unit and initiated a coinage in which the exact amount of silver in a stater could be known without any test; he derived his metal from the mines of Laurium, and so could dictate the price, as the city could later when the mines passed into its possession.

4. The great commercial coinages usually adhered steadily to the same types: the earliest issues bore a type on one face only, first the signet of the merchant and then the badge of the city. In the sixth century types began to appear on the reverse face as well, to distinguish denominations; the first instance in Greece was probably at Corinth, where experiments in modifying the obverse type for the same purpose had previously been tried. Another use of the second field for types is found in Boeotia, where the leading cities put the shield, the badge of the Boeotian League, on the obverse and their own badges on the reverse. But till the end of the century the types in Greece were practically limited to badges or to local deities. There was more freedom of choice in Sicily, where not only artistic but advertising elements affected the types: the cock of Himera and the parsley of Selinus may be badges, but the dolphin of Zancle seems to call attention to the advantages of the harbour; the racing-chariots, which became very popular in the next century, were probably in the first case personal types, for which rural parallels are found among the Thracian tribes. The only fifth-century coinage in Greece which shows such an attempt at medallial appeal was that of the Eleians, struck for the Olympic festivals and of remarkable artistic merit. The commemorative intent is clear in the *Dāmareteion* of Syracuse, issued after the victory at Himera in 480, which is of exceptional size and virtually a war-medal; a similar issue was made once at Acragas and several times at Syracuse in later years, but a single issue at Athens is the only instance outside Sicily till Hellenistic times.

5. Till the fifth century the only metal used for coinage in Greece was silver; the cities of the Asiatic coast continued to strike electrum, and Croesus and the Persian kings made gold their standard. Towards the end of the fifth century a few Greek gold coinages began to appear, the earliest probably at Thasos, and these became more numerous in the fourth; but the issues were small, judged by the rarity of specimens now known, except in the case of the staters of Lampsacus, which began about 390 and with Persian darics supplied the bulk of the gold in the Greek markets till Philip II of Macedon flooded them with his coins. Bronze was first struck in Sicily by the Greek cities early in the fifth century, to suit the wants of the Sicels and Elymians, who, like the Italian tribes, were accustomed to measure their values in bronze. It was not used for coinage in Greece till after 400, if emergency issues are left out of account; but the advantages of small change were quickly realized, and by the end of the fourth century most important Greek cities had their regular bronze currency. The old iron spits probably continued in use at Sparta till the end of the fourth century, and a few iron coins of Argos exist; but in this case, as in that of other base metal coins, it is difficult to decide whether they were official issues or fraudulent copies.

6. Plated coins were produced in Greece as early as the sixth century, the first recorded by ancient authors being the electrum staters of Polycrates of Samos; and the frequent occurrence, in hoards, of coins chopped to test their goodness, especially in the Near East, is evidence that the practice of plating was a recognized danger to the merchant. Gold and silver were seldom debased in official issues of the earlier periods, the most notable instance being the base silver of Lesbos; but in the fourth century debased gold was issued in Sicily, and Carthage followed suit. Under the Roman Empire the depreciation of Greek currencies continued, till the last survivors,

the staters of the kings of Bosphorus, which had originally been gold, ended in the fourth century A.D. as bronze. A similar deterioration is found in the silver coinages of the eastern provinces, beginning under the Hellenistic kings, and in Egypt and Syria recourse to lead occurs. This decay, however, was really in sympathy with the collapse in Roman credit, and belongs to Roman economic history.

7. There was a notable change in the Greek coinages after Alexander the Great had made an attempt, probably suggested by the action of the Athenians in the time of their empire in the fifth century, to develop a world currency on a single standard. In addition to the three Greek standards, local standards had grown up, especially in Thrace, Asia Minor, and Phoenicia, to suit the local values of silver, and there were wide differences between bullion and specie prices. The system of Alexander, which was based on the Attic standard, with gold in a fixed relation to silver, and bronze subsidiary, could last only as long as the Empire held together and its rulers dictated currency values; as soon as it broke up, the local conditions governed the markets as before. The Successors generally tried to keep to the Alexandrian standard for their regal issues; but by the second century in the East they had to resort to dual coinages. The kings of Pergamum struck royal Attic tetradrachms and commercial Asiatic ones, the Seleucids had a supplementary series of Phoenician standard, and the Ptolemies were driven on to a copper standard. Cities which obtained sufficient autonomy generally returned to the old local standard; Alexandrian types and weights lingered on for some time, in Asia Minor till the middle of the second century, but as a rule the Attic standard was followed in Greece, the Phoenician in the Syrian region, and the Asiatic between them. The issue of large silver pieces tended to concentrate in a few important trade centres; but there was a great extension in the production of bronze in the smaller towns for local use.

8. The general character of the types placed on the city coinages had begun to show some change in the fifth century, and this process went further in the fourth: the old badges on the obverses were replaced by heads or figures of deities, and the reverse types were often associated in idea with the deities so portrayed. After Alexander the custom grew up of putting on the obverse the head of the ruler who issued the coin. Alexander's likeness never appeared on his own coins, but Lysimachus and Ptolemy Soter first put the head of Alexander, the one as the son of Ammon, the other as the founder of Alexandria, on their coins; then Ptolemy substituted his own portrait, an example followed by the Seleucids and lesser houses.

9. The end of Greek coinage was gradually effected by the growth of Roman influences. The first to disappear were naturally the issues of Italy and Sicily, which, so far as silver was concerned, were killed by the change of the Roman unit from bronze to silver in or about 217 B.C.; bronze lingered on in diminishing quantity for a time, the last 'Greek' issues in Italy being at Paestum under Tiberius. In Greece itself silver continued to be struck on the old basis at Athens till Augustus, and a fair number of cities issued bronze. These issues, however, became restricted to occasions such as festivals or imperial visits, even at commercial centres like Corinth and Patrae; an exceptional output of small bronze coins in the Peloponnesus under Severus and Caracalla may have had military connexions. In Asia Minor the Greek standard lasted longer. Asiatic staters were struck at several cities till Hadrian, and there was a steady issue of silver at Caesarea in Cappadocia till the middle of the third century; many cities had quasi-autonomous bronze coinages, which are evidence of the local demand. The bulk of the bronze, however, was of the commemorative

class: even small towns occasionally struck showy coins, and the 'Imperial Greek' of Asia is a series remarkable not only for the number of places at which it was issued, but for the artistic merit and interest of many of the types.

10. All the issues came to an end in the troubles of the reign of Gallienus, except at a few cities in the south-west, where coins of Claudius Gothicus, Aurelian, and Tacitus were struck. Syria and Phoenicia were still more independent of Rome for their coinage: till the Empire they continued to follow their old standard, and, after Augustus had opened an Imperial mint at Antioch which seems to have posed as an eastern partner of Rome, the values were based on the drachma. There were large issues on the Antiochene model at other cities, particularly at Tyre, whose autonomous series did not end till Vespasian, and under the Severan house the number of subsidiary mints for tetradrachms was increased. Other cities, as in Asia Minor, struck commemorative bronze freely till the middle of the third century. Egypt stood absolutely apart, and the Alexandrian series inherited from the Ptolemies lasted on, though much depreciated, till the reform of Diocletian in 296. The coinages of Africa and the western provinces, sometimes called Greek, need not be considered here; after the Roman organization of the countries, they had nothing in the way of coinage that was not essentially Roman.

BIBLIOGRAPHY

INTRODUCTORY. G. F. Hill in *CAH* iv, ch. 5; K. Regling, *Münzkunde* (Giesecke-Norden³ 1931) ii, pl. 2; J. G. Milne, *Greek Coinage* (1931). For general reference, G. F. Hill, *Handbook of Greek and Roman Coins* (1899); F. von Schrötter, *Wörterbuch der Münzkunde* (1930).

ADVANCED. The only complete history of Greek coinage is B. V. Head, *Historia Numorum*³ (1911); for pure numismatics it is indispensable. The second part ('Description historique') of E. Babelon, *Traité des monnaies grecques et romaines* (1901-2) had got as far as Alexander, except for Italy and Sicily, at the author's death; the introduction in part i gives a valuable survey. P. Gardner's *History of Greek Coinage* goes down to 300 B.C. only, but is particularly useful in its treatment of the economic side. For illustrations of the coins, the handiest plates are in the British Museum *Guide to the Principal Coins of the Greeks* (1932), designed as a companion to Head's *Historia*; some additional material may be found in C. T. Selman's *Greek Coins* (1933); the plates of the *Sylloge Nummorum Graecorum*, published for the British Academy, are excellent, especially in vol. ii, the Lloyd Collection of Italian and Sicilian issues (1933).

ART AND TYPES. K. Regling, *Die Antike Münze als Kunstwerk* (1924), is the most comprehensive study of the whole history of Greek numismatic art. For the general classification of the types, P. Gardner, *Types of Greek Coins* (1883), gives the best account; for their origin and meaning, G. Macdonald, *Coin Types* (1905).

METROLOGY. The problems of Greek coin-standards are still controversial. There is much material for study in E. Petric, *Griechische Gezeichte* (1894), O. Viedeban, *Antike Gezeichte, monetae und Münzfunde* (1923), and A. Segre, *Metrológia e circolazione monetaria degli antichi* (1928). Certain points have been discussed recently in W. Giesecke, *Antiker Geldwesen* (1935).

BIBLIOGRAPHY. There is a full bibliography up to 1911 in Head's *Historia*, but no adequate supplement to his has been produced, except with regard to hoards in S. P. Noe, *Bibliography of Greek Coin-hoards*³ (1937). The volumes of the British Museum Catalogue of Greek Coins published since 1911 contain information up to the dates of their issues; otherwise the only way of discovering all that has been written on a particular series is by searching indexes. J. G. M.

COINAGE, ROMAN. All mentions of coinage under the kings and the early Republic are quite unhistorical. Rome reckoned values in terms of oxen and sheep (hence *pecunia* from *pecus*) down to c. 450 B.C., in uncoined bronze (*aes rude*) until after 300 B.C.

2. Until recent years the origin of Roman coinage was placed in Campania (c. 340). While Capua struck silver didrachms, the bronze *as* and its parts were cast for Rome and Latium. But it is now becoming clear that the whole development is to be placed somewhat later.

3. In 289 B.C. triumvirs of the mint were appointed, and their first task was to cast *aes* in bars weighing about six pounds each and bearing types on both sides. These

bars, usually known as *aes signatum*, bear no marks of value, and, while certainly currency, were not certainly coin. Other bars, of more primitive style, with simple patterns as types, are perhaps a little earlier, but not specifically Roman in origin.

4. In 269 B.C. Rome struck her first silver: didrachms, marked ROMANO, in Greek style, with token bronze attached. There were four series, each with its distinctive types, probably struck at Rome and at three Italian mints for three of the Italian *quaesturae*. At the same time, the bronze *as* was cast, at the weight of a pound, with multiples and subdivisions. Each denomination had its characteristic types and mark of value, but no ethnic. In the main the bronze runs parallel to the silver. The system was bimetallic: silver for the cities, heavy bronze for the old-fashioned country-side. In two of the silver series the standard was Neapolitan (didrachm of c. 113.0 grains), in one Alexandrian (c. 109.5 gr.), in one reduced Tarentine (?) (c. 102.5 gr.). The standards of the *as* were 240 scruples in two mints, 288 in one, and 300 in one. Of the mints, one was certainly Rome, two others possibly Beneventum and Tarentum; the exact site of the fourth is uncertain, but it served the north and north-east.

5. The First Punic War seems not to have affected the coinage in any notable way. But soon after (perhaps in 235 B.C.) a change was made. While the same four mints continued to issue, the types were varied or changed, the legend ROMA replaced ROMANO, and the standards were regularized: everywhere the didrachm of 6 scruples (102.5 gr.) and the *as* of 240. The change probably did not take place at the same time in all mints. The date given above (235 B.C.) seems to be true of Rome, and possibly of two other mints: the fourth struck the old ROMANO issue as late as c. 220 B.C. The new types of the Roman mint were 'Young Janus'-Jupiter and Victory in car for the *quadrigatus*, Janus-Prow for the *as*. The victoriolate, a drachm, with types Jupiter-Victory and trophy, seems to have originated outside Rome, but to have come later to represent the half *quadrigatus*.

6. The impact of the Hannibalic War on Roman institutions was violent. Of the four mints, only Rome struck throughout the war. The monetary unit, the *as*, was reduced from 240 scruples to 144 in 217 B.C., further to 72 about 209 B.C. The silver, we are told, was also debased. If, as is probable, the didrachm of pure silver was equal to 6 *asses* of 240 scruples each, it would equal 10 of 144 and 20 of 72 scruples.

7. After the war it seems probable that Rome went back for a short time to the libral standard of the *as* (240 scruples). One, but probably only one, of the Italian mints resumed issue. Not that all coinage proceeded from Rome itself, but the mints were now auxiliaries of Rome, using her types. About 187 B.C. a new silver piece, the *denarius*, began to be struck in Bruttium. It grew in favour and range; reduced a little from its original weight, it settled down to rank as the equivalent of the Attic drachm, and, c. 170 B.C., definitely replaced the *quadrigatus* as the standard silver coin of Rome. The *denarius* was marked X, its half and quarter, the *quinarius* and *sestertius*, V and IIS; the *as*, the unit, was now struck (not cast) at a weight of something over 2 oz., with the types Janus-Prow. The *quinarius* and *sestertius* soon disappeared, but the victoriolate continued, for a time, to be struck beside the *denarius*: it bore no mark of value and was probably struck, as bullion, for foreign trade.

8. Gold had been struck, probably c. 217 and 209 B.C., with *obv.* 'Young Janus' and *rev.* Two warriors striking a treaty, in a style very close to the *quadrigati*. At a date near 170 a new series, with *obv.* Mars and *rev.* Eagle, appeared, with marks of value, LX, XXXX, and XX (*asses*): gold is valued very low in terms of silver,

probably owing to a purely temporary cause, a 'gold-rush' near Aquileia.

9. From c. 200 B.C. foreign coinage is reported as pouring into Rome, in volume hitherto unknown: the 'argentum Oscense' from Spain, the gold Philippus of Macedon, and the two tetradrachms, Attic and cistophoric, from the East.

10. The *as* gradually fell to about an ounce in weight and, in the age of the Gracchi, was retariffed at sixteen to the *denarius*. Under the stress of the Social War, the *as* was reduced to half an ounce and soon afterwards ceased to be struck. Then, or perhaps earlier, the *denarius* suffered serious debasement, but seems to have recovered its fineness under Sulla. Plated coins, however, continued to be issued, mainly at any rate, by forgers. The victoriolate was reintroduced, before 100 B.C., as the half of the *denarius*, and the *sestertius* too was again struck. Gold was issued sporadically from Sulla onwards, to become regular under Caesar.

11. The mint of Rome was in the temple of Juno Moneta. It was assisted by subsidiary mints in Italy, and by mints in the western provinces. From Sulla onwards provincial mints became increasingly numerous and important, in East as in West. Roman coins rarely give the rank of the moneyer, but, apart from the regular *IIIviri aere argento auro flando feriundo*, quaestors, aediles, and other magistrates struck.

12. The original types of the *denarius*—head of Bellona on obverse, Dioscuri charging on reverse—were slow to change. But, by the end of the Republic, a great variety of types was in use, often referring more directly to the family history of the moneyers than to the fortunes of the State.

13. The Empire brought with it serious changes. The Senate soon ceased to issue gold and silver from its mint at Rome, and the Emperor took over this coinage, though he chose at first to strike, as *imperator*, at provincial centres, notably Lugdunum. *Aes* was struck in collaboration by Senate and Emperor, as holder of the tribunician power: it regularly bore the mark S C, 'Senatus Consulto'. Provincial and civic issues completed the scheme. They were mainly in bronze and, after the reign of Gaius, were almost restricted to the East. Triumvirs of the mint continued to be appointed and presumably had a hand in the *aes* coinage. The gold and silver was struck by imperial slaves and freedmen.

14. The coinage comprised *aureus* and half-piece in gold, *denarius* and half-piece in silver, *sestertius*, *dupondius*, and *semis* in orichalcum (brass), *as* and *quadrans* in copper. Twenty-five *denarii* went to the *aureus*, sixteen *asses* to the *denarius*. It was a bimetallic system, with both gold and silver struck exceedingly fine.

15. Nero reduced the *aureus* from $\frac{1}{2}$ to $\frac{1}{3}$ of a pound, the *denarius* from $\frac{1}{16}$ to $\frac{1}{20}$, and mixed 10 per cent. of alloy with the silver. As the debasement of the silver, once begun, increased till it reached nearly 40 per cent. under Septimius Severus, the coinage came to rest more and more on an essential gold basis. Caracalla, in A.D. 215, issued a double *denarius* (the *Antoninianus*) at something below its proper weight. Abandoned by Severus Alexander the coin was restored by Balbinus and Pupienus and, by the reign of Philip, had practically ousted the *denarius*. The *aureus*, reduced by Caracalla to $\frac{1}{6}$ of a pound, gradually fell in weight; by the reign of Gallienus gold was struck on no single apparent standard. The debasement of the silver continued, and, in A.D. 259, the *Antoninianus* sank to be a mere copper piece, coated with silver. Under Trajan Decius it had fallen to the value of a *denarius*: now it fluctuated at low and irregular values in the market. The *aes* coinage ran an even course down to Gallienus: Trajan Decius struck the *quadrans* after long intermission and introduced a double *sestertius*. But, when the silver piece collapsed, this coinage was suspended.

16. In A.D. 274 Aurelian called in the old money and issued new. He struck no regular *aureus*, and no good silver piece, but a slightly improved piece of bronze coated with silver. The mark XX.1 (20 = 1?) defined its value—perhaps '1 unit (*sestertius*) equals 20 *asses* or 2 *denarii*'. This reform, though never fully accepted in the West, carried the Empire over the immediate crisis.

17. The main mint of the early Empire was Rome for all metals: imperial and senatorial mints probably worked in close harmony. Provincial mints of imperial coin—Antioch, Milan, Siscia—then gradually arose to supply the needs of the armies. Local coinage gradually declined: the only mint to survive till Diocletian was Alexandria. The imperial coinage centred round the person of the emperor and discoursed, with discreet eloquence, on his achievements and aspirations.

18. Diocletian, after standardizing his *aureus* at 70, and then at 60, to the pound, carried through a complete reform of the coinage in A.D. 296. He struck an *aureus* of 60 to the pound, a silver piece of 96 to the pound, a large piece of silver-coated bronze, and a smaller piece with radiate head. It appears probable that the *aureus* was valued at 25 silver pieces, 100 larger and 200 smaller pieces of silvered bronze; the smaller piece was really the piece of Aurelian, reduced to half its original value. Constantine, c. A.D. 312, introduced the lighter *aureus* of 72 to the pound, the famous *solidus*. Silver was hardly struck between A.D. 305 and 330. Then the $\frac{1}{2}$ of the pound reappears, succeeded, c. 350, by the *silique* ($\frac{1}{12}$ pound) and the *miliarensis* ($\frac{1}{16}$). The subsidiary coinage of silvered bronze went through a series of changes and reductions, only partially intelligible to us. One reform fell under Constantius II (A.D. 348), another under Julian (363). *Pecunia maiorina* and *centenionalis* were names of coins, not yet certainly identified. In the main, the *solidus* stood apart, in a privileged position, commanding a premium on its nominal value. Its issue was long regarded as the special prerogative of the Roman emperor and the barbarian successor-states were slow to usurp the right.

19. All coinage after A.D. 296 was issued from imperial mints, carefully distributed to cover imperial needs—at Rome, Treveri, Lugdunum, Arelate, Siscia, Sirmium, Thessalonica, Nicomedia, Heraclea, Antioch, Alexandria and the rest. The types of the coins became more formal and referred rather to permanent aspects of the State than to specific events. Each denomination tended to have its special reverse type. The mints were under *rationales*, dependent on the *comes sacrarum largitionum*. False moneying was rife and was savagely repressed by edict.

20. The gradual development of independent money-systems among the barbarians of the West and the great reform of Anastasius in the East belong to another story.

COITIONES, *see* AMBITUS.

COLACRETAE, *see* KOLAKRETAI.

COLCHIS, the region at the east end of the Euxine Sea, just south of the Caucasus mountains; the legendary home of Medea and the goal of Jason's expedition. The land was rich in timber, flax, hemp, wax, and pitch, and Phasis was the terminus of a northern trade route to central Asia. Its people consisted of many tribes; seventy languages, it is said, could be heard in the markets of Dioscurias. Greeks established trading posts on the coast. Colchis was conquered by Mithridates; it appears later in the kingdom of Polemon. Under Hadrian there were Roman forts along the coast and the tribal chiefs were nominated by Rome.

Sirabo, II. 496-9; Arrian, *Periplus M. Eux.*

T. R. S. B.

COLLATINUS, *see* TARQUINIUS (3).

COLLATIO LUSTRALIS, under the Roman Empire, the contribution, levied every five years (*lustrum*), on earnings in trades and professions, normally paid in gold and silver by weight, only the lowest charges being paid in silver or copper coin. Landowners were supposed to be exempt; otherwise, exemptions (e.g. to the clergy) were only grudgingly allowed. This *collatio*, which was largely directed towards paying donations to the troops, was felt as an intolerable burden. Its five-year period coincided with the period of the imperial vows. But vows could be for more than one emperor or be celebrated in advance of their time, and the occasions of levy were continually being multiplied. Introduced by Constantine I, the tax was abolished by Anastasius. H. M.

COLLEGIA, *see* CLUBS, ROMAN.

COLLEGIUM

(1) Any private association of fixed membership and constitution (*see* CLUBS, ROMAN).

(2) A board of officials (or strictly speaking, of more than two officials).

The principle of collegiality was so common a feature of all Republican magistracies at Rome that its origins were embodied in the mythical figures of Remus and Titus Tatius (q.v.). To prevent the rise of a new monarchy disguised under the names of consulship or dictatorship, it was ordained that every magistracy should be filled by at least two officials, and in any case by an even number. They were to possess equal and co-ordinate authority, but subject to mutual control. Thus a decision taken by one consul was legal only if it did not incur the veto (*intercessio*) of the other. This principle led to alternation in the exercise of power, depending on age (*collega maior*), or, under the Empire, on domestic circumstances, the married being preferred to the single. Alternation gradually became a purely honorary distinction.

Mommsen, *Röm. Staat*, p. 27 ff.

P. T.

(3) The name *Collegium* was also applied to the two great priesthoods of the *Pontifices* (q.v.) and the *Augures* (q.v.) and to the *duoviri* (later *decemviri* (q.v.) and *quendecimviri*) *sacris faciundis*, who had charge of the Sibylline oracles and of the *Græcorum ritus* in general. Minor religious 'Colleges' were the *Collegia Compitalicia*, concerned with the worship of the *Lares* (q.v.) at the *compita*, the *Collegium Capitolinum*, responsible for the *Ludi Capitolini*, and the *Collegium Mercatorum*, who presided over the worship at the temple of Mercurius. The lower priesthoods were known as *Sodalitates* (*see* SOPALITAS).

COLLUTHUS, see EPIC POETRY, GREEK, para. 9.

COLOMETRY, see STICHOMETRY ad fin.

COLON, see METRE, GREEK, I.

COLONI, see COLONUS.

COLONIA, see COLONIZATION, ROMAN.

COLONIA AGRIPPINENSIS (*Colonia Claudia Ara Augusta Agrippinensium*), modern Cologne. In 38 B.C. Agrippa transferred the friendly tribe of the Ubii (q.v.) from the right to the left bank of the Rhine, and c. 9 B.C. an altar for the Imperial cult (*Tac. Ann.* 1. 57) was consecrated at their tribal capital. About the same time two legions were stationed close by. These were transferred to Neuss and Bonn c. A.D. 35, and in 50 Claudius founded a colony in honour of Agrippina his wife (*Tac. Ann.* 12. 27) which was laid out in regular form, perhaps within the former cantonments. A fine naval harbour, the headquarters of the Rhine fleet, was built a little upstream and a large mercantile port developed between the colony and the river. The colonists and the Ubii merged rapidly, and the latter only adhered unwillingly to Civilis in 69–70. Cologne suffered in the wars of the third century, and its fortifications were strengthened, partly by Gallienus. The city was taken by the Franks in 355, but Julian drove them out the following year. They retook it in 463.

From the first century Cologne was the chief commercial city of the Rhineland and the capital of *Germania Inferior*; it became a bishopric not later than the third century. Various manufactures are attested, and its glass was exported all over western and northern Europe. Part of the walls of Roman Cologne still stand (A.D. 1939), and large portions remain of the bridge-head fortifications at Deutz.

O. B.

COLONIZATION, GREEK (750–500 B.C.). The character of early Greek colonization was primarily agrarian (*Thuc.* 1. 15; *Hdt.* 4. 150 ff., on Cyrene; *Strabo* 257, on Rhegium; *Strabo* 380, Archilochus in Athenaeus 4. 167, on Syracuse; the corn ear on coins of Metapontum). There was, however, considerable trade between Greece and neighbouring lands, even before 800 B.C. (Blakeway, *BSA* xxxiii). The seamen who carried Geometric pottery to Sicily and to Cumae no doubt helped to direct the peasant colonists; and some very early colonies, far afield, seem to have been primarily trading posts, e.g. the first settlements at Sinope and at Cumae (Burn, *World of Hesiod* (1936), 179 ff.).

2. Sicily and south Italy formed the most important colonial area. Chalcis (with recruits from other States) planted Rhegium, Zancle (later Messene), Naxos, Catana, Leontini; Corinth founded Syracuse and the half-way house of Corcyra; Megara settled Sicilian Megara. In Italy Sybaris, Croton, Metapontum were colonized by Achaeans, Tarentum by Spartans, Locri by Locrians. There are traces of Eretrians around Cumae and at Corcyra before the Corinthians (*Thuc.* 6. 3–5; *Strabo*, bks. 5 and 6; etc.). All these foundations were of the late eighth century save Cumae, which was older. A generation later came eastern Greeks—Rhodians and Cretans to Lindii on the 'Cold Stream' of Gela (*Thuc.* 6. 4), and Colophonians to Siris (*Justin* 20. 2).

3. After two further generations there was apparently a concerted thrust farther west, when Selinus was founded by the western Megara and Himera by Zancle (c. 630). Phocaea opened up the Adriatic and the farther west, Massilia being the greatest of numerous colonies in Liguria and Spain (c. 600). Gela founded Agrigentum c. 585; but a Rhodo-Cnidian settlement of Lilybaeum, c. 580, was foiled by the natives, and soon after this

Carthage first intervened in Sicily (*Justin* 18. 7). Thereafter the Greeks made little progress and even lost some outposts (e.g. Maenace near Malaga and Alalia in Corsica, both Phocaean) in face of the opposition of Carthage and Etruria (*Hdt.* 1. 163–7; 5. 43–7; *Strabo* 156).

4. In Africa, Carthage and Egypt stopped Greek expansion, save round Cyrene, and at the unique treaty-port of Naucratis (*Hdt.* 4. 150–60; 2. 178). In the Levant Sennacherib claimed to have 'drawn the Ionians like fish from the sea, and given peace to Cilicia and Tyre'; Phoenicians maintained their foothold in Cyprus, though even during the Persian Wars Greek traders had at least a 'factory' at Ras Shamra in Phoenicia; Cymaean Side and Samian Nagidus and Celenderis remained small and half barbarous; in Lycia, Rhodian Phaselis alone became important.

5. In Thraee the natives imposed a barrier; but Thasos, colonized from Paros, prospered exceedingly, and Maronea (Chian), Aenos (Lesbian), and Abdera (Teian) ultimately grew rich on wine and the slave-trade. The peninsulas of Chalcidice offered sheltered sites, but restricted territory; here Andros, Chalcis, and Eretria founded many cities (*Thuc.* 4. 84; 103; 123); but Olynthus and Amphipolis were not Greek till the fifth century.

6. In Propontis, Mytilene (at Sestos), Teos (Cardia), Phocaea (Lampsacus), Colophon (Myrlea), Paros and Erythrae (Parion), were among the early colonizers; then Miletus, with Abydos, Cyzicus, etc., almost monopolized the passage. But Megara, evidently friendly with Miletus, occupied Chalcidion (675 B.C.), Selymbria (a first venture into Thraee), and finally Byzantium (657).

7. After this, Pontic colonization began in earnest. Of Miletus' numerous colonies, the greatest were Panticapaeum; Olbia (c. 645) tapping the 'Black Earth Belt'; Sinope; Trapezus. Megarian Heraclea in Bithynia became a considerable land-power, and founded Heraclea in Crimea, Callatis, Mesembria, etc. Phocaean Amisus (566) was probably, like Samian Perinthus (599), the result of armed monopoly-breaking (cf. *Plut. Quaest. Graec.* 57). The economic importance of the Pontus was immense; its contribution to Greek culture negligible—physical conditions were too different. Hellenism flourished essentially between the isotherms 40° for January and 80° for July. Outside these limits, roughly, are found some Greek settlements, but little Greek art or thought. There was, however, something to broaden the mind of old Greece in the spectacle of a land 'where an earthquake is considered a portent, and where they grow corn for export' (*Hdt.* 4. 17; 28), no less than in the strange peoples of Africa and Asia.

8. Late and exceptional was the 'Corinthian Empire' in north-west Greece. Epidamnus (c. 625), Apollonia, Ambracia, Anactorium, Leucas, with Potidaea in Chalcidice (594), were all Cypselid foundations, representing a coherent, personal plan. Here alone Greeks, with 'tyrannical' ruthlessness, colonized among Greeks; and here alone, before the Athenian cleruchies (q.v.), Greek colonies remained politically dependent on the mother city. The attempt to keep Corcyra similarly dependent, however, probably led to the 'earliest Greek naval battle' (*Thuc.* 1. 13), and provoked a feud. Cf. the Corcyraean claim that 'colonists are not sent out to be subjects, but to be equals'; and the Corinthian reply that they only expected 'to be acknowledged leaders and receive the customary respect' (ib. 34; 38).

9. The customary honours included preferential treatment at temples, games, etc.; but Corinth's 'over-magistrates' at Potidaea (*ἐπιδημιουργοί*, *Thuc.* 1. 56) remained exceptional. Political independence, however, was compatible with filial feelings. Rich, spectacular Syracuse sought help from compact, stable Corinth against Athens or Carthage; Tarentum from Sparta;

Perinthus from Samos. If a colony colonized, she asked for a Founder from the *metropolis* (e.g. Thuc. 1. 24). If two cities colonized jointly, one was the official metropolis, the other might give the colony its name (e.g. Cumae, Naxos, Gela—officially Lindii). Amphipolis, in revolt from Athens, made Brasidas its 'Founder' instead of Hagnon the Athenian (Thuc. 5. 11). Filial friendship was often reinforced by a thriving trade, which comprised not only metal and valuables, as before, but colonial food and metropolitan objects of industry. With the growth of a trading class and specialist manufactures, aristocracies became outworn and 'tyrants' arose as leaders of the unenfranchised. Thus, through colonization, the whole politics and economy of Greece were revolutionized; and thus in turn the need for large-scale colonization was brought to an end. See also articles on various cities.

J. L. Myres, *CAH* iii, ch. 25; A. Gwynn, *JHS* 1918, 88 ff.; A. R. Burn, *JHS* 1935, 130 (chronology). A. R. B.

COLONIZATION, GREEK (5th and 4th cc.), see CLERUCHY.

COLONIZATION, HELLENISTIC. The diffusion of Greek settlers through Asia and Egypt in the century after Alexander's conquests was as far-reaching in every sense as the earlier colonial movements. Greece in the fourth century had suffered cruelly from unemployment, but now the Macedonian rulers of the new lands needed Greek soldiers for their armies, and a Greek population attached to themselves (as their native subjects were not), to occupy places strategically or economically important. Alexander himself gave the lead. His greatest colony, Alexandria in Egypt, was the type of the new city, founded with an eye to trade and to creating a splendid Greek centre of administration. His military settlements in Sogdiana were likewise imitated by his successors wherever they had turbulent subjects to restrain or a dangerous frontier to hold.

In Egypt, apart from Alexandria itself (q.v.), the colonization process was mainly for military purposes. Land (*kleros*) was assigned to soldiers individually, with a military obligation which passed to each occupant in successive generations. The 'cleruchs' did not form political communities, a lack which probably explains the failure, in time, of the Ptolemaic system to fulfil its original military object.

In Asia, the military *kleros* carried the same obligations; but the wide, open spaces allowed, and even demanded, communal groups of settlers. Most of the new Greek 'cities' began as military colonies. The possibilities of colonization on these lines were realized by Antigonos I and probably by the Ptolemies in their Asiatic provinces; but the greatest work was done by the first two Seleucids. Clusters of colonies in Bactria-Sogdiana to guard the northern frontier, in Media to preserve vital communications and overawe hill-tribes, in Asia Minor and Syria to facilitate quick mobilizations in war-time, formed the backbone of the Seleucid military system, and ultimately of Greek civilization in Asia. Naturally they did not remain mere military centres. Greek civilians went to live there, and many foreigners; and in time they became self-governing cities (*polis*) with the normal Greek institutions and the minimum of political interference from the king. Their citizen-body probably consisted always of Greeks (or Macedonians, Thracians, etc.) only, and Greek was always the official language, even in cities with large native populations. Only in northern India, in the 'Greek' empire of Demetrius and Menander in the second century B.C., are there signs of a more liberal policy towards the conquered, dictated partly by the sewers of the Greek immigrants, but partly, too, by the political genius of Demetrius. In

India the bold experiment did not survive to leave a permanent impression; but in the Near and Middle East the new cities, with all their limitations, remained for centuries the great representatives of civilization under Roman, and even under Parthian, rule.

COLONIZATION, ROMAN. The earliest colonies of Roman citizens were small groups of 300 families sent to garrison the Roman coastline at Ostia, Antium (338 B.C.), and Tarracina (329 B.C.). Others were added as the Roman territory expanded, through reluctance to maintain a permanent fleet. In 218 there were twelve such *coloniae maritimae*. After 200 B.C. citizen colonies were used to guard the coasts of Italy in general. *Coloni* retained their Roman citizenship because the early colonies were within Roman territory, and were too small to form an independent *res publica*; colonies might be a mere enclave within an existing community. Thus citizen colonies are distinct from Latin colonies which, though largely manned by Romans, were autonomous States established outside Roman territory (see LATINI, IUS LATI). *Coloni maritimi* were normally exempt from legionary service, though the exemption was revocable, and were bound not to absent themselves by night from their colonies in time of war. C. 177 B.C. the system of citizen colonies was reorganized. They were assimilated to Latin colonies, and the use of the latter abandoned. Henceforth citizen colonies are large—from two to five thousand men—and are employed for the same purposes as Latin colonies formerly. Generous allotments of land were given and their internal organization was changed also. They remained citizen colonies but received extensive powers of local government with annual magistrates—*duoviri*, *praetores*, or *duoviri praetores*—a council, *consilium*, and priestly officials. Not many of the new style were founded till the Graecoan age, when a further change took place in their employment. Henceforth colonies were founded not for strategic but for political reasons, either as an emigration scheme for the proletariat or to provide for veteran soldiers. But under the Principate strategic centres were usually chosen for such colonies.

2. The first foundation outside Italy was the Gracchan Junonia at Carthage. Its charter was revoked, but the *coloni* retained their allotments. In 118 B.C. Narbo Martius was successfully founded in Provence despite senatorial objections to overseas colonies. Marius settled veterans in Africa and Corsica, but not in regular colonies. Caesar and the Second Triumvirate established the practice of transmarine foundations. Some colonists were still drawn from the civilian population, notably at the refounding of Carthage and Corinth, also at Ura in Spain. Such colonies were known as *coloniae civicae*, being exceptional. Colonies sent to places where native communities already existed encouraged the romanization of the latter, which eventually received citizenship and municipal rights and coalesced with the colony. Augustus established numerous colonies not only in Narbonensis, the Spanish provinces, Africa, and Mauritania, but also in the East, notably the group in Asia Minor, surrounding the rebellious Homonadenos. Claudius began the regular colonization of the Balkan provinces and the northern frontier. These processes continued till Hadrian. Henceforth no new colonies were founded. The increasing tendency to local recruitment of legionaries rendered veteran colonies unnecessary. Instead, the title of colony and *ius coloniae* became a privilege increasingly sought out by *municipia* as the highest grade of civic dignity. This process began when

Claudius conferred the title upon the capital cities of certain Gallic communes, but only became considerable in the second century (see *MUNICIPIUM, IUS ITALICUM*). Colonies usually adopted the names of their founders and subsequent benefactors, sometimes to an extravagant degree.

3. The arrangements for local government in Caesarean and Imperial colonies were a more complex development of the earlier system. Colonial magistracies were always more uniform than municipal magistracies, and soon came to resemble a standardized, small-scale replica of the Roman Constitution. Hence the later popularity of the *ius coloniae*. *Duoviri iure dicundo* replaced consuls and praetors; then came aediles and sometimes quaestors. *Pontifices* and augurs looked after cults and religion. The census was taken by *duoviri quinquennales*, replaced in some Italian colonies by *censores*. Ex-magistrates passed into the council of *decuriones* (q.v.), sometimes called *conscripti*.

4. Colonization was sometimes unofficial. In the later Republic casual immigrants established *pagi* and *conventus* (qq.v.) *civium Romanorum* in native communities, thus spreading Roman civilization and forming the basis of future *municipia*. See also *AGER PUBLICUS*.

COLONUS. (a) A member of a *colonia* (see *COLONIZATION, ROMAN*). (b) A tenant farmer. *Ager publicus* (q.v.) and municipal domains were normally let to *coloni*, as were the estates of private landlords when slave gangs were abandoned in the first century B.C., and also imperial estates. Private and imperial estates were usually managed by bailiffs (*villici*), often slaves or freedmen of the owner, or farmers-general (*conductores, mancipēs*), who cultivated a home farm and let the other farms to *coloni* and collected their rents. The rent was at first usually a fixed sum of money, later generally a share of the crops; on African estates the *coloni* also owed a few days' labour in the year on the home farm. On some municipal estates the tenure was perpetual, so long as a fixed rent charge (*vectigal*, q.v.) was paid. Nominally leases were for five years, but tenure tended to become hereditary. Perpetual tenure by emphyteutic leases (see *EMPHYTEUSIS*) was granted to *coloni* who reclaimed waste land. In the fourth century *coloni* were forbidden to abandon their farms, and their children were obliged to succeed them.

COLONUS (Κολωνός ἱππιος, as distinguished from Κολωνός ἀγοραῖος, on which the so-called Theseum stands), Sophocles' birthplace, is a hill a mile north of Athens, where Oedipus found refuge and was buried. The assembly which set up the Four Hundred in 411 B.C. was held in the sanctuary of Poseidon Hippios. There stood the bronze threshold of Hades, by which Theseus and Pirithous descended. The olives and nightingales have given place to a water-tower. T. J. D.

COLOR in rhetoric is often applied to embellished diction, but also specially to a plausible excuse or palliation of an offence debated in a *Controversia*. In this sense it enters into the title of the elder Seneca's collection. As a conjecture of motive or explanation for some

act, it is contrasted with a *quaestio* which can be supported by arguments (*Controv.* 1. 5. 9). The danger was that a *color* might be too far-fetched (1. 6. 9 'longe arcussito colore') or supremely silly (9. 4. 22 'colorem stultissimum induxit'). Seneca quotes many examples for approval or disapproval. About the Vestal who survived being thrown from the Tarpeian rock, he cites Junius Otho's *color* 'Perhaps she prepared for her punishment and practised falling from the time when she began her offence' (1. 3. 11), an intolerable fatuity from the author of four books on *colores*! (2. 1. 33). J. W. D.

COLOSSEUM, the medieval name of Amphitheatrum Flavium, near the Colossus Neronis, built by Vespasian over Nero's 'stagnum domus aureae'. The axes measure 188 metres and 156 metres, the height 48.50 metres. Vespasian dedicated in A.D. 79 two stories faced in travertine and treated in Doric and simplified Ionic arcades respectively. Titus added a third, Corinthian, arcade carrying a fourth tier of blind arcading broken by windows set alternately in its *podium* and panels, the former windows being surmounted by bronze *clipei*. Next came mast-corbels for the awning, worked by sailors. The seating was in three tiers, two in Vespasian's building, the third, with standing-room above it, in the addition by Titus. The arena was cut off by a fence and high platform carrying marble chairs for guilds and officials, and, on the short axes, imperial or magisterial boxes. The arena was floored in timber, covering dens for beasts, mechanical elevators, and drains. Audiences, estimated at 45,000, were regulated outside the building in a plot bordered by bollards, and held tickets corresponding to the numbered arcades, whence an elaborate system of staircases commodiously served all parts of the auditorium.

The amphitheatre was restored by Nerva and Trajan (*CIL* vi. 32254-5), Pius (S.H.A., *Pius* 8), between 217 and 238 (Dio Cass. 78. 25; S.H.A. *Elagabalus* 17, *Alex. Sev.* 24, *Max. et Balb.* 1. 14), in 250 (Hieron. *ab Abr.* 2268), after 442 (*CIL* vi. 32086-9) and 470 (*CIL* vi. 32091-2, 32188-9), about 508 (*CIL* vi. 32094) and in 523 (Cassiod. *Var.* 5. 42).

COLOTES (1), Greek sculptor and pupil of Phidias, native of Paros. He was the assistant of Phidias at Elis when Phidias was constructing the famous chryselephantine statue of Zeus. Colotes himself made an ivory statue of Asclepius at Cyllene. No work of his survives. S. C.

COLOTES (2) of Lampsacus (4th-3rd c. B.C.), pupil and fanatical admirer of Epicurus. Works: Against Plato's *Lysis*; Against the *Euthydemus* (both ed. by W. Crönert in *Kolotes u. Menedemus*, 1906); Against the *Gorgias*; Against the *Republic*; 'Ὅτι κατὰ τὰ τῶν ἄλλων φιλοσόφων δόγματα οὐδὲ ἕλην ἔστιν. From Plutarch *Adv. Coloten* we learn that the last-named work tried, in a superficial and ill-informed way, to show that any theory of knowledge other than the empiricism of Epicurus affords no secure basis for practical life.

PW xi. 1120.

W. D. R.

COLOURS, SACRED. Three colours are especially important for sacred purposes in antiquity; they are white, black, and red, the last being understood in the widest possible sense, to include purple, crimson, even violet (cf. E. Wunderlich, 'Die Bedeutung der roten Farbe im Kultus der Griechen und Römer', 1925 (*RGVV* xx. 1) 1 ff.).

White is in general a festal colour, associated with things of good omen, such as sacrifices to the celestial

gods (white victims are regular for this purpose in both Greece and Rome). See for instance *Il.* 3. 103, where a white lamb is brought for sacrifice to Helios (q.v.); the scholiast rightly says that as the Sun is bright and male, a white male lamb is brought for him, while Earth, being dark and female, gets a black ewe-lamb (cf. Verg. *G.* 2. 146 for the white bulls pastured along Clitumnus for sacrificial purposes). It is the colour of the clothing generally worn on joyous occasions (e.g. Eur. *Alc.* 923, *Martial* 4. 2, whereon see Friedlaender); of horses used on great festivals such as (probably) that of Demeter and Persephone at Syracuse (*Pind.* *Ol.* 6. 95, cf. J. Rumpel, *Lex. Pindaricum*, 1883, s.v. λευκίππος, and cf. LEUCIPUS). In Rome, white horses drew the chariot of a triumphator (Marquardt, *Staatsverw.* ii. 2 586).

Black on the contrary is associated with the chthonian gods and mourning (Homer and Euripides, *Il.* cc.), and with the dead (hence the Erinyes wear sombre clothing, φαειόχρωες, Aesch. *Cho.* 1049, as infernal powers). There are, however, exceptions. At Argos, white was the mourning-colour (Socrates of Argos in *Plut. Quaest. Rom.* 26); Plutarch's assertion that white was the colour of Roman mourning will hardly pass muster, see Rose, *Rom. Quest. of Plut.* (1924), 180. Hence to wear it at a festival was both ill-mannered and unlucky (*Martial*, l.c., cf. *Ov. Ib.* 102 and the scholiast there). The above facts easily explain why 'white' and 'black' respectively mean 'lucky' and 'unlucky' when used of a day, etc. The natural association of white with light and black with darkness is explanation enough, but it may be added that white garments are conspicuously clean (cf. *Od.* 4. 750 for clean clothes at prayer), black ones suggest the unwashed condition of a mourner; cf. DEAD, DISPOSAL OF. See further G. Radke, *Die Bedeutung der weissen und der schwarzen Farben* (Diss., Berlin, 1936).

Red has more complicated associations, for which see Wunderlich, op. cit. It would seem to suggest blood, and therefore death and the underworld (hence, e.g., the use of red flags in cursing, *Lysias* 6. 51), but also blood as the source or container of life, wherefore a red bandage or wrapping of some kind is common in ancient, especially popular medicine, and also the ruddy colour of healthy flesh and various organs of the body, wherefore it is associated with rites of fertility on occasion (e.g. statues of Priapus, *Hor. Sat.* 1. 8. 5). Perhaps because red, or purple, is the colour of light, red is on occasion protective, e.g. the *praetexta* of Roman magistrates and children. But it is also associated with the burning heat of summer, cf. AUGURIUM CANARIUM.

Other colours are of little or no sacred importance, but it may be noted that the veil (*flammeum*) of a Roman bride, often stated to be red, is distinctly called yellow (*luteum*) by Lucan (*Phars.* 2. 361) and Pliny (*HN* 21. 46).

H. J. R.

COLUMBARIUM. (1) A Roman dove-cot. These were sometimes small and fixed in gables (*columnina*), sometimes very large tower-like structures (*turres*), fitted with nesting niches in rows, perches, and running water.

(2) *Columbarium* was also applied to the sepulchral chambers of large households or of *collegia* (Mommisen, *De collegiis*, 93), where ash-chests and urns were stored in pigeon-holes (*loci, loculi*). These appear originally in Etruria (G. Dennis, *Cities and Cemeteries of Etruria* 12. 10, 26), but are a feature of large Roman slave and freedmen groups attached to given households. The most striking are those of the Empress Livia, containing some 3,000 urns, the well-preserved *columbarium* of Pomponius Hylas, between *Viae Appia* and *Latina*, and the three *columbaria* of *Vigna Codini* (*CIL* vi. 4418-580, 4581-5178, 5179-538), all within the later city wall of Rome.

G. Lugli, *The Classical Monuments of Rome* i (1922), 400 ff.
I. A. R.

COLUMELLA, LUCIUS JUNIUS MODERATUS, contemporary and fellow-countryman of Seneca, was a Spaniard of Gades with a hereditary interest in agriculture. He served as tribune in the Legio VI Ferrata in Syria and Cilicia, c. A.D. 36 (*CIL* ix. 235). He afterwards acquired an estate near Ardea in Latium.

WORKS. The subjects of the *De Re Rustica* (c. A.D. 60) are: bk. 1, general precepts; bk. 2, land and crops; bks. 3 and 4, vines; bk. 5, land dimensions, trees; bks. 6 and 7, domestic animals; bk. 8, poultry, fish-ponds; bk. 9, wild cattle, bees; bk. 10 (in verse, supplementing Virgil's *Georgics*), gardening; bk. 11, bailiff's duties, calendar; bk. 12, duties of bailiff's wife. *Columella's De arboribus* also survives, an earlier and briefer treatment of the subject of *De R. R.* bks. 3-5. His *Adversus Astrologos* and *De Lustrationibus* etc. are lost.

Columella writes as a practical and scientific farmer, desirous of reviving Roman agriculture; he deprecates the importation of foreign corn, the multiplication of country-seats and the absenteeism of landowners; he advocates hard work and personal supervision. He quotes Mago, the Carthaginian, as well as Greek and Latin agricultural writers, his sources including Cato, Varro, Hyginus, Virgil, Tremellius Scrofa, Celsus, Graecinus, Julius Atticus. His prose style, which in the prefaces is almost Ciceronian, is always lucid and appropriate, and, though sensitive to landscape and colour, he avoids the temptation of fine writing. In bk. 10, though his Muse sometimes soars on wings borrowed from Virgil, he reproduces the language rather than the spirit of his master.

COLUMNA BELLICA, see BELLONA, JETIALES.

COLUMNS, detached supporting members in Greek and Roman architecture which are circular in section, or similar partly detached members called 'engaged' columns. The earliest forms were of wood. Neither columns nor engaged columns should be confused with 'pillars', i.e. supporting members which are rectangular in section, though an engaged column may form part of a larger supporting member known as a 'pier'. From the earliest times important Greek stone or marble columns were, or were intended to be, fluted, i.e. decorated with parallel concave channels for the whole height of the column shaft, though convex ridges having a similar decorative function are sometimes found in early work. The columns of the sixth-century Temple of Artemis at Ephesus had 44 flutes, but 20 flutes for Doric (exceptionally 16 and 24) and 24 for Ionic and Corinthian, became standardized; both Ionic and Corinthian columns having deep channels (nearly or quite semicircular in section) divided by fillets, in place of the shallow channels of Doric columns which meet on a fine edge. Roman columns of polished granite or marble were sometimes unfluted; or, when fluted, the flutes were partly filled in for one-third of the height from the base.

Greek Doric columns had a shaft and a capital. Greek Ionic and Corinthian columns and nearly all Roman columns had a base in addition. Practically all classical column shafts had 'diminution', i.e. a diminishing diameter from the base upwards, and most of them had

entasis, i.e. a slight swelling of the shaft to correct any impression of hollowness. Occasionally, Graeco-Roman, Corinthian columns had 'counter-diminution', i.e. a re-entering curve, producing the greatest diameter at about one-third of the shaft height above the base.

Sir Banister Fletcher, *A History of Architecture on the Comparative Method*¹⁰ (1938), 86, 99, 122. T. F.

COMEDY (GREEK), ORIGINS OF. Aristotle (*Poet.* 3-5) could find no recorded evidence about the early stages of Greek Comedy before the second decade of the fifth century B.C. He says that it developed (and the context shows that he is thinking mainly of the actor's share) from the share taken by the leaders of phallic processions like those which continued in vogue in many parts of Greece in his own day, and the statement (which may be a conjecture) is doubtless intended to account for the presence of an actor in phallic costume in the Old Comedy; but it happens that none of the phallic processions of which accounts are preserved shows any near affinity to early comedy, and the phallic actor has possibly a different origin. He further records a claim of the Dorians of Megara to have originated both Sicilian and Attic Comedy—the former because Epicharmus was a Dorian of Megara Hyblaea in Sicily, the latter as having arisen out of a form of Comedy which developed during the democratic period in the history of Megara in Greece; and passing references in other authors suggest that the Athenians of the fifth century knew something of a Megarian Comedy of an unrefined kind. The one thing about which Aristotle seems to be certain is that Comedy originated in some kind of *κῶμος*, in the performance of a band of revellers.

2. Of the two types of Comedy which are found in the fifth century—the non-choral Sicilian Comedy of Epicharmus, and the Old Comedy of Athens, with a chorus as important as the actors—the former had no distinguished composer after Epicharmus and fell away into (or was supplanted by) the mime and by the performances of actors called *φλύακες*, of which many pictures survive on South Italian vases; the latter received the recognition of the State at Athens in 486 B.C., and are mainly known to us through the surviving plays of Aristophanes. Both appear to have derived important elements from Dorian and Peloponnesian sources, in particular the phallic actor and (at Athens) his costume, and the burlesque of a variety of stock characters, human and superhuman. These seem to have figured in little plays without a chorus—like the later mimes—sometimes (as at Sparta) presenting such characters as a quack doctor, or a food-stealer or orchard-robber, or a grotesque old man or old woman. The two latter are often found in Comedy, as is a Peloponnesian dance, the *Kordax*, commonly associated with the old woman; and the quack doctor may have been one of the many types of pretentious humbug whose discomfiture is part of the stock-in-trade of the Old Comedy. These performances in Sparta and elsewhere seem to have been mainly associated with the worship of Artemis in some of her more primitive forms; but early Corinthian vases give us pictures of demonic (and perhaps also of human) figures, which are apparently Dionysiac, and which wear practically the same costume—grotesque padding under a tight-fitting garment, with or without the phallus—as was worn by comic actors on the Attic stage; and since the Dionysiac demons of Attica were not of this type, it is a probable inference that Attic Comedy derived this costume from the Peloponnese. Megara may have served as a half-way house between the Peloponnese and Athens. It is not known when or how these Dorian and non-choral elements came to be combined with those derived from the Athenian *κῶμος*, and no recorded form of *κῶμος* corresponds exactly with what is required to explain the

typical forms of Attic Comedy, though some come near to it, and probably comic poets borrowed freely from any source, and also invented freely for themselves. In Aristophanes the general lines of Comedy, particularly in the early scenes, are fairly constant. A ludicrous person appears with a brilliant and extravagant idea for setting the world to rights or getting out of some difficulty; a chorus bursts in either in furious opposition or in enthusiastic support; there is a scene of violent argumentation or horse-play, calming down into a set debate (*agôn*); and when the conclusion of this is reached, the chorus turn to the audience—in a *κῶμος* it would be to the bystanders watching the revel—and deliver addresses to them which alternate with brief chants to the gods. These addresses and chants may contain a good deal of personal satire, like the exchanges of raillery between other Greek processions and the bystanders. The literary form of these elements in Comedy is singularly constant—the symmetrical structure and the use of long metres (anapaestic, iambic, trochaic, and others) almost throughout; and it does not seem extravagant to suppose that there must have been some form of *κῶμος* following the same sequence, viz. *parodos* (entrance etc. of chorus), *proagôn* leading to *agon* or debate, *parabasis* (addresses to audience separated by brief chants), and that into this performance there came to be introduced the phallic actor of Dorian mime (unless indeed the leading person in the *κῶμος* was sometimes phallic already) and the play of character-types.

3. The other main group of scenes which, with those just described, goes to compose Attic Comedy is mainly in iambic trimeters. In these scenes the play of character-types predominates, though the chief personage in the earlier group of scenes usually takes a leading part, often confronting and discomfiting a series of other characters in rapid succession. Aristophanes shows an increasing skill in combining these two main elements in Comedy—doubtless originally separate—into a unity.

4. The *κῶμος* was often entirely non-dramatic; the revellers pretended to be no one but themselves, whereas the primitive Dorian performers were entirely dramatic. But one particular semi-dramatic form of *κῶμος* was certainly Attic and contributed to Comedy, viz. the masquerade of revellers disguised as animals, of which various early forms are known (partly from vase-paintings), and which probably suggested the choruses of Birds, Frogs, Wasps, Goats, Storks, Fishes, Riders on horseback, etc., which the Attic poets employed.

5. If an 'origin' is required for the normal ending of a Comedy in a feast, it is enough to suggest that a *κῶμος* would naturally have ended so. The fact that Comedy at Athens was at first particularly associated with the Lenaea suggests that a *κῶμος* of the type required to explain it may have formed part of that Dionysiac festival, but the various elements (whether Dorian or Attic) composing Comedy probably go back to times before the introduction of the Dionysiac worship into which they were later absorbed, and belong to that stock of primitive customs and amusements which seem to be common to humanity everywhere. A. W. P.-C.

COMEDY (GREEK), OLD. Old Greek Comedy falls into two main divisions: (1) Sicilian Comedy and (2) Attic Comedy. Of (1) we know very little, except that it was written in Doric, that it had no chorus, and that it dealt with subjects of general interest, contained a plot, and was free from personal and political satire. Some of its 'stock' characters (e.g. the parasite) foreshadow New Comedy. Except for the shadowy Phormios the only exponent of whom we know anything is Epicharmus (c. 530-440 B.C.), who wrote (to judge from the fragments) mythological burlesques, comedies (or farces) of manners, and scenes of everyday life—perhaps not unlike the

mimes of, e.g., Herodas. Sicilian Comedy seems to have died out early, giving place to the Old Attic Comedy.

2. This was at first acted by amateurs (*ἐδελονταί*: Arist. *Poet.* 1449^b2) and obtained official recognition later than Tragedy. It is likely that in early times Tragedy was acted at the Great Dionysia (March) and Comedy at the Lenaea (January), though later both forms of drama were exhibited at both festivals. In spite of this 'the archon gave a chorus' to Comedy (i.e. Athens officially recognized and subsidized it) at the Dionysia earlier than at the Lenaea. Suidas (s.v. *Χιωνίδης*) assigns the first comic *ἀγών* to 486 B.C. This date is more or less confirmed by epigraphic evidence, for we know from the dramatic *fasti* (*IG* ii². 2318) that Magnes won a Dionysiac victory in 472, while in the Victors' list (*IG* ii². 2325) his name stands sixth, which fact sets the start of the comic *ἀγών* some years earlier than 472. The date of the first comic *ἀγών* at the Lenaea is put with much probability by Capps (*AJPhil.* xxviii. 179 ff.) as 441-440 B.C.

3. Little is known of the earliest writers of Attic Comedy. Epicharmus (q.v.) is said by Aristotle (*Poet.* 1448^a33) to have lived *πολλῷ πρότερος Χιωνίδου καὶ Μάγνητος*; but Aristotle himself admits that he knows little of the early history of Comedy *διὰ τὸ μὴ σπουδαῖσθαι (αὐτὴν)* (*Poet.* 1449^a38), and it is more likely that Epicharmus was an older contemporary of the other two. Suidas gives Chionides' first (?) victory as 486. Still more shadowy are the names of Euetes, Euxenides, and Myllus whom Suidas (s.v. 'Epicharmus') gives as active in Athens c. 484. Of Euxenides nothing further is known. Euetes occurs in the list of *tragic* victors. Myllus (= the Squinter) may have been no more than a stock character of farce (cf. Latin *Dossemus*, etc.). He is, however, mentioned by Diomedes (together with Susarion and Magnes) and by the paroemiographers. Magnes (q.v.) is the first comic writer who is more than a name.

4. The normal number of competing comedies was five—so Arist. *Ath. Pol.* 56. 3, a figure confirmed for the years 440-431 by a Roman inscription (*IG* xiv. 1097), for 388 B.C. by Ar. *Plut.* arg. 4, and for the end of the fourth century by didascalic inscriptions (Wilhelm, op. cit. inf. 43 ff.). The number was reduced to three during the Peloponnesian War, doubtless from motives of economy (args. to Ar. *Ach.*, *Eq.*, *Vesp.*, *Ran.*). The production of each play was financed by the *choregus* (see CHOREGIA); the chorus was trained either by the poet himself as *διδάσκαλος* or by a friend acting as such. For leave to produce at the Dionysia the poet applied (*χορὸν αἰτεῖν*) to the Archon (Arist. *Ath. Pol.* 56. 5), at the Lenaea to the *Archon basilcus* (ib. 57. 1). It seems probable that at least in the fifth century not more than one play could be produced by any one *διδάσκαλος* at the same festival. According to arg. Ar. *Vesp.* Aristophanes gained first prize with his *Wasps* produced *διὰ Φιλωνίδου*, while Philonides won second prize as his own *διδάσκαλος*; but it is likely that the words *διὰ Φιλωνίδου* should be excised. In the fourth and third centuries, however, there are undoubted cases of two plays produced by one *διδάσκαλος*. It is clear from schol. Ar. *Ecl.* 102 and *Ran.* 367 that the poet received the pecuniary prize; and in the Victors' list it is the poet's name that appears. In the *fasti*, however (i.e. in the official list), the name of the *διδάσκαλος* is inscribed.

5. At the Athenian festivals new plays were regularly produced, and it was very rarely that an old one was restaged. Not until 339 B.C. do we get the regular reproduction of an old play unaltered—the reaction of the *Frogs* (arg. 1, Ar. *Ran.*) was exceptional. On the other hand, a poet could *rewrite* and reproduce a play, as Aristophanes rewrote the *Clouds* and Teleclides the *Zeppol* (*IG* xiv. 10984). Old plays were also frequently reproduced at various country Dionysia (cf. Aeschin. 1. 157, and see Körte in *Gnomon* xl. 631 ff.).

6. The question whether the State could, or ever did,

interfere with a poet's *παρρησία* is a vexed one. Schol. Ar. *Ach.* 67 mentions a law *περὶ τοῦ μὴ (ὀνομαστὶ) κωμωδεῖν* in force from 439 to 437 B.C., and schol. Ar. *Av.* 1297 attributes another such law to Syracosius in 415 B.C. (Antimachus' *Ψῆφισμα* mentioned in Schol. Ar. *Ach.* 1150 is a palpable misinterpretation of the passage). It is more probable, however (so Körte, art. in *PW*), that no such 'law' ever existed, though politicians could and did bring private actions against libellous poets, as did Cleon against Aristophanes after the production of the *Babylonians* (schol. Ar. *Ach.* 378) and possibly Alcibiades against Eupolis after that of the *Baptae*, though tradition (Platon. *Diff. Com.* § 4; Cic. *Att.* 6. 1. 18) attributes to Alcibiades more violent methods.

7. The subject-matter *par excellence* of Old Comedy is personal invective, mainly against political characters and individuals otherwise notorious. The politicians attacked were, as a rule, those of the popular party, such as Pericles, Cleon, Hyperbolus; though the poets are not to be supposed to be themselves necessarily of oligarchic sympathies. Besides politicians, poets, philosophers, and musicians came frequently under the poet's lash; e.g. Euripides, Socrates, and Connus (Socrates' music master, attacked by Ameipsias in a comedy bearing his name). Another (and later—see CRATES 1) class of Comedy, not to be sharply differentiated from the comedy of invective, is what may be called the comedy of fantasy, typified by Aristophanes' *Birds*. A third type is mythological burlesque; a type perhaps commoner in Middle Comedy but well established in Old Comedy, as the titles of Aristophanes' plays (if nothing else) would suggest. Mythological burlesque is traceable from Epicharmus down, and Platonius (*Diff. Com.* § 7) is wrong in saying that such plays had neither chorus nor parabasis. Cratinus' *Ὀδυσσεύς* had both (frs. 144-6). Another type again is the comedy of everyday life. Out of this developed New Comedy. Comedies of this class are rare in the fifth century, though we find a certain number, mostly with the names of *ἐταῖραι* as titles. Broadly speaking, the comic poets did not specialize individually in particular genres.

8. Old Comedy, to judge from what remains of it, was written on a fixed plan. First came (A) the 'Attic' part (see above) lasting until the *parabasis*. This comprised (1) the *prologue*—not the *ῥῆσις* prologue of, e.g., Euripides, but a scene descriptive to the audience of the subject matter of the play. The slaves' dialogue in Ar. *Eq.* is a good example. Next (2) the *parodos* or entrance of the chorus. Then the development of the plot, which generally contained (3) an *ἀγών*, the set contest or dispute that figures in nearly all Aristophanes' plays. (There is none in *Ach.* or *Thesm.*; in *Eq.* and *Nub.* there are two.) Part (A) is written partly in iambic trimeters, partly in other measures. The *parabasis* (B) is the address of the poet made through the chorus and *coryphaeus* to the audience. It is generally (*Av.* and *Thesm.* are exceptions) unconnected with the action of the play and concerned with personal and political questions of the time. The third main division of Old Comedy is (C) the 'Dorian' or episodic part. This is a series of scenes of a more or less farcical character in which the main personage of the play puts to flight various unwelcome visitors. These scenes are always written in iambic trimeters and are interpermeated by short choric songs. Occasionally, as in Ar. *Ran.*, they are broken by the *ἀγών*, which in this case, exceptionally, comes after the *parabasis*. The episodes are brought to an end by the *exodus*, a *κῶμος* consisting usually of the main character and the chorus. This *κῶμος* is lacking in Ar. *Nub.* and *Thesm.*

9. As in fully developed Tragedy, the number of actors was limited to three—first, according to Terentius (Naibell, *CGF* 18) by Cratinus. Aristotle (*Poet.* 1449^b3) says 'no one knows who fixed the number of comic actors'. These actors were grotesquely padded before

and behind and furnished with leather phalli and masks. The chorus probably numbered twenty-four (Poll. 4. 109; scholl. Ar. *Av.* 297; *Ach.* 211) and was divided into two semi-choruses. It was dressed in appropriate costume (e.g. as birds in Ar. *Av.*), part of which it removed in order to dance (Ar. *Ach.* 627, ἀποδύντες; schol. *Pax* 729). Sometimes a play had a secondary chorus (παραχορήγημα); cf. Ar. *Ran.*, in which the μύσται form the chorus, the Frogs the παραχορήγημα. The leader of the chorus was the coryphaeus. It seems likely that where the chorus sang in two semi-choruses the coryphaeus would lead semi-chorus A, a secondary coryphaeus leading semi-chorus B.

COMEDY (GREEK), MIDDLE. From Old Comedy there was continuous development through the Middle period (c. 400-c. 320 B.C.) into the New: Middle merged into New, yet separate names are convenient. (Earlier Greek criticism recognized ἀρχαία and καινή (or νέα) only, e.g. Arist. *Eth. Nic.* 1128^a22; μέση was added later. See PLATONUS.) Development was accompanied by decrease in variety of interest, the New Comedy being almost entirely devoted to the dramatization of love-plots.

2. The downfall of Athens, 404 B.C., vitally affected the comic stage: other themes replaced those which had evoked the brilliant wit and extravagant fancy of Aristophanes and his contemporaries, and Comedy was led to adapt its structure to the conduct of a play of intrigue by greatly diminishing the rôle of the chorus and developing the importance of the ἐπεισόδια. In Aristophanes' *Plutus* (388 B.C.) the transition to Middle Comedy is already visible: χοροῦ (MSS.) indicates an interpolated lyric (ἐμβόλιμον), loosely connected with the comedy. Lyric measures are found in Middle Comedy fragments (e.g. Eubulus frs. 104, 105, *CAF* ii. 199), some in monodies (Axionicus fr. 4, *CAF* ii. 413, parodying Euripides). Evidence for chorus in Middle Comedy: Alexis fr. 237 and papyrus fragment, Timocles fr. 25 (*CAF* ii. 462); Hcniochus fr. 5 (*ibid.* 433). But the chorus is no longer the poet's mouthpiece.

3. Aristotle (*Eth. Nic.* 4. 1128^a20) attests that the Comedy of his time (the developed Middle Comedy) had renounced (with the phallus and the paunch) the αἰσχρολογία of Old Comedy, replacing it by ὑπόνοια; and the extant remains of Middle and New Comedy, with negligible exceptions, bear this out. Personal invective (καυμῶδειν ὀνομαστί) against contemporaries was not discarded so quickly or completely as obscenity (Pl. *Leg.* 11. 935 e; Isoc. *On Peace* 14; Aeschin. 1. 157): indeed, a greater proportion of titles are proper names in Middle Comedy than in Old. Political attacks are found early in the period (and one comparatively late—Mnesimachus' *Philippus*; and see TIMOCLES). Courtesans and philosophers (Aristophanes' *Πλάτων*, and passages on Plato and the Academy, Pythagoreans, the Lyceum, Cynics, and Cyrenaics) were prominent subjects. Parasites, gluttons, fishmongers, and cooks played a large part; eating and drinking were endlessly discussed. (The above-mentioned characters, with others, e.g. old men, young men, and slaves, appeared regularly as stock 'characters', and were further elaborated in the New Comedy.) Burlesque of mythology (well established in Old Comedy, q.v., para. 7) became common in Middle Comedy—in two types,

(1) directly from the myth, (2) from the treatment of the myth by some tragedians, especially Euripides, but also Sophocles, and less frequently Aeschylus. This παρατραγωδεῖν influenced the diction, representation, and structure of Comedy.

4. Before long, the realistic depiction of daily life (not unknown in Old Comedy, q.v., para. 7) became the chief aim in Comedy (cf. the titles of Antiphanes and other Middle Comedy poets). Ordinary, commonplace life is no easy subject to treat interestingly on the stage; and Antiphanes (fr. 191, *Ποίσις*) contrasts the comic poet's more difficult lot with the tragedian's, whose plot is already familiar, and the *deus ex machina* at hand—the comic writer has no such resources.

5. By study, or parody, of Tragedy, especially of Euripides (as well as by observation of life), comic poets learned to employ certain motives—the love-motive, and the exposure of children to treat their subsequent recognition. Such titles as Ἀντερῶσα (Antiphanes, Nicostratus) and the many names of foreign women (Ὀλυθία, Μιλησία) show that love is an important element in certain plays; cf. the Greek Middle Comedy original of Plautus' *Persa*. Again, the tragic motive of flight to the altar (used in Aristophanes, *Thesm.* 689 ff.) appears in the Alexis papyrus.

6. Numerous fragments show that the most striking characteristic of Middle Comedy is observation of contemporary types and manners (ὁ ζωγράφος, ὁ μεμημίμοπος). Yet not a single comedy can be reconstructed with any degree of certainty, since the extant passages were quoted to illustrate food and drink, moral principles, or lexicography—not dramatic technique nor comic force. (Contrast New Comedy, which papyrus discoveries have revealed in some detail.)

7. In Middle Comedy diction and metre are much less elaborate than in the Old. Beside iambic trimeter and trochaic tetrameter, there is occasional use of iambic tetrameter; more frequently, anapaestic systems and dactylic hexameters (one elegiac distich, Antiphanes fr. 149). For the few lyric measures see supra, para. 2, and EUBULUS.

8. To 57 poets Athenaeus assigns more than 800 plays: we know the names of about 50 poets (many of them non-Athenians), Antiphanes, Anaxandrides, Eubulus, Alexis, Timocles (qq.v.) being the most prominent. W. G. W.

COMEDY (GREEK), NEW. New Comedy continues the development begun by Middle Comedy away from the imaginative and fantastic. The chorus is almost altogether divorced from the action: a band of revellers (Alexis fr. 107, Menander, *Epit.* 242: cf. the κῶμος of Old Comedy) are, on their first appearance, announced as invading the stage, and they give an *entr'acte* performance of singing and dancing. Later, their entrances are unannounced. So little connexion has the chorus with the play that among the *dramatis personae* of Menander's *Hippos*, the chorus is not noted. But exceptions occur, e.g. the chorus of fishermen in the original (by Diphilus) of Plautus' *Rudens*. In any performance the stage need not be continuously occupied.

2. The stock characters are shown by numerous masks (Pollux 4. 143-54, cf. C. Robert, *Die Masken der neueren Komödie* (1911)—9 types of old men (e.g. the πάππος, infirm or severe; the πρεσβύτερος, choleric or phlegmatic), 11 types of young men (e.g. town-bred or country-bred, sanguine or despairing lover), 7 slaves, 3 old women, and 14 young women of three different classes; also, different types of parasite, soldier, cook, and others—mostly recognizable in the fragments as well as in the masks.

3. Personal ridicule (one means of providing comic relief in plots which became increasingly serious) is directed against parasites, gluttons, and the like; and there are isolated attacks upon philosophers (Philemon, Φιλόσοφοι) and others, e.g. by Philpides and Arche-

dicus (qq.v.). Plays are occasionally named after contemporaries, e.g. *Amastris* (Diphilus), after the niece of Darius and founder of the town in Pontus; *Arsinoe* (Posidippus), after the wife of Ptolemy Philadelphus.

4. A few mythological plays were written, but titles are deceptive: thus Menander, *Ἡρώς*, deals with ordinary life, the god Heros being the speaker of the prologue. Comedies are named after occupations (*Γεωργός*, *Ἀλκίς*), relationships (*Ἀδελφοί*, *Δίδυμοι*), origin (*Καρχηδόνιος*, *Ἀνδρία*), character (*Κόλαξ*, *Δεισιδαίμων*), prominent objects in the plot (*Δακτύλιος*, *Θησαυρός*), personal names (Thais, Thrasyleon); sometimes a present participle summarizes the plot or one episode (*Ἐπιτρέποντες*, from its arbitration scene). From the time of Alexis (apparently a pioneer in love-plots), love became the mainspring of the play (with few exceptions, e.g. the originals of Plautus' *Captivi* and *Trinummus*), yet within the limits of this theme there is infinite variety of detail.

5. To the influence of Old Comedy may be assigned the breach of illusion by direct appeal to the spectators (Men. *Epit.* 567, *Sam.* 54, 114, 338, and in a prologue *Ph.* 51), and the use of 'asides'.

6. The preponderating influence of Euripides (already marked in Middle Comedy) is seen in the dramatic treatment of modern problems, in the profusion of moral maxims, in the use of the monologue, the recognition-scene, the isolated prologue, and the prologue-god (which in Comedy may be a mere abstraction: in Menander, *Ἀγνοία* (*Ph.*), *Ἡρώς θεός* (*Her.*), *Τυχή*, *Ἐλεγχος*; in Philemon, *Ἀθήρ*; Anon., *Φόβος*, *Διόνυσος*). The plot of Menander's *Epit.* owes a debt to Euripides' *Auge* and *Alope* (see Körte, *Men. Rel.* i, p. xx).

7. The New Comedy is predominately serious in tone, with elements of pathos and grave reflection; its cosmopolitan character is due partly to the number of non-Athenian poets, partly to the universal interest of its plot of sentiment.

8. Metres are even fewer and less elaborate than in Middle Comedy, but the trochaic tetrameter is still used for whole scenes. Diphilus has a series of dactylic hexameters (fr. 126), and, exceptionally, an archilocheian (fr. 12). Menander uses anapaests in *Leucadia*, frs. 312, 313. Diction has developed towards the *Kouή*; hence the criticisms of the Atticist purists, Phrynichus and Pollux, in the second century A.D., who condemned neologisms; but in plays of daily life the living speech of contemporary Athens must be followed.

9. About 70 names of New Comedy writers are known to us, the three most eminent being Menander, Philemon, and Diphilus (qq.v.).

Meineke, Kock, Denis, Norwood, Körte (as under OLD COMEDY). P. E. Legrand, *Daos*, 1910 (Engl. Transl. J. Loeb, *The New Greek Comedy*, 1917). K. J. Maidment, 'The Later Comic Chorus', *CQ* xxix (1935), 1-24. Other works s.v. MENANDER. W. G. W.

COMEDY (LATIN), see DRAMA, ROMAN.

COMINIANUS, (early 4th c. A.D.), grammarian. His *Ars*, compiled for school use, is not extant, but is referred to respectfully by Charisius and was probably the basis of Dositheus (q.v.).

Cf. Teuffel, § 405. 1; Schanz-Hosius, § 825.

COMITATENSES, i.e. units forming the emperor's *comitatus*, were one of the two divisions in the Roman field army as reorganized by Constantine. They comprised both cavalry (*exillationes*) and infantry (*legiones*) and were under the command of the *magistri militum*. See PALATINI.

R. Grousset, *Romaine Militärgeschichte*, 88-91. Parker, *Roman World*, 273-5. H. M. D. P.

COMITES. Under the Principate *comes Augusti* meant first a legal and after A.D. 161 a military adviser who accompanied the *princeps* on his journeys abroad. In the

Constantinian reorganization *comes* was an honorary title conferred upon the leading military and civil functionaries. The *magistri militum* and sometimes the *duces* were so honoured, and all members of the *sacrum consistorium* were graded as *comites* in one of three classes.

Comites was also the title of mobile cavalry units which first appear in the time of Diocletian.

O Seeck, *PH*, s.v. 'Comites'.

H. M. D. P.

COMITIA. In Rome *comitium* was the place of assembling; *comitia* meant an assembly of the Roman People summoned in groups by a magistrate with *ius agendi cum populo*. The convocation had to be on a proper day (*comitialis*), after the *auspicia* had been taken, on an inaugurated site. When only a part of the People was summoned, the assembly was strictly a *concilium* (Gell. 15. 27). When the whole People were summoned, but not by groups, the assembly was a *contio* (q.v.). In the *comitia* the majority in each group determined the vote of the group. The *comitia* voted only on business presented to them by magistrates, and they could not amend proposals. As the three main divisions of the Roman People were *curiae*, *centuriae*, *tribus* (qq.v.), the three types of *comitia* were *curiata*, *centuriata*, *tributa*. A special form of the *comitia curiata* and *centuriata* was the *comitia calata* (probably always summoned by the *pontifices*). The resolutions of the *comitia* (and probably of the *concilia plebis*) depended for their validity on a formal ratification by the patrician senators (*sec PATRUM AUCTORITAS*).

2. (a) *Comitia curiata*. The most ancient *comitia* were the *curiata* (see CURIA 1), dating from the age of the kings. Their competence was progressively limited by the *comitia centuriata*. In historical times they formally confirmed the appointment of magistrates by a *lex curiata de imperio* (q.v.), and witnessed the installation of priests, adoptions, and the making of wills, when the *pontifex maximus* presided at these ceremonies. The monthly announcement by the *pontifices* of the day on which the *nonae* would fall was probably made before the *curiae*. In Cicero's time the 30 *curiae* were represented in the *comitia* only by 30 lictors (Cic. *Leg. Agr.* 2. 12. 31).

(b) *Comitia centuriata*. The *comitia centuriata*, on a timocratic basis (see CENTURIA), were traditionally instituted by Servius Tullius. Many modern scholars prefer a later date (after 450 B.C.). The enacting of laws, the election of the magistrates *cum imperio* and of the censors, the declaration of war and peace, and the infliction of the death penalty (subject to *provocatio*, q.v.), were concerns of *comitia centuriata*. An interval (*trinumidum*—probably of twenty-four days) was observed after the notification of a meeting, during which preliminary discussions (*contiones*) of the proposals (*rogationes*) were held. In the judicial *comitia* a preliminary investigation before a *contio* had to be held, lasting for three days; after a *trinumidum* and perhaps a further *contio* the vote was taken. The *comitia centuriata* met 'extra pomerium' (q.v.), usually in the Campus Martius, in military order. But in the last period of the Republic the voting centuries were no longer identical with the tactical field-units. The *Lex Caecilia Didia* (98 B.C.) forbade the presenting in the same bill of proposals dealing with unrelated subjects. The formula by which the magistrate proposed the law was: 'uelitis iubeatis Quirites rogo'. Approval was expressed by the formula 'uti rogas'; rejection by 'antiquo'. The method of voting is described s.v. VOTING (2). The voting groups were unequal, and the wealthier citizens consequently exercised a preponderating influence. In the third century B.C. this disparity was lessened; but the *comitia centuriata* never became democratic.

(c) *Comitia plebis tributa*. The assemblies of the *plebs* were not strictly *comitia* but a *concilium*. But when

plebiscita were given equal validity with the laws (287 B.C.), the *concilium plebis* was as a rule called *comitia*. It was divided in conformity with the territorial tribes (see *TRIBUS*). In them the tribunes of the plebs and the plebeian aediles were elected, trials were held for non-capital offences, and nearly every form of business was enacted. The procedure was quicker than in the *comitia centuriata*.

(d) The *comitia populi tributa* were founded in imitation of the *comitia plebis tributa*, at an uncertain date. They differed from the former in that they were convoked by consuls or praetors, and patricians were admitted. They elected quaestors, *aediles curules*, *tribuni militum a populo*, enacted laws, and held minor trials.

3. From c. 250 B.C. the Pontifex Maximus and from 104 B.C. (except during the period from Sulla to 63 B.C.) *pontifices*, *augures*, and *decemviri sacrorum* were elected by special *comitia* of seventeen tribes.

4. The *comitia* in Rome decayed with the extension of the Roman territory, which made it impossible for individuals to attend, and with the growing oligarchic spirit of the leading class, which avoided any reform of them. An attempt of Augustus to give to the *decuriones* of the colonies a chance to vote without coming to Rome was too late (Suet. *Aug.* 46). The election of magistrates was transferred to the Senate by Tiberius; only the declaration of the result (*renuntiatio*) was still performed before the People. The judicial functions also lapsed; and the last law known to us is an agrarian law of A.D. 98. The *comitia* continued a formal existence at least until the third century A.D.

5. The *municipia* and *coloniae* had *comitia*, at which (in Republican times and at least in the first century of the Empire) magistrates were elected. In Republican times they had also some legislative powers.

COMITIUM, the open place of assembly of Rome (Varro, *Ling.* 5. 155; Livy 5. 55), situated in the Forum and ritually orientated by the cardinal points. To north lay the *curia* (q.v. 2), to south the *rostra* (q.v.), to west the *carcer* and *basilica Porcia*. The area was finally restricted by Caesar (see *SAEPTA IULIA*) to a small space containing the successive Republican *rostra* respectively associated with all but the first and last of five levels ranging from the sixth century B.C. to 52 B.C. The numerous monuments and statues which filled it have perished, excepting the ancient group consisting of a *sacellum*, a tufa cone, and an archaic *cippus* of ritual law (*ILS* 4913), all sealed in damaged condition below a black marble pavement (*lapis niger*) itself at least once altered in position.

COMMAGENE, in north Syria, became an independent kingdom in 162 B.C. when its governor, Ptolemy, revolted against the Seleucids. Its king Antiochus I submitted to Pompey in 64 B.C. and was rewarded with a piece of Mesopotamia; he was deposed by Antony in 38 B.C. for abetting the Parthian invasion. Tiberius annexed the kingdom in A.D. 17, but it was restored by Gaius in A.D. 38 to King Antiochus IV, who, after being deposed by Gaius, was reinstated by Claudius in 41 and reigned till 72, when Vespasian, on account of his alleged Parthian sympathies, finally annexed the kingdom and

incorporated it in Syria. The royal house claimed descent, through the satrapal dynasty of Armenia, from Darius, and, by a marriage alliance with the Seleucids, from Alexander; its genealogy and its religion, a superficially hellenized Zoroastrianism, are illustrated by the pretentious funeral monument of Antiochus I. On the annexation the country was divided into four city territories, Samosata (the royal capital, founded by King Samos c. 150 B.C.), Caesarea Germanica (founded by Antiochus IV in A.D. 38), Perrhe, and Doliche. Commagene remained a separate *κοινόν* within the province of Syria.

COMMENDATIO. Under the Roman Republic distinguished consulars influenced the elections of magistrates by open canvassing (*suffragatio*) on behalf of their friends. This practice, when employed by an emperor, was known as *commendatio*, and the recommended candidates (*candidati Caesaris*) were elected without opposition. Augustus at first canvassed in person (Suet. *Aug.* 56), but after A.D. 8 (Dio Cass. 55. 34) announced the names of his candidates in writing. *Commendatio* was first employed for magistracies between the quaestorship and the praetorship (for which the Princes recommended four candidates; Tac. *Ann.* 1. 15), but by the end of Nero's principate it was employed for the consulship also (Tac. *Hist.* 1. 77). The *Lex de imperio Vespasiani* (Dessau, *ILS* 244) granted to the emperor the right of *commendatio*, apparently for all magistracies without limitation of number. Henceforth the consuls appear to have been the emperor's nominees (cf. Pliny, *Pan.* 77, 'praestare consulibus ipsum qui consules facit').

J. P. B.

COMMENTARII (ὑπομνήματα) were memoranda, originally of a private character, e.g. *tabulae accepti et expensi*, note-books for speeches, legal notes, etc. Their public use (excluding the false *commentarii regum*) developed in the priestly colleges (e.g. *commentarii pontificum*, *augurum*), and in the magistracies (e.g. *commentarii consulares*, *ensorii*, *aedilium*), and with the provincial governors. Under the Empire, the *commentarii principis*, like the Hellenistic ἐφημερίδες, represented a court journal, and the system spread in the Imperial administration, under the influence of the ὑπομνηματισμοί of the *praefectus Aegypti*. The emperors' *commentarii* of campaigns and audiences, constitutions, rescripts, epistles, and edicts, had official authority.

From the business *commentarii* arose the literary form, autobiographical in character, written in plain style as a basis of full history, yet directed to the reading public, e.g. Sulla's ὑπομνήματα and, above all, Caesar's *commentarii*.

A. von Premerstein, *PW* iv. 726; A. Rosenberg, *Einleitung und Quellenkunde zur röm. Geschichte* (1921), p. 2; cf. J. B. Bury, *Ancient Greek Historians* (1909), 232.

A. H. McD.

COMMENTARII or **LIBRI PONTIFICUM**, general name for the records kept by the *Collegium Pontificum* in Rome. They included *commentarii sacrorum*, of which an idea may be formed from the existing *acta Arvalium* and *acta ludorum saecularium*, save that these are records of ritual actually performed, the pontifical *commentarii* rather directions for the performance of ritual when necessary. They probably contained not only this, but also the text of prayers, sacred laws, and other relevant matter. The details are often extremely obscure, since neither the *commentarii* themselves nor any sufficient number of what may be safely regarded as verbatim quotations have come down to us. How old any kind of written liturgy, etc., was in Rome we do not know.

G. Rohde, 'Die Kultsatzungen der römischen Pontifices' (*RGVV* xxv (1936)).

H. J. R.

COMMERCE, GREEK AND ROMAN. A certain amount of trade with valuable raw materials and products of craftsmanship can be proved for neolithic Greece and Italy from finds and excavations, and in an increasing degree for the same regions during the Bronze and Iron Ages. Many early traders seem to have been warriors, sailors, pirates, and craftsmen simultaneously. Those of the Minoan and Mycenaean town cultures were, perhaps, employees and serfs of their rulers after the model of the Ancient Oriental cultures. They had connexions with and brought their products to all Mediterranean coasts and even to middle Europe. We have no evidence of barter in cheap products in these early communities, but its existence is self-evident.

2. The development of Greek trade after the migrations of the earliest Iron Age is closely connected with the invention of coins, and especially those of small denominations, during the eighth and seventh centuries B.C. The sale of cheap goods like corn, oil, pottery, small hardware, etc., became easier and paid better than exchange by barter. The Phoenician traders in valuable products of foreign countries lost their earlier importance for Greece and Italy, and gave way to native trade centres (e.g. Corinth, Athens, Aegina; the ports of Asia Minor, the Black Sea, and Magna Graecia). Three Greek commercial crafts developed during the seventh and sixth centuries B.C., all free and independent, but without much working capital, those of the *naukleros* (a sea-merchant with his own ships), the *emporos* (a sea-merchant using the ships of others), and the *kapelos* (a petty trader in small districts).

3. The Classical Greek Age carried Hellenic trade habits to neighbouring countries. Greek imports and exports of cheap goods, corn, oil, wine, cattle, Corinthian, Attic, and other pottery, metal products, etc., as well as inter-regional commerce, grew in such a degree that the markets of Athens and of other towns became surprisingly efficient, and their *kapeloi* were able to specialize in single products and crafts like those of middlemen for imported products. The sea-merchants began to specialize as well, e.g. as foreign agents and as exclusive transport merchants. Some of the *emporoi* became land merchants. *Deigmata* (mercantile exchanges) were built in great ports. 'Corners' of merchant associations tried occasionally to increase prices. The foreign population of Athens grew enormously. Greek imports of valuable foreign products were also more intensive than in earlier centuries, Greece being wealthier than before the Persian Wars. Greek export trade with valuable merchandise reached the Atlantic coasts and India.

4. Rome became, during the same period, a modest river port and centre of communications for the middle Italian trade, and had a certain importance for the salt trade of its neighbours. It introduced market days and festivals (*mundinae*, *ludi Apollinares*, *ludi Romani*, *ludi plebeii*), and created the *Forum Boarium* for foreign merchants. The beginnings of the Roman law of sales were of future importance.

5. The campaigns of Alexander, the *Diadochi*, and the Roman generals from the Punic Wars to Augustus unified the immense region between the Atlantic Ocean and India, the Sahara, Rhine, Danube, and the Ukraine. The Greek economic structure was imitated everywhere, but not without being modified and adapted to new conditions. The towns of the Greek mother country, and many of the *poleis* and hellenized Phoenician towns in the East, preserved much of the economic structure of the pre-Alexandrian days. Main centres of such an economic type were Syracuse, Tarentum, Naples, Carthage, Massilia, and Cyrene in the West; Alexandria in Egypt, Corinth, Athens, Ephesus, Miletus, Apamea, Delos, and Rhodes in the old country; Olbia, Tanais, Byzantium, Thessalonica, and Sinope in the North, Antioch on the Orontes, Seleucia in Pieria, Sidon, Tyre,

Seleucia on the Tigris, and Alexandria Charax in the East. The main trade was in cheap goods, the commercial crafts and their trading methods were not materially altered, but trade associations became more common and some of the *emporoi* were more specialized than during the classical period.

6. On the other hand, compulsory State planning was the most characteristic trade condition for the Egyptian country-side, for Hellenistic India, and to a lesser degree the more barbaric regions of the Seleucid, the Pergamene, the southern Arabian, and the Parthian Empires, which slowly developed a separate Semitic-Iranian Hellenism. In Ptolemaic Egypt, for example, the trade in oil, soda, salt, perfumes, beer, mining products, textile, leather, and metal products, and (perhaps) papyrus was monopolized, so that the government was able to control the price and quality of such merchandise and to claim special fees for the right to buy and to sell, very few enterprises being privileged. Prices and trade conditions of corn, cattle, fish, game, wood, wine, slaves, and the whole of the import and export trade were more or less government-controlled.

7. Roman civilization followed the Greek example, but modified it. Italy's essential imports of cheap products could not be paid for in full by her trading exports. Therefore the supply of Rome with corn and raw materials for military purposes was largely dependent on tribute. The exports of Italy, especially those in pottery, hardware, wine, and oil, spread over the whole of the Mediterranean during the last two centuries B.C., but by political as well as economic methods. The foreign trade in valuable products was much more important in the Latin than in the Greek part of the Ancient World. Rome was the economic centre. Its main ports were Puteoli and later Ostia; its main provincial import and export harbours Narbo and Arelate in Gaul; Utica, Cyrene, and Cirta in Africa; Athens, Delos, Pergamum, Ephesus, Apamea, Antioch, and Alexandria in the East. The Roman commercial crafts (*navicularii* (= *naukleroi*), *mercatores* (= *emporoi*), *caupones* (= *kapeloi*)) of the second century B.C. and their trade conditions were similar to the Greek ones, but not so specialized; but from the first century B.C. onwards *caupo* (and later *kapelos* as well) meant an innkeeper, *mercator* a *kapelos* or a small *emporos*. The great capitalists, already known from Alexander's time in the East, became a special craft, that of the *negotiatores*, who were at the same time merchants, bankers, and owners of workshops and large estates. They almost superseded the Greek type of great *emporoi* and absorbed the main business in all Roman provinces up to the time of Caesar.

8. A large area of the Old World remained outside the Greek, Latin, and not very different Semitic-Iranian regions of Hellenism, which were in close commercial intercourse. Britain, Germany, southern Russia, western Siberia, and India were visited by Mediterranean merchants; but their trade habits had to be assimilated to alien conditions. Valuable products of the Hellenistic world even reached China and central Africa, as finds and Chinese reports prove.

9. The time of the Roman Principate began with an absolute commercial supremacy of Rome and Italy, and free Empire trade (wherever advisable). It ended with a far-reaching economic autarky of the Roman provinces and State control over commerce. Britain and Dacia only were added to the central zone of ancient commerce during that period. The foreign trade of the Roman Empire was considerable, as finds and many Latin and Greek words in Irish, German, Pahlavi, Semitic, Iranian, and even a few in Indian and Mongolian languages prove. A few Roman merchants reached China, and Chinese merchants seem to have come to Iran and the most eastern parts of the Empire.

IO. The internal changes were more revolutionary. The imports and exports of most of the earlier centres for cheap products gradually lost importance for private buyers, because such merchandise could be and, as a rule was, produced locally or in a consumer's own province. In such circumstances only the inter-provincial import and export of valuable goods remained lucrative from about the third century A.D. A considerable amount of local trade was done by large estates and State institutions which did not require real merchants for this purpose. During the first century A.D. the *negotiatores* had spread as *pragmateutai* to the Hellenistic East, and the merchants and traders had been able to specialize in the Hellenistic way throughout the Latin provinces of the Empire, and in regions and provinces like Egypt which had not known free trade during the Hellenistic period; but from about the time of Hadrian all important commercial crafts had to be saved from complete collapse by the Roman government. The *collegia* (see CLUBS) of merchants—originally private organizations—were bound, regulated, and privileged by the State, first those of the transport merchants, then those of the other crafts. The Hellenistic trade control had not been completely dissolved by the Roman government in many provincial regions. Now a new compulsory system with characteristic legal regulations arose wherever State necessities were concerned. The end of free trade for many centuries had come. Prices and trade conditions were controlled by magistrates whenever difficulties arose.

II. The commerce of the Late Roman Empire up to the Islamic conquest has often been underestimated. This was no period of 'house-economy'. The trade in valuable products was equal to that of earlier centuries. Jewels, perfumes, valuable textiles, and glasses of the Mediterranean world were well known in northern Europe, Abyssinia, India, central and even eastern Asia. Trade in cheap products had suffered owing to Diocletian's system of taxation in kind, the decrease of the Roman and Greek town population during the third century A.D., and the autarky of many large feudal and church estates; but it was doubtless on the average superior to that of classical Greece (with the exception, perhaps, of Athens). The markets of Rome, Alexandria, Antioch, Constantinople, and many other towns were in normal years as full as ever of all that the population required. On the other hand, the strict and well-organized government control of the conditions of sale, and the codification of Roman commercial law, were novelties. Foreign trade was, if possible, restricted to certain frontier places, so that arms for prospective enemies as well as raw materials and victuals, which happened to be scarce in the Empire, could not be exported. Profitable imports, e.g. Chinese silk, became State monopolies. Government officials controlled the quality and prices of all merchandise in their districts as well as the quantities allowed to a merchant. The variety of products is well known from Diocletian's Price Edict and the Church Fathers. On the other hand, the purchasing of the Empire population had much decreased, and only in big towns and very wealthy country districts could the earlier specialization of commercial crafts be maintained to any extent. Not much difference existed, as a rule, between *negotiator* and *mercator*, between *emporos* and *kapelos*. Traders were very often craftsmen at the same time, and comparatively few big merchant firms remained; but on the whole the standard of Late Roman commerce was sufficient for the needs of the period, and we may justly consider its controlled organization as indispensable for the future world-wide progress of commerce during the Islamic and the later European Middle Ages.

COMMERCIIUM was the right of any *Latinus* (see LATINI) to enter into contracts with a Roman according to the forms of Roman law and enforceable in the Roman courts without recourse to the *ius gentium* (and vice versa). Without it a foreigner could only secure his rights by the help of the *praetor peregrinus*. *Conubium* similarly was the right to contract a legal marriage with a member of another State without either party forfeiting inheritance or paternity rights. Without *conubium* a Roman's children by a foreigner took the citizenship of the foreigner. These complementary rights formed an essential part of *ius Latii* (q.v.). Their development, unparalleled in the Ancient World until the later stages of some Greek cities, belongs to the period before the growth of large States in Latium, and was encouraged by the continental environment of the numerous small *populi* of the plain-dwellers, *Latini* (q.v.). In 338 B.C. Rome temporarily suspended these rights between certain Latin peoples, and again between certain Hernici in 308. This was only a temporary expedient in punishment for their revolts. The Latin colonies, including the so-called 'Last Twelve' founded between 268 and 181 B.C., all shared these rights not only with Rome but with one another, for, being often contiguous and also adjacent to Roman colonies, they could not flourish without such connexions. These *iura* also formed the chief practical benefit of *civitas sine suffragio* (see MUNICIPIUM), and could be granted to other *socii Italici* by special dispensation. By the Social War they were perhaps common throughout Italy. Under the Empire *conubium* was sometimes withheld from *ius Latii*, but the spread of Roman citizenship inside Latin communities rendered this rare. The grant of either to *peregrini*, however, remained exceptional. *Conubium cum peregrinis mulieribus* was thus given as a reward upon discharge to the pretorian troops, when required, and also along with the citizenship to the auxiliary troops drawn from the provinces.

These conceptions could also be applied to the relations between any communities of *peregrini*. Thus in 168 B.C. Macedonia was split up into four districts which were forbidden *commercium* or *conubium*, as an exceptional expedient to avoid the creation of a new province.

For bibliography, see LATINI, IUS LATII.

A. N. S.-W.

COMMIUS, appointed king of the Atrebatas by Caesar 57 B.C., acted as cavalry leader and general diplomatic agent, especially in Britain. He joined the revolt of 52, however, and evaded attempts at capture and assassination. He finally retired to Britain, where he founded a dynasty (British Atrebatas; apparently not at Calleva).

C. Hawkes and G. C. Dunning, *Arch. Journ.* lxxvii. 297-4.

C. E. S.

COMMODIANUS, probably of Arles and of the fifth century A.D. Two works of his survive: *Instructiones*, two books of short poems on numerous topics of importance to humble Christians, and *Carmen Apologe-*

ticum (1,060 verses), a metrical defence of Christianity against the still powerful paganism. Much of his work is accented verse.

Ed. B. Dombart (*CSEL* xv (1887)); A. F. van Katwijk, *Lexicon Commodianum* (1934); H. Brewer, *Kommodian von Gaza* (Paderborn, 1906). A. S.

COMMODUS, LUCIUS AELIUS AURELIUS, sole emperor A.D. 180-92, elder son of Marcus Aurelius, was born in A.D. 161. During his father's principate he was gradually advanced to the status of joint-ruler which he attained in A.D. 177 (Caesar in 166, *imperator* in 176, consul, *tribunicia potestas*, and Augustus in 177). In 177, after his marriage to Crispina, he accompanied his father to the second German-Sarmatian War.

2. After his father's death (partly as a measure of economy, but more essentially from a desire to return to the enjoyments of life in Rome) Commodus concluded peace, imposing restrictions upon inter-tribal intercourse in return for a subsidy and the evacuation of conquered territories. On reaching the capital he celebrated a triumph, and changed his name to Marcus Commodus Antoninus.

3. At first Commodus retained some of his father's ministers, e.g. Tarrutenius Paternus as praetorian prefect. But soon he resorted to government by means of favourites and open hostility to the Senate, which was exacerbated by an abortive conspiracy promoted by Lucilla and Ummidius Quadratus (182). For the next six years Rome was virtually governed by the praetorian prefects Perennis (182-5) and Cleander (186-9), and continuous war was waged against the Senate.

4. Commodus finally came under the influence of his concubine Marcia, his chamberlain Eclectus, and Laetus, who became praetorian prefect in 191. The intoxication of power seems to have deranged his mind. Senatorial persecutions were redoubled, Rome was rebaptized *Colonia Commodiana*, and the Emperor regarded himself as the incarnation of Hercules (title of *Hercules Romanus*). To perfect the impersonation he determined to appear in public on 1 January 193 as both consul and gladiator, and this so outraged the feelings of his advisers that they suborned an athlete called Narcissus to strangle him.

5. During this period the Empire was untroubled by foreign wars. The only serious unrest was in Britain, where the Antonine Wall was breached and south Scotland overrun. Order was restored by Ulpius Marcellus, and a subsequent mutiny of the legions put down by the future Emperor Pertinax.

Herodian, bk. 1; Dio Cassius, bk. 72; S.H.A.; J. M. Heer, *Der historische Wert der Vita Commodi*; W. Weber, *CAH* xi, ch. 9, §§ 7, 8; Parker, *Roman World*, 26-51. H. M. D. P.

COMMUNES LOCI, the 'commonplaces' or 'general arguments' of Latin rhetoric (as in Cic. *Orat.* 47; 126; *De Or.* 3. 106; Quint. *Inst.* 2. 1. 9) (cf. *κοινὰ τόποι* in Arist. *Rhet.* 1. 2 ad fin.; 2. 18-19; 23-4). They included a wide range of topics of universal character capable of being introduced by a speaker into appropriate parts of his oration (see *PROOEMIUM*). Being part of the rhetorical training (e.g. studies of character, good or bad, serviceable for eulogy or invective, or of general themes like envy, avarice, honour, fickleness of fortune), they were often recollected and employed in declamation or in forensic pleadings. They influenced also poets of the Silver Age like Persius and Lucan, who aimed at giving condensed and fresh expression to a 'commonplace'. J. W. D.

COMMUNIO, common ownership by two or more persons of a *res communis* or of an undivided group of objects (inheritance), originating in a contract by the will of the parties (*testatar*, see *CONTRACT*), or, independently of their intention, in a common inheritance or legacy. A joint owner might freely dispose only of his share by legal transaction (alienation, pledging, giving in usufruct);

dispositions of the whole *res communis* depended on the consent of all owners (*domini*). Manumission of a common slave was subject to special rules. Material alterations in the common object (constructions, plantations), intended or initiated by one joint owner, could be vetoed by any other. Controversies between joint owners were adjusted by an action for division of property (*actio communi dividundo*; *actio familiae erciscundae*, for division of inheritance was of earlier date). The judge divided the common object among the co-owners in proportion to their shares, or, if the object was indivisible, made an award for equalizing payments. The judge's *adiudicatio* vested the property. Profits, expenses, and damages, incurred by individual joint owners, were also apportioned by the judge, who distributed them among all owners according to their shares.

COMPRECATIONES. Aulus Gellius (13. 23. 1-2), quotes from the *libri sacerdotum populi Romani*, that is to say the *commentarii pontificum* (q.v.), the following forms of address, which he calls *comprecationes deum immortalium* (since they are in the accusative, it would appear that some verb meaning 'to invoke' is to be supplied): *Luam Saturni, Salaciam Neptuni, Horam Quirini, Virites Quirini, Maiam Vulcani, Hericem Iunonis, Moles Martis Nerienemque Martis*. It is clear that each pair consists of a well-known deity associated with an obscure one, or in two cases, a plurality of such. Since family relationships among Roman deities are unknown, and Gellius distinctly says that these prayers '*ritu Romano fiunt*', no such word as *uxor* or *filia* can be supplied (contrast, e.g., *Terentia Ciceronis, Tullia Ciceronis*). It therefore remains to suppose that the genitives mean that the lesser deity is somehow active in the sphere presided over by the greater one. Cf. K. Kerényi in *SMR* ix (1933), 17 ff. H. J. R.

COMUM, the modern *Como*, was the birthplace of the elder and the younger Pliny; the latter had two famous villas on the lake. The civilization of all this district emerges as a distinct entity as early as the tenth century B.C. It was not creative, only receptive; so that the best of the antiquities housed in the museum of *Como* are imports. Weapons are numerous, including fine swords of Hungarian types. A lively trade with Picenum on the Adriatic is proved rather by finds near *Lago Maggiore* than by the scanty discoveries at *Como*. The Golaseccans of *Lago Maggiore* were kinsmen of the Comacines. Both practised cremation, like the Villanovans, from whom, however, they can be distinguished. After 500 B.C. the whole lake region was strongly affected by Etruscan commerce, which spread from the newly founded Etruscan colonies north of the Apennines. During the Roman Republic the district was predominantly Celtic. In 89 Pompeius Strabo placed settlers at *Comum* and in 59 Caesar established a Roman colony (*Novum Comum*) of which the legality was questioned (cf. Rice Holmes, *Roman Republic*, ii. 217 ff.). For later history cf. G. E. F. Chilver, *Galatine Gaul* (1941), Index, s.v. D. H. MacL.

CONCILIABULUM, a type of large villas which down to the Social War formed political centres for the Roman country-folk. They replaced the *tribus rusticae*, whose

structure as civic units was shattered by the territorial expansion of Rome in the third century. Beginning 'beyond the tenth milestone' they covered the Roman territory except where other *oppida* existed. Official announcements were published in them, but as in other villages, their powers of self-government were slight, since they possessed neither municipal territory nor jurisdiction (see *VICUS*) until during the Ciceronian age they were assimilated to *municipia* (q.v.). A. N. S.-W.

CONCILIIUM was a general name for any Assembly; it was often used to denote the Popular Assemblies at Rome, especially the Plebeian Assembly (*Concilium Plebis*, see *COMITIA*).

The *Concilia Provinciarum* were provincial parliaments, consisting of delegates from the constituent cities or tribes of a province or of several associated provinces. They developed out of the *κοινά* or cult-assemblies which sprang up in the province of Asia (29 B.C.) and elsewhere in the Greek East for the worship of Augustus. They were introduced into the Western provinces by Augustus himself, who deputed his stepson Drusus to inaugurate a *concilium* of the four Gallic provinces at Lugdunum (12 B.C.), and they eventually received an official organization which covered the whole of the Roman Empire except Egypt.

The *concilia* or *κοινά* (as they were called in the Eastern provinces) ordinarily met once a year at a central point of their district (e.g. Carthage in Africa, Ephesus, Pergamum, or Smyrna in Asia). Their primary function was the worship of 'Roma et Augustus', and their president was also chief priest of this cult. Games and festivals were often associated with the religious ceremonies. But the *concilia* also served as channels of communication between the provinces and the emperors, and in the first century A.D. they often rendered good service in reporting on bad governors and facilitating their condemnation in the Roman courts. But they never acquired powers of legislation or taxation; they lost all significance in the troubled times of the third century; and an attempt by Constantine to reanimate them (without emperor-worship) proved ineffectual.

G. W. Botsford, *The Roman Assemblies* (U.S.A. 1909), ch. 6; E. G. Hardy, *Studies in Roman History* i (1906), ch. 13; P. Guiraud, *Les Assemblées provinciales dans l'empire romain* (1887); E. Kornemann, *PW*, s.v. *κοινά* (Suppl. iv) and 'Concilium'. M. C.

CONCORDIA, personification of agreement between members of the Roman State or of some body or bodies within it (*Concordia provinciarum, militum or exercituum, imperi*, etc., on coins; occasionally inscriptions are dedicated to the *Concordia* of a town, guild, or the like). Her oldest and principal temple, near the Forum (Platner-Ashby, pp. 138 ff.), was allegedly dedicated by Camillus in 367 B.C. (end of disturbances over the Licinian Rogations), restored by L. Opimius in 121 B.C. (death of C. Gracchus) and re-dedicated by Tiberius in A.D. 10 as *Concordia Augusta*, which from then on became a frequent title, apparently with reference to agreement between members of the Imperial family. She had also a shrine near the above temple, dedicated in 304 B.C. (Livy 9. 46. 6), and another on the Arx, (Livy 22. 33. 7; 23. 21. 7). The former was a political gesture, the latter commemorated the end of a mutiny. See Wissowa, *RE*² 328 f. See *HOMONOIA*. H. J. R.

CONCUBINATUS, see *MARRIAGE, LAW OF*.

CONDITORES, see *CITY-FOUNDERS*.

CONDUCTOR signified any kind of contractor, but more particularly a person who rented from the Roman government the right of collecting certain sources of revenue. In the course of the second century A.D. individual *conductores* (with whom *socii* might be associ-

ated) took the place of the companies of *publicani* (q.v.) as collectors of the *vectigalia* (q.v.). Inscriptions (*ILS* 1461 ff., 1851 ff.) prove that *conductores* were responsible for *portoria* (q.v.), mines, fishing-rights, etc. In the mining village of Vipasca (*ILS* 6891) the word is used not only of those who worked the mines but of dyers, shoe-makers, hairdressers, etc., who had been granted a monopoly. Much information about *conductores* can be derived from the complaints addressed to Commodus by the tenants of the Imperial *saltus* in Africa (*ILS* 6870). They were evidently wealthy men who acted as intermediaries between the government and its tenants, and were able to secure the collusion of the *procuratores* (q.v.), to whose supervision they were subject, in opposing the *coloni*.

H. Pelham, *Essays* (1911), 284 ff.; M. Rostovtzeff, 'Geschichte der Staatspacht', *Philol. Suppl.* ix. G. H. S.

CONFARREATIO, the oldest and most solemn form of Roman marriage, confined to patricians and in classical times obligatory for the three *flamines maiores* and the *rex sacrorum*, who must also have been born of such marriages (Gaius 1. 112). The ceremony is imperfectly known, but outstanding features were that bride and bridegroom sat with veiled heads on joined seats, which were covered with the hide of a sheep (Servius on *Aen.* 4. 374); a cake of *far* (spelt) was used in some way (perhaps eaten by the parties), and the whole rite was in honour of Jupiter Farreus (Gaius, *ibid.*). The *flamen Dialis* and the Pontifex Maximus were present (Servius on Verg. *G.* 1. 31) and there must be ten witnesses (five, a sacred number, for each of the two *gentes* concerned?) (Gaius, *ibid.*). The marriage was indissoluble save by an elaborate ceremony, *diffarreatio* (Festus, p. 65. 17 Lindsay, cf. Plutarch, *Quaest. Rom.* 50; see Rose ad loc.; he speaks of 'horrible, extraordinary, and dismal rites'). See *MARRIAGE CEREMONIES*, para. 3, and *MANUS*.

Rosbach, *Die römische Ehe* (1853), 95 ff.; P. E. Corbett, *The Roman Law of Marriage* (1930), 71. H. J. R.

CONGIARIUM. Under the Republic this term designated gifts of wine or oil made by magistrates, candidates for office, or generals. Later these distributions consisted, at first mainly, and then exclusively, of money. From the time of Augustus *congiaria* were given by emperors only or under their authority, and were associated with such events as the accession of a new emperor, imperial birthdays, victories, or the erection of buildings. The recipients were probably identical with the *plebs frumentaria* who received doles of corn. Instead of money they often received *tesserae nummariae* exchangeable for cash, of which a great number have survived. G. H. S.

CONGUS, see *JUNIUS* (1).

CONON (1) (c. 444-392 B.C.), an Athenian of noble birth. He was admiral of the squadron based on Naupactus in 414, and from 407 to 405 commanded the fleets operating in the Aegean and Hellespont. At Aegospotami he alone of the Athenian generals was on the alert, and slipped away to find refuge with Euagoras. He inspired the programme of reviving Persian sea-power, and his efforts were crowned with success when he annihilated the Spartan fleet at Cnidos (394). He crossed in triumph to Athens, completed the rebuilding of the Long Walls, and even dreamed of a new Athenian empire. The visit of Antalcidas to Tiribazus in 392 converted the satrap to a pro-Spartan policy. Conon, who was in Sardis on a diplomatic mission, was arrested, and although he succeeded in escaping, died shortly afterwards.

H. Swoboda, *PW*, s.v. 'Konon (3)'. D. E. W. W.

CONON (2) of Samos (3rd c. B.C.), astronomer and mathematician. After travelling in the western part of the Greek world in search of astronomical and meteco-

logical observations, he settled in Alexandria. He is best known for his discovery (c. 245 B.C.) of the new constellation *Βερενίκης Πλόκαμος* between Leo, Virgo, and Boötes, recounted in Catullus' imitation (c. 66 B.C.) of Callimachus' elegy on the Coma Berenices. He wrote an astronomical work *De Astrologia* of which nothing remains, and was well known for his researches into solar eclipses. In mathematics, he wrote a work *Πρὸς Θρασύδαμον* on the mutual sections and contacts of conic sections. He was a close friend of Archimedes, who always praises highly his mathematical work, and regrets his early death.

PF¹ xi. 1338.

W. D. R.

CONON (3), mythographer, who dedicated his work to Archelaus Philopator (Philopatris) of Cappadocia (36 B.C.-A.D. 17), published *διηγήσεις*, fifty tales from Greek saga, Atticist in style, based on a Hellenistic handbook, and preserved in Photius.

FG¹h i. 190, 499.

CONSCRIPTI. This obscure term may refer either to an official list or *album* of senators, the *patres* 'on the list'; or to an early union of two different kinds of senators—i.e. *patres* (et) *conscripti*—either patricians and plebeians, though the struggle of the Orders renders this unlikely, or the *patres* of different communities incorporated in Rome.

A. N. S.-W.

CONSECRATIO, the process of making anything into a *res sacra*. We are best informed of the ceremonial in the case of a temple (*aedes sacra*) and the ground on which it stood. The latter must be the property of the Roman people; e.g. Trajan saw no objection to the moving from its place of an old temple at Nicomedia, because it could not have been dedicated in Roman form (Plin. *Tra.* 49, 50; cf. Mommsen, *Staatsr.* iii. 734). Furthermore, dedication must be authorized by the State (Cic. *Dom.* 136). Usually the Senate, the People, or in later times the emperor appointed some person, or persons (*duumviri*, Livy 23. 21. 7 and often), with a natural tendency, if the temple had been vowed by a magistrate in office, to appoint him or some relative. It remained for the gods to accept the gift through their earthly agents, the *pontifices* (e.g. Justinian, *Inst.* 2. 1. 8). It was proper for the whole college to be present (Cic., *ibid.* 117); the minimum requisite was for one of them to be there. He held one of the *postes* of the entrance door and pronounced the necessary formula (*ibid.* 119, 121). Like all ceremonies, this must be gone through without interruption, hesitation, or stumbling (e.g. *ibid.* 134, 141; Pliny, *HN* 11. 174). The dedicator also held a doorpost (Livy 2. 8. 7), and went through a form of prayer (*ibid.* 8), dictated to him by the pontiff (Cic., *ibid.* 138, 'quid praeciri . . . ius fuerit' and Livy, *infra*), containing a clause to the effect that he gave the building (or other object) to the god (Servius on Verg. *G.* 3. 16). The ceremony was necessary also if a new building was put up on ground already consecrated (Livy 9. 46. 6).

Of the other consecrations less is known; the goods of a condemned man were on occasion consecrated by a magistrate, who covered his head, employed a flute-player to drown ill-omened sounds, and had by him a small portable altar (*foculus*) for incense (Cic. *ibid.* 123-4).

A title-deed (*lex dedicationis*) seems regularly to have been drawn up, at all events for important dedications. To judge by the provincial specimens which alone have been preserved (Bruns, *Fontes*, nos. 90, 92) it was recited by the dedicator under the direction of the pontiff and contained a precise statement of the size of the ground on which the object stood, the conditions under which it was to be used, etc. See **DEDICATIO**.

Convenient assemblage of material (requiring some revision) in Marquardt-Wissowa, *Staatsrecht*, iii. 269 ff.

H. J. R.

CONSENTES DI, the Roman version of the Athenian Twelve Gods. Their gilt statues stood in the Forum (Varro, *Rust.* 1. 1. 4), later apparently in the Porticus Deorum Consensuum (see Platner-Ashby, p. 421); as there were six male and six female, they may well have been the twelve worshipped at the *lectisternium* (q.v.) of 217 B.C. (Livy, 22. 10. 9), Jupiter and Juno, Neptune and Minerva, Mars and Venus, Apollo and Diana, Vulcanus and Vesta, Mercury and Ceres (Wissowa *RR* 61).

H. J. R.

CONSENTIUS (5th c. A.D.), grammarian. His extant treatises *De nomine et verbo* and *De barbarismis et metaplasms* (ed. Keil, *Gramm. Lat.* v. 338-85, 386-404) are excerpts from a complete grammar. His illustrations drawn from the speech of his own times make him valuable for the study of vulgar Latin.

Cf. Teuffel, § 472. 3; Schanz-Hosius, § 1103.

J. F. M.

CONSILIUM PRINCIPIS. A Roman magistrate was always at liberty to summon advisers in deliberation or on the bench. Under the Roman Empire a body of advisers summoned by the emperor acquired the character of a Privy Council. At first it was unofficial, and no more than an indeterminate collection of 'amici Caesaris' who had been summoned by the Princeps to act as assessors in a judicial inquiry (Tac. *Ann.* 3. 10; 14. 62) or as advisers in problems of administration. Hadrian went farther and, in judicial inquiries, summoned 'amici', 'comites', and juriconsults, 'quos tamen senatus omnes probasset' (*Vita* 18). Severus Alexander established a regular *consilium* of seventy members, who assisted him in the framing of *constitutiones*; twenty of them were juriconsults, the rest the Emperor's nominees, chiefly, no doubt, senators (*Vita* 16). Its members were known as *consiliarii Augusti*, some of them—perhaps only the *equites*—receiving salaries. The body was reorganized under Diocletian, membership being made permanent, and its name was changed to *sacrum consistorium* (q.v.). This *consilium* is to be distinguished from the regular *consilium* established by Augustus, and known as the *consilium semestrale*, consisting of the two consuls, one member of each of the other colleges of magistrates, and fifteen senators chosen by lot, who retained their membership for six months (Dio Cass. 53. 21. 4 ff.; Suet. *Aug.* 35. 3). This body prepared business for the Senate in collaboration with the Princeps (see, for example, the *senatus consultum* conveyed in the fifth of the Augustan edicts from Cyrene, *JRS* 1927, p. 36). Its character was altered slightly in A.D. 13 and again after Tiberius' accession, but the institution came to an end after Tiberius retired from Rome in A.D. 26.

J. P. B.

CONSISTORIUM, SACRUM (θεῖον συνέδριον), the Imperial Council from the fourth century onwards (see **CONSTANTINE**, para. 6), so called because it was necessary to stand (*consistere*) in the presence of the emperor. The *consilium* (q.v.) of the early Empire had important advisory functions, and Hadrian had given it added authority and prestige. But both its composition and its business depended entirely on the will of the emperor. The heads of bureaux were not expressly excluded, but were certainly not regularly called.

The *consistorium* of the fourth century resembled the *consilium* in its entire dependence on the emperor. It differed from it both in the increased formalism of its proceedings and in its usual composition; for the emperor, though still free to choose at pleasure, actually made a practice of summoning to the *consistorium* all heads of departments—the *quæstor sacri palatii*, the *comes sacrarum largitionum*, and the other *comites* and *magistri*. The business was prepared by the *magister officiorum* and included all matters reserved for the emperor's personal decision. The emperor himself held the

presidency and his judgements could not be set aside, but the advice of so many experts on subjects falling within their competence—foreign policy, internal legislation, finance, etc.—must have carried very serious weight.

O. Seeck, *PW*, s.v.

CONSIVA, see OPS.

CONSOLATIO. Outlined by Democritus, raised to the dignity of a *genre* by Crantor, and influenced from Bion's time by the Diatribe (q.v.), of which it became one of the characteristic forms, the 'Consolation' was introduced at Rome by Cicero. The Latin *consolationes* which have come down to us concern chiefly death, sometimes exile, rarely other misfortunes. Simple letters or philosophic treatises, they differ according to the author's style and personality, the circumstances which dictated them, and the character of the recipient. Yet they all wear a fundamental likeness. Eclectic, they draw upon the same arsenal of arguments (*solacia*) carefully catalogued, arguments which the *epicedium* (q.v.) in part borrows from them.

Of these *solacia*, one group is applicable to the afflicted person, the other to the cause of the affliction. Among the former the commonest thoughts are: Fortune is all-powerful—one should foresee her strokes (*praemeditatio*). Has a loved one died?—remember that all men are mortal; the essential thing is to have lived not long but virtuously; time heals all ills; yet a wise man would seek healing not from time but from reason, by himself putting an end to his grief; the lost one was only 'lent'—be grateful for having possessed him. As to death, the cause of the affliction, it is the end of all ills: the one who is lamented does not suffer; the gods have sheltered him from the trials of this world. To these *loci communes* consolers sometimes add eulogy of the dead, and almost always examples of men courageous in bearing misfortune.

Their exaggerated intellectualism distrusts feeling—reason is the supreme consoler. One of them, however—Seneca—views family affections as precious sources of comfort. Christian consolers (Ambrose, Jerome, Paulinus of Nola), while resorting to pagan arguments, were enabled to renew the *genre* by the stress laid upon feeling and by the character of their inspiration, which was at once biblical, ethical, and mystic.

In the following list of the chief Latin *consolationes*, their subjects, if other than death, are indicated in brackets: Cic. *Fam.* 5. 16, 18 (exile); 6. 1 (exile, war); *Brut.* 1. 9; fragments of Cicero's *Consolatio* written on Tullia's death; *Tusc.* 1 and 3; Sulpicius ap. Cic. *Fam.* 4. 5; Sen. *Dial.* 6 (*ad Marciam*), 11 (*ad Polybium*), 12 (*ad Helviam matrem*; exile); *Ep.* 63, 81 (ingratitude), 93, 99, 107 (runaway slaves).

A. Gercke, *De Consolationibus (Tirocinium philologum Berl.)* 1883; K. Buresch, 'Consolationum . . . historia critica' (*Leipz. Stud.* ix. 1), 1886; E. Boyer, *Les Consolations chez les Grecs et les Romains*, 1887; C. Martha, *Études morales sur l'antiquité* (1896), 135–89; J. D. Duff, *Sen. Dial.* 10, 11, 12 (two last being *Consolationes*), 1915; Ch. Favez, Introductions to his edns. of Sen. *Ad Helviam* (1918) and *Ad Marciam* (1928); *La Consolation latine chrétienne* (1937).
—C. F., transl. J. W. D.

CONSOLATIO AD LIVIAM, an elegiac poem of condolence, of 474 lines, addressed to the Empress Livia on the death of her son Drusus, campaigning in Germany 9 B.C., whose body was brought to Rome for burial. It is assigned to Ovid in the fifteenth-century manuscripts and the *editio princeps* Romana (1471), but is obviously not his work. If he had written it, he would not have passed over without mention this loyal effusion among his appeals for mercy. Its verbosity conflicts with his delicate touch; the frequent elisions and certain expressions are not in his manner. It was attributed to Albinovanus Pedo by J. J. Scaliger, and by Haupt to some humanist on insufficient grounds (*Opusc.* 1. 315). The

author, a Roman *eques* (202 'adsumus omnis eques'), professes to have attended Drusus' funeral. The poem may have been written then. But its excessively rhetorical structure, hackneyed commonplaces, and reminiscences of Seneca's *Consolations* suggest rather that it is a fictitious exercise composed considerably later in imitation of Ovid, from whom the author borrows continually, even whole lines. He also plagiarizes from Lucretius (359, 369), Tibullus (281, 415), and Propertius (330, 466).

Texts: Teubner *PLM* ii. 2 (Vollmer); Paravia (Lenz), full introd. and apparatus. Commentary: A. Witlox (Maestricht, 1934). Translation: J. H. Mozley, *Ovid: Art of Love* etc. (Loeb, 1929). S. G. O.

CONSTANTINE, known to history as 'the Great', FLAVIUS VALERIUS CONSTANTINUS (c. A.D. 274–337), was born at Naïssus, the son of Constantius Chlorus and his wife or concubine, Helena. Although Constantius (q.v.) had to put away Helena, Constantine could not but attract attention by his ability and energy. He was with Dicoletian at Alexandria in 296, served with Galerius against Persia, and was at his court in 305, when the old Augustus abdicated. The new ruler, Galerius, with both Caesars—Severus and Maximin Daia—devoted to him, was superior in all but name to his fellow-Augustus, Constantius, and Constantine was virtually a hostage for his father's good behaviour. In 306 Constantius requested Galerius to release Constantine for service in Britain; Galerius reluctantly consented. Constantine, fearing interruption by Severus, hastened to Britain and assisted his father in Scotland. When Constantius died at York (25 June), Constantine was proclaimed Augustus by the troops, urged on by the Alamannic king, Crocus; he seemed better qualified than his half-brothers, sons of Theodora, to carry the family fortunes. Galerius, smothering his resentment, granted Constantine the rank of Caesar; the rank of Augustus of the West was given to Severus.

2. The rise of Maxentius in Rome and the wars that ensued with Severus and Galerius reacted on the fortunes of Constantine. The old Emperor Maximian, returning to power to help Maxentius, visited Constantine in Gaul, gave him in marriage his daughter Fausta (once already betrothed to him in 293) and the title of Augustus. Constantine made no move, while Galerius invaded Italy and then retreated in disorder, but he sheltered Maximian when driven from Rome after a vain attempt to depose his son. At the Conference of Carnuntum in 308 Constantine was called on to resign the title of Augustus and become Caesar again, under Licinius as second Emperor. Both he and Maximin Daia resented the slight. They refused to be satisfied with the makeshift title of 'Fili Augustorum' and claimed and held the full rank of Augustus. In Gaul, meanwhile, Constantine had kept himself and his army in training against Franks, Alamanni, and Bructeri. He was absent on one of these expeditions in 310 when Maximian, restless and discontented, seized Massilia. Constantine turned and forced the old man to surrender and commit suicide. Deprived by this tragic incident of the moral support of the Herulian dynasty, Constantine claimed a new dynasty of his own, the Solar, derived from his ancestor Claudius (q.v. 2) Gothicus.

3. In 311 Galerius died and a new grouping of powers began. Constantine and Maxentius prepared for a fight to the death and sought support in Licinius and Maximin Daia respectively. Early in 312 Constantine invaded Italy, broke up a stubborn resistance in the north by great victories near Turin and Verona, and then marched on Rome. Maxentius gave battle and found defeat and death at the Mulvian Bridge. Welcomed as deliverer by the Senate, Constantine replaced Daia as senior Augustus. In 313 Licinius visited Milan, married Constantia, sister of Constantine, and with him issued certain regulations in favour of the Christians, known as the

'Edict of Milan'. Licinius then struck down his eastern rival, Maximin, and the two kinsmen emperors were left to rule East and West in harmony. The concord was unstable. A first war, fought in 314-15, was decided in favour of Constantine by victories at Cibalae and in the Mardian plain. The occasion was Constantine's attempt to make a third emperor, Bassianus, in Illyricum; the result was the cession to Constantine of territory as far as Thrace. Valens, appointed colleague by Licinius, was sacrificed. In 317 Crispus and Constantine II, sons of Constantine, and Licinius II, son of Licinius, were appointed Caesars. But trouble soon arose again. Licinius, jealous and suspicious, began to persecute the Eastern Christians. In 323 Constantine, in beating back a Gothic invasion, violated the territory of Licinius; war followed. Victorious in great battles by land and sea—Adrianople, Chrysopolis, and the Hellespont—Constantine forced the abdication of Licinius, who soon afterwards was executed.

4. Constantine now held the whole Empire, reunited under his own hand. Abroad his prestige stood unshaken. In 332 he repulsed Goths on the Danube and settled 300,000 Sarmatians within the Empire for its defence. A Persian war that was gathering did not break until after his death. Between 325 and 330 was built the new Christian capital of the East, new Rome, Constantinopolis (see CONSTANTINOPLE). A third son, Constantius II, became Caesar in 323 and a fourth, Constans, in 333. But in 326 Crispus, the eldest son, was accused by Fausta of an attack on her virtue and put to death. Fausta herself, charged with false accusation, was the next victim. The true facts are lost, but this imperial tragedy was a grave scandal to the Christian Church, to which Constantine now lent his full support. At the Council of Nicaea (A.D. 325) and in subsequent negotiations he succeeded in abating the strife of Athanasians and Arians that had threatened to split the Church.

5. Constantine planned to leave his Empire to his three sons, Constantine II, Constantius II, and Constans, and to the sons of his half-brother Delmatius, the younger Delmatius and Hannibalianus. Delmatius, who had put down a rebel, Calocoeus, in Cyprus, in 335, was to rule in Illyricum, while Hannibalianus was to have a kingdom to the south of the Black Sea. After Constantine had died, in full communion with the Church, in 337, the army massacred the side-branches of the family and secured the succession for the sons.

6. It is with full justice that Constantine bears the title of 'the Great'. He was a general of outstanding ability, an administrator and legislator of great talent and energy, a ruler of integrity, though too fond in his later years of unworthy friends and flatterers. With Diocletian he ranks as the re-founder of the Empire. It is impossible to decide in detail what parts belong to each, but to Constantine may be safely attributed the full development of the new status of the *praefecti praetorii*, the new imperial *consistorium* (q.v.) with its high officers and *comites*, and the new army, with its standing corps and frontier militia contrasted—not to mention a new money-system, with the famous gold *solidus* as its chief piece. But it is in the field of religion—as the instrument of the Christian Revolution—that Constantine rises to his full historical stature. Inheriting from his father, Constantius, a gentle and tolerant attitude to religion, Constantine was deeply impressed by the heroism of the Church under persecution. The audacity of his attack on Maxentius seems to imply that he felt assured of the spiritual support of the Christian God against the magic arts of his enemy. Victor, he showed marked favour to the Church, relieved it of all disabilities, and legislated in its interests. Within the Church, he fought hard for unity. A united Empire needed a united Church to support it. That was the reason why Constantine strove so hard, though without success, to bring the Donatists

of Africa back to their obedience, and why, throughout the Arian controversy, he used his whole influence to find a formula in which all could unite. He felt himself to be a 'servant of God' in a special sense, a 'bishop of those that are without'—the pagans and the aliens.

7. Constantine was baptized only on his death-bed, but his whole attitude shows that, long before that, he had passed from a vague monotheism to a definite belief in the power (*virtus*) of the God of the Christians. Statesman he certainly was and able to bend to his will a Church weak after persecution and unable to bear success. But he was no intellectual or sceptic. It was not without strong emotions and ardent faith that Rome's restorers could bring her through her great crisis. Constantine saw where the strength of the Empire lay and that recognition gave him the key to the new age that was waiting to be unsealed.

CONSTANTINOPLE. Byzantium (q.v.) in virtue of its unrivalled natural position, had always enjoyed great commercial prosperity and had occasionally played its part in history, under the Athenian Empire, with Lysimachus, in the war between Septimius Severus and Pescennius Niger. It was near Byzantium that Crispus in A.D. 324 won a decisive sea-victory for his father over Licinius. It was not without reason, then, that Constantine, seeking a site for a new Christian capital of the East, chose Byzantium.

2. The building of the new city—New Rome, or, more commonly, Constantinopolis—began in 324, but was only concluded in May 330. It was splendidly equipped with new buildings, and the grand natural harbours were developed. A new Senate, to match the Roman, was created and Roman noble families were induced by various offers to migrate. The poor too, like the poor of Rome, received their corn-dole. Paganism, even if not entirely excluded, as the statues of Cybele and of Constantine himself as Helios prove, had little place in a city destined to be the Christian metropolis. Constantinople became the centre of administration in the East. Its mint was one of the most active, and its 'Tyche Anthousa', is often represented beside that of Rome on Imperial coins. Special issues, from all mints, of Constantinopolis, with Victory on prow on reverse, and of Urbs Roma, with she-wolf and twins, celebrated the capitals, new and old, side by side.

3. As the Western Empire declined and fell, Constantinople rose steadily in oecumenical fame and standing. It became the firm rock, on which the Christian Empire of the East could rest, while the storms of attack, from Persian and Arab, from Bulgarian and Slav, broke against it in vain. Even the last and deadliest enemy, the Turk, was checked for centuries by its walls, even if the restored empire of the Palaeologi could only retain a very restricted independence. At the same time, the old commercial supremacy of the city was slowly sapped by Venetians and Genoese.

4. Constantinople was a Christian city and bore the symbols of the faith on its imperial coins. The Patriarch, under the shadow of the Emperor, could never attain the independence of the Pope of Rome; but he ranked as second in the hierarchy, and, after the final break between the Churches in 800, as supreme in the Greek Orthodox Church.

5. Constantinople had its seven hills and fourteen regions. It was extended by Theodosius II and Heraclius, and had a strong double wall. It was famous for its harbours—the Golden Horn, Sycae, etc.—its great

streets (such as 'H Μέσος), its palaces, squares, and aqueducts. The Hippodrome was often a centre of political demonstrations as well as of chariot races. Famous among its churches were 'H Ἀγία Σοφία, built by Justinian I in 532, Οἱ Ἅγιοι Ἀποστόλοι, and 'H Ἀγία Θεοτόκος τῶν Βλαχερνῶν. The population, never as large as that of Rome in its prime, may have been over half a million, with the Greek element predominating from about the eighth century.

CONSTANTIUS CHLORUS, FLAVIUS VALERIUS, of Dardanian stock, served with distinction as officer and governor, and was called by Diocletian in A.D. 293 to become Caesar of the West. To marry Theodora, daughter of Maximian, he had to put away Helena, his wife or concubine, the mother of Constantine.

The first task allotted to Constantius was the recovery of rebel Britain. In 293 he stormed Boulogne, after cutting it off by a dam from the sea; but Allectus, who murdered Carausius, was left in peace for three years. In 296 Maximian came up to guard the Rhine, and Constantius and his praetorian prefect, Asclepiodotus, put to sea. Asclepiodotus, landing in fog near Clausenium (*Bitterne*), routed and killed Allectus in Hampshire. Constantius, separated from him, came up the Thames and reached London in time to cut to pieces the marauding survivors of the beaten army. Constantius showed mercy to the island and restored its defences. In 298 he gained a spectacular victory over the Alamanni at Langres.

The abdication of Diocletian in A.D. 305 left Constantius in the West as senior Augustus, but hampered by his Caesar, Severus, a creature of Galerius. Constantine remained with Galerius, virtually as a hostage. In 306 Constantius asked that his son might be restored to him. Constantine, travelling with desperate speed, reached Britain just in time to help his father in a last victory, over the Picts, and to succeed him when he died at York.

Constantius was an able general and a generous and merciful ruler. Though not a Christian himself, he was as lenient to the Christians under persecution as his loyalty to Diocletian would allow. The stories of his descent from Claudius (q.v. 2) Gothicus are of doubtful value.

CONSTELLATIONS. The first evidence of knowledge of the constellations possessed by the Greeks appears in the poems of Homer and Hesiod. Homer speaks of the Pleiades, the Hyades, Orion, the Great Bear ('also called by the name of the Wain, which turns round on the same spot and watches Orion; it alone is without lot in Oceanus' bath', *Od.* 5. 271 f.), Sirius ('called Orion's dog', 'rises in late summer', 'a baleful sign, for it brings to suffering mortals much fiery heat'), the 'late-setting' Boötes. Hesiod mentions the same stars, his name for Boötes being, however, Arcturus. The inference is that, at first, the observations of the sky were all directed to practical utility, the needs of persons following various callings, the navigator, the farmer, etc. The stars served as signs to guide the sailor, or as indications of the weather, times, and seasons. Calypso tells Odysseus to sail in such a way as always to keep the Great Bear on his left. Hesiod marks the time for sowing at the beginning of winter by the setting of the Pleiades in the early twilight, or the early setting of the Hyades or Orion, the time for harvest by the early rising of the Pleiades, threshing-time by the early rising of Orion, vintage-time by the early rising of Arcturus, and so on; for Hesiod, spring begins with the late rising of Arcturus. Then,

later, legends came to be attached to the various constellations, often owing to supposed resemblances in shape, and poetic fancy played its part.

2. (1) *Orion*, Ὠρίων (*Ὠρίων*, Hesiod), was perhaps the constellation to which a Greek legend was earliest attached. A Boeotian legend made him a mighty hunter, ultimately killed by Artemis, or, according to a later version, by a scorpion sent by her. In art he is represented with a club in his right hand, a sword dependent from his belt (ξιφὴρης Ὠρίων, Eur. *Ion* 1153) and a lion's skin on his left arm. In Pseudo-Eratosthenes *ad Arat.* an alternative name Ἀλεκτροπόδιον ('cock's foot') appears. The three stars of the belt were in Latin *Iugulae*, and in Greek astrological texts Χάριτες ('graces').

(2) *The Great Bear*, ἡ Ἀρκτος = the Wain, ἡ Ἀμαξα, which is no doubt the earlier name. To the former name attaches the story that Callisto, beloved of Zeus, was turned into a bear by Hera and thereon placed by Zeus in the heavens. Another story is that the two bears were placed in the heavens as constellations, and that they were two bears which had hidden and nourished Zeus, when a youth, in Crete for a year (*Arat.* 30-5). With the 'Wain' is connected the name of the star called Βοώτης ('oxen-driver') by Homer; when the Wain becomes the Bear, Boötes is naturally called Arcturus (Ἀρκτοῦρος, 'Bear-guard', Hesiod; Ἀρκτοφύλαξ, Eudoxus and *Arat.* 92). Another name for the Great Bear was ἐλίκη (*Arat.* 3; *Apoll. Rhod.* 3. 1105) implying convolutions; one interpretation is 'snail's-house', from a supposed resemblance in shape; the other rests on the revolution of the Bear round the pole. The Romans called it *Septentriones*, 'seven threshing-oxen' (*trio* = 'threshing-ox' in Varro and Gellius) going round and round. Βοώτης would be the suitable attendant for such a team, and perhaps there was an earlier Greek name corresponding to *Septentriones* which dropped out of use.

(3) *The Little Bear*. The Greeks, we are told, sailed by the Great Bear, the Phoenicians by the Little Bear (*Arat.* 39). Thales advised the Greeks to follow the Phoenician lead, the reason being that the Little Bear is the better guide to the position of the north pole. The Little Bear was commonly called *Cynosura* (κυνόσουρα, 'dog's tail', *Arat.* 36); another name was 'Callisto's dog' (schol. in *Arat.* 27).

(4) Boötes (Βοώτης), *Arcturus* (Ἀρκτοῦρος, Ἀρκτοφύλαξ) see *Great Bear*.

(5) *Hyades*, Ὕαδες, a group consisting of one star of the first and four of the third magnitude, the morning setting of which marked for Hesiod the time for ploughing. The name is derived from ὕς, 'swine', and it was regarded as representing a sow with four young; this is a more likely derivation than the alternative one from ὕειν, 'to rain', because it corresponds to the Latin *suculae* (*Cic. Nat. D.* 2. 111).

(6) *Pleiades*, a group of seven stars of fifth magnitude near the Hyades. Hesiod calls them the seven daughters of Atlas by Pleione; their names were Halcyone, Merope, Celacno, Electra, Sterope, Taygete, Maia (*Arat.* 262 f.). The name Pleiades may be derived from πλεῖν, 'to sail', since their early rising in spring marks for Hesiod the beginning of the sailing season. The spelling of the word as Πελειάδες is, however, supposed to justify the early Greek view of them as a flight of doves. Another significant name for them is βότρυς, cluster or bunch of grapes (schol. on *Il.* 18. 486). The Latin name is *Vergiliae* (Plaut. *Amph.* 275), perhaps derived from *virga*, a twig.

3. *The Zodiac*. It seems now to be established that the Greeks obtained their knowledge of the twelve signs of the zodiac and the constellations in them from the Babylonians, to whom the Egyptians were similarly indebted. It was probably Cleostratus of Tenedos who imported this knowledge into Greece in the second half of the sixth century B.C. (see Pliny *HN* 2. 3; Hyginus, *Poet. Astr.* 2. 13). The pictorial representations of the

constellations, or most of them, passed over to Greece, as has been inferred from a number of boundary stones (see G. Thiele, *Antike Himmelsbilder* (1898), 10 f.; F. J. Boll, *Sphaera* (1903), 201 f.).

(7) The *Ram* (*Ἰππῖος*). According to Pliny this name was first used by Cleostratus, but it may be Babylonian. It marked for Hipparchus the spring time. The story is that it was the ram with the golden fleece which bore Phrixus and Helle over the sea (whence 'Hellespont'). It was sacrificed to Zeus, who placed it among the stars; the fleece was the object of the Argonauts' quest.

(8) The *Bull*, *Ταῦρος*, perhaps also a Babylonian name, is in the Greek legend the bull of the Europa-story.

(9) The *Twins*, *Δίδυμοι*, *Gemini*. They were variously identified as Castor and Pollux, Amphion and Zethus, Theseus and Heracles, Apollo and Heracles, Triptolemus and Iasion. The notion of them as Apollo and Heracles seems to go back to the time when the Greeks first became acquainted with the signs of the zodiac, and is supported by Ptolemy; they appear, however, in Babylonian texts as representations of the god Nirgal, the flaming summer-heat (Boll, 125).

(10) The *Crab*, *Κράβινος*, *Cancer*, the fourth sign of the zodiac, was easy, from its appearance, to picture as a crab. An earlier name for it was *ὄνων φάτιη*, 'Asses' Crib' (see Arat. 898 f.), representing a crib and two asses.

(11) The *Lion*, *Λέων*, *Leo*, the fifth sign, was associated with the hot harvest-season. Kugler identified it with the Babylonian Urguta (literally 'Big Dog'). Greek legend made it the Nemean lion killed by Heracles.

(12) The *Virgin*, *Παρθένος*, *Virgo*, the sixth sign, is represented with wings and holding an ear of corn (*σπαχὺς*, *spica*). Aratus tells the story that she was the daughter of Zeus and Themis and dispensed justice on the earth, but, when men became vicious, she was translated to heaven; hence the alternative name for the constellation, *Δίκη*, Justice. She became, later, associated with the succeeding sign, the *Scales*, *Ζυγός*, *Libra*; hence the treatment of *Spica* by Aratus as a separate constellation. Other names attached to the constellation from time to time were: Demeter (because of her holding the ear of corn), Athena, Isis, Atargatis, Tyche (= *Τύχη* Ps.-Eratosth. Cat. 9), and Erigone, daughter of Icarus or Icarus (Manilius 5. 251).

(13) The *Scales*, *Ζυγός*, *Libra*. The original Greek name was *χηλαί*, *Claues* (of the Scorpion). The idea of the *Balance* came later; it was suggested by the equality of night and day at the equinox. The *Scales* were at first represented as held in the claws of the Scorpion; later, separated from the Scorpion, they were pictured either alone or as held by a female or male figure.

(14) The *Scorpion*, *Σκορπίος*, seems to be of Babylonian origin. The Greek story is that it was sent by Artemis to kill Orion.

(15) The *Archer*, *Τοξότης*, *Sagittarius*, was represented sometimes as a Centaur, sometimes as a creature with two feet, standing upright. Ps.-Eratosth. (Cat. 28) says of him: 'Most men call him a Centaur. Others dispute this, because he does not appear to have four legs, but stands upright and shoots with his bow. But none of the Centaurs used a bow. This (figure), though a man, has horse's feet, and, like Satyrs, a tail.'

(16) The *Sea-Goat* or *Horned Goat*, *Αἰγόκερως*, *Cepriernus*, the tenth sign of the zodiac, is of Babylonian origin. It is a Goat-Fish, with the head of a goat and a fish-tail. Epimenides identified it with the Cretan goat which brought up Zeus; others make it Pan under the name *Aegipan*. Theogenes caused it to be adopted as part of the Arms of Augustus, and it was put on the banners of the Augustan legions (Thiele, 69).

(17) *Aquarius*, *Υδροχόος*, *water-pourer*. 'The man that holds the watering-pot' of the rhyme is represented as pouring out water from an urn variously described as *κόψα*, *κόλμης*, or *κόλμη*, *urna*. Legends identify it

sometimes with Deucalion, sometimes with Ganymede.

(18) The *Fishes*, *Ἰχθύες*, *Pisces*, twelfth sign of the zodiac, are two stars of the third magnitude, one north and one south, tied together by *δεσμά* or *συνδεσμός* (Arat. 243, 245). The northern one was also called 'swallow-fish' by the Chaldaeans = *χελιδονία ἰχθύς*, the other *ὁ ῥότρεος* (schol. in Arat. 242, Boll 196). The idea of this constellation came perhaps from the *Water* (*ὕδωρ*) of which Aratus made a separate constellation (Thiele 13).

4. After the time of the Ionian philosophers and the recognition in Greece of the signs of the zodiac comes a period in the fifth century when the constellations (their observed positions, risings, and settings) were used by Meton, Euctemon, and Democritus for the purposes of the calendar (*παρηγήματα*) and weather-indications (*ἐπιστημάσαι*). By the time of Eudoxus (first half of 4th c.) the following constellations were known and described in literature, with various legends attached. We take first those in the northern hemisphere.

(19) *Lyra*, *Λύρα*, containing the bright star Vega, is mentioned in connexion with the Twins. Apollo being one of the Twins, the association is appropriate, as legend has it that Apollo presented the lyre to Orpheus. The Lyre was used by Democritus and Euctemon for calendar-making (Diels, *Vorsokr.* ii. 143); it was also of significance in the calendar of Caesar (Plut. *Caesar*, 50).

(20) The *Swan* (*Ὀρνίς*, 'Bird', *Olor*, *Cygnus*), belonging, like the *Eagle*, to the Milky Way, touches the northern tropic circle. Aratus (279) says that its right wing stretches out to the right hand of Cepheus. Legend connects it with the story of Leda and the Swan.

(21) The *Eagle*, *Ἀετός*, *Aquila*, was used by Democritus (Diels, loc. cit.). According to the legend, Zeus used the Eagle to carry Ganymede to Olympus.

(22) The *Dolphin*, *Δελφίς*, *Delphinus*, known to Democritus (Diels, *Vorsokr.* ii. 144), and used for the calendar by Euctemon and Eudoxus, was supposed to have been placed in the heaven by Poseidon for having helped him towards his marriage to Amphitrite.

(23) The *Horse*, *ἵππος*, *Equus*, a constellation on the equator with back southwards; according to Aratus (283) his head is touched by the hand of the *Υδροχόος*, 'water-pourer', in the *Gatasterismi* and later he became Pegasus.

(24) The *Crown* (northern), *Στέφανος*, *Corona*, is mentioned by Aratus (71), next after the *Kneeler* (Heracles), as placed in the heaven to commemorate Ariadne; also used for the calendar by Euctemon. Its principal star, Gemma, is of the second magnitude.

(25) The *Charioteer*, *ἵππιος*, *Auriga*, a constellation between the Twins, the Bull, and the north pole, was first conceived as a man holding reins and driving a horsed chariot (Thiele 4. 28; Boll 111); he was then combined by astronomers with a still older constellation, the goat, *Αἶγ*, *Capella*, with two lids (*Ἐπιφάει*), so that he carries the former on his shoulder and the latter on his left hand. Legend associates him with Bellerophon.

(26) The *Kneeler* (*ὁ ἐν γόμφῳ*) is described by Aratus as 'like to a toiling man resting' on one knee with both arms raised, and the tip of his right foot on the head of the Dragon. He is represented as Heracles, with a club in his right hand and the lion's skin on his left arm, in his fight with the Dragon which watched the Garden of the Hesperides. Others identified him with Theseus, Ixion, Prometheus, etc.

(27) The *Serpent-holder* (*Ὀφιοχόος*, *serpentarius*) holds a serpent in his hands. His head is near and opposite to the Kneeler; he is above the Scorpion. Identified by Ps.-Eratosth. Cat. 20 with Atalepius, and so with *Υγιαν*.

(28) The *Dragon*, *Δράκων*, *Draco*, passes in and out enclosing the Bears in coils turned opposite ways. Its tail at first marked the north pole; its head is under the

foot of the Kneeler (Heraeles). It was variously identified with the dragon killed by Cadmus, the dragon which watched over the Garden of the Hesperides, or the Python killed by Apollo.

(29) *Cassiopeia* (earlier spelling *Cassiopeia*), a group of stars represented (a) by Aratus (192-3) as in the form of a key, (b) as a queen sitting on a throne with arms uplifted as if in agony about her daughter Andromeda. In another picture she is shown chained to two trees.

(30) *Andromeda* is represented by Aratus (203) as having her hands bound, agreeably to the story (cf. Eur. fr. 124 N.).

(31) *Perseus* is pictured running, unclad save for a chlamys, with a sword in his right hand, wings on his feet, and Medusa's head in his left hand. Aratus (249-50) does not mention the Gorgon's head. The constellation includes Algol (of the second magnitude).

(32) *Cepheus*, husband of Cassiopeia and father of Andromeda. His position in the heavens is described by Eudoxus (ap. Hipparch. in *Arat.* 1. 2. 11) and Aratus (179 f.). His upraised right hand touches the Swan's right wing; his feet are just below the tail of the Little Bear.

(33) The *Arrow* (*Οἰστός, Sagitta*) is under the Eagle. It is supposed to represent the arrow with which Heraeles killed the Eagle gnawing the liver of Prometheus.

(34) The *Triangle* (called *Δελτωτόν*, *Arat.* 233) is below Andromeda, between her and the Ram (Eudoxus ap. Hipparch. in *Arat.* 1. 2. 13).

The southern constellations are the following:

(35) *Cetus* (*Κῆτος, the Sea-Monster or Whale*), represented as the Sea-Monster sent to kill Andromeda, is some distance south of her and Perseus. Its head is on the equator, near to the feet of the Ram (cf. *Arat.* 354). It is said to occupy more space in the heavens than any other constellation.

(36) The *Eridanus* (or *Ποταμός, River*), alternatively called Oceanus and by some identified with the Nile. Eudoxus described it as *Ποταμός*, starting from the left foot of Orion and lying below the Cetus (Hipparch. in *Arat.* 1. 8. 6). The legend connects it with Phaëthon who fell into it when struck by Zeus with a thunderbolt. Later combined with ὕδωρ from Aquarius (Boll, 136-8).

(37) The *Hare* (*Λαγώς, Lepus*), a constellation described as under the feet of Orion and pursued by the Great Dog (Sirius) behind it (*Arat.* 338).

(38) The *Great Dog*, *Κύων, Canis Major*. Its feet lie, like the bend of the river Eridanus, on the southern tropic (Eudoxus ap. Hipparch. in *Arat.* 1. 10. 37). The bright star of the constellation, *Sirius*, was known to the Egyptians, who began their year from the day after the early morning rising of Sirius, which also marked the rising of the Nile.

(39) *Procyon*, *Προκύων, Antecanis, the Little Dog*, was called Procyon because its morning rising is just before that of Sirius, its position being a little more to the north (schol. in *Arat.* 450. It is just under the Twins. Cf. Hipparch. in *Arat.* 2. 2. 13. etc.)

(40) *Argo*, *Ἀργώ*, is described by Aratus (349-50), as being marked by stars only in the half of the ship from the mast to the stern. Hipparchus objects to this part of the description. Argo's position is near the hind legs and the tail of the Great Dog.

(41) The *Southern Fish* (*Ἰχθύς Νότιος, Piscis Australis*) is described by Aratus (386-8) as being under the Sea-Goat (*Αἰγοκέρως*) and turned towards the Cetus. It receives the water poured out by Aquarius. It is alternatively called the *Great Fish* (schol. in *Arat.*).

(42) The *Water-Snake* (*Υδρα Arat.* 444, 519; *Υδρας* Hipparch. in *Arat.* 1. 11. 9). Its head reaches the middle of the Crab, its coils are below the Lion and its tail above the Centaur. On its coils respectively are the *Bowl* (*Κρατήρ*) and the *Raven* (*Κόραξ*). It was identified with the Hydra killed by Heraeles (schol. in *Arat.* 443). The scholium also has the story that the Raven is a servant

of Apollo who was sent to fetch a cup of pure water for a sacrifice; the servant found a fig-tree on the way and waited for the figs to ripen; ultimately he carried back to Apollo a snake and the cup, saying that the snake had prevented him from drawing the water from the spring.

(43) The *Centaur* (*Κένταυρος*) contains one star of the first and five of the second magnitude. According to Eudoxus (ap. Hipparch. in *Arat.* 1. 2. 20) and Aratus (501-3) its back is along the winter tropic, like the Argo and the middle of the Scorpion; Aratus says (437-8) that the part like a man is under the Scorpion and the hinder (equine) part under the *Claws*. Hipparch. in *Arat.* 1. 8. 19-23, correcting this, says that it is almost wholly under Virgo except for the right shoulder, right hand, and fore-legs, which are partly under the *Claws*. In his left hand he is supposed to hold a thyrsus, and a hare dependent; on his right lies an animal (*Θηρίον*) which has been differently understood as a dog or a wolf or a panther (Boll, 143-8).

(44) The *Altar* (*Θυρήριον, Ara*) is in front of the fore-feet of the Archer (between them and the fore-feet of the Centaur). Aratus uses the name *θυρήριον* (403), Eudoxus and Hipparchus *θυμιατήριον* (Hipparch. in *Arat.* 1. 8. 14; 11. 9, etc.); so Ptolemy.

(45) The *Southern Crown*, *Στέφανος νότιος*, is under the feet of the Archer. It is probably identical with the nameless stars *δινωτοὶ κύκλοι* in Aratus (400). The name *Στέφανος* is later than Hipparchus but is used by Geminus and Ptolemy. Alternative names, according to schol. in *Arat.* are *Ὀυρανίσκος*, Prometheus, wheel of Ixion (*Ἰξίωνος τροχός*). Others again call it *πλοῖον* (Boll, 150).

5. We may assume that Eudoxus gives in his works on observational astronomy, entitled *Phaenomena* and the *Mirror* (*Ἐνοπτριον*) respectively, a description of all the constellations known in his time. According to Hipparchus (*In Arati et Eudoxi phaenomena* 1. 2. 2) the books were separate works, though they agreed in all but a few particulars. Hipparchus quotes freely from both. The *Mirror* may have been the earlier work and the *Phaenomena* an improved edition of it. The poem of Aratus, *Phaenomena*, was a popular version of Eudoxus so far at least as lines 19-732 are concerned. The commentary of Hipparchus gives three names which do not appear in Aratus: *Πρόπους* (= η of the Twins). In a text from Teueros a variant *Τρίπους* occurs (as to this see Boll, 126 f.); *Προτρυνγήτρ*, *Vindemiatrix*, herald of the vintage = ε of *Virgo*; *Canopus*, omitted in Aratus, according to schol., because not visible in Greece, = α of Argo; on this see Hipparch. in *Arat.* 1. 11. 7. Called the 'pilot of Menelaus'.

6. Geminus (*Εἰσαγωγή εἰς τὰ φαινόμενα*, c. 3) gives a list of the constellations, which he divides into three classes, those in the zodiac and those to the north and south of it respectively. The list does not differ substantially from that given above, but Geminus mentions separately the following stars:

The *Crib* (*Φάτνη*); two *Asses* (*ὄνοι*): as to these see under *Crab* (10) above: *Καρδιά λέοντος* (the Heart of the Lion, *Cor Leonis*, which Hipparchus calls *ὁ ἐν τῇ καρδίᾳ τοῦ λέοντος*), with the alternative name *Βασιλίσκος*, *Regulus*; *Αἶνοι*, *Bands*, between the two fishes in the constellation of that name, and *Συνδεσμός*, *Knot* (see *Fishes* (18) above); *Ὄφης*, the *Snake* held by Ophiuchus; *Προτομή Ἰππου* καθ' Ἰππαρχον = *Equuleus*, *Little Horse* (apparently Hipparchus has not the name, but Ptolemy has); *Θυρσόλοχος*, *Thyrsus-staff*, which according to Hipparchus 'the Centaur wields'; *Υδωρ*, the *water* from Aquarius (see *Eridanus* (36) above); *Κηρύκειον* καθ' Ἰππαρχον, *Herald's staff*, according to Hipparchus (= *Caduceus*), mentioned by Valens as held in Orion's left hand (not Greek but Egyptian in origin, Boll, 134, 167 f.); *Γοργόνιον*, the *Gorgon's Head*, 'at the end of Perseus' right hand'; 'the small stars close together at the end of

hand are made into the *Ἀρπη* (Sickle); *ὄκαμος*, *Coma Berenices*, so called by the nomer Conon in honour of Berenice and the poem of Callimachus: Ptolemy (*Alm.* is last constellation *Πλόκαμος* simply.

lky Way, *Γαλαξίας κύκλος*, is described by as 'that wheel with glaring eyes all round call Milk'. Democritus was the first to it consisted of stars packed very closely the name arose out of the legend of Hera's as spilt when she refused the breast to the es. Popularly and poetically it was variously he way to the Home of the Gods, the one- of the sun, Phaëthon's course, the souls' e, etc.

thus made a catalogue of 850 stars or more. n. bks. 7-8) has one of 1,022 stars grouped stellations. It may be noted that Ptolemy id name *Χηλαί*, *Claws*, for the *Scales*. He c stars which have not hitherto been men- ntares in the *Scorpion*, (b) *Antinous*, a group classified under the *Eagle*. On the other y does not mention the *Χάριτες* (*Graces*)— ion (1) above.

sitions of the various constellations and eavens were shown on globes or 'spheres' *ροποιῖα* of Archimedes). Even Thales and e are credited by the Doxographi with the of such globes. Eudoxus is certain to have ad Hipparchus; and Ptolemy must have had nc copy of it (see *Alm.* bk. 8 c. 1 ad fin., it. ch. 2). The globe on the shoulders of the e in the Naples Museum represents such a attributed to a date not later than A.D. 150. constellations with the principal great circles nly sphere, but not individual stars; the he constellations show that the artist avoided of Aratus pointed out by Hipparchus; he was ade use, of Hipparchus' corrections. A frag- milar globe of blue marble is preserved in useum (No. 1050 A); this has separate stars low colour within the contour of the figures the constellations.

the time of Alexander the Great an astro- of view becomes more and more dominant ical works, and there is more admixture of d Babylonian with Greek elements. Dis- es *Sphaera graecaeica* and *Sphaera barbarica* he first time in Latin works by P. Nigidius is bearing these titles, a few fragments of reserved; the *Sphaera barbarica* gave the ounts of the fixed stars and legends connected perhaps also the Babylonian. But Nigidius reek sources. One of these may be Asclepi- rleia (1st c. B.C.); Teucros 'the Babylonian' and Antiochus (perhaps 3rd c. A.D.) were with the *Sphaera barbarica* (see Boll, *Sphaera* us (q.v., 3rd c. B.C.) and Nechepso-Petosiris 160 B.C.) may also have been intermediaries and Egypt respectively. Astrology among was represented by Manilius and Firmicus qq.v.); the latter follows Manilius closely, as his authorities a certain Abraham and

Teucros and Antiochus Egyptian influence is d; they have alternative Egyptian names for stellations, such as the following: *Τυφῶν*, he Great Bear, *Osiris* = Orion, *Anubis* (in with the Osiris-Orion group), *Isis*, a seated or feeding her son Horus, *Κυνόκεφαλος* o constellations were so called, one of them z-headed *ἄψα*, see Boll, 218 f., etc.), *Ταυρο- ῶτης*, 'Bull-headed Boötes', with a plough o).

T. H.

CONSTITUTIONES, the generic name for legislative enactments by Roman emperors, which were made in different forms. In the first place the emperors possessed the *ius edicendi* like all higher magistrates (see *EDICTUM*); imperial *edicta* were issued for enactments of a general character (cf. Augustus' edicts from Cyrene, Caracalla's edict on citizenship), to a less extent for law reforms. This purpose was better served by *decreta* (decisions in civil or criminal trials passed by the emperor) and *rescripta* (imperial decisions upon special points of law, in answer both to petitions, *libelli*, addressed to him by a litigant, and to the inquiry of a judicial official in complicated cases, *relationes*). The *rescripta* were also called *epistulae*, when directed in the form of a letter to the inquiring official or *subscriptiones* when written on the *libellus* itself and signed by the emperor. These forms of constitutions gave occasion to legislative innovations, for their statements of law exceeded often the sphere of mere interpretation of existing law and laid down new legal rules which, though issued in particular cases, became authoritative and binding for all, as coming from the emperor himself. Another type of *constitutiones* was the imperial instructions given to officials, especially to provincial governors, *mandata*, which were more concerned with administrative matters. Exceptionally they touched civil law, e.g. in dealing with legal relations marriage, wills) of military persons. An excerpt of a *liber mandatorum* is preserved on a papyrus (*BGU* v. 1) known as *Gnomon of the Idios Logos* (a high official of the financial administration in Egypt).

The constitutional basis of the emperor's legislative power was at the beginning of the Principate not quite clear, apart from *edicta* as expressions of his magisterial *imperium* (*proconsulare*). The first emperors used therefore to give effect to their legislative intentions by means of the Senate, before whom they pronounced personally (*oratio*) or by a *quaestor* their motion for approval by the senators. The resolution of the Senate became later a mere formality, so that an imperial *oratio* was simply a kind of publication of an imperial law. And generally the constitutions were soon recognized as having the force of law (*legis uicem* [*uigorem*] *optinent*). The innumerable quotations of imperial rescripts in the works of the classical jurists excerpted for the *Digest* show how productive was this activity of the emperors in the times of the Antonines and their successors. Some titles of the *Digest*, especially those which deal with criminal law and procedure, abound in mentions of imperial constitutions. From the time of Diocletian and Constantine the legislative power of the emperors was unlimited: they issued directly general enactments (*leges generales*), laying down new legal rules with unrestricted validity. For collections of constitutions, see *CODEX*.

For bibliography see under **LAW AND PROCEDURE, ROMAN**, § 1 (text-books on the Sources of Roman Law). A. B.

CONSUL, the supreme civil and military magistrate of Rome under the Republic. The etymology of the word *consul* is uncertain: it has variously been derived from *cum-esse* (Niebuhr), from *cum-salire* (Mommsen), and from *consulere* (De Sanctis). In any case it was not the original designation of the chief magistrates. It is proved by Livy (3. 15. 12), and by the Greek translation of their title (*στρατηγός* or *στρατηγός ὑπατος*), that they were in the first instance called 'praetores'. This name (from *prae-ire*, to march ahead) and its Greek equivalent emphasize the military character of the magistracy. The name of 'consul' came into use before 366 B.C., for by this date the title *praetor* was reserved for another magistrate, the *praetor urbanus* (see **PRÆTOR**).

According to the traditional account, which has the support of the *fasti* (q.v.), the head magistrates were two in number from the beginning. An alternative theory (propounded by De Sanctis, *Storia dei Romani* i. 403 ff.)

maintains that the original board consisted of three *praetores* (probably the military commanders of the three original tribes), of whom two took special charge of military functions, while the third praetor discharged civilian duties; by 366 B.C. the board had been split into two separate offices, that of the 'consuls' (as the military commanders came to be called), and that of the *praetor urbanus* (who retained the older title with the distinctive epithet *urbanus*). In 367 B.C. the Licinian law opened the consulship to the plebeians. The law, often violated by the patricians, was confirmed by a plebiscite in 312 B.C., by which representatives of the two orders shared the consulship until 172, when for the first time two plebeian consuls were elected.

Throughout the Republic candidates for the consulship were elected by the people in the *comitia centuriata*, but, as they were proposed by the senators from their own ranks, liberty of voting was greatly restricted. It disappeared under the Empire when the *comitia centuriata* was suppressed and the emperors either recommended the candidates or themselves assumed the consulship. Under the Republic the consuls entered office on 15 March (after 153 B.C. on 1 January) and retained it for a whole year; under the Empire they retained it from two to four months only. Consequently, while Republican consuls, except *suffecti* (that is, appointed in case of the death, illness, or resignation of a consul), both gave their names to the year, despite differences of rank arising from their age (*collega maior*) or the polling (*collega prior*), Imperial consuls did so only if they entered office on 1 January (*consules ordinarii*, to be distinguished from their successors *consules suffecti*). A further distinction depended on whether Imperial consuls were single or married, and the number of their children. Moreover, the emperors often appointed themselves or their relatives and protégés consuls, entirely disregarding the legal age limits, which had been carefully fixed in 180 B.C. by the *Lex Villia Annalis*. In the age of Cicero no one under forty could be elected consul; under the Empire children were invested with the office, which was conferred upon Honorius at birth. But the consulship survived in the Western Roman Empire until A.D. 534.

CONSUS, a Roman god whose festivals (*Consualia*) were on 19 Aug. and 15 Dec., possibly in connexion with the ending respectively of the harvest and the autumn sowing. He seems connected with Ops (q.v.), by the dates of his festivals. The most reasonable explanation of his name is that it is connected with *condere* and he is the god of the store-bin or other receptacle for the garnered grain. This, as corn was often stored underground, may account for his subterranean altar in the Circus Maximus, uncovered only on his festival days (Varro *Ling.* 6. 20; Dion. Hal. *Ant. Rom.* 2. 31. 2); for its alleged inscription (Tert. *De Spect.* 5) see v. Blumenthal and Rose in *ARW* xxxiii. 384; xxxiv. 111. The ancients commonly supposed his name to have something to do with *consilium* (Dion. Hal., *ibid.* 3) or, because his altar lay in the Circus, identified him with Poseidon Hippios (Livy 1. 9. 6). He had also a temple on the Aventine, probably vowed or dedicated by L. Papirius Cursor about 272 B.C. (see Platner-Ashby, 141). His characteristic offering was first-fruits (Dion. Hal. *ibid.*). Horses and asses were garlanded and rested on his festival (Plut. *Quaest. Rom.* 48, whereon see Rosc). Whether he was originally honoured with circus games is doubtful. H. J. R.

CONTAMINATIO, 'spoiling'. Terence's enemies accused him of 'contaminating' his originals; he replies that he would rather imitate the 'carelessness' of Naevius, Plautus, and Ennius than the 'dull laboriousness' of his

rivals. The only liberty to which he confesses is that he has sometimes borrowed from a second Greek original. Modern scholars consequently assume that *contaminatio* could mean 'blending of originals', and that this is the procedure which Terence attributes to Naevius and others. Of the countless attempts to discover traces of 'blending' in Plautus only three are recognized as successful by P. Enk (*Rev. Phil.* 1938, iv; cf. G. Michaut, *Plaute* ii. 239 ff.). But I. Waltz (*Rev. Ét. Lat.* 1938, ii) argues that even in Terence's prologues *contaminare* means simply 'spoil'. The charge against Terence would, then, be that his translations were not faithful; and this charge, as he says, could be brought against earlier dramatists also. He glosses over the fact that his alterations differed from those made by earlier dramatists in being deliberate; but surely in speaking of their 'carelessness' he absolves them from any suspicion of so delicate a procedure as the blending of originals.

W. Beare, 'Contamination in Plautus and Terence', *Rev. Phil.* xiv (1940). W. B.

CONTIO (*conventio*) was a public gathering which even non-citizens, though illegally, used to attend. It was summoned by a magistrate or priest, either as a preliminary to legislation, in which case the measures to be passed were announced, or as a political assembly, called to discuss questions of public moment or the programmes of the political leaders. A magistrate could cancel a meeting summoned by an inferior (*contionem avocare*), and a tribune could veto or adjourn it (*intercessio* and *obnuntiatio*). The right of addressing the audience (*contionem dare*) depended on the will of the president who addressed the assembly from the platform (*ex superiore loco*), while the debaters spoke *ex inferiore loco*. The meetings generally took place near the rostra, in daytime, on *dies fasti*. As the kings had done, so the emperors alone summoned the meetings to address the people in solemn circumstances.

Mommsen, *Röm. Staatsr.* i². 191 ff.; W. Liebenam, *PIV* iv. 1149 ff.; G. W. Botsford, *The Roman Assemblies* (1909), 139 ff.; A. H. J. Greenidge, *Roman Public Life* (1911), 158 ff. P. T.

CONTRACT, ROMAN LAW OF. For the earliest forms of binding by agreement, see *NEXUM*, *STIPULATIO*. The developed Roman law embraced a whole system of obligations arising from a free agreement (*conventio*, *obligatio*; *contractus*, which did not become common as a technical term until the 2nd c. A.D., signified agreements recognized by *ius civile* as actionable). The extension and consolidation of *actiones* for protecting contractual obligations were supported in a large measure by the praetorian law of the late Republic. The classical Roman law did not elaborate any general conception of contract as a binding agreement; it recognized only some typical circumstances which, by agreement of the parties, produced one-sided or reciprocal obligations. According to a classification of Gaius (3. 89), repeated by Justinian (*Inst.* 3. 13. 2), four groups of contracts were distinguished according to the specific instrument employed for creating an obligation: (a) *res*, an actual handing over of a thing to the future debtor; (b) *verba*, a solemn declaration (*stipulatio*, q.v., *dotis dictio*, see *MARRIAGE*); (c) *litterae*, written entries in the account books of the creditor; (d) *consensus*, where a mere consent sufficed for a valid agreement. The informal real contracts (a) were: (1) *mutuum*, a loan of money or natural products (e.g. corn), obligating the debtor to return the sum loaned or an equivalent in quantity, kind, and quality of the products received for consumption. The payment of interest (with a maximum of 12 per cent., reduced by Justinian to 4 per cent.) required a special agreement; (2) *commodatum*, a gratuitous loan of an object for use, to be returned by the borrower after the agreed time; (3) *depositum*, gratuitous custody of another's property without any right of use or other profit for the depositor,

who was obliged to return the object to the depositor on demand; (4) *fiducia*, a pledge (see SECURITY). Under the group of consensual contracts (*d*) were included: (1) *emptio-venditio*, sale. This contract is effected when the parties have agreed on the object of sale and its price (estimated in money): henceforth the risk of the depreciation or destruction of the object sold passes to the buyer, and damage caused by accident falls upon him; on the other hand, he has the benefit of any increase in its value. The vendor was obliged to surrender to the buyer exclusive possession of the object sold, and to guarantee him against a third person's claims; he was also responsible for latent defects in the object. Special rules for the sale of slaves and beasts were introduced by the aediles' edict. (2) Hire (*locatio-conductio*), of a movable or immovable object, of services (*operae*), except certain liberal arts, or an undertaking to perform a piece of work (*opus*). (3) *Mandatum*, an undertaking to perform a gratuitous service for another (*mandator*) on his request. (4) *Societas*, when two or more persons contribute capital or labour, or even an entire property (as when an undivided inheritance was enjoyed in common by the coheirs, *consortium*), to be exploited for a common purpose. Profits and losses were divided between all partners (*socii*) according to their shares in the union. The consensual and real contracts created rights and obligations which were mostly of reciprocal character, and would vary more particularly in regard to the liability of the debtor for failure to safeguard the object entrusted to him (responsibility for *custodia*, *dolus*, *culpa*). The bilateral character of contractual obligations (apart from *mutuum* and the verbal contracts, which affected unilateral duties) gave occasion to a whole system of *actiones*, called generally by the name of the contract itself (*actio depositi*, *commodati*, *empti*, *venditi*, *locati*, *conducti*, *mandati*, *pro socio*). Sometimes special actions were introduced for a particular liability (as for secret defects in the sale). The action against a debtor in a case of *mutuum* was *condictio*. For agreements which did not fall within the above-mentioned types of recognized contracts the magistrate could grant an exceptional protection by an action called *in factum*. Later post-classical constructions extended the sphere of such reciprocal agreements not falling within the named contracts (and called therefore by the modern theory 'innominate'), and endowed them with legal protection (*actio praescriptis verbis*), if one party had performed his duties according to the agreement.

See the text-books mentioned under LAW AND PROCEDURE, ROMAN, § 1. P. De Francisci, *Synallagma* i (1913), ii (1916). P. Bonfante, *Scritti giuridici* ii. S. Riccobono, *Studi Bonfante* ii (1930); *Corso di diritto romano: Stipulationes, contractus, pacta* (1935). V. Arangio-Ruiz, *Responsabilità contrattuale* (1933). P. Collinet, *Law Quarterly Review* 1932.

CONTROVERSIA, the more advanced form of *declamatio* (q.v.), is best illustrated in the collection by the elder Seneca (q.v.), who recorded the treatment of debatable themes by the chief speakers of his day. He mentions *controversiae* as a recent term for Cicero's *causae* (*Controv.* i praef. 12). The debate was on some disputable point of law, usually fictitious and unreal, though as an exercise it was designed to equip for practice in law courts. The figures include pirate chiefs with or without a susceptible daughter, tyrants, mutilators of exposed children, poisoners, fathers implacably disinheriting sons. Unlikelihood of theme favoured imagination and ingenuity of argument, but served to make the exercise too scholastic to be serviceably forensic. Many *controversiae* look like novels in brief, and might be fitted with such titles as 'The young man with a kind heart who was twice disinherited', 'The Vestal Virgin who wrote love-poetry', 'The strange case of a son and stepson indistinguishable in looks'. Neat *sententiae* for and against are freely introduced; the skeleton statement of legal points involved comes in the *divitio*; and *colores*

(q.v.), or arguments professing to illumine motives, are quoted by Seneca from contemporary rhetors. It is surprising how much can be said to defend or condemn persons arraigned under the imaginary laws which are cited. The value of Seneca's collection lies partly in its illustration of the cleverly pointed *sententiae* which entered so inextricably into Silver Latin literature, and partly in its picture of the manner of argument adopted by contemporary speakers. Their straining after rhetorical effect and their use of far-fetched arguments or foolish *colores* are not spared by Seneca (e.g. *Controv.* 7. 5. 10; 9. 2. 27; 10 praef. 10). See EDUCATION, III. 3. J. W. D.

CONTUBERNIUM (from *taberna*), (1) the common life of soldiers occupying the same quarters; (2) any companionship; (3) the living together of slaves as husband and wife. Slaves could not contract *iustae nuptiae* (see MARRIAGE, LAW OF), but from early times a slave was allowed to marry a slave woman of the *familia*, and family life was increasingly recognized in practice and in law (*Dig.* 33. 7. 12. 7 rules that a testator could not will the separation of parents and children); literature, inscriptions, and law-books use *maritus*, *uxor*, *coniunx* instead of *contubernalis*, and show that an unbroken family life could generally be counted on.

For bibliography, see SLAVES.

R. H. B.

CONUBIUM, see COMMERCIIUM.

CONVENTUS, a word used in two main senses: (1) administrative divisions of a province, in the leading city of each of which justice was administered (*conventus iuridicus*, in the eastern provinces *diocesis*). These areas were determined by the *Lex Provinciae*, and often cut across pre-existing divisions. They developed some independence, and in the Principate sometimes had their own priests of the imperial cult (*ILS* 6931-2). (2) Associations of Roman citizens resident in provincial centres (*conventus civium Romanorum*). In the Republic (notably at Delos) they included non-enfranchised Italians as well as citizens proper. They are found only in places where citizenship was rare, and thus disappear early in the Principate from the romanized Western provinces; they are unknown in *coloniae* and *municipia*. At this period in such provinces as Raetia, Aquitania, and Lugdunensis, their members were drawn from all over the province. Their organization resembled that of *collegia* (see CLUBS, ROMAN). Under the Republic they elected *magistri*, who were often associated with a religious cult. In the Principate their president was normally a *curator civium Romanorum*, probably chosen by themselves. The *conventus* took part in the worship of the emperors, and priests of particular emperors are found among their members (*ILS* iii. 1. 587). G. H. S.

CONVERSION, abandonment, more or less sudden, of one way of living in favour of another, a genuine phenomenon and occasionally testified to in antiquity. The most famous case is that of the young rake Polemon, who strayed into Xenocrates' lecture-room and was so impressed by his discourse on temperance that he turned philosopher (*Diog. Laert.* 4. 16). Horace professes (*Carm.* 1. 34) to have been converted from materialism by thunder from a clear sky, which at least shows that such a thing was supposed possible. But religious conversion, i.e. the abandonment of one religion for another, did not take place under polytheism; a believer in certain gods would not cease to believe in them because he was attracted to and became a devotee of another. A mystery-cult might attract a man to a religious life as a monastic order does to-day, but that again is not abandonment of former beliefs. Only Judaism and Christianity produced conversions in this sense.

A. D. Neck, *Conversiones* (1933), and in *Piccola Franz Joseph Delig. d. griech. Lit.* (1930). 165 ff., also forthcoming art. 'Conversion' in *Reallex. f. Ant. u. Christ.*

H. J. R.

COPA, see APPENDIX VERGILIANA.

COPAIS, a lake, now drained, which in early days covered most of the west plain of Boeotia. It took its name from Copae on its north side. The swallow-holes on its east side were cleared and enlarged, and canals dug north and south to lead the Cephissus and other streams to them round the edge of the plain. Shafts for uncompleted tunnels were also bored on the low hills in the north-east corner and between Copais and Lake Hyliae on the east. The drainage works were usually ascribed to the Minyans of Orchomenus; to the Mycenaean period belongs the fortress of Gla, on what afterwards became an island in the lake. The outlets were said to have been blocked by the Theban hero Heracles: perhaps the Thebans stopped them during their wars against Orchomenus. In classical times, in spite of attempts to drain it, the lake was always swampy, and famous for eels (Ar. Ach. 880 ff.).

E. J. A. Kenny, *Annals of Archaeology and Anthropology* 1935, 189 ff.; U. Kahrstedt, *Arch. Anz.* 1937, 1 ff. T. J. D.

COPTUS (mod. *Keft*), on the right bank of the Nile, was a station on a well-equipped camel-track through the desert to Berenice on the Red Sea. This route became the principal link between the Mediterranean and Eastern waters. It was developed by Augustus; in the third century it temporarily fell into the hands of the native Blemmyes and was almost destroyed by Diocletian (A.D. 292), but recovered and maintained itself in the Byzantine Age. Part of a customs tariff survives on a papyrus from Coptus.

Warmington, *Indian Commerce*, 6 ff., 14-16, 50-1, 104-5; Kees, *PW* s.v. 'Koptos'. E. H. W.

CORAX of Syracuse (5th c. B.C.) wrote the first manual on rhetoric, based on legal practices in Sicily after the Fall of the Tyrants (Arist. *Rhet.* 2. 24; Cic. *Brut.* 46). It dealt with forensic oratory, defined rhetoric as an art of persuasion, advocated the use of probable (*eikos*) arguments, and prescribed three sections (*προοίμιον, ἀγώνες, ἐπιλόγιος*) for every speech. J. W. H. A.

CORBILO (mod. *Corsep?*, *Coron?*), a town of the Veneti on the Loire, to which British tin was shipped for conveyance across Gaul to the Mediterranean coast. The transit across Gaul was made in thirty days. Scipio Aemilianus (c. 135 B.C.) met traders from Corbilo at Massilia or Narbo, but failed to extract information about Britain from them.

Strabo 4. 190; Diod. 5. 22; Cary, *JHS* 1924, 172 ff. E. H. W.

CORBULO, GNAEUS DOMITIUS, son of the *consul suff.* of A.D. 39, was *consul suff.* (year unknown). In 47 as legate of Germania Inferior he successfully fought against the Chauci led by Gannascus, but was not allowed by Claudius to go farther. A strict disciplinarian, he made his troops dig a canal between the Meuse and Rhine. Proconsul of Asia under Claudius, he was entrusted as a *legatus* of Cappadocia and Galatia with the command against Parthia in the war about the control of Armenia, which broke out after Nero's accession, but which started in earnest only in 58, when Corbulo had reorganized the Roman army in the East. He captured Artaxata and Tigranocerta, installed Tigranes as king of Armenia, and received the governorship of Syria. But Tigranes was driven out of Armenia, the war was renewed in 61, and at Corbulo's request a separate general, Caesennius Pactus (q.v.), was sent to Armenia. After Pactus' defeat, Corbulo obtained in 63 a *maius imperium*, restored Roman prestige, and concluded a durable agreement with Parthia: Tiridates, the Parthian nominee to the throne of Armenia, admitted a Roman protectorate. Corbulo probably did not abuse his popularity, but his son-in-law Vinicianus (q.v.) conspired. In 67 Nero invited Corbulo to Greece and compelled him to commit

suicide. His daughter Domitia Longina became wife of Domitian in 70. It was the homage of the new dynasty to the name and influence of the greatest general of his time. The account of his achievements in Tacitus (*Ann.* bks. 12-15) and Dio Cassius (bks. 60-3) derives ultimately to a great extent from Corbulo's own memoirs.

Stein, *PW*, Suppl. iii. 394; M. Hammond, *Harv. Stud.* 1934, 81; J. G. C. Anderson, *CAH* x. 758, 880. Portrait: F. Poulsen, *Rev. Arch.* 1932, 48. A. M.

CORCYRA (*Κέρκυρα*), modern *Corfu*, the northernmost and most important of the Ionian islands. It owed its prosperity in part to its fertile soil, but especially to its situation at the starting-point of two main Greek trade-routes, along the coast of Illyria, and across the Adriatic to Italy and Sicily. It was popularly identified with the Phaeacia of the *Odyssey*. Its first Greek settlers came from Eretria (Plut. *Quaest. Graec.* 11; c. 700 B.C.); but these were supplanted, perhaps after the first Greek naval battle, traditionally dated 664 B.C. (Thuc. 1. 13), by the Corinthians. It shared with Corinth the foundation of Epidamnus (q.v.), and perhaps of other colonies in Illyria; but it resented the dominion of the tyrant Periander, and after his death it became a competitor of Corinth in Adriatic waters. Pursuing a policy of isolation, it stood out of the Persian Wars; but in 435 it was drawn into open hostility against Corinth, in consequence of a scramble for the control of Epidamnus, and to escape defeat it sought an alliance with Athens (433), which it renewed several times. It received protection from the Athenian fleet in 433, and again in 427 and 425, when Corinthian fleets attempted to co-operate with disaffected elements on the island; in 427 and 425 the Corcyrean democracy disgraced its victory by wholesale massacre of the oligarchs. In 410 Corcyra shook off the Athenian connexion, but in 375 it joined the Second Athenian Confederacy, and so drew upon itself a Spartan expeditionary force, which it beat off after a prolonged siege (373). By 360 it had again detached itself, but c. 340 it rejoined Athens in a vain attempt to prevent the intrusion of Macedonia into Adriatic waters. After the death of Alexander it became an object of dispute between various mainland dynasts, Cassander, Demetrius, and Pyrrhus, and was occupied for a time by the Syracusan tyrant Agathocles. In 229 it was captured by the Illyrians, but was speedily delivered by a Roman fleet and remained a Roman naval station until at least 189. At this period it was governed by a praefect (presumably nominated by the consuls), but in 148 it was attached to the province of Macedonia.

Thuc. 1. 24-55, 3. 70-85, 4. 46-8; Xen. *Hell.* 6. 2; J. Partsch, *Die Insel Korfu* (1887). M. C.

CORDUBA (nowadays *Cordova*), a pre-Roman city on the middle Bactis (*Guadalquivir*), first mentioned as a foundation of M. Claudius Marcellus, 152 B.C. It was granted colonial status, as *colonia Patricia*, by Pompey or his sons (during the Pompeian occupation of 46-45 B.C. according to M. Grant, *From Imperium to Auctoritas* (1946), 4). Pompeian in sympathy, Corduba was taken by Caesar in 45 B.C. Under the emperors it became the religious, and possibly also the administrative, centre of Baetica. Inscriptions reflect an active business life in which men of diverse origins shared. Local mines (*Mons Marianus*) and pasture-lands for sheep increased Corduba's wealth. It was the birthplace of Lucan and the two Senecas. J. J. Van N.

CORFINIUM, near the modern *Pentima*, controlled a strategic bridgehead of the river Aternus in Italy. It occupied a strong site on the Via Valeria near the Adriatic (Strabo 5. 241). As capital of the Pacligni, whose name the neighbouring church of San Pelino preserves, Corfinium must always have been important; but it is first mentioned during the Social War when the Italians made

it their seat of government and renamed it Italia, intending it to become the permanent capital of Italy (90 B.C.). They were quickly obliged, however, to transfer their seat of government to Aesernia, and the ultimate fate of Corfinium in the Social War is unknown: presumably the Romans captured it and made it a municipium (Diod. fr. 37; Vell. Pat. 2. 16). In 49 B.C., garrisoned by Domitius Ahenobarbus, it offered temporary resistance to Julius Caesar (Caesar, *BCiv.* 1. 15 f.; App. *BCiv.* 2. 38; Suet. *Iul.* 33 f.; Lucan, 2. 478 f.). Subsequently Corfinium received colonists on several occasions, but apparently was never styled *colonia* (Lib. *Colon.* 228, 255). Inscriptions indicate that it was a flourishing *municipium* in Imperial times, but its later history is unknown. Presumably it was destroyed in medieval times. E. T. S.

CORINNA, lyric poetess, of Tanagra (fr. 2; Paus. 9. 22. 3), elder contemporary of Pindar, with whom various legends, none very trustworthy, connect her (Suidas s.v. *Κόριννα*; Plut. *de Glor. Ath.* 4; Ael. *VH* 13. 25; schol. *Ar. Ach.* 720). She wrote narrative lyrical poems on Boeotian subjects for a circle of women (fr. 2), with titles such as *Boeotus*, *Seven against Thebes*, *Euonymie*, *Iolaus*, *Return of Orion*. A papyrus at Berlin contains substantial remains of two poems. In the first (fr. 4) she describes a contest in song between the mountain gods Cithaeron and Helicon. Since Helicon is defeated, the contest may stand for the competition between her own kind of art and that of the Hesiodic school. In the second the seer Aeraepheon foretells the high destiny of the daughters of Asopus, who are married to gods. The material used may go back to Eumelus of Corinth, and is based on legends of colonization. Both are written in regular stanzas of fixed length in which a metre is repeated and the stanza closed with a *clausula*. She uses simple verse-forms, such as minor ionics and choriambic dimeters. She also wrote lyric nemes, and fr. 5 B, called *Orestes*, seems to be a choral hymn for a spring festival. Her text is in the reformed Boeotian spelling of the fourth century and must have been transliterated from what she wrote. She normally keeps to her own dialect, but sometimes admits Aeolic and Homeric forms.

Text: E. Diehl, *Anth. Lyr. Graec.* i. 4, 193-206. W. Crönert, in *Rh. Mus.* lxxiii. 166-89. Commentary, etc.: U. von Wilamowitz-Moellendorf, in *Berl. Klass. Text.* v (2), 19-55. C. M. Bowra, in Powell and Barber, *New Chapters in Greek Literature* iii. 21-30, and 'The Daughters of Asopus' in *Hermes* lxxiii (1938), 213-21. C. M. B.

CORINTH, the isthmus city controlling communications between north Greece and Peloponnesus and the eastern and western seas. The city lay north of the citadel (Acrocorinth), two to three miles from the sea, with ports, Lechaicum and Cenchreae, on both gulfs. Finds of geometric, Mycenaean, and pre-Mycenaean pottery from Korakou near Lechaicum show that a city existed in prehistoric and Homeric times, though in the epic it takes a subordinate place (*Il.* bks. 2 and 13, and, under the name *Ephyre*, bk. 6).

2. At the Dorian conquest Corinth probably fell to Temenus the conqueror of Argos. Later the kingship gave place to the Dorian oligarchy of the Bacchiadae, under whom Corinth founded Coreyra and Syracuse (both traditionally 734 B.C.), led the way in shipbuilding (Aeneioles of Corinth built ships for Samos in 704) and naval warfare (battle with Coreyra, 664), and developed a great pottery industry. In its latest phase the Bacchiad government may have fallen under the ascendancy of Pheidon of Argos. C. 657 it was overthrown by the tyrant Cypselus, under whose house Corinth reached its greatest prosperity and power (commemorated by dedications at Olympia and Delphi), while the discontented Bacchiad Demaratus emigrated to Tarquinii, an event epoch-making in the history of Rome (Blakeway, *JRS* 1935, 129-49).

3. Archaeological evidence invalidates the attempts of some moderns to postdate the Corinthian tyranny, and supports the dating of fourth-century historians, according to which Periander died in 585, and his nephew and successor Psammetichus (Cypselus II) was overthrown soon after.

4. The tyranny was replaced by a constitutional government, based apparently on an inner cabinet of eight and a council of eighty (Nic. Dam. 60). Trade still flourished and craftsmen still enjoyed special consideration. The city fostered friendly relations with the rising powers of Athens and Sparta; mediated between Athens and Thebes over Plataea (519), between Athens and Cleomenes of Sparta (507), Gela and Syracuse (491); supported Sparta against the medizing Polygates of Samos, and Athens against Aegina; and fought well against Persia at Salamis, Plataea, and Mycale.

5. With the growth of Athenian imperialism Corinth's relations to Athens deteriorated, though even at the revolt of Samos from Athens in 440 she opposed Peloponnesian intervention; but Athenian interference at Megara and in the Corinthian Gulf had already led to fighting between Athens and Corinth in 459, and disputes between Athens and Corinth over Coreyra and Potidaea led to the outbreak in 431 of the Peloponnesian War. Corinth suffered severely, losing ships, trade, and colonies, and after the temporary peace of 421 was for a while estranged from Sparta, but at Mantinea in 418 was again fighting on the Spartan side. The Sicilian expedition of 415 increased her hostility to Athens; Corinthians under Gylippus took a leading part in the struggle at Syracuse and till the fall of Athens in 404 continued among Athens' most implacable foes. But shortly afterwards Corinth combined with Aetians, Argos, and Boeotia to make war against the tyrannical rule of Sparta. During this 'Corinthian War' (395-386) a democratic government was established c. 392 with Argive help, but after the war it was replaced by an oligarchy. In the troubled times of Epaminondas and Philip II Corinth aimed at a neutral policy in Greece proper, but when Sicilian Greeks sought help against local tyrants and Carthage she sent out Timoleon in 344 and helped to repeople Syracuse, whose coins now showed the Corinthian *pegasus*. After the battle of Chaeronea (338) Corinth was made the gathering place of the new Hellenic League; here Philip, its author, and Alexander proclaimed their crusade against Persia.

6. In the Hellenistic period Corinth became a centre of industry, commerce, and commercialized pleasure, and also a key fortress that frequently changed hands in the dynastic struggles of the period. In 243 it joined the Achaean League; in 224 it sided against Aratus and Macedon with Cleomenes III of Sparta, and on the latter's overthrow passed again under Macedon till Flamininus' victory over Macedon in 198-6, when it was declared free like all other Greek cities and became the chief city of the Achaean League. As such it suffered heavily when Rome sought to curtail the League's power, and in 146 it was completely destroyed by Mummius.

7. Refounded in 44 B.C., it became the capital of the province of Achaia and was visited by apostles, emperors (including Nero, who made a vain attempt to cut a canal through the Isthmus), philosophers, Gothic hordes, and earthquakes. Its destruction by one of these last in A.D. 521 is cited by Procopius as evidence that God was abandoning the Roman Empire.

The evidence of ancient sources on Corinth is highly scattered among such authors as Herodotus, Thucydides, Xenophon, Strabo, Diodorus, Plutarch, Tacitus, Pausanias, Himerius, Libanius, Zosimus, Malalas. Chief modern literature: J. G. O'Neill, *Ancient Corinth* (1919); H. G. Payne, *Neocorinthia* (1931). Excavation reports in *JHS*, *AJArch.*, *Hesperia*. P. N. U.

CORIOLANUS, GNAEUS MARCIUS, was probably the eponymous hero or god of the Volscian town Corioli, from the capture of which he was reputed to have won his *cognomen*. He is said to have withdrawn from Rome when charged with tyrannical conduct and opposing the distribution of corn to the starving plebs; he then led a Volscian army against Rome, from which he was only turned back by the entreaties of his mother Veturia and his wife Volumnia (491 B.C.); he was then put to death by the Volseians. The sources of Dionysius 8. 62 and other evidence show that the story did not arise from the misinterpretation of any monument (especially the temple of the *Fortuna Muliebris*, reputedly built where Coriolanus' womenfolk had met him). Nor was it a fiction invented either to glorify some patrician family, or in imitation of some incidents in Greek history (although some details may have been added from the stories of Achilles or Themistocles), or, finally, to provide an example of some legal customs and institutions. Rather, the legend reflects the period when Rome suffered severely from famine and Volseian pressure.

Mommsen, *Röm. Forsch.* ii. 113 ff.; W. Schur, *PW*, Suppl. v. 653 ff.; E. T. Salmon, *CQ* 1930. P. T.

CORIPPUS, FLAVIUS CRESCONIUS, *see* EPIC POETRY, LATIN, para. 3.

CORNELIA (1), mother of the Gracchi, the second daughter of Scipio Africanus, married Ti. Sempronius Gracchus after her father's death, and had twelve children, alternately boys and girls, until Sempronius' death in 154 B.C. She did not remarry, even refusing the hand of Ptolemy VII (Euergetes II, Physeon), but devoted herself to the education, in Greek culture, of her three surviving children, Tiberius, Gaius, and Sempronius, who married Scipio Aemilianus. Hostile tradition held that she supported her sons' revolutionary policy, but in fact she appears to have restrained them, e.g. checking Gaius' attack on Octavius (q.v. 2). The fragments of two letters attempting to dissuade Gaius from his political career, preserved in MSS. of Nepos, are, however, of doubtful authenticity, although Cicero knew letters by her (*Brut.* 58. 211). She outlived her sons, residing in Misenum, still prominent in State circles, her home a centre of culture. Tradition made her the model of Roman matronhood.

Plutarch, *Tiberius* and *Gaius Gracchus*. J. Carcopino, *Autour des Gracques* (1928), 47, 107; on the letters, H. Malcovati, *Athenaeum* 1920, 77; E. von Stern, *Hermes* 1921, 273 n. 1; J. H. Theil, *Mnem.* 1929, 347. A. H. McD.

CORNELIA (2), a cultured lady, daughter of Metellus (cos. 52 B.C.), in 55 married P. Crassus, the triumvir's son, who died with his father, and in 52 Cn. Pompeius, whom she accompanied after Pharsalus to Egypt, where she saw him murdered. She returned to Italy.

CORNELIUS (1), GAIUS, tribune in 67 B.C., in association with Gabinus introduced several popular reforms, the most important of which laid down that the praetors should abide by their own edicts. A proposal to introduce drastic measures against bribery at elections was considerably watered down by the Senate; Cornelius was also compelled to agree to a compromise when he attacked the right of the Senate to grant private dispensations. In 66 he was charged with *maiestas*, and the case came to court in 65. Cornelius, who was defended by Cicero, was acquitted by a large majority.

See Asconius, *In Cornelianam*. W. McDonald, 'Tribunate of Cornelius', *CQ* xxiii (1929). J. M. C.

CORNELIUS (2) NEPOS (c. 99-c. 24 B.C.), born in Cisalpine Gaul, moved to Rome, but took no part in politics; he was intimate with Cicero, with whom he exchanged letters, and with Pomponius Atticus after 65.

Catullus dedicated his book to N. in eulogistic verses. Fronto tells us that N. was also a transcriber of books.

WORKS: 1. *De Viris Illustribus*, in at least sixteen books (Charisius, *Gramm.* i. 141. 13 Keil), comparing Greeks and Romans. The categories of generals, historians, kings, poets, and probably orators, are certain. It was published before the death of Atticus, apparently in 34; before 27 a second edition appeared, including non-Greeks and expanding the *Atticus*. Of this we have *De Excellentibus Ducibus Exterarum Gentium* (see Loeb *Nep.* 357 ff.), and two Lives from *De Historicis Latinis*, besides fragments.

2. *Lost Works: Love Poems* (Plin. *Ep.* 5. 3. 1 ff.); *Chronica*, a universal history in three books (Catull. 1); *Exempla*, anecdotes in at least five books (Gell. 6. (7). 18. 11); *Life of Cato* (Nep. *Cato* 3. 5); *Life of Cicero* (Gell. 15. 28. 2); a work on Geography (Plin. *HN* 5. 4).

Nepos was the writer of the first surviving biography under its author's name, and the first biographer to compare Romans with foreigners, probably prompted by Varro's *Res Romanae*. His defects are hasty and careless composition (perhaps less marked in his first edition) and lack of control of his material. He is mainly eulogistic, with an ethical aim, but also gives information about his hero's environment. As historian his value is slight; he names many sources, but rarely used them at first hand. He follows mainly the 'plain' style (Gell. 6 (7). 14), but with colloquial features and many archaisms, not used for artistic effect, but from indifference. His rhetorical training appears in attempts at adornment, neither uniform nor discriminating.

CORNELIUS (3) SEVERUS, Augustan poet. Of his hexameter poem on the Sicilian War of 38-36 B.C., perhaps part of a longer *Res Romanae*, Quintilian says (10. 1. 39) that if he had maintained the level of the first book he would have been second only to Virgil; Seneca (*Suas.* 6. 26) quotes a passage of twenty-five hexameters on Cicero's death. The nature of the 'earmen regale' ascribed to him by his friend Ovid (*Pont.* 4. 16. 9) is unknown. *Cf.* AETNA. C. J. F.

CORNELIUS (4) LABEO (? second half of 3rd c. A.D.) wrote a (lost) history of Romano-Etruscan religion.

CORNELIUS, *see also* BALBUS, CETHEGUS, CHRYSOGONUS, CINNA, COSSUS, DOLABELLA, FUSCUS, GALLUS, LENTULUS, MERULA, PALMA, SCIPIO, SISENNA, SULLA.

CORNIFICIUS (1), QUINTUS, orator and poet, friend of Catullus (38. 1; cf. *Ov. Tr.* 2. 436; *Cic. Fam.* 12. 17-30), wrote a lost epyllion *Glaucus* (Morel, *FPL*). He played a creditable part in defending Illyrium against the Pompeians in 48 B.C., was sent to the East (as governor of Cilicia?) in 46, and appointed governor of Africa Vetus in 44. In the War of Mutina he sided with the Senate, was attacked by T. Sextius (governor of Africa Nova), and defeated and killed near Utica (42 or 41).

Bell. Alex. 42-7; Cicero, *Letters*; Plutarch, *Caesar*, 43 and 51; Appian, *BCiv.* 3. 85, 4. 36, and 53-6; Dio Cassius 48. 17 and 21. Modern literature: F. L. Gantler, *Philol.* liii (1894), 132-46; Drumm-Groebe, *Gesch. Roms* ii. 531-5. J. W. D. and G. W. R.

CORNIFICIUS (2), LUCIUS, a friend of Octavian, in 43 B.C. accused Brutus of Caesar's murder. In the war against Sex. Pompeius he was admiral; he was surrounded with three legions near Tauromenium, but escaped and joined Agrippa at Tyndaris (36). He was consul in 35, and proconsul of Africa; he celebrated a triumph in 32 and used to ride on an elephant at Rome in commemoration of his successes.

PIR², C 1503.

A. M.

CORNIFICIUS, by some regarded as the author of *Rhetorica* (q.v.) *ad Herennium*, cannot be certainly identified among several Cornificii.

CORNU COPIAE, *see* AMALTHEA.

CORNUA, *see* BOOKS, II. 2.

CORNUTUS, LUCIUS ANNAEUS, born c. A.D. 20 at or near Leptis, as a freedman of Seneca, or of one of his relatives, assumed the name Annaeus, and became a teacher of philosophy and rhetoric at Rome, c. A.D. 50, including Lucan and Persius among his pupils. Persius dedicated to Cornutus his fifth satire, and in 62 bequeathed him a sum of money, which he refused to accept, and his library. In collaboration with Caesius Bassus, Cornutus edited the posthumous poems of his disciple, omitting any passage which might appear to contain allusions to Nero. Probably involved in the conspiracy of Piso, Cornutus was exiled in 66; whether he later returned to Rome and resumed his literary activity is a matter of dispute. Cornutus was equally versed in Greek and Latin literature and wrote on Aristotle's logic (in Greek), and on rhetoric, the poetry of Virgil, etc. (in Latin). His one extant work is the *ἐπιδρομή τῶν κατὰ τὴν Ἑλληνικὴν θεολογίαν παραδεδομένων*, or Summary of the traditions concerning Greek mythology; in this he expounds, mainly following Chrysippus, the principles of Stoic criticism of myths, which he explains allegorically. In the Middle Ages scholia on Persius and Juvenal were wrongly attributed to him: cf. Teuffel, § 299. 2; Schanz-Hosius, § 451.

TEXTS: C. Lang (Teubner). The fragments of Cornutus' minor works collected by R. Reppé, *De L. Annaeo Cornuto* (1906). Modern literature: P. Decharme, *La Critique des traditions religieuses chez les grecs anciens* (1905); PW² i. 2225.

P. T.

CORONIS, in mythology, daughter of Phlegyas, and mother of Aselepius (qq.v.). While with child by Apollo, she had an intrigue with (or married) Isehyas son of Elatus, an Arcadian. Apollo learned this from a crow which brought word to Delphi (Pindar emends the story; he knew it by his own omniscience), and sent Artemis to kill Coronis. But when she was on the funeral pyre, he took the unborn child from her womb and gave him to Chiron to bring up (so Hesiod, fr. 123 Rzach; Pindar, *Pyth.* 3. 24 ff.). The local legend of Epidaurus omits the affair of Isehyas and the killing, and says Coronis was also called Aegla (Isyllus, 46 ff.). Apollo turned the crow black for bringing the bad news (Ov. *Met.* 2. 632).

H. J. R.

CORPUS TIBULLIANUM, *see* TIBULLUS.

CORRECTOR, a type of official first mentioned under Trajan, who sent Sex. Quintilius Maximus to Asia 'ad ordinandum statum liberarum ciuitatum' (Pliny, *Ep.* 8. 24). Pliny's own position in Bithynia was similar, though he was styled 'legatus pro praetore', and replaced the ordinary governor. As a rule the activities of *correctores* (λογισταί, ἐπαυροῦνται, διορθωταί) were confined to the supervision of the *liberae ciuitates*, which in strict law stood outside the jurisdiction of the governor. They were commonest in Achaia, where free cities were numerous; but they are found in other senatorial provinces such as Sicily and Asia, and do not seem to have superseded the

governors. They were generally of praetorian rank, though *consulares* are found among them after A.D. 200. From c. 250 the name appears in Italy, foreshadowing its inclusion in the provincial system by Diocletian. In the later Empire it is used of the governors of certain districts of Italy (CAH xii. 392 ff.).

A. V. Premerstein, s.v. 'Corrector' in PW; J. Marquardt, *Staatsverw.* i² (1881), 227 ff.

G. H. S.

CORSICA (Κύπρος), a rugged island in the Mediterranean off western Italy, consisting mostly of mountains that rise 9,000 feet and fall sheer into the sea on the west. The eastern coast, however, has good harbours. The tradition that Corsica's earliest inhabitants were Iberians mixed with Ligurians is credible but unprovable. About 535 B.C. Carthaginians, helped by Etruscans, expelled the colony which Phocaeans had established at Alalia thirty years earlier. By sending expeditions in 259 and 231, Rome ousted the Carthaginians and organized Corsica with Sardinia as one province (subsequently in Imperial times, exactly when is unknown, Corsica became a separate province). Rome colonized Mariana and Aleria on the east coast but exercised only nominal authority over the wild interior. Corsica produced ship-building timber, bitter-tasting honey, granite, cattle; the Romans did not work its mines. Vandals, Goths, Ravenna Exarchs, and Saracens successively followed the Romans as masters of the island.

Strabo 5. 223 f.; Pliny, *HN* 3. 80 (number of Corsican towns exaggerated); Hdt. 1. 165 f.; Diodorus 5. 13 f.; Theophr. *Hist. Pl.* 5. 8. 1; Seneca's picture of Corsica as inhospitable and unhealthy (*Dial.* 12. 7 f.; *Epigr.* 1 f.) is untrustworthy; Corsica was his place of exile. In general ancient authors seldom mention Corsica. E. Michon, *Mélanges de l'École française de Rome* xi (1891), 106; F. von Duhn, *Italische Gräberkunde* (1924) i. 112; E. Pais, *Storia della Sardegna e della Corsica* (1923).

E. T. S.

CORSTOPITUM, a Roman military post near Corbridge, Northumberland. The name, possibly corrupt, is of uncertain etymology (Corstopitum, *It. Ant.* 464. 3; Coriopolocarium, *Rav. Cosm.* 432. 6). Here the road from York to Scotland bridged the Tyne, branching to Carlisle and Tweedmouth. The place began as a Flavian bridge-head fort, with timber buildings and turf rampart (*Arch. Ael.* ser. 4, xv. 255) garrisoned by the *ala Petriana milliaria* (*Eph. Epigr.* vii. 995). It lay empty when Hadrian's Wall was built, but important buildings were erected in A.D. 139 (*Arch. Ael.* ser. 4, xiii. 274) and 140 (*Eph. Epigr.* ix. 1146) under Lollius Urbicus (q.v.) and in 163 (*Eph. Epigr.* ix. 1381-2) under Calpurnius Agricola (q.v.), presumably connected with the re-occupation of Scotland. Severus and his sons built granaries c. 205 (*Eph. Epigr.* ix. 1144, 1156), a large unfinished courtyard-building (probably a storehouse), and also legionary forges, all restored or altered under Constantius I (c. 297) and Valentinian I (369). Late fourth-century silver plate, gold rings (*CIL* vii. 1300), and a gold coin hoard attest prolonged use as an administrative centre.

Arch. Ael. ser. 3, iii-xi; ser. 4, xv, xvii.

I. A. R.

CORUNCANIUS (1), TIBERIUS, from Tusculum, consul in 280 B.C., triumphed over the Etruscans and guarded Rome against Pyrrhus' advance. He was the first plebeian Pontifex Maximus (253) and an early jurist: 'primus profiteri coepit' (Pompon. *Dig.* 1. 2. 2. 38), i.e. admitted the public, or at any rate students, to his consultations. Thus jurisprudence became professional instead of a mystery.

H. H. S.

CORUNCANIUS (2), GAIUS and LUCIUS, formed the Roman embassy to Teuta, the Illyrian queen, in 230 B.C., demanding satisfaction for the murder of Italian merchants by Illyrian pirates; this was refused, and they were themselves attacked, L. Coruncanius being killed. This outrage precipitated the First Illyrian War.

Polyb. 2. 8. M. Holleaux, *CAH* vii. 831.

A. H. McD.

CORVINUS, see VALERIUS (15).

CORVUS, see VALERIUS (3).

CORYNETES (Κορυνήτης), see PERIPHETES.

CORYPHEUS, see COMEDY (GREEK), OLD, para. 9.

CORYTHUS, the name of several obscure mythological persons, including (1) son of Zeus and husband of Electra (q.v.) daughter of Atlas; his sons were Dardanus and Iasius (Iasion), see DARDANUS; Servius on *Aen.* 3. 167. (2) Son of Paris and Oenone (qq.v.). His story is variously told; the least unfamiliar account is in Parthenius, 34, from Hellanicus and Cephalon of Gergis. He came to Troy as an ally; Helen fell in love with him and Paris killed him. Nicander, quoted *ibid.*, calls him son of Paris and Helen. H. J. R.

COS, one of the Sporades islands, probably colonized from Epidaurus. In the Peloponnesian War it suffered from both Spartans and Athenians. In 366, after internal strife, the townships (*demoi*) were merged in one capital city, on the north-east coast. The island revolted successfully from Athens in 354, but came under the control of Alexander of Macedon. It subsequently oscillated between Macedon, Syria, and Egypt, to find its greatest glory as a literary centre under the protection of the Ptolemies and as the home of Philetas and Theocritus. In the second century Cos was loyal to the Romans, even before it became a *libera civitas* in the province of Asia. The Emperor Claudius, influenced by his Coan physician Xenophon, conferred *immunitas* on the island. Here in the fifth century B.C. Hippocrates laid the foundations of medical science.

Strabo 14. 657-8. W. R. Paton-E. L. Hicks, *Inscriptions of Cos* (1891); R. Herzog, *Koische Forschungen und Funde* (1899); A. Maiuri, *Nuova Sillago epigrafica di Rodi e Cos* (1925); Herzog, etc., *Kos: I. Asklepion* (1932); A. N. Modona, *L'Isola di Cos nell'Antichità classica* (1933), with bibliography. W. A. L.

COSCINOMANCY, see DIVINATION, para. 6.

COSCONIUS, QUINTUS (1st c. A.D.), a scholar who wrote on grammar and law. His works are lost.

Cf. Teuffel, § 159. 7; Schanz-Hosius, § 196. 2.

COSSUS, AULUS CORNELIUS, the hero of two alleged wars with Fidenae (437-435 and 428-425 B.C.) of which only the second is probably historical. He won the *spolia opima* (q.v.) by killing Lars Tolumnius of Veii, whose inscribed breastplate he dedicated to Jupiter Feretrius. This inscription was read by the Emperor Augustus, who stated that Cossus performed the feat as consul in 428 (Livy 4. 20). This fact need not be interpreted as an invention of Augustus' designed to block the claim of M. Crassus (q.v. 6) to a triumph. According to other traditions Cossus was military tribune in 437 and *magister equitum* in 426. H. H. S.

COTTA (1), GAIUS AURELIUS, as consul in 75 B.C., carried a law to reseed the measure of Sulla, by which tribunes of the plebs were debarred from proceeding to higher magistracies. His speeches were noted for their neat style and sharp reasoning, but have not survived. He modelled his speaking on M. Antonius (q.v. 1) of the previous generation (Cic. *Brut.* 201-3). It was at his house that Cicero's dialogue *De Natura Deorum* was represented as taking place; and in bk. 3 Cotta is the champion of the Academic philosophy (cf. *De Or.* 3. 145). (The oration imputed to him in Sallust *H.* 2. 47 (Maurenbrecher) is Sallust's own invention.) M. C. and J. W. D.

COTTA (2), MARCUS AURELIUS, brother of (1) above, as consul in 74 B.C. was sent to defend the new province of Bithynia from invasion by Mithridates VI of Pontus. With a small army and improvised fleet he rashly engaged

the king's main forces near Chalcedon, sustaining a severe defeat, and the loss of his fleet in a counter-attack. In 73-70 he helped Lucullus to conquer Pontus, reducing several of the coast towns. His rapacity in plundering the city of Heraclea led to his subsequent conviction for embezzlement (67).

Memnon, chs. 30-59 (FHG iii. 541-57).

M. C.

COTTA (3), LUCIUS AURELIUS, brother of (1) and (2) above, as praetor in 70 B.C. proposed a law that the juries should be composed of equal numbers of senators, *equites*, and *tribuni aerarii*. In 66 he accused the consuls designate of corruption and became consul for 65 and censor in 64. He supported the proposal for Cicero's return from exile. On the eve of Caesar's murder it was rumoured that he would propose the proclamation of Caesar as king. Caesar's mother, Aurelia, was his kinswoman.

Münzer, *PIV* ii. 2485; *CAH* ix. 338, 737.

A. M.

COTTIUS, MARCUS JULIUS, son of a native king named Donnus, offered no opposition to Augustus' pacification of the Alpine regions and was recognized as ruler over a number of native tribes with the title of *praefectus civitatum* (*ILS* 94, cf. Pliny, *HN* 3. 138). He erected an arch in honour of Augustus at Segusio (*Susa*) in 7-6 B.C. (*ILS* 94), and improved the road over the Mt. Genève (Ammianus 15. 10. 2). The territory, annexed by Nero after the death of his son, was commonly known as the *Alpes Cottiae*. R. S.

COTTUS, see HECATONCHEIRES.

COTYS, COTYT(T)O (Κότυς, Κοτυ(τ)ώ), a Thracian goddess worshipped with orgiastic rites (Aesch. fr. 57 Nauck). Her cult was privately practised in Athens in Eupolis' time, and included some rite of washing or dipping, see the fragments of his *Baptae* in *CAF* i. 273 ff. For her cult in other Greek communities see Schwenn, *PIV* xi. 1551. H. J. R.

COVELLA, see JUNO.

CRAGUS, a Lycian god identified with Zeus (Lycophron 542 and schol.), humanized into a son of Tremilcs (eponym of the Tremileis or Lycians), after whom Mt. Cragus was named (Steph. Byz. s.v.).

CRANNŌN, a city of Thessaly, commanding a small level area among the low hills which separate the eastern and western plains. The Scopadae, the leading local family, were rivals of the Aleuadae (q.v.), but c. 515 B.C. they were involved in a mysterious disaster and lost much of their influence. The smallness of its plain and the proximity of Larissa checked its development. A Phraean named Deinias became tyrant of Crannon, probably in the fourth century, and with support from the tyrants of Pherac. In the Lamian War Antipater defeated the Greek confederates near Crannon (322). H. D. W.

CRANTOR of Soli in Cilicia (c. 335-c. 275 B.C.), philosopher of the Old Academy. After he had won fame in his native town he became a pupil of Xenocrates (Diog. Laert. 4. 24). He lived in intimate friendship with Polcmn, Crates, and his great pupil Arcesilaus, to whom he left his belongings (D.L. 4. 22; 24; 29).

With his commentary on Plato's *Timaeus* C. opened the long line of commentaries on Plato. His work *On grief* (Περὶ πένθους) was famous as the best ancient *consolatio*, renowned for its religious and philosophic depth as well as for its style.

CRASSUS (1) MUCIANUS, PUBLIUS LICINIUS (cos. 131 B.C.), married Clodia, sister of App. Claudius, Ti. Gracchus' father-in-law, and was father of Licinia, wife of C. Gracchus. A jurist and Greek scholar, he was a strong supporter of Tiberius Gracchus' land-law, and his successor as *IIIvir*. Though Pontifex Maximus, he insisted on leaving Italy in 131 to command in Asia against Aristonicus, but was killed after an initial setback in the campaign (130). M. H.

CRASSUS (2) DIVES, PUBLIUS LICINIUS (cos. 97 B.C.), commanded in Spain after his consulship and triumphed (Lusitania) in 93. He served under L. Caesar in the Social War, and was his colleague as censor in 89. Proscribed by the Marians in 87, Crassus committed suicide. M. H.

CRASSUS (3), LUCIUS LICINIUS (cos. 95 B.C.), statesman and orator, was the husband of Mucia (daughter of Q. Scaevola 'Augur') and the father of Licinia, who married the younger Marius. In 119 B.C. when only twenty-one, he made his mark by accusing Carbo, the renegade Gracchan, and further advertised his support of the Gracchan party by the foundation of *Narbo Martius* (*Narbonne*). But his democratic ardour soon cooled; in 113 the Vestal Licinia, his first cousin, was condemned in spite of Crassus' speech in her defence, and in 106 he supported the consul Caepio's judiciary law. In 95 as consul, with his colleague Scaevola 'Pontifex', he carried a law for expelling the Latins from Rome; the motive may have been to prevent the illegal extension of the franchise, but one result was certainly to intensify the agitation which led to the Social War. He also defended the younger Caepio. In 92 he was censor, and quarrelled with his colleague Ahenobarbus. He strongly supported the reforms of the younger Drusus, and died suddenly after making a powerful speech in Drusus' favour. In many respects his career foreshadows that of Cicero, who admired him greatly; and it is probably right to consider Crassus as a moderate, and above all a constitutionalist. As an orator, his only contemporary rival was Antonius. M. H.

CRASSUS (4) DIVES, MARCUS LICINIUS, the triumvir (b. c. 112 B.C.) and the younger son of Crassus (2), was, as commander of the successful right wing, largely responsible for Sulla's victory at the Colline Gate. His astute speculation in real estate rapidly marked him out as the leader of the business interests in Rome. In 72 B.C., as praetor, he was appointed to take over from the discredited consuls the command against Spartacus (q.v.), whom he defeated just before Pompey arrived from Spain to share his laurels. The two rivals suspended their hostility and joined forces. Together they were elected consuls for 70, when they did much to undo what was left of Sulla's constitution.

Crassus remained bitterly jealous of Pompey, and his aim from 67 onwards was to strengthen his position at Rome against Pompey's return from the East (Sallust, *Cat.* 17. 7). He persuaded the Senate to hush up the First Catilinarian Conspiracy, hoping to use the conspirators for his own purposes. In 65 he instigated an unsuccessful proposal for the annexation of Egypt, and as censor he tried, despite the opposition of his colleague Catulus, to gain fresh support by enfranchising the Transpadane Gauls. He bought over Julius Caesar, who was heavily in debt, and in 63 they sponsored the far-reaching agrarian law of Rullus (q.v.). He supported Catiline at the consular elections of 64, but he cautiously kept aloof from the conspiracy of 63.

Pompey returned late in 62, and through Caesar's agency the two rivals were in 60 brought into alliance as members of the 'First Triumvirate' (Dio 37. 56). During the next four years Crassus kept in the background, but he was to a large extent the moving spirit behind the activities of Clodius; in 56 he was again intriguing for a

commission in Egypt. Meanwhile his relations with Pompey became increasingly strained, but at the Conference of Luca Caesar prevented the impending break-up of the Triumvirate. Re-elected consul with Pompey (55), Crassus shared his colleague's credit for a series of constitutional reforms. More important for himself was the big military command for which he had longed; the *Lex Trebonia* awarded him the province of Syria for five years with extraordinary powers.

Crassus raised troops with some difficulty, and left Rome late in 55 for a Parthian campaign. After a preliminary invasion of western Mesopotamia in 54, he crossed the Euphrates again in 53 and headed east across the desert. He was hemmed in near Carrhae by the Parthians, whose elusive bowmen broke the morale of his forces. Retreat became a rout and Crassus met his death through treachery.

Such was the ignominious end of a strangely ineffectual career. Crassus' aim was power. His money bought him influence, his general affability gave him friends (Plut. *Crass.* 3). Yet when the opportunity came he achieved little, because he had no clear-cut programme and no political ideals.

Sources: Fragments of Sallust's *Historiae* (ed. B. Maurenbrecher, 1891-3); Plutarch's *Life of Crassus* (based, for the earlier years, on Sallust); Dio Cassius, bks. 37-40; Appian, *BCiv.* bk. 1; scattered references in Cicero's letters and speeches. CRASSUS (5), PUBLIUS LICINIUS (c. 85-53 B.C.), younger son of the triumvir. He accompanied Caesar to Gaul, first as *praefectus equitum* (58), then as *legatus* (57). In the victory over Ariovistus his resolute handling of the reserve was decisive. In 57 he subdued the coastal Gallic tribes and perhaps explored the Cassiterides (Strabo 3. 175-6). In 56 he defeated the Aquitanians. He returned to Rome in 55 and married Cornelia, daughter of Metellus Scipio. He commanded a body of Gallic horse under his father in the Parthian war of 53. His vigorous leadership involved them in heavy losses which he refused to survive.

Münzer, *PIV* s.v. 'Licinius (63)'. C. E. S.

CRASSUS (6), MARCUS LICINIUS (cos. 30 B.C.), grandson of M. Crassus (4), was at first a partisan of Sex. Pompeius, then an Antonian. The precise date of his desertion to Octavian has not been recorded; the consulate was probably his reward. Appointed proconsul of Macedonia, he conducted highly successful campaigns in 29 and 28 (Dio Cass. 51. 23 ff.). Having killed a king of the Bastarnae with his own hands, he claimed the *spolia opima*, to the annoyance of Octavian, himself jealously monopolizing military glory. The claim was rebutted on the grounds that Crassus had not been fighting under his own auspices; Octavian may have used as an argument the linen corslet in the temple of Jupiter Feretrius, which purported to show that Cornelius Cossus (q.v.) was consul (not merely military tribune) when he earned the *spolia opima*. The incident may have accelerated the regulation of Octavian's constitutional position (as E. Groag argues, *PIV* xiii. 283 ff.). Crassus was permitted to hold a triumph (27), after which nothing more is heard of this ambitious (and perhaps dangerous) nobilis.

E. Groag, *PIV* s.v. 'Licinius (58)'; R. Syme, *Roman Revolution* (1939), see Index. R. S.

CRASSUS (7) FRUGI LICINIANUS, GAIUS CALPURNIUS, of a long and illustrious line, was suffect consul under Domitian. Conspiring against Nervus, he was exiled to Tarentum. His plotting against Trajan caused his removal to an island, where, becoming suspect in Hadrian's reign, he was slain by a procurator (perhaps unbidden) while trying to escape.

S.H.A. *Hadrian*; Dio Cassius, bk. 65; *PIV*, C 257. C. H. V. S.

CRASSUS, see also CANIDIUS, NINNIUS, OTACILIUS.

CRATERUS (1) (c. 370?–321 B.C.), Macedonian officer of Alexander the Great. Beginning as commander of a *taxis* (brigade) of Macedonian infantry (at the Granicus), he advanced to be senior *taxiarch* (at Issus and Gaugamela), and, after Parmenion's death, virtually Alexander's second-in-command. When the army was divided he frequently held separate commands, and distinguished himself particularly in Bactria and Sogdiana (329–328), and in India at the Hydaspes battle. In 324 he was delegated to lead home the discharged Macedonian veterans, and to replace Antipater as regent of Macedonia and overseer of Greece, a distinction which illustrates Alexander's confidence in him. He was generally recognized as the best soldier on Alexander's staff, and he would certainly have played a commanding part among the 'Successors', had he not been killed in the very first battle, against Eumenes of Cardia, near the Hellespont.

Berve, *Alexanderreich*, no. 446.

G. T. G.

CRATERUS (2) (321–c. 255 B.C.), son of Craterus (1) and Phila, Antipater's daughter, was appointed governor of Corinth and Peloponnesus (c. 285), and later viceroy of Attica and Euboea, by his half-brother, Antigonos II, whom he served loyally. In 271 he tried to assist Aristotimus, the Elean tyrant (Plut. *Mor.* 253 a), and in 266 checked Areus of Sparta at the Isthmus (Paus. 3. 6. 4–6).

The *ψηφισμάτων συναγωγή*, a collection of Athenian decrees with a scholarly commentary, was probably the work of this Craterus.

F. W. W.

CRATES (1), Athenian comic poet. Aristotle (*Poet.* 5. 1449b⁵) says he was the first to drop the comedy of personal invective and invent plots of a general character. This would seem to date C. earlier than Cratinus. But that C. was the later is clear from the fact that he appears later on the victors' list (*IG* ii². 2325), that Anon. *Περὶ κωμ.* deals with Cratinus first, and that Aristophanes (*Eq.* 526 ff.) clearly mentions C. as the younger poet. Eusebius puts his *floruit* at 450 B.C. Suidas and Anon. *Περὶ κωμ.* attribute seven plays to him, and the former gives six titles: *Γέτροες*, *Ἡρώες*, *Θηρία*, *Λάμια* (*The Vampire*), *Πεδῆται* (*The Prisoners*—an odd title; perhaps a mistake for *Παιδιαί*, *Games*; Poll. 9. 114), *Σόμιοι*. In the *Γέτροες* drunkards were first introduced on the comic stage (Ath. 10. 429a). The *Θηρία* depicted a Golden Age, in which no one ate meat, and slaves were unnecessary, since everything a man needed came to him of its own volition. It had a chorus of animals, and contained an *ἀγών* between an upholder of the simple life and a lover of luxury. The *Σόμιοι* was probably political in tone. Too little remains for an estimate of C., but Aristophanes (*Eq.* 537–40) represents him as a neat and finished poet whose literary resources were meagre.

M. P.

CRATES (2) (c. 365–285 B.C.), son of Ascondas of Thebes, Cynic philosopher. Having come to Athens as a young man he first attended the lectures of Bryson of the Megaric School, but was soon converted to Cynicism by Diogenes of Sinope and decided to live henceforth in Cynic poverty. He married Hipparchia, sister of Metrocles of Maroneia, having converted both brother and sister to Cynicism. In her company he led a wandering life, preaching the gospel of voluntary poverty and independence, consoling people in distress, and reconciling enemies. He became so universally beloved that people wrote on their doors 'welcome to Crates, the good spirit' (Julian, *Or.* 6. 201 b). He wrote a great many poems, mostly by revising the poems of famous poets so

as to give them a Cynic content. His letters were praised for their style, but those which have come down to us are spurious. He is said by Diogenes Laertius (6. 98) to have written tragedies of a very lofty character in which his philosophy was displayed. One fragment expresses cosmopolitan sentiments.

H. Diels, *PPF* 216 ff.; *TGF* 809–10; Diogenes Laertius 6. 85–93; E. Schwartz, *Charakterköpfe* ii. 1–26; D. R. Dudley, *A History of Cynicism* (1938), 42–53; *PF* xi. 1625. K. von F. and A. W. P.-C.

CRATES (3) of Mallos, son of Timocrates, was a contemporary of Demetrius of Scepsis (Strabo 14. 676) and Aristarchus. He visited Rome, probably in 168 B.C., when his lectures, during his recovery after breaking his leg in the Cloaca Maxima, greatly stimulated Roman interest in scholarship (Suet. *Gram.* 2). He was the first head of the library at Pergamum, and wrote, *inter alia*, on Homer, Hesiod, Euripides, Aristophanes, and Aratus, usually with a philosophic and antiquarian bias; on Attic; and on 'anomaly'. See also *Anth. Pal.* 11. 218.

The Pergamenes and the Alexandrians were divided on the rival principles of 'analogy' and 'anomaly' in language. Aristophanes and Aristarchus, of Alexandria, in editing Homer sought the correct form (or meaning) of a word by collecting and comparing its occurrences in the text, a procedure more novel in their age than in ours. Further, they tried to classify words by their types of form (cf. our declensions), in order by reference to the type to decide what was correct in any doubtful or disputed instance. Thus in Homer Aristarchus accented *Κάρησος* after *Κάνωβος*, *πέφνων* after *τέμνων*, *οἰῶν* after *αἰῶν*; and similarly as to inflexions (see APOLLONIUS (15) DYSCOLUS). Crates, on the contrary, borrowed his linguistic principles from the Stoics. Not only words (see ETYMOLOGY) but literature likewise they thought a *μυθὸς θεῖος καὶ ἀνθρωπίνων* (Diog. Laert. 7. 60), an accurate reflection of truth, and on this basis they carried to ludicrous extremes the allegorical method of interpretation, in order to secure the support of Homer for Stoic doctrines. In such features as inflexion they saw only confusion wrought upon nature's original products by man's irregular innovations and perversions. Cleanthes had named this unruly principle of language *ἀνωμαλία*, illustrating it without much difficulty from the Greek declensions. This term and doctrine, and the allegorical method, were adopted by Crates and his school, to whom, consequently, the Alexandrian classification of forms (Crates seems to have written chiefly on noun anomalies) seemed futile in practice and wrong in principle.

The Alexandrians did valuable work; yet they had inevitable difficulty in deducing their types and rules from the facts: in such discrepancies, and when they proceeded by 'analogy' to adapt the facts to their rules, as even Aristarchus sometimes did, Pergamene criticism was, so far, justified. But neither did the Stoics (and Pergamenes) themselves follow usage *simpliciter*, but only usage controlled by their theory: cf. Diog. Laert. 7. 59.

The controversy gained importance with the growth of purism (see GLOSSA), and its extension from Greek to Latin. An Alexandrian compromise appears in Aristarchus' pupil, Ptolemy Pindarion, which is later derided by the extreme anomalist Sext. Emp. *Math.* 1. 201: and see Lucian, *Pseudologista*. Reconciliations were attempted by Varro, Caesar, Cicero, and the Elder Pliny, but the problem remained unsettled. 'Quare mihi non inueniuntur dici uidetur, aliud esse Latine, aliud grammaticae loqui' Quint. *Inst.* 1. 6.

P. B. R. F.

CRATEUS, pharmacologist, at the court of Mithridates the Great (111–64 B.C.), after whom he called a plant 'Mithridatium' (Plin. *HN* 25. 62). C. is the author of a comprehensive and scientific work on pharmacology (*Πύλο-*

τομικόν, schol. Nic. Ther. 681) in at least three books ([Gal.] *De virtute centaurica*, 2). Of a more popular character was another book which contained coloured pictures of plants with notes underneath indicating their medical use (Plin. *HN* 25. 8). C.'s works are much used in Sextius Niger and Dioscorides. They exercised a strong influence on all later medicine and pharmacology.

Dioscorides ed. M. Wellmann (1906-14) iii. 139 f. (fragments); M. Wellmann, 'Krateus', *Abh. Gött. Ges.* 1897; *PIW* xi. 1644.

K. O. B.

CRATINUS, always regarded, with Aristophanes and Eupolis, as one of the greatest of Athenian comic poets (Hor. *Sat.* 1. 4. 1; Quint. 10. 1. 66; Platon. *Diff. Com.* 1). His dates are uncertain: born probably c. 484 B.C.; died probably c. 419 (if we may assume that the reference to his death in Ar. *Pax* 700 ff. is a joke). Definitely datable plays are: *Χειμαῖόμενοι* (425; arg. Ar. *Ach.*); *Σάρυροι* (424; arg. 2 Ar. *Eq.*); and *Πυρίνη* (423; arg. 5 Ar. *Nub.*). C.'s comedies fall into two not sharply differentiated classes: (A) personal or political satires; (B) mythological burlesques. Of (A) may be cited the *Ἀρχιλοχοί* (? 448). This play contained a dispute between Archilochus and some cyclic poets (frs. 2 and 6). The *Παιόπται* ridiculed the Sophists. In the *Πυρίνη* (written as a practical answer to Aristophanes' imputations (*Eq.* 531-6) of senility) C. satirizes himself as a drunkard. A chorus of friends try to prevent C.'s desertion of his true wife *Κωμωδία* in favour of *Μέθη* and other such mistresses (fr. 183). To effect this they break all C.'s wine-jars (fr. 187), leaving him with but one empty one (fr. 190). C. makes a speech in his own defence (frs. 185-6). Of class (B) we may mention the *Ὀδυσσεύς*, a burlesque (*διασυρμός*) of the *Odyssey*. The chorus consisted perhaps half of Odysseus' companions and half of Cyclopes. The play seems to have contained a novelty (*νεοκμὸν ἀθύρμα*; fr. 145), viz. the arrival in the orchestra of Odysseus and his company in a ship (cf. Lohengrin's swan). The *Πλοῦτοι* was a skit on the Golden Age. The *Θράσσαι* (prob. 443, as it contains a reference (fr. 71) to Pericles' escape from ostracism (444)) was an attack on the Thracian goddess Bendis, whose orgiastic rites had been introduced into Athens. The *Σερπίδιοι* burlesqued the Perseus myth. The *Νέμεσις* contained both elements, for, though a burlesque on the story of the egg which produced Helen—Nemesiis, not Leda, is said to have laid it (fr. 108)—yet it seems that Pericles was satirized under the character of Zeus (fr. 111) and Aspasia under that of Helen. Thanks to a comparatively recently found papyrus (*POxy.* iv. 69 ff. (no. 663)), which gives us the hypothesis of the play, we know more about the *Διονυσάλειανδρος* (430). It had a chorus of Satyrs. Dionysus (not Paris) gives the golden apple to Aphrodite, who, as a reward, enables him to clope with Helen to Troy. On the arrival of the Greek fleet Dionysus hides Helen and changes himself into a ram (fr. 43). Paris discovers them, keeps Helen for himself, and hands over Dionysus to the Greeks. In this play, as the hypothesis says, Pericles is satirized in the guise of one of the characters (obviously Dionysus) for having brought war on the Athenians.

C.'s style is vigorous and direct. Aristophanes (*Eq.* 526-30) likens him to an impetuous torrent that sweeps all before it. The Anon. *Περὶ κωμ.* (6) detects an Aeschylean quality in him, and Platonius (*Diff. Com.* 2. 14) compares him to Archilochus and calls him *αὐστηρὸς ταῖς λοιδωρίαις*, but criticizes his faulty construction (*οὐκ ἀκολουθῶς πλῆροί τὰ δῶματα*). The Alexandrian scholar Callistratus edited Cratinus with notes (at any rate the *Θάπται* (Ath. 11. 495a)); Galen (*Libr. Prop.* 17) wrote two books on C.'s *πολιτικά διόματα*, and Symmachus also seems to have produced an edition of the poet (Hdn. 2. 495; cf. schol. Ar. *Vesp.* 151).

M. P.

CRATIPPUS OF ATHENS, author of a continuation of Thucydides' history to Conon's restoration of Athenian naval power, at least to 394 B.C., was, according to Dionysius of Halicarnassus (*Thuc.* 16), contemporary with Thucydides, but appears rather to be a late Hellenistic historian, claiming antiquity for the sake of authority.

FGH ii A, p. 13; C, p. 2; E. Schwartz, *Hermes* 1909, 496.

A. H. McD.

CRATYLUS, a younger contemporary of Socrates. He pressed the doctrine of Heraclitus to an extreme point, denying to things even the slightest fixity of nature. According to Aristotle he was Plato's first master in philosophy, and Plato drew the conclusion that since fixity does not exist in the sensible world there must be a non-sensible world to account for the possibility of knowledge. Plato in his *Cratylus* makes Cratylus maintain that falsehood is impossible and that all words in all languages are naturally appropriate to the meanings in which they are used, and exhibits him as a glib and unscientific etymologist.

Testimonia in Diels, *Vorsokr.* ii. 69-70; *PIW* xi. 1660. W. D. R.

CREMATION, see DEAD, DISPOSAL OF.

CREMONA, a Latin colony, founded in 218 B.C. as a bulwark against Insurbes and Boii on the north bank of the Po in north Italy (Polyb. 3. 40; Tac. *Hist.* 3. 34). Cremona staunchly supported Rome against Hannibal, although thereby it suffered so severely that in 190 it required additional colonists (Livy 21. 56; 27. 10; 37. 46). Its territory was confiscated for a colony of veterans c. 41 B.C. (Verg. *Ecl.* 9. 28). However, it continued prosperous until its destruction by Vespasian's troops in A.D. 69 (Tac. *Hist.* 3. 33 f.). Thereafter, although an important road centre, Cremona did not really revive until the ninth century.

E. T. S.

CREMUTIUS CORDUS, AULUS, the historian, writing under Augustus (Suet. *Tib.* 61. 3) and Tiberius, treated the period from the Civil Wars to at least 18 B.C. (Suet. *Aug.* 35. 2). He refused to glorify Augustus, and celebrated Cicero, Brutus, and Cassius, 'the last Roman'. Prosecuted for treason at the instigation of Sejanus (Tac. *Ann.* 4. 34-5), he committed suicide (A.D. 25). His work was burnt, but copies, preserved by his daughter, were republished under Gaius (Dio 57. 24. 4). The Elder Pliny and Seneca used his work.

H. Peter, *HRRL* ii (1906), pp. cxiii and 87; G. M. Columbia, 'Il processo di Crem. Cordo', *Atene e Roma* 1901.

A. H. McD.

CREON (Κρέων), a stopgap name ('prince', 'ruler') given to several subsidiary figures, as (1) a king of Corinth. Medea and Jason (qq.v.) visited him, and Medea killed him by magic and fled, leaving her children behind (Creophylus ap. schol. Eur. *Med.* 264); the children were killed by the Corinthians. Euripides himself makes her kill Creon's daughter, Jason's betrothed, with a poisoned costume which catches fire when worn, Creon being killed in trying to save her (*Med.* 1136 ff.), and murder her own children (ibid. 1273 ff.). (2) An early king of Thebes, sometimes confused with (3). He purified Amphitryon (q.v.) from blood-guilt on his arrival in Thebes, helped him in his campaign against the Teleboans, and afterwards married his daughter Megara to Heracles (Apollod. 2. 57. 70). (3) Brother of Iocasta, see OEDIPUS. He offered her hand and the kingdom to anyone who would rid Thebes of the Sphinx (Eur. *Phoen.* 45 ff.). After Oedipus' fall and again after the death of Eteocles he became king, or regent, of Thebes, see ANTIGONE (1). During the attack by the Seven he lost his son Menoeceus (q.v.). According to the Attic account, Theseus was persuaded to intervene and compel him to grant burial

to the bodies of the Seven (Eur. *Supp.*, passim). In Statius (*Theb.* 12. 773 ff.) Theseus kills Creon in the resulting battle. (4) The oldest occurrence of the name is *Il.* 9. 84, where he is father of Lycomedes, commander of part of the Greek outpost; otherwise unknown.

H. J. R.

CREPIDATA, see *FABULA*.

CRESCONIUS CORIPPUS, FLAVIUS, see *EPIC POETRY*, LATIN, para. 3.

CRESILAS (later 5th c.), Greek sculptor, famous for a statue of Pericles, of which the head survives in poor Roman copies in the British Museum and the Vatican gallery. It is uncertain whether the portrait of Pericles was a complete statue or only a herm. Three bases of statues by him, bearing his signature, were found on the Acropolis at Athens, and one at Hermione. One of the bases on the Acropolis states that it is a statue of Hermolycus son of Diitrephes. A second is the base of the portrait of Pericles. He is also recorded to have made a statue of a wounded Amazon. A Roman copy of a wounded Amazon in the Capitoline Museum at Rome is thought to be a version of this work. It may also be identical with the statue of an Amazon which Cresilas contributed in a competition, in which Phidias took the first place and Cresilas the third.

S. C.

CRESPHONTES, see *HERACLIDAE*.

CRETE. I. PREHISTORIC. The earliest population yet known in Crete is that of the Neolithic Age, which seems to have lasted long. This people probably reached Crete from south-west Asia Minor. They dwelt first in caves and some distance from the coast, and spread thinly about east and central Crete. By the end of the age (3100-2800 B.C.) they had begun to live in small two-roomed huts grouped in villages. With the Early Bronze Age the population had increased, reinforced perhaps by a fresh wave from Asia Minor. Towns were built, especially on the east coast, houses were larger, and metals were used—gold, silver, copper, lead. Burial took place in large ossuaries. Settlement in central Crete extended slightly westward, but not till the last phase of the Late Bronze Age (1400-1150) does there seem to have been any habitation in West Crete. In south Crete a strong Egyptian influence suggests that at the end of the Second Dynasty refugees fled across the sea to Crete. North Crete was in touch with the Archipelago. In the Middle Bronze Age (c. 2200-1600) population increased in the centre and south, but declined in the east. Towns developed and the first palaces arose. Building improved and ashlar work began. Copper developed into bronze, the potter's wheel was introduced, and writing evolved from a pictographic to a linear script. Cretan culture in this age is more uniform, and the island was prosperous. Manufactures and arts flourished, and by 1600 carving and fresco painting were freely practised. There was overseas trade with the Archipelago, Egypt, and the Levant. This prosperity continued through the first two phases of the Late Bronze Age (1600-1400). Palaces and houses grew larger, were better equipped and even luxurious. Metal-work improved, and carving, writing, and fresco painting were commonly practised. Overseas commerce was now extended to the mainland of Greece. The road system and the tablets and store chambers of the palaces suggest a well-organized administration. About 1400 the palaces were destroyed and the power of Crete collapsed. The large centres of population suffered and small towns took their place, but there was no break in civilization, and inhabitation began in west Crete. The end of the old system may have been due to an earthquake, or to some political upheaval perhaps caused

by Greek raids from the mainland. See also CNOSSOS; MINOS; PHAESTUS.

J. D. S. Pendlebury, *The Archaeology of Crete* (1939).

II. GREEK AND ROMAN. In historical times Crete was predominantly Dorian, having been colonized by Dorians probably from Peloponnesus. These divided themselves into city-states: Homer speaks of a hundred cities. The names of over forty are known, of which the most powerful were the rivals Cnossos and Gortyn, and Cydonia (colonized from Aegina). Apart from the absence of kings, the Cretan type of constitution and society resembled the Spartan, which may have been derivative. The chief magistrates were called *kosmoi*. The history of Crete is largely that of the independent cities. Disputes between them, especially about territory, led so often to war that a contract for arbitration (*κοινοδίκιον*) was framed for the cities of the Cretan league (*κοινὸν τῶν Κρηταίων*) and supplemented by arbitration treaties (*σύμβολα*).

Crete was geographically important as a station on the trade-routes from the Sporades and Cyprus to Egypt. But the island lay outside the main currents of Greek history; she refused to aid the defence against Persia in the fifth century. Cretan mercenaries, however, often took part in the wars of Hellas. From the middle of the third century her foreign relations centred on the new and unstable league and the intrigues of Macedon. In 216 the cities accepted Philip V as protector, but strife soon returned. At the end of this century Crete was reputed a home of pirates second only to Cilicia. These activities were encouraged by Philip, who realized his hope of thereby injuring Rhodes (155). The pirates supported Mithridates VI of Pontus against Rome, and when M. Antonius intervened to chastise them he was beaten off Cydonia (74); but Q. Metellus with three legions crushed the islanders and destroyed Cnossos (68/7). Crete became a Roman province, and was united with Cyrcne at least from the time of Augustus. The old league was adapted as a *concilium provinciae*. In the early Empire Roman traders were numerous at Gortyn, where an imperial mint was established. See also ARCHERS.

Hom. *Od.* 19. 172 ff.; Strabo 10. 474-84; Arist. *Pol.* 2. 10; Polyb. 6. 45-7. Bursian ii. 529 ff. Mijnsbrugge, *The Cretan Koiton* (New York, 1931); Karo and Büchner, *PIV* s.v. 'Kreta'.

W. A. L.

CREUSA (*Κρέουσα*), feminine of Creon (q.v.). The best-known 'princesses' who bear this quasi-name are: (1) daughter of Erechtheus king of Athens. She was violated by Apollo and bore a son whom she exposed; Hermes brought him to Delphi, and thence after growing to young manhood he was brought back to Athens by Creusa's husband Xuthus, who supposed him his own son and called him Ion (q.v. 1). He became the ancestor of the Ionians (Eur. *Ion*). (2) Wife of Aeneas and mother of Ascanius; she died in trying to escape from Troy and her ghost warned Aeneas of his future adventures (*Aen.* 2. 651 ff.).

H. J. R.

CRETIC SEA, see *AEGEAN SEA*.

CRINAGORAS (b. c. 70 B.C.), elegiac poet, of Mytilene, son of Callippus, took part in embassy to Caesar at Rome in 45 B.C., and to Augustus in 26-25 B.C. In Rome he was the friend of Octavia, and there wrote his epigrams nos. 29, 11, and 41. No. 29 is concerned with the marriage of Octavia's stepdaughter to Juba, no. 19 with Tiberius, no. 31 with Drusus. Ep. 24 has been connected with the disaster of Varus. He is more interesting for his connexions with others than for his own sake, since his work is usually rhetorical and undistinguished.

Text: M. Rubensohn, *Crinagorae Mytilenaei Epigrammata* (1888). Criticism: J. S. Phillimore, *Dublin Review* 1906; E. Norden, 'Das Germanenepigramm des Crinagoras', in *Sitz. Berl. Akad.* 1917, 668-79; C. Cichorius, *Röm. Stud.* viii (1922), 4ff.

C. M. B.

CRISA, the name applied to a site on a spur close to the modern Chryso, on the road from the coast to Delphi. The place was occupied as a refuge-settlement after the destruction of Cirrha (q.v.) in the First Sacred War (see SACRED WARS).

CRISPUS, see **VIBIUS** (3).

CRITIAS (c. 460–403 B.C.), one of the Thirty Tyrants at Athens, of an aristocratic family, to which Plato's mother (his first cousin) also belonged. He was an early associate of Socrates, and of the sophists, and was himself active as a writer (see below). He was implicated in the mutilation of the Hermæ, but released on the evidence of Andocides. He seems to have played but a small part in the Revolution of the Four Hundred (q.v.), perhaps from hostility to Phrynichus. After their overthrow he proposed the recall of Alcibiades and the denunciation of the dead Phrynichus as a traitor; on the restoration of the full democracy he was exiled. He retired to Thessaly, where (according to Xenophon) he intrigued with the *penestæ* (the serfs) against their masters. On the surrender of Athens in 404 he returned and was made one of the Thirty (q.v.). He soon proved himself the most unscrupulous and violent and vicious of them all, at least according to the democrats and rival oligarchs; he caused the death of his colleague Theramenes. He was killed fighting against Thrasybulus (q.v.), spring 403. His reputation did not recover after his death; but Plato, much as he disliked the excesses of the Thirty, honoured his memory in his Dialogues.

Critias wrote elegiac poems and tragedies. In later days it was uncertain whether certain plays were the work of Euripides or of Critias (*Vit. Eur.*). A long fragment of the *Sisyphus* gives a rationalistic account of the belief in the gods, and the *Pirithous*, which is described by Ioannes Diaconus *In Hermogenem*, and of which some fragments are known from papyri, is probably his work (*TGF* 770–5, Powell and Barber, *New Chapters in Gk. Lit.* iii. 148 ff.).

A. W. G. and A. W. P.-C.

CRITICISM, LITERARY, IN ANTIQUITY, see **LITERARY CRITICISM**.

CRITIUS (fl. c. 480–470 B.C.), Greek sculptor who invariably worked together with another named Nesiotes. Five statue bases bearing their combined signatures have been found on the Acropolis at Athens. They are most famous for their group of the Tyrannicides, to replace that by Antenor which had been taken by Xerxes to Persia. It stood in the Agora at Athens, and a part of its base with inscription has recently been found there. Our knowledge of that group is derived from a Roman copy, now in Naples, and from copies of the head of Harmodius in New York, and of Aristogiton in the Vatican and at Madrid. Critius was probably an Athenian; his style is strong and clear-cut, deeply influenced by a Peloponnesian tradition. An original of his period in the Acropolis Museum is attributed by some to him. S. C.

CRITO (*Κρίτων*) (1), a contemporary and devoted friend of Socrates, referred to in Plato's *Apology*, *Phaedo*, and *Euthydemus*. In the *Crito* he plans for Socrates to escape from prison. Seventeen (lost) dialogues ascribed to him by Diogenes Laertius are of doubtful authenticity.

PII xi. 1932.

CRITO (*Κρίτων*) (2), one of the latest poets of the New Comedy; he won second prize with *Ἐπίδοι* in 183 B.C. and with *Αἰτωλός* in 167. From *Φιλοπράγμων*, *The Busybody*, eight lines are preserved, in which Criton calls the Delians *παρόιστοι τοῦ θεοῦ*.

FCG iv. 337 ff.; *CAF* iii. 354 f.

CRITO (*Κρίτων*) (3), a Neo-Pythagorean, probably of the first century B.C. or the first century A.D., who produced a work claiming to be a product of the early

Pythagorean school—*Κρίτωνος ἤτοι Δαμίσπου Πυθαγορείου περὶ φρονήσεως καὶ εὐτυχίας*. Three frs. are quoted by Stobaeus.

PIV xi. 1933.

CRITO (*Κρίτων*) (4), physician at Trajan's court c. A.D. 100 (his full name was T. Statilius Crito). We have (in Galen) considerable frs. of his works *Κοσμητικά* and *Περὶ τῆς τῶν φαρμάκων συνθέσεως*.

PIV xi. 1935.

CRITOLAUS (early 2nd c. B.C.) of Phaselis in Lycia (*Plut. De exil.* 14. 605 b), Peripatetic. As president of the school he perhaps succeeded Ariston of Ceos (see Zeller 479, n. 1). He was a member of the famous embassy of philosophers to Rome in 156–155, and lectured there (*Gell.* 6. 14. 10). He died in his eighty-third year (*Lucian, Macr.* 20).

The activities of the post-Aristotelian school had been scholarly rather than philosophical. Critolaus reintroduced into the Peripatos metaphysical speculation. Thus he brought the school into closer contact with important doctrines of Aristotle (*Antiochus ap. Cic. Fin.* 5. 14). He defended the Aristotelian theory of the world's eternity ably against the Stoa (*Philo, De aetern. mundi* 11 f.). Cicero quotes a fine passage on the value of the soul (*Tusc.* 5. 51). His ethics, as well as his psychology, is probably not free from Stoic influence. He carried on a controversy against popular rhetoric.

K. O. B.

CROESUS, last king of Lydia (c. 560–546 B.C.), son of Alyattes. He secured the throne after a struggle with a half-Greek half-brother, and completed the subjugation of the Greek cities on the Asia Minor coast. His subsequent relations with the Greeks were not unfriendly; he contributed to the rebuilding of the Artemisium at Ephesus and made offerings to Greek shrines, especially Delphi; anecdotes attest his friendliness to Greek visitors and his proverbial wealth (cf. the famous *Κροίσκοι στατήρες*). The rise of Persia turned Croesus to seek support in Greece and Egypt, but Cyrus anticipated him: Sardis was captured and Croesus overthrown. His subsequent fate soon became the theme of legend: he is cast or casts himself on a pyre, but is miraculously saved by Apollo and translated to the land of the Hyperboreans or becomes the friend and counsellor of Cyrus.

CRONUS, see **IKRONOS**.

CROTON (*Κρότων*), nowadays *Cotrone*. Originally a Messapic settlement (J. Whatmough, *Pre-Italic Dialects* ii. 258), Croton became an Achaean colony c. 710 B.C. Its situation, near the celebrated temple of Hera Lacinia in the 'toe' of Italy on an indifferent but important harbour, was bracing (*Strabo* 6. 261 f.; *Polyb.* 10. 1). Croton became a flourishing city twelve miles in circumference; it founded some colonies (Terina, Caulonia) and dominated others (Lametium, Scylletium). Famous for its doctors, athletes (including Milon, q.v.), Heracles cult, and especially for its Pythagorean brotherhood (between c. 530 and 455), Croton reached its apogee after destroying Sybaris (510). It even sent a ship to the battle of Salamis (Hdt. 8. 47). Shortly thereafter, however, its defeat by Locri and Rhegium prefigured its decline. Although still populous when captured by Dionysius (379), internal, Lucanian, Brutian, Pyrrhic, and Hannibalic wars ultimately ruined Croton. A Roman colony (194

B.C.) failed to revive it (Diod. 14. 103 f.; 19. 3, etc.; Livy 24. 3; 34. 45).

See the bibliography s.v. MAGNA GRAECIA and add D. Randall-MacIver, *Greek Cities of Italy and Sicily* (1931); P. Larizza, *Crotone nella Magna Grecia* (1934); J. Bérard, *Bibliogr. topogr.* (1941), 48. E. T. S.

CRUS, see LENTULUS (7).

CRYPTEIA, see KRYPTEIA.

CTEATUS, see MOLIONES.

CTESIAS (late 5th c. B.C.) of Cnidos, Greek doctor at the Persian court who assisted Artaxerxes at the battle of Cunaxa, and was sent as envoy to Evagoras and Conon, 398 B.C. Author of a history of Persia (*Ἱστορίαι*) in twenty-three books, written in Ionic; also of the first separate work on India (*Ἰνδικά*). See J. Gilmore, *Fragments of the Persika of Ctesias* (1888). G. L. B.

CTESIPHON, on the river Tigris, c. sixty miles above Babylon. Founded as a Parthian military camp opposite the Hellenistic Seluceia (q.v.), it became the winter residence of the Arsacids. After the destruction of Seleucia (A.D. 165) it was the chief city in Babylonia. Artaxerxes made it the capital of the new Sassanian Empire, and his successors built palaces and added new suburbs. In 636 the 'seven cities' of Ctesiphon were taken by the Arabs. Part of the fortifications still stand, and the impressive ruins of a Sassanid palace.

M. Streck, 'Seleucia und Ktesiphon', *Alte Orient* xvi. 3/4 (1917); O. Reuther, *Antiquity* 1929, 434 ff. M. S. D.

CUICUL (modern *Djemila*), a mountain-town lying between Cirta and Sitifis. Originally a *castellum*, dependent on Cirta, it became a colony under Nerva. In the second century A.D. it received an influx of romanized Berbers; agricultural prosperity developed and many public buildings were erected by generous citizens. Under the Severi Cuicul doubled its size; its best-known citizen was Claudius Proculus, who became governor of Numidia. Its extensive ruins include a Christian basilica, baths, theatre, baptistry, Caracalla's arch, and the temple of the *gens Septimia*.

A. Ballu, 'Ruines de Djemila', *Rev. Africaine*, 1921; Y. Allias, *Djemila* (1938). W. N. W.

CULLEO, QUINTUS TERENTIUS, a senator, captured by the Carthaginians and released by Scipio in 201 B.C.; to show his gratitude he marched in Scipio's triumphal procession in a freedman's cap. As *tribunus plebis* (189) he carried a measure to enrol sons of freedmen in the rustic tribes. As praetor (187) he examined the evidence of unlawful registration by Latins on the citizen roll. The statement (Antias, apud Livy) that he was chairman of a special *quaestio* set up to try L. Scipio belongs to a false account of the procedure then adopted. H. H. S.

CULT, DOMESTIC, see WORSHIP (HOUSEHOLD).

CULTS, ARCADIAN, MACEDONIAN, etc., see ARCADIAN, MACEDONIAN, etc.

CULTURE-BRINGERS. All folk-lore (see Stith Thompson, A 500 ff.) contains stories of persons, divine or human, who introduced mankind in primitive days to the arts, religious observances, etc. Greek tradition is no exception. Prometheus (q.v.) is the great culture-hero of Attic belief (Aesch. *PV* 442 ff.); Cadmus (q.v.) introduces letters; Triptolemus, by direction of Demeter (q.v.), teaches men to plant corn. Similar Latin stories are late and artificial; for examples, see JANUS, SATURNUS. Gods figure occasionally in this capacity (Athena invents horsemanship, Dionysus introduces the vine, etc.). Lists of such inventors are late, but common, see Kremmer, *De catalogis heurematum* (Diss. Leipzig, 1890). H. J. R.

CUMAE, Italy's earliest Greek colony, founded on the coast near Naples by Chalcis, traditionally in 1050, actually c. 750 B.C., in fertile territory inhabited in pre-Hellenic times but now deserted. After its foundation Greek civilization spread farther in Italy (A. Blakeway, *JRS* 1935, 135). Cumae soon acquired wealth and power. From 700 to 500 it exercised wide dominion and colonized Neapolis, Dicaearchia (= Puteoli), Abella, distant Zancle (= Messina), and possibly Nola. Cumae is inseparably associated with the Sibyl whose oracular cavern still exists (*Aen.* 6); but its first real personality is Aristodemus (q.v. 3), who repulsed the Etruscans. In 474 Cumae with Syracusan aid crushed Etruscan power in Campania, but was itself conquered by Sabelli (q.v.) c. 425 and became an Oscan city (Diod. 11. 51; 12. 76). Subsequently coming under Roman control it obtained *civitas sine suffragio* in 338 and *praefecti Capuam Cumas* in 318. It staunchly supported Rome in the Hannibalic and Social Wars, discarded Oscan for Latin in 180, and ultimately obtained full citizenship. But, as Puteoli rose, Cumae, despite repeated colonizations and the erection of villas nearby, declined. However, its inaccessible citadel was still strategically important in Belisarius' time.

Bérard, *Bibliogr. topogr.* (1941), 50. See too the bibliography s.v. MAGNA GRAECIA. E. T. S.

CUNAXA, northward from Babylon, was the scene of the battle between Cyrus (q.v. 2) the younger and Artaxerxes II (401 B.C.). Artaxerxes' scratch army—he had only two satraps with him besides Tissaphernes—consisted of perhaps 30,000 infantry (Xenophon's estimate of 900,000 is ridiculous), but at least 6,000 horse. Cyrus, who had brought only 2,600 horse, had failed before he started. Tissaphernes, with Artaxerxes, was in the centre with a strong cavalry force; Cyrus put his 10,400 Greek hoplites under Clearchus on his right instead of opposite Tissaphernes, and took the centre himself with only 600 horse; Ariaeus with Cyrus' Asiatic troops was on the left. Clearchus routed the infantry of Artaxerxes' left, but neglected to turn against his centre; while he uselessly pursued the beaten infantry, Tissaphernes threw in his cavalry, killed Cyrus, outflanked Ariaeus who fled, and gained a decisive victory.

W. W. T.

CUNICULARIA, see BALEARES INSULAE.

CUNOBELLINUS, son of Tasciovanus, king of the Catuvellauni at Verulamium. He may have conquered the Trinovantes of Essex before his father's death, and succeeded (*post* 12 B.C.) to a kingdom which ultimately embraced south-east Britain, so that he was styled 'rex Britanniarum' (Suetonius, *Calig.* 44. 2). His capital and mint at Camulodunum (Lexden Heath, near the later colony) became a notable centre of Roman imports, and his coins bear Latin inscriptions and emblems of mythology. His relations with Rome were friendly, but c. A.D. 40 a quarrel with his son Amminius, who fled to Rome, prompted Caligula's abortive demonstration. He died before 43; and a mound at Lexden Heath may be his grave (*Archaeologia* lxxvi. 241-54). He was prominent in medieval fable, whence Shakespeare derived the material for 'Cymbeline'.

CURA, CURATOR, see GUARDIANSHIP.

CURATOR, a term applied to a great variety of persons, other than magistrates, to whom specific duties were allotted. Under the Republic *curatores viarum* are frequently mentioned (*ILS* 5800, 5892; *Cic. Att.* i. 1. 2); and in the Principate the disappearance of the censorship as an ordinary magistracy led to the creation of various *curae*, of which the most important were the *cura viarum* (see ROADS), the *cura aquarum*, the *cura aedium sacrarum locorumque publicorum*, and the *cura riparum et alvei Tiberis*. These were entrusted to boards of senators holding office for indefinite periods. The term was also applied in municipal towns to men performing special duties, e.g. *curator kalendarum*, *curator muueris gladiatorum*, and sometimes to officers of *collegia* (see CLUBS, ROMAN).

A special use of the term was to designate the imperial officials who were appointed from the time of Nerva and Trajan to supervise the finances of towns in Italy and the provinces. Their appearance marks the beginning of the interference of the central government in the affairs of municipalities, which was later to deprive them of all independence. The *curatores (logistae)* of particular cities were distinct from the *correctores* (q.v.), who controlled larger areas. In the first instance they were merely advisers whose consent was required for any unusual expenditure, and there is no evidence that their services were unwelcome (*ILS* 5918a). By the third century they practically superseded the ordinary magistrates, and the *curator* became a permanent mayor. *Curatores* might belong to the senatorial or to the equestrian order. The great majority exercised their authority in the cities of Italy, but they are found in provincial cities before the end of the second century A.D.

ILS iii. 1. 358; iii. 2. 685; E. Kornemann, s.v. 'Curator' in *PIW*; W. Liebenam, *Philol.* lvi. 290 ff.; J. Marquardt, *Staatsverw.* i¹ (1881), 162 ff.; F. F. Abbott and A. C. Johnson, *Municipal Administration* (1926), 90 ff.; C. Lucas, 'Notes on the Curatores Reipublicae of Roman Africa', *JRS* 1940. G. H. S.

CURETES, (1) a people hostile to the Calydonians (*Il.* 9. 529). (2) Semi-divine beings (*Hesiod.* fr. 198 Rzsch, calls them *θεοί*) inhabiting Crete, who protected the infant Zeus by dancing about him and clattering their weapons so that his cries were not heard (*Callim. Jov.* 52 ff., and many authors). The origin of the legend is plausibly derived from the Cretan rite (see J. Harrison, *Themis*² i ff.; Nilsson, *Minoan-Mycenaean Religion*, 475 ff.) of a ceremonial (not probably a dance) in honour of Zeus Kourios. They are often confused with the Corymbantes attendant on Rhea (see Rose, *Handbook of Greek Mythology*, 171). See further H. Jeanmaire, *Couroi et Courètes* (1939), and for the religious confraternity bearing this name at Ephesus in and after the time of Strabo, Ch. Picard, *Éphèse et Claros* (1922), 279 ff., etc. H. J. R.

CURIA (1) was the most ancient division of the Roman People, already existing under the Kings. The *curiae* were thirty in number (ten for each Romulean tribe). Some bore local names (Foriensis, Velienis), others personal ones (Titia). They were probably composed of families, who were, originally at least, neighbours. Probably both patricians and plebeians were always included (*Dionysius* 4. 12. 20). The head of the *curia* was the *curio*; the head of the college of the *curiones* was a *curio maximus*, who until 210 B.C. was always a patrician. The *curiae* were probably the basis of the oldest military organization and certainly the elements of the oldest Roman assembly (see COMITIA). Each *curia* had its own place of worship called after the *curia*.

Curia was also the name given to the assembly-places of many other corporations, and especially of the Senate-house (see below). As a voting section of the citizens the *curia* is attested in Latium (Lanuvium) and in many Italian and provincial *municipia* and *coloniae*, both of

Latin and Roman status. It was especially common in Africa. During the Empire *curia* was also the usual name for the municipal Senates, to which the elections of the magistrates were transferred from the people. It was largely constituted from ex-magistrates chosen for life (at least in the West) and in the Late Empire turned into a hereditary caste, called the *curiales*, whose lives and property were under the control of the State as security for the collection of taxes. See also CURIALIS, DECURIONES.

G. Humbert, *Dar.-Sag.* i. 2. 1627; Köhler, *PIW* iv. 1819; Mommsen, *Röm. Staatsr.* iii. 99; F. Altheim, *Epochen d. röm. Geschichte* i (1934), 70; W. Warde Fowler, *The Roman Festivals* (1899), 71, 306. For the *curiae* in *municipia* W. Liebenam, *Städteverwaltung im römischen Kaiserreiche* (1900), 214; Mommsen, *Juristische Schriften* i. 303. A. M.

CURIA (2), the Senate-house of Rome, situated on the north side of the Comitium (q.v.) in the Forum and ascribed to Hostilius. It was restored by Sulla in 80 B.C., burnt after the death of Clodius in 52, and rebuilt by Faustus Sulla. Julius Caesar began a new building in 44, forsaking the old orientation by cardinal points, which was restored by Domitian, and later by Diocletian after the fire of Carinus. The Caesarian plan, always retained, was a sumptuous oblong hall (25.20 × 17.61 m.), with central door facing a magistrates' dais and lateral marble benches. The hall was separated from the record-office (*secretarium senatus*) by an *atrium* or *chalcidicum*, dedicated by Domitian to Minerva. Diocletian's building, of tile-faced concrete coated with imitation stucco block-work, still exists to full height. I. A. R.

CURIALIS (earlier *Decurio*, q.v.), the member of a *curia* or senate of a *municipium*. In the early Empire the position, though burdensome, was coveted, as a mark of rank and wealth, and as the door to municipal office. But after the reforms of Diocletian and Constantine, the position of the *curiae* rapidly deteriorated. The honour was not entirely lost, but the burdens and responsibilities increased out of all proportion. Not only were the *curiales* responsible for all local offices and their expenses, but also for the collection of taxes; in case of deficit they were often called upon to make good. The result was a double movement—of the *curiales* to escape from their rank, of the government to bind them to it or to assign fresh members to the office, by way of punishment. H. M.

CURIATIUS MATERNUS, senator, poet, and dramatist, at whose house the scene of Tacitus' *Dialogus* is laid. A lover of *nemora et luci secretum*, he speaks there as champion of poetry. His (lost) *praetextae*, *Domitius* and *Cato*, belong to Vespasian's time.

CURIO (1), GAIUS SCRIBONIUS (cos. 76 B.C.), son of a famous orator, opposed Saturninus in 100 B.C. and was tribune in 90. He besieged Athens with Sulla. As consul he opposed the restoration of the tribunician power. Proconsul in Macedonia (75-73), he defeated the Dardanians. He spoke for P. Clodius at his trial, but afterwards became Cicero's friend and Caesar's enemy. In 55 he published a dialogue against Caesar.

F. Münzer, *PIW* ii A 662; Schanz-Hoerius i. 351.

A. M.

CURIO (2), GAIUS SCRIBONIUS, son of (1), was, as a young man, implicated in the mysterious conspiracy of Vettius (q.v. 3). On his election as tribune for 50 he was, in spite of his aristocratic connexions, bought over for Caesar by his agent Balbus. He consistently opposed the attempts of the Senate to recall Caesar (*Cic. Fam.* 8. 11. 3), proposing instead that both Pompey and Caesar should give up their armies (*Plut. Pomp.* 55). It was he who bore Caesar's ultimatum to the consuls in late December; early in January he fled from Rome to Ravenna with Antony.

In the Civil War Curio won Sicily for Caesar (April 47)

and thence crossed to Africa. After initial successes he besieged the Pompeian commander Varus in Utica; but an attempt to surprise a relief force sent by King Juba led to a crushing Roman defeat. Curio himself died fighting; he was a reckless but loyal lieutenant who served Caesar well.

Caesar, *BCiv.*; Appian, *BCiv.* bk. 2; Dio, bks. 40 and 41; Cicero, *Epp. ad Fam.* 2. 1-7 are addressed to him. J. M. C.

CURIUS, see **DENTATUS**.

CURSES. A curse is in general a wish, expressed in words and with magical effect, that evil may befall a person or persons or, eventually, the curser himself.

I. The Greek word *ἀρά* reflects a prehistoric stage of Greek religion, signifying the address to supernatural forces, prayer as well as curse (personified as *Ἀρά*, secondarily combined with Erinyes, goddess of revenge; cf. *ἀρητήρ* in the *Iliad*). Originally the curse (just as its opposite, the blessing) worked by its own inherent quality (*mana*), the power of its magic formula; this may be spoken or written or both; it may also be accompanied or symbolized by action (cf. the modern Greek *φασκέλωμα* and the Italian *il fico*, etc.), the gesture and the intonation intensifying the emotional character of the curse. The curse was always a powerful weapon in the hands of the weak and the poor, as also against unseen or unknown foes. So we often meet with such imprecations (*dirae*) in funeral inscriptions against those who violate graves (especially in Asia Minor). Numerous leaden tablets (magic nails, amulets, etc., cf. the magic papyri), inscribed with imprecatory formulas or words or signs, testify to the popularity of cursing (*ἀναθεματίζειν*), resorted to in all centuries by all sorts of people on any provocation (in the 4th c. B.C. even by well-to-do Athenians). When the tablets are buried in tombs, not only the spirits of the dead are invoked, but also the infernal deities, Persephone, Hades, Erinyes (cf. *Il.* 9. 453 ff.); elsewhere Hermes, Gaia, Demeter (at Cnidos), Hecate, and all sorts of demons are favourites (cf. the Roman *devotio*: see s.v.). Especially to be noted are the 'hereditary curse', infectious through generations (cf. Aeschylus' *Oresteia*), and the curse, uttered in vain, that returns to the curser, destroying him and his family (cf. *SIG*³ 41. 14). The *ἀρά*, *dirae*, developed into a special literary genus (cf. Sophron, Ovid's *Ibis*, Horace *Epod.* 10; Tib. 1. 5. 49 ff.). Later Christians might use ancient curses in inscriptions, simply prefixing a cross.

II. In the development of human society and ethics the curse plays an important role, just as does the oath (the two being often combined, cf. *Il.* 3. 279). The curse, expressed by the community through its representatives (magistrates, priests), had an enormous effect (cf. the blessing or curse uttered by parents or dying people). The culprit ('infecting' his countrymen, as Plato puts it, *Leg.* 9. 881 e 5) was thus in the position of a man guilty of sacrilege, and so the legal powers could enforce their rights even in cases where only the gods could help. Enemies and traitors were cursed, just as those who removed landmarks or maltreated guests and suppliants. The curses of the Bouzygai (see **SACRIFICE**) at Athens may illustrate how ethical principles might be enforced by cursing the offenders, and 'public curses' were as terrifying to the Greeks (cf. the *dirae Teiae*, *SIG* 37-8) as to the Romans (cf. Crassus on his departure for the Orient, Plut. *Crass.* 16). The weakening of the fear of the old gods already recognizable in official use in the third century B.C. reduced the importance of the curse, but we can still see its effect in ecclesiastical ritual.

CURSOR, see **PAPIRIUS**.

CURTIUS, the hero of an aetiological myth invented to explain the name of *Lacus Curtius*, a pit or pond in the Roman Forum, which by the time of Augustus had already dried up. Three Curtii are mentioned in this connexion: (1) a Sabine Mettius Curtius who fell off his horse while fighting against Romulus; (2) the consul of 454 B.C. who consecrated a site struck by lightning; (3) most important, the brave young knight M'. Curtius who, in obedience to an oracle, to save his country, leaped armed and on horseback into the chasm which suddenly opened in the Forum.

Platner-Ashby, *Topogr. Dict.* 310 f.

P. T.

CURTIUS MONTANUS was prosecuted under Nero for his satiric poems, and excluded from holding any public office (*Tac. Ann.* 16. 28; 29; 33). He became, however, one of Domitian's advisers (*Juv.* 4. 107).

CURTIUS, see also **RUFUS**.

CYBELE (*Κυβέλη*; Lydian form *Κυβήθη*, *Hdt.* 5. 102), the great mother-goddess of Anatolia, worshipped with her youthful lover Attis (q.v.), god of vegetation. Pessinus in Phrygia was her chief sanctuary, and the cult appears at an early date in Lydia. The queen or mistress of her people, C. was responsible for their well-being in all respects; primarily she is a goddess of fertility, but also cures (and sends) disease, gives oracles, and, as her mural crown indicates, protects her people in war. The goddess of mountains (so *Μήτηρ ὄρεα*; Meter Dindymene), she is also mistress of wild nature, symbolized by her attendant lions. Ecstatic states inducing prophetic rapture and insensibility to pain were characteristic of her worship (cf. especially Catull. 63).

2. By the fifth century C. was known in Greece, and was early associated with Demeter (*H. Thompson, Hesperia* vi (1937), 206) and perhaps with a native *Μήτηρ θεῶν*, but except possibly for such places as Dyme, Patrae (*Paus.* 7. 17. 9; 20. 3), and private cult associations at Piraeus, where Attis also was worshipped, it is likely that the cult was thoroughly hellenized. C. was officially brought to Rome from Asia Minor in 205-204 (for the conflicting legends see Graillet, *op. cit. inf.*, ch. 1), but under the Republic, save for the public games, the Megalesia, and processions (*Lucr.* 2. 624 f.), she was limited to her Palatine temple and served only by Oriental priests (*Dion. Hal. Ant. Rom.* 2. 19. 3-5). After Claudius admitted Attis to public status, the priesthood was opened to citizens, and was henceforth controlled by the *XVviri sacris faciundis* (see **QUINDECIMVIRI**). The cycle of the spring festival, while not fully attested till later, perhaps took form then. The rites began on 15 March with a procession of the Reed-bearers (*cannophori*), and a sacrifice for the crops. After a week of fastings and purifications, the festival proper opened on the 22nd with the bringing of the pine-tree, symbol of Attis, to the temple. The 24th was the Day of Blood, commemorating the castration and probably the death of Attis. The 25th was a day of joy and banqueting, the *Hilaria*, and after a day's rest the festival closed with the ritual bath (*Lavatio*) of Cybele's image in the Almo. The rubric for the 28th (*Initium Caiant*) may refer to initiations in the Vatican Phrygianum. Of these initiations we know little. The formulae preserved (*Firm. Mat. Err. prof. rel.* 18; *Clem. Al. Protr.* 2. 15) mention a ritual meal; the carrying of the *képros*, a vessel used in the *taurobolium* to receive the genitals of the bull; and a descent into the *παστός*, probably an underground chamber where certain rites were enacted.

3. The ritual of the *taurobolium* originated in Asia Minor, and first appears in the West in the cult of Venus

Caelesta (i.e. -is) at Puteoli in A.D. 134 (*ILS* 4271, but cf. 4099 of 108 A.D.). From the Antonine period, numerous dedications to C. and Attis record its performance in this cult 'ex vaticinatione archigalli' (i.e. with official sanction), on behalf of the emperor and the Empire. From Rome the rite spread throughout the West, notably in Gaul. It was performed also on behalf of individuals, and was especially popular during the pagan revival, A.D. 370-90. In the rite, the recipient descended into a ditch and was bathed in the blood of a bull, or ram (*criobolium*), which was slain above him (Prudent. *Perist.* 10. 1011-50). It was sometimes repeated after twenty years; one late text (*ILS* 4152) has 'taurobolio criobolique in aeternum renatus' (a concept possibly borrowed from Christianity), but in general the act was considered rather a 'thing done' for its own value than as a source of individual benefits.

4. A belief in immortality was part of the cult from early times, perhaps under Thracian influence. In Anatolia, C. and Attis were the guardians of the grave, and the after-life may at first have been thought of as a reunion with Mother Earth. Later, Attis became a solar god, and he and C. were regarded as astral and cosmic powers; there is some evidence that the soul was then thought to return after death to its celestial source.

5. Thanks to its official status and early naturalization at Rome, the cult spread rapidly through the provinces, especially in Gaul and Africa, and was readily accepted as a municipal cult. Its agrarian character made it more popular with the fixed populations than with the soldiery, and it was especially favoured by women.

6. Cybele is generally represented enthroned in a *naïshos*, wearing either the mural crown or the *calathos*, carrying a patera and tympanum, and either flanked by lions or bearing one in her lap.

CYCLADES, the islands regarded as encircling round the sacred isle of Delos. According to ancient tradition the Carians once inhabited them, and were driven out by Minos, king of Crete. There is archaeological proof that the culture of the Cyclades in the second millennium resembled that of Crete. About 1000 B.C. Ionic-speaking settlers from continental Greece occupied these islands. In the eighth century Eretria exercised control over some of them, as did the tyrants Pisistratus (Athens), Polycrates (Samos), and Lygdamis (Naxos) in the sixth; but no power could protect the islanders from the invading Persian fleet in 490. After the Persian Wars the islanders entered an Athenian Confederacy centred at Delos (478-477), and Athens soon became mistress of the Cyclades. They were also enrolled in the second Athenian Confederacy (378-377), but the triumph of Philip of Macedon ended Athenian hegemony. Antigonos of Macedon founded a League of Islanders with headquarters at Delos. In the prolonged struggle between Macedon and Egypt in the third century the Cyclades often changed masters; late in the century they suffered from Cretan piracy and the rivalries of Pergamum, Rhodes, and Syria. In the Mithridatic War the islands were reduced by Archelaus (88), nor was tranquillity restored until the triumph of Augustus.

CYCLIC POETS, see EPIC CYCLE.

CYCLOPES (*Κύκλωπες*), gigantic one-eyed beings of whom at least two separate traditions exist. In Homer they are savage and pastoral; they live in a distant country, having no government or laws. Here Odysseus (q.v.) visits them in his wanderings and enters the cave of one of them, Polyphemus, who imprisons him and his men and eats two of them morning and evening, until they escape by blinding him, while in a drunken sleep, and getting out among the sheep and goats when he opens the cave in the morning (*Od.* 9. 106 ff.). Polyphemus is son of Poseidon, and the god, in answer to his prayer for vengeance, opposes the home-coming of Odysseus in every possible way, bringing literally to pass the curse that he may return alone and find trouble when he arrives (*ibid.* 532-5). Out of this, or by conflation of it with some local legend, grows the story of the amorous Polyphemus (*Theoc.* 11 and elsewhere). He lives in Sicily (one of many identifications of Homer's with later known western places) and woos Galatea (q.v.).

But in Hesiod (*Theog.* 149) the Cyclopes are three, Brontes, Steropes, and Arges (Thunderer, Lightener, Bright), who make thunderbolts and in general are excellent craftsmen; they are like the gods except that they have but one eye each, and are sons of Earth and Heaven. They often appear (as Callim. *Dian.* 46 ff.) as Hephaestus' workmen, and often again are credited with making ancient fortifications, as those of Tiryns, and other cities of the Argolid (schol. Eur. *Or.* 965). There they are called *ἐγχειροποιότορες*, simply 'workmen' (Wilamowitz-Moellendorf, *Glaube der Hellenen* i. 277). Schol. Hesiod, *Theog.* 139, makes these builders a third kind of Cyclopes.

See Roscher in his *Lexikon*, s.v. 'Kyklopen', and S. Eitrem in *PW*, s.v. H. J. R.

CYCENUS, (1) a son of Ares, a brigand, waylaying and robbing those who brought tithes to Delphi (Arguments 2 and 3 to [Hesiod], *Sc.*). According to that poem, Heracles and Iolaus met him in company with Ares himself in the precinct of Apollo (58). Clad in his armour, the gift of the gods, and drawn by Arion (q.v.; 120), Heracles asked Cyenus to let him pass, then, as he would not, engaged with him, encouraged by Athena (325 ff.), killed him, and then, when Ares attacked him, wounded the god in the thigh. Pindar (*Ol.* 10. 15) says Heracles fled before Cyenus, which the scholiast explains, quoting Stesichorus, as meaning that he at first fled before Ares. He also says that Cyenus' object was to build a temple of skulls to Apollo. (2) Son of Poseidon. He was killed by Achilles before Troy, according to several authors from the *Cypria* on. Ovid (*Met.* 12. 83 ff.) adds that he was invulnerable and Achilles choked him to death; Poseidon then turned him into a swan (*κύκνος*). (3) King of Liguria, kinsman of Phaethon (q.v.); mourning for his death, he also became a swan (*Hyg. Fab.* 154. 5). (4) Son of Apollo, a handsome boy. Because a much-tried lover left him, he drowned himself in a lake, ever after frequented by swans, into which he and his mother, who also drowned herself, were turned (Antoninus Liberalis 12).

H. J. R.

CYCENUS, see TENTS.

CYLON, an Athenian nobleman; winner of the *stadion* and *diaulos* at Olympia, perhaps 640 B.C. He married the daughter of Theagenes, tyrant of Megara, and with his help and a few friends seized the Acropolis at Athens with a view to a tyranny (632 or 628). The masses, however, did not follow him, and he was besieged. He himself escaped; his friends surrendered and, though suppliants at an altar, were killed. Hence arose the *étyos*, or taint, which attached to those said to be responsible, especially to Megacles the archon and his family, the Alcmaeonidae.

A. W. G.

CYME, the most important and powerful of the Aeolian cities on the seaboard of Asia Minor, occupying a site of natural strength midway between the mouths of the Caicus and the Hermus, and facing north-west towards Lesbos. Its history is a record of external domination, by Persians (though Cyme participated in the Ionian Revolt, and belonged to the Delian League and the second Athenian Confederacy), Seleucids, Attalids, and Romans. A severe earthquake devastated the city in A.D. 17. Hesiod's father came from Cyme to Boeotia. Its most distinguished son was Ephorus. The inhabitants were famous for their easy-going temperament.

D. E. W. W.

CYNAETHUS of Chios, rhapsode; interpolated Homer; supposed author of the *Homeric Hymn to Apollo*; said to have been the first to recite Homer at Syracuse in 504 B.C. (? 704: T. W. Allen, *Homer, the Origins and Transmission* (1924), 65-66). See RHAPSODES.

CYNAXA, see CUNAXA.

CYNEGEIRUS, brother of Aeschylus, fought and fell at Marathon (490 B.C.) in a bold attempt to seize a Persian ship by the stern. This exploit was immortalized in the Painted Portico (c. 460), and was variously elaborated by historians (e.g. the source of Justin 2. 9. 16 ff.) and rhetoricians (e.g. Polemon).

P. T.

CYNEGETICA, books on management of dogs for hunting; see GRATIUS, NEMESIANUS, OPIAN, XENOPHON (1).

CYNICS (κυνικοί), followers of the principles of Diogenes of Sinope, who had received the nickname of κύων (dog) because he rejected all conventions, tried to live on nothing, and advocated and practised shamelessness (ἀναιδέεια). Since Antisthenes had probably influenced the philosophy of Diogenes, many considered and still consider him the real founder of the sect.

The Cynics were never organized in a school like the Stoics, Epicureans, Peripatetics, etc., and had no elaborate philosophical system. Since therefore everybody was at liberty to adopt those of Diogenes' principles which appealed to him and to neglect the rest, there has been and still is much argument as to who was a true Cynic and who was not. The variety was greatest during the century following the death of Diogenes. His most faithful disciple Crates of Thebes preached the gospel of simplicity and independence, and comforted many in those troubled times by demonstrating that he who needs next to nothing, renounces all possessions, and keeps aloof from social entanglements, can live happily in the midst of war and disorder. Onesicritus adapted Cynic philosophy to the life of a soldier or sailor, and compared Diogenes' principles with those of the Indian ascetics. Bion of Borysthenes and Menippus imitated Diogenes' caustic wit in their satirical writings. They were the first to mingle Cynicism with Hedonism. Cereidas derived theories of social reform from Cynic doctrines. Crates and Teles originated the type of Cynic who wandered all over Greece with stick and knapsack, teaching and preaching.

After having flourished in the third century B.C., Cynicism gradually faded out in the second and first centuries B.C., retaining only some literary influence (Meleager of Gadara). It was revived in the first century after Christ. The beginnings of this revival are unknown; but under the reign of Vespasian and his successors the Orient and Rome swarmed with Cynic beggar philosophers (Dio Chrys. 32. 10). Educated men like Dio himself, however, also adhered to Cynic principles; and the contrast between the true Cynic and the depraved Cynicism of the beggar philosophers became a commonplace in the literature of the Empire (Dio, Lucian,

Julian). While the aristocratic opposition to the emperors was connected with Stoicism, middle-class criticism was sometimes voiced by Cynics who contrasted their ideal of the philosopher king with the actual conduct of the emperors. They therefore were frequently banished from the capital.

Outstanding among the Cynics of the first and second century after Christ were Demetrius, Dio, Demonax, Peregrinus Proteus, Oenomaus of Gadara, Sostratus, and Theagenes. Only very few Cynics of the following centuries acquired any renown. The last one mentioned by name is Sallustius, who lived at the end of the fifth century (Suidas s.v.; Dam. *Isid.* 342^a 27 ff.). But the Cynic beggar philosophers are frequently alluded to in literature up to the sixth century.

D. R. Dudley, *A History of Cynicism* (1938).

K. von F.

CYNTHIA, the name under which Hostia was celebrated in the love-poetry of Propertius (q.v.).

CYPARISSUS (Κυπάρισσος), i.e. Cypress, in mythology son of Telephus (q.v.), a Cean (Ov. *Met.* 10. 106 ff.), who grieved so much at accidentally killing a pet stag that the gods turned him into the mournful tree; or a Cretan, who was so metamorphosed while fleeing from the attentions of Apollo, or Zephyrus (Servius on *Aeth.* 3. 680).

H. J. R.

CYPRIA see EPIC CYCLE.

CYPRIAN (*Caecilius Cyprianus qui et Thascius*) lived from about A.D. 200 to 258, when he was martyred. After the best rhetorical training that Carthage could provide, he entered on an ecclesiastical career which culminated in the bishopric of Carthage. He regarded Tertullian as his 'magister', but writes a much better style than he, a style formed before his conversion in the same school of rhetoric as that of Apuleius. It is evident that Cyprian had read Cicero, Virgil, and Seneca. His writings have all to do with Christian topics. The [*Testimonia*] *Ad Quirinum* and the *Ad Fortunatum* consist almost entirely of exact citations from the Latin Bible used by him, and are invaluable, as both localized and dated. Among his other works are his letters, his *Ad Donatum*, *De (Catholicae) Ecclesiae Unitate*, and *De Lapsis* (backsliders in the Decian persecution).

A. S.

CYPRUS, an island in the Levant immediately south of Cilicia. Its extreme measurement is 140 × 60 miles, and it is shaped like the skin of an animal, with the neck pointing towards Syria. Recent excavations have revealed the existence of a neolithic culture of high quality lasting from c. 4000 to 3000 B.C. It was followed by a native Bronze Age which was a period of increasing prosperity and culture. In the fifteenth century B.C. direct contact on an extensive scale was made with Mycenaean Greece, perhaps through the medium of Rhodes. Contacts with Asia Minor and Syria began earlier and were continuous. The Mycenaean contacts brought about a widespread change in the island which from 1400 onwards developed urban life and culture on Mycenaean lines. All the main elements of Mycenaean life are found except architecture, Mycenaean tomb-types, and Mycenaean road-systems. It is probable that the copper mines of the island first began to be worked in the fourteenth century. Salamis seems to have been the chief Mycenaean city, and its connexions with Syria have been illustrated by recent finds at Ras Shamra (*Ugarit*). Among the Mycenaean imported elements of culture was a mode of writing, a variant of the Minoan script, which reached Cyprus through the Mycenaean colonists. The name of

Cyprus at this time seems to have been Alashia, as in Hittite and Egyptian texts. The Cypriot script of the Bronze Age survived into the Classical period and was used as a vehicle for Greek down to about 400; but inscriptions also prove the survival of a non-Greek tongue in the Classical age. Egyptian connexions were constant, and in 1450 Cyprus came under Egyptian domination.

2. Cyprus was only slightly affected by the Dorian invasion and no Dorian settlement was made on the island, although its neighbour Rhodes was completely dorianized. The Greek stock of the island, which probably took root at the time of the Mycenaean immigration, must therefore be Achaeans. The survival of Achaean dialect forms (mostly as Arcadian) in the Cypriot Greek of the Classical age indicates the continuity of this original Mycenaean-Achaean stock. The survival of the Bronze Age script also testifies to the absence of any catastrophic change in the island at the Iron Age. But Cyprus shared in the general changes of the time, and Iron Age peoples from Syria seem to have moved into the island c. 1000 B.C. Cypriot art was altered and deeply modified. Perhaps c. 800 Phoenicians entered the island and settled in the cities. But their influence was never profound. Cyprus was known to Homer, but not intimately. In 709 and again in 670 it fell under Assyrian rule. In the sixth century it was virtually annexed by Egypt and from 569 to 525 it was ruled by Euclithon of Salamis, as governor for the Egyptians. At the same time each Cypriot city retained a semi-autonomous kingship. Such kingdoms of Cyprus went back to the Bronze Age and continued down to Ptolemaic times.

3. The City-State never gained a foothold in Cyprus, whose traditions of kingship probably derived from the Achaeans. In 525 Cyprus fell to the Persians under Cambyses. In 498 an abortive attempt was made by Cypriots to join the Ionian Revolt. After the Persian Wars Cyprus was finally liberated by Cimon. But the island did not regain its freedom from the Phoenicians until one of the greatest Cypriots, Evagoras of Salamis, organized in 411 a wider movement of phil-Hellenism. At the peace of Antalcidas in 387 Persia gained control again. In 350 the Cypriot kings revolted and the island was free. In 333 the island declared for Alexander, and at his death passed to Antigonus. Later it fell to Ptolemy and remained under the Egyptian dynasty for nearly two and a half centuries. It became a Roman province in 58 B.C. At its annexation the island was systematically drained of its wealth, which was poured into Roman coffers. It became a district of the province of Cilicia.

CYPSĒLUS, tyrant of Corinth c. 655–625 B.C., son of Eetion, who traced descent from the pre-Dorian Lapithi, and Labda, a lady of the ruling Dorian clan of the Baechiadae. Oracles foretold his destiny, and he escaped destruction by the Bacchiads only through being hidden as a babe in a jar (*cypselē*). After reaching manhood Cypselus, again with oracular support from Delphi, overthrew the Bacchiads and made himself tyrant. Herodotus calls him blood-thirsty, but later writers contrast his mild rule with that of his son Periander. He had no body-guard; probably his severity was confined to the nobility while the masses supported him. The fine local pottery (late Protocorinthian and early Corinthian) was exported (especially to the West) in immense quantities throughout his reign. On the route to Italy and Sicily he founded the colonies of Leucas, Ambracia, and Anactorium. The earliest Corinthian coins may go back to him, as may also some of the dedications made by his house at Olympia and Delphi.

Herodotus i. 92; Nic. Dam. fr. 58. P. N. Ure, *Origin of Tyranny* (1922), ch. 7, footnotes. P. N. U.

CYPSELUS, CHEST OF, a chest of cedar wood, exhibited at Olympia in the temple of Hera, and reputed to be the one in which the infant Cypselus (q.v.) was hidden. Either Cypselus himself or his son Periander dedicated the chest as a thank-offering. The very detailed description by Pausanias of the chest and its decoration suggests that it was a work of Corinthian art in the period of the tyrants. The decoration was executed in ivory, in gold, and in the cedar wood of the chest itself; apparently it was a form of inlay work rather than of relief. No specimen of work of this kind survives. The decoration and composition conform to our knowledge of Proto-Corinthian and Corinthian painting, and may be compared with that of the François vase.

J. G. Frazer, *Notes to Pausanias*, 5. 17. 5; H. Stuart Jones, *JHS* 1894, 30 ff. S. C.

CYRANIDES (*Βίβλοι κυρανίδες* or *κοιρανίδες*), a Greek work, in four books, on the magical curative properties of stones, plants, and animals. The name is of uncertain origin. If *κυρανίδες* is its original form, this may mean 'inscribed on columns' (from a Coptic word)—that being the account the work itself gives of its history; if *κοιρανίδες*, it means 'queens among books'. The compilation may be ascribed to the first or second century A.D., though part of it may go back to the Hellenistic age. It describes itself as the work partly of Cyranus king of Persia and partly of Harpocraton (the medical and astrological writer).

Ed. C. E. Ruelle in F. de Mély, *Les Lapidaires de l'antiquité et du moyen âge*, ii (1898–9). *PIV* xii. 127. W. D. R.

CYRENAICS, the 'minor Socratic' school founded at Cyrene by Aristippus (q.v.; fl. c. 400–365), which became the pioneer of Epicureanism. The chief other members were Theodorus, Hegesias, and Anniceris. The main tenet of the school was the treatment of the pleasures of the senses as the end of life. The school seems to have come to an end c. 275 B.C.

Zeller, *Ph. d. Gr.* ii. 1⁴. 336–88.

CYRENE, a port lying north of Great Syrtis (q.v.). The Delphic oracle encouraged Theraeans and Cretans to found Cyrene c. 630 B.C.; these early settlers intermarried with the Berbers. Fresh colonists came from Peloponnese and the islands (570). Barca, Euhesperides (*Bengazi*), and other cities were founded, and the Cyrenaic pentapolis formed a prosperous centre of Hellenic civilization between the Phoenician tripolis to the west and the Egyptians to the east. The limestone plateau of Cyrene was rich in corn, silphium, wool, and dates.

The original founder became king of Cyrene, assumed the name Battus (Libyan for 'king'), and established a dynasty (see ARCESILAS). Under Battus III Cyrene received a liberal constitution from Demoxas of Mantinea; but this was abolished by Arcesilas III. Attacked unsuccessfully by Apries of Egypt, the city came to terms with Amasis. Battus IV reduced Barca and its neighbours to subjection. Cyrenaica maintained contact with mainland Greece; it built a treasury at Olympia, and Pindar celebrated the sporting triumphs of Arcesilas IV (*Pyth.* 4). Cyrene submitted to Cambyses, and formed part of Darius' empire. On recovering its independence it sheltered the Athenian survivors from the Egyptian expedition (c. 455). In the fourth century it was famous for its mathematicians and philosophers, and was prosperous enough to supply the mother-country with corn in the great famine of 330 B.C.

Alexander made Cyrene an ally, and Ptolemy joined it to his Egyptian kingdom. In spite of occasional reparations the connexion was maintained till Ptolemy Apion bequeathed Cyrene to Rome (96 B.C.). After twenty-two years of chaos, during which the royal lands

fell into private hands, it became a province, to which Crete was added in 67. Augustus allotted it to the Senate; but his edicts (see following article) show that the emperor intervened on occasion. Its tranquil existence was shattered by violent Jewish outbreaks under Trajan; though Hadrian imported colonists into the devastated province, its prosperity declined. Cyrene was reunited with Egypt under the Later Empire. Its recently excavated ruins have revealed outstanding examples of Greek art and architecture.

U. von Wilamowitz-Moellendorf, *Kyrene* (1928); L. Malten, *Kyrene* (1911); R. Paribeni in *Diz. Epig. s.v. 'Cyrenae'; CAH* iii. 666 ff., iv. 109 ff. (bibliog., pp. 628-9), xi, ch. 16 (bibliography of excavation reports, p. 928); E. S. G. Robinson, *British Museum Catalogue of the Greek Coins of Cyrenaica* (1929); Jones, *Eastern Cities*, ch. 12; P. Romanelli, *La Cirenaica romana* (1943). W. N. W.

CYRENE, EDICTS OF, five edicts of Augustus, discovered in an inscription of Cyrene, published in 1927. The first four belong to 7-6 B.C. and apply to the senatorial province of Cyrenaica and Crete alone; the fifth (which introduces a *senatus consultum*) belongs to 4 B.C. and applies to the whole Empire. The documents definitively prove that Augustus received an *imperium maius* over the senatorial provinces and demonstrate the emperor's ably balanced policy towards the provincials.

In the first edict Augustus establishes the procedure that criminal cases involving a capital charge against a Greek should be tried by mixed Graeco-Roman juries of a certain census, unless the accused prefers to have an entirely Roman jury. The system is modelled on the *quaestiones perpetuae* of Rome. Roman citizens except Greeks who had received Roman citizenship are not allowed to be accusers in cases involving murders of Greeks. The second edict approves the conduct of the governor towards some Roman citizens. The third establishes that the provincials who have obtained Roman citizenship should continue to share the burdens of their original Greek community unless they had special privileges. Under the fourth, all legal actions between Greeks, other than capital ones, were to have Greek judges, unless the defendant preferred Roman judges. The fifth edict communicates a *SC* which establishes that charges of extortion can be examined by five senatorial judges, after a preliminary examination by the whole Senate. This marks a beginning of the judicial function of the Senate.

Wenger, *Abh. d. Bayer. Akad.* xxxiv (1928), 2 Abt.; F. De Visscher, *Les Édits d'Auguste découverts à Cyrène* (1940). Cf. H. M. Last, *JRS* 1945, 93. A. M.

CYRUS (1) (Kurash), son of Teispes, the founder of the Achaemenid Persian Empire (559-529 B.C.). According to a legend of his birth and upbringing (Hdt. i. 107-30), he was related to Astyages, king of Media (denied by Ctesias, *Persica* exc. 2). Heir only to the throne of Anshan, he soon challenged his Median overlord. Capturing Astyages, he entered Ecbatana in 549 B.C. Thenceforward the Persians became the ruling race, though their kinsmen the Medes still held privileged positions in the State. Cyrus' defeat of Croesus of Lydia (Hdt. i. 71 ff.) gave him Asia Minor, that of Nabonidus, Babylonian, Assyria, Syria, and Palestine. Campaigns in the north and east extended his boundaries over almost all the Iranian plateau. The extent of his conquests is known from the lists of peoples subject to Darius. This vast empire he administered with wisdom and tolerance. In the conquered territories he was welcomed as a liberator; he respected their customs and religion, honouring Marduk at Babylon and freeing the captive Jews to build their temple in Jerusalem. To the Greeks he became a model of the upright ruler.

There are conflicting legends of his death (Xen. *Cyr.* 8. 7. 2 ff.; Hdt. i. 204 ff.); it is probable that he died in

battle. His grave is at Pasargadae (Strabo 15. 730; Arrian, *Anab.* 6. 29. 8).

The best sources for Cyrus' reign are the official cuneiform records: F. H. Weissbach, *Kcilinschriften der Achämeniden* (1911). Classical sources: Hdt. bk. 1; Ctesias, *Persica* bks. 7-9; Xen. *Cyropaedia* (a fanciful biography). Modern works: J. V. Prašek, 'Kyros der Grosse', *Alte Orient* xiii. 3 (1912); F. H. Weissbach, *PW* Suppl. iv (1924) s.v. 'Kyros (6)'. See also under ACHAEMENIDS. M. S. D.

CYRUS (2) II, younger son of Darius II and Parysatis, and his mother's favourite. He was given an overriding command in Asia Minor in 408 B.C. when he had barely come of age. In Sardes he met Lysander; their friendly co-operation meant victory for Sparta in the Peloponnesian War. Cyrus was summoned to the court in 405 on his father's fatal illness, but Arsaces, the elder brother, succeeded as Artaxerxes II, and only Parysatis' influence saved Cyrus when accused of treason by Tissaphernes. On his return to Asia Minor he began to gather mercenaries (amongst whom Xenophon enlisted), ostensibly for an expedition against Persia. In the spring of 401 he set out with some 20,000 men; his true destination was not revealed until the army struck the Euphrates at Thapsacus. At Cunaxa (q.v.), some forty-five miles from Babylon, Artaxerxes made his stand. Cyrus' deficiency in cavalry proved fatal, and he lost his life in a desperate attack on his brother's bodyguard. He had youthful faults of impetuosity and superficiality, but his personal charm, his energy, and his gift of leadership, were the qualities of a potentially great ruler.

CYTHERA, an island off the south-east promontory of Peloponnesus, formerly called 'the purple island' (*Πορφύρεσσα*) from its rich *murex* deposits. It passed from Argive into Spartan possession (c. 600 B.C.) and received a Spartan garrison and governor (*Κυθηροδίκης*); its inhabitants were *perioikoi*. Herodotus relates that King Demaratus, in advising Xerxes to occupy it, quoted Chilon's saying that it would have been better sunk beneath the sea. Captured by Nicias (424 B.C.), it became a base for Athenian raids into Laconia; and it was again held by Athens from 393 to 386.

R. Leonhardt, 'Die Insel Kythera', *Petermann's Mitteilungen*, *Ergänzungsheft* 128 (1899); O. Maull in *PW* s.v. A. M. W.

CYZICUS, a Milesian colony traditionally founded in 756 and refounded in 675, on the island of Arctonnesus, among a Myso-Phrygian population. The site rivalled Byzantium in defensibility and commercial importance. The island could be joined to or cut off from the mainland at will; it sheltered two harbours, and practically all the shipping of the Propontis came to Cyzicus to avoid the inhospitable northern shore. Its coinage of electrum staters, called *Cyzicencs*, became famous everywhere.

Cyzicus was a member of the Dclian League, to which it gave the largest annual contribution from the Hellenistic region, nine talents. It was the scene of Alcibiades' naval victory over the Spartans in 410. It preserved much of its commercial importance in the fourth century, and continued to do so in the Hellenistic age, when it cultivated especially good relations with the Attalid kings. Under Rome it remained a free city and was rewarded with an increase of its already large territory for its courageous resistance in 74 to Mithridates. Loss of freedom for a time and some diminution of territory followed the killing of Roman citizens, probably trade rivals, in 20 B.C. Further outbreaks caused definitive loss of the privilege in A.D. 25. Hadrian built a huge temple at Cyzicus, probably giving the city at the same time the titles of *metropolis* and *neocorus*. Later emperors gave aid after earthquakes. An earthquake in the reign of Justinian gave him a chance to use the marbles of Cyzicus in Saint Sophia.

DACIA was the country situated in the loop of the lower Danube, consisting mainly of the plateau of Transylvania, but extending in a wider sense to the Seret and the Vistula. The Dacians were an agricultural people. Under the influence of Celtic invaders in the fourth century they partly absorbed Celtic culture and developed the gold, silver, and iron mines of the Carpathians. From c. 300 B.C. they traded with the Greeks by way of the Danube; from the second century they also had relations with the Greek towns of Illyria and with Italian traders. Their chief import was wine.

The separate Dacian tribes were united c. 60 B.C. by a chieftain named Burebistas (q.v.), who extended his rule to south-west Russia, Hungary, and the Balkan peninsula as far as the Roman border. After his death his empire broke up, and for 100 years the Dacians merely made sporadic raids across the Danube. But the threat from Burebistas to Roman territory was not easily forgotten. In 44 Caesar was preparing to sweep up the Dacians south of the Danube; Antony and Octavian sought alliance with Dacian tribal kings. When a chieftain named Decabalus reunited Dacia, Domitian made a preventive attack upon him A.D. 86-9. This invasion remained indecisive, but Trajan made two further attacks (101-2 and 105-6) which resulted in the death of Decabalus and the capture of his chief stronghold, Sarmizegethusa. See DECEBALUS. The two Dacian wars of Trajan were commemorated by the sculptured reliefs on Trajan's column (see FORUM TRAIANI).

Dacia was now constituted into a Roman province, but its territory was restricted to the Aluta in the east, and to a line short of the Carpathians and the river Theiss in the north and west. New settlers were introduced from Dalmatia and the eastern provinces, and the mines were exploited more intensively. Colonies and *municipia* of Italian type were established, the most important being Sarmizegethusa and Apulum. After the Gothic invasions of A.D. 250-70 Dacia was abandoned by the Romans.

DACTYLS, IDAEAN, see IDAEAN DACTYLS.

DAEDALA, see MARRIAGE (SACRED) and BOEOTIA (CULTS).

DAEDALUS, a legendary artist, craftsman, and inventor of archaic times. He has a significant name, for artful works were called δαίδαλα. His father (Paus. 9. 3. 2) Eupalamus or 'Skillhand' was descended from Erechtheus (Pherecydes, *FGH* i. 146). D. was born in Athens, but had to leave the city because he killed his nephew Perdix who surpassed him in skill (Suidas s.v. Πέρδικος ἱερόν). He went to Crete, where he made the cow for Pasiphaë, the labyrinth for the Minotaur, a dancing ground (χορός), a small wooden statue of Aphrodite, and the famous thread for Ariadne. Enraged by the aid that D. had rendered to Pasiphaë, King Minos imprisoned him and his son Icarus, but D. constructed two pairs of artificial wings and flew away. He crossed safely to Sicily; Icarus, however, approached the sun too closely so that the wax of his wings melted and he drowned in the Aegean Sea.

In Sicily D. was protected by the Sicilian king, Cocalus; Minos, who arrived in pursuit of D., was suffocated in a steam bath (constructed by D.?) by the daughters of Cocalus (A. C. Pearson, *Fragments of Sophocles* ii, p. 3). D. had constructed in Sicily a reservoir for the river Alabon, a steam-bath at Selinus, a fortress near

Agrigentum, and a terrace for the temple of Aphrodite on Mt. Eryx (Diod. 4. 78 after Antiochus).

Daedalus was also considered the inventor of carpentry and of such things as the saw, the axe, the plumb-line, the auger, and glue. He also invented the mast and the yards of boats (Pliny, *HN* 7. 198). As tangible evidence of his skill a folding chair was shown in the temple of Athena Polias on the Acropolis (Paus. 1. 27. 1). His skill in metal-work was attested by the golden honeycomb in the temple of Aphrodite on Eryx. A multitude of archaic temples and archaic statues, especially wooden ones in Greece and Italy, were believed to be by his hand (Overbeck, *Antike Schriftquellen* (1868), 119). He first made figures which had open eyes, walked, and moved their arms from their sides, whereas earlier works had their feet closed and their arms fixed to their sides (Suid. Δαίδαλον ποιήματα). Several later archaic artists were considered pupils of Daedalus, and a demos of the phyle Cecropis in Attica was named the Daedalids.

The legend of Daedalus unites many heterogeneous elements. Certain features seem to go back to Cretan and Dorian tales, others betray an Attic origin. The propensity of the Greeks to recognize their own gods and legends in foreign countries enabled them to recognize works of Daedalus in architecture and sculpture of the natives in Sicily, Sardinia, and even in the pyramids of Egypt (Diod. 4. 30; 1. 97; Paus. 9. 17. 3). Since the name of Daedalus had come to stand for art of extremely archaic character, any very archaic statue was easily ascribed to Daedalus. The notion of uncanny superhuman skill inherent in the character of Daedalus accounts for such folkloristic traits as the legend of living statues (Eur. *Hec.* 836). The chronology of the Daedalids being faulty (Robert, *Archäologische Märchen* (1886)), it is not possible to determine the lifetime of D. from ancient authors. It is also controversial whether a historical artist D. gave the impetus to the formation of the legends, or is a purely mythological figure representative of accomplished craftsmanship.

Daedalus is represented on vases, gems, and in sculpture in Greece (J. D. Beazley, *JHS* 1927, 222) and Etruria (G. M. A. Hanfmann, *AJArch.* 1935, 189 ff.), and in Roman wall-painting and sculpture usually with Icarus or Pasiphaë.

DAIMACHUS of Plataea (first half of 4th c. B.C.), is Ephorus' source for early Boeotian history, and is important if Jacoby rightly assigns to him the *Hellenica* from Oxyrhynchus (q.v.; *Nachrichten Gesellsch. d. Wissensch. zu Göttingen* 1924, i). A younger Daimachus wrote *Ἰνδικά* a century later.

DAIMON (δαίμων). In Homer this word may be applied to one of the great gods, but its use has peculiar features. It has no feminine form and no plural (this is frequent in later literature). It has been observed that, whilst the Homeric poet in his own narrative constantly refers to the anthropomorphic gods, in the words which he puts in the mouth of his personages the cause of events is ascribed not to these but to a *daimon*, or a general phrase, *θεός τις*, *θεοί*, *Ζεὺς*, is used. *Daimon* appears to correspond to the supernatural power, the mana, not as a general conception but in its special manifestations. *δαίμων* is 'strange', 'incomprehensible'. As *daimon* refers to the lot

of a man, the word comes sometimes near the significance of 'fate', *ὁ δαίμων, πάρος τοι δαίμονα δώσω*. An expression occurring in tragedy, *ὁ παρὼν δαίμων*, proves that the old reference to a special manifestation was not forgotten, although a general sense is frequent in later writers, e.g. in the compounds *ὀλβιοδαίμων*, *εὐδαίμων*, *κακοδαίμων*. Heraclitus says: *ἦθος ἀνθρώπου δαίμων* 'a man's character is his fate', but 'fate' is not quite a correct translation. Finally people spoke of a good and an evil *daimon* of a man, which follows him through his life. The application of the word to cult gods is extremely rare, but it was appropriate to less well-defined gods. Hesiod calls the deceased of the Golden Age *daimones*, and Aeschylus in the same sentence calls the ghost of Darius *δαίμων* and *θεός*. Thus the word seemed to be appropriate to lesser gods. Since Plato *daimones* were conceived of as beings intermediate between gods and men, and Xenokrates allowed that they were of a mixed nature, and that *ἡμέραι ἀποφράδες* (see APOPHRADES) and festivals involving mourning, fasting, or improper language belonged to beings of this nature—an idea developed by Plutarch (R. Heinze, *Xenokrates*, 167 f.). Finally, Christianity which made the pagan gods evil beings impressed upon the word the significance which 'demon' now has in common language.

DALMATIA, a land on the east coast of the Adriatic, north of Epirus, was inhabited by the warlike Dalmatians of the Illyrian group, but to some degree celticized. The Dalmatians once formed part of the Illyrian kingdom of Scodra (see ILLYRICUM), but revolted from Genthus and therefore preserved their independence after his defeat by the Romans in 168 B.C. As the Dalmatians continuously threatened their neighbours, the Romans intervened and forced them to acknowledge Roman supremacy (156–155 B.C.). There was further fighting in 119 and a revolt in 78–77; in 51 the Dalmatians defeated the troops which Caesar sent against them. In the Civil War the Dalmatians sided with Pompey and beat Caesar's lieutenants, Q. Cornificius and A. Gabinus, but agreed to pay taxes in 46. But fighting was renewed in 45; after the campaigns of Asinius Pollio (39) the Dalmatians were finally subdued by Octavian (see ILLYRICUM). After two revolts in 16 and 11–10 their great fight for independence in the Illyrian-Pannonian revolt of A.D. 6–9 (or *bellum Delmaticum*: *ILS* 3320) failed, and Tiberius established the *pax Romana*, which was only once disturbed by the unsuccessful revolt of Camillus Scribonianus (q.v.), the governor of Dalmatia in A.D. 42. After its subjugation by the Romans Dalmatia formed part of Illyricum. After the creation of a separate province of Pannonia (q.v.) Dalmatia was occasionally called *superior provincia Illyricum*, and later, probably under the Flavians, received the official name 'Dalmatia'. It was then an imperial province under a *legatus Augusti pro praetore*, who resided at Salona. In the third century it was put under equestrian administration, apparently in consequence of the reform of Gallienus. Under Diocletian Dalmatia was divided into *Dalmatia* with Salona as capital, and *Praevalitana* or *Praevalis* with Scodra as capital, the former belonging to the *diocesis Pannoniarum*, the latter to the *diocesis Moesiarum*.

DAMASCUS was the capital of Demetrius III and Antiochus XII, under whom it issued municipal coins (some under the name of Demetrias, which the city received during Demetrius' reign). Menaced by the Ituraeans, it invited Aretas III to protect it in 85 B.C., but was independent in 69. Annexed by Pompey in 64, it was granted by Antony to Cleopatra, reannexed by Octavian, granted by Gaius to the Nabataean kingdom, and finally annexed c. 62. It was made a colony by the Emperor Philippus. It derived its wealth from the caravan trade, from its woollen industry, and from the multifarious products of its territory, which included not only its own fertile oasis but from 24 B.C. a large (formerly Ituraean) area up to Mt. Hermon. The only surviving monument is the *peribolos* wall of the temple of Zeus.

G. Watzinger and K. Wulzinger, *Damaskus* (1922). A. H. M. J.

DAMASTES (mythological), see PROCRUSTES.

DAMASTES of Sigeum, a contemporary of Herodotus and pupil of Hellanicus, wrote on *Events in Greece* (he mentioned a Persian visit of Diotimus, a *strategus* of 433–432 B.C.); on *Poets and Sophists*; on *Peoples and Cities*; on the *Ancestors of those who fought at Troy*: his *Periplus* was based on Hecataeus. Strabo (i. 3. 1) criticized Eratosthenes for trusting him.
